"Much of the free food is distributed through voluntary agencies ('Volagencies' on the chart). Such organizations as CARE, the Church World Service, Catholic Relief Services, the Jewish Joint Distribution Committee, and others have many projects that are largely dependent on PL–480 for food and seed. Shipping charges on these products are often paid by AID. Within the recipient country, the local government usually pays the distribution charges..."

"Perhaps the broadest Food for Peace activity is the school lunch feeding program under which 40 million children (as of August, 1963) receive daily lunches in many countries. Another important use of this food is as wages for community development projects; present Food for Work projects in 22 countries employ an estimated 700,000 workers. In this manner, the food has been used to encourage the building of schools in Bolivia, the planting of trees in Tunisia, and the construction of a road in Iran."

Note: This is the earliest document seen (Nov. 1999) that mentions Nestle's work with soy. Address: Boston, Massachusetts.

2023. Dutra de Oliveira, J.E.; Rolando, Edgardo. 1964. Fat absorption studies in undernourished children fed cow's milk or soya milk. In: Proceedings of the Sixth International Congress of Nutrition. Edinburgh and London: E. & S. Livingstone Ltd. xv + 683 p. See p. 566. Held 9-15 Aug. 1963 at Edinburgh, Scotland.

• ***Summary:*** It is commonly accepted that undernourished children are able to absorb little fat in their diets. Metabolic studies on the absorption of fats were conducted using a group of 29 undernourished children, ages 1 to 3 years, with and without clinical oedema. One group was fed skim [non-fat] cow's milk; there was little or no absorption of fat. A second group was fed soya milk, fat absorption was generally above 90%; no differences were observed in children with or without oedema. A third group was fed cow's milk containing similar amounts of fat as the soya

milk; they absorbed less of the fat than the group fed soya milk–usually less than 80% of intake. Thus the type of fat consumed by undernourished children seems to affect their ability to absorb it. Address: Faculdade de Medicina, Ribeirao Preto (Sao Paulo), Brazil.

2024. Jones, Dorothea Van Gundy. 1964. The soybean cookbook: Adventures in zestful eating. New York, NY: Gramercy Publishing Co., a divison of Crown Publishers Inc. Paperback published by Arco Publishing Co. Inc. xii + 240 p. Foreword by Ruth Stout. Index. 21 cm.

• ***Summary:*** This lacto-ovo-vegetarian cookbook is identical to the 1963 edition published by Devin-Adair except: (1) Mildred Lager, who died in Aug. 1960, is no longer listed as the author. Note: Mildred's husband, Ed Jones, married Dorothea Van Gundy, the present author. (2) The dust jacket is white, yellow, green and black on a blue background. A face, made of yellow and green soybeans, is wearing a chef's hat. (3) The publisher of the hardcover edition is now Gramercy rather than Devin-Adair. The copyright date (written in hard-to-read Roman numerals) is 1963, the same as the Devin-Adair edition. The date of publication is not given, but it must have been after 1963. We have taken the liberty of giving it as 1964. (4) The title of the second preface has been changed to "Preface to the revised edition" from "Preface to the 1963 edition." Both were written by Dorothea Van Gundy Jones of Arlington, California. Address: Arlington, California.

2025. Jones, Mary Lou. 1964. Better soybean recipes. Anacortes, Washington: Outdoor Pictures. 58 p. Index. 22 cm.

• ***Summary:*** This small book is primarily about soy milk–how to make and use it. Contents: Introduction. 1. Working tools. 2. How to make a portable stove with a portable oven and kerosene oil lamp. 3. Ingredients for recipes: Soybeans, lecithin, oil, calcium phytate, slippery elm, flax seed, herbs. 4. Preparation of soybeans.

5. Recipes (p. 21): Thickening (with slippery elm or lecithin), oil-lecithin mix, soy milk recipes (soybean liquid {"Refrigerate pulp to make Soy Cheese [p. 26], Cultured Cheese, or Soy Crackers [p. 31]," p. 23}, soy milk–basic, soy milk concentrate [the favorite, with salt, honey, and oil-lecithin mix], low fat soy milk concentrate, chocolate-like milk [carob], chocolate-like syrup [carob], soy cream {made with "1 cup Soybean Liquid" [soy milk] put in a liquefier with water, salt, slippery elm powder, then Whiz while adding lecithin and vanilla}, whipped cream [to ½ cup soy cream slowly add 2 tablespoons oil-lecithin mix in a blender], ice cream, custard pudding, basic soy cheese [not tofu, based on okara]), dressings and spreads (royal mayonnaise, salad dressing supreme [based on tofu], cheesy spread or dressing [based on tofu], soy butter or health margarine, royal soy margarine, butter spread [made with "soybean pulp" = okara], oil free butter spread [made with ½ cup soy milk, ¼ cup lecithin, a little salt, and one recipe of Soybean Pulp {okara; see p. 24}]).

Cereals (p. 30) (flax cereals [2 types], soy crackers [with soybean pulp], soybean and corn meal muffins [with whole soybeans], sprouted grain granola [breakfast cereal]). Soy bread recipes (eight-grain sprouted soy bread, whole wheat soy bread, bread recipes without soybeans, basic variable whole wheat bread, enriched whole wheat bread, bran whole wheat bread, carob bread, peanut bread, eight-grain sprouted bread), waffles (soy waffles, eight-grain soy waffles, pigeon feed waffles).

Entrees (p. 41) (gluten supreme [meat substitute], malt flavored ice cream, mayonnaise, salad dressing, concentrated dressing base, gravy, soybean souffle), dextrinizing (heating starchy foods to turn the starch into more easily digested sugar), suggestions for using prepared soybeans without using a liquifier [pickle cooked soybeans in concentrated dressing base], yogurt (soy-based medium for culture, yogurt made from soy milk), watermelon and cantaloupe seed, fresh kelp relish.

6. Sprouting seeds (including soybeans): Four methods, how to serve sprouts (incl. Sukiyaki). Some variations in making soy milk.

Page 22 is a directory of the names and addresses of major health food distributors in the USA: California: Kahan and Lessin Co. (Los Angeles, or San Francisco). Colorado: Health Food Sales Co. (Denver). Illinois: Health Food Jobbers, Inc. (Chicago). Massachusetts: Foods Inc. (Cambridge). Michigan: Health Food Distributors (Detroit). New York: Sherman Foods, Inc. or Balanced Foods, Inc. (New York City). Oklahoma: Akin Distributors (Tulsa). Oregon: Nu Vita Foods (Portland). Tennessee: Collegedale Distributors (Collegedale). Washington state: Kahan & Lessin Co. or Vital Foods Distributors (Seattle).

This book contains considerable information about gluten and the use of the gluten rinse water (as in breads or soups). Pages 41-42 contain a unique recipe for making 2 pounds of gluten at home from whole wheat flour. The gluten is then baked with a seasoning mix and the rinse water for 10 hours at 108ºF to make Gluten Supreme.

Concerning dextrinizing: "This process is acclaimed by many health authorities to be a more healthful way of eating some starchy foods. Many people who have digestive problems with starchy foods can eat them prepared by the dextrinizing process. This process is said to turn the starch into a more easily digested sugar." Breads, cereals, or flour can be dextrinized by baking at 225ºF until lightly browned.

Note: This is the earliest English-language document seen (June 2013) that uses the word "soybean pulp" to refer to okara. Address: Box 1326, Escondido, California.

2026. Lager, Mildred; Jones, Dorothea Van Gundy. 1964. Suggestions for the arthritic. Recipes and menus. Riverside,

California: Mrs. E.S. Jones. 68 p. 22 cm.
• ***Summary:*** Contents: Part I. Arthritis–The result of many conditions: Types of arthritis, causes of arthritis, suggestions, foods for the arthritic, my own case. General outline of the diet: Juice diet, limited diet, general diet. Other suggestions: Mental attitude, comments 1957, comments 1961. Part II. Menus. Carbohydrate content of fresh fruits. Carbohydrate content of dried fruits. Carbohydrate content of fresh vegetables. Recipes.

Mildred wrote that proper diet was the greatest factor in her recovery from arthritis. Based on her own experience and that of many others who she helped, she strongly opposed the use of dairy products, and thus used dairylike soy products in their place, especially soymilk, tofu, and soy flour or grits.

Mildred wrote in Aug. 1957 that it has been 32 years since she began her battle with arthritis. In a Feb. 1961 update to this book Dorothea wrote that Mildred died on 25 Jan. 1960. "Hers was a very remarkable life in that while still in her teens she was told, after examination at a noted medical clinic, that she had incurable arthritis and would never walk again, her feet and legs being completely ankelosed at that time. In spite of this verdict Mildred went home with a determination to show those doctors they were wrong, and show them she did, for before long she was back on her feet again. You already know her story. For the next forty years she battled arthritis, never quite winning but keeping it under control to the extent that she lived a normal life and made a remarkable contribution to the field of nutrition as, health food store owner and operator, author, lecturer, radio commentator and dietary consultant. She taught many arthritics how to overcome their handicaps, and if that was not possible, how to live with them. Her life made a real contribution and she left many friends as a result." Address: Riverside, California.

2027. Schwarz, Richard William. 1964. John Harvey Kellogg: American Health Reformer. PhD thesis in modern history, University of Michigan. vi + 504 p. 23 cm. [234 + 1,308 footnotes]
• ***Summary:*** This is one of the finest examples of recent Adventist scholarship. John Harvey Kellogg was born on 26 Feb. 1852 in rural Tyrone Township, Livingston County, Michigan. His parents were John Preston Kellogg and Ann Stanley, his second wife. His birth was spaced almost midway between those of his seven half- and eight full brothers and sisters. Contents: Preface. 1. The making of a health reformer. 2. "What manner of man." 3. Biologic Living: The Kellogg "Gospel of Health." 4. Kellogg and the Battle Creek Sanitarium. 5. Lecturer, author, publisher. 6. Surgeon and inventor. 7. His brother's keeper. 8. Kellogg's break with the Adventist church. 9. Food manufacturer and eugenist. 10. Concluding years. Bibliography: Primary sources (Manuscript collections, books by John Harvey Kellogg, articles by John Harvey Kellogg, newspapers and periodicals, official reports and records, interviews, other primary sources, secondary sources).

Concerning the invention of peanut butter: (p. 283-84): "Another important item in the modern American diet first introduced by Dr. Kellogg was peanut butter. Shortly after 1890, John Harvey had a quantity of roasted peanuts ground up into a paste for use by patients who had difficulty in masticating nuts well enough to digest them properly. Later the doctor decided that roasting caused the fat content of the nuts to begin to decompose and that this irritated the digestive organs. From that time forward Sanitarium peanut butter was made from nuts which had been steam-cooked rather than roasted. Kellogg devised a variety of other nut butters which he claimed were 'sweeter, more palatable, and more digestible' than regular butter. He directed that these nut butters be used as shortening in the preparation of all baked goods produced at the Sanitarium. John Harvey made no attempt to control through patents the production of either peanut butter or any of his other nut butters. He announced that he believed that these were products that 'the world ought to have; let everybody that wants it have it, and make the best use of it.'" Address: Univ. of Michigan.

2028. Vollmer, Marion W. 1964. Food: Health and efficiency. Lessons in nutrition and healthful food preparation. Revised ed. Nashville, Tennessee: Southern Publishing Association. 136 p. 23 cm.
• ***Summary:*** In this Seventh-day Adventist vegetarian cookbook, soy-related recipes include: Farmer soy breakfast hash (with Proteena, p. 34). Granola (with soy flour, p. 34). Bit o' soy waffles (with soy flour, p. 35). Cashew milk (p. 52). Soy nut milk (with soy milk powder, almonds & cashews, p. 52). Baked soybeans (with cooked whole soybean, p. 62). Gluten–how to prepare and serve it (incl. Gluten stroganoff, gluten cheeseburgers, 64-67). Soy cheese–how to make and serve it (tofu made from full fat soy flour and curded with lemon juice, p. 67-68). Soy cheese loaf (with tofu, p. 69). Soy cheese croquettes (with tofu, p. 69). A note on p. 69 states: "Tofu is fresh soybean curd. Sold in blocks under water in Oriental and some other markets. Canned soy cheese called Vegechee, Cheez-o-Soy, etc., may be substituted." Note: An earlier edition was published in 1954.

2029. Ohsawa, G. 1964? Macrobiotics: The art of longevity and rejuvenation. New York, Paris, Brussel [sic], Tokyo: Ohsawa Foundation. Printed in the U.S.A. by Eastern Technical Publications (Boston & New York). 218 p. Undated. Index. 17 cm.
• ***Summary:*** This is the earliest known American printing of "Zen Macrobiotics." The word "Zen" was removed from the title at Michio Kushi's suggestion. The cover is yellowish tan. The author is George Ohsawa.

Contents: Foreword: Two ways to happiness through

health. Preface: Health to peace. Books by the same author (7 in French, 9 in Japanese, one in English, plus 4 periodicals). Table of contents. 1. Macrobiotics and Oriental medicine. Why I have written this book. What is the philosophy of the Far East? 2. What is my therapy? Unhappiness, illness, crime. Incurable disease. Three categories of cure. What we must not cure. Satori. Courage, honesty justice. Tolerance. 3. The six main conditions of health and happiness. 4. Nothing shall be impossible to you. You should have infinite freedom. You must be your own doctor. 5. Ohsawa's macrobiotic cuisine. 6. Principal foods: Rice, buckwheat, udon etc., millet, raw rice etc. (p. 62-71, with recipes). 7. Secondary foods (p. 72-103, with recipes): Nituke, soup (lotus root ankake, kuzu gruel, cracknel yuba), pie, gyoza (piroshiki), chapati, jinenjo (wild potato, tororo). Egyptian beans (chick peas, *pois chiche*), beans (boiled soy beans with miso, gomoku beans, goziru [gojiru] soup, aduki beans), corn, aduki (ogura vermicelli), goma-tohu [sesame tofu], aemono (salads), varieties (chou farci, buckwheat crepe), wild vegetables, seaweeds (shi kobu [shio kombu], kobu maki, fried kobu, musubi kobu, kobu soup, matsuba kobu, salmon head kobu-maki, hiziki with lotus root, hiziki nitsuke, hiziki with "age," hiziki and soyabean, gomoku hiziki, hiziki rice), wild plants (dandelion leaves or root, aozu {wild spinach}, fuki), miso and tamari preparation (sauce miso, miso cream, muso [miso with tahini and orange peel], miso soup, carrot and onion au miso, vegetable au miso, oden au miso, buckwheat dango au miso, miso ae, tekka no. 1 and 2), syoyu [shoyu] (sakura rice, sauce au shoyu, sauce au sesame, bouillon au shoyu, ositasi [ohitashi], oatmeal cream, potage oatmeal, sauce bechamel a la sauce shoyu, mayonnaise a la sauce shoyu, sauce Lyonnaise; "Shoyu diluted with a little water is very good for Sasimi [Sashimi = raw fish] and fried oyster, tempura, fish Sukiyaki, tofu {vegetable cheese of soya beans}, etc."), beverages (rice tea, wheat tea, dandelion coffee, Ohsawa Coffee {Yannoh; incl. roasted and ground rice, wheat, aduki, chick peas, and chicory}, Kokkoh {incl. roasted rice, glutinous rice, oatmeal, soya beans, and sesame seeds}, Mu tea, syo-ban {coarse green tea with soy sauce}, kuzu [cream, with shoyu] {"A good drink for everyone"}, aduki juice, radish [daikon] drink no. 1 and 2, ransyo {one beaten egg + 50% of traditional Ohsawa shoyu}, soba tea, umeboshi juice, ume-syo-kuzu, special rice cream).

8. Special dishes. Desserts. 9. Yin and Yang. 10. Macrobiotic suggestions for various symptoms of disease (p. 131-36, with recipes): General suggestions (by disease), macrobiotic external treatment (tofu plaster, soya bean plaster, Dentie). 11. Specific curative dietary suggestions: Examples of diseases and their macrobiotic treatments. 12. Kokkoh: Macrobiotic food for baby. 13. On cooking. Salt. Folk medicine. Your history. Appendix: The case of Mr. E. (Cure in 10 hours). "Pro-forma death certificate of the American World Empire and its Gold Dynasty."

Ohsawa centers and friends (p. 217-18): England (Trustin Foods, London; Mrs. R. Takagi, London), France (Centre Ignoramus, Longue Vie, Guenmai [Genmai = brown rice], Yamato, Ohsawa-France; all in Paris). Germany (Miss M. Arnoldi, Heidelberg; Dr. P. Martin, Munich; Dr. Henning, Hamburg), Italy (Miss H. Onoda, Rome; Mrs. Baccolis, Rome), Japan (Nippon Centre Ignoramus, 8 Kasumi-cho, Minato-ku, Tokyo; Shinsekai, Osaka), Brazil (Casa Longavida, Sao Paulo), Sweden (Miss Ilse Clausnitzer, Stockholm), U.S.A. (Ohsawa Foundation, 61, W. 56th St., New York; Ohsawa Foundation, P.O. Box 238, Chico, California; Chico-San, Inc., 64, 5th Ave., Chico, California; Musubi, 61, W. 56th St., New York–Macrobiotic Restaurant).

This book is undated, but it contains clues as to when it was published. On page 190 is reference to an article in *Time* magazine dated 7 March 1960 about the sad state of health in the United States. Then on page 189, Ohsawa states: "Upon my arrival in the United States last November, I began my lectures on the philosophy and medicine of the Orient. I gave some in Los Angeles and San Francisco [California], but mostly in New York institutes and schools such as the Universalist Church, The New School for Social Research, Columbia University, New York City College, and the American Buddhist Academy. I have postponed my departure twice. But I am very happy as I have confirmed my assumption: marriage between paradoxical philosophy of the Orient and the materialistic techniques of precision of American science, which must be realized for the infinite freedom of Man and for world peace" (p. 189).

Concerning the date of publication, which is not given in or on the book. One guess is about 1964, because when you do a printing of a book, you want to print enough to last for at least two years. This 1962 + 2 = 1964. A pretty weak reason! Carl Ferré (6 and 8 May 2011) states: I've done enough printing to know that the book printed in the USA uses the same plates as the second printing in Japan except for two changes. They added "Printed in the USA by..." (in a different type face) to the back side of the first page, which is blank; and, they whited out "Zen" and the smaller "Macrobiotics" on the cover and title page and replaced both with one word: "Macrobiotics" (again, in a different type face). The rest of the book appears to be exactly the same as the second printing from Japan."

"My thinking is that 1964 is a pretty good guess because I believe it may have been arranged by the East Coast Group–thus, the word 'Zen' was off the title and it was printed by a printer in Boston and New York. This would be about the time Michio Kushi was getting settled in Massachusetts."

Note 1. These lines almost certainly describe Ohsawa's first visit to the United States. He arrived in November 1959 and stayed well into 1960.

Note 2. All recipes in this book are numbered, from No. 1 (Unpolished rice, p. 162) to No. 816 (Rice plaster, p. 136). The recipe numbers are identical to those published

in the mimeograph edition of *Zen Macrobiotics* (also titled *Macrobiotics–The Biological and Physiological Foundation of Zen Buddhism*), published in early 1960.

Note 3. The contents of this book is very similar to that of the earliest published edition of *Zen Macrobiotics*, which was printed in Japan and was 218 pages long.

2030. Cuatrecasas, Pedro; Lockwood, D.H.; Caldwell, J.R. 1965. Lactase deficiency in the adult: A common occurrence. *Lancet* i(7375):14-18. Jan. 2. [64 ref]
• ***Summary:*** "Interest in disaccharide metabolism has risen sharply in the past few years with the detection in infants of disaccharide [lactose] intolerance."

"Summary: 55% of adults are intolerant of lactose because of a deficiency of jejunal Beta-galactosidase (and cellobiase), and consequent inability to hydrolyse dietary lactose. Evidence that this is an acquired trait, a strong correlation with dietary milk deprivation, loss of symptoms with prolonged lactose intake, and decreased absorption with milk restriction, all suggest that intestinal lactase may be an adaptive enzyme. Genetic polymorphism is not, however, excluded." Address: 1. Washington Univ., St. Louis, Missouri; 2-3. Dep. of Medicine, Johns Hopkins Hospital and Johns Hopkins Univ. School of Medicine, Baltimore, Maryland.

2031. Banno Tsusho Company. 1965. [Deodorizing soybean milk]. *Japanese Patent* 3461. Feb. 23. English-language summary in Soybean Digest, Feb. 1966, p. 53. [Jap]*
• ***Summary:*** The soymilk is adjusted to pH 6.8 then subjected to dialysis with a suitable colloid impervious film and activated charcoal.

2032. James, W.S. 1965. The Vegetarian Nutritional Research Centre, 1959-1964. *British Vegetarian.* Jan/Feb. p. 29-32.
• ***Summary:*** Discusses the history and activities of the Centre, Wanderlac and Velactin, Frank Wokes, N.W. Pirie, Cyril Vesey, vitamin B-12, leaf proteins, etc.

The article begins: "Since the Research Centre was inaugurated in Stanborough Park near Watford in 1959, I have, as a member of its scientific sub-committee, been in close contact with its activities of which the following is a brief summary.

"Scientific investigations must be based on much previous experience. The Research Centre was fortunate in starting in 1959 under the guidance of Dr. Frank Wokes with over thirty years' experience of nutritional research especially on vegetarian foods. In 1958 [sic, 1959] this culminated in the marketing of the first British vegetable milk Wanderlac, now called Velactin (A. Wander Limited). At the inaugural meeting of the Research Centre there were several vegetarian experts whose investigations during the previous ten to fifteen years had done much to help directly or indirectly in the development of Wanderlac. These included Dr. W.W. Payne and Dr. Cyril Pink, who carried out clinic trials on babies at Great Ormond Street Children's Hospital and at the Vegetarian Nursing Home, Blackheath, respectively. Dr. Lester Smith, F.R.S., whose discovery of vitamin B-12 in 1948 gave a clue to the successful use of vegetable protein, was also present. As the Royal Society's adviser to the research project on vitamin B-12 in Stanborough School, in which the Research Centre has played a leading part, Dr. Lester Smith has taken increasing interest in its work.

"In October, 1959, the Research Centre helped to arrange a meeting in Manchester on leaf proteins, addresses being given by the leading expert Mr. N.W. Pirie, F.R.S., and by Dr. Wokes, who had for some years previously been studying these problems with Mr. Pirie."

"When the Research Centre started in 1959 its administrative headquarters were at Stanborough School where the headmaster, Mr. Richard Syme, its chairman until February, 1961, and his colleagues gave great help. Mr. Cyril Vesey, B.Sc., head of the school's science department, first functioned as Secretary and as Treasurer, but towards the end of 1960 handed the latter duties over to Mr. Ted Cox. Mr. Vesey, as well as taking an active part with Dr. Wokes and his son Richard in establishing the research laboratory, remained Secretary until 1964, when his secretarial duties were taken over by Mr. Ronald Luxton, another member of the school science department. Mr. Harry Leonard, B.A., a third member of the school staff, served as Committee Chairman in 1961 and again in 1963-1964.

"Steady increase in the Research Centre's activities showed the need for its own headquarters. In 1961 these were established at Dr. Wokes' residence, on the outskirts of Stanborough Park, close to the research laboratory. They contain the registered office of the Centre, also a library housing its books and records, providing a unique collection of information on vegetarian nutrition." Address: M.Sc., Chairman.

2033. Morinaga Milk Products Company. 1965. [Deodorizing soybean milk]. *Japanese Patent* 3462. Feb. 23. 2 p. English-language summary in Soybean Digest, Feb. 1966, p. 53. [Jap]*
• ***Summary:*** "In a method for thoroughly deodorizing soybean milk, the raw aqueous soybean extract is inoculated with one or more of the following species of bacteria: Leuconostoc diacetylactease; Leuconostoc dextranicum; and Leuconostoc citrovorum. The inoculated milk is fermented at 20º-25ºC for a period of from 12 to 30 hours at a pH of about 6.5."

Note: This is the earliest document seen (March 2013) concerning Morinaga and soy.

2034. Nagai, K. 1965. [Deodorizing soybean milk]. *Japanese*

Patent 3,459. Feb. 23. English-language summary in Soybean Digest, Feb. 1966, p. 52-53. [Jap]*

2035. Shurpalekar, S.R.; Korula, Soma; Chandrasekhara, M.R.; Swaminathan, M. 1965. Studies on the preparation, chemical composition and nutritive value of a spray-dried soya food suitable for feeding weaned infants. *J. of the Science of Food and Agriculture* (*London*) 16(2):90-94. Feb. [15 ref]
• ***Summary:*** Describes the results of studies using a spray-dried food based on full-fat soya flour, dextrin-maltose mixture, and hydrogenated groundnut oil fortified with DL-methionine and certain essential vitamins and minerals. The food contained 26% protein and 18% fat. The basic protein efficiency ratio was 2.47 but fortification with 4 gm/kg of DL-methionine markedly increased the PER to almost the same level as that of a control milk food of similar composition. "It may be concluded that in many developing regions where milk is in short supply and soya-bean is readily available, the spray-dried food costing only about 4s. per kg. and possessing an overall nutritive value comparable to that of a milk food of similar composition can be manufactured on large scale and used for supplementary feeding of weaned infants." Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2036. Abbott, J.C. 1965. Protein rich foods from oilseeds: Economic aspects. *P.A.G. News Bulletin* (*Protein Advisory Group, WHO / FAO / UNICEF*) No. 5. p. 19-38. April. [15 ref]
• ***Summary:*** Table 1 lists annual consumption (in metric tons) of oilseed protein foods in some main consuming areas. Column 1: Miso, tofu, tempeh and other fermented or cooked soybean products: Mainland China 3,736,000. Japan 2,536,000. Indonesia 200,000. South Korea 160,000. Taiwan 153,000. Hong Kong 15,000. Malaya 15,000. Singapore 15,000.

Column 2: Soy milks: Singapore and Malaya 1,300 metric tons, Hong Kong 1,000.

Note: This is the earliest document seen (Aug. 2013) that contains industry or market statistics for soymilk by geographical region. Address: Chief, Marketing Branch, FAO Headquarters, Rome, Italy.

2037. DeMaeyer, E.M. 1965. Full-fat soy mixtures in the feeding of infants in Taiwan. *P.A.G. News Bulletin* (*Protein Advisory Group, WHO / FAO / UNICEF*) No. 5. p. 50-59. April. [2 ref]
• ***Summary:*** "In China soy products including soy milk are customarily not fed to children below the age of three years."

"These trials have thus established the usefulness of full-fat soy products as practical and satisfactory alternatives to infants' foods based on animal milk when they are fed at levels which are not critical from the protein and calorie viewpoint." Address: PAG, New York.

2038. Hafner, Fred H. 1965. No more milk! *Soybean Digest.* May. p. 22, 25.
• ***Summary:*** "In discussing the milk powder situation with various officials who are close to the situation, I found some who foresee the time when there will be *No More Milk* in surplus to distribute."

"Under sponsorship of the Soybean Council of America [SBC], food technologists and nutritionists cooperating with the SBC protein products subcommittee developed a product which they appropriately named soy beverage powder. About 2 years ago Washington [DC] representatives of SBC introduced the product in Washington to officials of USDA, FAS [Foreign Agricultural Service], ARS [Agricultural Research Service], AID [Agency for International Development] and Food for Peace. Reaction was most favorable."

"Soy beverage powder is a dry blend of the following ingredients: Toasted soy flour, sugar, milk powder, wheat starch, calcium di phosphate, stabilizer-flavor blend and vitamin-mineral premix." It contains 35% protein, 1.0% fat, 50% carbohydrates, 5% minerals, and 0.6% calcium, 0.7% phosphorus, plus vitamins A, C, B-12, D, and iodine.

"Soy beverage powder is available commercially and can be supplied in limited quantities now but in almost unlimited quantities within a year, costs no more than nonfat milk powder and can be flavored to suit the taste preference of the recipient country."

"Soy beverage powder represents the first major breakthrough toward providing a companion product to milk powder in a world no longer able to obtain a sufficient quantity to meet the ever increasing demand for it."

A round photo shows a tanker next to a grain terminal. Address: General Mills Inc., Minneapolis, Minnesota.

2039. Miller, Harry W. 1965. Meeting the world's nutritional needs with soy milk. *Soybean Digest.* May. p. 19-21.
• ***Summary:*** In East Asia, milk is in short supply and expensive. A replacement made from soybeans has proved acceptable both tastewise and nutritionally. Moreover, animals are not an efficient means of producing protein. In East Asia, soybeans for food use have traditionally been soaked and then milled. Thus a "wet milling operation" is used instead of dry milling, as to make flour. "For adult use, they have built up a number of soy protein dishes, called 'meat without bones'. However they have not taken into consideration the nutritional needs of infants and growing children, and malnutrition is seen everywhere in these developing countries."

"In Japan, 30 pounds per capita of soybean are consumed as food but to provide soy milk for infants and children another 15 pounds per capita need to be added." For soy milk processing two systems are in use: the small

community soy milk plant (the fresh milk may be dispensed from the conventional milk can without bottling, thus lowering the cost) and the large commercial bottling plant. "In Hong Kong, soy milk is made, bottled, and distributed everywhere in the colony for 3½ cents for a 7-ounce bottle. It has the largest sale of any bottled beverage in the colony... In Hong Kong are two factories of the most modern type, with upwards of 40 large delivery beverage trucks, under the genius and leadership of K.S. Lo, general manager. These plants daily manufacture some 25,000 cases each containing 24 bottles of soy milk [i.e. 600,000 bottles/day]. These are delivered to hospitals and schools, and this milk is on sale at all beverage places..." In Singapore, in Bangkok, Thailand, and in Manila, Philippines, soy milk is also made and well accepted. In Formosa, where 2-3 years ago there was only one soy milk plant in Taipei, today more than a dozen rural pilot plants have sprung up all over the country.

Photos show: (1) A bottling machine at a soy milk plant in Hong Kong. (2) Boy scouts in Hong Kong drinking bottled soy milk. Address: M.D., Director Emeritus, International Nutrition Research Foundation, Arlington, California.

2040. **Product Name:** [Baby Nago {Powdered Soy-Based Infant Formula}].
Foreign Name: Bébé Nago {Pulver}.
Manufacturer's Name: Nago Naehrmittel AG. Then Lindt & Spruengli from 1971. Then Galactina Ltd. from 1980.
Manufacturer's Address: CH-4600 Olten, Switzerland. It was partly made at a plant in Sursee. Then Kilchberg near Zurich, Switzerland. Then Belp, Switzerland. Phone: 1-716-22-33.
Date of Introduction: 1965. June.
Wt/Vol., Packaging, Price: 300 gm heavy paperboard tube, lined inside with aluminum foil, and having aluminum and plastic lids.
How Stored: Shelf stable below 20ºC.
New Product–Documentation: Talk with Conrad Seewer of Galactina. 1990. May 17. This product was part of the complete Naga line was developed by Nago Olten, which later merged with Lindt & Spruengli, a large chocolate company located near Zurich. It was introduced in the early 1960s at about the same time as Naga-di and Naga-Sonda. Both Lindt & Spruengli and Galactina always made it from soymilk made from whole soybeans rather than from soy protein isolates.

Letter (fax) from Mr. Heinz Knell of Lindt & Spruengli, Olten. 1990. July 12. This product was launched in June 1965 by Nago, Nährmittel, CH-4600 Olten. It was partly made in Sursee/Sprueken? It came in 300 gm aluminum-lined carton doses. It was a powder, used in general for infant nutrition, and especially for infant who were allergic to cow's milk or had galactosemia. This was one of the three pioneering soy products he developed. Each was the first of its type, as far as he knows, based on soya.

Webster's Third New International Dictionary (1963) defines galactosemia as "galactose [a sugar] in the blood of infants due to an inability to utilize galactose because of a congenital absence of an enzyme that normally changes the galactose of galactose-containing foods into glucose." *Webster's Dictionary* (Ninth Collegiate, 1985) defines galactose, a term first used in 1869, as a sugar $C_6H_{12}O_6$ less soluble and les sweet than glucose. It also defines galactosemia, a term first used in 1934, as "an inherited metabolic disorder in which galactose accumulates in the blood due to deficiency of an enzyme catalyzing its conversion to glucose."

2041. Rawi, Ihsan el; Oey, Kam Nio. 1965. Soya-rice baby food. *Paediatrica Indonesiana* 5(1-2):606-08. Jan/June. Supplement. [7 ref. Eng]
• ***Summary:*** Saridele is a commercial weaning food made in a factory in Jogja (Central Java). It is powdered soya milk fortified with vitamins and minerals. Animal trials (young albino rats) show that saridele has a high P.E.R. value, especially after adding rice flour. A table compares the PER of whole milk, skim milk, Saridele, fried tempeh, and fried whole soybeans.

The latter, which are the least expensive, are prepared as follows: Soak whole soybeans overnight in water (or for 1 hour in hot water). Remove the hulls by rubbing and pour off the hulls. Drain and rise the soybeans, then drain until dry. Deep fry the soaked whole soybeans in hot cooking oil until golden brown in color. Then grind or pound the fried beans.

"The combination of tempeh and red rice is a daily food for adults and older children." There is no reason why it cannot be made into a porridge and served to younger children after weaning. Address: Nutrition Inst., Ministry of Health, Jakarta, Indonesia.

2042. Pinchera, Aldo; MacGillivray, M.H.; Crawford, J.D.; Freeman, A.G. 1965. Thyroid refractoriness in an athyreotic cretin fed soybean formula. *New England J. of Medicine* 273(2):83-87. July 8. [17 ref]
Address: Depts. of Medicine and Pediatrics, Harvard Medical School, and the Medical Service (Thyroid Unit) the Children's Service, Massachusetts General Hospital.

2043. Thrapp, Dan L. 1965. Thousands owe lives to doctor's soybean "milk." Noted surgeon nutritionist, now 86, devised formula as missionary in 1925 [Dr. Harry Miller]. *Los Angeles Times.* July 31. p. 19. Saturday.
• ***Summary:*** "Starving babies, often cast out to die because the parents have no way to feed them, inspired Dr. Miller to undertake his research [on milk from soybeans 40 years ago]... Today in Hong Kong about 25,000 cases of 24 bottles in a case are delivered daily... In America, the use of soybean formula for infants is growing rapidly–at a rate of 15-20% a

year. Dr Miller has seen plants to create his product rise in China, Japan, Formosa, the Philippines, Singapore, Thailand, and, of course, Hong Kong. 'The nutritional qualities of the soybean are a gift to the world,' he said, 'and I have not copyright.' He said that U.S. studies showed that 14% of the people here are allergic to some degree to cow's milk and 7% of new-born infants get severely ill from cow's milk formula. There is no allergy rate from soybean milk, he said... Since 1960 he has been in Hong Kong raising money for two hospitals." One served refuges from Red China. As a surgeon, he has performed more than 3,000 goiter operations during his lifetime. Address: Times religion editor.

2044. De, Sasanka S. 1965. The present state of protein-rich food development in Asia and the Far East. *J. of Nutrition and Dietetics* (*India*) 2(3):166-76. July. [23 ref]
• ***Summary:*** Gives an excellent account of soymilk production in Asia during the mid-1960s and a brief history of the FAO/WHO/UNICEF/Protein-rich food program. "The First International Conference sponsored by FAO, WHO and Josiah Macy Jr. Foundation (New York) held in Jamaica in 1953, discussed the biological, technical and pathological aspects of protein malnutrition. The next Conference on 'Human protein requirements and their fulfillments in practice' held in Princeton in 1955 under the same sponsorship, gave detailed consideration to the testing of new protein rich foods before their use in child feeding was recommended.

"The Protein Advisory Group (PAG) was established by the Director-General of WHO in 1955 to 'act on behalf of WHO in rendering advice to FAO and UNICEF on the safety and suitability for human consumption of proposed new protein-rich foods.' The PAG... became a tripartite FAO/WHO/UNICEF Protein Advisory Group in 1961."

Soybean milk: "In 1939, K.S. Lo established a firm known as 'Hong Kong Soyabean Products' to produce sterilized bottled soya milk. The two plants of the firm in Hong Kong produce 12,000 cases (24 x 7-oz. bottles per case) a day."

Also discusses miso, natto, tempeh, full-fat soya flour, soya presscake and meal, groundnut protein isolate. Address: Regional Office for Asia and Far East, FAO, Bangkok, Thailand.

2045. Dinshah, Freya. 1965. The vegan kitchen. Malaga, New Jersey: The American Vegan Society. 16 p. Index. 28 cm. Spiral bound. *
• ***Summary:*** The first edition of this pioneering vegan cookbook was published as part of a special issue of the Dinshah's magazine *Ahimsa*, issued in July 1965. *The Vegan Kitchen* runs from pages 4 to 19. It was first published as a spiral-bound book in Jan. 1967, with the third edition. As of 1991, the book has sold more than 30,000 copies.

A lifetime vegetarian, the author (whose photo appears on page 2) was born and raised in England, has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher. Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey.

2046. Gitzelmann, Richard; Auricchio, Salvatore. 1965. The handling of soya alpha-galactosides by a normal and a galactosemic child. *Pediatrics* 36(2):231-35. Aug. [23 ref]
• ***Summary:*** Soy formulas contain galactose [a sugar, less soluble and less sweet than glucose] in the form of the alpha-galactosides stachyose and raffinose. A soy formula was used in the treatment of galactosemia, an inherited metabolic disorder in which the sugar galactose accumulates in the blood due to deficiency of an enzyme catalyzing its conversion to glucose. Soybean oligosaccharides cannot be metabolized in the small intestinal tract by endogenous enzymes from the animal due to the absence of a-1, 6-Galactosidase activity in intestinal mucosa.

Note: This is the earliest document seen (Nov. 2003) that mentions alpha-galactosides in connection with soybeans. Address: M.D., Lab. for Metabolic Research, Univ. Children's Hospital, Zurich, Switzerland.

2047. Hackler, L.R.; Van Buren, J.P.; Steinkraus, K.H.; Rawi, I. el; Hand, D.B. 1965. Effect of heat treatment on nutritive value of soymilk protein fed to weanling rats. *J. of Food Science* 30(4):723-28. July/Aug. [11 ref]
• ***Summary:*** "The effect of heating soymilk at 93º and 121ºC for varying periods was evaluated in weanling rats. Also determined were trypsin inhibitor retention and available lysine values."

Soybeans were soaked overnight in 3 times their weight of tap water. While soaking, the soybeans absorbed approximately 1.2 times their weight in water.

Cooking soymilk at 93ºC for 1-6 hours made no sense as it did not improve its quality. However pressure cooking soymilk at 121ºC for 5-10 minutes gave the best results. Address: New York State Agricultural Experiment Station, Cornell Univ., Geneva, New York.

2048. **Product Name:** Plantmilk (Soymilk. Renamed Plamil by Oct. 1966. Called Soya Plantmilk in Feb. 1979. Later renamed Soya Milk).
Manufacturer's Name: Plantmilk Ltd. (Renamed Plamil Foods Ltd. in 1972).
Manufacturer's Address: Tithe Farm, High St., Langley, Slough, Buckinghamshire, England.
Date of Introduction: 1965. August.
Ingredients: Incl. soya protein isolate.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: *The British Vegetarian.* 1965. July/Aug. p. 316. "Availability of Plantmilk." "Our

private carrier service makes deliveries to the London and Birmingham areas, and to most towns in the following counties:-" Seventeen counties are listed. "Plantmilk may, therefore be obtained from your nearest Health Food Store in the above defined areas... Those living outside these counties may obtain supplies by mail order service from: 'Healthiways', 5 Tranquil Passage, Blackheath, London, S.E. 3."

The British Vegetarian. 1966. Jan/Feb. p. 34-38. "The development of Plantmilk." Plantmilk is sold in cans as a liquid, concentrated to twice the recommended concentration. "The protein content of plantmilk is higher than human milk and about the same as cow's. It is derived from two sources–leaves and soya."

The British Vegetarian. 1966. Sept/Oct. p. 444. "Plantmilk News." "The availability of 'Plamil' and other products made by Plantmilk Ltd. is now improved by the recent extension of our distribution service to Staffordshire, Worcestershire, Warwickshire, Derbyshire, Northamptonshire, Leicestershire, Bedfordshire, Hunts. [sic, Hampshire], Rutland, and North Norfolk. From 1st October supplies of our lines will be available to Health Food Stores anywhere in England, Scotland, Wales and Northern Ireland.

The British Vegetarian. 1967. March/April. p. 147. "Attractive new label for 'Plamil'" Cans of liquid Plamil plantmilk will soon be appearing in Health Food Stores with a more attractive label, bearing a pleasant scenic design in white and green, giving a fresh, country appearance." On p. 180, in a letter from C.A. Ling, we learn that Plantmilk Ltd. is located at Langley, Buckinghamshire, England. In the May/June 1967 issue, p. 246, we learn that the protein in Plamil "now comes mainly from soya (one of the best plant proteins nutritionally)."

Ad (full-page) in *The British Vegetarian.* 1968. Jan/Feb. p. 5. "The milk of tomorrow, today!" The label reads: "Plamil- Use like milk. Delicious used neat as a cream."

The British Vegetarian. 1969. Sept/Oct. p. 461-63. "Plantmilk."

Letter to *The British Vegetarian.* 1970. May/June. p. 206. "Cost of Plantmilk." The writer complains that at 3/4d. per tin it is too expensive.

Ad (¼-page) in *The British Vegetarian.* 1970. May/June. p. 207. "Meat and Milk." "You can't have one without the other!" Letter to *The British Vegetarian.* 1970. July/Aug. p. 290, 290. "Plantmilk" It is too expensive. "After all, 2s. 6d. per pint for Plamil against 11d. per pint for cow's milk is a big difference. [Note: Since 12d. = 12 pence = 1 shilling, Plamil costs 2.7 times as much as cow's milk.] Letter from Frank Wokes to *The British Vegetarian.* 1970. Sept/Oct. p. 462. It would be easier and cheaper to prepare plantmilk in India from soya beans grown domestically using Dr. Harry Miller's original method. The product would be cheaper than cow's milk.

Alive magazine. 1978. June. p. 14-15; Ad in *Alive* magazine. 1979. Jan/Feb. p. 19. Letter from Plamil Foods Ltd. They were the pioneers in liquid soya milk in England in 1965.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 118. "One of the first successful soymilks in Europe after World War II." The first soymilk made or sold in England after the war.

2049. *Soybean Digest.* 1965. A pilot program on soy beverage. Aug. p. 26.
• ***Summary:*** "A pilot Food for Peace program which will introduce soy beverage in six foreign countries will be launched shortly" by USDA and the Agency for International Development."

"The USDA will purchase 500 metric tons of full fat and 5,000 metric tons of defatted fortified soy beverage powder which will be distributed by U.S. voluntary relief agencies in ongoing Food for Peace programs.

"Tests will be conducted in school lunch programs, hospitals, orphanages, and maternal and child health centers." It will also be tested in CARE child feeding projects in India.

"The soy beverage, based on a formula developed by the Soybean Council of America, contains a milled soybean product as its principal ingredient with added nonfat dry milk and corn dextrose, fortified with vitamins and minerals. When mixed with water it provides a nutritious beverage for human diets." Photos show: (1) An elderly man (a Hong Kong refugee) holding a box bearing the U.S. AID logo. (2) Three children drinking from metal cups.

2050. *Times* (*London*). 1965. Delegates taste plantmilk: New liquid food. Sept. 1. p. 6, col. 6.
• ***Summary:*** "From our correspondent. Derby, Aug. 31. Drinka pinta milka day but make it plantmilk, Dr. Alan Stoddard advised delegates at the International Vegetarian Union's world congress at Swanwick, Derbyshire, today.

"Dr. Stoddard, a medical practitioner, is chairman of Plantmilk Ltd., a society founded to produce liquid food that is a commercial substitute for milk. Delegates were offered drinks for plantmilk: about 10 per cent of those who are vegetarians never drink cow's milk."

2051. Cook, L.N.; Andrews, B.F.; Falkner, F.T. 1965. Response of low birth weight infants to soybean formula. *Southern Medical Journal* 58:1594-95. Dec.
• ***Summary:*** "Ten infants weighing between 1200 and 2000 grams were fed a standard milk protein formula, 20 calories per ounce at 2.5 to 3 ounces per pound of body weight per day.

"Ten infants weighing between 1600 and 2270 grams were fed a soybean formula at 2.5 to 3 ounces per pound per day.

"Infants were continued on the soybean formula until

they reached a weight of 2250 grams or until clinical complications dictated the discontinuation of the formula.

"Results: The mean weight gain on the milk protein formula was 23.9 grams per day.

"The mean weight gain on the soybean formula was minus 8.24 grams per day.

"The above data may reflect the difference in nutritional value of the two formulae and would suggest that soybean preparations such as that mentioned above are of questionable value in the low birth weight infant." Address: Univ. of Louisville School of Medicine, Louisville, Kentucky.

2052. Gigon, Jean-Pierre; Hartmann, G. 1965. Soja als vollwertige Sondennahrung [Soya for high-quality enteral tube feeding]. *Zeitschrift fuer Klinische Medizin* 158(7):545-68. [35 ref. Ger; eng]

• ***Summary:*** About Naga-di and Naga-sonda, made by Firma Nago AG, Olten, Switzerland. Naga-sonda has a higher content of sodium chloride than Naga-di. In French, *sonde* means "probe." This product is typically administered to a patient through a tube that goes in through the nose and down into the stomach. "In a short time a new diet preparation (Naga-di, whose composition is shown in Table 5), used for the normalization of serum lipids, will be put on the market. This nutritional product, which has a high content of unsaturated fatty acids (85% of the total fatty acids) makes possible the lowering of cholesterol as well as total fats. The pure vegetable raw material is derived from the soybean... A clinical report was made on 15 patients, who were tube-fed exclusively this soy-based preparation for a total of 375 days (9-90 days uninterrupted each). Based on metabolic balance studies on 9 patients and clinical and biochemical controls, it was demonstrated that high-quality nutrition for a longer time period is possible. All patients studied were very sick, presenting a deep catabolism caused by tumors, paralysis, or severe infections. The nutritive effect of the soybean product could be demonstrated by: 1. Increase or constance of body weight. 2. Positive nitrogen balance in most patients. 3. Increase in the albumin / globulin ratio, partly to a normal level. 4. Amelioration of the general status.

"The individual tolerance of the soybean food is good; diarrheas have rarely been observed. The soybean product is considered a complete food of vegetable origin. The composition of amino acids is discussed." Address: Chirurgische Universitaetsklinik; 2. Medizinische Universitaetsklinik. Both: Buergerspital, Basel, Switzerland.

2053. Virendrasingh, Maharajkumar. 1965. Soybean–The crop without a peer: Answer to India's protein malnutrition. *Commerce* (*Bombay*) 111(2852):A120-A122. Dec. Annual number at back of volume. [13 ref]

• ***Summary:*** One of the oldest known crops, the soybean dates back about 5,000 years. It was first described in a materia as long ago as 3838 B.C. prepared by the Chinese Emperor Sheng-Nung [sic], who was known as the "Heavenly Farmer."

"Soybean eaters are more physically fit and have more stamina than people who subsist on rice, millet and other grains."

In 1804 the soybean was introduced to the USA [sic]. In 1898 many soybean varieties were imported and tested, but not until 1924 did it enter into the official record [sic], "according to pioneer, Bill Baker from California of soybean fame." The USA discovered the value of soybean during World War I, but gave it its rightful place during World War II.

"In India, as nutritionists and agronomists came to know of the immense possibilities and nutritional value of the soybean, attempts were made to grow it, but it has not caught on, perhaps because the varieties tried were unsuitable for propagation in the soil and climate of our country. Further, there was no ready market to take the small produce and it did not prove of economic advantage.

"High nutritive value at low cost: The soybean can be virtually regarded as 'the miracle golden bean of the twentieth century,' because it is an oilseed with a high protein content. The country that has this crop on a major scale or can develop it need not worry about protein malnutrition among its people.

"The soybean has the supreme quality of being the only vegetable protein to possess all the essential amino-acids required for maintenance and growth. It is a complete vegetable protein like meat, milk, eggs and cheese,..."

"Research workers at the Central Food and Technological Research Institute at Mysore maintain that the soybean contains twice the quantity of protein as the common pulses of India." For Indians today, the best source of oilseed protein from crops grown in India is the groundnut. "However, on equal production per acre, the soybean yields twice the quantity of protein. Therefore, if soybean growing can be developed, we stand a better chance of meeting the protein needs of our people.

"Uses in Indian diet: The Indian diet has a preponderance of cereals, especially rice and wheat, which of themselves do not have enough proteins and protective elements to build and maintain health.

"The soybean is described as the poor man's meat."

"Other protein products developed recently are soy beverages and soy soups. Soy beverage can replace milk. Two tablespoons stirred in a glass of water can provide the protein deficiency in our diet. Soy protein fibres have been developed and when flavoured can be so prepared that vegetarians can have the pleasure of having chicken and meat made from vegetable protein.

"Miss T. Phillip, Principal of the Institute of Catering Technology and bean Council of America, Inc., provided. The work was sponsored by us. These products can be

incorporated in popular Indian dishes as *Nimki, Sev, Samosas, Pakoder, Sambar, Alu Chole, Batata bhajee, Dalwada, Rava dosa, Oppuma* and sweets like *Ladoo, Shakarpara, pooran poli, Sooji Halva.* Soy flour did well in bakery product. Miss Phillip has reported excellent acceptability."

Soybean is an excellent source of low-priced, edible vegetable oil. "The first ever major agreement by the U.S. for the supply of soybean oil to India was signed on 30th September 1964 for a quantity of about 75,000 metric tons valued at about Rs. 9 crores. The oil began coming in March 1965. The price has averaged Rs. 1,525 a metric ton inclusive of freight and duties. On the whole, it has been half the price of domestic peanut oil. It has helped the *vanaspati* industry to meet its requirement of raw materials... Soybean oil helped to keep the price of *vanaspati* at a reasonable level as compared with liquid edible vegetable oils. The industry has approached the Government of India to request for another 150,000 metric tons of U.S. vegetable oil, and it is hoped at the time of writing this that it will come through. U.S. vegetable oil can be supplied under title I of P.L. 480."

Contains a long quotation by Glenn H. Pogeler, President of the Soybean Council of American, in a Dec. 1964 address to the Delhi Fats and Oils Symposium. It begins: "The United States consumer pays a smaller proportion of his income for food than any other consumer in this world."

Tables show: (1) India: Production of the five major oilseeds and their products (1958-59 to 1963-64)–Groundnut (by far the largest), rape and mustard, sesamum, linseed, and castor seed. (2) Oilseed yields (pounds per acre) of the above five (1958-59 to 1963-64): Peanuts (in the shell) have by far the largest yield–622 to 727 pounds/acre. (2A) Cost of protein content of major foods (wholesale on world market): The 3 least expensive sources (in U.S. cents per kg) are defatted soybean flour (40), fish flour (50), dried skim milk (51). (3) USA soybean oil and meal, supply and disposition. (3a) Consumption per caput per annum of (visible) food fats and oils (in lbs.): Netherlands 70, West Germany 56, Australia 49, USA 46, India 11. Address: Director for India, Soybean Council of America, Inc.

2057. **Product Name:** Loma Linda Soyagen (Milk Free Soy Beverage Powder) [Carob].
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505. Phone: 714-687-7800 (3/88).
Date of Introduction: 1965.
Ingredients: Soy solids, brown sugar, soy oil, carob powder, soy lecithin, salt, tri-sodium citrate, calcium carbonate, vegetable mono- and di-glycerides, artificial and natural (vegetable) flavors, vitamins (ascorbic acid, beta-carotene, DL-alpha tocopheryl acetate, vitamin A palmitate, cholecalciferol, phytonadione, cyanocobalamin).
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
Nutrition: Per 1 oz powder (approximately ¼ cup): Calories 140, protein 6 gm, carbohydrate 16 gm, fat 6 gm, cholesterol 0 mg, sodium 160 mg, potassium 290 mg.
New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1965; the label is dated "3/77"–March 1977. A less sophisticated version of this product with the same name appeared in 1948.

A color photo (taken in Sept. 1980 in California) shows different flavors and sizes of canned Soyagen and Soyalac.

2058. **Product Name:** Prosobee (Non-Dairy Infant Formula Based on Soy Protein Isolates) [Ready to Feed, or Concentrated Liquid].
Manufacturer's Name: Mead Johnson & Co.
Manufacturer's Address: 2404 W. Pennsylvania Ave., Evansville, IN 47721.
Date of Introduction: 1965.
Ingredients: Incl. soy protein isolate and water.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: Fomon. 1967. Infant Nutrition. Page 230 states that ProSobee contains a "soy isolate fortified with methionine." Harkins & Sarett. 1967. Journal of Nutrition. 91(2):213-18. "The first true infant formula based on soy protein isolates." Sold at Bill's Drugs in Lafayette, California. 1989. Sept. 7. A 13 oz can of concentrated formula, to which water must be added, retails for $1.69.

2059. **Product Name:** Kreme-O-Soy, and Infa-Soy (Hypoallergenic Baby Formula).
Manufacturer's Name: Nutrition International Corp. (Formerly Madison Foods).
Manufacturer's Address: Box 415, Madison, TN 37115.
Date of Introduction: 1965.
New Product–Documentation: Soybean Blue Book. 1965. p. 115. Also listed in 1970. Note: Kreme-O-Soy was soymilk.

2060. Onochie, B.E. 1965. The potential value of soybean as a protein supplement in Nigerian diet. In: 1965. Proceedings of the Agricultural Society of Nigeria. Papers presented at the Third Annual Conference. Vol. 4. See p. 43-45. [18 ref]
• ***Summary:*** "During the second World War years, the Department of Agriculture in Nigeria made investigations on methods of incorporating soya beans into the diet of Southern Nigerians. Attempts were made to prepare 'Akara balls;' this entailed soaking soya beans overnight to remove the testa, milling and preparing a paste which was later fried in small lots in palm oil... the final product was not accepted by the people because of a peculiar 'beany' taste which developed during the course of preparation. Another preparation–the 'olele' was similarly rejected on account of both the colour and taste.

"Possible uses of soya bean in Nigerian menu: Incorporation into bread, cowpea substitute, use in soups, soya bean milk." Address: Univ. of Ife, Ibadan Branch, Ibadan.

2063. Brandemuhl, William. 1965. Tofu (including Aburaage and related products): Frying Aburaage, Atsuage, Hirosu / Ganmodoki, Okara, Soybean Milk (Continued–Document part IV). In: William Brandemuhl. 1965. Soybean Utilization in Japan. San Francisco, California. xxii + 478 p. See p. 137-201, Unpublished manuscript. 28 cm. [18 ref]

• ***Summary:*** (Continued). “Frying Aburaage: Aburaage is usually fried in rapeseed oil with soybean oil being occasionally used. Frying is accomplished in two stages as Figure 56 indicates. The containers used to fry are usually housed with bricks and heated by oil and blower although wood is sometimes used. A wood stoked fryer has the disadvantage of uncontrollable temperature. The oil containers are provided with hoods but as seen in Figure 57 cleanliness is difficult to maintain.

“The number of double oil containers varies with the size of the maker with a slightly larger than average maker processing about 1,000 Aburaage at a frying rate of about 120-150 per hour so at least two vats are needed. Each of the double containers are about 28 inches square and 2½ inches deep. Although it seems that the containers are completely separated by a partition actually a three millimeter space exists between the bottom of the oil vat and the partition so that a certain amount of oil circulates between the two vats.

“Although most vats are as pictured in Figure 57 some have slanting sides for easier insertion of the raw Aburaage and conservation of oil. To insure even frying on both sides of the Aburaage as well as to increase speed of frying one of the two vats used for frying the same Aburaage has a wire mesh rack that is constructed to fit inside the vat. Such mesh is hinged to the container at the rear so by suitable attached

wire or rope, the mesh can be easily controlled. A weight is put on the mesh so that the buoyancy of the frying Aburaage will not raise the mesh and defeat its purpose. In addition to the above equipment three hand utensils are used for frying Aburaage, one is a dipper (seen in foreground of Figure 57), for pouring oil over the Aburaage, another is a wire mesh spatula about 10 inches in diameter (see Figure 58) used to turn and individually press certain Aburaage, and the third is a long metal forceps for removing the Aburaage from the oil. Although equipment is supposedly cleaned everyday the oil in use is unusually dark although clean oil usually stored in a tank above the working area delivers large quantities of oil quite often.

"Given the above equipment Aburaage are fried in the following fashion. About 12 Aburaage are taken by hand four at a time from the trays shown in Figure 56 and inserted into the number one vat of oil. The oil in this vat has a temperature of around lOOºC. Immediately upon insertion the Aburaage sink to the bottom of the oil. Two and one half minutes later they rise to the surface and at that time another batch of Aburaage are inserted in the same vat but the latter do not interfere with the frying of the first batch because they sink. As soon as the first batch rises they are turned and selectively pressed with the wire mesh spatula and the dipper mentioned above is used to pour oil from vat number two at 180-21Oº C onto the uncooked side of the Aburaage. About five minutes after insertion the Aburaage are transferred to vat number two and pressed under the surface of the oil with the hinged wire mesh and weight. About three to four minutes later the golden brown Aburaage are removed with the metal forceps and placed on a slanting wire rack adjacent to the number two vat. The length of frying time varies with the temperature of oil that each maker might use so that generalizations cannot be made, however each maker attempts to produce the largest Aburaage possible given the size of raw Aburaage used. If frying is successful the Aburaage will first become very puffed and then collapse having then a skin-like surface. The void space may then be used after suitable cutting for holding rice, one of the most popular ways to prepare Aburaage. The 1.8 liters of oil that are absorbed into 100 Aburaage make the protein rich Aburaage very rich in oil also. One reason why the use of meal has been successful for Aburaage is that oil absent from raw Aburaage is replaced in great part by frying.

"After excess oil has dripped from the Aburaage on the wire tray, they are removed and placed on another wire tray and stored in a wooden rack until marketed. The form the 240 gram Aburaage takes is as shown in the center rear of Figure 59.

"Sushiage is made using exactly the same materials and procedures as Aburaage except that Sushiage is less than one half the size of Aburaage as can be seen when comparing both in Figure 59 and Figure 57 (Sushiage) with Figure 58 (Aburaage). Length of frying Sushiage has to be compensated so that total frying time is usually less than eight minutes.

"The Japanese people delight in consuming a slice of raw fish set upon a small ball of rice but since fish is expensive a quantity of rice packed inside a split Sushiage often acts as an inexpensive substitute.

"Atsuage (see right front, Figure 59) may best be described as being two different products although marketed as the same. Standard Tofu which cannot be sold on the day it is processed is on the next day cut into triangular pieces one inch thick with legs about two and one half or three inches long. This product when fried only in the hot oil vat for a short time is called Atsuage. Since it is small it can easily be used when a piece of Aburaage is too large for the required use. Demand for Atsuage is usually higher than what can be made from the varying quantity material remaining each day so Atsuage also has to be made from regular batches of Aburaage resulting in products of two different qualities but not distinguished as such. A little known fact is that Tofu makers make nearly as much profit on cutting old regular Tofu into four pieces, frying, and selling as Atsuage as they do on selling regular Tofu.

"Hirosu (also called Ganmodoki) is pictured in Figure 59 on the left front. It is composed of old regular Tofu, old Yakidofu (after the roasted surface is removed), the trimmings obtained when cutting Aburaage products, a shredded vegetable (usually carrots), ground yam, and sesame seeds. The first three materials are put into a cotton bag and pressed with a stone or the mechanical press if it is free so that a great portion of the water is removed.

"After removing the material from the press, the shredded carrots, ground yam, and sesame seeds (the sesame seeds may also be placed in the top of the material after formed) are mixed together by hand. Then the paste-like material is shaped into balls the size of one scoop of ice cream. In fact an ice cream scoop is sometimes used for shaping; otherwise it is done by hand. The balls are then put in the low temperature oil vat and allowed to remain submerged for a short while, then transferred to the high temperature oil (180-200ºC) and fried until golden brown. Hirosu is more often used by poor people than other Aburaage products but not limited to same.

"Okara, as mentioned before, is the residue of the various filterings [sic] of the raw Tonyu. It is usually sold to dairy farms for feed at $.01 (four yen) a kilogram. Figure 60 shows a farm owned truck with Okara from a number of Tofu shops located in the farm's milk market. Not all Okara is fed to cows however, as it is also a popular food for rabbits, and Tofu delivery people also carry it for selling as dog food. Although for cleaning purpose other commercial products have replaced Okara, it can be used as a floor and hand cleaner. A small amount is also sold for human food (see Figure 61) with very poor people accounting for most of the food use.

"Soybean milk: Although other places in Asia use soybean milk with large and small scale factories producing same for a milk deficient population, in Japan soybean milk is not significantly consumed, although one modern factory is producing a similar product, however initiation of production is too recent to tell if this product will be successful. The Tonyu of Tofu production would seemingly be marketed but it is not because of the availability of fresh milk. Such was not the case up to about 25 years ago when nearly every Tofu shop sold Tonyu for direct human consumption and even for enriching other food products such as bakery goods.

"The Tofu factory: Figure 62 shows the production area of a Tofu factory employing six persons and producing the following amount of Tofu per day:

"Products. Pieces
"Regular Tofu 560
"Yakidofu 150
"Aburaage 1,200
"Sushiage 2,700
"Atsuage 400

"This factory is much larger than average yet for the above Production only 140-200 kilograms of soybeans are used. It might be imagined that to employ six people, hand work is the rule rather than the exception" (Continued). Address: San Francisco, California.

2064. Davis, Adelle. 1965. Let's get well. New York, NY: Harcourt, Brace & World. 476 p. Index. 18 cm. [2402* ref]
• ***Summary:*** This book is about various common health problems and diseases and how they can be treated or cured by changes in diet. These include cholesterol problems, heart attacks, overweight, ulcers, diabetes, arthritis, infections, skin problems, digestive tract problems, allergies, liver damage, gall bladder problems, gout, kidney diseases, blood pressure, disorders of the nervous system, anemia, women's problems, bone problems, surgery, accidents, burns, what about sex?, eye problems, cancer, Last chapters: The two unvarying rules, planning your nutrition program, a fortress against disease, medical references.

Soy lecithin, soy flour, soy milk, and soy oil (source of linolenic acid and vitamin E) are widely discussed.

"Adelle Davis [Miss], one of the country's best-known nutritionists, studied at Purdue Univ., graduated from the Univ. of California at Berkeley, and took postgraduate work at Columbia Univ. and the Univ. of California at Los Angeles before receiving her Master of Science degree in biochemistry from the Univ. of Southern California Medical School." Note the large number of references in this book. Her other books were "Let's Cook It Right" and "Let's Have Healthy Children." Over 8,000,000 Adelle Davis books in print. Note: Adelle Davis died in 1975. Address: Los Angeles, California.

2065. LaBarge, Margaret Wade. 1965. A baronial household in the thirteenth century. London: Eyre & Spottiswoode. 235 p. See p. 98-99. Illus. Index. 22 cm. [50* + 250+ endnotes]
• ***Summary:*** This is the earliest known "private account of the day to day life of an English noble family. It is based mainly on the household of Eleanor de Montfort (sister of Henry III and Countess of Leicestershire) in the fateful year 1265" (from the Publisher; rear cover).

The book is mainly a description of daily life in the medieval household of an earl. The earls of England were a small group–scarcely a dozen were active at any one time in the 13th century. All were wealthy, and had political power and close ties to the king. The symbol of an earl's power was his castle, and in this book the main castle is Dover Castle. The household account ("household roll") on which this book is based, is a summary made by the steward of the household's daily expenses. "The earliest of these private household accounts, one which consists of seven months of the year 1265, is that of the countess of Leicester" (p. 13).

Pages 98-99: A 14th century cookery book (*Forme of Cury,* 14, 87) "suggests that rice should be used as a side dish with meat, or in a 'blank-manger' [blancmange] with chicken meat, milk of almonds and fried almonds.

The combination of almonds and rice is found frequently, "since almonds play an important part in many medieval recipes. They were relatively cheap, and another staple of Anglo-Spanish trade. Besides being used in cooking, they were often blanched and served as dessert with dried fruits. The amounts used were very large; Edward's royal household used 28,500 pounds of almonds in 1286, as compared with 6,600 pounds of rice. [1] The countess bought 280 pounds of almonds during the period of the roll, and 5 pounds cost only 1*s.* [2] Almonds seem to have had still another use, as a cosmetic. King Edward's ten-year-old daughter, Eleanor, was provided twice with almond and violet oil for her own special use" [3]. Address: England.

2066. Li, Shih-chen. comp. 1965. Pen-ts'ao kang-mu [Collected essentials of herbs and trees. Illustrated compendium of pharmacopoeia with commentaries]. Hong Kong: Commercial Press. [Chi]*
• ***Summary:*** This 1965 edition of the classical work incorporates the following works on plants by earlier authors, now largely unpreserved, which were cited extensively by Schafer (1977) in his chapter: Chen, Ch'üan. *Yao hsing pên ts'ao.*

2067. Poey, S.H. 1965. Trial of soy milk on children

older than 5 months. *Paediatrica Indonesiana* 5:599-605. Supplement. [4 ref. Eng]
• ***Summary:*** Indonesia is not self-sufficient in cow's milk, so large quantities are imported for infant feeding and other needs. For growing infants, breast milk or cow's milk is indispensable. But all the space where dairy cattle might be pastured is already used for growing rice.

So the Indonesian government is taking other steps to supply the population needs of its people. "It is already know that the soybean is a good source of protein. Since soybean can easily be grown in Indonesia, and is very popular among the population," there great hopes that it can fill these protein needs. "But can soybean replace the cow's milk entirely? Can it also replace breastmilk as the food for infants as cow's milk can do?

"The government has founded a soybean [sic, powdered soymilk] factory in Jogjakarta. The product, called saridele, has been tested on animals...;" the results show that it has a high P.E.R. value, especially after adding rice flour.

The purpose of this study is to try the soybean flour prepared by the government factory as a 100% substitute for cow's milk or breastmilk on infants of 5 months or older. Trials were conducted on 35 babies, which were divided into 3 groups. A number of the infants refused the soy bean milk. A graph shows that the infants fed soy bean milk has the slowest weight increase of the three groups; they weighed on average about 1 kg less at the age of 12 months than the infants in the other two groups. Address: Dep. of Child Health, School of Medicine, Univ. of Indonesia, Jakarta.

2068. Photograph of Végélact ad from about the 1960s. 1965? France. Undated.
• ***Summary:*** Letter (e-mail) from Hervé Berbille of France. My last purchase is in the attached file. I do not have any idea of when it was distributed (it is not a publication and the laboratoires Boutroux do not exist any longer), but I suppose it was in the 1960s.

2069. Worthington Foods, Inc. 1965? A food plan for fitness (Leaflet). Worthington, Ohio. 2 p. Undated. Front and back. 28 cm.
• ***Summary:*** This glossy color leaflet contains a "Daily food guide for growth, energy, maintenance and resistance." It recommends a vegetarian diet containing: 4 or more servings daily of fruits and vegetables. 3 or more servings daily from the milk and cheese group (incl. Soyamel–A Powdered Soy Milk). 2 or more servings daily of protein foods (incl. many canned or frozen Worthington products). 4 or more servings daily of breads and cereals. Limited servings daily of "Plus foods" such as oils and fats, sweets, desserts, etc.

On the back panel is a description of the vitamins and minerals needed in a healthy diet. Color photos show: Prime, White-Chik, Big Pats, Soyameat, Chili, Choplets, Veja-Links, Entrée, Prosage. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

2070. Hartman, Warren E. 1966. Vegetarian protein foods. *Food Technology* 20(1):39-40. Jan.
• ***Summary:*** "Early Worthington products bore the mark and influence of John Harvey Kellogg and the Seventh-Day Adventists. In 1866 the Adventists established the forerunner of the Battle Creek Sanitarium and the Battle Creek Food Company, in Michigan. Continuous experimentation with materials and methods to provide a wholesome palatable non-flesh diet led to the invention of breakfast cereals, peanut butter, cereal coffee substitutes, and decaffeinated coffee. It is not generally realized that these products, now a regular part of the diet of both meat-eaters and vegetarians, emanated from the vegetarian habits of the early Adventists."

"Until recently, the majority of the U.S. population was

totally unaware of the so-called vegetarian protein food products, and the food industry gave them little more than passing attention. Undoubtedly, the greatest contribution to the present technology and status of vegetarian protein foods was that of Robert A. Boyer and his method of processing edible protein, first by solubilizing and then utilizing textile spinning techniques to orient the molecules in continuous filaments. Convinced of a future for vegetarian protein foods, Worthington obtained a license in 1957 under the Boyer patent..."

"In 1960, Worthington acquired Battle Creek Food Company, pioneer of the vegetarian protein foods industry. And in line with its modernization and diversification policy, Worthington has recently acquired Nutrition International Corporation and its subsidiary, Madison Foods, Tennessee. Prime interest focused on 'Infa-soy,' Nutrition International's highly palatable hypoallergenic liquid soy formula for infants. Another important addition to the Worthington complex is the new Research and Development Center...

"The first textured soybean protein fiber product marketed in the U.S. is Worthington's frozen 'Fri-Chik,' an extruded formulation simulating a small fried portion of white chicken meat. This same formulation was next canned in a light gravy and called 'Soyameat–Fried Chicken Style,' and was also later marketed as frozen and canned 'White-Chik' in large rolls for slicing, dicing, etc. The approximate analysis of these simulated chicken products: protein 20-26%, fat 18-25%, and carbohydrate 2-3%."

Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "soybean protein fiber" to refer to edible spun soy protein fiber. Address: Worthington Foods, Inc., Worthington, Ohio.

2071. Stoddard, Alan. 1966. The development of plantmilk. *British Vegetarian.* Jan/Feb. p. 34-38.
• ***Summary:*** The article begins: "In 1847 the Vegetarian Society was founded. In 1944 the Vegan movement was started. In 1956 the Plantmilk Society was inaugurated. These are the historical dates of progressive humanitarian ideas in this country."

A number of nutritious alternatives to cow's milk have been put on the market: Velactin, Wanderlac, Soyalac, and Almondlac. The latest product is called Plantmilk. It is sold as a liquid, concentrated to twice the recommended concentration. "The protein content of plantmilk is higher than human milk and about the same as cow's. It is derived from two sources–leaves and soya. The fat is derived from the soya bean and palm oil, the carbohydrate from cane sugar and soya, the minerals from leaves and soya. Calcium is added to bring the level near to human milk and vitamins A and D and B-12 are also added." Vitamin B-12 is added at the level of 0.5 microgram per 100 gm of Plantmilk.

About £20,000 has already been spent on the research, development and production of Plantmilk. "Further improvements will be made until a perfect food is evolved.

"Most of the research into the formulation of the milk has been in the extraction of protein from leaves, cabbage, cauliflower, pea pods, etc.," and the greatest difficulty has been to separate the chlorophyll–the green part of the leaf–from the protein. It has finally been accomplished with activated carbon.

"First of all the cleaned cabbage leaves are broken down by an apparatus called a 'food Tec' which has large numbers of sharp blades which divide the cabbage into minute pieces. Water is added to carry the product to the next stage which is that of the separation of the chlorophyll by charcoal from the protein. This gives an almost clear fluid which is then heated to precipitate the protein. The filtrate is then concentrated to form what is now called the 'curd.' This vegetable protein has most of the amino-acids contained therein, but as it is lacking in two essential ones–methionine and cystine, we now have to add soya protein necessary for maintaining life.

"Complete analysis of protein into its component amino-acids is a complex and costly procedure. We have as yet, not had a quantitative analysis of the amino-acid content of Plantmilk but we do know that the sources–viz., the combination of leaf protein and soya protein contain the complete range of known amino-acids, and we are satisfied that Plantmilk alone would sustain healthy life from the protein point of view."

"A small amount of starch comes from the soya protein 'isolate.'" The various ingredients are placed in a mixer and then de-aerated before being fed into a Fryma, which homogenizes them.

Unfortunately reconstituted Plantmilk costs twice as much as cow's milk. And even at this price, the company is operating at a loss. The author urges all vegetarians to buy and use the product. The company's first goal is to make and sell 5,000 cans of Plantmilk a week. By comparison, 50 million pints of cow's milk are consumed each day in Britain. However its present plant and machinery is capable of producing only 2,000 cans/week. So they need bigger machinery and more staff.

Note: This is the earliest English-language document seen (Aug. 2003) that contains the term "soya protein isolate" (or "soya protein isolates"). Address: Chairman, Plantmilk Ltd.

2072. Fries, Joseph H. 1966. Experiences with allergy to soybean in the United States. *J. of Asthma Research* 3(3):209-11. March. Presented at the First International Symposium on Pediatric Allergy. Held 5-6 Nov. at Tokyo, Japan. [10 ref]
• ***Summary:*** The soybean occasionally proves to be highly allergenic in older children and adults. The author studied "30 allergic children of the atopic type all known to suffer from respiratory allergies such as asthma or allergic rhinitis. All either gave significantly positive reactions to

intracutaneous testing with soybean extract, or had been maintained for various periods of time during infancy on a soybean derived milk. Twenty-seven of the 30 children also gave positive intracutaneous reactions to one or more other legumes, suggesting the likelihood of cross sensitivity to these botanically related foods. Only 3 of the 15 children who had been fed soy milk in infancy failed to give a positive cutaneous test to that food, and even these gave positive tests to other legumes... In early infancy it would seem that the target area of allergic sensitivity to soybean is the gastrointestinal tract, and symptoms of diarrhea, abdominal distress, vomiting and the like were observed." Address: 52 Eighth Ave., Brooklyn, New York 11217.

2073. Johnstone, Douglas E.; Dutton, Arthur M. 1966. Dietary prophylaxis of allergic disease in children. *New England J. of Medicine* 274(13):715-19. March. [7 ref]
• ***Summary:*** The authors tried to decide whether feeding of soy-based formulas will actually suppress the incidence of allergy in infants known to be at risk. They followed 240 children until they were 10 years of age. One group was fed evaporated milk and the other a soybean formula. A difference was found between the two groups in the incidence of asthma and perennial rhinitis, 22.3% for the soybean and 42% for the milk. There was no difference in the incidence of hay fever. Address: Univ. of Rochester School of Medicine and Dentistry, Rochester, New York.

2074. James, Isabel. 1966. The use of whole foods. *British Vegetarian.* March/April. p. 141-48.
• ***Summary:*** This is the revised text of a lecture given by the author at the 18th International Vegetarian Union Congress at Swanwick in 1965. After defining whole foods she discusses vegetarian protein foods, including nuts, pulses, and yeast. Under Pulses, the main variety discussed is the soya bean. "This is truly a Wonder Bean!" It can be used to make flour, milk, curds and cheese [tofu], and soy sauce. Or the beans themselves can be soaked and cooked for a long time. "The by-products of the bean are also valuable for pasturage, dry fodder and silage. It seems a pity that such a valuable food should also be used for the production of soap, paint and high explosives!" Address: B.A.

2075. Thurston, Claude E. 1966. *Today's Food* passes 10th birthday. *Today's Food* (*Loma Linda Foods, Riverside, California*) 11(1):3. Spring.
• ***Summary:*** "As this *Today's Food* goes to press we are beginning our eleventh year of publication. Begun as a two-color paper in the spring of 1956, with a circulation of only a few thousand–mostly in California–*Today's Food* is now printed in full color and is circulated from coast to coast to every member of the Seventh-day Adventist church who wishes to receive it. Many thousands of non-Adventists have also requested that their names be placed on our subscription list because they are interested in our vegetarian program."

The Associate Editor, Dorothea Van Gundy Jones is "daughter of the late T.A. Van Gundy, pioneer developer of vegetarian protein loaves and soy milk... Upon completion of her Bachelor of Science Degree at the CME [College of Medical Evangelists] School of Dietetics, she served as a dietetic counselor to a Beverly Hills physician for a number of years before accepting a call to La Sierra College as Director of Food Service. For the past eleven years (during which she became Mrs. Edwin Jones) our nutritionist has traveled widely both in this country and abroad while conducting cooking classes, lecturing before civic groups, camp meetings, and professional organizations of physicians and dentists. Mrs. Jones has also made numerous TV appearances from coast to coast."

Photos show nice portraits of Editor F.W. Edwardy and Associate Editor Dorothea Jones. Address: PhD, Director, Research Lab., Loma Linda Foods.

2076. *Today's Food* (*Loma Linda Foods, Riverside, California*). 1966. Celebrating our 60th anniversary [Loma Linda Foods]. 11(1):5 (back cover). Spring.
• ***Summary:*** Loma Linda Foods has been guided by the wise counsel of Ellen G. White, who began discussing healthful nutrition in 1863. "Actually, the nutrition work of Seventh-day Adventists, who own and operate Loma Linda Foods, began 100 years ago at Battle Creek Michigan... But the denominational affiliation with the old Battle Creek San breakfast foods ended in 1903 and it was not until 1906 that it was reactivated at the Loma Linda Sanitarium in California. Here stoneground wheat bread and healthful cookies and fruit crackers were made in the sanitarium bakery, and in 1907 demand for the products from residents of the growing community forced the construction of a separate building. Here in a combination bakery and store, the business thrived for 30 years.

"Now known as Loma Linda Foods, the new factory continued making fine bread and cookies but added high protein products perfected to take the place of meat in vegetarian menus; whole grain breakfast foods; Breakfast Cup cereal drink [coffee substitute]; and about 1930, began making the first soy milk.

"Demand for Loma Linda Foods quickly outgrew the small delivery truck service developed within a 125 mile area, and when land for a new plant was offered by what was then La Sierra Junior College, ten miles west of Riverside, the move was made.

"Our present plant and Western Division general offices opened in 1938, and in 1951 the Eastern Division headquarters opened in Mount Vernon, Ohio. Developed for 25 years under the leadership of George T. Chapman from Australia, and now managed by Charles P. Miles, Loma Linda Foods is one of 30 food factories owned and operated by Seventh-day Adventists in Australia, New Zealand, South

America, England, France, Denmark, Germany, Switzerland, Africa and Japan.

"Some 300 workers, plus nearly 100 salesmen, are dedicated to the production and distribution of more than three dozen tasty products bearing the Loma Linda Foods label..."

Color photos show: The general offices and main Loma Linda Foods plant at Riverside. Sales representatives and management personnel of the Western Division of Loma Linda Foods.

2077. *Today's Food* (*Loma Linda Foods, Riverside, California*). 1966. None of these healthy youngsters was reared on milk. 11(1):1-3. Spring.
• ***Summary:*** Photos show many healthy infants and children. Commercial soymilk products include:

Soyagen: all-purpose, malt flavored, or carob flavored; in liquid or powdered form.

"Multigen: This new soy milk just now being placed on the market, is specially formulated to supply a total diet for those on a restricted menu. It supplies a higher fat and carbohydrate content and all the nutrition needed for those on a liquid dietary.

High-So-Pro: a high-protein powdered soymilk, low in fat, salt, and carbohydrates that is especially good for those on weight-reducing programs and ideal for diabetics.

"Instagen: an isolated protein soy milk, fortified to provide the essential vitamins and minerals. Instagen has a little lighter color, a little milder flavor, and is a little lower in price.

Whether or not you have dietary problems, if you wish to lower your cholesterol level, or would like to become a complete vegetarian, Loma Linda soy milks provide the easy answer.

"As to those who in years past complained of a 'beany' flavor in soy milk: try it once more–today's product is vastly improved! And for the diehard who still demands a completely different taste, the new Carob Soyagen with its rich chocolate-like flavor comes not only ready to drink, but may be used in any number of tasty recipes for puddings, ice cream, and other dishes."

2078. Vest, M.; Olafson, A.; Schenker, P. 1966. Eine neue Sojamilch als Nahrung fuer Fruehgeborene und reife Saeuglinge Vergleich mit Frauenmilch und adaptierter Kuhmilch [A new type of soymilk for feeding premature or full-term infants compared with mother's milk and modified cow's milk formula]. *Schweizerische Medizinische Wochenschrift* (*Journal Suisse de Medecine*) 96(23):762-68. June. [18 ref. Ger; fre; eng]
• ***Summary:*** The product examined is Bébénago made by Firma Nago, of Olten, Switzerland. "A vegetable infant milk made from soybeans by a new process in which the lipids are separated by centrifugation and kept suspended by the natural emulgators has been compared with breast milk and an adapted cow's milk (albumin milk). Each of the three groups comprised some 25 prematures and 10 full term infants, mainly aged between 1 and 3 months. Some infants, however, were observed for longer periods of up to 1 year. The following criteria were used to assess the results: gain in weight and length, total serum protein, amino-nitrogen, calcium, phosphorus, alkaline phosphatase, iron, optical density (as a measure of lipid content), hemoglobin, red cell, and reticulocyte count. Excretion of fat, fatty acids, and starch in the feces and the pH of the stools were estimated semiquantitatively. Under the conditions of the study the soybean preparation (Bébénago) was found to be equivalent to the other milk preparations tested." Address: From the University Children's Clinic Universitaetskinderklinik, Basel.

2079. *Time.* 1966. Commotion in the bean pit. 88:77-78. July 8.
• ***Summary:*** The soybean is now "the hottest item in the seething U.S. commodities market. Last week futures for soybeans, soybean oil and soybean meal set seasonal records after a month of wild trading." Prices tripled during the month.

"Introduced to the U.S. from Asia in 1804, the soybean did not become a significant agricultural product until World War II cut off normal U.S. imports of fats and oil. From a crop of 193 million bu. in 1945, output rose to 843.7 million bu., worth nearly $2.5 billion last fall. Soybeans are the U.S.'s most valuable agricultural export, ranking ahead of wheat and corn...

"Worthington Foods Inc. takes edible soybean fiber produced by Ralston Purina, turns it into meatless frankfurters, roast beef and fried chicken, sells them to Seventh-day Adventists and vegetarians. Archer-Daniels-Midland Co. is testing a soy beverage to be sold in powder form, and Central Soya has developed an ice cream-like frozen dessert made of soybeans.

"What interests researchers the most about the soybean is its high protein content (up to 50%), and this month Central Soya will begin mass production of Promine, an isolated soybean protein, at a new Chicago plant. Promine binds and emulsifies pulverized meats, such as sausages, meat loaf and bologna."

2080. Assigned to Nago Nahrmittel, A.G. 1966. Improvements in and relating to the production of an extract of soy milk. *British Patent* 1,036,057. July 13. 2 p. *
• ***Summary:*** A soy milk extract is prepared by steeping soy beans in water, wet grinding the soaked beans in the presence of an excess of water, heating the resultant mixture of ground material to above 120 C. to destroy trypsin inhibitor and subsequently cooling in vacuo to between 40 and 60 C. to deodorize the aqueous mixture, and after

physically separating the aqueous mixture into solid matter and an emulsion the latter is sterilized and concentrated. The steeping and/or the wet grinding of the soy beans may be effected in the presence of calcium hydroxide. Sterilization is effected by heating the emulsion to about 150 C. prior to concentration in a vacuum evaporator. The concentrate may be freeze dried, spray dried or dried in vacuo, in the latter two cases with the addition of 5-15% of carbohydrates prior to sterilization. Address: Olten, Switzerland.

2081. *Business Week.* 1966. Soybeans move up on the menu. July 23. p. 82, 84, 87.
• ***Summary:*** "General Mills, under its Betty Crocker Red Spoon trademark (A.D. Odell in charge), is test marketing the first of a series of projected foods spun out of a protein isolated from soy. Called Bac*Os, it is designed as a condiment and looks and tastes like lean, crumbled, cooked bacon. Priced at $0.69 for 3.25 ounces, the jar is equal to 1 lb of cooked bacon." Corn Products' (CPC) Best Foods Div. is marketing Skippy peanut butter containing the product. "Thomas J. Lipton, Inc., a Unilever subsidiary, recently launched four dried gourmet main dish meals including beef stroganoff and chicken la scala. Lipton has patented a process to use isolated soy protein (ISP) as a binder for dried meats... Ralston Purina has developed a series of spun soy protein foods resembling ham, chicken, and turkey out of ISP. It is selling its spun ISP base, Edi-Pro, to Worthington Foods Inc. Worthington has developed its own line of chicken and ham-like products for sale to religious groups.

"Central Soya makes an isolated soy protein binder called Promine, which goes into sausage and other processed meats. Sales of the binder at $0.35/lb–twice the cost of the binder it is replacing–are so promising that production will be doubled to 2.5 million lb monthly when a new plant opens in Chicago next month... In addition the company this fall hopes to start exporting a frozen soy dessert to tropical countries with no dairy industries." General Mills, Ralston, ADM, Central Soya, and Worthington combined spend some $4 million annually on research. Half of this sum is going into basic research and half into product development. ADM recently shipped 3 million lb of a new protein rich soy beverage to Latin America and the East Asia under a USDA program.

2082. *British Vegetarian.* 1966. Science Council of the International Vegetarian Union: SCIVU Abstract Service. July/Aug. p. 325-27. [9 ref]
• ***Summary:*** The Science Council has started an international service to collect and summarize scientific information about vegetarian nutrition from journals published around the world. The information is recorded in abstracts. Nine examples follow; three of them are about soya bean milk.

2083. Kirchner-Dean, Otto. comp. 1966. Soybean processing and utilization: A selected list of references, 1955-1965. *USDA Library List* No. 83. iv + 183 p. Aug. Author index. Subject index. 28 cm. [2218 ref]
• ***Summary:*** Contents: Part I: Processing. Meal. Oil. Beans. Part II: Utilization. Meal in feed. Oil in feed. Beans in feed. Meal in food. Oil in food (General, margarine). Beans in food (general, flour, milk, soy sauce). Meal for industrial uses (general, coatings). Oil for industrial uses (general, coatings, drying oils, paints, resins, soaps). Beans for industrial uses. Part III: Chemistry and research. Amino acids, bibliography, biochemistry, chromatography, composition, enzymes, fatty acids, lecithin, lipides, lipoxidase, organic chemistry, pesticide residues, phosphatides, proteins, research, sterols. Part IV: Miscellaneous. Argentina, Australia, Brazil, California, Canada, China, Congo, cook books, Far East, government loans, India, industry, international trade, Japan, laws and legislation, markets and marketing, nutrition, pesticide residues, varieties.

"All citations except those to patents have been examined and verified by the compiler. Patents cited were obtained from Chemical Abstracts. All foreign language titles have been translated into English with the original language indicated. [Warning: Many patent titles listed in this are different from those appearing on the actual patent.]

"Sources consulted: Agricultural Index, Bibliographic Index, Bibliography of Agriculture, Biological and Agricultural Index, Card Catalog of the National Agricultural Library, Chemical Abstracts, Dissertation Abstracts, Engineering Index, Food Science Abstracts, Journal of the Science of Food and Agriculture, Nutrition Reviews, and Pesticides Documentation Bulletin." 2084. *Prevention* (*Emmaus, Pennsylvania*). 1966. Milk intolerance is widespread: Switzerland is learning how harmful dairy foods can be. Aug. p. 122-23. [1 ref]
• ***Summary:*** Summary of an article in *Medical News* (9 Oct. 1964) about the work of Dr. Haemmerli of Kantonspital, Zurich, Switzerland. Many adults who lack the intestinal enzyme lactase experience diarrhea, abdominal discomfort, and flatulence when they consume milk or dairy products. Address: Emmaus, Pennsylvania.

2085. Bayless, Theodore M.; Rosensweig, Norton S. 1966. A racial difference in incidence of lactase deficiency: A survey of milk intolerance and lactase deficiency in healthy adult males. *J. of the American Medical Association* 197(12):138-42. Sept. 19. [21 ref]
Address: Dep. of Medicine, Johns Hopkins Univ. School of Medicine, Baltimore, Maryland.

2086. *British Vegetarian.* 1966. Plantmilk news. Sept/Oct. p.

444.
• ***Summary:*** "The availability of 'Plamil' and other products made by Plantmilk Ltd. is now improved by the recent extension of our distribution service... From 1st October supplies of our lines will be available to Health Food Stores anywhere in England, Scotland, Wales and Northern Ireland."

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "Plamil." Address: England.

2087. Chandrasekhara, M.R.; Shurpalekar, S.R.; Subba Rau, B.H.; Kurien, S.; Shurpalekar, K.S. 1966. Development of infant foods based on soyabean. *J. of Food Science and Technology* (*Mysore, India*) 3(2):94-97. Oct. [6 ref]
• ***Summary:*** Discusses a process for the preparation of a spray-dried infant food based on soya dhal, skim milk powder and barley malt. The PER of the product is 2.7 as compared with 3.0 for skim milk. Addition of Dl-methionine to the product at the level of 1.1 gm per 16 gm nitrogen raises the PER to 3.0. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2088. Dutra de Oliveira, J.E.; Scatena, Luiz; Oliveira Netto, D. de; Duarte, Geraldo G. 1966. The nutritive value of soya milk and cow's milk in malnourished children: A comparative study. *J. of Pediatrics* 69(4):670-75. Oct. [11 ref]
• ***Summary:*** "Twenty-four malnourished children, 1 to 3 years of age, were fed soya milk or cow's milk with similar protein content." Soya milk compared favorably with nonfat cow's milk in the initial treatment of these children, and the results can be considered excellent. "These studies indicate that soya milk is a good source of protein for the correction and prevention of infantile malnutrition." Address: Faculdade de Medicina, Ribeirao Preto, Sao Paulo, Brazil.

2089. **Product Name:** Plamil Fudge.
Manufacturer's Name: Plantmilk Ltd. (Renamed Plamil Foods Ltd. in 1972).
Manufacturer's Address: Tithe Farm, High St., Langley, Slough, Buckinghamshire, England.
Date of Introduction: 1966. October.
Ingredients: Incl. Plamil plantmilk (made with soya protein isolate), chocolate, sweetener.
Wt/Vol., Packaging, Price: Half-pound block, ready cut for ease of breaking, film wrapped.
New Product–Documentation: *The British Vegetarian.* 1966. Sept/Oct. p. 444. "Plantmilk News." "Jack McClelland, the well-known swimming champion, has been acting as dietetic advisor to a number of athletes who are competing in the Commonwealth Games in Jamaica; and priority of place has been given to Plamil Fudge. It provides the easily assimilated energy needed by those undertaking long endurance races. Plamil Fudge has therefore become an integral part of the 'equipment' taken to Jamaica."

The British Vegetarian. 1967. Sept/Oct. p. 456. "Plamil Fudge Goes Mountaineering." "The Midlands Hindukush Himalayan Expedition (1967), now in the Himalayas, has taken a supply of Plamil Fudge as part of its food supplies... All Plamil Products (Plamil Plantmilk, Chocolate and Fudge)" contain no animal products.

The British Vegetarian. 1969. Sept/Oct. p. 463. "Plamil Fudge" is now available in a 2-color carton with an inner wrapping of white waxed paper. Each half-pound block, as before, is ready cut for easy breaking.

2090. **Product Name:** Plamil Chocolate.
Manufacturer's Name: Plantmilk Ltd. (Renamed Plamil Foods Ltd. in 1972).
Manufacturer's Address: Tithe Farm, High St., Langley, Slough, Buckinghamshire, England.
Date of Introduction: 1966. October.
Ingredients: Incl. soya protein isolate.
New Product–Documentation: *The British Vegetarian.* 1967. Sept/Oct. p. 456. "Plamil Fudge Goes Mountaineering." "All Plamil Products (Plamil Plantmilk, Chocolate and Fudge)" contain no animal products.

Ad in *The British Vegetarian.* 1969. May/June. p. 219. "The vegetarian chocolate is Plamil Chocolate." It is made by Plantmilk Ltd., Tithe Farm, High Street, Langley, Slough, Bucks. [Buckinghamshire], England. "This chocolate is also intriguingly different, and has just the kind of velvet-smooth taste that just asks for more... and more..."

2091. Swaminathan, M. 1966. The use of soyabean and its products in feeding infants and in the prevention of protein malnutrition in weaned infants and pre-school children in developing countries. *Indian J. of Nutrition and Dietetics* 3(4):138-50. Oct. [63 ref]
• ***Summary:*** Contents: Introduction. Chemical composition: Carbohydrates, fat, minerals, vitamins, proteins. Factors affecting the nutritive value of soya proteins: Trypsin and growth inhibitors, heat processing, other factors. Nutritive value of soya proteins (with or without methionine supplementation): Experiments with animals, experiments with human beings, supplementary value to other food proteins. Processed foods from soyabean for feeding infants and preschool children: Milk substitutes and infant foods, processed protein foods based on soya (soya flour, Multipurpose Food or MPF, soup powder). Foods based on soyabean and other oilseed meals: Precooked roller dried foods, extrusion-cooked full-fat soybean flour. Other soya products (soy protein isolate, tofu, natto, miso, tempeh, soy sauce). Conclusion. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2092. Miles, Charles P. Assignor to Pacific Union

Association of Seventh Day Adventists, doing business as Loma Linda, Foods (Riverside, California; a corporation of California). 1966. Process of producing milk from soy beans. *U.S. Patent* 3,288,614. Nov. 29. 3 p. Application filed 2 Nov. 1964. [2 ref]
• ***Summary:*** Miles was manager of the Loma Linda plant at Mt. Vernon, Ohio at the time. The process involves cracking, dehulling, flaking, blending with water (hot or cold), pressure cooking, homogenization, centrifugation, and formulation. Address: Riverside, California.

2093. Worthington Foods, Inc. 1966. Dealer wholesale price list–order blank. Worthington, Ohio 43085. 1 p. Dec. 1. 36 cm.
• ***Summary:*** New products in the Worthington Foods line include: Soyameat [or Soya-Meat] (Fried chicken, sliced chicken, diced chicken, sliced beef, diced beef, Salisbury steak). Bakon Yeast.

Worthington now owns the Madison Foods line of products including: Cheze-O-Soy, Dinner Morsels. Madison Burger, Not Meat (Regular or tomato). Nu-steaks. Yum. Zoy burger. Kreme-O-Soy. Infasoy.

Worthington now has warehouses in Battle Creek, Michigan; Dallas, Texas; Denver, Colorado; Los Angeles, California; Madison, Tennessee; South Lancaster, Massachusetts; Oakland, California (actually San Leandro); Portland, Oregon; Washington, DC. Address: Worthington, Ohio. Phone: 614-885-9511.

2094. **Product Name:** Isomil (Non-Dairy Infant Formula Based on Isolated Soy Protein) [Ready to Feed, Concentrated Liquid, or Powder].
Manufacturer's Name: Abbott Laboratories (Ross).
Manufacturer's Address: 625 Cleveland Ave., Columbus, OH 43216.
Date of Introduction: 1966.
Ingredients: Incl. soy protein isolate and water.
New Product–Documentation: Fomon. 1967. Infant Nutrition. Page 230 states that Isomil contains a "soy isolate fortified with methionine." Dean. 1973. Medical Journal of Australia. 1(26):1289-93. June 30; Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88. The second isolate-based infant formula after Mead Johnson's Prosobee.

Italian-language Label for powdered Similac Isomil. 1985. Ingredients include corn syrup solids, saccharose, soy protein isolate (*proteine di soja isolate*), corn oil and coconut oil, mineral salts (calcium phosphate, calcium carbonate, potassium citrate, potassium chloride, magnesium chloride, sodium chloride, ferrous sulfate, zinc sulfate, cupric sulfate, potassium iodide,...), methionine,...

Sold at Bill's Drugs in Lafayette, California. 1989. Sept. 7. One quart ready to feed retails for $2.95.

2095. **Product Name:** Dairene: Imitation Vitamin D Milk (Powdered).
Manufacturer's Name: Dairene.
Manufacturer's Address: Miami, Florida. Phone: 305-534-5630.
Date of Introduction: 1966.
New Product–Documentation: Dairy Record. 1973. 74:23. "Soybean 'milk' producer gets underway in Florida." The soybean milk powder called Pureblend is manufactured from 35 ingredients in Newark, New Jersey. Talk with Eddie Goldstein. 1989. Feb. 27. This product (Dairene) was launched in 1966 in Miami. The stabilizer in Dairene was called Pureblend. Dairene's address is now 801 41st St. (Arthur Godfrey Rd.) #210, Miami Beach, FL 33140. Phone 305-534-5630.

2096. **Product Name:** Dairene TAC (Top-a-Cake), Dairene Sour Cream, and Dairene Coffee Cream.
Manufacturer's Name: Dairene.
Manufacturer's Address: Miami, Florida.
Date of Introduction: 1966.
New Product–Documentation: Talk with Eddie Goldstein. 1989. Feb. 27. These products were launched in 1966 in Miami, sold only to institutions. The sour cream was widely used for years by Howard Johnsons on their cheesecakes. The coffee cream sold for $0.32/quart vs. $0.80 for the dairy-based product.

2097. **Product Name:** Pure Soya Powder (for Making Soy Milk).
Manufacturer's Name: El Molino Mills.
Manufacturer's Address: 3060 W. Valley Blvd., Alhambra, CA 91803.
Date of Introduction: 1966.
New Product–Documentation: Soybean Blue Book. 1966. p. 110. *Soybean Digest.* 1969. Nov. "El Molino offers a number of soy foods including breakfast foods, soy milk, vegetable soybeans, soy sprouts, and soy flour and soy flour mixes." It is not clear whether this product is soy flour or powdered soy milk. June Ranill. 1976. The El Molino Cookbook. p. 88. This product was sold in 1976 but was apparently discontinued by 1980.

Soybean Digest Blue Book. 1977. p. 33. Address is now 345 N. Baldwin Park Blvd., City of Industry, California 91746. Soya Bluebook. 1980. p. 50. Company is now a Division of ACG Co.

2098. Han, P.J.; Choi, K.S.; Yoon, I.W. 1966. Soybean oil extraction methods and processing of bean milk and bean curd. *Nongsa Sihom Yon'gu Pogo* 9(1):247-59. *

2099. Hartman, Warren E. 1966. Research and development in synthetic foods. *New York State Association of Milk and Food Sanitarians, Annual Report* [19 ref]

• ***Summary:*** "Research and development in synthetic foods is no longer a skeptical venture. Today it is fast becoming an alarming necessity! Two most basic and major problems face the world today (1) The world population explosion accompanied by (2) The skyrocketing need for food. Synthetic foods are already a part of big business."

"Worthington Foods has been in the vegetarian protein food business for some 25 years. Primarily, the business was concerned with supplying such foods to consumers who had medical, philosophical, or religious reasons for wanting them. Early products were based on wheat proteins or 'gluten.' Worthington had accumulated considerable flavoring 'know-how' by the time soy products such as flakes, toasted grits and isolated protein became available. One of the first Worthington products based on soy protein was a powdered milk-like product, Soyamel, which was designed primarily as a hypoallergenic formula for infants and children who were allergic to milk... Perhaps one of the first companies to explore the protein spinning technique developed by Robert Boyer (U.S. Pat. # 2,682,466) was Worthington Foods. For the past ten years Worthington has pioneered in the field of vegetarian protein foods; seeking suitable protein isolates for spinning, developing spinning technology, formulating and adapting these spun protein fibers to acceptable consumer end-products."

"The present technology of spinning as practiced by Worthington Foods, uses as a raw material relatively pure soy protein isolate as obtained from Ralston Purina, Central Soya or other suppliers of protein isolates."

A photo shows Hartman, who has been with Worthington Foods since 1947. "His academic training was acquired at Andrews University, Berrien Springs, Michigan; University of Michigan, Ann Arbor; and at Massachusetts Institute of Technology. Dr. Hartman was employed as a biochemist- bacteriologist for four years by the Michigan State Department of Health Laboratories in Lansing, Michigan, and was a consultant-instructor for a year for the U.S. Public Health Service." Address: Director of Research and Development, Worthington Foods, Inc., Worthington, Ohio.

2100. **Product Name:** Loma Linda Hi-So-Pro (Powdered Soymilk for Diabetics. Low in Fat and Salt and Carbohydrates).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1966.
Wt/Vol., Packaging, Price: 12 oz. can.
New Product–Documentation: Today's Food. 1966. Wholesale price list. 1968. Sold in 12 oz. cans for $1.42 retail.

2101. **Product Name:** Loma Linda Instagen (Based on Isolated Soy Protein) [Fortified Concentrated Liquid].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1966.
Wt/Vol., Packaging, Price: 16 oz. can.
New Product–Documentation: Today's Food. 1966. Apparently not an infant formula; Wholesale price list. 1968. Instagen All Purpose Fortified. Sold in 16 oz. cans for $1.05 retail. Shurtleff & Aoyagi. 1984. Soymilk Industry and Market. p. 28. Later renamed "i-Soyalac."

2102. **Product Name:** Loma Linda Multigen (Soymilk).
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1966.
Wt/Vol., Packaging, Price: 16 oz. can.
New Product–Documentation: Today's Food. 1966. "This new soymilk is specially formulated to supply a total diet for those on a restricted menu. It supplies a higher fat and carbohydrate content and all the nutrition needed for those on a liquid dietary." Wholesale price list. 1968. Sold in 16 oz. cans for $1.51 retail.

2104. **Product Name:** Soyamel Banana Beverage (Soymilk).
Manufacturer's Name: Worthington Foods, Inc.
Manufacturer's Address: 900 Proprietors Rd., Worthington, OH 43085. Phone: 614-885-9511.
Date of Introduction: 1966.
New Product–Documentation: Wholesale price list. 1966. Dec. 1.

2105. Burkill, I.H. 1966. Dictionary of the economic products of the Malay Peninsula, 2nd ed. 2 vols. Kuala Lumpur, Malaysia: Ministry of Agriculture and Co-operatives. xiv + 2444 p. See vol. 1 (A-H), p. 1098-1103. Index. 24 cm. [11 ref]
• ***Summary:*** Information on the soy bean (*Glycine max*) is found under Glycine. Contents: Origin. Man has selected the more tropical races and is still selecting. Search for a race suitable for Malaya. Java, long ago, found one suitable for the drier parts of the island. Secondary uses as fodder, a cover crop, and green manure. High food-value of the seed. The seed, ripe or nearly ripe, as food. Its special use in diabetes. Artificial milk. Vegetable casein [for industrial uses]. substitute for coffee. Seedlings [sprouts] eaten. Sauces, &c., from the bean. Témpé made in Malaysia with the aid of a fungus. Teou-fu [tofu] prepared by the Chinese. Tao-

cho prepared [in Java] with the aid of fungus. Sho-yu or soy kechap. Miso, a Japanese preparation. The making of soy kechap in Java. Organisms in fermentation. Oil [soy-bean oil, or kachang oil]. Criminal use (hairs on the pods cause irritation within the digestive tract). Fibre (in the stem). Joss sticks (Ash of the stem is said to be used in joss-sticks in Indo-China). The soybean is frequently cultivated in Burma and Siam.

A photo (frontispiece) facing the title page shows Isaac Henry Burkill (1870-1965). This second edition is only slightly different from the original 1935 edition of which 2,000 copies were sold. This edition was published on behalf of the governments of Malaysia and Singapore by the Ministry of Agriculture and Cooperatives, Kuala Lumpur, Malaysia. Address: Director of Gardens, Straits Settlements (Singapore; 1912-1925).

2106. Dresner, Samuel H.; Siegel, Seymour. 1966. The Jewish dietary laws: Their meaning for our time. New York, NY: Burning Bush Press. 77 p. 20 cm. *
• ***Summary:*** Includes a guide to observance, by Seymour Siegel.

2107. Gould, Robert F. ed. 1966. World protein resources. *Advances in Chemistry Series* No. 57. xv + 285 p. (American Chemical Society, Washington, DC). [200* ref]
• ***Summary:*** Contains 20 papers from a symposium sponsored by the Division of Agricultural and Food Chemistry at the 150th meeting of the American Chemical Society, Atlantic City, New Jersey. Held 13-15 Sept. 1965. Aaron M. Altschul, Symposium Chairman. The papers are divided into the following groups: Outlook (6 papers), seed protein products (5), protein quality factors (4), and future developments (5). Contains a memorial tribute to Maurice Pate (1894-1965).

The Preface begins: "In the totality of the problem of overcoming the world food shortage, providing sufficient protein occupies a special place, first because it affects primarily children–not only as children in terms of their survival, but also in terms of their growth and development. Evidence is accumulating that protein deficiency during the preschool years could result in retarded mental and physical development. This problem also occupies a special place because it is becoming clear that to produce the amounts of protein concentrate needed, it will not be enough to extend the present 'classical' methods of producing animal protein; there will be the need to develop and exploit other sources of protein concentrate ranging from fish and oilseeds to petroleum." Address: American Chemical Society, Washington, DC.

2108. Heer, Jean. 1966. World events 1866-1966: The first hundred years of Nestlé. Vevey, Switzerland: Nestlé. 326 p. Illust. 27 cm. [45* ref]
• ***Summary:*** This is an English-language translation of *Reflets du Monde 1866-1966: Présence de Nestlé*, which was also published in German, Italian, and Spanish. It is a good overview of a century of world history, with emphasis on Europe, food, and politics. Enriched with many color photos, it unfortunately has no index.

Nestlé was founded in 1866 making infant milk foods. Initially it consisted of two separate businesses, 120 miles apart, at Cham and Vevey, Switzerland. They were rivals until 1905, when they merged to form the Nestlé and Anglo-Swiss Condensed Milk Company. Now Nestlé makes milk, cocoa, and coffee. In the war of 1870 [Franco-Prussian War], France was defeated by Germany. In 1947 Nestlé acquired Maggi in Kempttal; Maggi has archives. In 1960 Nestlé acquired the share capital of Crosse & Blackwell worldwide, selling canned soups, pickles, canned peas, beans and fish. This move increased Nestlé's manufacturing capacity by the addition of 11 factories, six of which were in Great Britain (including two at Dundee in Scotland). Crosse & Blackwell traces its origins back to 1706, but it got its present name in 1830 when two friends and employees, Edmund Crosse and Thomas Blackwell, bought out a firm that preserved foods for victualling long-distance vessels. In 1892 it became a limited company. After World War I they bought out two companies; one was E. Lazenby & Son Ltd., which had started in the kitchen of a middle-class housewife, Elizabeth Lazenby, wife of a London grocer, who prepared a sauce [Harvey's Sauce] which acquired a great reputation as a seasoning for meat dishes. Manufacture commercially was started in 1776, and remained a family business until taken over by Crosse & Blackwell in 1919. Address: Nestlé.

2109. Mascheville, Maria L.C. 1966. Coma bem e viva com saúde: Orientacao pratica sobre alimentos sadios, vegetarianos e iogues, receitas para cozinhar, indicacoes para criancas, doentes e sobre jejum e desintoxicacoes [How to live well and healthfully: Practical orientation to healthful, vegetarian and yogic food, with recipes for cooking, instructions for children and sick people, and on fasting and detoxification]. Sao Paulo, Brazil: Sociedade Beneficente S. Camilo, Departamento Gráfico. 247 p. Portrait. 22 cm. [Por]
• ***Summary:*** The author is a yoga master, also known as Maestra da Ioga, Swamini Sadhana. Soy-related recipes include: Soja (whole soybeans, p. 167). A comparison of the nutritional/chemical composition of meat and soybeans is given (p. 187-88). Soya beefsteak (with roasted soy flour {*farina de soja torrada*}, p. 188). Soymilk (p. 188). Whole soybeans (p. 189). Homemade soybeans and native beans. Soybean soup (with roasted soy flour). Soya ice cream or sherbet (*Sorvete de Soja*, p. 189). Soybean cakes or dumplings (p. 190). Soya croquettes. Bolinho de soja. Cocada de soja. Nhoque de soja (p. 191). Soybean salad. Assado de soja. Bife a Parmesa. File de soja. Pao com soja (p. 192).

Note 1. This is the earliest Portuguese-language document seen (March 2007) that mentions soy ice cream, which it calls *Sorvete de Soja.*

Note 2. This is the earliest Portuguese-language document seen (Nov. 2012) that mentions roasted soy soy flour, which it calls *farinha de soja torrada.*

2110. Milner, Max. 1966. General outlook for seed protein concentrates. *Advances in Chemistry Series* No. 57. p. 52-64. Chap. 5. World Protein Resources. [8 ref]

• ***Summary:*** "Seed proteins, particularly those of the cereals and legumes, are mainstays of human protein nutrition, providing several times more of this nutrient than animal proteins...

"World Protein Resources: The cereals contribute in round numbers 75 million metric tons of protein, of which wheat provides 25 million, rice 12 million and corn 20 million tons. The legumes, consisting of various beans, peas and lentils, in aggregate, provide, surprisingly, only about 8 million tons. Additional but minor plant sources of protein are tubers, including potatoes, and nuts. The world animal protein supply, including principally meat, milk, eggs, and fish, has been estimated to be about 20 million metric tons. And finally, the potential contribution of the oilseeds, which include principally soybeans, cottonseed, and peanuts, can be considered to be about equal to that of all the animal protein now available, 20 million tons per annum."

A long section titled "Soybeans" (p. 57-59) discuses soybeans and soyfoods, including tofu, miso, natto, tempeh, soybean milk, full-fat soybean flour, soy protein concentrates and isolates, and spun soy protein products. Address: UNICEF, United Nations, New York, NY; Present address: Office of Technical Cooperation and Research, Agency for International Developement, Washington, DC.

2111. Nelson, Andrew Nathaniel. 1966. The modern reader's Japanese-English character dictionary. Revised ed. Rutland, Vermont, and Tokyo, Japan: Charles E. Tuttle Co. 1109 p. Index. 24 cm. [15 ref. Jap; Eng]

• ***Summary:*** Radical 37 = dai or oh = big + 3 strokes = #1171 = *daizu* or *ômame* = soy bean (p. 290).

Radical 75 = tree; at left = ki hen. #2211 = eda of edamame. Radical 82 = Hair of animals, ke. Radical 85 = Water + 11 strokes = soymilk. Radical 151 = Bean + 7 strokes = mame (bean) or tou = toufu. Radical 164 = Liquid (Sake sukuri) + 11 strokes = shoyu no sho. Radical 201 = Yellow (variant is 11 strokes).

Soy related words: (1) Miso: *miso* (fermented [soy] bean paste; flattery, p. 247). *miso o tsukeru* (to make a mess of, p. 247). *miso shiru, misojiru* (bean-paste soup, p. 247). *miso mame* (soybeans, p. 247). *misoni* (boiling with bean paste, p. 247). *misozuke* (pickled in bean paste, p. 247). *misokoshi* (bean-paste strainer, p. 247). *misosuri* (grinding bean paste; flattery, p. 247). *temai miso* (self praise; bean paste of one's own making, p. 420). *miso dengaku* (tofu baked [grilled] with miso, p. 621). *konamiso* (powdered miso, p. 691). *nuka miso* (salted rice-bran paste, for pickling, p. 694). *karamiso* (salty miso, p. 869).

(2) Tôfu [tofu]: *yakkodôfu* [yakkodofu] (tofu cut in cubes, p. 47). *kôridôfu* [kori-dofu] (frozen tofu, p. 75). *unohana* (refuse from tofu, p. 119). *shimidôfu, kogoridôfu, kogodôfu* [shimi-dofu, kogo-dofu, kogori-dofu] (frozen tofu, p. 192).

Note 1. This is the earliest English-language document seen (April 2013) that contains the word *kogodôfu* (written as one word, with diacritics) which it says is the same as *shimidôfu,* all of which it defines as frozen tofu.

age (fried tofu, p. 447). *kara, okara* (tofu refuse, p. 525). *aburage* (fried tofu, p. 543). *yuba* (dried tofu [sic], p. 561). *yakidôfu* [yaki-dofu] (broiled bean curd, p. 578).

Note 2. This is the earliest English-language document seen (April 2013) that contains the word *yakidôfu* (written as one word, with diacritics).

nama-age (fried tofu, p. 618). *dengaku* (tofu baked with miso, p. 621). *inarizushi* (fried tofu stuffed with seasoned rice, p. 668). *tofu* (bean curd, tofu, p. 843). *kirazu* (tofu refuse [okara], p. 941). *kôyadôfu* (frozen tofu, p. 978).

toshi no mame ([soy] beans of the bean scattering ceremony, p. 88).

mitsumame (boiled [soy] beans with treacle / molasses, p. 328).

edamamé (green soybeans, p. 494). *irimame* (parched [soy] beans, p. 576).

nimame (boiled [soy] beans, p. 578).

nattô (fermented soy beans, p. 697).

tamari (soy sauce, p. 564).

azemame (soy beans grown on rice-field ridges, p. 624). *moyashi* (artificially sprouted beans, p. 780). *moyashi mame* (beans for sprouting, p. 781). *hôrai mame* (sugar-coated beans, p. 786).

kuromame (black soy bean, p. 992).

mame abura (soybean oil, p. 843). *tônyû* (soybean milk, p. 843). *kinako* (soybean flour, p. 991). Address: PhD, Tokyo, Japan.

Note: The *Advent Review and Sabbath Herald* of 23 Oct. 1860 states (p. 179, col. 2): "Resolved, that we take the name of Seventh-day Adventists." Address: Washington, DC.

2113. Ohsawa, George. 1966. The book of judgment. The philosophy of Oriental medicine. Vol. II. Los Angeles, California: Ohsawa Foundation, Inc. 169 p. Revised and edited by Lou Oles and Shayne Oles Suehle. No index. 17 cm. First edition was 1960. [2 ref]

• ***Summary:*** In this book, Ohsawa is at his creative / outrageous best, with many big ideas. The author's name on the title page and cover is written "georges ohsawa." There are two slightly different 1966 editions of this book. In one, revised and edited by Lou Oles (which Soyinfo Center owns), a portrait photo shows Ohsawa from the waist up (frontispiece, facing the title page). In the other, revised and edited by Lou Oles and Shane Oles Suehle, a portrait photo shows Ohsawa (head and shoulders) laughing.

Contents: About the author (autobiographical). Preface. Introduction. 1. Medicine or faith? 2. The unique principle, a practical and dialectical classification. 3. The unique principle of the science and philosophy of the Far East. 4. Man's origin: What is disease?, the origin of nutrition–the vegetal, animal foods, why use milk?, embryological of Far Eastern mothers with emphasis on breast feeding, when milk becomes outlawed, supreme judging ability, the failings of Occidental medicine, sons of the vegetal mother, faith–prayer and fasting, the vegetal mother–yin, the mother of the elements & the birth of energy, genus Homo, a dialectical world & universal compass, man–the masterpiece of creation, magic spectacles–new Aladdin's lamp–solution of problems, food–living to eat–eating to live–quantity changes quality, economics of food, lack of supreme judging ability in orthodox allopathic medicine, conclusion–recapitulation.

5. Far Eastern medicine. 6. The order of the universe. 7. Supreme judging ability. Appendices: Good and evil, ethics and morality, public and individual salvation, individual and universal soul, Darwin's hypothesis, non-violence, samsara, the noble road to the eight virtues [Buddha's eightfold noble path], respect [reverence] for life, the infinite, the absolute, the eternal, the will, entropy, cancer and blood cancer, the narrow gate, freedom, despair, vitamins, insulin, the unique

principal.

"Animal foods: If we are compelled to eat animal foods, owing to climactic or economic conditions, we are to use them only in small quantities and also with special caution in order to deanimalize or vegetalize them with proper culinary preparation and efficient nutritional combinations. Anatomically speaking, according to his teeth and intestines, man is vegetarian. Why then should he depend for food upon the flesh or products of inferior animals? Depending upon adequate sources of food, the vegetable is normal, logical and sure. The opposite or carnivoral way is speculative. Utilizing the inferior and weaker always leads to the speculator's downfall.

"Why use milk? Why do we drink animal milk? In China and Japan, and even in India, the peoples lived a very happy, peaceful and long life, without drinking animal milk for thousands and thousands of years.

"Cow's milk is intended to be the nourishment of calves to form their constitution and their fundamental characteristics. There is no reason for man to live upon the milk of the animal, which is biologically and intellectually very inferior to him." Address: Los Angeles, California.

2114. Parpia, H.A.B.; Subramanian, N. 1966. Plant protein foods in India. *Advances in Chemistry Series* No. 57. p. 112-32. Chap. 9. World Protein Resources. [16 ref]
• ***Summary:*** The emphasis is on peanut proteins, including peanut protein isolate, milk substitutes, spray-dried infant foods, etc. Soy protein is mentioned only briefly (p. 118). Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2115. Schenk, E.G.; Naundorf, G. 1966. Lexikon der tropischen, subtropischen und mediterranen Nahrungs- und Genussmittel [Dictionary of tropical, subtropical, and Mediterranean foods and food adjuncts (stimulants / enjoyables)]. Herford, Germany: Nicolaische Verlagsbuchhandlung Herford. xiv + 199 p. Index. 21 cm. Series: Manualia Nicolai 1. [200* ref. Ger]
• ***Summary:*** Pages 70-71 give a list of Japanese foods (after Mayerhofer and Pirquet 1926) in no apparent order, with the Japanese name followed by a translation of that name into German. Included in the long list are: Akamiso, miso, shiromiso, tofukasu [okara], daizu, fu [dried wheat gluten], kingyo-fu, kiri-fu, kiri-mochi [frozen and dried rice cake], ame [malt extract], mirin, aburage [tofu fried in vegetable oil], natto–Bohnenkäse, Tofu–Sojatopfen, Tonyu–Sojamilch, azuki [small red beans], kwansen-fu, kinako–Sojabohnenmehl, geröstet, amasake–unvergorener Sake, umeboshi, koritofu [frozen and dried tofu], midzuame [soft ame = rice syrup], shoyu–Sojasauce, yuba–eine Bohnenspeise. Plus many types of sea vegetables.

On pages 140-42 the following terms are defined in German: Soja [soya], Sojabohne [soybeans], Sojabohnenkäse [soy cheese or tofu], Sojabohnenmehl [soybean meal], Sojabohnenöl [soybean oil], Sojakäse [fermented soy cheese], Sojamilch [soymilk], Soja-Nahrungsmittel [soyfoods]: Koji, Miso, Tofu, Nato [sic, natto], kondensierte Soja-Milch [condensed soymilk], Japanische Verarbeitungen [Japanese processed foods: Japanische Soja-Sauce Shoju (Shoyu), Miso, Tofu], Soja-Nahrungsmittel, javanische [Javanese] soyfoods: Tao-Hoe, Tempeh, Ketjap, Tao-Tjiong [a term, and perhaps a product, between *doujiang* and *tao-tjo*, Indonesian-style miso], Sojatunken, Soja-Verarbeitungen: Sojamilch, Bohnenkäse, Teoufou (China), Tofu (Japan), Dan Phu (Vietnam), Natto (Japan), Tao-tehe (China).–Bohnenbrei Miso (Japan), Tao-tjiung (doujiang, China).–Sojasauce: Shogu [sic, Shoyu] (Japan), Tsiang-Yeou, Tao-yu (China), Ketjap (Java), Tuong (Vietnam).–Gärmittel: Kiut see (Japan). Then a table shows the nutritional composition of 8 of these foods.

Note 1. This is the earliest German-language document seen (April 2013) that uses the term *Sojabohnenkäse* ("soybean cheese") to refer to tofu.

Note 2. This book contains more than its fair share of errors and could be better organized. Address: 1. Prof. Dr. med. habil., Dr. phil. nat, Laurensberg ueber Aachen, Germany.

2116. Zen cookery: The philosophy of Oriental culture. Vol. I. Practical macrobiotics. 1966. Los Angeles, California: Ohsawa Foundation, Inc., The Ignoramus Press. 84 p. Index. 22cm.
• ***Summary:*** The revolutionary little reddish-orange or yellow book, with a black plastic comb binding, that introduced many to macrobiotic cooking. No author or editor is listed. The Ohsawa Foundation has branches in Los Angeles, New York, Wellesley, Paris, and Tokyo. Contents and format are identical to the 1964 edition edited by Teal Nichols, published by the Ohsawa Foundation of Chico–which see. Address: Ohsawa Foundation, Inc., 1434 N. Curson Ave., Los Angeles, California.

2117. Worthington Foods, Inc. 1966? Soyamel–Fresh tasting: Five different ways (Leaflet). Worthington, Ohio. 4 panels each side. Each panel: 22 x 9 cm. Undated.
• ***Summary:*** In the middle of the front panel is a photo of a boy and girl drinking soymilk from glasses. At the bottom of this panel is a photo of 5 cans of Worthington Soyamel: All Purpose, Instant Malt Flavor, Instantized All Purpose. Banana Beverage. And Fortified Soyamel: A Powdered Soy Milk.

Two pages of the leaflet describe these products and their nutritional composition. "Regular Soyamel, Fortified Soyamel, and Soyamel Banana Beverage are packed in a 1 lb. can, 4 lb. can and a 20 lb. carton. Instant Soyameal and Instant Malt Soyamel are packed in a 12 oz. can, 3 lb. can and 15 lb. carton." The ingredients of Soyamel are: "Soy

bean protein [probably soy protein isolate], soy bean oil, dextrose, soy bean lecithin, dextrins and maltose, sucrose, barley malt, salt, dicalcium phosphate, and added vitamin B-12. To make 1 glass of regular Soyamel place 1 cup of water in high-speed mixer or blender and add 6 level tablespoons of Soyamel. Mix until powder is dissolved. Refrigerate until used. To make instant Soyamel, add 1/3 cup of powder to 1 cup water. Stir until dissolved, or use blender. One pound of Soyamel will make a gallon of delicious, wholesome soy drink. When mixed, a quart of Soyamel will cost a little as $0.25 depending upon the richness desired."

Four pages of recipes are given. Address: 900 Proprietors Rd., Worthington, Ohio 43085.

2118. Hackler, L.R.; Stillings, B.R. 1967. Amino acid composition of heat processed soymilk and its correlation with nutritive value. *Cereal Chemistry* 44(1):70-77. Jan. [11 ref]

• ***Summary:*** The effect of heating soymilk at 93º and 121ºC for varying periods was evaluated in weanling rats. The effect of spray-drying inlet temperatures on the amino acids of soymilk were also investigated.

Soymilk heated for as long as 4 hours at 93ºC caused no significant changes in amino acid composition. On the other hand, processing temperatures of 121ºC caused decreases in some of the amino acids–especially cystine. Moreover, it was found that spray drying inlet temperature is critical and it was found that amino acids destroyed during spray-drying are different from those destroyed during pressure cooking (121ºC). Therefore temperatures must be carefully controlled in order to make soymilk of the highest nutritional quality. Address: Cornell Univ., Geneva, New York.

2119. *Science News.* 1967. Nature note: 'China cow.' 91(7):172. Feb. 18.

• ***Summary:*** A brief introduction to the soybean. "Last year in his Food for Freedom message, President Johnson asked for more soybean production and the farmers responded. More than 931 million bushels were grown in the United States," a substantial increase over the 1965 crop.

2120. Abdo, K.M.; King, K.W. 1967. Enzymatic modification of the extractability of protein from soybeans, *Glycine max. J. of Agricultural and Food Chemistry* 15(1):83-87. Jan/Feb. [22 ref]

• ***Summary:*** "Enzymes capable of improving the extractability of protein in soybeans from a control value of approximately 74 to 95% have been derived from *Pestalotiopsis westerdijkii.* The resulting soybean milk product appeared to be free of toxic components, and the protein was of a quality equal or superior to that of soybean milk prepared without enzymatic treatment."

"In most instances, existing processes for extracting soybean protein recover from 70 to 80% of the total protein... and the quality of the protein in the unextracted residue is superior to that of the soy milk protein."

Table III shows the effect of enzyme concentration on subsequent extraction of nitrogen from soybean residue [okara]. Table IV shows the time course of enzyme modification of nitrogen extractability Trichloracetic acid (TCA) is used for deproteinization.

Table III shows the effect of enzyme concentration on subsequent extraction of nitrogen from soybean residue. Table V shows the carbohydrate reaction products from degradation of soybean residue. Address: Dep. of Biochemistry & Nutrition, Virginia Polytechnic Inst., Blacksburg, Virginia.

2121. Harkins, Robert W.; Sarett, Herbert P. 1967. Methods of comparing protein quality of soybean infant formulas in the rat. *J. of Nutrition* 91(2):213-18. Part I. Feb. [13 ref]

• ***Summary:*** Discusses: Prosobee and Sobee (Mead Johnson), Mull-Soy (Borden), and Soyalac (Loma Linda, Riverside, California). Address: Dep. of Nutritional Research, Mead Johnson Research Center, Evansville, Indiana.

2122. Roberts, Hibbert Rice. 1967. The Meals for Millions Foundation: a study of a non-governmental organization (Continued–Document Part V). PhD thesis in Political Science, University of Washington. 288 leaves. [53 + 100+ footnotes]

• ***Summary:*** Continued: Chapter 5, "MFM and the United States government." "Over a period of nearly twenty years, the executive and legislative branches of the federal government have been a source of both assistance and frustration to MFM's staff as it sought to promote the use and production of MPF and MFP-type foods throughout the world." Dr. Allan K. Smith of the USDA's Northern Regional Research Laboratory (Peoria, Illinois), "an expert on soybean protein and its uses gave great encouragement to the infant Foundation [starting with a letter dated 30 Dec. 1947] and undoubtedly brought to its attention a potential source of technical advice,..." (p. 115-18).

The Bureau of Educational Affairs of the State Department provided ongoing help. The Foreign Training Division of USDA's Foreign Agricultural Service also responded favorably and now furnishes MFM the names and itinerary of individuals brought to the United States by the USDA to study American food and nutrition programs. "As a result, many foreign nutritionists, politicians, officials, and businessmen on U.S. government sponsored tours have visited MFM headquarters and have listened to Miss Rose and staff explain the MPF answer to protein scarcity in developing nations of the world." This "represents another step in the slow process of educating the citizens of other countries about the potential of vegetable proteins as a source of human food and the wisdom of manufacturing

MPF-type foods." Perhaps the U.S. "officials believed that the example of an American-supported voluntary agency motivatd by an unselfish desire to help improve the living conditions of people in other countries would create a favorable impression of the United States in the minds of its guests. In any case, the routing of visitors to MFM by two federal departments appears to be a satisfactory arrangement for everyone involved" (p. 118-20).

The U.S. government sometimes helped in transporting MPF to foreign countries for relief. In one case, in 1959-60, MFM sent (with transportation paid) "over 74,000 pounds of MPF to Hong Kong, Japan, the Philippines and Taiwan in less than a year" (p. 120). It might be seen as part of the fight against communism. Also discuses Public Law 480–the Agricultural Trade and Assistance Act of 1954, which was signed into law on 10 July 1954–which offered to pay for some shipping (p. 120). "The lack of an MFM representative in Washington, who could personally press appropriate officials, greatly hurt MFM."

In Feb. 1958, in a speech delivered at Caltech, President Richard Nixon mentioned "Multi-Purpose Food which has meant so much to undernourished peoples all over the world" and congratulated Dr. Borsook for his "imaginative work" (p. 132-33; See also *Pasadena Star News* 17 Feb. 1958).

Also discusses the Armed Forces, school lunch program, civil defense and bomb shelters, and the American Soybean Association. The "Foreign Agricultural Service of the USDA and the American Soybean Association had entered into an agreement, on 7 Feb. 1956, which committed 108 million yen or $300,000 of PL 480 counterpart funds for a project to 'expand the market for U.S. soybeans in Japan.'" This was part of Section 104 within Public Law 480. MFM unsuccessfully tried to attach itself to this agreement (p. 143).

Continues the discussion of PL 480, Senator Hubert Humphrey (encouraged MFM; cordial relationship), MFM's "ambitiously conceived but sporadically executed campaign to convince U.S. officials that high-protein vegetable supplements, i.e., MPF, should be incorporated into the relief and emergency feeding programs authorized by PL 480" (p. 144-51). George McGovern (Director of the Food for Peace program). Dec. 1961 Eddie Albert of MFM shows the film "People to People" to McGovern, who calls it "an inspiration" and requests a copy for his office (p. 154-55). But the benefits to MFM of all this effort were negligible.

At the national level, pressed by "a keen and understandable desire to augment the limited resources and modest capabilities of the Foundation, Miss Rose and Mr. Chamberlain seem to strike out in any direction that they feel might lead to an improvement in the fortunes of their organization. What started to be a relatively simple effort on the part of MFM to obtain a PL 480 grant of $18,000 to develop a Japanese version of MPF, soon spiraled into an increasingly complex campaign to alter the focus of the United States overseas surplus food disposal program. The question of whether MFM, or more specifically Miss Rose and Mr. Chamberlain, should embark on such a campaign was never raised" (p. 159).

Chapter 6, Meals for Millions and the United Nations Children's Fund (UNICEF). The apparent identity of interest between the Fund and the Foundation "helps to explain why Miss Rose and Mr. Chamberlain concentrated so heavily upon the establishment of a cooperative relationship with UNICEF" (p. 161). However from its beginning in 1947, when MFM first offered to donate MPF to UNICEF, until the present, this relationship was filled with disappointments and frustrations for MFM (p. 161-96).

Dr. James Hundley of UNICEF told a MFM delegation of three (on 26 Feb. 1958) that the Saridele (soybean milk powder) plant in Indonesia had cost UNICEF approximately $480,000. But villagers found the powder "difficult to blend with water and prone to absorb moisture and harden when left exposed to the air" (p. 179).

The unfortunate and unhappy relationship shattered unmistakably on 9 June 1959 when Dr. Henry Borsook delivered the opening address at the Second Annual Inter-American Food Congress in Miami Beach, Florida. The "answer he gave to the question posed in the title of his address, 'We can at this time provide fairly adequate nutrition for the world. Why isn't it being done?' included a bitter and poignant indictment of 'official agriculture' in general and United Nations nutritional scientists in particular" (p. 182-87). Thereafter, UNICEF officials showed no desire to cooperative with MFM. Yet both sides were at fault. "Thus, it is little wonder that MFM–UNICEF relations were filled with more discord than collaboration and understanding" (p. 196).

Chapter 7, "Meals for Millions overseas," concentrates on the development of the production of MPF-type foods in India and Brazil, where they are still (as of 1967) being produced, in order to describe and analyze MFM's approach to famine prevention (p. 197). "India: In 1957, Meals for Millions achieved its most significant advance in the field of hunger prevention when the Mysore Central Food Technological Research Institute [CFTRI] started to produce on a regular albeit limited basis an Indian version of American MPF for use in a school lunch program in the state of Mysore." The formulation was based on peanuts and bengal gram. But it was not until 1960 that a large-scale Indian MPF plant went into operation (p. 221-23). From 1946 to 1956 MFM gave India 1.39 million pounds of American MPF but there were ongoing problems with its distribution (p. 199-202).

Brazil: "In June 1956 a Brazilian company began processing its own soybean-based, fortified food supplement patterned after the American MPF." Here Maurice Abrahams had taken the initiative–not MFM. Pages 223-56 describe, step by step, the chain of events that led to the ill-fated

attempt to start making an MPF-type food in Brazil. The idea for this project "started in the later summer of 1953 when Mr. Abrahams, a United States citizen residing in Sao Paulo, Brazil, happened to read a glowing account of MFM and MPF in the July, 1953 issue of *Readers' Digest.* He was stimulated to think of the commercial potential, as well as the humanitarian value of an inexpensive soybean food if sold on a large scale to lower-income and malnourished Brazilians. After an exchange of letters with Miss Rose, Mr. Abrahams concluded that a commercial venture was feasible and flew to Los Angeles to discuss the details of a contract to produce MPF in Brazil. Though later events were to show that Mr. Abrahams had made an error in judgment, when they signed an agreement on 19 April 1954 [with Mr. Abrahams doing business as the Capital Research and Management Company], he and MFM's officers were highly optimistic about the great market potential of a Brazilian MPF." Details of the contract are given (p. 223-24). Continued. Address: Seattle, Washington.

2123. Ling, C.A. 1967. More about milk in our diet. *British Vegetarian.* March/April. p. 179-80. [1 ref]
• ***Summary:*** The author and many Britons believe that "from a humanitarian point of view the consumption of animal milk by human beings is wrong. This conviction follows from a realisation that the slaughterhouse and dairy products are interlinked and inseparable." Address: Plantmilk Ltd., Langley, Bucks., England.

2124. Bhat, Sudhakar. 1967. Rock-drilling rigs gifted by UNICEF are in use in Bihar. *Times of India* (*The*) (*Bombay*). May 4. p. 1.
• ***Summary:*** The rigs are being operated by the Special Relief Organization (Emergency Water Supply) in areas where deep drilling of wells through rock is necessary.

UNICEF's assistance to Bihar, and to the famine zones of adjacent Uttar Pradesh, has been substantial. About 3,200 tonnes (metric tons) of milk powder "and 3,800 tonnes of [powdered] soyabean milk have also been released for distribution in the scarcity areas by UNICEF."

Note 1. The "soyabean milk" was actually CSM (corn-soya-milk) a powdered relief food from the USA, made from a mixture of corn flour, defatted soy flour, and nonfat dried milk, plus added vitamins and minerals.

Note 2. In 1966-67 Bihar experienced a serious drought and harvest failure; a serious famine was barely averted by the timely arrival of food, water, and aid from the international community. Address: The Times of India News Service.

2125. *Times of India* (*The*) (*Bombay*). 1967. Catastrophe averted in Bihar, says Egger. May 19. p. 11.
• ***Summary:*** Dr. Charles A. Egger, head of the UNICEF office in India, said after a visit to Bihar that a large catastrophe had been averted, but that the battle against famine continued.

Dr. Egger said that UNICEF "had contributed 3,200 tonnes of milk powder and 3,800 tonnes of CSM (corn-soya-milk) high protein food for the school feeding programme."

2126. *Times of India* (*The*) (*Bombay*). 1967. Current topics: Soya bean milk. May 20. p. 6.
• ***Summary:*** More than a year ago the Central Committee for Food Standards said that the milk from slightly fewer than a million camels and slightly more than a million donkeys could make a useful addition to India's perennial year-round shortage of milk. It still says the same thing, but nothing has changed.

But there is still much that could be done. "Milk foods have been prepared from the soya bean with considerable success in both China and the United States." There is no reason why such vegetable milk could not also be made in India and used for feeding infants [after weaning] and young children.

2127. De, Sasanka S.; Russell, J.S.; Andrè, L.M. 1967. Soybean acceptability and consumer adoptability in relation to food habits in different parts of the world. *USDA Agricultural Research Service.* ARS-71-35. p. 20-27. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [1 ref]
• ***Summary:*** Contents: Traditional soy products in the Far East: Soysauce, soy milk, bean curd, tempeh, natto and miso, roasted soy flour, kochu chang [Korean soybean miso], sprouted beans. Introduction [of soybeans] in other countries: Brazil, USSR, Africa, Latin America, Turkey. New types of products: Defatted soy flour, full-fat soy flour and beverages made from it developed by the Soybean Council of America. Justification: Cost of a pound of protein from different foods. Beef $4.60. Pork $4.30. Poultry $1.50. Nonfat dry milk solids $0.41. Dry beans $0.35. Soybeans $0.14. Attempted introductions: India. Factors involved in adoptability.

Soybean varieties can be divided into three basic groups: commercial, forage, and garden or vegetable varieties. The commercial and forage varieties do not cook easily and have a raw, beany flavor, whereas the garden varieties can be characterized as having a milk or nutty flavor.

"Kochu chang is produced in every household in Korea from mashed boiled [soy] beans which are hung in bags for 2 to 3 months. The product is broken up, dried, and ground. It is then mixed with ground red pepper [plus salt and water] and kept for some time before use."

This paper was presented by Leon Marie Andrè.

Note 1. This is the earliest English-language document seen (Jan. 2007) that contains the term "roasted soy flour." We read (p. 22): "This product is produced in small amounts and consumed with rice cake [mochi]. There is hardly any information on the nutritive value of the product."

Note 2. This is the earliest English-language document seen (March 2009) that uses the word "kochu chang" (or "kochu-chang") to refer to Korean-style red pepper and soybean paste (miso). Address: 1-2. Food and Agriculture Organization of the United Nations, Rome, Italy; 3. FAO Liaison Officer and adviser to UNICEF.

2128. Hand, David B. 1967. Formulated soy beverages for infants and preschool children. *USDA Agricultural Research Service*. ARS-71-35. p. 67-74. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois. [8 ref]
• ***Summary:*** Contents: Introduction. Previous work. Wet versus dry processing. To soak or not to soak [soybeans used to make soy beverages]. Hot versus cold extraction. Conclusion.

Tables show: (1) Composition of soy milk fractions (percent on dry basis). (2) A summary of the effect of soybean fractions upon growth of weanling rats when diets supplied 10% protein. (3) Percent composition of a 24-hour soak water from dehulled soybeans. (4) Effects of soaking dehulled soybeans on content of protein, fat, and carbohydrate [incl. oligosaccharides raffinose and stachyose]. Address: New York State Agric. Exp. Station, Geneva, New York.

2129. Hill, Ronald A. 1967. Potential and use of soy protein for low-cost infant foods in India. *USDA Agricultural Research Service*. ARS-71-35. p. 223-24. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois.
• ***Summary:*** Starts by discussing the very successful work of the Kaira Co-operative Milk Producers' Union Ltd. at Anand, 270 miles north of Bombay. Mr. V.H. Shah is production manager. They have 110,000 members and a turnover of $15 million a year. Their infant food named Amul is well known throughout India. The Co-operative has requested UNICEF's help in a new project to produce a weaning food consisting of a cereal-legume-milk mixture. Soybeans would serve as the legume. The cooperative has excellent relations with farmer members, and this could be used to promote interest in the cultivation of a new crop such as soybeans. Address: Senior Engineer, Food Conservation Div., UNICEF, United Nations, New York.

2130. Johnson, Dale W. 1967. Marketing soy protein products and problems of acceptance in foreign countries. *USDA Agricultural Research Service*. ARS-71-35. p. 195-204. May. Proceedings of International Conference on Soybean Protein Foods. Held 17-19 Oct. 1966 at Peoria, Illinois.
• ***Summary:*** "These edible products include soy flour and grits, isolated soy proteins, soy protein concentrates, soy milk products, and enzyme hydrolyzed soy proteins." Address: Executive Vice President, Crest Products Inc., Park Ridge, Illinois.

2131. Gorrill, A.D.L.; Thomas, J.W. 1967. Body weight changes, pancreas size and enzyme activity, and proteolytic enzyme activity and protein digestion in intestinal contents from calves fed soybean and milk protein diets. *J. of Nutrition* 92(2):215-23. June. [19 ref]
• ***Summary:*** Milk and soybean sources of dietary protein for calves were compared on the basis of growth, pancreatic enzymes, and intestinal proteolysis. Soy protein concentrates (called 71% crude protein soybean flour) gave better results than soy flour in calf milk replacers. This was attributed, at least in part, to the negligible trypsin inhibitor content of the soy protein concentrates. Address: Dep. of Dairy, Michigan State Univ., East Lansing, Michigan.

2132. Orr, Elizabeth; Adair, David. 1967. The production of protein foods and concentrates from oilseeds. *Tropical Products Institute Report* No. G31. 104 p. June. Also titled T.P.I. Report (London). [44 ref]
• ***Summary:*** Contents: Foreword. Acknowledgements. Introduction. 1. The use of oilseeds as a source of protein. 2. Oilseed resources. 3. The manufacture of protein flours by standard oil milling processes. 4. Some cost aspects of the manufacture of protein flour by standard oil milling processes. 5. Examples of the use of edible flours made by standard oil milling processes. 6. Full fat soya flours. 7. Oriental methods of processing soya. 8. Other processes for making protein products. 9. The distribution of protein products. 10. Current experience of making protein flours and foods from oilseeds. 11. The initiation of protein food programmes with particular reference to the role of the administrator. Appendices. 1. Protein nutrition. 2. Oilseed statistics. 3. Toxic hazards. 4. P.A.G. Guides [PAG]. 5. Aflatoxin. 6. Questionnaire. 7. Some examples of the cost of packaging oilseed-based protein foods. 8. Prices of edible oilseed products and protein flours and foods made from oilseeds. Bibliography. Chapters 6 and 7 are especially relevant to soyfoods.

"Full fat soya flour (FFSF) is manufactured in the USA by Archer Daniels Midland Co. and Central Soya, and in the UK by 3 firms: British Arkady Co. Ltd., Soya Foods Ltd., and British Soya Products Ltd. There are no official statistics for production in either country. A trade source of information has estimated UK usage of soya flour at 30,000 tons per annum, but this figure includes defatted soya flour made from meal imported from the USA. Full fat soya flours can be divided into 2 main categories: (a) flours used primarily for bleaching purposes in bread, and (b) general purpose flours. When the flour is to be used mainly for bleaching it is made from uncooked beans, since the natural enzymes in the bean must remain active until the bleaching process has been completed. It is estimated that about half

the full fat soya flour made in the UK is used in bread manufacture."

A table lists all known commercial full-fat soy flours, their composition and prices. Describes the Promo Process and Wenger Process for making FFSF, with cost data. Gives case histories for Pronutro in South Africa and Nutresco in [Southern] Rhodesia.

Chapter 7. Oriental methods of processing soya beans: Kinako ("a flour made from ground toasted [soy] beans, used in making cakes"). Fermentation products: Soya sauce (shoyu), miso, natto, tempeh. Developing the use of fermented products. Aqueous extracts: Soya milk and tofu, kori-tofu. Soya milk as a substitute for cow's milk. The package soy milk shop (including Tetra Pak and Prepac packaging; the Prepac system, developed by the S.E.A.B. Co., Villejuif, France, has a capacity of 1,500 packs/hour). Case histories for soya milk: Rural cooperatives in Taiwan, Saridele in Indonesia, and Vitasoy in Hong Kong. Soya milk made from soya flour: The 4 known manufacturers of soya milk are Promo Ltd. of the U.K. ("The product made by Promo is marketed under the brand name of 'Velactin' by the Wander company."), and Loma Linda Foods (Soyalac and Granogen), Mead Johnson (Sobee or Soybee), and Borden's Soy Processing Co., all of the USA. Promo and Loma Linda use the traditional Oriental method rather than using soy flour.

Note: This is the earliest document seen (Aug. 2013) concerning Tetra Pak and soy. Address: TPI, 56/62 Gray's Inn Road, London WC1.

2133. Plantmilk Ltd. 1967. Feeding baby on Plamil plantmilk: Up to 12/15 months. *British Vegetarian.* May/June. p. 245-48.
• ***Summary:*** The protein in Plamil comes mainly from soya. A table shows a baby feeding guide. Address: England.

2134. Saio, Kyoko; Koyama, E.; Watanabe, T. 1967. Protein–calcium–phytic acid relationships in soybean. I. Effects of calcium and phosphorus on solubility characteristics of soybean meal protein. *Agricultural and Biological Chemistry* 31(10):1195-1200. June. [12 ref]
• ***Summary:*** Discusses the solubility characteristics of soybean meal protein as a function of pH. Phosphorus and calcium have a very significant effect on the solubility of that protein. It is difficult to increase the calcium content in soy milk, since soy protein is coagulated and precipitated by calcium-protein interaction. The coagulated soy protein is not suitable for beverages. Address: 1&3. Food Research Inst., Ministry of Agriculture and Forestry; 2. Japan Tofu Assoc.

2135. Schmutz, W.G.; Cravens, W.W.; Soldner, W.L.; Hughes, D.L. 1967. Evaluation of a soybean protein concentrate in calf milk replacers (Abstract). *J. of Dairy Science* 50(6):993 (Abst. #P118). June.
• ***Summary:*** The authors compared an all milk control to three experimental milk replacers containing 8, 10, or 16.0% of an alcohol extracted "soy protein concentrate (Promosoy)" during a 4 week trial. "A commercial calf starter was also fed on an ad libitum basis."

Note: This is the earliest English-language document seen (Dec. 2005) that uses the term "soybean protein concentrate" to refer to a product containing 70% protein on a dry-weight basis. Address: Central Soya Co., Decatur, Indiana.

2136. *Los Angeles Times.* 1967. Pilot plant and training center opened by Meals for Millions. July 9. p. WS12.
• ***Summary:*** Meals for Millions has opened a demonstration pilot plant at 1800 Olympic Blvd., Santa Monica, California. Mark Sterner is foreman of the demonstration plant. It contains $40,000 worth of machinery and has the capacity to produce 3-4 tons of high-protein food supplement (or protein beverage) per day from oil seeds such as soy bean, sunflower, safflower, sesame, or cotton.

Also in the building is a "multitrax classroom, where foreign technical trainees can select verbal instruction from one of five different languages all of which are electronically synchronized with a rear projection visual presentation.

Starting later this month, students from the following countries will arrive at Meals for Millions to attend training classes: Bolivia, Brazil, Chile, Ecuador, Japan, Korea, Philippines, and Taiwan.

They will learn how to make the high protein food supplement or beverage from seeds indigenous to their home countries. They will also learn processing sanitation, packaging, marketing, and distribution, so they may start a self-help program when they arrive home.

2137. U.N.I. 1967. Soya products unit for Bombay. *Times of India* (*The*) (*Bombay*). July 15. p. 6.
• ***Summary:*** A plan to establish a plant in Bombay to make soya milk and soya products (from soya beans) has been licensed. The necessary equipment is being ordered from the United States.

"The programme is aimed at stimulating the use of soya beans, besides providing soya milk to serve as a supplement to animal milk."

In the Punjab, moreover, a unit has started testing the production of high-protein foods.

2138. Berg, Alan D. 1967. Malnutrition and national development. *Foreign Affairs* 46(1):126-36. Oct. Address: Washington, DC.

2139. Diamond, Holton W. 1967. Profit potential of new vegetable fat products. Paper presented at the 60th annual convention of the Milk Industry Foundation and the 63rd

annual convention of the International Association of Ice Cream Manufacturers. 9 p. Held jointly in Los Angeles, California. Session on Marketing and Technology, Tuesday, Oct. 24, 1967.
• ***Summary:*** Pages 5-6 state: "The finest vegetable milk which I have seen is that which was made at one time at the George Washington Carver Laboratory in Dearborn, Michigan. During my work there in the years between 1940 and 1946, a great deal of technology was developed in the manufacture of many kinds of vegetable dairy products. A pilot type soy bean milk plant in which we made 150 gallons per day of soy bean milk and soy bean cream was part of the laboratory. The milk and cream were supplied at no cost to mothers of infants who were allergic to cow's milk, and to others; and the technology was shared freely with all who were interested. The laboratory was supported by the late Henry Ford, and he visited us often. A very great deal has been done since, but much of the basic technology now in use in this field originated in this small laboratory, in research which was made possible by the interest of Henry Ford in the soy bean and in what has come to be called 'chemurgy,' the industrial use of the products of the farm and of the soil...

"If you will share with me one experience, you can imagine how I may have become prejudiced in my outlook on cultured cheeses. Across a period of several months, at my direction, a laboratory technician at the George Washington Carver Laboratory inoculated samples of soy bean milk and soy bean cream with portions of Cheddar, Limburger, Roquefort, Camembert, Liederkrantz and other cheeses." None of the workmen wanted to open the incubator door; in fact, they drew straws each Monday morning to see who would have to do it.

Concerning the concept of "imitation" products: "A product which is demonstrably less well suited to its intended *purposes* than is a well known precursor which it resembles and which is used for the same purposes is inferior. Because of its inferiority, it is properly labeled and referred to in a derogatory way as an 'imitation', for this word, both as an adjective and as a noun, connotes inferiority.

"We are no longer ashamed of new or mixed-ingredient materials merely because they are new or comprised of components of different origins." In almost every case they are less expensive, and in some cases they are clearly superior in at least some characteristics to their dairy counterparts. Address: Rex Diamond Laboratories, Inc., Detroit, Michigan.

2140. Dutra de Oliveira, J.E.; Scatena, L. 1967. Nutritional value of protein from a soybean milk powder. *J. of Food Science* 32(5):592-94. Sept/Oct. Also in Soja: Relatorio e Pesquisas. Ribeirao Preto. 1972. p. 11. Pinto 1978, p. 293. [8 ref]
Address: Faculdade de Medicina, Ribeirao Preto (Sao Paulo), Brazil.

2141. Henderickx, H.K.; Vanneste, G. 1967. Maïze-soybean mixtures as protein sources of high biological value. *Zeitschrift fuer Ernaehrungswissenschaft* 8(4):209-15. Oct. [15 ref. Eng]
• ***Summary:*** In the Luluabourg [later renamed Kananga] area of the Belgian Congo, there is a shortage of proteins. Animal protein is too expensive and in short supply. Therefore it appears necessary to solve the problem using plant proteins. Ground-nuts, beans, and sometimes voanszous (voandzeia subterrsmea [subterranea] Thou.) [Bambara groundnuts] are cultivated in the Luluabourg area and their growth is highly encouraged. "Another possibility would be the introduction of the soybean culture. Indeed from a nutritional point of view this could be a valuable improvement. The soybeans, adequately treated, is quantitatively and qualitatively one of the best vegetable protein sources. From an agricultural standpoint the soybean growth in this area is more favourable than that of other leguminosae as to yield, vegetation period, edaphic conditions, etc." The authors tried making soybean milk but with little or no success due to unsanitary conditions during preparation. But they got good results substituting soybeans for manioc in *bidia* using 25% soybean meal and 75% maize meal. It was sweetened with a piece of well matured banana. The nutritional value of the mixture was high, with a chemical score of 91. Address: 1. Dep. of Nutrition, Faculty of Agricultural Sciences, 235 Coupure, Gent (Belgium); 2. BP 110, Tshibashi-Luluabourg ([Belgian] Congo).

2142. Kapsiotis, G.D. 1967. A list of protein food mixtures. *PAG Bulletin* (*Protein Advisory Group, WHO / FAO / UNICEF*) No. 7. p. 71-73. Oct.
• ***Summary:*** For each product, the following information is given: Product name, country, composition, protein content (percentage), and price (in US$/kg) and packaging. Of the 18 products listed, the following 8 contain soya. Incaparina in Colombia and Mexico. Fortifex in Brazil. Pronutro in South Africa. Saridele in Indonesia. Prolo in the UK. CSM and CEPLAPRO in the USA.

Several interesting products do not contain soya: Peruvita in Peru contains quinua. Bal-Ahar in India (made by CFTRI) contains mixed wheat flour, vegetables and defatted oilseed flour, vitamins, calcium. Address: Food Science and Technology Branch, Nutrition Div., FAO, Rome, Italy.

2143. *Prevention* (*Emmaus, Pennsylvania*). 1967. The superior soybean. Oct. p. 60-62. [5 ref]
Address: Emmaus, Pennsylvania.

2144. Hackler, L.R.; Stillings, B.R.; Polimeni, R.J. 1967. Correlation of amino acid indices with nutritional quality of several soybean fractions. *Cereal Chemistry* 44(6):638-44.

Nov. [10 ref]
• ***Summary:*** The residue or water-insoluble fraction [from making soymilk, called okara] was the most nutritious fraction as measured by growth and PER; it contained more cystine and consequently more total sulfur amino acids than all other soybean fractions. Based on Clark soybeans ground with water, the residue contains 23.5% of the solids and 13.5% of the protein found in the original soybeans. The soy milk contains 65.0% of the solids and 83.0% of the protein.

The residue contains 23.1% crude protein, 17.3% lipid, and 4.5% water. Discusses the essential amino acid index (EAAI) and the requirement index (RI). The results of the amino acid composition of the soybean fractions (residue, soy milk, curd, whey protein, hulls, soak water) are reported in table 1 as grams of amino acid per 16 gm nitrogen. Table 2 gives the protein scores of the various soybean fractions based on essential acid index. Table 3 gives the protein scores of the various soybean fractions based on the requirement index. Table 7 shows that the residue contains the highest quality protein based on PER and EAAI, but second highest based on RI. Address: Cornell Univ.

2145. Lo, K.S. 1967. Development and marketing of soybean products for developing countries. Presented at Bangalore Conference, Mysore, India. Nov. *

2146. *Prevention* (*Emmaus, Pennsylvania*). 1967. Milk can cause adult diarrhea. Nov. p. 50-51. [1 ref]
• ***Summary:*** Summary of an article by Marshall Sparberg, M.D., in *Medical Digest* (Aug. 1967). The problem is due to lactose and lactase. Lactose is a combination of two sugars, glucose and galactose. It must be broken down (hydrolyzed) by the enzyme lactase before the body can digest it. Infants typically have plenty of lactase, but the level steadily decreases through childhood, until many adults have little–leading to lactose intolerance. Some demographic groups, such as Negroes, have less than others.

Prevention magazine has "long advocated the elimination of milk and milk products from the diets of adults. There are many less risky ways of acquiring the same nutrients contained in milk."

"Human beings are the only mammals that continue to drink milk into adult life. Nobody really knows why." Address: Emmaus, Pennsylvania.

2147. *SoyaScan Notes.* 1967. Chronology of soybeans, soyfoods and natural foods in the United States 1966-1967 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1966, April 9. Erewhon opens as a small (10-by 20-foot) macrobiotic and natural foods retail store at 303-B Newbury Street in Boston, Massachusetts. Aveline and Michio Kushi are the founders and Evan Root is the first retail store manager. Erewhon is the first food store of its kind in America, and it soon serves as a model for many other similar natural foods stores across America. Erewhon starts to grow in Oct. 1967 with the arrival of Paul Hawken.

The natural foods movement in America is in its infancy, advocating a return to traditional whole foods, naturally grown and processed. It's predecessor, the health foods movement (which started in the 1930s, based on the new public interest in vitamins), now largely sells vitamin, mineral, and protein supplements.

1966, Nov. America's first soybean checkoff program voted in by North Carolina soybean growers, who will pay half a cent per bushel checkoff on the 1966 crop. This new income source marks the start of a new era for the American Soybean Association.

1967. The All-India Coordinated Research Project on Soybean is founded in India, after about 4 years of pioneering soybean work there by American Land Grant Universities, funded largely by the Rockefeller Foundation. This story is well told in Carroll P. Streeter's book A Partnership to Improve Food Production in India (1969).

1967. Soy idli developed by Steinkraus and van Veen at Cornell University, New York. These small steamed cakes are the first traditional Indian fermented soyfood to be fortified with soy flour. The fortification of basic foods in Third World countries with soy flour becomes popular.

1967. Philsoy brand soymilk launched in Los Baños, Philippines, with aid from Cornell University food scientists Bourne and Steinkraus.

1967. Proceedings of International Conference on Soybean Protein Foods published by USDA Agricultural Research Service. The conference was held 17-19 Oct. 1966 at Peoria, Illinois. Many of the 276 attendees were pioneers in the field. A similar conference on Soybean Products for Protein in Human Foods had been held in 1961 at the same location. A major theme at both is that protein malnutrition is now the world's most widespread deficiency disease.

1967. Soybean production in Latin America reaches 1 million metric tons (tonnes), up 10-fold since 1953.

2148. Wilkens, W.F.; Mattick, L.R.; Hand, D.B. 1967. Effect of processing method on oxidative off-flavors of soybean milk. *Food Technology* 21(11):86-89. Dec. Based on paper presented at New York State Agric. Exp. Station. Cornell Univ. Geneva. June 30, 1966. 13 p. Babatunde 1979. [7 ref]
• ***Summary:*** Note: This classic study, the first to discover that the lipoxidase enzyme in soybeans causes off-flavors, played a major role in starting the modern soymilk boom and leading to improved-quality soy flours as well.

The authors found, by means of sophisticated chemical-analytical techniques (especially chromatography), that the enzyme lipoxidase, which is present in whole soybeans, is the cause of the beany flavor in soymilk. The off-flavors are not present in the whole dry soybeans but are formed during processing. As soon as the soaked or dry soybeans

are ground with water at a temperature below 80ºC (180ºF) (or the tissues of the soybean cotyledons are broken or damaged in any way in the presence of even a small amount of moisture), the lipoxidase enzyme almost immediately catalyzes off-flavor development by acting on the lipids (oils and fats) in the soybeans. In particular it catalyzes the oxidation of unsaturated fatty acids (principally linoleic and linolenic acids), which results in rancidity and off-flavor formation, and produces more than 80 compounds called volatiles, all having low molecular weights. The majority of these volatiles are reported to be ketones, aldehydes, and alcohols, and most impart undesirable flavors.

"An acceptable bland milk was produced by grinding unsoaked, dehulled soybeans with water at temperatures between 80 and 100ºC and maintaining the temperature for 10 minutes to completely inactivate the lipoxidase enzyme." Address: Cornell Univ., Geneva New York.

2149. **Product Name:** Neo-Mull-Soy (Non-Dairy Infant Formula Based on Soy Protein Isolate).
Manufacturer's Name: Borden, Inc. Pharmaceutical Products Div.
Manufacturer's Address: Headquarters: 350 Madison Ave., New York, NY 10017. Plant in Elgin, Illinois.
Date of Introduction: 1967.
Ingredients: Incl. water, soy protein isolate, vitamins and minerals.
New Product–Documentation: Bates et al. 1968. Annals of Allergy. 26(11):577-83. Nov. "Milk and soy formulas: A comparative growth study." Syntex. 1990. Press backgrounder. In 1967 The Borden Company developed Neo-Mull-Soy and Cho-Free, highly specialized infant feeding formulas designed for children who were allergic to milk products, or in the case of Cho-Free, to carbohydrates.

2150. **Product Name:** Jolly Joan Soyquick. Renamed Ener-G Soyquick in 1968.
Manufacturer's Name: Ener-G Cereal Co.
Manufacturer's Address: P.O. Box 24723, Seattle, WA 98124.
Date of Introduction: 1967.
Ingredients: Soya bean powder.
Wt/Vol., Packaging, Price: 397 gm carton.
How Stored: Shelf stable.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). "Ener-G Foods Inc., P.O. Box 24723, Seattle, Washington 98124. Phone: 206-767-6660 (Makes soymilk and Jolly Joan Soyquik)."

Food Report (Lehmann). 1983. Aug. One carton of the powder mixed with water makes seven quarts of soymilk. Advertised in a women's magazine in Greece as "an easy alternative to milk." The company also makes Nutquik, containing ground almonds.

Frank Murray. 1984. More than One Slingshot. p. 45. Formerly known as Ener-G Cereal Co., it was started in 1910 by L.J. McCarthy. Now in Seattle, Washington. An early product was Jolly Joan Toasted Wheat Germ. They now make Soy Pancake Mix.

Talk with Sam M. Wylde, Chairman, Ener-G Foods, Inc. 1990. Oct. This product was originally named Soymilk Powder. They changed it to this name in 1967. Then they changed the name to Ener-G Soyquick in 1968, at the time they moved to Fox Ave. and changed the company name.

During World War II, when the German armies moved into Holland, they seized all the wheat, rye, oats, and barley, then sent them back to Germany to feed their own people. Suddenly a lot of Dutch people, who had been sick all their lives, suddenly got well. The cause was found to be an intolerance to the gluten found in these 4 crops. Two Dutch physicians did research on this and called the disease celiac-sprue disease. It is genetic defect found only in people of northern European extraction (the very people who tend NOT to be lactose intolerant), of which 1 in 200 people have the defect. In the rest of Europe, its 1 in 400. In the USA, 1 in 2,000 have it. Ener-G Foods moved in the direction of serving people on gluten-free diets, on kidney machines who needed a diet low in protein, sodium, potassium, and phosphorus, and kids with PKU (phenylketonuria). Their Soyquick, which is their only soy product, is now part of a line of special food for special diets. Their three best-selling products are Soyquick, Egg Replacer, and Rice Mix. The Soyquick is still used mainly for people with lactose intolerance, the same as in the early days. They also make an almond milk named Nutquick. In 1989 the company made its third move to 5960 First Ave. South, Seattle, WA 98108,– where they are now located.

2151. Tin Tin U, Daw; Thien, U Aung. 1967. Processing of soya milk. *Union of Burma J. of Science and Technology* 2:355-62. [7 ref. Eng]
• ***Summary:*** In 1963-64 in Burma about 17 million pounds of soybeans were produced. This article is about attempts to get rid of the slight unpleasant residual flavor in soya milk.

It was further discovered that the pH of soy-milk needs to be raised when used in coffee in order to prevent coagulation. This is not a problem, however, when soy-milk is used in tea or milo. Address: Food Technology Research Dep., Union of Burma Applied Research Inst.

2152. **Product Name:** Philsoy (Soymilk).
Manufacturer's Name: University of the Philippines at Los Baños.
Manufacturer's Address: Los Banos, Philippines.
Date of Introduction: 1967.
Wt/Vol., Packaging, Price: Glass bottle with crown cap.
New Product–Documentation: Bourne 1970, 1971; Puertollano et al. 1970; Bourne et al. 1976; Banzon &

Escueta 1979. A bottled soymilk. Due to a retail price which was lower than that of a competing skim milk, chocolate-flavored beverage, production reached 3,500 bottles/day. Production breakdowns halted the project. Talk with Rachel Cabato. 1989. May 28. Production of Philsoy stopped about 1-2 years ago.

2153. **Product Name:** Yeo's Soyabean Drink.
Manufacturer's Name: Yeo Hiap Seng Ltd.
Manufacturer's Address: 950 Dunearn Rd., Singapore.
Date of Introduction: 1967.
Wt/Vol., Packaging, Price: Tetra Pak Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 101. In 1967 it became the world's first soymilk to be sold in aseptic (UHT, Tetra Pak) cartons. Note: An aseptic product is one which is sterilized at UHT = Ultra High Temperature before packaging. By 1983 Yeo Hiap Seng was making 18.8 million liters/year of soymilk, the sixth largest in the world. Lee. 1986. Sunday Times (Singapore). Sept. 7. "Soya Bean Milk Packs More Water than Flavor." Yeo's sells for 35 cents per 250 ml. Comments: Sweet, very watery, not tasty.

Soya Bluebook Plus. 1997. p. 163. The company name and address have not changed. The postal code is Singapore 2158, Singapore. Phone: +65 466-2266. Fax: +65 466-4641. Contact: Desmond H.K. Ng or S.C. Toh.

2154. Bennett, Victor. 1967. The complete bean cookbook. New York, NY: Bonanza Books. 298 p. Preface by Senator Everett Dirkson. Index. 21 cm.
• ***Summary:*** The glossary (p. x-xii) defines bean curd (called *tou fu* in Chinese and *tofu* in Japanese). Soy-related recipes include: Salted soybeans (p. 8). Roasted soybeans (p. 8). Spiced soybeans (p. 10). Soybean milk soup (p. 38-39). Green soybean salad (p. 80; incl. "1 pound green soybeans, shelled, cooked, drained and cooled"). Molded sprout salad (p. 82, with sprouted soybeans). Soybean salad (p. 84). Soybean perfection salad (p. 84). Scalloped soybeans (p. 119). Scalloped green soybeans (p. 121; incl. "3 cups cooked green soybeans"). Soybean croquettes (p. 124). Bean stuffed peppers (p. 128, with "2 cups soybean pulp... prepared by pressing cooked soybeans through a coarse sieve or putting through a food grinder"). Bean stuffed tomatoes (p. 130, with soybean pulp). Scalloped eggplant (p. 131, with soy grits). Soy Welsh rabbit (p. 239, with soy flour). Soybean loaf (p. 239). Soybean curry (p. 240). Soybeans and salmon (p. 240). Soybean curd chop suey (p. 242). Soybean sprout casserole (p. 242). Soy cheese soufflé (p. 247, with soy grits or flour and 1 cup grated dairy cheese). Biscuits (p. 274, with soy flour). High soy yeast bread (p. 275). Yeast bread (p. 276, with full-fat soy flour). Coffee bread (p. 276, with low-fat soy flour). Currant nut bread (p. 277, with soy flour). Southern corn bread (p. 278). Whole wheat bread (p. 278). Doughnuts (p. 279). Bronze cake (p. 280). Griddle cakes (p. 280). Southern spoon bread (p. 282, with soy flour). Nut bread (p. 282). Nut mixture (p. 283, with soy grits). Dumplings (p. 283, with soy grits). Cherry pie (p. 284, with soy flour). Yeast rolls (p. 284). Spice cake (p. 285). Chinese almond cookies (p. 286). Butter crunch (p. 286). Orange cake (p. 287). Muffins (p. 288). Cocoa (p. 288, with soybean milk). Orange rolls (p. 289, with soy flour). Creamy rice with raisins (p. 289, and soybean milk). Waffles (p. 290, with soy flour). Egg nog (p. 290, with 2 cups dairy milk, 2 eggs, and 4 teaspoons soy flour). Molasses puffs (p. 291, with soy grits). Apple crisp (p. 291, with soy flour). Peanut butter cookies (p. 293). Brownies (p. 294, with "soyflour"). Oatmeal pudding (p. 294, with soybean milk). Peanut candy (p. 295, with soy flour). Boiled custard (p. 295, with soybean milk). Chocolate soufflé (p. 296, with soy grits). Apple betty (p. 296, with soy grits). Apple cobbler (p. 297, with soy flour). Fruit balls (p. 298, with soy flour). Sugar cookies (p. 298, with soy flour).

2155. Dutra de Oliveira, J.E.; Scatena, L.; Duarte, G.G. 1967. Metabolic studies of the supplementary value of animal and vegetable proteins. *Nutritio et Dieta* (*European Journal of Nutrition and Dietetics*) 9(4):249-58. Also in Soja: Relatorio de Trabalhos e Pesquisas. Ribeirao Preto: Departamento de Clinica Medica. Faculdade de Medicina. 1972. p. 17. [6 ref. Eng; ger; fre]
• ***Summary:*** "The study of the nutritive value of new sources of protein for infant feeding attracts great interest in various parts of the world. Mixtures of proteins, especially vegetable proteins, have been developed for such a purpose in Latin America, Africa, and India." A metabolic study was conducted on 24 children to test the supplementary value of animal and vegetable protein with a basic Brazilian diet. The vegetable sources of protein were soya milk, soya flour, and ground beans. Two nitrogen balance studies were carried out in each child. The vegetable proteins gave excellent results, and were much less expensive than their animal counterparts. Address: Brazil.

2156. Fomon, Samuel J. 1967. Infant nutrition. Philadelphia, Pennsylvania: W.B. Saunders Co. 299 p. Illust. 25 cm. See p. 228-33, Formulas from Protein from Soy. [86* ref]
• ***Summary:*** In Chapter 12, titled "Milk-free formulas" Table 12-1, "Formulas with protein from soy" (p. 229) gives detailed nutritional information on the following products: "Sobee (Mead), Mull-Soy Liquid (Borden), Mull-Soy Powder (Borden), Soyalac Liquid (Loma Linda), Soyalac Powder (Loma Linda), ProSobee (Mead), and Isomil (Ross)." A footnote states: "Protein of ProSobee and Isomil is the acid precipitated fraction, called soy protein isolate."

Page 230 continues: "Protein. Although two soy formulas made with soy flour (Mull-Soy and Sobee) have for years been widely used as milk substitutes, the greater whiteness and improved palatability of water-soluble soy

isolates makes it likely that in the future such isolates will replace soy flour as the source of protein for most soy formulas. ProSobee and Isomil contain a soy isolate fortified with methionine." Analyzes commercial formulas in terms of protein (incl. PER comparisons), carbohydrate, minerals, vitamins, and heat labile substances. Also describes the use of a soy formula to treat disaccharide intolerance and disaccharidase deficiency. Address: Iowa State.

2157. Hunter, Beatrice Trum. 1967. The natural foods cookbook. New York, NY: Pyramid Books. 368 p. Index. 18 cm.
• ***Summary:*** The content of this paperback edition is almost identical to that of the original 1961 hardcover edition, but the pagination is different. The Introduction by Clive and Jeanette is missing. On the cover of the 19th printing (Jan. 1974) is written: "Over a million copies sold." Address: White Mountains, New Hampshire.

2158. Manber, David. 1967. Wizard of Tuskegee: The life of George Washington Carver. New York, NY: Crowell-Collier Press. vi + 168 p. Illust. Index. 21 cm. [9 ref]
• ***Summary:*** George Washington Carver lived from about 1864 to 1943. This book is part of the series "America in the Making" written for teen-agers as an introduction to important American individuals, ideas, and events. The chapter titled "Carver Rediscovers the Peanut" notes that in 1904 the boll weevil was making it increasingly difficult to grow cotton in the South. So Carver urged farmers to plant less cotton and to raise cowpeas, sweet potatoes and peanuts to sell. "Although he had been successful at growing the soybean years before anyone had even heard of it, he did not suggest it to the farmer because he felt it was too different for southern farmers, too unfamiliar to appeal to them. Peanuts, on the other hand, were not at all strangers to Alabama farms. Almost every farmer had a little patch of peanuts somewhere near the house, grown for the children to eat." The peanut is a native of South America. "The Spanish conquistadors brought peanuts back to Spain with them. From there they found their way to Africa in the 17th century, and were brought to America by slave traders, who fed them to the slaves. 'Goober,' another word for the peanut, is actually an African word" (p. 118).

Carver developed hundreds of food and industrial products from the peanut, including milk, cream, and butter. "Peanut milk was a lifesaver in the Belgian Congo. Cows could not be raised there, because they would be devoured by leopards or diseased by flies... When missionaries started feeding the babies peanut milk, the babies lived and flourished.

"Carver lectured everywhere on the peanut and issued bulletins regularly. In addition, he lectured on the soybean and the many products that could be made of it: flour, meal, coffee, breakfast food, oil, milk. Again, however, he realized that southern unfamiliarity with the soybean would be a hindrance to its development" (p. 121).

"Carver published recipes for cooking peanuts for the home in 1913, but the original bulletin was in its sixth printing by 1916. It gave directions for growing, and 105 different ways of preparing the peanut for eating" (p. 125).

The first commercial crops of peanuts in Alabama were finally planted in 1917. Coffee County, Alabama, on the verge of bankruptcy in 1915, soon became the state's leading peanut growing county. In 1919 its largest town, Enterprise, erected a $25,000 shelling plant. It also honored Carver by placing a large monument in the town square. In May 1919 peanut growers met in Atlanta, Georgia, and organized the United Peanut Associations of America. They invited Carver, age 55, to speak about the peanut. Carver showed them his peanut products. "There were leather stains, wood stains, sauces, milk, skim milk, buttermilk, ice cream, evaporated milk, fruit punch. He showed them peanut coffee, instant coffee with cream. The *Peanut Promoter* for October 1920 wrote that the biggest thing at the convention had been the address of Professor Carver... The following January the association invited him to address the Ways and Means Committee of Congress." His presentation and exhibit there "was a powerful factor in the committee's decision to write a stiff tariff into the Fordney-McCumber Bill; the highest tariff the peanut industry ever had. The trade magazine *The Peanut World* wrote in their May 1921 issue: 'With profound pleasure and pride we dedicate an entire page to that incomparable genius to whose tireless energies and inquisitive mind the South and the country owe so much...'" (p. 139).

• ***Summary:*** The main types of milk substitutes discussed are soybean milk, peanut milk, coconut milk, almond milk, and cashew milk. Of these, soybean milk is considered to be the most important. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2160. Swaminathan, M. 1967. Availability of plant proteins. In: Anthony A. Albanese, ed. 1967. Newer Methods of Nutritional Biochemistry, with Applications and Interpretations. Vol. III. New York: Academic Press. xv + 527 p. See p. 197-241. [179 ref]
• ***Summary:*** Soy is mentioned briefly in various tables and other places throughout this chapter. The section titled "Use of Plant Proteins in Child Feeding" (p. 220-22), soymilk is discussed at length in the subsection on "Infant Foods" and soy flour and Multi-Purpose Food (MPF) in the subsection on "Processed Protein Foods."

Anthony A. Albanese was born in 1908. Address: Applied Nutrition and Dietetics Discipline, Central Food

Technological Research Inst. (CFTRI), Mysore, India.

2161. Valnet, Jean. 1967. Thérapeutique journalière par les légumes et les fruits [Daily therapy using vegetables and fruits]. Paris: Librairie Maloine S.A. 320 p. Illust. 20 cm. [Fre]
• ***Summary:*** Advocates a vegetarian diet. Pages 238-40 discuss therapeutic uses of the soybean, including soy flour, soy oil, soy sprouts, and soy milk. Address: Docteur.

2162. Colvin, B.M.; Ramsey, H.A. 1968. Growth of young calves and rats fed soy flour treated with acid or alkali. *J. of Dairy Science* 52(2):270-73. Feb. [1 ref]
Address: Dep. of Animal Science, North Carolina State Univ., Raleigh, North Carolina. Colvin's present address: Dep. of Biochemistry, Oklahoma State Univ., Stillwater, Oklahoma.

2163. *Prevention* (*Emmaus, Pennsylvania*). 1968. That cold could be an allergy. Feb. p. 71-73.
• ***Summary:*** In children, allergic reactions often resemble the common cold. According to Dr. Jerome Glaser, breast feeding protects the child. He says that most allergies in early infancy are due to food, and of these cow's milk is the chief offender.

Many will find this revelation shocking. Haven't we long been taught that milk and healthy children go together? That we milk for good teeth and healthy bones?

"Soy milk can help: If breast milk is not practical, Dr. Glaser suggests soybean milk. It can be given from birth as a supplementary feeding to breast milk."

Note: Prevention has opposed the use of cow's milk since July 1955; that same issue advised mothers to use soy milk as an alternative for babies who were allergic to cow's milk.

In August 1965 the findings of a British study were summarized, indicating that malabsorption of lactose (milk sugar) is due to a human deficiency in the enzyme lactase; this is a cause of 'functional' diarrhea.

In Aug. 1966 appeared "Milk intolerance is widespread."

In Nov. 1967 *Prevention* focused on the danger of milk-induced diarrhea in adults.

In Feb. 1971, in "Milk is not for grown-ups," readers were advised of the folly of giving away milk to hungry nations.

2164. Cerny, K.; Hajkova, S.; Pechar, J.; Van Vinh, V.; Rubin, A.; Zvolankova, K. 1968. A comparison of the efficacy of a soy flour-based milk substitute in feeding malnourished Vietnamese and eutrophic Czech infants. *J. of Tropical Pediatrics* 14(1):15-25. March. [30 ref]
• ***Summary:*** "The use of soybean in infant feeding first reported by Ruhrah (1909) has been given great attention ever since as a substitute for cow's milk in different forms of allergy, but increasingly in the treatment and prevention of protein-calorie malnutrition in infants and preschool children in developing countries.

The two main types of vegetable mixtures recommended for infant feeding are: (a) packaged commercial products of typically high nutritional value but costly due to expensive industrial processing, fortification, and (above all) packaging; (b) formulae based on low-cost natural ingredients available even in regions with an inadequate distribution network and cash economy.

This report details trials with a vegetable milk of type (b) based on full-fat soy flour fed to 40 Vietnamese infants and toddlers with different types of malnutrition and to 25 eutrophic (well-nourished) Czech infants. The results are complex. Address: 1. Inst. of Human Nutrition, Prague, Czechoslovakia.

2165. **Product Name:** [Saci {Liquid Soymilk} (Chocolate, or Caramel)].
Foreign Name: Saci.
Manufacturer's Name: Coca-Cola Refrescos, S.A.
Manufacturer's Address: Rio de Janeiro, Brazil.
Date of Introduction: 1968. March.
Ingredients: Soybean protein [isolate], powdered [cow's] milk, hydrogenated fat, sugar, carbohydrate, cocoa powder.
Wt/Vol., Packaging, Price: Sold in 6 oz soft drink bottles, sterilized with crown cap in 1968. Sold dry in multiwall paper bags. $1.76/kg in 1981.
How Stored: Shelf stable.
Nutrition: Biological value is 90% of casein. Per 100 gm: Protein 3 gm, fat 1.7 gm, with 15% added sucrose and vitamins A, D, B-1, B-2, B-6, B-12.
New Product–Documentation: *Soybean Digest.* 1968. March. p. 45. "Protein beverage by Coca-Cola." *Soybean Digest.* 1968. May. p. 23. "New weapons for the war on hunger: Latest high-protein soy beverage."

Bird, Kermit. 1968. "Foods of the future: Part I. Using conventional materials." *Food Product Development.* Oct/Nov. p. 32, 34. In Rio de Janeiro, Brazil, the Coca Cola Co. has been test marketing a beverage named Saci, bottled like a soft drink. A chocolate-flavored energy drink containing 3% protein; the protein comes from local Brazilian soybeans. The drink is promoted (see ad) as "Powerful" with "delicious energy." Photos show: (1) A bottle of Saci; (2) A graphic ad for the drink.

Russo, J.R. 1969. *Food Engineering.* June. p. 81-82. "Can new protein sources avert world shortage? Part II." In Brazil, Coca-Cola Co. has introduced Saci, a beverage containing about 3% protein. Saci is a chocolate flavored drink, made from cocoa beans and soybeans. Acceptance of chocolate Saci was encouraging and led to the recent introduction of caramel flavored Saci. Protein-rich Saci is sold in a 7-oz soft-drink type bottle (with a crown cap), which contains 6 gm of protein. A photo shows the bottle.

E. Orr. 1972. Tropical Products Inst. G73. The use of protein-rich foods for the relief of malnutrition in developing countries: an analysis of experience. p. 29-30. "Saci is manufactured by a branch of the Coca Cola company in Brazil. The enterprise had its roots in a decision by the parent company that since there was a need for protein products in developing countries there might be a demand for a nutritional beverage which the company could, with profit, meet. The company's food scientists were accordingly given the brief of developing a beverage with a good nutritional quality and a pleasant flavour which could be made available at a 'minimum price'. After more than a year's work a product was considered ready for consumer testing. Brazil was chosen for the initial launch primarily because soya is grown there and the bottling plant there is company-owned and not under franchise. (It might be noted that the company did not expect the production of Saci to reduce the market for Coca Cola and its other soft drinks since Saci is considered to be 'at the opposite end of the taste spectrum' from these). Consumer acceptability tests were carried out, leading in particular to the selection of chocolate as the flavour for the product. A well-known firm of industrial designers was employed for package design and the initial promotion was arranged by the Brazilian Office of McCann-Erickson Inc., one of the giants in the advertising field. Test marketing began in a small suburb of a major city in February, 1968. Certain changes were made as a result of this experience, e.g. an additional flavour was made available and the advertising was changed, to emphasise the healthful qualities of the product rather than attempting to explain protein deficiency and its consequences. No official information is available about the operational status of the Saci enterprise. However, no attempt has been made to launch it outside the market trial area, and in general there is reason to believe that the market response has been discouraging, and possibly so discouraging that the enterprise will be abandoned."

E. Orr. 1977. Food and Nutrition (U.N.). 3(2):2-10. "The contribution of new food mixtures to the relief of malnutrition."

Soya Bluebook. 1980. p. 50-51. For Brazil. Address is P.O. Drawer 1734, Atlanta, GA 30301; Pereira & Campos. 1981. *Journal of the American Oil Chemists' Society.* March. p. 357. Gives ingredients. Aguilera and Lusas. 1981. Journal of the American Oil Chemists' Society. March. p. 519. "Coca-Cola introduced a caramel-flavored protein beverage, Saci, which contained 3% soya protein, in Brazil in 1969. By 1976 the production was terminated and a new type of beverage using whey powder was being considered." R.H. Moretti. 1981. Journal of the American Oil Chemists' Society. March. p. 521. "Soy milk developments in Latin America." Saci was introduced in Brazil in 1968.

D.S. Bhatia. 1981? "Developing and marketing of protein-containing beverages." This unpublished manuscript, written by the Director of the Corporate Research and Development Department, The Coca-Cola Co., Atlanta, Georgia, contains the best discussion seen of Saci and its development. The sterilized beverage was launched in early 1968 in Rio de Janeiro, Brazil, and marketed for about 3 years.

Brian Fitzpatrick. 1982. Soya Milk in Asia. p. 261. States that Coca Cola Co. test marketed SACI in Brazil in 1969; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 125-26. Marketing stopped in 1976.

2166. *Soybean Digest.* 1968. Protein beverage by Coca-Cola [SACI]. March. p. 45.
• ***Summary:*** "A noncarbonated beverage which includes soy milk designed to improve the protein in the diet has been announced by Coca-Cola Bottling Co., Atlanta [Georgia]. J. Paul Austin, president, said the product, called SACI, has been launched in Rio de Janeiro, Brazil, by Coca-Cola Refrescos, S.A. That particular market was selected because of the ready availability of Brazilian soybeans, machinery and talent for the undertaking. Also included in the beverage will be cocoa for chocolate flavor, sugar, and vitamins.

"USDA says a number of commercially produced high-protein foods in the form of tasty beverages, meatlike products, soups and candies are appearing in various parts of the world."

2167. Indian Council of Agricultural Research. 1968. Proceedings of the First Workshop Conference on Soybean. New Delhi, India: ICAR. 8 p. Held 4-5 April 1968 at the Indian Agricultural Research Institute.
• ***Summary:*** Dr. M.S. Swaminathan, Director of the Indian Agricultural Research Inst., welcomed the delegates. Various University of Illinois personnel were present. He noted that that "the most significant point that hindered the progress of soybean introduction in Indian Agriculture in a big way in the pre and post World War II periods [was the] bottleneck in marketing and utilisation of the soybean that was produced in different parts of the country. In the current post-Independence period he pointed out that the" situation is different.

"In view of the special importance of soybean in the antibiotic industry and a rich and cheap source of meat-like protein and milk-like invigorating drink, Dr. Swaminathan stressed the need for agricultural scientists of diverse disciplines to bend their energies toward attaining expeditiously the goal of introducing into cultivation soybean varieties adapted to different latitudinal zones in this country."

He pointed out "the current urgent demands for large quantities of soybean meal and oil by the existing antibiotic industries in India. This point, at the request of the Chair, was elaborated by Dr. Thirumalachar, Chief Mycologist, Hindustan Antibiotics Factory, Pimpri, Maharashtra, who was present at the workshop by special invitation.

"The Chair also informed the gathering that seed multiplication of Bragg and Clark varieties that grew well in the northern plains of India" will be accelerated by about 20 tonnes of imported seeds from the U.S.A. in the coming kharif season to be grown in isolation at Suratgarh (Rajasthan).

"At the request of the Chairman, Dr. Earl Leng of Illinois University, gave a talk on 'Soybeans for India–Promise and Problems.'

The chair later "related how soyabean could be a good substitute for *urid* [a pulse] and maize for rice in the preparation of *idli*, the nutritious breakfast food of south India.

"The inaugural session closed with a brief review of the working of the All India Soyabean Project during 1967, the first year of its operation, presented by the Project Coordinator, Shri H.B. Singh, who noted that he visited the various cooperating centers during the 1967 season. The trials at Pantnagar (U.P.), Jabalpur (M.P.), Kalyani (West Bengal), and Katrain (Himachal Pradesh) were all uniform and gave useful information.

Also discussed (with Dr. A.B. Joshi, Chair): Concluding session. Agronomic trials: Fertilizer trial, date of planting and plant population trial. Breeding (for the plains, for the hills, vegetable-type soybeans). Pests and diseases. Bacterial inoculation. Marketing. Address: Indian Agricultural and Research Inst., New Delhi.

2168. Hurd, Frank J.; Hurd, Rosalie. 1968. A good cook–Ten talents. Chisholm, Minnesota: Published by the authors. Printed by The College Press, Collegedale, Tennessee 37315. 354 p. Illust. Color plates. No index. 22 x 15 cm. Spiral bound. [1 ref]

• ***Summary:*** A very important, pioneering, indeed classic American vegan cookbook, which uses no animal products (except in one chapter at the end titled "Recipes Using Milk and Eggs," "for those who are in the transitional period. However, we encourage all those who still cling to milk and eggs to become acquainted with the facts concerning their use, and become weaned through this process"). Some recipes also use honey.

Contains more than 750 unique recipes (plus color photos), including many innovative soy recipes, including the first recipe for shakes made with soymilk ice cream.

In the Glossary (p. 11-17) are entries for lecithin (p. 13; "A food extracted from the soybean"), soybeans (p. 15-16), and tofu (p. 16), as well as agar-agar, almonds, carob, cashew nut, coconut, dulse, flaxseed, malted nuts (made from peanuts and cashew nuts with dry malt added), nuts, oils, peanut, sea kelp or dulse, sesame seed, and sesame tahini. A color photo (p. 55) shows soy sprouts. Soy-related recipes include: Homemade soy coffee (p. 66). Soybeans milks (p. 69; No. 1 costs $0.06/quart homemade. "Soybean pulp [okara] which remains can be made into various dishes. Try Soy Not-Meat," p. 202; No. 2 uses 1 cup plain soya starter). Banana milk shake (with chilled soy milk, p. 70). Banana carob milk shake #1 or #2 (with soy milk, p. 72). Molasses milk shake (with soy milk, p. 72). Soy-fig milk (p. 72). Milkless milk shakes (with non-dairy ice cream incl. soy milk powder, p. 72-73). Soy yogurt, cultured (p. 73-74; 3 recipes–made from whole soybeans, liquid Soyagen, or soy starter). Soya bread or rolls (p. 80). Vanilla ice cream (with soy milk powder optional, p. 125). Pineapple ice cream (with soy milk powder, p. 127). Banana soya ice cream (with rich soy milk, p. 128). Sesame soy cookies (p. 131, with 1½ cups raw sesame seeds). 7 grain granola (with 1 cup soy flour, p. 156). Easy granola (with soy flour, p. 157). Soy-millet patties or loaf (p. 182). Vegetable-nut loaf (with soy milk, p. 186). Green soy beans (p. 187; dry, green-seeded soybeans). Buckwheat, soy or whole wheat spaghetti (p. 192). Soybean curd #1 (homemade tofu using whole soybeans, curded with Epsom salt, p. 195). Soybean curd #2 (from soy flour, curded with lemon juice, p. 196). The tofu-making process is shown in six black-and-white photos. Ways to serve tofu (p. 196). "Scrambled eggs" (made with tofu, egg-free, p. 196). Tofu loaf (p. 198). Chinese nut loaf (with soymilk, p. 198). Vegetarian chow mein (with soy sprouts, p. 199). Peanut-soymeat (with soy flour, p. 200; steamed for 2-3 hours in greased cans). Soy not-meat (p. 202, with soaked ground soybeans or "the soybean pulp from the soy bean milk. This way the pulp is not wasted" [i.e. okara]). Peanut-soy round (p. 202). Soy meat (p. 203; made with 2 cups homemade gluten, 1 cup toasted ground peanuts, and 1 cup soaked blended soybeans, plus water, seasonings, oil and salt, steamed for 3 hours in greased cans). Soya peanut soufflé (p. 204). Soybean soufflé (p. 204). Tofu & rice croquettes (p. 206).

The chapter titled "Nuts, seeds, olives" (p. 209-20) includes: Glossary of nuts, raw nuts for your enzymes, nut notes, almond butter (king of the nuts), raw nut butters, cashew nut butter, cashew Brazil-nut butter, peanut butter, nut butter clusters, peanuts–oven blanched, dry roasting–soya nuts, malted nuts, browned sesame seeds, seed cereal topping (sunflower seeds, sesame seeds, flax seed), peanut butter-seed spread (tahini, sunflower seeds), peanut butter balls, simple sesame squares, sprouted sunflower clusters, olives, tree chestnuts, roasted chestnuts, roasted chick peas.

Green soy bean salad (p. 234; probably dry, green-seeded soybeans). Soybean sprouts salad (p. 234). Tofu cheese salads (p. 235). Tofu sun faces (p. 236). Pineapple tofu salad (p. 245). Pineapple tofu cottage cheese (p. 246). Lo-fat salad dressing (with soy yogurt, p. 251). Soy mayonnaise–eggless (4 types, p. 252-53). Soy butter (made with soybean flour, lightly dextrinized, p. 262). Soya starter (made with soy flour, p. 262). Soya yeast sandwich spread (p. 263). Super sandwich spread (with soybean pulp [probably okara, see p. 69], p. 264). Pimento-soy chee spread (p. 265). Sour cream–soy (p. 270). Soy whipped cream (p.

271; whirl in a blender ½ cup each soybean milk and soy oil, plus 1 tablespoon honey, ¼ teaspoon vanilla, and a pinch of salt). Tartar sauce, cheese (with soy mayonnaise and tofu, p. 273). Sprouts (p. 291-95). Fresh cucumbers with soy sour cream (p. 304). Celery and green soyas (p. 312; "2 cups green soy beans, frozen, canned, or fresh." Probably means green vegetable soybeans). Soya starter (base, made with soy flour, p. 326; keep a jar ready for quick use in making tasty spreads, milk and cream, mayonnaise, a binder when nut butter is not available. Dextrinizing the soy flour gives this Soya Starter a nutlike flavor).

Talk with Rosalie Hurd. 1991. June 3. *Ten Talents* is now going into its 44th printing. More than 250,000 copies have been sold. The latest was published by College Press in 1985. The first edition was published in May 1968. Frank, originally a chiropractor, is now a medical doctor. The Hurds now live most of the year in Fountain City, Wisconsin, where they run Alpine Springs, a live-in lifestyle program and center on 585 acres of land offering treatment and education in natural health.

Note 1. This is the earliest cookbook seen (May 2006) that contains a recipe for soy sour cream. For the basic recipe: Pour 3/4 cup soy bean milk into a blender. Gradually add 3/4 cup soy oil until desired thickness is reached. Stir in 1-2 tablespoons lemon juice and ¼ teaspoon salt. Chill. "Delicious on fresh cubed cucumbers with a dash of dill." An alternative recipe calls for the use of: ½ cup soy starter (not dextrinized, see p. 69, 262), ¼ cup water, and ½ teaspoon honey.

Note 2. This is the earliest English-language document seen (Nov. 2003) that contains the word "Soymeat" (p. 200), or the term "Soy Not-Meat," or the term "Soy Meat" (p. 203) as a recipe name.

Note 3. This is the earliest dated English-language document or book seen (Sept. 2012) that contains the modern term "Soy yogurt."

Talk with Rosalie and Dr. Frank Hurd. 2005. Feb. 9. Both have moved to Oregon to warmer weather. They have a daughter there. *Ten Talents* is now in its 48th printing. They are working on a revision. He was born in March 1936 and she in April 1937.

Talk with Rosalie Hurd. 2009. Jan. 19. Frank is still working as a doctor and she as his helper. They are both in good health. The greatly enlarged 40th anniversary edition of *Ten Talents* has been published and is now available.

The term "Ten Talents" comes from the teachings of Ellen G. White: "The one who understands the art of properly preparing food, and who uses this knowledge, is worthy of higher commendation than those engaged in any other line of work. This talent should be regarded as equal in value to ten talents; for its right use has much to do with keeping the human organism in health. Because so inseparably connected with life and health, it is the most valuable of all gifts" (Ellen G. White, *Counsels on Diet and Foods*, p. 251). Address: 1. D.C. [Doctor of Chiropractic]; 2. B.S. Both: Box 86A–Route 1, Chisholm, Minnesota 55719.

2169. *Soybean Digest.* 1968. New weapons for the war on hunger: Latest high-protein soy beverage. May. p. 23.
• ***Summary:*** "American industry, stimulated by a U.S. Agency for International Development (AID) subsidy program, has intensified its attack on world malnutrition, the 'war on hunger.' The new weapon in the offensive is high-protein food supplements."

"A new protein-base beverage, Saci, is being manufactured and test marketed in Brazil by the Coca Cola Co. Saci's main ingredients are soybean milk, flavoring, sugar and other essential ingredients for nutritional adequacy. It is vitamin enriched, sterilized and noncarbonated. Monsanto Co. has acquired an interest in the biggest selling soft drink in Hong Kong, a high-protein, soybean-based beverage called Vitasoy... Future plans call for Vitasoy to be bottled and marketed in Latin America as well as Southeast Asia. Last December the Yoo-Hoo Chocolate Beverage Corp. announced development of a new high-protein beverage. It will come in 4 types."

"Under phase I of the AID program, grants up to $30,000 were offered to U.S. companies to survey the availability of local ingredients, food tastes, customs and the economics of manufacture and distribution. Under phase II, companies would develop their own high-protein food additives, retaining a proprietary interest in the results. AID then offered grants of another $30,000 (phase III) for test-marketing the new products, to be paid back if the results were successful."

"The latest development in the soy beverage field is a product that looks and tastes like cow's milk, but costs half as much. Soypro International of Cedar Falls, Iowa, has developed the patent for the new beverage whose basic ingredient is soybeans."

"Cost is said to be around $0.20 per gallon unbottled. Production equipment for a 1,000-gallon-per-hour capacity plant is estimated at $200,000 installed."

2170. Wokes, Frank. 1968. Our aims [in starting publication of the journal Plant Foods for Human Nutrition]. *Plant Foods for Human Nutrition* 1(1):3-6. May. [5 ref]
Address: The Vegetarian Nutritional Research Centre, Watford, Herts [Hertfordshire], England; Editor of the new journal.

2171. Cherry, Flora F.; Cooper, M.D.; Stewart, R.A.; Platou, R.V. 1968. Cow versus soy formulas. Comparative evaluation in normal infants. *American J. of Diseases of Children* 115(6):677-92. June. [20 ref]
• ***Summary:*** Soy formula was fed to premature infants with good results. One factor that may impair growth or bone mineralization in infants fed soy-based formula is the low

methionine content. Address: Dep. of Pediatrics, Tulane Medical School, New Orleans, Louisiana.

2172. Colvin, B.M.; Ramsey, H.A. 1968. Soy flour in milk replacers for young calves. *J. of Dairy Science* 51(6):898-904. June. [18 ref]
• ***Summary:*** Calves were fed milk replacers containing fully-cooked soy flour as the only source of protein. The nutritive value of the soy flour can be markedly improved by treating the flour in an acid environment (pH 4.0 for 5 hours at 37ºC) prior to feeding. Address: Dep. of Animal Science, North Carolina State Univ., Raleigh, North Carolina.

2173. Hackler, L.R. 1968. The development of a high-protein soy beverage in alleviating malnutrition. In: Proceedings: Frontiers in Food Research. Geneva, New York: New York State Agric. Exp. Station. 159 p. See p. 138-42. Held 11-12 June 1968 at New York State Agric. Exp. Station, Cornell Univ., Geneva, NY. [10 ref]
• ***Summary:*** Food industries and universities in the USA are being encouraged to pursue or intensify their research into world malnutrition problems. Much of the funding for such work has come from various foundations and governmental agencies (Ford and Rockefeller Foundations, UNICEF, and US AID for example).

The potential value of soybeans in alleviating protein malnutrition has been well demonstrated by Bean (1967) who reported that 1 acre of land planted solely to soybeans will produce enough protein to satisfy a moderately active man's requirements for 2,224 days, whereas protein supplied by 1 acre of land devoted to beef cattle would supply the same man's requirements for only 77 days.

Wilkens et al. (1967) have recently reported a new way to make good-tasting soymilk. Grind unsoaked, dehulled soybeans with water at temperatures between 80ºC and 100ºC. It is important to maintain the temperature between 80ºC and 100ºC for 10 minutes to completely inactivate the lipoxidase enzymes that create off off-flavors.

Mattick (1968) recently isolated and identified the ethyl vinyl ketone as being partially responsible for the raw bean flavor in soybeans. Address: Assoc. Prof., Food Science and Technology, New York State Agric. Exp. Station, Cornell Univ., Geneva, New York.

2174. Kosikowski, Frank V. 1968. The problems of milk and imitation milk. *J. of Milk and Food Technology* 31(6):174-76. June. [9 ref]
• ***Summary:*** During the past decade, the dairy industry has been burdened with butterfat surpluses, and with the uncomfortable knowledge that butterfat consumption has been decreasing.

Imitation milk is defined as a beverage made to resemble milk but containing no dairy product. "It is destined to be the dairy farmer's greatest future adversary.

"Sodium caseinate is used as a 'non-dairy protein source' in imitation milk, although this chemical in reality is a derivative of milk and actually may exist as a natural component of cow's milk and surely does in fermented milk products. Ultimately however the soybean appears destined to become the principal source of protein for imitation milk."

Note: This is the earliest document seen (Aug. 2013) which states clearly that sodium caseinate, derived from dairy milk, can be considered a non-dairy product. Watch out vegans! The Code of Federal Regulations (CFR) states in Title 21, Part 101, Sect. 101.4 (Revised 1 April 2013): "(d) When foods characterized on the label as 'nondairy' contain a caseinate ingredient, the caseinate ingredient shall be followed by a parenthetical statement identifying its source. For example, if the manufacturer uses the term 'nondairy' on a creamer that contains sodium caseinate, it shall include a parenthetical term such as 'a milk derivative' after the listing of sodium caseinate in the ingredient list." Address: Cornell Univ., Ithaca, New York.

2175. Lo, Winston Yau-Lai; Steinkraus, K.H.; Hand, D.B. 1968. Heat sterilization of bottled soymilk. *Food Technology* 22(6):129-31. June. [9 ref]
• ***Summary:*** A temperature of 121ºC for 3 minutes is adequate to produce sterility of soymilk in 6-ounce soft drink bottles, but 4-5 minutes at 121ºC is recommended for development of optimum protein nutritive value in soymilk, and to give an additional safety factor. Address: Cornell Univ., Geneva, New York.

2176. Wilkens, W.F.; Badenhop, A.F. 1968. Lipoxidase and flavor formation. In: Proceedings: Frontiers in Food Research. Geneva, New York: New York State Agric. Exp. Station. 159 p. See p. 108-16. Held 11-12 June 1968 at New York State Agric. Exp. Station, Cornell Univ., Geneva, NY. [5 ref]
Address: 1. Asst. Prof.; 2. Post-doctorate Fellow: Both: Food Science and Technology, New York State Agric. Exp. Station, Cornel Univ., Geneva, New York.

2177. Eley, Cleveland P. 1968. Food uses of soy protein. *USDA Economic Research Service, ERS* No. 388. p. 27-30. Aug. Also in Marketing and Transportation Situation MTS-170, p. 27-30.
• ***Summary:*** Contents: Introduction. Forms of soy protein. Food uses of soy proteins and reasons for use. Simulated meat products. Limitations of soy protein for food use. Price and quantity of soy protein manufactured. Past growth and market potential.

The author believed that the use of soy proteins was increasing at the rate of 5-7% a year at that time. Estimated 1967 production and July 1968 prices of various soy proteins are given: Soy flour and grits (120-126 million lb, 6½-7 cents/pound). Soy concentrates (17-30 million lb, 18 cents/

pound). Soy isolates (20-25 million lb, 35-39 cents/pound). Enzyme modified soy meal products (small, 70-120 cents/pound).

Estimated uses of soy flour in 1967 (in million lb). Domestic use: Baked goods 50, incl. 6 million lb of enzyme active flour. Meat products 30. Soy beverage products 10. Dry cereals and baby foods 6. Enzyme active flours 7. Brewers flakes 3. Pasta and macaroni products 1. Miscellaneous 5-10. Commercial exports 10. U.S. Government purchases for CSM 100. Address: USDA, Marketing Economics Div.

• ***Summary:*** Effects of sodium sulfite and sucrose on viscosity and dispersibility of protein in soymilk are reported. Address: New York State Agric. Exp. Station, Dep. of Food Science and Technology, Cornell Univ., Geneva, NY 14456.

2179. *Soybean Digest.* 1968. To introduce soy drink in South America. Aug. p. 26.
• ***Summary:*** A large photo shows a soft-drink type bottle of Puma, behind which is a large, alert Puma with a chain around its neck connected to the bottle. "Puma, a new protein soft drink developed by Monsanto Co., will initially be bottled and marketed in Georgetown, Guyana, South America...

"Soybeans supply the protein contained in Puma, a noncarbonated beverage. The product was developed through a joint venture between Monsanto and K.S. Lo, inventor of the similar Vitasoy protein beverage in Hong Kong. Soy-based Vitasoy has a substantial share of the Hong Kong soft drink market.

"'The drink was named Puma to convey the idea of the energy and vitality inherent in its protein content,' said Edward Wenner, manager of Monsanto's protein foods enterprise. Monsanto food technologists, while maintaining the nutritional quality of Vitasoy, structured Puma in flavor and appearance to meet preferences of people throughout the world.

"The Puma franchise was awarded in Guyana after the success potential for the product was assured by tests in that market, according to Wenner. Plans call for eventual expansion to other Latin American and Asian markets."

2180. Okumura, George K.; Wilkinson, Jack E. 1968. Process of producing soy milk from sprouted soy beans. *U.S. Patent* 3,399,997. Sept. 3. 3 p. Application filed 5 April 1965. [5 ref]
• ***Summary:*** Soybeans are cleaned, moistened, and sprouted at 90-100ºF for about 3 days to produce sprouts approximately ½ to 1½ inches long. The sprouting step is found to (1) largely eliminate the disagreeable aspect of soybean flavor in the final "soy-base milk," (2) improve the vitamin content of the soybeans, and (3) cause the soybean hulls to be loosened, thereby facilitating their subsequent removal. The sprouted soybeans are then ground to a slurry, using a stone grinder. Add water to the slurry and mix. Cook in a pressure cooker or open vat, then strain to remove the hot suspension liquor [soy milk]. Now slowly add and stir in a mixture of calcium sulphate and magnesium chloride to form a curd. Wash the precipitated curd, then removed all excess water, and press the curd in a cloth-lined forming box to make bean curd [tofu]. Now grind the curd to a very fine state using an emulsifying machine or colloid mill. Formulate the milk to resemble, as nearly as possible, natural cow's milk, by adding oil, sugar, salt, calcium gluconate and ferrous sulphate. To produce a fortified milk, vitamins A, D, and C may also be added. Pasteurize, homogenize, cool, and pack. Address: 1. 3151 S. Elm Ave., 93706; 2. 2411 Divisadero St., 93721. Both: Fresno, California.

2181. Lo, Winston Yau-Lai; Steinkraus, K.H.; Hand, D.B.; Hackler, L.R.; Wilkens, W.F. 1968. Soaking soybeans before extraction as it affects chemical composition and yield of soymilk. *Food Technology* 22(9):138-40. Sept. [11 ref]
• ***Summary:*** "As the soaking time for soybeans increased, larger quantities of water-soluble solids leached into the soak water, where they were they were lost in the usual methods of manufacturing soymilk. Analysis of the dry solids found in the soak water showed the following composition: 23.3% crude protein (of which 48.7% was non-protein nitrogen); 2.8% fat; 4.5% sucrose; 1.5% raffinose; 3.5% stachyose; and 63.7% other carbohydrates.

"Changes, apparently metabolic, in the soybeans during soaking caused protein to decrease from 43% in the non-soaked control to 38% for the 24-hour soak to 36% for the 72-hour soak. Non-protein nitrogen increased during the same intervals from 0.16% to 0.28% to 0.86%. Fat decreased during soaking for 24% to 19% (72-hour soak)." Address: Cornell Univ., Geneva New York.

2182. Lo, W.Y-Y.; Steinkraus, K.H.; Hand, D.B.; Wilkens, W.F.; Hackler, L.R. 1968. Yields of extracted solids in soymilk as affected by temperature of water of various pre-treatments of beans. *Food Technology* 22(10):120-22. Oct. [6 ref]
• ***Summary:*** "Soybeans soaked 8 hours before extraction yielded higher milk solids than unsoaked beans or bean flour in spite of a loss of 1.6% solids in the soak water. An extraction temperature between 55 and 65ºC gave the highest yields of solids in the milk regardless of the pre-treatment. Using beans pre-soaked at room temperature, extraction temperatures ranging from 45 to 80ºC gave higher yields of solids than other temperatures or pre-treatments. Temperatures of extraction above 85ºC resulted in substantial

decreases in the solids extracted in soymilk. A gradual rise in the pH of soymilk was observed as the temperature of extraction was increased from 30 to 95ºC."

"Pre-soaked beans yielded a higher average volume of soymilk than either non-soaked beans or bean flour... When beans were ground at temperatures above 85ºC, additional difficulties were encountered in filtering the soymilks, which resulted in decreased volumes in the soymilks produced."

"The Chinese have traditionally used pre-soaked beans ground with added water because of the difficulty of grinding dry beans in stone mills." Address: Cornell Univ., Geneva New York.

2183. Steinkraus, Keith H.; David, L.T.; Ramos, L.J.; Banzon, J. 1968. Development of flavored soymilks and soy/coconut milks for the Philippine market. *Philippine Agriculturist* 52(5):268-76. Oct. [12 ref]
• ***Summary:*** The most widely accepted formulation contained 10% by volume of coconut milk prepared by grinding grated coconut with water 1:1 (w/v) and filtering. A detailed description for making this product on a commercial scale is given.

"Soymilks distributed as soft drinks have become commercial successes in Hongkong (Lo, 1964), Bangkok, Thailand (Green Spot Ltd., personal communication, 1968), and Singapore (Yeo Hiap Seng Canning & Sauce Factory Ltd., personal communication, 1969). The flavors used in these soymilks include sugar, skim milk powder, full-fat spray-dried cow's milk, malt flavor, etc. The exact flavorings are industrial secrets." According to Malaspina (personal communication, 1969) "Coca-Cola Export Inc. has been market-testing a soymilk-based soft drink in Brazil. Flavorings used have included chocolate and caramel."

"In July 1967, U.S. AID / Washington [DC], through its office of War-on-Hunger, financed a project (Cornell Contract csd-1815) on the development of soy-based foods for infants and children. The project involved development of soymilks or soy/coconut milks and other soy-based foods with flavors acceptable to children in the Philippines." This paper reports the results of flavor studies conducted to develop those foods. Address: Agric. Exp. Station, Univ. of the Philippines.

2184. *Time.* 1968. Sipping soya through a straw. Nov. 15. p. 101-02.
• ***Summary:*** "Vitasoy has become the new soft-drink craze in the British crown colony. Vitasoy is a milky brew that is enriched with vitamins and offers 5.9 gm of protein in every bottle, or as much as a dish of spinach. A 6½ oz bottle costs $0.032, compared with $0.048 for the same size bottle of Coca-Cola. Sold either chilled in warm weather or warmed in cold, Vitasoy has captured 25% of the Hong Kong soft-drink market. This year an estimated 78 million bottles, second only to Coca-Cola's 100 million, will be sold from sidewalk stands, sampans and grocery stores for a total of $2,600,000. The drink's main drawback is that it tastes a good deal like liquid library paste.

"Still, the success of the product attracted the attention of the Monsanto Co. of St. Louis [Missouri]. It went in with Lo's Hong Kong Soya Bean Products Co. to create a new, more flavorful soybean drink called Puma, which has more than 100 flavor ingredients, including vanilla, orange and cinnamon. Monsanto's Hong Kong subsidiary, Lomond Ltd., will produce the powder concentrate for Puma. The first franchise operations are now being set up in Guiana and Taiwan, and several others are expected to follow soon in other parts of Asia and Latin America. Lo, who owns one-fifth of the company's shares and gets royalties on Puma sales, is managing director of Lomond. Monsanto hopes that under his hand the proverbial cow of China may yet yield a truly international soft drink and, in the bargain, a handy source of protein."

A photo shows K.S. Lo standing behind many stacked cases of Vitasoy in his Hong Kong plant. "Milking the 'cow of China.'"

2185. Bates, Richard D.; Barrett, W.W.; Anderson, D.W.; Saperstein, S. 1968. Milk and soy formulas: A comparative growth study. *Annals of Allergy* 26(11):577-83. Nov. [13 ref]
• ***Summary:*** Discusses Mull-Soy (made with soy flour) and Neo-Mull-Soy (made with soy protein isolate), both manufactured by Borden, Inc. A detailed nutritional analysis of both products is given. Concludes the Neo-Mull-Soy "supported growth and development of infants comparable to that of children raised on the soy flour (Mull-Soy) or milk formulas. A significant advantage of the formula used here, formulated from a soy protein isolate, was a lower incidence of anal irritation and loose stools as compared to any other soy formulations." Address: 1-2. Southwestern Medical School, Univ. of Texas, Dallas, TX; 3-4. Borden, Inc., 350 Madison Ave., New York, NY 10017.

2186. Bird, Kermit. 1968. Foods of the future: Part I. Using conventional materials. *Food Product Development* 2(5):32, 34, 36, 44, 82. Oct/Nov. [6 ref]
• ***Summary:*** In Rio de Janeiro, Brazil, the Coca Cola Co. has been test marketing a beverage named Saci, bottled like a soft drink. A chocolate-flavored energy drink containing 3% protein; the protein comes from local Brazilian soybeans. The drink is promoted (see ad) as "Powerful" with "delicious energy." Photos show: (1) A bottle of Saci; (2) A graphic ad for the drink.

Synthetic milk, which is now on sale in Southern California, contains vegetable oil, whey, and non-dairy ingredients. It's price is lower than that of cow's milk.

In Hong Kong, Vitasoy, "a soybean milk with a good amino acid balance, has been on the market for many years." It is sold in bottles at a low price, which enables to

compete with soft drinks. "Its main attraction seems to be its nutritional value. Since many soybean products have a 'beany' taste and cause intestinal gas in humans, it is doubtful whether this healthful, nutritious food drink will become a best-seller in the U.S. market until these problems are overcome."

If such drinks expand in foreign markets, they may provide an additional outlet for soybeans grown in the USA.

"Protein foods from plants are a current reality and a distinct future development opportunity. Many of our synthetic meat analogs of the future of the future will use proteins from soybeans, peanuts, sunflower, and perhaps cowpeas.

In Latin America, Incaparina was developed as a low-cost, nutritious, grain-based food. After 6 years of commercial development, annual sales are estimated to be 4.5 million pounds. Recently, makers of Incaparina have agreed to enrich the product with lysine, which will raise its protein quality to equal that of casein.

Corn [maize] could be an excellent protein source except that it lacks adequate amount of lysine and tryptophan–two of the eight essential amino acids the body cannot make for itself. But at Purdue University (Indiana), scientists have discovered "Opaque-2 and Floury-2," two "cereal grain germ plasms" that "upgrade the upgrade the protein quality of cereal grains to equal" that of milk and meat proteins.

Also discusses: Fish protein concentrate (FPC), fresh water fish farming (with giant carp and catfish), marine fish and shell-fish ranching, raising oysters in the ocean in Japan, ranching of wild animals (such as eland, wildebeest, and zebra in Africa–"instead of hunting them to extinction and replacing them with poorly adapted temperate zone species"). Address: Marketing Economics Div., Economic Research Service, USDA, Washington, DC.

• ***Summary:*** This is a reprint of the 1956 edition published by The Chemical Elements (South Lancaster, Massachusetts)–except that Appendix B has been updated using the 1961 Soybean Blue Book.

On the copyright page is a detailed print history of this book: Copyright 1956, 1962 Philip Chen. Second printing, April 1957. Third printing, June 1959. Second edition, Jan. 1962. Third edition, Nov. 1968. Second printing, July 1970. Third printing, July 1975. Address: 1. Head of the Chemistry Dep. and Chairman of the Div. of Biology and Chemistry, Atlantic Union College, South Lancaster, Massachusetts; 2. National Science Foundation Fellow, Cornell Univ.

2189. **Product Name:** Hi-Pro (Protein Concentrate & Delightful All-Purpose Food).
Manufacturer's Name: Organic Foods and Gardens.
Manufacturer's Address: Ojai, California. Phone: 805-646-1287.
Date of Introduction: 1968. November.
Ingredients: Soy beans, wheat germ, brewer's yeast, alfalfa, kelp, carob, date sugar, sunflower seeds, unhulled [dehulled] sesame seeds.
Wt/Vol., Packaging, Price: 1 lb, 5 lb, or 15 lb bag.
How Stored: Shelf stable.
New Product–Documentation: Mail order catalog. 1968. Nov. See p, 5. This product may well have been based on Hi-So-Pro, a powdered soymilk made by Loma Linda Foods in nearby Southern California and introduced in 1962. The other ingredients could have been mixed in by Organic Foods and Gardens.

2190. *SoyaScan Notes.* 1968. Chronology of soybeans, soyfoods and natural foods in the United States 1968 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1968, March. Saci, a liquid soymilk in chocolate and caramel flavors, launched by Coca-Cola Industrias Ltda. in Brazil. Indicates growing interest in commercial soy beverages in Third World countries.

1968, April. First Workshop on Soybean held in New Delhi by the Indian Council of Agricultural Research.

1968, April. *Aerobics* by Dr. Kenneth Cooper published. The book soon becomes a major force in America's new wave of interest in health, fitness, and jogging.

1968, May. Conference on Protein Rich Food Products from Oilseeds held by the USDA in New Orleans, Louisiana. Oilseed proteins are increasingly seen as the answer to the "protein crisis."

1968, May. *Ten Talents* self-published by Frank and Rosalie Hurd of Chisolm, Minnesota. An early vegan cookbook (using no meat, eggs, or dairy products) with many innovative soy recipes.

1968. *International Action to Avert the Impending Protein Crisis*, a United Nations publication, recommends soybeans as the single most promising protein source to close the "protein gap."

1968, Aug. Erewhon starts importing foods from Japan, initially from Muso Shokuhin, then later by correspondence with Mr. Akiyoshi Kazama, who worked for an import/export company named Mitoku, which sold no food at that

time. The initial orders include red miso (made by one of George Ohsawa's cronies) and natural shoyu made by Marushima. These soon become high-volume items.

1968. *Plant Foods for Human Nutrition*, a scientific journal, starts publication from the Vegetarian Nutritional Research Centre, Watford, Herts, England. Runs many articles on soy nutrition and on vegan diets.

2191. **Product Name:** Plamil Pease Pudding.
Manufacturer's Name: Plantmilk Ltd. (Renamed Plamil Foods Ltd. in 1972).
Manufacturer's Address: Tithe Farm, High St., Langley, Slough, Buckinghamshire, England.
Date of Introduction: 1968. December.
Ingredients: Incl. soya protein isolate.
Wt/Vol., Packaging, Price: 15½ oz can or 7.75 oz can.
New Product–Documentation: *The British Vegetarian.* 1968. Nov/Dec. p. 533. "New Products by Plantmilk Ltd." This vegan product is available at "Health Stores" in two sizes of cans. The Family Size (15½ oz) retails for 1 shilling 7 pence, and the Picnic Size (7.75 oz.) retails for 11 pence.

2192. Tawa, Andre. 1968. Marketing soy proteins in the Lebanon. *Soybean Digest.* Dec. p. 13-14.
• ***Summary:*** "More than 50,000 people visited the soy protein stand at the Food Fair at Beyrouth and sampled ADM's textured vegetable protein in Lebanese foods."

"The Lebanon, a tiny Arab republic tucked away on the eastern corner of the Mediterranean Sea, is well known in international finance as the oil banker of the Gulf.

"The 2 million people of Lebanon, in ritzy-Riviera-like Beyrouth, or on the snow covered slopes of the ski resorts in the Cedars, do make an ideal market for any new food product."

"Estimated consumption of all meats is around 40,000 mt/year, 90% of which is imported." Note: "mt" = metric tons.

"Poultry growing is expanding rapidly and has become one of the major agricultural industries."

"Last year's imports of soybean meal rose to about 10,000 m.t., mostly bulk, from the U.S."

"A more challenging market, which is practically untouched, is the one for soy proteins in human consumption."

ADM is introducing its TVP to Beyrouth, Lebanon under the brand name Aminos; their goal is 1 lb/year per capita consumption. "Other soy proteins just being introduced to this market are soy flour for bakery products, soy milks, and other soy extenders for the meat packing industries."

2193. **Product Name:** Jolly Joan Wheat and Soy Pancake Mix, Whole-Wheat and Soy Pancake Mix.
Manufacturer's Name: Ener-G Cereal Co.
Manufacturer's Address: 6901 Fox Ave. South, Seattle, WA 98108.
Date of Introduction: 1968.
Ingredients: Wheat or whole wheat, whole soy flour, monocalcium phosphate, sodium bicarbonate.
Wt/Vol., Packaging, Price: 16 oz bag in a box.
How Stored: Shelf stable.
New Product–Documentation: Talk with Sam M. Wylde, Chairman, Ener-G Foods, Inc. 1990. Oct. These two products were introduced at about the same time in 1968, when the company moved to Fox Ave. Shortly after they were launched the company name was changed to Ener-G Foods Inc. and the brand was changed to Ener-G. Each product contained whole soy flour, purchased from ADM (Archer Daniels Midland Co.).

2194. *Federal Register.* 1968. Imitation milks and creams. 33(98):7456-58. *

2195. Fukushima, D. 1968. High-protein food products. In: Proceedings of the Western Hemisphere Nutritional Congress II. See p. 95. *

2196. **Product Name:** Haypro-T (Calf Milk Replacer Based on Soy Protein Concentrate).
Manufacturer's Name: Hayes Ashdod Ltd. Renamed Solbar Hatzor Ltd. in April 1987.
Manufacturer's Address: Habosem Street, Industrial Zone, P.O. Box 2230, Ashdod, Israel.
Date of Introduction: 1968.
How Stored: Shelf stable.
New Product–Documentation: Letters from Daniel Chajuss, founder and owner of Hayes Ashdod Ltd. 1992 June 23, and 1993 Jan. 5 and 14. "In 1968 Hayes [Ashdod Ltd.] started producing Haypro-T, a special soy protein concentrate, free of trypsin inhibition and free of antigenicity, for calves milk replacers as a substitute of milk proteins." Note: This is the earliest known commercial soy product used as a calf milk replacer.

2197. **Product Name:** [Soyamalt Soymilk (Strawberry, Vanilla, or Walnut)].
Foreign Name: Soyamalt (Fresa, Vainilla, y Nuez).
Manufacturer's Name: Industrial de Alimentos S.A.
Manufacturer's Address: 146 Poniente 789, Col. Ind. Vallejo, Mexico 17, DF, Mexico.
Date of Introduction: 1968.
Wt/Vol., Packaging, Price: Powdered.
How Stored: Shelf stable.
Nutrition: Vanilla (powdered): Protein 23.4%, carbohydrates 61.2%, fat 8.2%, crude fiber 0.82%, moisture 2.5%, ash 3.8%.
New Product–Documentation: F. Suberbie. 1975. Produccion y utilizacion de bebidas a base de soya.

In: American Soybean Assoc., ed. Memorias: Primera Conferencia Latinoamericana. p. 91. This product is sold mainly to industry and to institutions (day-care centers, hospitals, boarding schools, etc.). R.H. Moretti. 1981. *Journal of the American Oil Chemists' Society.* March. p. 521. "Soy milk developments in Latin America." In addition to Sustilac, Industrial de Alimentos also developed Isolac and Soyamalt. Soyamalt contains 24.4% proteins, 41.8% carbohydrates, 25.7% fat, and 1.9% fiber. J. Ponce Aguirre. 1982. History of Soyfoods in Mexico. In 1968 Felipe Suberbie and Felipe Tello of Industrial de Alimentos launched two commercial products: Isolac and Soyamalt. Only Soyamalt remains on the market.

2198. **Product Name:** [Isolac Soymilk].
Foreign Name: Isolac.
Manufacturer's Name: Industrial de Alimentos S.A.
Manufacturer's Address: 146 Poniente 789, Col. Ind. Vallejo, Mexico 17, DF, Mexico.
Date of Introduction: 1968.
Wt/Vol., Packaging, Price: Powdered.
How Stored: Shelf stable.
Nutrition: Protein 24.5%, carbohydrates 41.9%, fat 25.7%, crude fiber 2.0%, moisture 2.2%, ash 3.8%.
New Product–Documentation: F. Suberbie. 1975. Produccion y utilizacion de bebidas a base de soya. In: American Soybean Assoc., ed. Memorias: Primera Conferencia Latinoamericana. p. 90. This product was developed to replace or extend cow's milk. Reconstituted, it contains 10-12% solids. A table is given showing its amino acid content compared with the 1958 FAO recommendations. The limiting amino acids are tryptophan and methionine. R.H. Moretti. 1981. *Journal of the American Oil Chemists' Society.* March. p. 521. "Soy milk developments in Latin America." In addition to Sustilac, Industrial de Alimentos also developed Isolac and Soyamalt. Isolac contains 20.3% proteins, 47.2% carbohydrates, 25.7% fat, and 1.7% fiber.

J. Ponce Aguirre. 1982. History of Soyfoods in Mexico. In 1968 Felipe Suberbie and Felipe Tello of Industrial de Alimentos launched two commercial products: Isolac and Soyamalt. Only Soyamalt remains on the market.

2199. **Product Name:** [Sustilac Soymilk].
Foreign Name: Sustilac.
Manufacturer's Name: Industrial de Alimentos S.A.
Manufacturer's Address: 146 Poniente 789, Col. Ind. Vallejo, Mexico 17, DF, Mexico.
Date of Introduction: 1968.
Ingredients: Whole soy flour, cereal hydrolyzates, malt extract, vitamins, minerals.
Wt/Vol., Packaging, Price: Powdered. It is ivory in color.
How Stored: Shelf stable.
Nutrition: Per 100 gm powder: Calories 501, protein 20.3 gm, carbohydrates 47.2 gm, fat 25.7 gm, moisture 2.9 gm, ash 2.8 gm, crude fiber 1.1 gm. Reconstituted: Protein 3.0%, fat 3.7%, total solids 15%.
New Product–Documentation: F. Suberbie. 1975. Produccion y utilizacion de bebidas a base de soya. In: American Soybean Assoc., ed. Memorias: Primera Conferencia Latinoamericana. p. 89-90. Development of this product began in 1968 and it was ready by 1971. It was used and evaluated for treating cases of diarrhea in the pediatric hospital of Seguro Social, with good results (Luengas, Borbon and Col 1972). It is distributed by the Instituto Mexicano del Seguro Social (IMSS; Social Security), by the Instituto de Seguridad y Servicios Sociales de los Trabajadores del Estado (ISSSTE; Social Security), and by specialized pharmacies.

R.H. Moretti. 1981. *Journal of the American Oil Chemists' Society.* March. p. 521. "Soy milk developments in Latin America... Sustilac was introduced in 1968. This soya milk is produced using pregerminated (sprouted) soybeans. The pregermination reduces the amount of oligosaccharides. Compañia Industrial de Alimentos (his company in Mexico) is still producing soya milk. All of its products are in powder form." J. Ponce Aguirre 1982. History of soyfoods in Mexico. In 1971 Felipe Suberbie and Felipe Tello of Industrial de Alimentos launched Sustilac, which is for infants who are allergic to cow's milk. Production ceased in 1979.

2200. **Product Name:** Loma Linda Soy Fortified Cereals [Ruskets, or Ruskets Crunchy].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505.
Date of Introduction: 1968.
Wt/Vol., Packaging, Price: Can.
New Product–Documentation: H.F. Meyer. 1960. Infant foods and feeding practices. A photo (p. 82) shows these two canned products. A photo of a baby's face appears on the front panel of each. See also p. 88 and 90. Page 121 gives a detailed analysis of the product. The powder, after being reconstituted, contains: Fat 3.2%, protein 2.85%, carbohydrates 5.4%. Calories per ounce: 18. Added vitamins and minerals: ferrous sulphate, calcium carbonate, dibasic calcium phosphate. Affected by terminal sterilization: No. How formulated or reconstituted: 1 vol. milk to 7 vols. water. Chemical definition and essential clinical uses: "Contains soya bean solids, dextrose, maltose, dextrins, sucrose, soya oil. A spray-dried soya food to serve the nutritional needs of the bottle-fed infant. Completely soluble and formulated to simulate human milk. Used for infants allergic to dairy milk."

2201. **Product Name:** [Nutri-Soja {Soy Isolate-Based Infant Formula} (Powder, or Concentrated Liquid)].
Foreign Name: Nutri-Soja.

Manufacturer's Name: N.V. Nutricia.
Manufacturer's Address: Stationstraat 186, Zoetermeer, Netherlands. Phone: 21 92 50.
Date of Introduction: 1968.
Ingredients: Glucose syrup [corn syrup solids], vegetable oil, soy protein isolate, minerals, vitamins, methionine, taurine, trace elements, L-carnitine.
Wt/Vol., Packaging, Price: 400 gm can.
How Stored: Shelf stable.
Nutrition: Per 100 gm powder: Protein 14.2 gm, fat (vegetable) 28.3 gm, carbohydrates 52.7 gm, moisture 3 gm, minerals 2.1 gm, vitamins 0.2 gm, energy 522 kcal (2215 kJ).
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88. Soyfoods Center Computerized Mailing List. 1982. July 23. Product brochure. 1989. Nutri-Soja: When nature fails, Nutricia helps. This is a milk-free, saccharose-free infant formula made with soy protein isolate supplemented with L-methionine.

Letter from Barbara B. Rumpff. Loma Linda Foods. 1989. Nov. 30. Nutri-Soja was introduced in Europe in 1968. Nutricia N.V. was founded in 1901.

Label. 1989, received. 12.75 by 4.5 inches. Dark blue, black, red, orange, yellow, and green on orange. Illustration of bottle, teddy bear, and flowers. "Complete soy-based infant food." This is a powdered soymilk.

2202. Piquin, Alberto. 1968. Soja: cultivo del futuro argentino [Soybean: The crop of the future in Argentina]. *Revista de la Bolsa de Cereales* (*Buenos Aires*) No. 2811. p. 38-43. [8 ref. Spa]
• ***Summary:*** Contents: Introduction. Characteristics of the species. Early history in Argentina (from 1956). Quality of the raw material. Uses of soybeans: The plant (green forage, green manure, silage), green vegetable (*grano verde*), whole dry soybeans, vegetable milk (incl. curds, dry powder, condensed), powdered milk, flour, oil. Labor requirements. Varieties suited for 5 ecological zones in Argentina. Mechanical harvesting. Introduced varieties. Diseases and insect pests. Yields. Promotion of cultivation. Address: Ing. Agr., Coordinador Nacional Programa Soja, Salta, Argentina.

2203. Roane, J.; Crawford, L.V.; Hilty, L.; Stout, R.H. 1968. Observations on isolated protein soy formula as a feeding for infants with allergic disease. Lecture presented at the Annual Meeting of the American Medical Assoc. Held in San Francisco, California. *

2204. **Product Name:** Shaklee's Instant Protein Powder [Vanilla, Cocoa].
Manufacturer's Name: Shaklee Products. Formulated by Worthington in Richmond.
Manufacturer's Address: 1992 Alpine Way, Hayward, CA 94547. Phone: 415-954-3000.
Date of Introduction: 1968.
Ingredients: Lecithinated soy protein.
Wt/Vol., Packaging, Price: 1 lb can.
How Stored: Shelf stable.
New Product–Documentation: John R. Caella. 1978. *Cooking naturally: An evolutionary gourmet cuisine of natural foods.* p. 18. The author describes "Instant protein powder" which contains soya protein concentrate, fructose, lecithin, calcium carbonate, yeast, potassium chloride, and natural flavors. He then says that his favorite brand is "Shaklee's Instant Protein."

Talk with Ted Aarons of Protein Research Associates in Berkeley. 1988. Sept. 23. The first commercial application of the lecithinated protein process was with Shaklee's Instant Protein Powder, launched in about 1969. The process was licensed to Worthington, a custom formulator in Richmond or San Pablo that prepared the product for Shaklee. It was sold in 1-lb cans in vanilla, chocolate, and strawberry flavors. It sold very well to the general public via Shaklee's pyramid-type marketing organization. Dr. Shaklee (who may have gotten his doctorate in religious studies) founded Shaklee Products in 1948. He sold biodegradable soaps, cosmetics, and other health aids. For details, contact Shaklee in San Francisco (415-954-3000).

Letter and two Labels from John Westerdahl, MPH, RD, Project Manager, Health Sciences, Shaklee U.S., Inc., 444 Market St., San Francisco, California 94111. 1993. Aug. 31. The two undated Labels are for Instant Protein Drink Mix. "The earliest information I can find is that Instant Protein was on the market in 1968. The flavors were Vanilla and Cocoa. We've never had a strawberry flavor." The ingredients on the undated Cocoa flavor are: "Soy protein isolate, fructose, cocoa, tricalcium phosphate, calcium carbonate, glucose, soy lecithin, natural flavors, primary grown yeast, di-methionine, ferrous fumarate, niacin, calcium pantothenate, riboflavin, thiamine hydrochloride, pyridoxine hydrochloride."

2205. Abehsera, Michel. 1968. Zen macrobiotic cooking. New Hyde Park, New York: University Books/Avon. 224 p. Index. 18 cm. [15 ref]
• ***Summary:*** Abehsera's first macrobiotic cookbook contains a strict approach to macrobiotics. Includes many short stories by and about George Ohsawa.

In the Introduction, the author states (p. 13) that if he had been asked to write a cookbook 5 years ago, he would have been utterly amused, for he was in a precarious state of health and, for him, a cookbook was basically a collection of "recipes for stuffing one's belly.

"These five years have been an exhilarating adventure and happiness spent with my dear wife and children together with a 'thousand' friends. The anguished thoughts of a 28-year-old have been dissipated and he has been freed from the tortures and agony that previously pervaded his

existence.

"This new and happy change has been due to the profound influence of George Ohsawa, who made it possible for me to recover my health so that I could leave France [Paris] and journey to New York, the city of my dreams. Now, I have decided to write a cookbook."

Contains the following soy-related recipes: Miso spread (with sesame butter, p. 105). Miso onion spread (p. 106). Miso in green (with green pepper and scallion, p. 106-07). Miso soup (p. 117). Chinese soup (with miso, p. 120). La belle jardiniere (with miso, p. 123). Koi-koku (with carp, burdock, and miso, p. 125-26). French onion soup (with tamari, p. 132). Soup stock made with miso paste (p. 137). There are no tofu or seitan recipes in this book. It is not a vegetarian cookbook, since many recipes call for fish and seafood.

Monthly publications (p. 208): (1) *Yin-Yang*, Centre International Ignoramus, 26 Rue Lamartine, Paris 9eme, France. (2) *The Macro-Biotic Monthly*, Ignoramus Press, Los Angeles, California. (3) *The Order of the Universe*, Order of the Universe Publications, Box 203, Prudential Center Station, Boston, Massachusetts.

Shopping guide (p. 209-10): Those marked with an asterisk (*) welcome mail orders. (1) Chinese products (incl. tofu, woks): Wo Fat Co., 16 Bowery, New York, N.Y. 10013. Mon Fong Wo Co., 36 Pell St., New York, N.Y. 10013. Yuit Hing Market Corp., 23 Pell St., New York, N.Y. 10013.

(2) Organic fruits, vegetables and whole grains. Also oil, sea salt and many other health foods. * Good Earth–Natural Foods, Inc., 1336 First Ave., New York, N.Y. * Nature's Cupboard, 80 E. Seventh St., New York, NY. Living Foods Coop, Inc., 165 Ninth St., New York, N.Y. * Greenberg's. 125 First Ave., New York, N.Y.

The next two stores are the same as above but no fruits and vegetables: * Brownie's Natural Food Stores, 21 E. 16th St., New York, N.Y. * Kalustyan Orient Export Trading Corp., 123 Lexington Ave., New York,

(3) Japanese food products: Bancha tea, seaweed, Japanese vegetables, Japanese knives, soba and udon noodles, dried lotus, burdock, tofu, sesame seeds, bonito and other dried fish, tawashi [vegetable scrubbing brush], daikon [giant white radish]: * Japan Mart Inc., 239 W. 105th St., New York, N.Y. Katagiri & Co., Inc., 224 E. 59th St., New York, N.Y. Tanaka (K.) Co., Inc., 326 Amsterdam Ave., New York, N.Y.

(4) Wholesale organic products and all macrobiotic products: Chico San, Inc., 1262 Humboldt, Chico, California. The Infinity Co., New York, N.Y., 10012. Balanced Foods, 2500 83 St., North Bergen, N.J. [New Jersey]. Specialty Food, 116 W. Houston St., New York, N.Y.

Glossary (p. 211-15): Aduki or azuki beans, bancha, bonito flakes, brown rice, bulgur, burdock, cellophane noodles, chapati, couscous, daikon, ginseng tea, gomasio [gomashio], hiziki [hijiki], Japanese knife, kasha, kokkoh [grain milk; weaning food for babies], kuzu, lotus tea or kohren tea, miso, mu tea, nituke [nitsuke], nori, sea salt, semolina, soba, soy or soya sauce (see tamari), suribachi, tahini, tamari, tempura, tofu, udon, umeboshi plums, vegetable brush or tawashi, wok.

A few glossary definitions: "Tamari: A pure soy sauce concentrate, a byproduct of miso. Commercial soy sauce is not recommended; macrobiotic stores have the right kind."

"Tofu: A curd made of the liquid in which crushed soybeans have been softened; it is solidified by boiling" [sic].

Note: This book was published in London in 1969 by Anchor Press, Ltd. (201 p.). Address: New York.

2206. Borgstrom, Georg. 1968. Principles of food science: Food microbiology and biochemistry (Vol. 2). New York, NY: Macmillan. xiv + 473 p. Index. 26 cm. [9 ref]

• ***Summary:*** In Chapter 4, "Fermentation," is a section titled "soybeans" (p. 110-12) which discusses: Tofu or teou-fu, miso, sufu, natto, tempeh, taotjo and ketjap (shoyu / soy sauce).

"Frozen tofu (kori tofu, or koya dofu) is tofu that has been frozen for several weeks and dried. Aburage is fresh tofu dried in deep fat. Namaage is fresh tofu that has been surface-fried."

In Chapter 10, "Trends in food utilization," is a section titled "Soybean" (p. 297-301) which discusses: Soybean products and fermented products ("These foods are all rather unknown among Western peoples, although they are eaten by millions of people and constitute some of the most common foods on earth." Yet some "typical oriental soy foods," such as tofu and tempeh, are finding acceptance in the West. One soy product that is widely used in most parts of the world is soy sauce. Soy flour and soy grits were first made commercially in the USA in the early 1930s. Milk made from the soybean is important in China {see Vol. I, Chap. 15}. Fermented products include taotjo, soy sauce or ketjap). Soybean protein, including soybean oil and defatted soybean oil meal (In 1961, 9.5 million tons of soybean oil meal was used in the USA, mainly for animal foods, with special grades used for food and industrial products, such as isolated soybean protein. Purified proteins extracted from dehulled and defatted meal, when toasted, are used in "Civil Defense emergency rations" and by the "international organization Meals for Millions." Some 90% of the processed soybean oil in the USA now goes into food uses. Soybean oil is now the most important ingredient in oleomargarine {see Fig. 10.1}. About one-third of the soybeans moved off the farm are exported; Japan is our biggest customer {taking about 57%} followed by Western Europe {27%}, Canada {8%} and Israel {5%}). Soybean uses (Despite its nutritive value, "the soybean is not looked upon with favor in many areas" for two main reasons: it does not soften well during cooking and it is difficult to digest. Many other legumes share these problems, but they are generally require less

cooking. When soy flour is used, alone or with cereal flours, the drawbacks almost vanish. "Soybean milk is not comparable to animal milk or human milk except in protein content." And it usually has an unpleasant, bitter taste, but this can be removed at least cost by bulk processing. When soybean curd is made in the typical way, "many nutritious components are lost," yet it is easy to digest. Soy sauce can be used only as a condiment because of its high salt content. Germinated soybeans make an excellent vegetable, which is rich in vitamin C).

Table 10-1 (p. 300) shows utilization of soybean oil (in millions of pounds) (1947-49 to 1967). The columns are: Shortening (the largest use and steadily increasing), margarine, cooking, salad and other edible oils (No. 2), total for food uses, total nonfood uses.

Toasted soy protein (Made by General Mills, starting in Belmont, Iowa, and named Hi-Pro and Protein Plus. "The Belmont plant has been running at capacity to supply for American Civil Defense stockpiling of toasted soy protein"). MPF (Multi-Purpose Food) made by a joint venture between General Mills and the Meals for Millions foundation. Gelsoy (the "first vegetable protein found to have gelling properties"). Promine (an edible soy protein). Fibrotein (soy protein spun into edible filaments). Soybean oil (The initial purpose of the U.S. soybean crushing industry was to obtain oil. The residual meal was considered virtually useless).

Chapter 13, titled "The world food issue," is about world hunger, which is "an ever-present specter for 2.3 billion people of the present world population of 3.4 billion." These people are concentrated largely in warm parts of the globe. Also discusses "protein malnutrition" (the main problem) and the need for more animal protein. North America has an animal protein "intake nine times that of the Far East." A section on "Plant milks" (p. 428-29), which are made from pulses and cereals, includes a subsection titled "Soybeans" which begins: "Soybeans form the basis of the most widely used and successful plant milks in China, Hong Kong, Indonesia, and the Philippines. Such milk has recently become available in Europe and the United States, primarily for clinical purposes"–for children allergic to the proteins in cows' milk.

Notes: Many references, divided into English and non-English, books and papers, are given at the end of each chapter. Address: Michigan State Univ.

2207. Hahn, Emily. 1968. The cooking of China. New York, NY: Time-Life Books. 206 p. Illust. (many color photos). Index. 28 cm. Series: Foods of the World.

• ***Summary:*** Another superb work in this superlative series from the editors of Time-Life Books. This book is about cooking in China, where the author lived (in Shanghai), before the 1949 Communist revolution.

Contents: Introduction: The cooking of the world's oldest civilization. 1. An ancient and honorable art. 2. "Chinese cooking" in your own kitchen. 3. Secrets of savor and spice. A reverence for good food. 5. Oriental staff of life. 6. Gentle teas and strong spirits. 7. Feasts for festivals. 8. A cuisine for all continents.

China, the world's oldest existing civilization, has the world's most ancient cuisine–as well as one that is both great and profound (p. 6). When the Red Guards of China's Cultural Revolution appeared in the 1960s, they "attacked every symbol of what they regarded as bourgeois culture. Among the targets in Peking were the city's fine restaurants." In the process they destroyed much of China's culinary heritage–but only inside of China (p. 7). An article by Peggy Durdin in the *New York Times* was titled "Mao's great crime against cuisine" (p. 184). Chinese food is, of course, about life, but it is also about health, and it can resonate on numerous symbolic levels (p. 7).

The southern provinces of China, Fukien, Kwantung, Yunnan, and Kwangsi, enjoy tropical temperatures year round and more than 80 inches of rain. Here rice is the main crop. Yet China is a mountainous country, with 60% of its land at elevation 6,500 feet or higher; only 11% of its land can be cultivated (compared with 80% in the USA) (p. 10). Fukien, a coastal province to the south, makes the best soy sauce in China, and stewing is called "red cooking" because of the color imparted by the soy sauce (p. 16, 42).

Vegetable oil is very important in China because the Chinese rarely use butter (p. 29). "For protein the Chinese depend heavily on the soybean, which has for this reason been called the cow of the East." Soybean oil is used for cooking. Soybean milk is a good substitute for cow's milk. And "doctors, even Western doctors–prescribe it for babies who cannot get mothers milk and are allergic to cow's milk" [sic]. From soymilk one can make "bean curd, an exceptionally high-protein food known in China as 'the meat without bones.'" Bean curd is made by curdling soybean milk with gypsum, then pressing the curds into pieces about 3 inches square by ½ inch thick. "The thickened curd skin [sic, yuba] is a food by itself, with a more concentrated flavor. Fermented bean curd [fermented tofu] tastes much like cheese." Both soy and mung-bean sprouts are used in China, "In one form or another the soybean can be found in dishes eaten at every meal" (p. 29).

A two-page color photo spread and legend (p. 61-63) shows (numbered) basic Chinese ingredients, incl. "13. Fresh bean curd. 14. Dried bean-curd skin" [yuba]. Buddhist monks and nuns in China are strict vegetarians; special foods that simulate meat have been developed for them. These include vegetarian "duck made from crisp beancurd skin, colored and shaped to look like the bird's flesh" and "chicken roll in *hoisin* sauce, the 'chicken' made of soft soybean curd" (p. 64, 67, 70).

Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "beancurd skin," apparently to refer to yuba.

A full-page color photo and legend (p. 74-75) shows (numbered) Chinese sauces and condiments, incl. "1. *Hoisin* sauce. 3. Soy sauce. 8. Yellow-bean paste, or thick bean sauce. 11. Fermented black beans. 14. Red bean [azuki] paste." "Among the best known of Chinese seasonings is soy sauce, which was mentioned in several Confucian classics as early as the Fifth Century B.C." [sic]. Other condiments made from soybeans are bean paste (for preserving and flavoring meat) and *hoisin* sauce (widely served with Peking duck). "It is said that the best grades of soy sauce can take as much as six to seven years of aging to reach perfection, and that the making of superb soy sauce requires 'as much art in its preparation as good French wines"' (p. 74-75, 77).

The controversy over M.S.G. is discussed. "A really god Chinese chef considers it a questionable shortcut for giving taste to second-rate foodstuffs, but most Chinese cooks admit that its use in certain dishes is perfectly valid" (p. 77-78).

The emperor Chien Lung (1735-1796), 4th ruler in the Manchu [Qing] dynasty, wrote an *Ode to Tea* (p. 91). In China there is an intimate association between eating and health (p. 91).

Recipes: "Steamed bass with fermented black beans *Tou-shih cheng hsien yu* (with "2 teaspoons fermented black beans," soy sauce, Chinese rice wine, and shredded fresh ginger root, p. 104).

Most festivals (each with a feast) in China are based on events of agricultural importance; the two most important are New Years and the Moon Festival (p. 155, 162, 164-65). A Peking duck is "brought to the exact degree of plumpness and tenderness through force-feeding," then roasted slowly, suspended by hooks, in a mud-lined oven "until the thick, fat skin becomes golden in color. This crackled skin is the choice part of the dish." The skin, a piece of the meat, a spring onion, and thick, sweet hoisin are served enfolded in a thin wheat-flour "pancake" (p. 158, 15).

The history of chop suey (unknown in China) and chow mein (had an honorable origin in China) are discussed (p. 178-79).

The first wave of Chinese to America came with the gold rush and transcontinental railway. Most were laborers from southern China. The first Chinatown in the USA was established in San Francisco (1850s), followed by New York City (Manhattan, 1870s). Most early American Chinese restaurants reflected their social status, serving inexpensive foods. In the early 20th century, as China's Republican revolution was gaining momentum, a second wave arrived to study. These young people, also mostly from southern China, came from far more prosperous backgrounds than those in the 1st wave and they wanted better food. Restaurants were started or upgraded to suit their tastes. Thus, it "was the southern school of cookery that first spread over the world outside China" (p. 179).

China has three great regional cuisines: Cantonese (southern), northern, and Szechuan (p. 179). Six photos show "The Americanization of the fortune cookie: Assembly line at a factory in New York City's Chinatown." A two-page spread shows many of the "fortunes" found in fortune cookies (p. 195-97).

"A guide to ingredients in Chinese cooking" (p. 198-99) includes: Bean curd, fresh: Square. Bean-curd skin [yuba] ("Thin stiff sheets of dried bean curd. Sold by weight... {5 to 6 sheets weigh about 1 ounce"}). Bean sprouts ("Young sprouts of the mung bean"). Black beans, fermented ("Strongly flavored, preserved black soybeans." Sold in cans or plastic bags). Brown bean sauce ("Thick sauce made from fermented yellow beans [huang dou = yellow soybeans], flour and salt. Sold in cans of 1 pound or more"). Hoisin sauce ("Sweet, brownish-red sauce made from soybeans, flour, sugar, water, spices, garlic and chili for use in cooking. Sold in 1-pound cans and up"). Oyster sauce ("Thick brown sauce with a rich flavor, made from oysters, soy sauce and brine"). Red bean paste ("Thick, sweet paste made from red soybeans" [sic, azuki beans]). Salted eggs and thousand-year eggs. Sesame seeds and sesame seed oil. Soy sauce ("Pungent, salty, brown liquid made from fermented soybeans, wheat, yeast [sic, mold] and salt"). Vegetable steak ("A vegetarian food that looks like a small beefsteak but is made from wheat gluten. Sold in cans"). Address: Author, lives in England with her husband.

2208. Hahn, Emily. 1968. Recipes: The cooking of China. New York, NY: Time-Life Books. 119 p. Illust. (many color photos). Index. 23 cm. Series: Foods of the World. Revised ed. 1973, 1980, 1981. [1 ref]

• ***Summary:*** A recipe for "Shua-yang-jou–Mongolian fire pot (rinsed lamb)" (p. 28-29) calls for "1 tablespoon fermented red bean curd, mashed."

Note: This is the earliest English-language document seen (Oct. 2011) that contains the term "red bean curd" or that uses the term "fermented red bean curd" (or "fermented red beancurd") to refer to red fermented tofu.

The excellent "Guide to ingredients used in Chinese cooking" (p. 115-19) is identical to that found in the larger companion volume, *The Cooking of China* (Hahn 1968, p. 198-99). Address: Author, lives in England with her husband.

2209. Hon, Hazel. comp. 1968. Three week vegetarian menu. Sydney, Australia: Published by the author. 88 p. 24 cm.

• ***Summary:*** This Seventh-day Adventist vegetarian cookbook uses lots of canned Adventist food products, gluten, and whole soybeans. The Four Basic Food Groups (p. 7) are fruits and vegetables, cereal and bread, protein (including legumes, cottage cheese, eggs, soy cheese, nuts, peanut butter, and various manufactured nuts, soybean and gluten products), and milk groups ("use milk or a suitable alternative such as soybean milk").

A table titled "Seasonings" (p. 8) divides them into (1) Not irritating. (2) Slightly irritating. (3) Strongly

irritating: Cloves, ginger, paprika (Hungarian). (4) Irritating, stimulating, harmful: Cayenne pepper, chili pepper, horse-radish, mustard, pepper (black or white). (5) Seasoning herbs: Oregano, tarragon, chervil, sage, basil or sweet basil, bouquet garni, marjoram, rosemary.

A table (p. 9) lists "Goods obtainable at all Sanitarium health food shops" including gluten flour, soya flour, Soyagen (liquid or powder). Sanitarium canned foods: Nutmeat, Nutolene, Soya Beans, Vegetarian Sausages, Lima Beans. Worthington Foods: Soya Meat in tins. Chicken Style sliced. Chicken Style diced. Beef Style sliced. Beef Style diced. Loma Linda: Vegelona, and Linkettes.

Three weeks of menus and recipes are given. Soy-related recipes include: Soya nut loaf (p. 30). Soybean omelette (p. 65). Soya vegetable loaf (p. 70). Soya mayonnaise (p. 71). Soya oven croquettes (p. 82).

Note: This is the earliest document seen (Oct. 2004) concerning the work of Sanitarium Foods in Australia with soy. Address: 54 Castle Howard Road, Cheltenham, N.S.W., Australia.

2210. Jones, Dorothea Van Gundy. 1968. The soybean cookbook: Adventures in zestful eating. New York, NY: Arc Books, Inc. ix + 240 p. Foreword by Ruth Stout. Index. 21 cm.
• ***Summary:*** This lacto-ovo-vegetarian cookbook is identical to the original 1963 paperback edition by the same title except that this is a hardcover edition and the publisher is listed as Arc Books rather than Arco Publishing. The publisher's address is the same. Address: Arlington, California.

2211. Roden, Claudia. 1968. A book of Middle Eastern food. London and Camden, New Jersey: Thomas Nelson and Sons, Ltd. 320 p. Illust. (by Edward Bawden. Color photos by Bruce Pinkard). Index. 26 x 20 cm. [20* ref]
• ***Summary:*** In the chapter titled "Cream salads," tahina [tahini] is discussed and used there as a major ingredient in 7 recipes (p. 35-40). The recipe for Tahina Cream Salad states (p. 35): "*Tahina* in its various forms is a great Middle Eastern favourite... and invariably appears as an accompaniment to most cold, and some hot, main dishes. *Tahina* itself is a paste made from sesame meal and can be found in all Greek stores and a few delicatessens." "Serve the *tahina* cream in a bowl and provide Arab or other bread to dip it in.

The section titled "Hummus: Chick Peas" (p. 36-37) begins: "These hard, round, corn-coloured peas, earthy in flavour and aesthetically attractive, lend themselves, as do most ingredients in the hands of Middle Eastern cooks, to an infinite variety of dishes. Mashed and smoothly puréed, they make an excellent base for a *tahina* cream or a meat soup." Next comes a recipe for *Hummus bi tahina* (Chick peas with tahina) which states: "This *tahina* salad is the most widely known and appreciated of all outside the Middle East... It makes an excellent appetizer served as a dip with... practically anything." One "exquisite and very delicate variation" is Tahina cream salad with almonds (p. 35). Note: This is the earliest English-language document seen (June 2008) that uses the term "Hummus" by itself to refer to chick peas (*Cicer arietinium*).

Ta'amia or falafel [felafel] is also in this chapter (p. 38-40). Made of dried white broad beans (*ful nabed*), they are served hot, accompanied by tahina.

Almonds are used in recipes throughout the book. A recipe for "Milk of almonds" [sweet almond milk] is given on p. 306. Address: [London, England].

2212. Thomsen, Nora. 1968. Sund mad [Healthy vegetarianism]. Odense, Denmark: Dansk Bogforlag. 247 p. Illust. Index. 16 plates. 25 cm. [Dan]
• ***Summary:*** In this Danish vegetarian cookbook, soy-related recipes include: Sojagroed (with soy flour, p. 15-16). Sojapostej (with soy flour, p. 29). Veg. postej (p. 29). Sojamayonnaise uden aeg (with Sojagen [Soyagen] soymilk powder). Sojaboennesalat (Soybean salad, with cooked soybeans, p. 37). Sojaboennesuppe (Soybean soup, p. 65). Sojaboenneretter (p. 88). Sojasteg (p. 88). Sojafrikadeller (p. 89). Sojaboenner naturel. Glutenretter: Fremstillig af gluten (p. 89-90). Sojaost (with Sojagen soymilk powder, p. 118). Sojamælk (with Sojagem soymilk powder, p. 201). Address: Denmark.

2213. Uphof, Johannes Cornelis Th. 1968. Dictionary of economic plants. 2nd ed., revised and enlarged. West Germany: Verlag von J. Cramer. 591 p. See Glycine max, p. 246. 25 cm.
• ***Summary:*** Lists briefly the many food, industrial, and feed uses of the soybean. For example: "Seeds are source of an oil, made into glycerine; used in enamels, varnishes, paints, waterproof goods, linoleum, hard soaps, liquid shampoo, paste soap for hospital use, oil cloth, used in metal moulding, foundry cores; used with rubber for manuf. mats, hose etc., rubber substitutes, lubricant, in printing inks. When refined used for cooking, salads, margarine, shortening." Address: Tampa, Florida. Emeritus Prof. of Botany. Formerly faculty member of the Michigan State Univ. and State Univ. of Arizona. Economic botanist to the Board of Economic Warfare, Washington, DC.

2214. Vithaldas, Yogi; Roberts, Susan. 1968. The yogi cook book. New York, NY: Crown Publishers, Inc. (Pyramid Books). 137 p. Illust. 22 cm.
• ***Summary:*** A vegetarian cookbook. The recipe for almond milk (p, 125) notes: "As champagne is to the Frenchman, so almond milk is to the Indian."

2215. Watanabe, Tokuji. 1968. Advanced technology in

non-fermented soybean foods in Japan. *JARQ* (*Japan Agricultural Research Quarterly*) 3(4):9-13. [7 ref. Eng]
• ***Summary:*** A landmark article, filled with new and accurate information. Contents: Introduction. Tofu and derived foods: Fresh tofu (incl. "momen tofu," "kinugoshi," and "packed tofu." Glucono-delta-lactone has been known for the past several years as a coagulant for kinugoshi and packed tofu), aburage ("Thin sliced tofu"), kori-tofu (also called "dried tofu" it is made by freezing hard fresh tofu). Soybean protein concentrates: Dried soybean milk, 70% protein concentrates, soybean protein curd. Isolated soybean protein. Soybean protein fiber (a thick solution of alkaline isolated soybean protein is forced through spinnerettes into a batch consisting of an acid and salt mixture). Conclusion.

Note. This is the earliest English-language document seen (April 2013) that uses the term *momen* refer to a type of tofu.

Each year about 2,000,000 metric tons of soybeans are consumed in Japan. Most of these are imported from the United States or Communist China. Of this total, about 1,300,000 metric tons are crushed to make soybean oil and meal; about 75% of defatted soybean meal is fed to animals. Of this total, one million metric tons (included a portion of the defatted soybean meal) are used by the food industry to make human foods and condiments.

Although the demand for soybeans in Japan is increasing steadily, domestic production is decreasing, largely because imported soybeans are less expensive.

Traditional Japanese fermented soybean foods include miso, soysauce, and natto. Traditional non-fermented foods include tofu, aburage, koritofu, and kinako. Moreover a number of new foods or food materials are derived from defatted soybeans; they can be used in fish and meat products.

In fresh tofu, a nitrofuran derivative is permitted to be added as a preservative in amounts up to 5 parts per million.

Kinugoshi is made by mixing thick soybean milk at about 70ºC with calcium sulfate suspended in water in a box which has no holes. The milk coagulates into a homogeneous gel without separation of curds and whey.

Packed tofu is made by mixing cold thick soybean milk with a calcium salt in sausage-shaped plastic film bags. Each bag is then sealed closed and immersed in hot water at 90º C for 40 minutes. The soybean milk coagulates into a homogeneous gel like kinugoshi. "Packed tofu is more sanitary, transportable and preservable than momen or kinugoshi."

In some modern factories, aburage is made on a larger scale than momen tofu, using a continuous deep-fryer. There are more than 10-20 aburage factories in Japan which consume at least 600 kg of soybeans per day.

A detailed description of the process for making kori-tofu is given. Several kori-tofu factories consume at least 10 metric tons of soybeans a day.

Small photos show: (1) Fresh tofu soaked in cold water ready to be sold. (2) Continuous manufacture of packed tofu (made with GDL). (3) Equipment for making packed tofu from spray dried soybean milk. (4) Continuous deep-frying equipment for making aburage. (5) Bird's-eye view of a large-scale kori-tofu factory. (6) Soaking tofu cakes in cold water for pre-cooling and removing excess calcium chloride in making kori-tofu. (7) Continuous freezing of cut tofu cakes in making kori-tofu.

Flow sheets show: (1) Kori-tofu making. (2) Fresh tofu making. Address: Head, Food and Nutrition Div., Food Research Inst., Japan.

2216. Worthington Foods, Inc. 1968? Tomorrow's foods today. Worthington, Ohio. 19 p. Undated. 28 cm. [3 ref]
• ***Summary:*** Contents: Message from management. Tomorrow's foods today. Research and development department, W.E. Hartman, director. Production department, Sam Brown, manager. Sales department, W. Kenneth Case, manager. The Worthington line. Engineering department, B.J. Knecht, chief engineer, B.L. Knecht, assistant engineer. Data processing department, John Dalton, manager. Credit and traffic, Al Foster, manager. Advertising department, Michael A. Jones, manager, James Converse, art director. Purchasing and office management, Luther Lyle, manager. Personnel department, Kenneth Innocent, manager. Accounting department, Richard Waters, manager. The future. The wonderful Choplet. Board of directors: James L. Hagle (chairman), Warren E. Hartman, Allan R. Buller, George T. Harding, III, M.D., Warren G. Harding, M.D., George E. McKay, Harrison Evans, M.D.

A color photo shows each of the products in the Worthington line. All are canned, except those followed by an asterisk: Cutlets, Fry Sticks, Vegetable Skallops, Sandwich Spread, Chili, Vegetarian Luncheon Slices*, Kaffir Tea, Soyameat, Vegetarian Dinner: Salisbury Steak Style*, Soyameat: Diced Chicken Style, Choplets, Vegetarian Pie: Chicken Style*, Vegetarian Dinner: Chicken Style*, Holiday Roast*, Prosage: Breakfast Treat*, Vegetarian Luncheon Slices: Smoked Beef Style*, Vegetable Steaks, Numete, Vegetarian Luncheon Slices: Use Like Corned Beef*, Soyameat: Diced Beef Style, Breading Meal: Fry and Loaf Mix, Vegetarian Dinner: Ham Style*, Soyameat: Beef Style Slices with Gravy, Soyameat: Sliced Chicken Style, Meat Loaf Mix*, Veja-Links, Soyamel: All Purpose, Saucettes, Infa-Soy, Soyamel: Banana Beverage, Fortified Soyamel: A Powdered Soy Milk. The section titled "The future" is prophetic. "Since 1962 Worthington Foods has been growing in sales by nearly 20 percent a year. This is significant but modest in comparison to what is coming. For in out opinion the growth of the vegetable protein industry very shortly will be astronomical. The reasons are fairly simple.

"First, these new foods not only taste good. They are nutritionally sound.

"Second, vegetable protein foods offer significant economies over traditional meats. When grazed, an acre of land offers approximately 43 pounds of protein. Plant that same acre to soybeans and the yield is about 450 pounds of protein. The economic advantages of vegetable proteins are widening rapidly today. They will continue to widen.

"Third, vegetable protein foods are more convenient, and convenience foods will soon dominate the food business. No long hours of marinating, basting, of baking are necessary with these new foods. No skin to peel or bones or fat to cut out. With vegetable protein foods, taste and tenderness are controlled. The housewife or chef need only heat and serve.

"A forth reason why the growth of this industry is going to be enormous shortly is because of the protein shortage in the world. The U.S. Department of Agriculture recently pointed out that even in the United States, 'Future protein needs must be met by chemically nurtured and protected plant materials. They certainly cannot be met by animal protein.'"

Note 1. This brochure contains an original illustration of each of the men mentioned above. Note 2. All three dated footnotes at the end of this brochure are from the year 1967, and the latest is Dec. 1967. Address: Worthington, Ohio.

2217. **Product Name:** [Tow-foo-fah (Oboro), and Soymilk]. **Manufacturer's Name:** Super-Soy Specialty. **Manufacturer's Address:** No. 19, Jalan Dato Teoh Siew Khor, Kluang, Johor, West Malaysia. Phone: 07-717558. **Date of Introduction:** 1969. January. **New Product–Documentation:** Form filled out by Richard F.C. Chan. The business was started on 1-9-1969. He uses 100 lb/day of soybeans. His business card describes him as a "Soycrafter. Soyfoods–Natural and Health Giving."

2218. *Washington Post, Times Herald.* 1969. Tofu: Anne's reader exchange. Feb. 13. p. D2.
• ***Summary:*** Describes how to make (at home) "soybean curd or Tofu from soya milk, canned or homemade," using lemon juice as a coagulant.

Also gives a very short recipe for making "soya milk from beans" at home.

2219. Hetrick, J.H. 1969. Imitation dairy products–Past, present, and future. *J. of the American Oil Chemists' Society* 46(2):58A-62A. Feb. [4 ref]
• ***Summary:*** This is a "history of substitute dairy products" and the impact on the market for dairy products.

1923–The Federal Filled Milk Act allowed for dairy milk products in which vegetable fat was substituted for milk fat [butter] in a skim milk base in states where such products was legal. Yet it made interstate commerce of such products in any form illegal. In Illinois, filled evaporated milk is still being with billboards which say: "If cows could, they'd give Milnot."

Milk and milk products, which are an important part of the U.S. diet, provide 77% of the calcium, 45% of the riboflavin, 24% of the protein, 12% of the Vitamin A, 10% of the thiamin, and significant quantities of B-6, B-12, pantothenic acid, folic acid, and essential trace minerals in the Nation's diet. Address: Dep. of Food Science, Univ. of Illinois, Urbana, Illinois 61801.

2220. Mattick, Leonard R.; Hand, David B. 1969. Identification of a volatile component in soybeans that contributes to the raw bean flavor. *J. of Agricultural and Food Chemistry* 17(1):15-17. Jan/Feb. [4 ref]
• ***Summary:*** The volatile component, ethyl vinyl ketone, has been identified by gas chromatography and mass spectrometry. The green bean odor and flavor have been attributed to this compound, which is not present in the intact raw bean, but whose formation is probably the result of enzymatic action when raw soybeans are macerated.

Note. This is the earliest English-language document seen (Nov. 2012) with the term "raw bean flavor" in the title–used to refer to off flavors in soybeans.

Note 2. This is the earliest English-language document seen (June 2013) that contains the term "ethyl vinyl ketone." It is considered responsible for undesirable soy flavors or odors. Address: Dep. of Food Science and Technology, Cornell Univ., Geneva, New York.

2221. Rubini, Milton E. 1969. Filled milk and artificial milk substitutes. *American J. of Clinical Nutrition* 22(2):163-67. Feb.
• ***Summary:*** Milk, filled with polyunsaturated fats such as Safflower, soya, corn, and cottonseed oils and fortified with vitamins A and D, is viewed by some professional nutritionists as an ideal nutritional, especially for the disadvantages population groups where price is critical. Soymilk is not mentioned.

Table 1 (p. 164) shows the nutritional composition of the milk of 15 species of mammals. Human milk has the highest sugar content (75; elephant milk has 73 and whale milk has only 4), the lowest content of protein (11; cow's milk has 35 and reindeer milk has 100), a relatively low fat content (35; cow's milk has 40, horse milk has 12, and porpoise milk has 460), and the lowest content of salts (3; cow's milk has 9 and reindeer milk has 14). Address: M.D.

2222. Badenhop, A.F.; Wilkens, W.F. 1969. The formation of 1-octen-3-ol in soybeans during soaking. *J. of the American Oil Chemists' Society* 46(3):179-82. March. [12 ref]
• ***Summary:*** Soaking soybeans in water as a pretreatment for the manufacture of soy milk was found to result in the production of significant quantities of 1-octen-3-ol. The flavor threshold of this compound was found to be between 0.5 and 1.0 parts per million. Address: New York State Agric.

Exp. Station, Dep. of Food Science and Technology, Cornell Univ., Geneva, New York 14456.

2223. U.P.I. (United Press International). 1969. India's joint ventures in Malaysia. *Times of India* (*The*) (*Bombay*). April 3. p. 16.
• ***Summary:*** Kuala Lumpur–Seven industrial concerns from India, three from the USA and one from Italy are seeking Malaysian partners to establish joint ventures in Malaysia–according to the commercial secretary of the Associated Chinese Chambers of Commerce.

"The proposals are for establishing factories in Malaysia for manufacturing furniture, abrasives, soyabean milk, shoes,... etc."

2224. Spilsbury, Calvin C. 1969. Three stages in Far East soybean markets. *Foreign Agriculture.* April 14. p. 6-8.
• ***Summary:*** Today soybean markets in the Far East, the original home of the soybean, have emerged from time-honored Eastern patterns and have differentiated into what may be called three types–traditional, transitional, and industrial. In traditional markets soybeans continue to be sold and used chiefly for human protein foods, and volumes traded are comparatively small. Also, volumes processed by modern methods are small. Transitional markets are characterized by larger volume, the modern processing of considerable quantities of soybeans for oil for human consumption, and the developing use of soybean meal for human food products and for high-protein animal feeds for emerging livestock and poultry industries. In industrial markets very large quantities of soybeans are efficiently imported, marketed, and processed for oils and fats for human use and for meal for vigorous livestock industries; at the same time soybeans are still used in traditional foods and soybean meal is used to make a variety of new food products.

Korea is a traditional soybean market. Nearly all soybeans are processed into human protein foods such as synthetic milk, flour, paste for soup [miso], curd for consumption in more solid form, mash, sprouted beans, soy sauce, and even fermented "cheese". About 60 to 70% of the domestic crop of about 200,000 tonnes annually is sold in the country's food markets directly to private and commercial consumers. Total imports in 1968 were 28,000 tonnes–all from the U.S.

Most processing of soybeans for human use is done in individual homes by housewives. For example, nearly every Korean family makes a product known as kochojang, or hot bean mash, which consists of powdered, fermented soybeans mixed with red pepper, salt, and water. Some foodmaking (soybean curd and soy sauce) is organized into cottage industry. Most of the soybeans imported from the U.S. are made into traditional soybean foods for rations for the Korean army by one large food factory. Crushing soybeans and other oilseeds for oil is done by about 100 small mills throughout the country. The estimated capacity of all the mills added together is about 200,000 tonnes per year of oilseeds of all types. The largest mills have capacities less than 25 tons per day.

In Taiwan, very little of the imported soybeans are used to make traditional Far East foods. The larger crushing and extraction facilities are clustered around large cities–Taipei, Taichung, Tainan, and Kaohsiung. Only the last is a port, and even there no mills are located on deep water. Imported soybeans are discharged by ships' equipment onto docks, where they are bagged and then stored. Bagged beans are sent by truck or rail to inland processing plants. Modern deep-water bulk discharge facilities are to be built at Kaohsiung along with storage for soybeans and grain.

Japan is the giant of Far Eastern markets for U.S. soybeans. One of the most important recent improvements in soybean logistics has been the development of modern deepwater grain and soybean terminals where soybeans can be rapidly discharged from ships' holds directly to storage, interim transportation, or crushing mills. The first fast-discharge elevator on deep water for soybeans or grain was built by an American-Japanese company. At present four terminals have been built in the Tokyo and Kobe areas, and two more are under construction. Unloading is accomplished by pneumatic suction tubes with capacities of 600 to 800 tons per hour (about 6,000 tonnes per 8-hour day). In Korea and Taiwan, facilities for the fast unloading of large tankers do not exist. Many large, new crushing mills have been built on harbor frontage rather than inland so that they can benefit from bulk transportation methods. The annual capacity of the 15 large, modern mills in Japan is estimated at 1.8 million tons of soybeans. The first mills in Japan were in the mountains because most oilseed crops were grown there. Address: Fats and Oils Div., Foreign Agricultural Service.

2225. Banzon, Julian; Steinkraus, Keith H. 1969. How to use soybeans from your garden. College of Agriculture, University of the Philippines. 5 p. Mimeographed circular. Distributed through Los Banos Extension Dept.
• ***Summary:*** Introduction (the importance of protein, of which soybeans are a good source). How to grow soybeans in the Philippines, by Richard Bradfield of IRRI. How to make soybean milk and other nutritious soybean foods: Steamed green soybeans, mature dry soybeans, soybean milk, tokua–soybean curd, taosi (soybeans fermented with *Aspergillus oryzae* mold), tempeh.

Note: This is the earliest English-language document seen (Nov. 2011) that uses the word *taosi* to refer to fermented black soybeans. Address: 1. Prof. of Chemistry; 2. Visiting Prof., Microbiology and Food Science. Both: Univ. of the Philippines, College of Agriculture, Laguna, Philippines.

2226. Binding, George J. 1969. The soya bean–a vegetable full of body-building protein. *British Vegetarian.* March/April. p. 155-57.
• ***Summary:*** The "soya bean has the highest protein content of any vegetable. As such it is God's gift to man and is a must for vegetarians. In the Far East it is known as 'the meat of the soil.'" The author spent many years in East Asia, where he studied the foods of the region. Soya beans can be used to make a wide variety of foods; the author briefly describes the following: Bean shoots [soy sprouts], soya bean milk, bean curd or vegetable cheese [tofu], yuba, natto, miso, soy sauce, and boiled whole soybeans.

Since World War II, America has become the largest producer of soya beans. Before that war, England was one of the largest importers of soya beans in the world. "All vegetarians should make certain of a sufficient daily intake of protein. There's no more effective and satisfying way of doing so than eating soya beans." Address: M.B.E.

2227. Breth, Fred E. 1969. Ersatz-foods: The danger ahead. *British Vegetarian.* March/April. p. 141-45.
• ***Summary:*** Writing in a critical tone, the author discusses the various products resembling meat and dairy products now available to American shoppers. "Turkey meat that has never held a feather and milk that has never been near a cow... These foods are making progress in markets around the world. Like the prospect or not, it is obvious we shall have to live with laboratory-bred proteins in the not-too-distant future." For more than a decade, food companies have been developing imitation animal proteins, based largely on soya bean proteins. Soya bean derivatives are being used to "stretch" low-cost meats.

"The American dairy industry has yet to find an answer to soya-protein based coffee whiteners, whipped cake toppings, cream-type and frozen desserts. The consuming public has fully accepted them some time ago–and likes them. Are synthetics a real threat to animal products? Expert opinion on this question is deeply divided." Mr. J.L. Hagle, president of Worthington Foods Inc. ("at present the major producer of 'synthetic foods'") believes that "Granted enough time, the relative efficiency of man-made foods will work in their favour."

"Professor C.O. Chichester, University of California, put it even more bluntly: '... the isolation of plant proteins and their processing into textured products may very well result in a major change in the eating habits of the world.'"

"'Meatless' meats, also called 'synthetic meats,' 'analogue meats' and 'textured meats' are made from isolated soya-protein (90 per cent. protein), which is a tasteless, odorless powder."

"Worthington Foods Inc. is already marketing about 30 different 'meat' items, including fried chicken, dried beef, meat loaf casserole, croquettes, chicken show mein, 'soymeat' sandwiches, sandwich spread, bacon bits and so on."

Experts predict plenty of competition in the field of "high-protein drinks" (H.P.D.s). Large companies like Monsanto (a chemical company), Pillsbury (a flour mill), and Swift (a meat packer) have already entered this market. They are all aware of the success story of "Vita-Soy" [Vitasoy], "a straight, three per cent. protein soya-bean milk drink," which sells 60 million bottles a year and has captured 25% of the Hong Kong soft drink market; it sells for as little as 5 pence per bottle. And they are aware of a similar powdered soy protein drink [Saridele] which contains 18% protein and is being marketed successfully in Djakarta, Indonesia and was introduced in 1957; 300 tons/year are now being produced.

The author concludes that these new foods are a necessity from the viewpoint of global nutrition.

Note: This is the earliest English-language document seen (Nov. 2003) that contains the term "meatless meats" or "meatless meat" (with any combination of quotation marks). Three other publications also used this term later in 1969.

2228. Cowan, Claude C., Jr.; Brownlee, R. C., Jr.; DeLoache, W.R.; Jackson, H.P.; Matthews, J.P., Jr. 1969. A soy protein isolate formula in the management of allergy in infants and children. *Southern Medical Journal* 62(4):389-93. April. [10 ref]
• ***Summary:*** The soy formula was successful in alleviating symptoms of allergy and maintaining an adequate nutritional state. Address: Chrisite Pediatric Group, Greenville, South Carolina.

2229. Moede, Herbert H.; Rogers, G.B.; Agnew, D.B.; Duewer, L. 1969. Synthetics and substitutes for agricultural products, a compendium: Meat and poultry substitutes. *USDA Economic Research Service, Miscellaneous Publication* No. 1141. p. 34-40. April.
• ***Summary:*** "Dale Johnson, an industry representative, estimated the following end uses for soy protein and grits to replace an animal-source raw material in commercial products in August 1967." The estimated quantity is in million pounds per year: Pet food 120, meat products–fresh, smoked, and canned 30, calf milk replacers 15, soy milk and beverage products 10. Address: USDA.

2230. *Soybean Digest.* 1969. Worldwide oils and fats. April. p. 58.
• ***Summary:*** Discusses: Rapeseed. Thailand. Palm oil. Spain. Korea. Asia. World. Iran.

"Thailand: The first Thai International trade fair–held Dec. 12-29 in Bangkok–drew over 750,000 people and introduced them to 422 U.S. food products including new textured vegetable protein items made from soybeans."

"Korea: Response to a new U.S. soy beverage tested as part of a Korean school lunch program has encouraged early introduction into the commercial market."

"Iran: Vegetable oil extraction and processing equipment worth $750,000 has been ordered by Iran from a British engineering firm..."

2231. Tabuchi, Ichiro. 1969. Tônyû inryo ni kansuru chôsa to kongo [A survey on soymilk and its future]. *Daizu Kaihatsu, Shokuhin Kaihatsu* (*Soybean Development, Food Development*). May 27. p. 10-15. [Jap]
• ***Summary:*** Contents: Why we started producing soymilk. First is the economic reason; getting soymilk directly from soybeans is less expensive than feeding cows and getting milk from them. Second is the health reason. Our school has 3 goals in our education; the help develop a sound mind in a sound body with high moral values. We also emphasize independence and self-sufficiency, in part be encouraging students to be active in one of the businesses that are part of the school. And we encourage students to produce, as much as possible, what we eat at school.

We used to run a self-sufficient dairy farm and produced milk, which we used at the school and sent any extra to the Tokyo Eisei Byôin (Tokyo Adventist Hospital), etc. But during World War II for about 2 years, Christianity in Japan received pressure from the Japanese government. After the war we lost the milk cows and couldn't run the dairy farm. We switched these plants to make other foods. At this time we were using the nonfat dry milk from the USA–which was not tasty, or a little milk which we got somewhere. But that was not enough for the growing children at school. We needed the least expensive and most nutritious milk we could find.

Right at this time, Dr. Harry W. Miller visited us. He was an honorary member of the Japan and American Soybean Association, and a developer and researcher of soymilk; he urged us to make soymilk.

But actually we were not so sure about making soymilk, so we hesitated. It was a long time later that we decided to do so.

The main reason for our hesitation was that even if we made soymilk, we were not sure that the children would like it and drink it. But as we think about it now, it was an unnecessary worry.

Anyway, Dr. Miller stayed for two months at our school and taught us how to make soymilk. He also gave three lectures on soymilk. mostly from a nutritional point of view. He did this because some thought that soymilk was nutritionally inferior to cow's milk and therefore it would not be a good idea to feed soymilk to growing children. Therefore he had to correct this point of view.

So in 1959, from the earnest recommendation (*nesshin na susume*) of Dr. Miller and the wise decision of our school principal, we discontinued the use of dairy milk and switched to soymilk only.

There was the opinion that we should keep both and let individuals decide which they wanted to drink.

It has been just ten years since we made the decision to switch to 100% soymilk. As I look back, I realize that we were now free of the work of feeding, caring for, and milking dairy cows; that was a big plus.

At present we make 1,000 bottles of soymilk a day, and this work is done by 1 person in half a day; it is very efficient.

Also discusses: Physical condition improves with ongoing soymilk consumption. Boys (male students) tend to like soymilk more than girls. Try not to lose the characteristics of soymilk.

Note: This is the earliest publication seen written by Mr. Tabuchi about soymilk and Soyalac. Address: Nihon San-iku Gakuin.

2232. Colvin, B.M.; Lowe, R.A.; Ramsey, H.A. 1969. Passage of digesta from the abomasum of a calf fed soy flour milk replacers and whole milk. *J. of Dairy Science* 52(5):687-88. May. [2 ref]
• ***Summary:*** Note: This is the earliest document seen that mentions abomasum or abomasal in connection with soy. *Webster's Dictionary* defines abomasum (derived from New Latin, via the Latin *ab + omasum* = the tripe of a bullock), a word first used in about 1760, as "the chamber of the ruminant stomach that is fourth and has a true digestive function." The adjective is abomasal. Address: Dep. of Animal Science, North Carolina State Univ., Raleigh, North Carolina 27607.

2233. Emerson, R.J. 1969. AID incentives to U.S. commercial operations in developing countries. *USDA Agricultural Research Service* ARS 72-71. p. 137-39. May.
• ***Summary:*** Discusses Saci to be made by the Coca Cola Company in Brazil, Vitasoy concentrate to be made by Monsanto in Southeast Asia and Latin America, and Incaparina made by Quaker Oats in Latin America. Gives details on AID incentives to private investment by U.S. companies in developing nations. Recently AID has established, within the Office of Private Resources, a Private Investment Center and a Private Resources Development Service. Address: Office of Private Resources, Agency for International Development, U.S. Dep. of State, Washington, DC.

2234. Hammann, W.C. 1969. Development and marketing of a soy-protein beverage. *USDA Agricultural Research Service* ARS 72-71. p. 101-04. May. [3 ref]
• ***Summary:*** Monsanto's objective is "The translation of Vitasoy, a nutrient soybean soft drink successfully sold in Hong Kong, into an internationally acceptable product to be marketed as a franchise beverage in various parts of the world." The author reviews the early history of Vitasoy, and notes that after introducing the beverage in soft drink bottles, the company "developed an effective advertising campaign.

His soft drink image told the customer that Vitasoy was good, and his advertising words and pictures told the customer it was good for him–'Vitasoy will make you grow taller, stronger, and prettier.' By these techniques Mr. Lo, in the face of sophisticated competition, now has a 24% share of the soft drink market in Hong Kong. He has proved that a business marketing a high-protein food can succeed."
The author then describes how Monsanto reformulated the product. They gave it "a yellow color, similar to that of egg yolk, a symbol of nutrition around the world." Giving the product a new flavor was the most difficult problem, but was solved by "careful control of the process for the soy base of our beverage to eliminate volatile fat oxidation products and prevent formation of bitter notes due to protein degradation. More important, it required development of flavor agents, to mask the bland but still apparent soy taste and the creation of a flavor compatible with the masking agents and stable to processing conditions." A complex group of emulsifiers and stabilizers were used to impart a creamy, homogeneous appearance. Each 6.5 oz serving contained 3.8 gm of protein (from soy), 94 calories, and 1/3 the minimum daily requirement of vitamins A, B-1, B-2, B-6, B-12, and niacinamide. Monsanto decided to sell the product as a dry concentrate, to be supplied to franchised bottlers, who would then mix it with sugar and water, and homogenize, bottle, and sterilize it. Recently two consumer acceptance tests were conducted in different countries. In city I, 61% of the respondents liked the product, and of these, 85% confirmed this like by taking more samples instead of money. In City II, 75% liked the product and 77% said they would buy. Consumers indicated they would be most likely to drink the product at lunchtime and other unspecified occasions.

Note: This product was named Puma and it was first sold in Guyana. It may have been the first commercial soy product to apply the "boiling water grind" principles developed at Cornell University (New York, by Wilkens, Mattick and Hand, 1967) for elimination of beany flavor. Address: Monsanto Company, St. Louis, Missouri.

2235. Hedges, Irwin R. 1969. Soybeans in the war on hunger. *Soybean Digest.* May. p. 13-17.
• ***Summary:*** Discusses protein-rich cereal-soy blends such as CSM ("the high-protein blend") and WSB (Wheat-Soy Blend) used in the Food for Freedom program. The article begins: "War on hunger: The U.S. government launched a War on Hunger 3 years ago [1966, under President Lyndon Johnson], based on the conviction that next to the pursuit of peace the world faces no issue more important than solving the food / population problem... world population was growing at a rate that would double the number of earth's inhabitants by the year 2000, while food production was lagging considerable behind the population growth rate."

"AID is providing incentive to private industry to develop, test and eventually produce for commercial distribution low-cost, high-protein foods and beverages. Under these incentive contracts, food processors receive grants to survey the market, determine costs and availability of indigenous commodities, and develop and test market for prototype foods and drinks." Under this plan, contracts have been signed with Monsanto for a soybean drink in Brazil, with Swift & Co. for soybean-based foods in Brazil, with Archer Daniels Midland for textured vegetable protein and other foods in Thailand, and with General Mills for a high-protein product in Pakistan. Monsanto's research in Brazil has already shown good results.

Concerning food and population: "Many developing countries show population growth rates of 2.5% to 3.5% per year, rates that double their population in 20 to 30 years. Two-thirds of the world's population live in the developing countries.

"Must curb population: These same countries also have great potential for increasing food production by the application of modern science and technology. But unless measures are taken to curb population growth, any likely or possible increase in food production will only postpone the crisis."

Photos show: Dr. A.M. Altschul and Dr. Max Milner. Address: Acting administrator, War on Hunger, Agency for International Development.

2236. Prater, A.N.; Powell, M.E.; Sterner, M.M. 1969. Use of oilseed proteins in dairy product substitutes. *USDA Agricultural Research Service* ARS 72-71. p. 87-90. May.
• ***Summary:*** "Sodium caseinate which is manufactured from nonfat milk is a high protein product with good biological value. The casein is first extracted from the milk with acid and is then converted into a soluble product by addition of a sodium compound. The remaining milk ingredients are discarded. Sodium caseinate is used in whole or in part as a substitute for the protein in nonfat milk solids, but the overall quality of the finished product is considered inferior from the taste palatability standpoint in direct proportion to the amount of substitution.

"Furthermore, sodium caseinate poses an interesting labeling situation. The Food and Drug Administration considers sodium caseinate to be a chemical product derived from milk. In some products which contain sodium caseinate the claim is made that there is no dairy product present. This is true when the legal definition of milk is applied, but the implied inference that no product from milk is present is misleading." Address: 1. Consultant, Encino, California; 2. Consultant, Glendale, CA; 3. Meals for Millions Foundation, Santa Monica, CA.

2237. Altschul, A.M. 1969. Combating malnutrition: New strategies through food science. *Plant Foods for Human Nutrition* 1(3):149-61. June. [7 ref]
• ***Summary:*** Fig. 3 (p. 152) is a graph that shows, for various

countries of the world, the percentage of total grain supplies fed to animals (Denmark and USA are highest at 72-78%) versus animal protein consumption (pounds per person per year) (Denmark and USA are highest at about 45 lb). Address: USDA, Washington, DC.

2238. Brown, Earl B.; Josephson, B.M.; Levine, H.S.; Rosen, M. 1969. A prospective study of allergy in a pediatric population: The role of heredity in the incidence of allergies, and experience with milk-free diet in the newborn. *American J. of Diseases of Children* 117:693-98. June. [10 ref]
• ***Summary:*** The author tried to decide whether feeding of soy-based formulas will actually suppress the incidence of allergy in infants known to be at risk. He studied 427 infants ages 12 to 17 months and found that 10.6% of the soybean group developed a disease of allergy compared with 13.3% in the milk group. This difference was considered too small to be significant.

Note: Vegetarian Times (March 1995, p. 85) defines a prospective study as "A type of epidemiological study that looks at events and behaviors in a population, then follows the group over the years to see what they do and what differences develop. More likely than retrospective studies to generate scientifically valid results." Address: Div. of Social Medicine, Montefiore Hospital and Medical Center, Bronx, New York.

2239. Kosikowski, Frank V. 1969. Role of imitation milk in feeding of tomorrow's population. *J. of Dairy Science* 52(6):756-60. June. [7 ref]
• ***Summary:*** Contents: Introduction. Present state of filled milk evolution in developing countries. Synthetic-like imitation milks. Growth of protein concentrate beverages. Acceptance, usage, costs and safety of imitation beverages. Attitudes. Role of imitations.

"Examples of protein concentrate beverages now available commercially or in pilot plant state include 'Saci,' a sterilized, noncarbonated chocolate-flavored, 3% soy protein nutrient beverage distributed by the Coca-Cola Company in Brazil."

There is a bright future for the synthetic-like imitation milk described earlier. "These imitations are bound to improve with time and it is likely that soybean isolates will replace sodium caseinates as the protein source." These imitation should try to attain protein and calcium levels equal to that of cow's milk. Address: Dep. of Food Science, Cornell Univ., Ithaca, New York 14850.

2240. Russo, J.R. 1969. Can new protein sources avert world shortage? Part II. *Food Engineering* 41(6):80-83. June.
• ***Summary:*** Part I of this article discussed protein in new forms such as fish protein concentrate, meat protein concentrate, and protein from petroleum. This part discusses protein from oilseeds, the least expensive and most promising source. Products containing soy include beverages such as Vitasoy in Hong Kong, ProNutro in South Africa, and Saci in Brazil. In Brazil, Cerealina has been introduced by Corn Products Company. Also discussed are synthetic amino acids, new foods from meat wastes, and food processing "wastes." Photos show a Saci bottle and an Incaparina bag. Address: Asst. ed., Food Engineering.

2241. Andrews, Billy F.; Cook, Larry N. 1969. Low birth-weight infants fed a new carbohydrate-free formula with different sugars. I. Growth and clinical course. *American J. of Clinical Nutrition* 22(7):845-50. July. [25 ref]
• ***Summary:*** Thirty premature infants were fed a new carbohydrate free formula (based on soy protein isolate) to which glucose, sucrose, and lactose were added. Growth of the infants was normal. The authors suggest "further clinical trials to explore the diagnostic and therapeutic uses of such carbohydrate-free formulas." Address: Univ. of Louisville School of Medicine, Kentucky.

2242. Schneider, Donald L.; Sarett, Herbert P. 1969. Growth of baby pigs fed infant soybean formulas. *J. of Nutrition* 98(3):279-87. July. [18 ref]
• ***Summary:*** "Newborn pigs were used to compare the nutritional quality of a recently developed soybean protein isolate (supplemented with methionine) with that of milk protein in 31-day studies."

This study had two parts. Results from Part I showed that the protein quality of the infant soybean formulas with isolate plus methionine was approximately 85% that of the milk protein. Address: Dep. of Nutritional Research, Mead Johnson Research Center, Evansville, Indiana.

2243. Wilkens, W.F.; Hackler, L.R. 1969. Effect of processing conditions on the composition of soymilk. *Cereal Chemistry* 46(4):391-97. July. [6 ref]
• ***Summary:*** Harosoy variety soybeans with 12-13% initial moisture content were used in these experiments. Dehulling was accomplished by heating the beans for 10 minutes at 105-110ºC in a circulatory air oven, cooling, then passing them through a properly spaced burr mill to loosen the hulls, without substantial cracking of the cotyledons. The hulls were separated by aspirating a moving bed of cracked soybeans.

Figures show: (2) That as the soak temperature of dehulled soybeans was increased from 25ºC to 65ºC, the total solids and total carbohydrates decreased the most; protein and lipids decreased only slightly.

(3) That the higher the soak temperature of dehulled soybeans, the faster the water uptake. However soaking at ambient temperature (30ºC) requires no energy for heating the soak water and results in the greatest water uptake after 2-3 hours of soak time.

(4) The effect of soak temperature and time on the water

uptake of whole soybeans. These soybeans, which are not dehulled, absorb water more slowly than dehulled soybeans. Whole soybeans soaked at 40ºC absorb the most water after 7 hours, whereas those soaked at 30ºC absorb the least.

(5) Effect of soak temperature and time on the composition and yield of soy milk prepared from whole soybeans with a 100ºC water extraction grinding (hot grind). Soak times: 1 3 and 6 hours. As the soak temperature of whole soybeans was increased from 25ºC to 65ºC, the total solids and total carbohydrates decreased the most; protein and lipids decreased only slightly.

(6) Relation of soak temperature and time to the volume of filtered soy milk recovered from dehulled soybeans at 100ºC water extraction grinding (boiling water grind). The volume of soy milk was greatest with a soak time of 3 hours at 40ºC. Address: New York State Agric. Exp. Station, Dep. of Food Science and Technology, Cornell Univ., Geneva, New York 14456.

2244. Leng, Earl R. 1969. The soya bean explores new territory. *World Farming* 11(8):8-9, 11-12. 14-15.
• ***Summary:*** Contents: Introduction. The potential. Will soya beans do any better? History of soybean research in India from 1965. Climatic factors. Variety selection. Seedbed preparation. Planting techniques. Weed control. Insect and disease pests. Harvesting and threshing. Seed storage. Utilization: Full-fat soy flour, soy milk.

For the last 3 years, the author has headed the University of Illinois' Coordinated Soya Bean Research Project in India. Under this program, he has conducted India's first extensive field trials using modern soybean varieties suited to Indian conditions. The soybean is almost unknown in many areas of the world, such as India and Africa, where protein is in acute short supply.

"Except for Indonesia, southern China, Taiwan, and the Philippines, soya beans were almost unknown in the tropical and sub-tropical regions of the world until about 1960. In the early 1960's work in southern Brazil rapidly; showed that good yields and high protein content of soya beans could be produced in that area. The varieties used were chiefly those grown in the Gulf Coast states of southern United States. Yields of 1,500 to over 2,000 pounds [per acre] were reported from experimental trials in both southern and central Brazil, and significant acreages are now grown in southern Brazil.

"In 1965 research workers with the University of Illinois, Urbana, Illinois, U.S.A., began intensive soya bean field trials at Pantnagar in northeastern India and at Jabalpur in the central part of the country under a USAID contract. The first year's results were only moderately encouraging; however, the 1966 trials at Pantnagar resulted in some yields over 3,000 pounds per acre. By 1968, it had been shown that yields up to nearly 4,000 pounds per acre could be produced both at Pantnagar and at Jabalpur. These outstanding results were achieved with varieties developed by U.S. Dept. of Agriculture plant breeders for the Gulf Coast states of southern U.S. From these results, it is now clear that high yields of soya beans can be obtained in much of India, between latitudes 23º and 30º."

A photo shows the Leng in a field of soybeans at Jabalpur, India. Address: Agronomist, Univ. of Illinois, Urbana.

2245. Orr, Martha Louise. 1969. Pantothenic acid, vitamin B-6, and vitamin B-12 in foods. *USDA Home Economics Research Report* No. 36. 53 p. Aug. [440* ref]
• ***Summary:*** Lists the content of these three vitamins (p. 25) for: Soybeans, mature, dry, raw. Fermented product, tempeh. Soybean flours (full-fat, high-fat, low-fat, and defatted). Soybean milk product, sweetened powder.

The percentage of vitamin B-6 in the form of pyridoxol, pyridoxal, and pyridoxamine is as follows: for soybeans (44, 44, 12) or (18, 77, 5), soyflour (63, 25, 12).

2246. Spilsbury, Calvin C. 1969. The U.S. soybean market in the Republic of China (Taiwan). *USDA Foreign Agricultural Service*. FAS M-209. 20 p. Aug. Summarized in Soybean Digest, Nov. 1969, p. 52.
• ***Summary:*** Contents: Foreword, by Howard A. Akers. Introduction. The market. The oilseed crushing industry: Organization and mill location, number and type of mills, crushing capacity. Soybean oil and foods: Soybean meal demand for swine, soybean meal demand for poultry. Domestic oilseed supplies: Soybeans, peanuts, rapeseed, sesame, minor oilseeds. Marketing: Discharging and handling facilities, freight costs, government controls, purchasing, credit, quality problems, crushing margins wide. Appendix: Directory of major soybean and oilseed crushing mills, by region.

The Foreword notes: "This small island made near-phenomenal strides in both agriculture and industry in the late 1950s and early 1960s, and by the mid-1960s was recognized as a growing dollar market for U.S. soybeans and soybean products." In 1965 Taiwan moved from aid to trade status. In 1966 soybeans were removed from controls, and with the booming economy of 1967-68, imports of soybean from the USA–all paid for in dollars,–leaped to record levels.

Today, Taiwan has one of the world's highest economic growth rates. Since the end of World War II, and especially since 1955, the Taiwan oilseed crushing industry has undergone a complete technological transformation. The country now boasts 36 solvent extraction plants, many of them with modern continuous systems.

In Taiwan today, per capita consumption of soybeans for food is estimated at around 5½ pounds/year, compared with about 4 pounds in 1958. Soybean oil is now Taiwan's major source of edible fats and oils; per capita consumption is about 6 pounds/year compared with 4 pounds/year for peanut

oil. Total per capita vegetable oil consumption is about 12 pounds/year. Per capita consumption of animal fats is 6-8 pounds/year.

Domestic production of soybeans rose from 4,000 metric tons (tonnes) in 1935-39 to 72,997 tonnes in 1968. Historically, imports of soybeans and soybean products have been large. In 1938 over 45,000 tonnes of soybeans and about 164,000 tonnes of soybean cake were imported, mainly from Manchuria.

In 1950, Taiwan's vegetable oil crushing industry was first organized into a trade association by a group of 20 crushers using screw presses. By 1967 some 86 crushers were members; this included 35 solvent-extraction operators. Known today as the Taiwan Regional Association of Vegetable Oil Expelling and Refining Industries, the group is located at 82 Nan Yuan Street in Taipei. Today in Taiwan there are 99 oilseed crushing mills with a total crushing capacity of 1.3 million tonnes–up from only 400,000 tonnes in 1954-55.

As in many countries of East Asia, the Taiwanese consumer has a taste preference for crude peanut oil, sesame oil, and rapeseed oil, in that order. For this reason, soybean oil is often marketed as a blend with peanut or rapeseed oil.

The soybeans required for the manufacture of bean curd [tofu], soybean paste [jiang], [soy] sauce, milk, and other foods are largely produced domestically. In 1969 an estimated 40,000 tons of soybeans will be required for bean curd and 3,000 tons for soybean sauce. "In the rural areas of Taiwan, soybean milk cooperatives have been organized under government auspices. Members use their own soybeans and make their soybean milk at common soybean milk shops."

A map (p. 9) shows the island of Taiwan, each of its prefectures, and where each of four oilseeds (soybeans, peanuts, rapeseed, sesame) are produced. Tables show: (1) Production of four oilseeds in Taiwan from 1965-1968. Peanut production decreased from 88,000 to 74,000 tonnes. Soybean production increased from 66,000 to 73,000 tonnes but was still No. 2 after peanuts (p. 8). (2) Taiwanese soybean production, imports, and utilization from 1955 to 1968 (p. 11). Address: Fats and Oils Div.

2247. Funchess, William H. 1969. Soybeans saved my life. *Soybean Digest.* Sept. p. 32-33.

• ***Summary:*** He was captured on November 4 [probably in 1950]. The snow began falling the day after he was captured by the Communists in North Korea. Just before he was captured, he had been shot by a machine gun, so every step was like walking on nails. He had already seen the Communist Chinese shoot and kill one of his men who could not walk. After several days of walking in the freezing cold, wearing only light clothing, he and the other American POWs finally reached a temporary prisoner of war camp. "Snow covered the ground and the temperature was 10 to 20 degrees below zero. Thirty-six of us were assigned to a mud house that had a straw roof, dirt floors, paper windows, and no heat. There was a bundle of dried corn stalks for bedding."

One day he noticed soybean stubble extending several inches through the snow. He found a stick, hobbled out to the small soybean field near his hut, pried out the soybeans from the frozen ground, and collected them one by one in his pocket. When the guard left his fire, Funchess placed the beans on a piece of tin in an effort to roast them. When he saw the guard returning, he would grab his beans and move out of sight. Occasionally, however, when he was not quick enough, his beans were kicked into the fire.

He had never eaten soybeans before but he knew they had a high protein content and would sustain life, so he determined "to acquire as many of those little life-giving nuggets as possible."

His daily rations were a cupful of cooked millet or corn that he got twice a day. He received no additional water from Nov. 4 until sometime in February. But he could eat snow–if he could stand the stomach cramps that followed.

He did not get a grain of salt or any meat for nearly 5 months. By that time, however, the Communists would occasionally throw several handfuls of soybeans into the pot of millet. He was so hungry and thin that those soybeans tasted better than anything he had ever eaten. But many of his fellow prisoners died of starvation. His weight dropped to 105 pounds. He and his friends knew they had to improve their diet.

When he was made to carry bags of soybeans, he learned to "accidentally" tear the bags and fill his pockets during every work detail. Occasionally he found earthen jars of fermented "soybean paste" [miso]. It did wonders to the millet seed that he was constantly eating.

After the peace negotiations began [on 10 July 1951], some 8-9 months after he was captured, their food supply improved. Whole soybeans were added to the rations. First they tried boiling whole beans in water; they enjoyed them seasoned only with salt. Then they cracked the soybeans and mixed them into their millet or rice. After a while they began to grow soybean sprouts, which they found very tasty–and when he enjoys to this day.

Finally they learned to make a product some of the men called "Tofu." The Communists gave them a coagulant, They added a small amount of tofu to everything they cooked–and he began to feel his strength returning. Then they learned to make soybean milk, which they also liked if they were careful not to scorch it. It was so rich, however, that they soon learned to drink only a few ounces at a time.

"Eventually a small amount of soybean oil was provided for cooking purposes... A small dish of oil and a cotton wick made an excellent light at night."

"Soybean oil worked well, too, for chapped hands. Some of us even found that it made pretty good hair tonic.

"While a prisoner of war I learned to appreciate the soybean for its life-giving characteristics. To me, the soybean became not a "way of life" but a "way to sustain life." Needless to say, I gained great affection for the little yellow bean that helped keep us alive in the prisoner of war camps of North Korea.

"Each fall at harvest I still collect some soybeans to roast. I always take great delight in offering roasted beans to my friends. Most people will accept only a few, but I can still sit down and enjoy them by the pocketful."

A portrait photo shows William H. Funchess. Address: County Agent, Allendale, South Carolina.

2248. *British Vegetarian.* 1969. Plantmilk. Sept/Oct. p. 461-63.

• ***Summary:*** In 1956 when the Plantmilk Society was formed, one of its main objectives was to try to find a humane alternative to cow's milk, so that vegetarians could be "released from association with the slaughter and unpublicised suffering caused by dairy farming... Put the bull to the cow, and when the calf comes, kill it–so we can have the milk." After years of research, with the guidance of nutritional experts, Plantmilk Ltd. was formed to make this milk, and in 1965 it made and sold its first cans of Plantmilk. Now, four years later, what is the status of the company and its products?

First, distribution of plantmilk has been extended throughout the UK and a start has been made on exports. Second, the taste and acceptance of the product have been improved by stages. Third, the medical value of using plantmilk to treat children or adults with allergies to cow's milk is becoming more widely recognized. However it is the ethical question which must most appeal to the convinced vegetarian–especially in this age of factory farming. A "meat-milk complex" has developed.

"Plantmilk Ltd. is a tiny, embryonic organisation which needs the help of every vegetarian if it is to survive." Three television documentaries have featured plantmilk, and it has been the focus of articles in newspapers and magazines worldwide. "What is missing so far is sufficient support from a sufficient number of users." Sales during the fiscal year just ended are up 30% over the previous year. This growth rate must be maintained and increased.

Photos: Inside the plantmilk factory, where a gleaming pile of cans is ready for the next batch of milk. Mr. William Stark, Production Manager, examines the color of the milk while Mr. John Cross watches the "mechanical cow." Mr. Leslie Cross, Managing Director of Plantmilk Ltd., and William Stark drink a toast, each holding high a glass of plantmilk.

2249. Gramsevaks Training Centre, Dharwar. 1969. Hand book on soyabean recipes. Mysore, India: Mysore Dept. of Agriculture. 18 p. Oct.

• ***Summary:*** Contents: Foreword, by Dr. H.R. Arakeri, Director of Agriculture, Bangalore. Preface. Introduction: Nutritional properties of soyabean, uses of soyabeans in the diet, processing of soyabean. Recipes (in these 26 Indian-style recipes the soyabean is used as soyabean dal {halved or whole, dry} or soyabean flour. One recipe is for homemade soyamilk, and one for Soyamalt–sprouted soybeans that are dried and ground).

"During the 1930s, soyabean was tried in Sindhu basin, Baroda State and black soils of Maharashta but did not become popular due to lack of knowledge of its cultivation practices, utility and marketability. This crop can be classified as a kharif crop, the months of June and July being suited for planting. In states like Mysore, where winter is less severe, it can also be grown in Rabi season, planting the crop during the 1st week of December."

"Attempts were made in the 1940s to introduce this crop afresh on large scale. It did not become very popular as a grain for human consumption. One of the reasons was that it had a strong odour and that it had to face competition with other pulses and oilseed crops." Address: Mysore, India.

2251. VJG. 1969. Advanced technology in non-fermented soybean foods in Japan, by T. Watanabe. *Food Science and Technology Abstracts* 1(10):1236. Oct. [1 ref]
• ***Summary:*** This is a summary (by VJG) of an article that appeared in *Japan Agricultural Research Quarterly* 3(4):9-13 (1968) [7 refs., Eng.].

The article discusses: "Preparation of fresh tofu, aburage (dehydrated and deep-fried tofu slices) and kori-tofu (frozen fresh tofu). Composition and methods of preparation of soybean protein concentrates (dried soybean milk, 70% protein concentrates, soybean protein curd),..."

Note 1. This is the earliest English-language document seen (April 2013) that contains the term "fried tofu slices" or the term "deep-fried tofu slices."

Note 2. This is the earliest English-language document seen (April 2013) that uses the term "frozen fresh tofu" to refer to dried-frozen tofu.

2252. Altschul, A.M. 1969. Food: Proteins for humans. *Chemical and Engineering News* 47(49):68-81. Nov. 24. [11 ref]
• ***Summary:*** Discuses private companies making protein foods as part of a USAID 3-year grant program to encourage U.S. companies to develop commercially viable protein foods for production and marketing in developing countries. A total of 14 projects were funded. A photo (p. 76) shows bottles of Puma from Guyana, Saci from Brazil, and Vitasoy from Hong Kong. Address: Special Asst. for Nutrition Improvement to the U.S. Secretary of Agriculture.

2253. Harrison, D.W. 1969. Analysis of the Uganda experience based on Africa Basic Foods Inc. Paper presented at United Nations Industrial Development Organization Expert Group Meeting on Soya Bean Processing and Use. 43 p. plus 6-page summary. Document: ID/WG.45/4. Held 17-21 Nov. 1969 at Peoria, Illinois.
• ***Summary:*** Africa Basic Foods (ABF) Ltd. was established in Uganda to develop soybeans as a food cash crop with small farmers, to produce and market low-cost soyfoods, and to educate the people about their value for good health. In 1965 ABF asked the Ministry of Agriculture at the Department of Agriculture at Makerere University to do research on soybean production. The company built a food factory 4 miles from Kampala, and by May 1966 was producing various soy-based foods, and marketed them throughout Uganda, especially to hospitals, schools, the government, and various institutions.

"The soya bean was introduced in Uganda from America and South Africa in 1938. Within a few years various varieties were tested and the crop distributed to the farmers. The crop increased in production as the demand from overseas grew during the wartime shortage of proteins in England.

"The highest acreage achieved during the Second World War was about 35,000 to 40,000 acres. After that time (about 1948) the acreage gradually dropped, due to lack of demand, to only a few thousand acres under cultivation by 1965.

"Since 1965, ABF Ltd. has been actively promoting the growth of soya beans. First, the Ministry of Agriculture initiated variety trials. Then in 1966 the University of Makerere Department of Agriculture started variety trials with over 50 varieties available. The crop production has grown very rapidly as the farmers heard of a local demand, and the price of 25 cents per pound (US¢ 3½). In 1968 about 12,000 to 15,000 tons were produced. A large share of this was used locally by the oil milling industry...

"Aside from the oil millers, there is an animal feed plant now operating in Uganda since about 1967, as well as our human food plant. The consumption from these two plants is small, about 352 tons and 120 tons respectively...

"Over 50% of the local production is perhaps exported."

By 1969 ABF was making the following (for each is given processing details, and the name and brand of equipment used): Roasted soybeans ground to a flour, soy milk sterilized in bottles (adapted from Dr. Harry Miller's method), soy cheese (tofu mixed with a little nonfat dry milk, curry, sage, and salt, packed into 1-inch diameter casings, pasteurized at 190ºF for 20 minutes, then cooled and refrigerated, p. 16-17), soy butter (like peanut butter, from soy flour, oil, sugar, and salt), soy bread mix (wheat flour fortified with 20% soy flour, plus sugar, nonfat dry milk, salt, and yeast), soy fortified maize flour (25% soy), school porridge, and soy porridge (soy fortified corn porridge).

Note: This is the earliest *published* English-language document seen (March 2007) that uses the term "soy cheese" to refer to a Western-style soy cheese.

In Dec. 1964 Dr. Harrison was hired by the government of Uganda, Buganda region, to serve as Director of Nutrition and Health Education, with emphasis on local, commercial production of high-protein foods (p. 28). Then ABF was registered in Uganda as a nonprofit corporation. Dr. Harrison and two of his government departmental employees "operate the entire scheme." Their salaries come entirely from the Uganda Government, so the government is to some extent helping to finance the project. The company has hired 3 other persons full time and one part time. They receive salaries from sales income. Address: President, Africa Basic Foods Inc., Kampala, Uganda.

2254. Kapsiotis, G.D. 1969. PAG and the FAO/WHO/UNICEF Protein Food Programme with special reference to soybean products. New York. 4 p. Nov. 13. Soy Products Document 2.1/25.
• ***Summary:*** Contents. 1. Brief history–The FAO/WHO/UNICEF Protein Advisory Group was established in 1955 with the purpose of advising WHO on nutritive problems concerned with the development of special protein-rich

foods. 2. PAG's scope of activities–Focus on development of protein foods for infants and children. 3. Focus on utilization of soy-beans and soy-bean products in human feeding–since 1956. 4. Attention to fermented soya bean products. 5. Saridele project for spray dried soy bean extract [soy milk] in Indonesia.

6. Survey of soy products available for human consumption. 7. Development of processing equipment for full fat soy bean flour. One Wenger unit, donated by UNICEF, has been installed in Taiwan. Another unit, also provided by UNICEF, will be installed at the Kaira Dairy Cooperative in India for the production of protein food mixtures for infants and children. 8. Dairy type foods based on soy protein isolates. 9. Studies on the economics of soy bean production, supply, processing and marketing. Two projects, in Turkey and Madagascar, are discussed briefly. 10. Conclusion.

The two projects: "One refers to Turkey where soy beans are produced in a restricted area on the Black Sea. The remodelling of the soy processing facilities through UNICEF and FAO assistance makes it possible to produce edible soy bean protein concentrates for the production and distribution of an enzyme treated and precooked infant food in Turkey. The second project, in its very early stage of preparation concerns Madagascar where there is a very serious effort of the Government to expand the culture of soy beans. Here it is anticipated that the commercial production of protein mixtures based essentially on rice and soy for infant and young children could be developed. In the same country, where there is a substantial production of bananas, some development work encouraged by FAO is now under way for the production of soy flour-banana mixtures for feeding of all age groups.

"In conclusion, it could be said that the PAG and its sponsoring Agencies are trying to find ways and means for introducing and expanding the culture of soy and for the utilization of it and its products in human feeding." Address: Nutrition Div., Rome, Italy.

• ***Summary:*** The 10-course soy dinner menu uses the following products made by Worthington Foods or Fearn Soya Foods: Hi-Protein, Fried chicken style soy meat, Salisbury soy meat steak, Veja-Links soy meat, Soy powder (flour), Diced chicken soy meat, Soyamel (powdered soymilk). The author is the wife of Chas. V. Simpson, former American Soybean Assoc. director from Minnesota and a past president. Address: Tetonka Farms, Waterville, Minnesota; Wife of former American Soybean Assoc. director.

2257. *SoyaScan Notes.* 1969. Chronology of Eden Organic Foods, Inc. Renamed Eden Foods, Inc. in April 1971. Part I. 1969 to 1972. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1969 Nov. 4–Eden Organic Foods is named and incorporated as a non-profit corporation by Bill Bolduc. Other names on the articles of incorporation are Judith Bolduc, Ronald Teeguarden, Gloria Dunn, and Linda Succop. It is a natural foods co-op retail store at 514 East William St. in Ann Arbor, Michigan. Bill is president of the company and his wife, Judy, is part-time secretary. The date of incorporation, Nov. 4, was selected by an astrologer, Michael Erlewine, because it was astrologically propitious. Michael also designed the Eden logo of four sprouts in a circle. Also in Nov. 1969 Eden begins selling soyfoods, tamari and miso purchased from Erewhon.

Prior to this, starting in about the summer of 1969, Ronnie Teeguarden and Gloria Dunn had started a loosely-knit food buying co-op–which had no name, no assets, no formal structure, and no bank account. Original or very early members included Tim and Pattie Redmond, Mark and Nancy Retzloff, Linda Succop, Iona Teeguarden, and Bob Thorson. On about 3-5 different occasions they collectively ordered macrobiotic staples (including tamari and miso) from Erewhon in Boston, Massachusetts, using the Erewhon catalog. When the foods arrived, the members got together and divided them up at the Teeguarden-Leabu General Store, at 209 South State St. in Ann Arbor. This general store, located in the basement below Marshall's Bookstore, carried mostly antique clothing and records, and the art of local artists. By September 1969, Bill and Judy Bolduc joined the food co-op. They also joined the Zen Macrobiotic Supper Club; all of its members were also members of the food co-op.

In the fall of 1969 the Teeguarden-Leabu second-hand store looked like it was about to close, which would leave the food co-op without a home. The group (especially Ronnie Teeguarden) convinced Bill Bolduc to take charge of the food co-op and find it a permanent home, which he did–in an upstairs apartment at 514 East William St. Members of the informal food-buying co-op who worked at Eden Organic Foods included Bill Bolduc, Gloria Dunn, and Tim Redmond. An environmental group named the Environmental Defense Education Network (EDEN) also operated out of the Teeguarden-Leabu General Store; it was from this group that Eden got its name. That fall, after the Eden Organic Foods co-op was up and running, Tim Redmond went to Boston to work and study at Sanae, a macrobiotic restaurant on 272A Newbury St.

1970 summer–Bill Bolduc establishes Eden's first contact with an organic food grower (Bill Vreeland of Ypsilanti, Michigan, who grows organic wheat and soybeans). He soon makes Eden's first direct purchase of organically grown wheat, which the company mills and sells.

1970 July 6–Eden Organic Foods, Inc is reorganized upon a stock basis. Bill Bolduc (who resides at 6210 Bethel Church Rd., Saline, Michigan) owns all the shares (1,000). Other people listed on this document are Judith Bolduc, Ronald Teeguarden, and Gloria Dunn.

1970 Sept.–The fledgling company has an offer from Cynthia Shevel to move into a newly decorated mini-mall at 211 South State St. on the main street of campus. They need money to finance the move. Tim Redmond's father says he will help finance the expansion only if the business is reorganized as a for-profit corporation. So Eden is changed into a for-profit corporation, and Redmond invests the $10,000 he borrowed from his father in Eden in exchange for 50% ownership. In Nov. 1970 Eden moves into the mini-mall (they register the new address on Nov. 17) and soon begins to mill flour and bake granola at the new store. Bolduc and Redmond are now equal partners.

1971 April 8–Bolduc registers a change in the company name to Eden Foods, Inc. from Eden Organic Foods, Inc. After the store was up and running, Redmond returns to Boston and Sanae restaurant, where he completed his studies.

1971 Jan.–Michael Potter is hired by Bill Bolduc. Mike had initially had a good-paying job at an art gallery in Royal Oak, Michigan. Then he began working for, and eventually became a partner in Joyous Revival, a macrobiotic and natural foods retail store in Birmingham, Michigan. At that time he and his wife, Carol Roller Potter (Ron Roller's sister), moved from Royal Oak to Walnut Lake, Michigan–to be nearer to Joyous Revival. In the fall of 1970 Michael Potter, while still working at Joyous Revival and at Bill Bolduc's request, had done volunteer work to try to help a failing new Eden retail store in downtown Detroit on the campus of Wayne State University. This store was owned jointly by Eden and two people named John and Darleen–two of the first people in the area interested in macrobiotics. By Jan. 1971 it had become evident that the store would not be able to survive financially, so Michael's first job after being hired was to make one last try to save it, then to help in shutting it down.

1971 May or June–Tim Redmond returns to Ann Arbor permanently, having finished his macrobiotic training in Boston. He planned to open a restaurant like Sanae in Ann Arbor but instead got increasingly involved with Eden Foods.

1971 June–Eden starts to wholesale natural foods out of the back of their retail store at 211 South State Street. They buy increasingly from original sources instead of other wholesalers. Buying clubs and co-ops come to the retail store to pick up their bulk foods.

1971 July–Eden's wholesale pricelist, dated July 26, shows that Eden is selling bulk (50 and 100 lb) soybeans, corn, soft wheat, and rye, which are being grown organically in Michigan (by Tom Vreeland). Eden stone-ground a portion of them into flour–on order. Eden is also selling numerous bulk and packaged grains, cereals, flours, and beans from Arrowhead Mills in Deaf Smith County, Texas; some are organically grown.

1971 early summer–Bill Bolduc asks Mike Potter to manage the Eden retail store at 211 South State St. Mike and his pregnant wife, Carol, move to Ann Arbor from Walnut Lake. By this time the company name was Eden Foods, Inc.

1971 Aug.–Eden Foods starts to distribute its wholesale bulk products, especially in the Detroit area. The company starts to bring in small trailer loads of staples from Arrowhead Mills in Texas. Bolduc and Redmond, realizing that Eden is the only natural foods store in the area, borrow some money and rent a 4,000 square foot Quonset hut warehouse on North Main Street north of Ann Arbor near the Huron River. They expand their wholesale and distribution operations.

1971 Oct.–Mike Potter is given 13.5% of the common stock of Eden Foods, Inc. largely to compensate him for his many hours of unpaid volunteer work. According to Michael Potter (Dec. 1986), at this point the common stock ownership of Eden Foods is: Between Bill and Judy Bolduc 43.5%, Tim Redmond 43.5%, and Michael Potter 13.5%. Potter later says (Feb. 1993) that Bill Bolduc and Tim Redmond now own the same number of shares, but Judy Bolduc owned a small number of shares so the Bolducs owned the largest block.

1972 fall–Ron Roller starts to work part time for Eden Foods. Continued. Address: 514 East William St. in Ann Arbor, Michigan. Phone: 313-769-8444.

2258. *SoyaScan Notes.* 1969. Chronology of Eden Foods, Inc. Part II. 1973 to Nov. 1981. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1973 March–Eden moves into a larger warehouse at 310 West Ann Street in Ann Arbor, sharing it with Midwest Natural Foods, which initially was not a competitor. At about this time, Ron Roller starts working full-time for Eden. While at this warehouse, in late 1973 or early 1974, Eden receives its first shipments of imported Japanese natural foods from Mr. Kazama of Mitoku in Tokyo. Tim Redmond had ordered these foods from Mr. Kazama at a meeting of the Natural Foods Distributors Association in Florida. Initially Eden was forced to import Erewhon-branded products. Redmond recalls that at this time he was working at and managing the warehouse and Potter was working at and managing the retail store. Redmond was managing the corporation because he controlled it.

1973 summer.–The Eden retail store moves to a much larger location at 330 Maynard St. in Ann Arbor, on the University of Michigan campus. It now includes three

operations under one roof in 6,000 square feet of leased space: A large natural foods retail store, a natural fast-food deli, and a natural foods bakery named Sun Bakery that had relocated itself from Kalamazoo, Michigan. This operation proved to be very profitable; it paid off all Eden's debts and paid for the new warehouse, offices, trucks, and equipment.

1973 July–Bill and Judy Bolduc leave Eden Foods, selling their stock to Mike Potter for $2,500 cash. Tim Redmond becomes president. Redmond ends up owning 51% and Potter 49% of the shares in Eden Foods. Potter recalls that he bought the stock directly from the Bolducs, then gave a small amount to Redmond so that Redmond would have majority ownership. Redmond recalls that the Bolducs sold their stock back to the corporation, then Redmond sold enough shares to Potter so that he (Redmond) would keep control with 51% of the shares.

1973 late or 1974 early–Potter and Redmond become equal owners of Eden Foods after Potter loans the company $44,000 (entrusted to him by his father), then converts the loan into an investment in the company in exchange for equal ownership.

1973 Sept.–Mike Potter becomes president of Eden Foods at the unanimous recommendation of an employee steering committee. At about this time Midwest Natural Foods starts to compete with Eden Foods, carrying many of the same products that Eden carries plus dairy products and frozen foods. Eden has never sold dairy products or frozen foods and, in the face of new competition from Midwest, Michael Potter reaffirms this position. This decision makes it impossible for Eden to become a full-line distributor like Midwest, and lays the groundwork for Eden's eventual decision in 1986 or 1987 to discontinue distribution to retail stores and focus on manufacturing of natural foods.

1974 spring–Eden moves from 310 West Ann St. into a larger warehouse at 4601 Platt Road. This move extricates Eden from what had become a "pathetic relationship" with Midwest Natural Foods. Redmond is sure that he and Potter became equal partners before this move.

1974 March 7-8–Michael Potter represents Eden at the meeting of Natural Foods Distributors at the Janus conference room in Seattle, Washington.

1974 Oct.–Potter makes the first of his eleven trips to the People's Republic of China. On the way back he visits Yuko Okada at the Muso Company in Osaka, Japan. Potter decides to import exclusively from Muso.

1977 Aug.–Eden Foods opens Turtle Island restaurant at 315 South State St. in Ann Arbor.

1979 spring–Cliff Adler, a painter renovating apartments in Ann Arbor, is hired by Michael Potter to work for Eden in Chicago, Illinois, to try to expand their sales to natural food retail stores. During that summer Cliff lends Eden Foods $100,000, for which he is paid bank interest rates. Tim Redmond, however, believes Cliff was hired as a salesman in 1976, and that on 15 March 1979 Cliff became a shareholder in Eden Foods, buying 10% of the stock.

1979 Nov. 26–The Eden warehouse at 4601 Platt Road is destroyed by a large fire. According to the *Ann Arbor News* (Nov. 27-29) total damages are estimated at $650,000. Eden Foods, organized in 1970, employs some 100 persons in distribution and production, supplies about 500 natural food stores and restaurants, has annual sales of about $5 million, and is said by its owners to be "the largest natural foods distributorship in the Midwest." This fire burned many of Eden's key records, including records that would have helped in determining dates and facts for this chronology. Eden has never kept a written chronology of key events in the company's history.

1979 Dec.–Within 10 days after the fire, the board of directors (Potter, Adler, and Redmond) meets, authorizes a large number of additional shares of common stock, and decides to give away (free of charge) shares of Eden Foods' common stock to six key employees/managers to try to motivate them to stay with the company and help try to rebuild it. They also decide to lay off 35 other people. Shortly thereafter Cliff Adler decides to convert his $100,000 loan to stock (equity)

1980 Jan.–Tim Redmond decides to leave Eden Foods; he leaves in May, selling most of his stock (he kept 1,000 shares) in exchange for ownership of the Maynard Street Connection, Inc., which has a retail store and restaurant at 330 Maynard St., which are now separate companies.

1980 Feb.–Now Michael Potter and Cliff Adler each own 34% of Eden Foods shares, Frank Dietrich (of Natural Foods, Inc., Toledo, Ohio) owns 10% (which he bought for $100,000), Ron Roller owns 5%, Michael Gordon 4%, Mark Cook 4%, Kathy Knor 3%, Bill Swaney 3%, and Bob Duha 3%. Michael Potter notes that four things saved Eden Foods (which now had a negative net worth of more than $800,000) after the fire: (1) Cliff Adler's conversion of his $100,000; (2) The incredible cooperation, generosity, and kindness that Eden received from its suppliers in the natural foods industry, and their trust that Eden would do its best to pay back they money at a time when interest rates were over 20%; (3) Frank Dietrick's investment of $100,000 in the company; and (4) The great effort made by natural foods retail stores and consumers to go out of their way help Eden survive by purchasing more Eden products. Note that it was not until Feb. 1982 that Eden ended up receiving from its insurer (Hartford Insurance Company) $400,000 net, or $0.50 for each dollar Eden felt it was owed.

1980 Nov.–Eden Foods headquarters moves into a 20,000 square foot building at 701 Tecumseh Road in the tiny town of Clinton (population 2,000) about 60 miles southwest of Detroit.

1981 Nov.–Erewhon Trading Co. files for Chapter 11 bankruptcy protection. Trying to keep up with the super-distributors in their region (especially Balanced Foods) Erewhon had moved into an 80,000 square foot warehouse

and added too many items to their product line too fast–which destroyed the company. Stow Mills picked up the bulk of their business, with Westbrae scooping up most of the business for their Japanese imports. Eden had not yet recovered enough financially to take advantage of this opportunity. Continued.

2259. *SoyaScan Notes.* 1969. Chronology of Eden Foods, Inc. Part III. 1983 to present. 31 Jan. 1992. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1983 July–Eden Foods surprises the U.S. natural foods industry by introducing Edensoy, a long-life soymilk in plain, carob, or cranberry flavors, imported from Marusan-Ai Co. in Japan, and packaged in a stand-up foil retort pouch.

1984 Jan.–The Muso Company of Osaka, Japan, appoints Eden Foods its General Agent for North America.

1984 March 2–A series of calamities hit Eden Foods in quick succession. The FDA (U.S. Food and Drug Administration) informs Eden Foods, in a strongly worded letter, that it considers eleven claims in a promotional pamphlet for Edensoy to be erroneous. The FDA advised that the "Good for Babies" section of the pamphlet be deleted.

1985 June 14–The FDA informs Michael Potter that a six-month-old child in Canada had become seriously ill after being fed the company's soymilk as an infant formula. The mother said her decision to forgo regular infant formula was inspired by Eden's own literature–the promotional pamphlet cited above which said that Edensoy was "Good for Babies." Eden took the position: "There's a problem and we're responsible for it." To date some 18 million packs of Edensoy have been sold.

1985 June 23–Eden Foods voluntarily mails 10,686 requests for a recall of the pamphlet to its distributors and to individual retail stores.

1985 July–Eden Foods forms a joint venture partnership with four Japanese companies, and incorporates in the state of Michigan as American Soy Products, Inc.

1985–Eden opens a west coast sales office and warehouse in San Francisco, California.

1986 May–The Lima Company of Belgium appoints Eden Foods its General Agent for North America.

1986 Nov.–American Soy Products, Inc. launches a new generation of Edensoy soymilk products, in original, vanilla, and carob flavors. Made at a large, new factory in Saline, Michigan, they are packaged in Tetra Brik Aseptic cartons. This is the earliest known aseptic soymilk plant in the USA.

1987 Jan. 1–Eden Foods stops distributing products directly to retail stores (which comprised only 10% of Eden's total sales), drops 150 products, and starts serving as a master distributor, selling only through other distributors. This decision had a very positive effect on Eden's growth; all the energy that was formerly required to attend to 10% of the business was now free to be focused on developing new products and the Eden brand.

1988 April 13–Cliff Adler and Michael Potter are in a serious car accident. Cliff is killed and Michael is seriously injured. Upon Cliff Adler's death, Michael immediately and automatically acquires Cliff's 34% share in the company–because Eden Foods Inc. and Michael and Cliff, jointly and severally, had a buy-sell contract that came into effect in the event that either Cliff or Michael should die. The value of Cliff's stock was $500,000. Michael pays this amount from his personal funds for the stock. Potter now owns a large majority of Eden Foods' stock.

1988 May–While Eden Foods is still reeling from the effects of the car accident, the FDA files charges against Eden for publishing inaccurate information in a pamphlet which stated that Edensoy was "Good for Babies." Eden's previous major effort to recall all of these pamphlets from retail stores apparently had little or no effect on the FDA charges.

1988–Eden Foods joins OCIA, the Organic Crop Improvement Association, for independent certification of organically-grown crops.

1989 Jan. 20–Nearly 6 years after Eden Foods published its ill-fated Edensoy pamphlet, the company is fined $110,000 by a federal judge in Detroit, and its president, Michael Potter, is fined $25,000 and sentenced to 30 days imprisonment. On Feb. 24 he begins to serve out his sentence in Bay City, Michigan.

1989 Oct. 12–Michael Potter is convicted of manslaughter and sentenced at the circuit court in Ann Arbor to 8-15 years in jail for his role in the April 1988 automobile accident that caused Cliff Adler's death. He begins to serve out his sentence in Oct. 1989 in Coldwater, Michigan. Ron Roller takes over as president of Eden Foods–the top position.

1989–Eden and OCIA establish standards for food processing as well as growing crops.

1991 mid-June–Ron Roller, president of Eden Foods, is asked to resign from his position. He chooses to leave and go to American Soy products to work full time. There he becomes CEO.

1992–Eden Foods now has 180 distributors, virtually all of whom distribute Edensoy. Owners of stock in Eden Foods include Mike Potter (who owns more than 50% of the shares), Tim Redmond, Mark Cook, Bill Swaney, and at least one other person.

1992 Aug.–Michael Potter returns to work at Eden Foods. He was re-sentenced and his sentence is changed to 60 months probation. 1993 Dec. 31–Potter purchases Tim Redmond's remaining 1,000 shares of Eden Foods stock, which Tim has kept since 1980.

2260. *Soybean Digest.* 1969. Fearn Soya Foods. Nov. p. 44.
• ***Summary:*** "Fearn Soya Foods has specialized in consumer food products based on the nutritional excellence of soy

throughout its 34-year history. Today Fearn manufactures and packages 20 soy products in its plant in Melrose Park, Illinois. These include pancake mix, cornbread mix, and wheat cereal plus soya, a 47% protein drink mix and protein tablets intended for athletes who want a very high-protein diet. Fearn markets an oil-roasted soy snack food in several flavors."

"The American Mt. Everest expedition used three Fearn products in its successful assault on the world's highest peak."

A photo shows a can of "Fearn's High Protein" for athletes. Vanilla flavor. 47% protein. An illustration on the front shows a basketball player shooting. Address: Melrose Park, Illinois 60160.

2261. *Soybean Digest.* 1969. The soy foods companies: El Molino Mills (Document part). Nov. p. 42.
• ***Summary:*** "El Molino Mills is a stone-ground, specialty milling business carried on by the three Vandercook brothers at Alhambra, California. It was begun by a Vandercook ancestor in Holland eight generations ago.

"El Molino offers a number of soy foods including breakfast foods, soy milk, vegetable soybeans, soy sprouts, and soy flour and soy flour mixes. Outlets include health food stores."

2262. *Soybean Digest.* 1969. The soy foods companies: Worthington Foods (Document part). Nov. p. 44.
• ***Summary:*** "Worthington Foods at Worthington, Ohio, is a foremost producer of some 55 vegetable protein foods, including vegetarian entrees, meatless meats, and milks. Many simulate meat, fish, fowl, or nuts. They have been on the scene only since 1962.

"Worthington's vegetable protein foods are marketed frozen, dehydrated, or canned, or as an ingredient in other foods. Since 1966, Worthington Foods has manufactured its own spun protein, which it formerly purchased from Ralston Purina Co., for its meatless meats."

2263. Swaminathan, M. 1969. The use of oilseeds and nuts in the feeding of infants and pre-school children in the developing countries. *Plant Foods for Human Nutrition* 1(4):205-35. Nov. [106 ref]
• ***Summary:*** "There is increasing recognition among nutrition workers that the diets consumed by the majority of infants and children belonging to low-income groups of the population in the developing countries are deficient in various important dietary essentials, such as protein, minerals and vitamins... The consequences of consuming such deficient diets are strikingly seen in the vulnerable segments of the population, viz. weaned infants, pre-school children and expectant and nursing mothers. Protein malnutrition is widely prevalent among the children belonging to the low-income groups of the population."

Protein-rich animal foods, such as milk, eggs, fish, meat, etc. are not available to these people in adequate quantities. Therefore there is a need for developing or providing low-cost nutritious foods to overcome these deficiencies. Considerable work has been carried out in recent years on the utilisation of protein-rich foods of plant origin such as oilseed meals and legumes. Address: Central Food Technological Research Inst. (CFTRI), Mysore, India.

2264. **Product Name:** Provide (Soy Protein and Dairy Whey Beverage).
Manufacturer's Name: Swift Chemical Co. Vegetable Protein Products. Subsidiary of Swift & Co.
Manufacturer's Address: 1211 W. 22nd St., Oak Brook, IL 60521.
Date of Introduction: 1969. November.
New Product–Documentation: *Soybean Digest.* 1969. Nov. p. 42. The soy foods companies. p. 42. Provide is a newly developed blend of soy protein and dairy whey, with applications in bakery, confectionery, snacks, and frozen dessert products. Provide is a one-for-one replacement for skim milk solids; it has equal functional properties and a very bland flavor. A patent on the process has been applied for. Provide comes as a spray-dried cream-colored powder, available at protein levels of 27-36%, and protein solubilities of 40-65%.

Soybean Digest Blue Book. 1971. p. 115.

2265. Worthington Foods, Inc. 1969. Dealer wholesale price list–order blank. Worthington, Ohio 43085. 1 p. Dec. 15.
• ***Summary:*** New products in the Worthington Foods line include: Salisbury Steak, Worthington "209," Stripple Zips, and Tamales.

The Madison Foods line of products now includes: Cheze-O-Soy, Madison Burger, Not Meat (Tomato). Yum. Infasoy. Address: Worthington, Ohio. Phone: 614-885-9511.

2266. *SoyaScan Notes.* 1969. Chronology of soybeans, soyfoods and natural foods in the United States 1969 plus overview of the 1960s (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1969 Jan. Volume 1, Number 1 of *Food Science and Technology Abstracts* published; the earliest records in it go back to Jan. 1968. It is created from the world's first computerized database specializing in food.

1969 Jan. Richard M. Nixon inaugurated as President of the United States. Clifford M. Hardin of Indiana is Secretary of Agriculture.

1969 March. Paul Hawken takes a 9-month trip to Japan and arranges for Mitoku and Muso Shokuhin to export natural foods to Erewhon.

1969 March. Soybean yields in tests top 100 bushels/acre for the first time.

1969 March. Essene Macrobiotic Supply starts business

in Philadelphia, Pennsylvania. Denny Waxman and Charles Smith are founders.

1969 June. A.E. Staley Manufacturing Co. acquires Gunther Products, a pioneer in the field of modified (enzyme hydrolyzed) soy whipping proteins. Gunther had been founded in 1948, incorporated in 1949.

1969 Aug. Erewhon–Los Angeles opens as a small macrobiotic natural foods retail store at 8003 Beverly Blvd. Bill Tara is the first manager.

1969. USAID starts actively encouraging U.S. businesses to launch low-cost commercial protein products in Third World countries.

1969 fall. Erewhon Natural Foods in Boston starts to distribute macrobiotic and natural foods. They had begun to wholesale these foods out of the back of their retail store in the spring of 1969. They are America's first natural foods distributor, and remain the largest for many years.

1969 Oct. *Protein-Enriched Cereal Foods for World Needs*, edited by Max Milner, published by American Assoc. of Cereal Chemists.

1969 Nov. Bac-o-Bits, meatless bacon bits made from extruded soy flour, start to be sold nationwide by General Mills. Its forerunner, Bac*O's, made from spun soy protein fiber, had been introduced in May 1966. Frozen Bontrae meat analogs are sold to the foodservice trade. This pioneering work by one of America's largest food companies indicated to the U.S. food industry that the time for soy protein foods of the future had arrived.

1969 Nov. 4. Eden Organic Foods incorporated in Ann Arbor, Michigan by Bill Bolduc, and their macrobiotic retail store begins operation, selling soyfoods including tamari and miso purchased from Erewhon. The company grew out of a loosely-knit food buying co-op which had started in about July 1967 but which had no name, no formal structure, and no bank account. Bolduc was joined 9 months later by Tim Redmond.

1969 Nov. 17-21. United Nations Industrial Development Organization Expert Group Meeting on Soya Bean Processing and Use held at Peoria, Illinois.

1969. The first of the new wave of tempeh shops in the Western world, Handelsonderneming van Dappern (later renamed Tempeh production Inc.) started by Robert van Dappern in Kerkrade, The Netherlands. It soon becomes the world's largest tempeh manufacturer.

1969. The Program for International Research, Improvement, and Development of Soybeans (PIRIDS) established at the University of Illinois with funding from a Rockefeller Foundation grant. The forerunner of INTSOY, it is directed by Earl R. Leng.

1960s overview:

Oilseed Proteins and the Protein Gap. Worldwide, there is a growing consensus that Third World countries are facing a "protein crisis," that protein malnutrition is the world's most widespread deficiency disease, and that low-cost oilseed proteins (such as defatted soybean meal and flour) offer the most promising hope for remedying the problem. The leading architect and proponent of this view is Dr. Aaron Altschul of Georgetown University School of Medicine. The United Nations' FAO/WHO/UNICEF Protein Advisory Group, composed of the world's leading authorities in the field, is very active from the mid- 1960s to the mid-1970s, supporting wider use of soy protein products and soyfoods.

Food for Peace Shipments of Soy Fortified Foods Begin. The first shipment of such foods, CSM (corn-soy-milk), took place in 1966, when 28,000 metric tons (tonnes) were shipped. The next year 54,000 tonnes were shipped. Shipments increased dramatically during the 1970s.

Growing Interest in Modern Soy Protein Products. These new products, including soy protein isolates and concentrates, and textured soy protein products, now appear to have major potential in the food systems of all countries.

Leading Soyfoods Research Centers in America are the Northern Regional Research Laboratory at Peoria, Illinois (Hesseltine, Wang, Mustakas, Wolf), and the New York State Agricultural Experiment Station at Geneva, New York (Steinkraus and Bourne).

Vitasoy sales are booming in Southeast Asia. The introduction of Vitasoy by K.S. Lo in Hong Kong in the early 1940s brought soymilk into the modern era. Takeoff began in 1955 when Vitasoy began to be marketed like a soft drink. Sales grew from 8.4 million bottles that year to 42 million in 1960 and 100 million in 1970, a 2.4-fold increase during the 1960s. By 1962 Vitasoy had become Hong Kong's best-selling soft drink, ahead of such internationally known brands as Coca-Cola, Pepsi-Cola, and Seven-Up.

Shoyu (Soy Sauce) Becomes a World Class Seasoning, Thanks to Kikkoman. Shoyu has long been the world's most popular seasoning other than salt, and Kikkoman has been the world's largest manufacturer since about 1918. During the 1960s Kikkoman internationalized its operations, developing new markets for shoyu throughout the world by exporting from Japan and promoting the products for use in Western-style recipes, largely with meat, fish, and poultry. Production climbed from 183,000 kiloliters in 1960 to 340,000 kl in 1970. During the same period its share of the Japanese shoyu market rose from 18% in 1960 to 30% in 1970.

Steady Rise in Soybean Production in Latin America and Africa. In Latin America production rose from 231,000 tonnes in 1960 to 1,535,000 tonnes in 1969, a 6.6-fold increase during the decade. Brazil accounted for 87% of that production in 1969, followed by Mexico and Colombia.

African soybean production rose from 27,000 tonnes in 1960 to 74,000 tonnes in 1969, a 2.7-fold increase. Nigeria accounted for 84% of that production in 1969, followed by South Africa and Ethiopia.

American Soybean Association Funding Increases Dramatically from Checkoff Programs. This was a decade

of great growth for ASA. In 1962 the Minnesota Soybean Growers Assoc., the first affiliated state association, was founded. The ASA's biggest breakthrough to date came in 1966, when soybean growers began to support their own market development and research activities (previously funded by USDA's Foreign Agricultural Service) using funds provided by state checkoff programs. Typically ½ to 1 cent of funding was generated from each bushel of soybeans sold in states where a checkoff referendum had passed. By the early 1970s the checkoff programs had begun to generate large sums of money, which allowed ASA to expand its activities. Expanded market development activities overseas led to a steady, long-term increase in soybean exports.

Soybean Changes from an Oilseed to a Protein Seed. Prior to the mid-1940s the soybean, worldwide, had been crushed primarily for its oil. The meal was considered a by-product. But in the post-war period, with growing affluence driving increased demand for meat, the demand for meal outstripped that for oil, and the oil became the by-product. This trend, which started in America, was in full swing by the 1960s and expanded to other countries thereafter.

Soybean Digest and ASA Interest in Soyfoods. During the past two decades *Soybean Digest* has published a steady stream of articles on soyfoods worldwide. Soyfoods were given big play at many ASA annual conventions. This interest in the USA had largely stopped by the mid-1970s, focusing on soybean production instead.

2267. Gorrill, A.D.L.; Nicholson, J.W.G. 1969. Growth, digestibility and nitrogen retention by calves fed milk replacers containing milk and soybean proteins supplemented with methionine. *Canadian J. of Animal Science* 49(3):315-21. Dec. [13 ref]
• ***Summary:*** "Milk replacers containing zero (all milk) or 70% of the total protein from a soybean protein concentrate..., with or without methionine supplementation, were fed to Holstein calves... It was concluded that the soybean protein concentrate could supply a major portion of the protein in milk replacers for rearing dairy calves." The soy protein was supplied by Promosoy, a soybean protein concentrate, supplied by Central Soya (Decatur, Illinois). Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

2268. Simoons, Frederick J. 1969. Primary adult lactose intolerance and the milking habit: A problem in biological and cultural interrelations. I. Review of the medical research. *American J. of Digestive Diseases* 14(12):819-36. Dec. Series II. [95 ref]
• ***Summary:*** Note: This is the earliest document seen with the term "lactose intolerance" in the title. *Webster's Dictionary* defines lactose (a term first used in 1858) as "a disaccharide sugar $C_{12}H_{22}O_{11}$ that is present in milk and yields glucose and galactose upon hydrolysis and yields especially lactic acid upon fermentation." Address: Dep. of Geography, Univ. of California, Davis, CA 95616.

2269. **Product Name:** Soy Milk.
Manufacturer's Name: Africa Basic Foods Inc.
Manufacturer's Address: Kampala, Uganda.
Date of Introduction: 1969.
Ingredients: For 20 gallons: Soybeans 20 lb., sugar 5 lb., salt 18 gm.
Wt/Vol., Packaging, Price: In sterilized bottles with crown caps.
How Stored: Shelf stable.
Nutrition: Protein 3.5%, fat 2.0%.
New Product–Documentation: Harrison. 1969. Analysis of the Uganda Experience Based on Africa Basic Foods Inc. p. 15-16. Interview with Dr. D.W. Harrison. 1982. Letter from Sam Yoshimura. 1982.

2270. **Product Name:** [Soymilk (Brand Named Soyalac by 1983)].
Manufacturer's Name: Alimentos Colpac. Affiliate of Liga Mexico Pan-Americana Medio Educacional A.C.
Manufacturer's Address: KM 13 Carratera Huatabampo, Apartado 502, Navojoa, Sonora, Mexico.
Date of Introduction: 1969.
New Product–Documentation: Soybean Blue Book. 1976. The company makes a "soy beverage." It is not clear whether this is a soy coffee or a soymilk. They are an affiliate of Liga Mexico Pan-Americana Medio Educacional A.C., KM 13 Carratera Huatabampo, Apartado 502, Navojoa. *Soybean Digest Bluebook.* 1979. p. 98.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). "COLPAC, Apartado 16, Montemoralos, Sonora, Mexico. Seventh-day Adventist soy dairy."

Letter from Robert Folkenberg. 1983. Feb. 15. This company, organized in 1969, presently makes about 3,000 liters/week of soymilk.

J. Ponce Aguirre. 1982. History of Soyfoods in Mexico. "In 1968 in Navojoa, Sonora, Alimentos Colpac began operations, run by Seventh-day Adventists. Paul Allred started production of textured soy flour and whole soy flour to make a base for soymilk." Soya Bluebook. 1983. p. 63. "Soyalac Soy Beverage." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 128. "The first soymilk plant in Mexico was started in 1968 or 1969 by Seventh-day Adventists in Sonora, Navojoa. Its founder was Paul Allred, who also pioneered a similar plant in Egypt. This soymilk was made from whole soy flour."

2271. **Product Name:** [Magnolia Vitamin Enriched Soya Bean Drink].
Manufacturer's Name: Cold Storage (S) Pte. Ltd.
Manufacturer's Address: 277 Upper Bukit Timah Rd,

Singapore 2158. Or Empire Dock Keppel Rd., Singapore 0409.
Date of Introduction: 1969.
Wt/Vol., Packaging, Price: Glass bottle with crown cap.
New Product–Documentation: Soyfoods. 1981. Winter. p. 29. With photo; Brian Fitzpatrick. 1982. Soya Milk in Asia. p. 261. States that Singapore Cold Storage first launched this soymilk in 1969; Tetra Pak Co. 1983. Brochure. Packaged in Tetra Brik Aseptic 250 ml; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 121. STS. 1985. Containers for Soymilk. Shows color photo of Tetra Brik carton. Dark blue, light blue, and red on white. Color photo. Tetra Brik carton. Blue and red on white with yellow soybeans. Color photo sent by Anders Lindner of STS. 1987. Nov. 14. Glass bottle with crown cap. Label is red and white. Boi. 1986. Sunday Times (Singapore). Sept. 7. "Soya Bean Milk Packs More Water than Flavor." Magnolia sells for 35 cents per 250 ml. Comments: Carries consumption deadline, sweet, thin, vague soya bean flavour. This product was considered the best among a group of 6 soymilks sold in Singapore because "it was the only brand with a hint of soya bean flavour."

2272. **Product Name:** Magnolia Vitamin Enriched Soya Bean Drink.
Manufacturer's Name: Cold Storage (S) Pte. Ltd.
Manufacturer's Address: Petaling Jaya, suburb of Kuala Lumpur, Malaysia.
Date of Introduction: 1969.
New Product–Documentation: Brian Fitzpatrick. 1982. Soya Milk in Asia. p. 261. States that Singapore Cold Storage first launched this soymilk in 1969. Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 121.

2273. **Product Name:** [Soyalac {Soymilk}].
Foreign Name: Soiyarakku Neo.
Manufacturer's Name: College Health Foods. Later renamed San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1969.
Wt/Vol., Packaging, Price: 180 ml glass bottle. Caned by 1980.
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants. In Japan: San-iku Foods, Kanno 4162, Sodegaura-machi, Kimitsu-gun, Chiba-ken 299-02. M. Urumba, Manager. Hidekazu Watanabe, production manager for Soyalac.

Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 227-28. Gives a detailed description of the method used to make Soyalac.

William Shurtleff. 1981. Soyfoods. p. 35. "Dr. Harry Miller: Taking soymilk around the world." "Starting in about 1955 Dr. Miller started to recommend that the Adventist-run Japan San-iku School serve soymilk instead of cow's milk to the students; however the staff hesitated because of its nutritional value and flavor. In 1957 two Japanese Adventists, Mr. Hidekazu Watanabe and Mr. Hanzo Ueda (who ran a tofu shop at the time), started making Japan's first soymilk on a small scale in Hachioji, Tokyo, bottling it in 180-ml bottles, and selling it locally. Mr. Watanabe later described the great value to them of Dr. Miller's ongoing technical, nutritional, and spiritual guidance. After some time, directors of the San-iku School visited the small soymilk plant, liked the soymilk flavor, and understood its nutritional value. In 1959 they bought similar equipment, set up a small plant in the school, and started to produce soymilk, which was bottled in 180-ml bottles and served to the students at every meal. In 1969 the San-iku School set up an independent food production company called College Health Foods (which later became today's San-iku Foods) and through it, with the help of Loma Linda Foods in America, began to produce Soyalac soymilk infant formula." By 1980 this product was canned in plain and carob flavors.

Letter (in Japanese) from Hidekazu Watanabe. 1981. July 19. Discusses the early history of this product. "The Ueda Tofu Shop in Hachioji helped with the product development; I was there at the time. In those days our name was San-iku Gakuin Shokuhin-bu (the food department of the San-iku School). The purpose was to provide a place of labor for the students and opportunities to learn food processing. It was not a business. Dr. Perry Webber was the principal of our school at the time." K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Neo was introduced in 1969. It is now sold by Saniku Fuuzu in a 425 gm can and distributed nationwide.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. "In 1958 Dr. Miller set up a small soymilk plant in the kitchen of the Adventist-run Tokyo Sanitarium. It was used to make soymilk, soy whipping cream, soymilk ice cream, and soy spread, which were served to the staff and patients. In 1959 a small soymilk plant was established in the Seventh-day Adventist San-iku School. From this year, Japan's oldest existing soymilk company, San-iku Foods, traces its origin. By 1982 San-iku Foods was Japan's fourth largest soymilk manufacturer.

Letter from San-iku Foods. 1990. June. This product was introduced in 1969.

Letter from Ichiro Tabuchi. 1990. July 4. In 1970 San-iku Foods became independent from the San-iku Gakuin Food Department and started to make and sell infant formula.

2274. **Product Name:** [Puma {Soymilk}].
Foreign Name: Puma.
Manufacturer's Name: Lomond Ltd. Subsidiary of Monsanto Co.
Manufacturer's Address: Hong Kong.

Date of Introduction: 1969.
Ingredients: Incl. isolated soy protein, banana flavor, sugar, vitamins.
Wt/Vol., Packaging, Price: Glass bottle with crown cap.
How Stored: Shelf stable.
Nutrition: 2.5% protein.
New Product–Documentation: *Soybean Digest.* 1968. "To introduce soy drink in South America." Aug. p. 26.

Time. 1968. "Sipping soya through a straw." Nov. 15. p. 102. Lomond Ltd., a joint venture of Monsanto and Hong Kong Soya Bean Products Co. Ltd., made a powder concentrate for Puma, based on isolated soy proteins, in Hong Kong, then shipped it to Guyana for bottling.

Chemical and Engineering News. 1970. Aug. 10. p. 37. "Fortified foods: the next revolution." "Puma (Beverage) by Dih, Ltd., Guyana; Monsanto. Composition: Vegetable protein, sugar, vitamins, flavor. Market status: Good acceptance after one year; marketed through soft drink system."

E. Orr. 1972. Tropical Products Inst. G73. The use of protein-rich foods for the relief of malnutrition in developing countries: an analysis of experience. p. 16. "The sale of Puma in Guyana is of relatively recent origin, dating from 1969. The concentrate was originally manufactured by the Monsanto company, which developed the product in the U.S.A., and bottled and distributed in Guyana by a local firm under the type of franchise arrangement characteristic of the soft drink industry. This firm also has the franchise for other conventional soft drinks. Monsanto sold Puma to the Quaker Oats Company in 1971. Monsanto, whose primary business is in chemicals, but which has diversified into food and other products, is known to have explored the possibility of entering the protein-rich food field for a considerable time before manufacturing Puma. The decision to concentrate on a beverage was made in view of the relatively high consumption of soft drinks in developing countries and the existence of 'excellent' channels of distribution; while the franchise system has certain economic advantages to both the lessor and the licensee. The company is stated to have carried out extensive research and development work for several years before formulating Puma. Its first concern was to get an acceptable product, after which considerations affecting other aspects of production, such as raw materials and processing, could be settled. 'We firmly believe that the reason for the failure of former protein or protein-enriched foods was that consumer acceptability was not considered of paramount importance. We believe it is the single most important factor of success of any food or beverage program'. Therefore the research and development work was carried out in conjunction with the programme of panel testing and consumer group testing which the company would carry out for any new food product it was developing.

"Puma is based on a soya isolate. It is strongly flavoured with banana, and in appearance resembles the conventional soft drink and not the usual soya milk type of beverage. The product 'image' which the publicity is primarily designed to promote is 'vigour'. The product was launched with a promotional campaign similar in type to the launching of a new food product in a sophisticated market, and apparently without assistance from Government or any other external agency. Sales are believed to be wholly on the retail market. Sales volume was around 29 million bottles per year in the early years and was said to have far exceeded the original target."

E. Orr. 1977. Food and Nutrition (U.N.). 3(2):2. By 1976, Puma was still in regular production.

Aguilera and Lusas. 1981. *Journal of the American Oil Chemists' Society.* March. p. 516. Monsanto launched Puma in Guyana in 1969. Based on Soya Isolate (ca. 2.5%), Puma had a strong banana flavor. In the early years, sales volume was around 29 million bottles/year, entirely on the retail market.

Note: This is the earliest known commercial soy product made in British Guiana.

2275. **Product Name:** [Luppy {Soymilk}].
Foreign Name: Luppy.
Manufacturer's Name: Luppy Tanpaku (House Shokuhin).
Manufacturer's Address: Minami Gotani 360-2, Yashio-shi, Saitama-ken 340, Japan. Phone: 048-924-5011.
Date of Introduction: 1969.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that House Shokuhin first made commercial soymilk in Japan in 1969.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. This was Japan's third commercial branded soymilk. Shurtleff and Aoyagi visited the company during the mid-1970s, but were not allowed to see the plant.

2276. Streeter, Carroll P. 1969. A partnership to improve food production in India. A special report from the Rockefeller Foundation. See p. 80-85. 27 cm.
• ***Summary:*** Discusses the all-India soybean research program that was launched in 1967, with technical guidance from the University of Illinois under a U.S. AID contract and financial support from the Indian Council of Agricultural Research.

2277. Altschul, Aaron M. 1969. Low-cost foods: Fortified cereals and protein beverages. In: M. Milner, ed. 1969. Protein-Enriched Cereal Foods for World Needs. St. Paul, MN: American Assoc. of Cereal Chemists. x + 343 p. See p. 82-96. [27 ref]
• ***Summary:*** Contents: The world food problem: Hunger and malnutrition are caused by poverty. Food quality vs. food cost. Improving food quality: Improving the quality of cereals, new protein foods. New foods program. Four

generations of protein foods (history). Food distribution within the family. Discussion: The relative importance of adequate nutrition, choosing the most effective approach to improved nutrition, the nature of the problem and the value of improvements. Conclusion.

Tables: (1) New Protein Food Program of the Agency for International Development (Feb. 1967 to July 1968): Countries and products that include soya: Brazil–Krause Milling, Monsanto, Swift. Kenya–Del Monte. Pakistan–General Mills. Thailand–Archer-Daniels-Midland. India–Swift. (2) Conventional and new protein sources (incl. oilseed protein). Address: USDA, Washington, DC.

2278. Burnett, Ray S. 1969. The role of soybean meal in the development and use of modern livestock and poultry feeds. Arlington, Virginia: Soybean Council of America, Inc. 37 p. 24 cm. Printed in Madrid, Spain. [54 ref]

• ***Summary:*** This booklet was printed in Madrid, Spain. Contents: Introduction. 1. Availability. 2. Technical advances: Heat processing of soybean meal, vitamins (B-2, B-12), minerals, amino acids and proteins, protein-energy ratio. 3. Specifications: 50% vs. 44% soy meal. 4. Increase in productivity from technical advances: Broilers, eggs, swine, beef cattle, calves and milk. 5. Formulation and feeding practices: Poultry nutrition for meat and eggs, turkeys, ducks, and pigeons, swine nutrition, cattle nutrition (growing-fattening cattle, milking cows, calf milk replacers {substituting soy flour for part or all of the dry skim milk}, calf starters {used only after calves are 24 days old}), sheep, horses and mules, miscellaneous (rabbit pellets, trout pellets, dog food, mink feed). 6. Continuing needs for improving efficiency of poultry and livestock production.

Contains 27 tables. Note 1. A box, with a logo, near the bottom of the title page states: “Soybean Council of America, Inc. Executive office: P.O. Box 9153, Arlington, Virginia 22209 USA. Cooperating with the United States Department of Agriculture.” Glenn Pogeler was executive director of the Soybean Council at this time. Address: Technical Director, Soybean Council of America, Inc., P.O. Box 9153, Arlington, Virginia 22209.

2279. Cooking good food. 1969. Order of the Universe Publications, Box 203, Prudential Center Station, Boston, MA 02199. 34 p. No index. 28 cm.

• ***Summary:*** A simple, concise source of the basic macrobiotic ideas adapted to the American way. Note 1. This booklet was written by Jim Ledbetter, a student of macrobiotic teacher Michio Kushi, although his name does not appear in it.

Contents: The traditional food of man. The way of eating. Salt and oil. Special foods. Useful kitchen items. Cooking brown rice. Cooking other grains. Cooking vegetables. Cooking sea vegetables. Cooking beans. Cooking soups. Cooking with flours (Cooking noodles, cooking creams, baking bread, variations with flour). Cooking animal food. Preparing salads. Preparing condiments. Preparing drinks. Cooking desserts. Plasters. Traveling and eating out. he manner of eating. The seven levels of cooking.

In Chapter 4, titled “Special Foods” is a section on “Soybean foods” (p. 6), which states: “The soybean has been called the ‘Vegetable Cow’ of the Orient. It is full of good vegetable quality protein (43%). It was not traditionally eaten without special preparation, because it is fairly yin, except by monks who wished to limit their sexual desires. When cured with salt, however, it was used as a daily food. You will find these traditional preparations very helpful in your kitchen.

“Tamari is the ancient form of soysauce, fermented for at least eighteen months from soybeans, salt, wheat or barley, and water, without chemicals or preservatives. It has a very distinctive, delicious taste. It is used mainly in cooking vegetables when it is added after salting and just before the end of cooking time, and in broths. It is rarely used directly on grains, but is often found on the table to use with deep-fried foods. Some women mix tamari with an equal amount of water to make it less strong.

“Miso is a paste made from the same ingredients as tamari. There are two varieties; one (Hacho) is a little harder and darker in texture than the other. It has many uses, especially in soups, in which case it is added towards the end of cooking time so that the wonderful digestion-aiding bacteria it contains will not be destroyed. (All of these soybean condiments produce their best flavor when cooked slightly.) Miso soup has a deep, satisfying bouillon flavor, and is often taken every day as a delicious source of energy. It is helpful to thin miso in a little water before adding it to soups and sauces.

“Morromi [sic, moromi] is the pulp from which tamari has been made. It has a very special tangy flavor, and is used like miso.

“Seitan or ‘Protein X’ is made from the same ingredients as the above condiments. A slightly different process produces a strong jerky which, when boiled or sauteed, resembles beef in appearance and taste. It is very good in soups” (p. 6). Note 2. This is the earliest document seen (March 2011) that mentions “seitan.” It is also the earliest English-language document seen (March 2011) that contains the word “seitan.” By placing seitan in the category of “Soybean Foods,” the author is apparently emphasizing the importance of soy sauce as one of its two main ingredients. He seems to have tasted seitan, but it is not clear that he knows what its other main ingredients are (wheat gluten, ginger, sesame oil) or how it is prepared.

“Tofu is made from fresh soybeans. This curd or ‘cheese’ is a good quality, strong yin food which is very refreshing for occasional use in summer when it is cooked with tamari. It is helpful to store tofu in water. The more yang pulp, which is usually thrown away, can sometimes to obtained from the Oriental stores which make tofu, and

used to make delicious casseroles or well-sauteed vegetable dishes."

The section on "Condiments" (p. 6-7) discusses Gomasio (Sesame salt), umeboshi (salted plums), and Tekka. The section on "Oriental vegetables" (p. 7) discusses lotus root, daikon, ginger root, Chinese cabbage, jinenjo (Japanese potato), and kuzu arrowroot.

In the chapter titled "Cooking Beans" the author considers "Aduki Beans" to be the "King of Beans."

"Black Beans: The imported Japanese black beans are higher nutritional quality and superior taste. They are very sweet, delicious beans. They should be soaked and boiled, because their skin can become loose and clog a pressure cooker spout."

"Miso Soup: This hearty bouillon is the staple everyday soup. Prepare vegetables and boil for at least one-half hour (if you want a really good soup); thin miso with a little of the stock in a bowl and add it to the soup towards the end. Do not boil the soup after adding miso or the beneficial digestion-aiding bacteria will be harmed. If it is simmered very slowly, it can be cooked from 5 minutes to one hour.

"Tamari Soup: Prepare as above using tamari instead of miso for flavoring. A simple tamari broth with onions or carrots and onions is often served over dishes such as noodles."

In the chapter titled "Preparing Condiments" (p. 27) we read: "Vegetable Miso. Slice vegetables finely and saute. Add diluted miso and water and cook. Scallions, chives, carrot tops and many other vegetables are good prepared in this manner. 'Tekka' is made from lotus root, burdock root and carrots. 'Sigure' [Shigure] ('November Rain') is prepared with lotus roots, carrots, and onions. A little freshly grated ginger is often added towards the end of the cooking. A small amount of these condiments is usually sufficient."

The chapter titled "Preparing drinks" (p. 28-29) discusses Mu tea, umeboshi tea, chicory, Yannoh [Ohsawa coffee], dandelion coffee, Bardan, Kokkoh, kuzu, ume-syo-kuzu, and daikon drink.

The chapter titled "Cooking Desserts" (p. 30) states: "Amasake (Homemade Rice Wine). For special occasions this drink is very smooth and sweet."

Tofu is also mentioned in the chapter titled "Plasters" (p. 31). "Tofu Plaster. Squeeze tofu (soy bean curd, see *Special Foods*) and mix with 10% flour to make it more manageable. Apply this to any painful, feverish, or inflamed area. Alternating tofu plasters with ginger compresses often helps stubborn cases."

Note 3 This is the earliest document seen (July 2000) that mentions "Hacho" miso (spelled that way). Subsequently, many macrobiotic publications used this word and spelled it that way.

The chapter titled "Cooking sea vegetables" briefly defines kombu, wakame, hiziki (the incorrect idea concerning "black rice" comes from a casual remark by Evan Root), arame, dulse, and nori (laver).

Note 4 One original edition of this booklet, sent to Soyfoods Center by Tim Redmond (a founder of Eden Foods), has one dark blue stalk of wheat against a light blue background. In the lower right corner of the cover the following has been stamped with a blue ink stamp: "Eden Organic Food Store, 514 E. William. Ann Arbor, Mich. [Michigan] 48104." Address: [Massachusetts].

• ***Summary:*** Contents: Map of South Vietnam showing all provinces and their names. Preface, by the author. 1. Introduction: History of soybean, production and trade in the world and in Vietnam, utilization of soybean (uses, nutritive value of the soybean). 2. Botany of the soybean plant: Seed, stem and pubescence, leaves, flower parts, root and nodule bacteria, genetics. 3. Ecological requirement: Germination, temperature, rainfall, day length, soil. 4. Cultivation and storage: Planting (land preparation, depth of seeding, methods of seeding, rate of seeding, time of seeding,

rotation, erosion), fertilizer (manure, nodule bacteria, nitrogen, phosphorus, calcium, potash, molybdenum, application), insects (maggot fly, soybean insects found in Vietnam, control), diseases (root disease, foliage disease, seed disease), weed control, harvesting and threshing (harvesting time, methods of harvesting, drying). 5. Variety improvement: Aims of improvement (high yielding variety, disease resistance, insect resistance, day length, varieties tolerant to unfavorable soil conditions, seed size, seed color, oil and protein content in seed, palatability), introduction method, pure line selection method, breeding method (making the cross, pedigree method, bulk method), regional trials, variety purification and multiplication (breeder's seed, foundation seed, stock seed, extension seed, maintenance). 6. Seed certification standard. 7. Bibliography.

The author thanks for their help: Dr. Thai-Cong-Tung, Director of the Agriculture Research Institute, and Mr. Nguyen-Huu-Quyen, Manager of Eakmat Experiment Station.

"The history of soybean in Vietnam is meager, but the references by Loureiro (1790) and Rumphius (1747) mentioned the cultivation of soybean in Malaysia and Vietnam. Harmand (1877) collected wild soybean (*Glycine laotica*) in the Hue and Bassac areas, and the herbariums [herbarium specimens] are still available at the Agricultural Research Institute, Ministry of Agriculture, Vietnam." Since the history of Vietnam is closely related to that of China, it seems likely that the soybean has been cultivated for many centuries in what is today Vietnam (p. 1).

In Vietnam, the soybean is still not a very familiar crop to the majority of farmers. Although the acreage has gradually increased since 1958, production had not yet reached 10,000 tons by 1967. According to the *Agricultural Statistics Yearbook of Vietnam,* in 1966 in South Vietnam, total soybean acreage was 6,610 hectares and production was 7,585 metric tons, or 1.148 tonnes/ha (p. 7). The main soybean producing provinces are all in the southern half of South Vietnam: Long-Khanh (40% of total South Vietnamese acreage), An-Giang (20.4%), Chau-Doc, Kien-Phong, and Binh-Dinh (5%). In 1963 some 1,440 tones of soybeans were imported and in 1966 some 100 tonnes were exported (p. 6).

Table 4 shows an estimate of the costs and returns per hectare of growing soybeans at the Eakmat Agricultural Experiment Station in Ban-Me-Thuot in 1968. The net income or profit from one hectare was about VN$26,000, which is larger than for any other field crops, including: cassava (VN$22,766), mung beans ($20,267), sweet potatoes ($19,269), upland rice ($6,828), corn ($6,569), and peanuts (VN$5,100).

Uses: "In Vietnam, the soybean is not commonly used in daily food, but a number of foods such as soysauce, tuong [a soft kind of miso resembling Chinese chiang in consistency, and sold in crocks], bean curd, vermicelli, soymilk, soybean wine, chao [fermented tofu, sold in bottles], soybean oil, [soy] bean sprouts, and green pods [green vegetable soybeans] are available in the market and they are gradually becoming popular among Vietnamese.

Note: This is the 2nd earliest English-language document seen (Oct. 2011) that uses the word "chao" to refer to fermented tofu.

Photos (p. 11-12) show: (3) Bean sprouts and cooked beans with tomato sauce. (4) A shop that sells soybean products in a Saigon market. Soybean paste [tuong] is in big jars, chao [fermented tofu] is in bottles in front, and bean curds [tofu] are in the front left corner. (5) A Vietnamese girl frying bean curds in the market. (6) Bottles with labels showing various kinds of soy sauces made in Vietnam.

The highest yielding soybean varieties in Vietnam are presently Palmetto and E-32. In trials, they yield about 1 tonne per hectare. Address: FAO Agricultural Officer. Phone: Saigon 91.746.

2284. Moore, Raymond S. 1969. China Doctor: The life story of Harry Willis Miller. 2nd ed. Mountain View, California: Pacific Press. 215 p.

• ***Summary:*** The original edition of this book was published in 1961. This 1969 edition, although it has been completely re-set, contains only minor revisions: (1) A new color paperback cover shows a large illustration of Dr. Miller's face. (2) This second edition contains a 3-page Postscript (p. 150-52), which describes his work in Hong Kong (1960-65, 1969), Philippines (1966), expansion of his work with soymilk in Hong Kong ("The Hong Kong soft drink industry dispenses more milks derived from his soybean milk than all others combined"), other work with soy ("His grain-and-soybean-based foods are being adopted as alternates to meat in lands which cannot support animals as a principal diet source. They range from soy cheese, milk, ice cream, and butter-like spreads to simulated steaks, wieners, and sausages. These vegetable foods now are making headway even in the United States and other Western countries. In an era of population dilemmas, Harry Miller reminds the experts that meat, as compared with vegetable protein, takes several times the acreage to produce the same amount of food."), George McGovern and Food for Peace (1961) which resulted in sharply increased exports of soybeans from the USA. (3) The number of pages in the book has been reduced to 152, from the original 215. (4) The valuable index in the first edition has (unfortunately) been omitted. (5) The number of photos has been reduced to 11, from 16 in the first edition, and many photos from the first edition were omitted. New photos (located on unnumbered pages 142-47) show: (1) Harry and Maude Miller at the time of their wedding in 1902. (2) Dr. Miller with a woman victim of goiter in China. (3) Hong Kong Hospital for Chinese refugees at Tsuen Wan, completed in June, 1965. (4) Dr. Miller with little Mohammed Ali, a Bedouin child in Libya. (5) Harry and his wife Mary in 1957 waiting at the airport in Benghazi, Libya.

(6) Mr. Chan Shun donates 1 million Hong Kong dollars for the construction of a Seventh-day Adventist hospital in Hong Kong. Dr. Miller looks on. (7) In 1968 at Albuquerque, New Mexico, Dr. and Mrs. Miller are given a red-carpet welcome by Governor David F. Cargo.

2285. Soypro International Inc. 1969. A study of business prospects in the food industry of India. Cedar Falls, Iowa. iv + 87 p. Summarized as "Soybeans have good future in India" in Soybean Digest. 1969. Dec. p. 28. 28 cm. [20 ref]
• ***Summary:*** As part of The Canadian Food Advisory Team. For Malwa Economic Development Society (MEDS), Indore (which has expressed an interest in entering some aspect of the food industry in India). Sponsored by United Church of Canada.

Contents: Objectives and guidelines. Part I: Food resources and malnutrition. Food grains and pulses. Calories. Proteins: Legumes, oilseeds, milk, fish, poultry, meat. Fats and oils. Areas of food needs: Under-nourishment protein malnutrition. Summary and conclusions.

Part II: Food marketing. The non-market. Primary factors of the real market. Guidelines for product selection and production. Selling the product.

Part III: What is being done. Food ingredients: Grain processing, oilseeds for human nutrition. Consumer products: Protein foods for infants and children, foods for general consumption.

Part IV: Prospects for soybean production and soya food processing. Production: Yields, crop input, returns in relation to other crops. Market outlets and prices: Domestic markets for soy products, estimated prices. Soybean processing: Processing plants, storage, transportation, plant investment costs (new plants, converting existing plants to soybean processing). Low fiber meal and soy flour: Investment cost for production, marketing. Full-fat soy flour. Soy protein isolates. Specialty soy foods: Soy milk and related products, soy-based snack foods, cereals, dal. Conclusions.

Part V: Potential projects. Storage. Rice milling. Pulse milling. Soybean processing for soy flour, soy protein isolates. Sesame processing. Bread. Baby foods. High protein mixes. Synthetic milk or base for toned milk–related dairy products. Extruded high protein snacks / cereals. Low-cost quick-cooking dal. Food marketing and distribution.

List of references. Appendixes. Population of India. Recent production trends and current yields of key crops in India. Rough calculations of gross protein availability from local production in India.

This practical, business-oriented report focuses on low-cost high-protein foods designed to help private business meet India's problems of protein malnutrition, especially among infants and children. "Similarly, with fast rising interest in soybean production and utilization, considerable early attention had been given to this particular field..." In 1965-66, and in 1966-67 India had two devastating drought years. Prior to this, India has experienced four major droughts accompanied by famines since 1900: 1907-08, 1918-19 (the worst, with a 32.3% drop in agricultural output), 1920-21 (the second worst; 24.0% drop), and 1923-24 (16.6% drop).

Pulses, mostly in the form of dal ("the poor man's meat") have for many years been second only to food grains as a source of protein in Indian diets. Most pulses are dehulled by hand-powered stone mills at home before cooking, with a wastage of about 10%. However pulses are not keeping pace with the food grains in India's Green Revolution. Average yields are relatively low and response to fertilizer is low. Per capita consumption is static, or declining. India's main oilseeds in 1967-68 were (in descending order of output in million metric tons): groundnuts in the shell (5.83), cottonseed (2.00), rapeseed and mustard (1.48), sesame (0.42), and niger seed (0.10). Only groundnut, sesame, and niger also provide significant amounts of protein for humans. Yet after the oil is removed, most of the protein-rich oilseed cakes are used in livestock feeds or fertilizer, or exported; only about 10% of the available protein is used directly in human diets. There is now much interest in using more groundnut protein (as flour or isolate) in human foods; it has been used in toned milk. India's major source of animal protein is milk (both from water buffaloes and cows), with per capita daily consumption being 123 gm (4.4 oz).

Relatively little red meat is consumed in India; many states prohibit slaughter of cows. Goats and water buffaloes are the major sources of meat. According to CFTRI, 39% of Indians are deficient in proteins, and a high proportion of these are infants and children. Per capita availability of oils is 9.3 lb/year. 70 to 75% of all food produced stays on the farm and is consumed directly by the producers. Wheat is the main grain in north India, and rice in south India. About 25% of Indians are vegetarian by conviction, and "75% are now willing to eat animal products, with the latter percentage increasing every year. In practice, diets are still largely vegetarian because of the scarcity and cost of animal products." Prestige is the single most important marketing factor in part because India is still a highly class-conscious society. The market is highly segmented. Products need to be targeted separately at the top 3 or 4 of the 5 class segments. The high class line should be introduced first. Cheap food or "food for the poor" has little chance of succeeding in commercial channels. Except as food for children, it is very hard to sell food on the basis of its nutritional or health-giving benefits. Sampling is the most effective promotional technique.

Several companies produce dried baby foods from milk and sell them in tin cans. In 1968 the biggest seller was Amul (3,500 to 3,800 tons), made by Kaira Dairy Coop. The pioneer commercial weaning food in India was Farex, made by Glaxo and sold in tins at Rs. 13 per kg. Kaira Dairy Coop

launched Bal-Amul at Rs. 11 per kg and now produces 1,000 tons/year, expected to grow to 5,000 tons by 1974. Bal-Amul contains about 25% full-fat soy flour, 25% rice and wheat flour, 20% gram flour, 11% sugar, 10% nonfat dried milk, and 6-8% moisture. Processing equipment was donated by UNICEF. Soy flour and milk powder were donated by USAID. It will soon be offered in plastic bags at Rs. 7 to 8 per kg to reach a broader market. CSM contains 25% defatted or low-fat soy flour. Bal-Ahar contains 65% bulgur wheat, 25% groundnut flour, 10% Bengal gram [chickpea] flour plus vitamin/mineral pre-mix. Requiring 10-15 minutes cooking in water, it does not contain any soy. Use of CSM and Bal-Ahar is limited to food relief programs; they are not sold commercially.

MPF (Multi-Purpose Food, formulated under sponsorship of the Meals for Millions Foundation in the U.S.) consists of 75% groundnut flour, 25% Bengal gram flour, plus a vitamin/mineral pre-mix. Containing 45% protein, it sells for only Rs. 3.5/kg and is thus the cheapest protein source on the market and one of the best. However it has not met with any real success. 7 plants have been authorized to produce MPF in India. None are operating at capacity and most are not operating at all. Total output, currently 600 tons/year, is purchased largely by OXFAM for the Meals for Millions Foundation.

UNICEF is supplying an X-25 Wenger Cooker-extruder to CFTRI to experiment with extruded high-protein snacks. Note: The Wenger X-25 is a low-cost extrusion cooker / extruder. This is the earliest document seen (Jan. 2011) that mentions the use of a low-cost extrusion cooker.

The population of India has grown from 314.8 million in 1941 to about 533.3 million in 1969. Each year the population is growing by about 13 million people. Roughly 80% lives in rural areas. In terms of gross protein availability, the main sources produced in India (in million metric tons of protein) are: rice 3.03, pulses 2.69, wheat 2.49, groundnuts 1.12, milk 1.05, and jowar (sorghum) 0.91. Soy is not listed. Address: Cedar Falls, Iowa.

2286. Soypro International Inc. 1969. Part IV. Prospects for soybean production and soya food processing (Document part). In: A Study of Business Prospects in the Food Industry of India. 1969. Cedar Falls, Iowa. iv + 87 p. See p. 54-75. [7 ref]

• ***Summary:*** Contents: Production: Yields, crop input, returns in relation to other crops. Market outlets and prices: Domestic markets for soy products, estimated prices. Soybean processing: Processing plants, storage, transportation, plant investment costs (new plants, converting existing plants to soybean processing). Low fiber meal and soy flour: Investment cost for production, marketing. Full-fat soy flour. Soy protein isolates. Specialty soy foods: Soy milk and related products, soy-based snack foods, cereals, dal. Conclusions.

"Several years ago, test trials with soybeans indicated that they could be produced successfully and economically over a substantial portion of Central India. These included tests by the Indian Agricultural Research Institute near Delhi in 1956, tests by Michigan State researchers at Ranchi and by Missouri University at a number of stations in 1962.

"Since that time agricultural stations in many parts of India have been conducting studies on soybean production on a very wide scale, and at great depth. Many hundreds of soybean varieties from all over the world have been tested for adaptability to Indian growing conditions. Extensive tests of response to a wide range of agronomic conditions have been carried out...

"The most intensive work has been at Pantnagar (U.P.) and Jabalpur (M.P.) under a cooperative project of US/AID with the University of Illinois, the Indian Council of Agricultural Research, and the two Agricultural Universities, UPAU and JNAU."

Yields of 3,000 to 4,000 kg/ha have been reported in various locations. In general, soy is not competitive with groundnuts for the same land. Good soybean land is too heavy for groundnuts, and good groundnut land too light for soy. Soy can fit into maize cropping rotations, and it will apparently compete successfully with pulses for land because of the much higher yields and comparable market value. "Thus, if the industry provides a processor-market for domestic soybeans, it appears that soybean acreage and production will expand dramatically in the next few years...

"Many assumptions were being seriously discussed at the time of the Team's visit including: 1. That the market can take very large quantities (up to 1 million tons) of soy flour and soy proteins for human consumption. 2. That existing oilseed processing industry, operating at 60% capacity or less, is not properly located or equipped to crush soybeans.

"Investigations of the industry and the market indicated the following: 1. Soybean oil is well known to the trade due to large P.L. 480 receipts in recent years. It will sell at about 10% discount to groundnut oil on the open market. Present demand exceeds 100,000 tons per year–equivalent to 500,000 tons of beans. 2. A small tonnage of soybean meal could be sold in India for poultry feed at about 10% premium over groundnut meal... 3. Foreseeable potential demand for soybean flour or soy proteins, including its use in antibiotic manufacture, could scarcely exceed 100,000 tons per year within the next five years, even with heavy demand by Government and relief agencies for fortification and public feeding projects. However, since soy flour and soy protein are easier to use in foodstuffs than groundnut products, they would gradually tend to displace the latter in most bread and bakery products, confections, beverages, etc.

"Thus at one-ton-per-acre yields, 250,000 acres of soybeans would saturate the potential market in India for soy proteins for some time to come. Any larger acreages would be producing soybean meal for export. However, 250,000

acres would only meet about half of India's immediate needs for edible oils...

"Because of the large number and wide diversity of oilseed processing plants in India, the latitude for size and type of plant which might feasibly process soybeans is much greater than in any other country in our experience." A 300 ton/day plant operating 300 days/year would require 90,000 tons of soybeans. A new solvent extraction plant with this capacity would cost about $900,000 (Rs. 67.5 lakhs). Groundnut processing plants could be adapted to process soybeans without great expense (about $140,000 or Rs. 10.5 lakhs for a 300 ton/day plant). Tata indicated they would be glad to take all the soybeans they could get.

Potential markets are estimated as follows: For soybean flour (in tons/year): bread and related products 1,000, biscuits and confections 600, weaning foods 600, fortified flour (commercial) 500, and snack foods 500. This is about 10 tons/day. Note that Bal-Amul presently uses full-fat soya flour from the U.S. But it is very difficult to manufacture a good-quality full-fat soy flour, and it must be tailored to each application. For 50% protein (low-fiber) soybean meal: Pharmaceutical manufacturers 4,000, poultry feeders 4,000 minimum.

"Considerable interest is expressed in soy protein isolates, especially for toning milk and other dairy foods. Since the color and flavor of the best soy isolates is somewhat better than that of groundnut protein isolates, India could offer a good potential market in this area. If available, some soy isolates would also probably be used in lieu of groundnut isolates in biscuits, confections, and pharmaceutical lines."

Of the various potential specialty soy foods, "In terms of existing market demands, the most interesting product is soy-based synthetic milk, or a soy-protein milk-base for sale to dairies to be used in milk toning." Packaging will be a major problem. There is a severe milk shortage in most parts of India, and soy milk is superior in quality, as a base, compared with groundnut milk.

"Eventual market demand for soy flour could be substantial, depending on government policy and the continuing programs of relief agencies. It will hinge on the use of soy flour to fortify atta and maida, to use in high-protein gruels for relief feeding, and to supplement school lunch and institutional diets in various foods." Address: Cedar Falls, Iowa.

2287. **Product Name:** Whitehouse Coffee Fresh (Non-dairy Soy-based Coffee Creamer).
Manufacturer's Name: Whitehouse Products, Inc.
Manufacturer's Address: Livonia Dairy, 2001 S. Telegraph Rd. at Harvard, Dearborn, Michigan.
Date of Introduction: 1969?
New Product–Documentation: Talk with David and Harvey Whitehouse of Delsoy Products and Whitehouse Products. 1992. Feb. 4. In the late 1960s, Whitehouse Products (formerly Delsoy Products) developed a soy-based non-dairy creamer named Whitehouse Coffee Fresh. After several years the soy was replaced by another ingredient.

2288. Okumura, George K.; Wilkinson, Jack E. 1970. Preparation of vegetable protein-containing food products. *U.S. Patent* 3,490,914. Jan. 20. 4 p. Application filed 15 May 1967. [6 ref]
• ***Summary:*** "Water soluble protein is extracted by precipitation from de-fatted slurry of soy bean or other protein-containing vegetable material, and is then converted by a freezing step in a fibrous, sponge-like protein mass lacking the taste of soy or other starting material, which mass can then be further processed into a meat-like solid food or into a milk, or derivative of milk such as cheese, ice-cream, yogurt, etc., additional steps of finely comminuting the fibrous mass and adding water and other additives being utilized in producing the milk.

"This application is a continuation-in-part of our application Ser. No. 445,695, filed April 5, 1965, for Process of Producing Soy Milk from Sprouted Soy Beans, now Patent No. 3,399,997 and of our abandoned application Ser. No. 638,573, filed May 15, 1967, for Processing of Soy Food Products with Freeze Treatment." Address: 1. 3151 S. Elm Ave., 93706; 2. 2411 Divisadero St., 93721. Both: Fresno, California.

2289. Civetta, Armando. 1970. Re: Research in Colombia on soybean flour and soybean milk. Letter to Dr. J.J. Rackis, Oilseed Crops Laboratory, Northern Utilization R&D Div., ARS, USDA, Peoria, Illinois, Jan. 21. 2 p. Typed, with signature on letterhead.
• ***Summary:*** Civetta thanks Dr. Rackis for his cooperation and sympathy during Civetta's recent stay at Peoria, Illinois, during the UNIDO (United Nations Industrial Development Organization) conference in Nov. 1969. He is proposing to UNIDO that Dr. Rackis and Mr. Mustakas be invited to work at his institute for a while. Dr. Norton Young, the Director of his Institute, agrees with the idea. They would like help on two soy-related projects in Bogotá: (1) Low-fat soybean flour: Processing, functional properties, and its use in local foods. (2) Soybean milk: Use as a cow's milk substitute, processing and equipment design. Address: Project Leader, Instituto de Investigaciones Tecnologicas, Av. 30 No. 52A-77, Bogota, D.E., Colombia.

2290. Bourne, Malcolm C. 1970. Ingredient cost of soymilk. Mimeographed. 2 p. Jan. Unpublished manuscript.
• ***Summary:*** The main ingredient is whole dry soybeans. These costs are valid as of 1970. Address: Visiting Prof. of Food Science, U.P. College of Agriculture, Los Baños, Laguna.

2291. Centre de Documentation Internationale des Industries Utilisatrices de Produits Agricoles (CDIUPA). 1970--. IALINE (Industries Agro-Alimentaires en Ligne) base de données [IALINE (Food and Agricultural Industries On-Line) database]. 1, avenue des Olympiades–91300 Massy, France. [271542 ref. Fre]

• ***Summary:*** This is the world's best database for French-language publications related to food and nutrition. It first became available for use in Jan. 1970, and that is also the date of the earliest record in the database. It is produced by the Center for International Documentation on Industrial Utilization of Agricultural Products (CDIUPA), founded in 1965 by the French Ministry of Agriculture. CDIUPA is administered by APRIA (*Association pour la Promotion Industrie Agricole*), which is a member of the International Commission of Agricultural and Food Industries.

The current contents of the database is published in a monthly journal titled "Industries Agro-Alimentaires: Bibliographie Internationale," which began under that title in Jan. 1983. It was preceded by *Bibliographie Internationale des Industries Agro-Alimentaires. Bulletin Bibliographique* (published from Jan. 1967 to Dec. 1982). In the monthly journal, the citations are grouped under 6 broad headings: 1. General (with 8 subcategories). 2. Agro-food industries (industries agroalimentaires; with 17 subcategories; Many documents on soyfoods are cited in subcategory N titled *"Protéines d'origine animale, végétale, microbiologique, algues et levures aliments"*). 3. Fermentation industries (with 6 subcategories). 4. Food microbiology. 5. Food toxicology. 6. Utilization and adding value to agricultural and food-industry by-products. Biotechnology. The journal contains 3 indexes: Subject index. Index of sources (periodicals [with journal names written out in full], acts of congress, books, theses). Author index.

Information related to soyfoods is likely to be found under the following headings in the subject index: Aspergillus oryzae; Farine de soja (incl. soy flour, and roasted soy flour or kinako); Huile de soja (soy oil); Koji; Lait de soja (soymilk); Miso; Nato (incl. natto); Produit à base de soja (incl. dawa-dawa, kinema, soy cheese [western style], fermented black soybeans / Hamanatto, soynuts, soy ice cream, soy yogurt, thua-nao, yuba), Protéine de soja (soy protein products); Protéine de soja, Produit extrudé (extruded soy products); Protéines d'origine animale, végétale; Sauce de soja (soy sauce); Soja (incl. green vegetable soybeans); Soja, germe (soy sprouts); Sufu (fermented tofu); Tempeh; Tofu. Address: Massy, France. Phone: (1) 69.20.97.38.

2292. Puertollano, Carmen L.; Bourne, Malcolm C. 1970. How to make soymilk in your kitchen (Leaflet). College, Laguna, Philippines. 1 p. Feb. 3. Single sided. 28 cm. [12 ref]

• ***Summary:*** Uses the Cornell boiling water grind method. See also the Dec. 1976 edition by Dr. Bourne.

"Soymilk is the water extract of mature dry soybeans. It is a cheap source of protein. It is a nutritious beverage with a protein content equivalent to that of cow's milk.

"Steps in the production of soymilk:

"1. Wash thoroughly l cup dry clean soybeans.

"2. Soak for 4 to 16 hours in sufficient amount of water to keep the beans well covered throughout the soaking period. Make allowance for the beans to double in size during soaking.

"3. If the water is foamy after soaking, due to slight fermentation, pour off the water and wash the beans very well with a fresh lot of water. Drain the beans well.

"4. Divide the drained soaked beans into three equal portions. Grind each portion with 2 full cups boiling water in a pre-heated Waring blendor for 2-3 minutes. The Waring blendor is pre-heated by blending 2 cups of boiling water for approximately 1 minute.

"There are three types of Waring blendor available: plastic, glass, and stainless steel. If your Waring blendor is plastic make sure that it can stand boiling water. If it is made of glass it should be warmed first to avoid cracking due to sudden change of temperature. The stainless steel type is the most ideal to use but it is an expensive type of Waring blendor. Not all housewives can afford it.

"5. Strain the mixture in a muslin bag to remove the insoluble residue [okara]. Squeeze the bag to get as much of the milk as possible. The residue can be used as animal feed or for making cookies and candies.

"6. For every cup of filtered milk add 2 level tablespoons refined sugar.

"7. Heat the milk for at least 30 minutes in an open saucepan set on a boiling water bath to prevent scorching. Stir occasionally to prevent film formation. Take note of the original volume of the milk so that water lost by evaporation can be replaced.

"8. With one cup of dry beans approximately six to seven cups of milk is produced

"9. Add ½ tsp. vanilla essence when milk is cool (optional).

"10. The soymilk is now ready for drinking. It can be consumed hot or cold. Some people like to flavor it with chocolate or Ovaltine. The milk will keep for several days in the refrigerator but less than 24 hours without refrigeration." Address: Dep. of Chemistry, Univ. of the Philippines, College of Agriculture, College, Laguna, Philippines..

2293. Gould, Ira A.; Hansen, Paul M.T.; Harper, W.J.; Mikolajcik, E.M.; Vakaleris, D.G. 1970. Using soy proteins in new dairy foods. *Ohio Report on Research and Development* 55(1):20. Jan/Feb.

• ***Summary:*** "Dairy food scientists in the Department of Dairy Technology have been actively engaged in a variety of studies to determine the quality and characteristics of different soy protein isolates to be used in foods and how

these may best be incorporated into different dairy-type foods and beverages.

"The development of fluid milk-based beverages containing soy protein,... has been hampered in the past by extreme sensitivity of soy proteins to calcium and magnesium, especially under the effects of heat. In addition, soy proteins possess a characteristic 'beany-type' flavor which limits the amount of protein which can be used in bland, unflavored foods."

Research shows that soy protein can be made resistant to the harmful effect of calcium by the use food stabilizers (hydrophilic colloids) and by proper use of other minerals.

"Selected food stabilizers, such as Kappacarrageenin, carboxymethyl cellulose, and the Kappa fraction of milk casein, were all found to be effective in preventing the destabilization of soy protein in systems containing calcium in relatively high concentration. Also, heat-stable, fluid products were produced by a sequential incorporation of citrates, phosphates, and calcium in the fluid food to give a balance of minerals similar to that found in normal [cow's] milk."

"In one experiment, the flavor of soy protein isolate was improved by culturing a solution of the protein with lactic acid producing bacteria and then precipitating and re-isolating the protein." Address: Dep. of Dairy Technology, Ohio Agricultural Research and Development Center (OARDC), and Ohio State Univ.

2294. Puertollano, Carmen L.; Bourne, Malcolm C. 1970. How to make soymilk in your kitchen (Leaflet). Dept. of Chemistry, University of the Philippines, College of Agriculture, College, Laguna. 1 p. Feb. 3.

• ***Summary:*** This 10-step process uses the Cornell boiling-water grind method (to give soymilk with little or no beany flavor) and therefore requires a Waring blendor with a glass or stainless steel container.

One cup of dry soybeans makes 6-7 cups of soymilk. "6. For every cup of filtered milk add 2 level tablespoons of refined sugar" [too much sugar for good health!] and (optional, when the milk is cool) ½ teaspoon vanilla essence. "Some people like to flavor it with chocolate or Ovaltine." Address: Dep. of Chemistry, Univ. of the Philippines, College of Agriculture, College, Laguna.

2295. Erewhon Trading Co., Inc. 1970. Traditional foods: Importers, processors, distributors. Mail order catalogue. Boston, Massachusetts. 16 p. March 1. [2 ref]

• ***Summary:*** On the orange cover is the silhouette of three heads of grain on the plant, by a Japanese crest. The company sells the following types of foods: 1. Whole grains: Brown rice (short grain grown by Koda Brothers, in 6 weights from 2 lb. to 100 lb). "Not strictly organic, but the finest available in the U.S. today."

Note: The previous sentence, starting with "Not strictly organic" is deceptive and misleading. According to "Erewhon, A Biography," by Paul Hawken (*East West Journal*, Aug. 1973, p. 13) the short-grain brown rice being sold by Erewhon at this time was grown by the Lundberg brothers (Wehah Farm, Richvale, California) and harvested in the fall of 1969. But this rice was the result of a secret deal, so Koda Brothers is listed in the Catalog as the grower. According to the Koda website, Koda first started to convert some fields to organic in 2004. Moreover, this rice was not "the finest available in the U.S. today." The only organically grown brown rice in the USA in March 1970 was grown by the Lundberg Brothers (Wehah Farms) in Richvale, California. 1969 was the first year they had grown rice organically, and they grew 78 acres under contract with Chico-San, who agreed to buy all the brown rice grown on that acreage in exchange for the exclusive right to sell that rice. Chico-San sold half the rice in advance and had no trouble selling all of it. But they refused to sell any of the rice to Erewhon. In 1970 Lundberg expanded their exclusive organic brown rice acreage to 200 acres; that rice was harvested in the fall of 1971.

Sweet brown rice (also grown by Koda Bros.), buckwheat groats (Kasha, from Pocono Mts. in Pennsylvania), wheat berries (organically grown in the Golden Valley of North Dakota), millet (organically grown), barley, yellow and white corn (organically grown in Deaf Smith County, Texas), oats, rye (organically grown in Deaf Smith County, Texas). Table of prices for different weights. 2. Fresh stone ground flours. 3. Cereals, made from whole grains and milled in a manner to allow quick cooking, incl. Kokoh (which can be used as a milk substitute or prepared as a cereal for children). 3. Noodles (udon, soba, and shonai fu–wheat gluten cakes). 4. Beans: Azuki beans ("The King of Beans... Organically grown on the island of Hokkaido, Japan), black beans (a sweet black soybean imported from Japan. Organically grown), chickpeas, soybeans ("Organically grown in Pennsylvania. A food high in protein, vitamins and minerals. Should be soaked many hours before cooking. Particularly good if cooked with Kombu"), pinto beans, whole green lentils, red split lentils. Table of prices for different weights.

5. Sea vegetables: Nori (dried laver), kombu, wakame, hiziki, agar-agar. 6. Dried fish and vegetables: Bonita [sic, Bonito] flakes, chirimen iriko, daikon pickle, gourd strips (dried), daikon (dried radish). 6. Order form. 7. Beverages: Kukicha, mu herbal beverage, yannoh, lotus root powder, mugicha (barley tea), peppermint tea.

8. Soybean Products (imported from Japan): Soy sauce ("aged for at least 18 months"; 16 oz, 32 oz, ½ gallon, 1 gallon, 4.75 gallon keg). Mugi miso–Soybean puree ("Made by a special enzymatic process, this Miso is aged for 18 months. It is made from soybeans, barley, water and salt. It is ideal for making soups and sauces and blends well with tahini to make a spread for bread." 1 lb, 2 lb, 4 lb, 44 lb keg).

Hacho miso–Soybean puree ("A darker, stronger miso than Mugi Miso..."). Moromi ("A thick sauce removed from the bottom of the Soy Sauce kegs after fermentation. Its uses are unlimited in soups & sauces"; 7 oz.). Seitan ("A concentrated protein source made from wheat and soy sauce. When used in soups or sauteed in vegetables, it has a taste much like beef"; 3½ oz.).

9. Condiments: *Furikake*, kuzu arrowroot, tekka, umeboshi, sesame butter, Erewhon sesame tahini, sesame salt, white sea salt, grey sea salt. 10. Oils: Refined corn oil, corn germ oil, sesame oil. 11. Sundries: Sesame seeds, sunflower seeds, pumpkin seeds, popcorn, raisins (Thompsons), dried apricots, wheat germ (raw), apple butter, whole dried chestnuts. 12. Toilet articles: Dentie (tooth powder made from eggplant and salt), Aditi sesame shampoo, Orgene [Orjene] herbal shampoo, Fu-nori (seaweed shampoo), sesame coconut soap, vege oat soap.

13. Kitchen and tableware: Cookbooks: *Zen Cookery, Cooking with Grains and Vegetables, Cooking Good Food, Zen Macrobiotic Cooking.* Tableware: Rice paddles (bamboo), soy sauce dispenser, oil skimmer, bamboo tea strainer, vegetable press, vegetable brush, bamboo chopsticks (Japanese), chopsticks (Chinese), MAC knife (vegetable), vegetable knife, fish knife, grater, suribachi (3 sizes), Corona hand grinding flour mill ($10.95).

On the inside rear cover is a United Parcel Service rate chart. Address: 342 Newbury Street, Boston, Massachusetts 02115. Phone: 617-262-3420.

Address: Cornell Univ., Geneva, New York.

2297. **Product Name:** [Mac-Curd Soy Milk].
Manufacturer's Name: Hohnen Oil Co. Ltd.
Manufacturer's Address: Mitsui Seimei Building Ltd., 1-chome Ohtemachi, Chiyoda-ku, Tokyo, Japan.
Date of Introduction: 1970. March.
New Product–Documentation: *Soybean Digest Blue Book.* 1970. p. 108; 1981. p. 60.

2298. Bourne, Malcolm C. 1970. Soybeans, food technology, and improved nutrition in southern Asia. Mimeographed text of a seminar given at the Ford Foundation, New Delhi, India. April 8. 14 p. Unpublished manuscript. [9 ref]
• ***Summary:*** Published in the Proceedings of the 3rd All India Soybean Conference, held 28-30 Sept. 1970 at Jabalpur, India. Tables: 1. Deaths among small children (ages 1-4) in various countries as a percentage of total deaths in population. 2. Comparison of soybean with other protein sources in the Philippines (As of early 1965 soy provides has the largest amount of protein per peso as purchased [559 gm vs. 287 for mungbean, which is second largest]). 3. Foods made from soybeans (12 types). 4. Comparison of the nutritional composition of soybeans with common dry beans. 5. Material balance in manufacture of soymilk. 6. Volatiles found in cold-grind soybeans. Postulated mechanism of formation of ethyl vinyl ketone in soymilk. 8. Boiling water process for soymilk (bottled or fresh). 9. Ingredient cost of soymilk. 9. Protein supplied by soymilk. Address: Visiting Prof. of Food Science, College of Agriculture, Univ. of the Philippines, College (Los Baños), Laguna, Philippines. Permanent address: New York State Agric. Exp. Station, Geneva, NY.

2299. Descamps, Hubert. 1970. Tamari et kokkoh: Source d'acides aminés [Tamari and kokkoh: Source of amino acids]. *Spirale* (*Brussels, Belgium*) No. 36. p. 13-16. May. [1 ref. Fre]
• ***Summary:*** Prof. Christophe of the laboratory of biochemistry and nutrition on the faculty of medicine of the U.L.B. has done an analysis of Kokkoh (grain coffee) and tamari. The composition of 8 amino acids is given for each product.

"Miso, another source of vegetable proteins, strongly resembles tamari, except that the dry extract is superior. Miso contains about 30-40% moisture. Thus it contains about 3 times the concentration of amino acids and other nutrients found in tamari. It is also clear that one cannot consume large quantities of miso. It is interesting to note that miso is very useful for making soups."

Note: This magazine began publication in 1964.

2300. Bourne, Malcolm C.; Puertollano, Carmen L. 1970. Pilot plant procedure for making PHILSOY [soymilk] at Los Baños, Philippines. Mimeographed. 4 p. June 2. Unpublished manuscript.
• ***Summary:*** The ten steps in the Cornell boiling-water grind procedure are described in the form of a two-column table: (1) Procedure. (2) Comments. The comments are much longer than the procedure.

The procedure is: 1. Soak clean whole soybeans in water at ambient temperature until saturated (about 4-5 hours). 2. Discard soak water. Remove any defective beans. 3. Preheat grinding machine (to ensure that the first lot of material ground does not fall below 80ºC). 4. Grind beans at ambient temperature with boiling water. Temperature of bean-water slurry must never fall below 80ºC (180ºF). It is advisable to hold the slurry at 80ºC. or higher for about 5 minutes before proceeding to next step. Ratio is 1 part of dry beans plus 10 parts by weight of water. This is approximately equivalent to 1 volume of soaked beans to 3 volumes of boiling water. 5. Boil [in open kettle] for 5 to 10 minutes. 6. Filer off insoluble residue [okara]. 7. Formulate. 8. Fill into 7 oz. bottles and seal. 9. Sterilize in steam for 12 minutes at 250ºF (15 lbs. pressure). 10. Cool in air.

General notes. "If a fresh product is desired that has not been sterilized, it is necessary to maintain the milk at near the boiling point for approximately 30 minutes in order to destroy the antitrypsin." Address: 1. Visiting Prof. of Food Science and Associate Director (Philippines) U.S. AID-Cornell Contract csd-1815; 2. Food Technologist, Univ. of the Philippines, College of Agriculture, Laguna, Philippines.

2301. Plantmilk Ltd. 1970. Meat and milk (Ad). *British Vegetarian.* May/June. p. 207.
• ***Summary:*** "You can't have one without the other. A cow can't make milk without first making a calf, for each lactation. She is robbed of her calf so that we can have her milk. The calf? More and more are imprisoned in factory farms. Every time you use milk, think of the baby calf in the factory farm. Plamil liquid plantmilk, from Health Stores, replaces milk." Address: Tithe Farm, High St., Langley, Slough, Buckinghamshire, England.

2302. Plantmilk Society. 1970. The cruel cost of milk (Ad). *British Vegetarian.* May/June. Rear cover.
• ***Summary:*** A large photo shows calves in a British factory farm, where they are "imprisoned for life in pens 2-feet by 5-feet" and are not allowed to turn around. They are put in the pens when they are about 5 days old. Most cows are made pregnant by artificial insemination.

After the age of about 3 weeks, most young milk cows are unable to turn around in their pens. In centered, bold letters: "Calves for rearing into meat come from dairy farms, whose products are: (1) calves, taken from their mothers so that we can have the milk, (2) milk, (3) worn out cows, slaughtered for beef."

"The nutritious plantmilk alternative to milk, made entirely from non-animal ingredients, has given *you* the opportunity to release yourself from supporting the vicious circle of the meat-milk complex. Plantmilk is obtainable from most Health Food Stores. Please support this humane effort."

Note: Plantmilk is now made largely from soybeans. This is the earliest English-language document seen (Aug. 2013) that uses the term "alternative to milk" to refer to soymilk. Address: 39 Willow Crescent, Exbridge, Middlesex, England.

2303. Wilkens, Walter F.; Lin, Lin M. 1970. Gas chromatographic and mass spectral analyses of soybean milk volatiles. *J. of Agricultural and Food Chemistry* 18(3):333-36. May/June. [34 ref]
Address: Cornell Univ., Geneva, New York.

2304. Wokes, Frank. 1970. India revisited: 1920-1970. *British Vegetarian.* May/June. p. 221-25.
• ***Summary:*** The author arrived in Bombay on 31 Jan. 1970 to participate in an international seminar on nutrition at the invitation of Prof. C.V. Ramakrishnan of Baroda University, India. He and his wife, Dr. Rajalakshmi, both lifelong vegetarians, are very interested in increasing production and consumption of plant foods in India. The author first visited India on 1 Feb. 1920.

In India there are plenty of cows but their milk yields is far lower than in Western countries. Since hygienic conditions are far from satisfactory, much of the milk is grossly contaminated. Therefore the Government of India, with the help of foreign aid, has established at Anand, near Baroda, a large dairy farm to which milk is brought by farmers from surrounding areas, pasteurized, and spray dried for sales in tins. "In this powdered baby food most of the protein now comes from plant foods, the proportion gradually being increased as investigations at CeFTRI [CFTRI = Central Food Technology Research Institute, at Mysore] show its suitability for replacing cow's milk protein, at a lower cost." CeFTRI has already made, on a pilot plant scale, non-dairy milks made entirely from plants, which it hopes eventually to commercialize.

"Many Indians, especially among the Jains and Theosophists, pressed me to suggest how they could make for general domestic use a liquid vegetable milk similar to that in my tins of Plamil. They listened with interest to my descriptions of what is being done at CeFTRI, where among other things a study is being made of *Vitasoy,* the liquid soya milk, made by wet grinding and processing of steeped soya beans by a method developed by Dr. Harry Miller, who first made soya milks in China nearly forty years ago [actually 1936] and described it to me over twenty years ago, when I first saw samples of his products. In Hong Kong, *Vitasoy* is said to be rivalling *Coca Cola* in public favour."

Also discusses CeFTRI's interest in leaf protein, and problems with aflatoxins in groundnuts in India.

2305. Roy, J.H.B. 1970. Protein in milk replacers for calves. *J. of the Science of Food and Agriculture* (*London*) 21(7):346-51. July. [39 ref]
Address: National Inst. for Research in Dairying, Shinfield, Reading, Berkshire, England.

2306. *Chemical and Engineering News.* 1970. Fortified foods: the next revolution. Growing number of AID-funded programs encourage development of low-cost, high-protein foods. 48(33):36-37, 39, 41, 43. Aug. 10.
• ***Summary:*** The magazine talked with three men who direct and assess many of the current projects in this new field. A photo of each man is shown: (1) Dr. Daniel Rosenfield, deputy director of the nutrition and agribusiness group at the USDA; (2) Dr. Martin J. Forman, director of the office of nutrition in the Agency for International Development (AID); and (3) Dr. Max Milner, senior food technologist in the food conservation division of the United Nations Children's Fund.

A table shows some low-cost fortified foods that have

found market acceptance (Source: League for International Food Education). Those containing soy are: Cerealina (weaning food) by CPC International (Brazil); Golden Elbow Macaroni by General Foods (Brazil); Kupagani Biscuits by Pyott Ltd. (Union of South Africa); ProNutro Cereal and ProNutro Soup by Food Corp (Pty.) Ltd, Durban, Natal, Republic of South Africa; Puma (soy beverage) by Dih, Ltd. (Guyana) and Monsanto; Vita Bean (soybean milk) by Yeoh Hiap Seng, Ltd. (Singapore); Vitalia (macaroni products) by Instituto de Investigaciones Tecnologicas (Bogota, Colombia); Yoo Hoo (milklike beverage) by Yoo Hoo Beverage Co. (Carlstadt, New Jersey; made from a "blend of animal and vegetable protein products"–soy is not specifically mentioned. Marketed in U.S. and abroad; produced in 14 countries).

Note: This is the earliest English-language document seen (Aug. 2013) that contains the term "milklike beverage" (or "milklike beverages").

The world's food supply and distribution are already failing to keep up with population increases. Each day, 10,000 people die of malnutrition according to Dr. Richard L. Hall, chairman of the executive board for SOS/70. And the situation appears to be steadily getting worse. "Malnutrition can also kill indirectly by leaving people alive but highly vulnerable to disease. The most critical type of malnutrition is caused by a lack of protein, he says."

Dr. Rosenfield believes that the "most critical type of malnutrition is caused by a lack of protein," and that fortification of traditional foods is the quickest, least expensive, and easiest way to make a real difference in combating malnutrition. The Green Revolution has brought about dramatic increases in production of some crops, but it has also brought with it "a host of problems that may put a damper on the usefulness of high-yield crops as a short-term solution to the food shortage, according to Dr. Rosenfield."

Dr. Milner sees a growing role for legumes. He feels that the outlook for protein from green plants such as alfalfa is "very sad."

A sidebar titled "Incaparina finds the going rough in Panama" begins: Incaparina, developed at INCAP, is a blend of corn and local sources of protein, soych as "cotton seed or soy bean."

2307. Briggs, George M. 1970. Memories of an "oldtimer." *Soybean Digest.* Aug. p. 50-53.

• ***Summary:*** "My personal interest in soybeans has spanned nearly 60 years–from September 1912 to the present. My introduction to the crop came when, with a fellow agricultural student at the University of Minnesota, we attempted to thresh out some soybeans with old fashioned flails in a high-sided boarded wagon box at the University Farm. In a half-hour's time we harvested about 10 pounds of little soybeans!"

"Following my graduation from the College of Agriculture of the University of Minnesota, I became the 14th county agricultural agent in Wisconsin, serving for 3½ years in Burnett County.

"This county has a large proportion of light, sandy soils. People needed a cash crop, as well as a legume hay. Soybeans seemed to offer an answer to the problem of producing cheaper feed. So, it was natural that we had considerable interest in the development of a program that would answer the needs of the farmer.

"During my Burnett County years, and later, in my years of agricultural extension work at the University of Wisconsin, it was my privilege to advise and counsel with people on farm crop culture. An attempt was made to establish a recommendation that farmers plant soybeans according to the rule of 1 acre for hay, 1 acre for seed, and 1 acre to plow under as green manure."

"The production of soybeans in Wisconsin, as well as in the whole country, was never too great until the combine was perfected." Dr. Harry Miller, an ASA member from Ohio, had been a missionary in China. "He related to me how he helped develop and distribute a soybean milk for Chinese infants who were deprived of nutritional foods.

"Soybean milk was introduced in many parts of this country. Over 50 years ago, one of my nephews in Minnesota was nurtured to health and growth by its use when regular milk could not be assimilated properly. The use of soybean milk as a regular milk substitute in special diets is now well established."

Also discusses early problems of soybean production, soybean hay which was piled in cocks then fed to dairy cows to increase their milk production, the slow acceptance of soybean meal for livestock feeding in America, how I.C. Bradley educated farmers about soybean meal, why Wisconsin didn't favor margarine, and work with the ASA.

Photos show: (1) Early shocks of soybean hay in a field. (2) Soybean pioneer V.P. Atwell (Stevens Point, Wisconsin) harvesting soys with an old-fashioned reaper. (3) Portrait: "George 'Soybean' Briggs was one of the founders of the American Soybean Association, and its fourth president. In fact, he may be the only member who was at the first meeting at Camden, Indiana" [at the Fouts Bros. farm]. Address: Univ. of Wisconsin, Agric. Exp. Station.

2308. Kon, Samuel; Wagner, J.R.; Guadagni, D.G.; Horvat, R.J. 1970. pH adjustment control of oxidative off-flavors during grinding of raw legume seeds. *J. of Food Science* 35(4):343-45. July/Aug. [19 ref]

• ***Summary:*** Many approaches have been taken to improve or reduce the undesirable flavors of soy products. Preventative measures include grinding soybeans under acidic conditions (pH 3.85 or lower). Address: USDA Western Utilization R&D Div., Albany, California.

2309. Simoons, Frederick J. 1970. Primary adult lactose

intolerance and the milking habit: A problem in biologic and cultural interrelations. II. A culture historical hypothesis. *American J. of Digestive Diseases* 15(8):695-710. Aug. Series II. [60 ref]
• ***Summary:*** Consideration of the conditions of genetic selection that may have led some groups of people to have high levels of lactase throughout life. Address: Dep. of Geography, Univ. of California, Davis, CA 95616.

2310. *Soybean Digest.* 1970. Dr. [Harry] Miller's lifelong work with soy foods. Aug. p. 37.
• ***Summary:*** Photos show: (1) Dr. Miller in Libya, 1957. (2) Dr. and Mrs. Miller with Madame and Generalissimo Chiang Kai-shek.

2311. Dinshah, Freya. 1970. The vegan kitchen. 6th ed. Malaga, New Jersey: The American Vegan Society. 44 p. Illust. Recipe index. Sept. Saddle stitched. 21 cm. The Ahimsa book series No. 2.
• ***Summary:*** With a bonus chapter: Why veganism? by Eva Batt. Page 6 notes that soya beans can be sprouted. The authors believe that the best way to eat cereal grains is to sprout them. In a section titled "About Vitamins" we read: "Some people, at least in the transition period, may wish to supplement the menus given, with a glassful of B-12 fortified soya-milk. In the USA, Loma Linda Soyagen and Worthington Soyamel are marketed in various flavors. In England there is Granogen, Velactin, and a leaf-protein milk known as Plantmilk or Plamil. (Plamil is now also being made available in North America)." Soy-related recipes include: Soya patties (with soya meal or flour, baked in an oiled dish, p. 20). How to shell green soya beans (p. 21). Soya loaf (with cooked soya beans, baked, p. 23). Soya milk (with soya powder/flour and dates, p. 24). Soya cheese Americana (tofu made with soya powder/flour and coagulated with lemon juice, p. 25). Australian soya cheese (tofu made with soya powder, coagulated with orange and lemon juice, jelled with agar-agar, p. 25). British Plantmilk cheese (tofu made with Plamil and lemon juice, p. 25). Vegan "mayonnaise" II (with soya milk and mashed potatoes, p. 26).

A lifetime vegetarian, the author has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher. Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey 08328.

2312. Knapp, Ronald G. 1970. Itinerant merchants in T'ai-Wan [Taiwan]. *Journal of Geography* (*The*) 69(6):344-47. Sept. See p. 345. [5 ref]
• ***Summary:*** The itinerant merchant or peddler (*t'iao-fan*) sells his wares from place to place, moving on foot (sometimes "toting his goods in two baskets hung from a rhythmically bouncing pole"), by bicycle, etc. He sometimes sells in periodic markets, so common in developing countries.

Page 345: "These hawkers may be selling home-grown vegetables, fish, bean curd, ice cream, bamboo baskets... The hawker of prepared foods is often at once his own producer, distributor, and, of course, salesman. Bean curd milk (*tou-chiang*) [soymilk] and fried sticks of twisted dough (*yu-t'iao*) offer breakfast fare (Figure 4). Later in the day 'stinky bean curd' (*ch'ou tou-fu*) is peddled as a late afternoon snack. (Figure 5). Punctuality characterizes the daily arrival of the seller of any of these light foods..."

Figure 5, a black-and-white photo, shows a man frying *ch'ou tou-fu* at a pushcart stand.

Note: This is the earliest English-language document seen (Oct. 2011) that uses the word "stinky" or the term "stinky bean curd" to refer a special type of fermented tofu. Address: Asst. Prof. of Geography, State University College, New Paltz, New York 12561.

2313. *Soybean Digest.* 1970. China Doctor is now in paperback. Sept. p. 61.
• ***Summary:*** "*China Doctor,* the exciting story of Dr. Harry Miller who pioneered medicine and nutrition, notably with the soybean, is now available in paperback." While in the United States, Dr. Miller built a soymilk plant at Mt. Vernon, Ohio.

2314. *New York Times.* 1970. Filipino children hurt by poor diet: U.S. aiding effort to end widespread malnutrition. Oct. 4. p. 11.
• ***Summary:*** The village of San Andres Bukid, just off Manila's plush Ermita district, has a community center next to hundreds of shanties. A young nutritionist, Germelina Villarex, is helping to feed 60 village children, who have come to the center with their mothers. In each child's bowl was a mound of American wheat in a "cream soup made from corn-soybean-milk powder supplied by the United States Food for Peace Program and flavored with a local vegetable." Each group of 60 children is "graduated" every 2-3 months so that a new group can benefit.

The U.S. program is administered by the United States Agency for International Development. CARE, a voluntary agency, also helps in distributing the food.

• ***Summary:*** This is the earliest publication seen suggesting that binding of off-flavors by proteins is a major cause of the persistence of these off-flavors. The hydrophobic binding of these components by soy protein has been implicated in the

occurrence of off-flavors. They also found that n-hexanal was one of the major contributors responsible for the beany odor of soybeans.

Note: This is the earliest document seen that uses the term "n-hexanal" or "hexanal" in connection with soybeans and their off-flavors. Address: Dep. of Agricultural Chemistry, Tokyo Univ.

• ***Summary:*** A partially purified preparation with alpha-galactosidase and invertase but free from protease was obtained from commercial *Aspergillus satoi* by simple molecular sieving. Address: Cornell Univ., Geneva, New York.

2318. Theuer, Richard C.; Sarett, Herbert P. 1970. Nutritional adequacy of soy isolate formulas in rats: Choline. *J. of Agricultural and Food Chemistry* 18(5):913-16. Sept/Oct. [22 ref]
Address: Mead Johnson Research Center, Evansville, Indiana 47721.

2319. Wilding, M.D. 1970. Oilseed proteins. Present utilization patterns. *J. of the American Oil Chemists' Society* 47(10):398-401. Oct. [10 ref]
• ***Summary:*** A review of the uses of soy protein. Soybean is the most economical source of protein in terms of yield/acre. Flavor problems have been solved. Textured soy protein is reported. Figure 1 shows the relative efficiencies of protein conversion from some major protein sources. "The time has now come as predicted by Harry W. Miller in 1943, that our chief interest in the soybean is in its value as a human food."

The first significant development in texturizing proteins was made by Robert Boyer in 1947; he developed an edible soy protein fiber using a process similar to that for making textile fibers. This process is described. Today such fibers are being produced commercially by General Mills, Worthington Foods, and Ralston Purina, and used in some very sophisticated "engineered meat-like items." General Mills recently announced its intention to construct a multimillion dollar plant to make these "fabricated engineered foods."

Figure 1 shows the number of days of protein requirement (by a moderately active man) produced by one acre, yielding selected food product. Legumes make very efficient use of the land, grains make fairly efficient use, and livestock make very inefficient use. Soybeans make the most efficient use of the land to produce protein; they will sustain a man for 2,224 days. Beef cattle make the least efficient use; they will sustain a man for only 77 days.

Tables show: (1) The estimated production and prices of soy proteins. Soy flour and grits (120-126 million lb, 7-8 cents/pound). Soy concentrates (19-33 million lb, 18-26 cents/pound). Soy isolates (24-38 million lb, 35-45 cents/pound). (2) Amount of soy flour (million lb) used in various applications (both extrapolated from Eley 1968). (3) Physical properties and functional advantages of textured soy protein.

Large amounts of soy protein are also now being used to make fluid beverages. In Brazil, the Coca-Cola Co. has launched Saci, a chocolate flavored soy beverage. In British Guiana, Monsanto is making Puma. In Hong Kong Vitasoy is a commercial success. Address: Research & Development Center, Swift & Co., Oak Brook, Illinois.

2320. Wokes, Frank. 1970. Plantmilk (Letter to the editor). *British Vegetarian.* Sept/Oct. p. 462.
• ***Summary:*** During his tour of research centers in India, his stock of Plamil samples was eagerly tasted by colleagues who wished such a product were available in India. Discussions with industrialists and research workers showed him that it would be easier and cheaper to prepare a plantmilk in India from soya beans grown domestically using Dr. Harry Miller's original method, which calls for wet-grinding soaked soya beans, then processing them into a vegetable milk. "The product would be cheaper than cow's milk, which in India is relatively scarce and expensive... In Hong Kong Dr. Miller's efforts have led to the production of a soya milk cheaper than the equivalent amount of cow's milk..."

Margarine would not be available today in the UK "at prices lower than that for butter if it had not been bought by vegetarians who helped Hugh Mapleton in his pioneer efforts on its production." Address: V.N.R.C. [Vegetarian Nutrition Research Centre], Watford, Herts., England.

• ***Summary:*** Sodium carbonate and sodium hydroxide significantly reduced beany flavour in soymilk. Harasoy variety soyabeans, grown in New Zealand, were used throughout the experiment. Address: Dep. of Food Technology, Massey Univ., New Zealand.

2325. Mendoza, Josefina; Meyers, J.; Snyder, R. 1970. Soybean sensitivity: Case report. *Pediatrics* 46(5):774-76. Nov. [23 ref]
• ***Summary:*** "The purpose of this paper is to present a case of soybean milk sensitivity in a potentially allergic infant who was started on this product as a prophylactic measure to reduce the possibility of atopic disease." The author detected an acute anaphylactic response from infants. Address: 1. Coney Island Hospital, Ocean and Shore Parkways, Brooklyn, New York 11235.

2326. Puertollano, Carmen L.; Bourne, M.C.; Banzon, J.; Melgar, J.C. 1970. Effect of changes in the formulation of soymilk on its acceptability to Filipino children. *Philippine Agriculturist* 54(5&6):227-40. Oct/Nov. [9 ref]
• ***Summary:*** Dr. Bourne is a visiting professor from Cornell University (New York). A large-scale acceptability study using various soymilk formulations was conducted with approximately 400 Filipino school children as tasters. The soymilk was made using the boiling-water grind method, developed at Cornell, because it gives soymilk with little or no "beany" flavor. The various formulations ranged from 77.2% to 91.8% acceptability using a 7 point visual scale.

Soymilk containing 7% sugar had significantly higher acceptability than that containing 5% sugar. Soymilk containing 7% sucrose plus 20 ppm [parts per million] vanilla essence was accepted as the "standard" formula on the basis of acceptability and cost.

The addition of 2% coconut oil fat to the standard soymilk made almost no change in acceptability. The addition of chocolate resulted in a significant increase in acceptability. The use of 0.1% sodium hydroxide in the water used for soaking the soybeans increased acceptability slightly. A mixture of 25% carabao milk and 75% soymilk was not liked as well as pure soymilk. Serving the soymilk cold gave higher scores than serving it at room temperature. A comparative taste study shows that soymilk, when tasted first, has an acceptability approaching that of a popular cola beverage (89.3% vs. 89.8%). "There is a widely held opinion in the Philippines that cow's milk is indigestible because it gives stomach pains and/or flatus [gas] and diarrhea." None of these problems occurred after consuming soymilk. Address: Dep. of Agricultural Chemistry, Univ. of the Philippines' College of Agriculture.

2327. *Soybean Digest.* 1970. A Southeast Asia soy food firm. [Yeo Hiap Seng Ltd.]. Nov. p. 3.
• ***Summary:*** "A company that started as a family business making soybean products is today one of the largest food and beverage concerns in Southeast Asia. Yeo Hiap Seng Ltd. owns a number of manufacturing plants in Singapore and Malaysia and makes soybean products and also soft drinks and canned foods.

"Yeo Hiap Seng Ltd. started off using soybeans as a base for all its products. It made soy sauce, soybean paste, and other products that are basic necessities for Chinese food...

"In 1950, Yeo Hiap Seng Ltd. decided to undertake the processing of soy milk on a commercial scale. The firm successfully launched the first soy milk in bottles in 1952. This is marketed as a food beverage known as 'Beanvit' and retailed at the same price as other soft drinks...

In 1968 the company successfully introduced soymilk in a modern one-way container. "This form of packaging, which has been widely used for milk, is the tetrahedron-shape kraft paper lined with polyethylene-coated aluminum foil. The product is sterilized before filling.

"The soy milk is heated to 142ºC and held for 4 seconds, cooled instantly to the original temperature, then poured into the containers. This method of packaging under sterile conditions will enable the product to be kept for about 8 months without refrigeration. The product is much better in both appearance and taste than with the normal sterilization at 115ºC for 15 minutes. The container can be discarded after use.

"Yeo Hiap Seng Ltd. has recently introduced an improved soy milk, 'Vitabean.' Packed the same way, Vitabean is enriched with vitamins A, B1, B2, B6, C, D3 nicotinamide and pantothenic acid sufficient to provide half the normal daily vitamin requirements for adults. It has been found there are no great losses of heat-sensitive vitamins processed with this UHT [ultrahigh temperature] method.

"The company says it is looking forward to establishing Vitabean plants in other parts of the world." A photo shows a machine packaging Beanvit and Vitabean, with a woman standing nearby.

2328. *Soybean Digest.* 1970. Soy beverage fills nutrition gap. Nov. p. 25.

2329. **Product Name:** Vitabean (Soymilk Fortified with Vitamins).
Manufacturer's Name: Yeo Hiap Seng Ltd.
Manufacturer's Address: 950 Dunearn Rd., Singapore.
Date of Introduction: 1970. November.
Wt/Vol., Packaging, Price: Aseptic tetrahedron-shaped container.
New Product–Documentation: *Soybean Digest.* 1970. Nov. p. 3. "A Southeast Asia soy food firm." "Yeo Hiap Seng Ltd. has recently introduced an improved soy milk, 'Vitabean.' Packed the same way, Vitabean is enriched with vitamins A, B1, B2, B6, C, D3 nicotinamide and pantothenic acid sufficient to provide half the normal daily vitamin requirements for adults. It has been found there are no great losses of heat-sensitive vitamins processed with this UHT [ultrahigh temperature] method.

"The company says it is looking forward to establishing Vitabean plants in other parts of the world."

E. Orr. 1972. Tropical Products Inst. G73. The use of protein-rich foods for the relief of malnutrition in developing countries: an analysis of experience. p. 15. "More recently a form of Beanvit, with vitamin and mineral additives, called Vitabean has been on sale with Beanvit. The trend of sales is said to be satisfactory and the company has plans to expand production."

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 101. "It was fortified with half the adult Minimum Daily Requirement of most essential vitamins."

2332. Bourne, Malcolm C. 1970. Recent advances in soybean milk processing technology. *PAG Bulletin* (*Protein Advisory Group, WHO / FAO / UNICEF*) No. 10. p. 14-21. [8 ref]
• ***Summary:*** An excellent presentation of the "boiling water grind" technique developed by the Food Technology Group at Cornell University. Table 1 shows that, in the Philippines, the soybean provides almost twice as much protein per peso as its nearest competitor, the mungbean, and 19-times more protein per peso than pork. Address: Visiting Prof. of Food Science, Univ. of the Philippines, College of Agriculture, College (Los Baños), Laguna, Philippines. Permanent address: New York State Agric. Exp. Station, Cornell Univ., Geneva, NY 14456.

2333. **Product Name:** [Soyalac {Soymilk} (For General Use)].
Foreign Name: Soiyarakku Ippanyô.
Manufacturer's Name: College Health Foods. Later renamed San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1970.
Wt/Vol., Packaging, Price: 425 gm can.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Ippanyô was introduced in 1970. It is now sold by Saniku Fuuzu in a 425 gm can and distributed nationwide.

2334. Escueta, E. 1970. Effect of alkali additions on pH and flavor of aqueous soybean extracts. BSc thesis, University of the Philippines at Los Banos, Laguna, Philippines. *
• ***Summary:*** Soymilk treated with alkali sodium hydroxide of pH 7.0–7.5 is acceptable to Filipino tastes.

2335. **Product Name:** Kaset Cookies, Kaset Protein, Soya Milk, Kaset Noodles.
Manufacturer's Name: Institute of Food Research and Product Development, Kasetsart University.
Manufacturer's Address: Bangkok, Thailand.
Date of Introduction: 1970.
New Product–Documentation: E. Orr. 1972. Tropical Products Inst. G73. The use of protein-rich foods for the relief of malnutrition in developing countries: an analysis of experience. p. 28. "In Thailand, Kasetsart University, in collaboration with the Nutrition Division of the Ministry of Health, and assisted by USAID, has been experimenting with protein products for a number of years. Its particular interest is in the use of soya and the local mung bean. It manufactures four products: soya milk, cookies, noodles and 'Kaset Protein'–a combination of soya flour and mung bean with a protein content of 60 per cent–on a pilot plant scale. The products are disposed of through a school feeding programme and a few co-operative stores. Attempts to persuade local firms to take over the operation have not been successful."

A. Siegel et al. 1975. Cereal Chemistry 52(6):801-12.

Dec. "Development, acceptability, and nutritional evaluation of high-protein soy-supplemented rice noodles for Thai children."

2336. Barnard, W.G. 1970. Health via the carrot and other vegetables. St. Catharines, Ontario, Canada: The Provoker Press and Paul S. Eriksson, Inc. xiv + 144 p. No index. 19 cm.

• ***Summary:*** This is apparently a reprint (with several words missing from the title) of the original edition (which Soyfoods Center has never seen), published in about 1939 by the Natural Foods Institute of Cleveland, Ohio. This edition contains 37 short chapters on a variety of subjects such as: What causes good health and poor health? Personal experiences of the author. The natural laws that govern health–God's simple rules of natural living. About vitamins and minerals. Various health problems or diseases and testimonials of cures and prevention. Good and bad foods, etc. Enemies of health: Coffee, alcoholic liquors, tobacco, denatured foods, tea, cocoa, cola drinks.

The introduction begins: "One of the most wonderful gifts God gave to man is a healthy body. It costs not one penny to preserve your health, but it may cost you a fortune, untold suffering, yes, even life itself, once health is lost... Primitive man sustained himself on natural foods..." (p. ix). "In our opinion some of the worst enemies man has today are High Pressure Advertising of Denatured foods, drugs, etc... Through the powerful medium of radio, billboard, magazine, and newspaper advertising, the public has fastened themselves upon the use of aspirins, alkalizers, narcotics, pills, laxatives, seltzers, cold cures,... Some of the largest buildings in our cities are the hospitals... Oh, what tragedy!" Sadly man fails to recognize that he has brought all these diseases upon himself (p. xiii).

Chapter 3, titled "My personal experiences with carrots and other fruits and vegetables" (p. 11) begins: "For the past 14 years the writer has been lecturing in food shows, trade shows, and expositions on the proper preparation of foods. I lectured at the Century of Progress in Chicago [Illinois] in 1933 and again in 1934, and at the Great Lakes Exposition in Cleveland in 1936 and again in 1937. I am the founder of the Natural Foods Institute in Cleveland, Ohio. He has proclaimed the health-giving carrot to thousands.

"Up to ten years ago, I had been living the average life, eating anything and everything, drinking coffee, tea, cocoa, and colas. The base of my meal was potatoes and white bread. I acquired an excessive weight of 212 pounds. Heartburn followed every meal." He then describes a typical day's diet, loaded with meats, sugar, fat and refined foods–and the agony that followed. He lost his pep and ambition, and was refused life insurance because of sugar in his urine. His family became very concerned. A doctor warned him of the possibility of immanent death, and "prescribed a diet of milk, bananas, lots of raw vegetables and vegetable and fruit juices, which I heeded" (p. 14). He began to feel better from the first day. "Today I feel like a new man... at the age of sixty-six my recovery is so complete that I am now enjoying exceptionally good health" (p. 15).

"With the return of spirituous liquors [in Jan. 1934], cocktail recipes and cocktail bars are prevalent all over the land. We all know that alcoholic cocktails are injurious regardless of the content as long as alcohol prevails... There are cocktails however, that can be made from Nature's vegetables and fruits that are healthful, exhilarating and bracing." "A new machine called a liquefier propelled by electricity liquefies vegetables in from one to three minutes and marvelous Health-Cocktails can thus be prepared at least once each day for the entire family" (p. 16-17). He also mentions the "liquefier" on p. 34, and p. 53 ("liquefying machine"). So this book was apparently not written mainly to promote the liquefier. Note: This liquefier would later become known as a "blender" and Barnard's company would later make and market the Vita-Mix or Vitamix, a powerful type of blender.

"Constipation is a disease known mainly to the civilized races" (p. 29). Barnard regularly cites and summarizes the writings or Dr. John Harvey Kellogg.

Essential for good health is a "pure, red blood stream created by natural foods, fresh air, sunshine, and exercise. Soy bean products, spinach, parsley, celery, cabbage and beets, as well as carrots help make good red blood. Eat a plate of salad made of three grated carrots together with orange juice dressing. Drink freely of carrot juice daily" (p. 49). "Carrot juice and other vegetable and fruit juices can be included in the diet of every child every day." In growing boys or girls, beware of "False Sugar Appetites."

"A strict vegetarian diet is used in the treatment of cancer with notable success..." (p. 88).

Like many in the 1930s, the author believes that an alkaline diet fights acidosis and promotes good health (p. 91). "Salt is a very harmful substance if not used in moderation" (p. 119).

Chapter 35, titled "Soy bean (the perfect protein food)" (p. 127-28) begins: "For centuries the Chinese have used the Soy Bean as a source of protein and fat and the necessary Amino acids that are found in flesh foods. In America the production of the soy bean is now running into millions of bushels and vegetable meat factories and milk factories are springing up all over the country.

"Henry Ford, who has done so much to educate the American people to the value of the Soy Bean, recently made the prophecy that the cow and hog were destined to oblivion and we will soon be eating our meat from the Soy Bean and drinking our milk from the Soy Bean. In other words obtaining our food direct from the soil first hand instead of second hand..." "It is the experience of the Natural Foods Institute that babies taken from the natural mothers milk thrive on soy bean milk and we have found no one allergic to

it.

"Soy Meat substitutes, Soy Milk, Soy Flour, Soy Cheese [tofu], Soy Coffee substitutes, canned green soy beans, canned soy beans in tomato sauce, soya macaroni are fast becoming popular among health minded people."

In conclusion (p. 133-34): "In writing this book I have consistently followed one line of reasoning. It is agreed to by many physicians, dieticians [sic, dietitians], and food scientists, that vegetables and fruits are absolutely essential for maintaining good health, natural balance, and physical well being. I have tried to help those who are afflicted by giving this information." I also want to help those who are healthy to stay healthy. At the end of the book is a food dictionary and lists of acid-forming foods (bad) and foods with an alkaline reaction (good). Address: Cleveland, Ohio.

2337. Binding, George Joseph. 1970. About soya beans: Wonder source of protein and energy. London: Thorsons Publishers Ltd. 64 p. No index. 18 cm. About series, no. 35.
• ***Summary:*** A superficial introduction containing many errors. Contents: 1. Beans in general. 2. History of the soya bean. 3. Content of soya beans. 4. About lecithin–vital for retaining youth. 5. The soya bean in the Far East: Cooking in China, soya sauce, bean curd or tufu [sic, tofu], bean sprouts, soya bean milk, candied beans, Japan, natto, miso, Japanese soya sauce. 6. American influence on the soya bean. 7. Industrial uses in America. 8. The soya bean and world food shortage. 9. Soya bean recipes.

On page 10 we read: "For over 5,000 years this tiny seed has been the staple food of certain parts of the East, including North China, Japan, Korea, and some areas of India. The ancient Yogis, who were among the world's first vegetarians, placed great faith in the soya bean as a supplement to their meatless diet."

Note: Soyfoods Center has been unable (Aug. 2004) to find any documentation for the statement that the ancient yogis consumed soya beans. The earliest date we have seen (Aug. 2004) for the soybean growing in India is 1798 (Roxburgh 1832). The earliest document we have seen concerning the soybean in India is by Beckmann (1798). The earliest document seen (Aug. 2004) for soy products in India (soy sauce) is by Locke (1679). Address: England.

• ***Summary:*** The 62-year old author is a well-known and skilled vegetarian runner. A popular book emphasizing a unique health regimen and yoga. Address: Brazil.

2339. FAO/WHO/UNICEF Protein Advisory Group. 1970. Lives in peril: Protein and the child. *FAO/WHO/UNICEF Protein Advisory Group, World Food Problems* No. 12. 52 p.
• ***Summary:*** Contents: The vulnerable group. Questions of quality and quantity. Safe in the womb. Born to hunger. A chance for life. The protein gap. World Council on Protein (incl. Saridele and PAG).

This book is about the effects of hunger and population growth on children. It advocates increased use of plant proteins. Examples of protein food mixtures that contain soya are (p. 35): Incaparina (Colombia, Mexico), Fortifix (Brazil). Pronutro (South Africa). CSM (United States). Page 36 states that soy flour is the least expensive food protein source ($0.11/lb) and beef is the most expensive ($4.44/lb). Cereals provide almost half of the world's supply of proteins.

2341. Hong Kong Soya Bean Products Co. Ltd. 1970. The Hong Kong Soya Bean Products Co. Ltd. 1940-1970. Kowloon, Hong Kong. Annual Report. 17 p. Summarized in Soybean Digest, July 1971, p. 30. [Eng; chi]
• ***Summary:*** Written in both English and Chinese, this important document contains an detailed history of the company, which celebrates its year of founding as 1940.

Photos show: (1) K.S. Lo, Chairman. (2) Directors and employees in 1940 outside original Causeway Bay factory. (3) Aberdeen factory, an early photo. (4) Employees in 1950. (5) Employees in 1960. (6) Illustration of Kwun Tong factory opened in 1962. (7) Pepsi Cola bottling line. (8) Vitasoy bottles being capped. (9) Quality control. (10) Loading of trucks by more than 20 fork lift vehicles. (11) A retail outlet and cooler; About 15,000 stores sell Vitasoy in the Colony. (12) More than 100 trucks distribute Vitasoy and Pepsi Cola in Hongkong. (13-14) Vitasoy and Pepsi signs are seen everywhere in Hongkong. (15) The board of directors in 1970. (16) The five "Lo's" instant rice dishes soon to be marketed. (17) Meat dicing machine. Packaged Foods Division capable of processing 8,000 lb of meat/hour. (18) Three "Lo's" cheese spreads soon to be marketed. (19) Part of production plant–Cheese division. (20) "Lo's" weaning food–first product developed by the Extrusion Foods Div. (21) Packaging machine–Extrusion Foods Div.

A bar chart shows that annual sales grew from $5.1 million in 1960 to $17.0 million in 1965, to $30.0 million in 1969. The number of employees grew from 352 in 1960 to about 630 in 1970.

In 1937 K.S. Lo, the founder, who happened to be on a business visit to Shanghai, attended a lecture by Julian Arnold, then Trade Attache to the United States Embassy in

Nanking. The subject was "Soybean–The Cow of China." Lo left inspired to do something about the widespread nutritional diseases then found in Hongkong. "He applied to the government for a license to manufacture soymilk in 1938. He received such a discouraging and unfavorable reply from the Sanitary Board that he was forced to give up his plan. However, a year later, Dr. P.S. Selwyn Clarke took over the chair of the Sanitary Board, and day by chance he came across Lo's application. He telephoned Lo and assured him that he would issue him the necessary license.

"Lo was overjoyed and immediately went to raise a modest capital of $18,000. He put up a small factory at Causeway Bay and the plant was opened in March 1940 by Sir Man-Kam Lo... Sales remained poor for the first two years. By the end of 1941, when the Pacific War broke out, the Company was almost on the verge of bankruptcy. The factory was occupied by the Japanese soon after Hongkong fell and Lo left for Free China [Taiwan]. In Sept. 1945 he returned to Hongkong and production was restarted in Nov. of that year." Lo started to market his product as a soft drink through soft drink outlets, instead of like milk. Sales grew rapidly. By 1949 the company had accumulated enough capital to buy a piece of land and build a new factory in Aberdeen. In the meantime the company had also acquired the Greenspot franchise. So in 1950, the Aberdeen factory was opened and used for the bottling of Greenspot while Vitasoy remained at the Causeway Bay factory. In 1952 the bottle was changed to a soft drink bottle that was sterilized. Sales skyrocketed. In 1957 the company gave up the Greenspot franchise and acquired the Pepsi Cola bottling franchise. In 1962 a new 6-story, 300,000 square foot factory was opened in Kowloon. In 1964 the company invented a powdered soymilk. That year Lo was invited to present a paper at the "International Symposium on Oilseed Protein Foods" in Japan. His concepts caught the attention of UNICEF and FAO, which had been trying to find ways of increasing protein consumption in developing countries. A joint venture with Monsanto proved unsuccessful and was terminated last year. Monsanto was given a license to manufacture a powdered soymilk concentrate.

The company has created three new divisions. The Packaged Foods Division will be introducing in the spring a line of precooked foods which are ready for the table after simply heating. They include Chow Fan, Bar-B-Q Spare Rib, Dim Sum, etc. The Cheese Division will be launching this year 3 types of soymilk-based cheese spreads: Chinese Fu-Yu, European Blue Cheese, and English Cheddar. The Extrusion Foods Division is developing a high-protein weaning food, and hopes eventually to branch out into snack foods and meat substitutes.

2342. Hunter, R. 1970. Iron nutrition in infancy. In: Report of the 62nd Ross Conference on Pediatric Research. Columbus, Ohio. See p. 22. *

2343. Kanthamani, S. 1970. Tasty recipes from soybean. Jabalpur, India: Directorate of Extension and USAID, Jawaharlal Nehru Krishi Vishwa Vidyalaya. 100 p. Illust. 28 cm.

• ***Summary:*** The majority of the recipes use "full-fat soy flour." Lime juice is the coagulant used for making tofu. Textured soy flour is not mentioned.

Contents: Definition of terms. Substitutions. Glossary. Introduction. 1. Soybeans are rich food: Findings of nutrition research, soybeans are good for certain patients (diabetics, those with nervous disorders, those with acidity in blood tissues needing to be alkalinised), soybeans must be properly processed, how to make full-fat soy flour [at home]. 2. Fried soy products. 3. Soy sweets. 4. Roasted soy flour. 5. Baking. 6. Dals and vegetables. 7. Soy milk and milk products (including homemade soy milk and homemade soy paneer {tofu, p. 88-89}). 8. Miscellaneous. Appendix.

Note: This is the earliest document seen (April 2013) that contains the word "paneer" (spelled that way) used in connection with tofu or soy, or that contains the term "soy paneer." Paneer is a soft, fresh dairy cheese, widely consumed in India. It is more expensive than tofu.

Chapter 1 begins (p. 11): "A large proportion of the people of India are vegetarians who obtain only a small part of their protein from animal products, principally milk and milk products. Oilseeds are an important source of protein

to such persons. Both groundnuts and soybeans are rich in protein. However the protein content of soybeans is higher than that of groundnuts and the protein of soybeans is nutritionally superior to the protein of groundnuts."

Note 1. This is the earliest English-language document seen (Dec. 2005) that contains the term "roasted soy flour."

Note 2. The page facing the title page announces a Hindi version of this book, by the same author, which will be published soon. Address: Extension Specialist, Home Science, Jawaharlal Nehru Krishi Vishwa Vidyalaya, Jabalpur, India.

2348. Schwarz, Richard W. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. Illust. Index. 22 cm. See p. 44, 120-23, 243. Also published in 1970 by Andrews Univ. Press (Berrien Springs, Michigan).
• ***Summary:*** This excellent biography of Dr. J.H. Kellogg was originally written as a 1964 PhD thesis at the University of Michigan. Although it contains no references or footnotes, and thus lacks the documentation and completeness of the dissertation, it is still (March 2009) the best biography of Dr. Kellogg. The author is a Seventh-day Adventist.

Contents: Preface. 1. The boy foreshadows the man. 2. A convert (the early health reform and vegetarian movements in America). 3. From teacher to doctor. 4. A man is what he eats. 5. Changing American habits. 6. Developing the Battle Creek Sanitarium. 7. Sanitarium ups and downs. 8. A torrent of words. 9. Variations on a boyhood dream. 10. The unwilling surgeon. 11. Products of an active mind. 12. All work, but little play. 13. What manner of man. 14. Father of forty-two children. 15. His brother's keeper. 16. The ties of fifty years are broken. 17. Food manufacturing and family quarrels. 18. New outlets for promoting an old program. 19. The last battles. 20. An epilogue.

Concerning meat substitutes (p. 121-23): "During the years in which he directed the experiments which led to the production of flaked cereals, Bromose, and Malted Nuts, Dr. Kellogg also attempted to develop a substitute for meat from plant sources. He traced his interest in such a product to conversations with Dr. Charles W. Dabney, noted agricultural chemist and former president of the University of Tennessee. When Dabney was serving as President Cleveland's Assistant Secretary of Agriculture [probably about 1893-1897], he had discussed with Kellogg the problem of supplying adequate protein for the world's rapidly expanding population. The men agreed that it was better economics to use grain for human food than to feed it to animals and then use them for food. The problem, as Dabney saw it, was to produce a grain product which would have all the nutritional value and taste appeal of meat.

"In 1896 Kellogg announced that he had perfected the ideal substitute for meat in Nuttose, a nut product which he could prepare to taste much like beef or chicken... The doctor's interest in new vegetarian meatlike protein foods continued active until shortly before his death. Among some of the more popular creations later developed in his laboratories were Protose, Battle Creek Steaks, and Battle Creek Skallops. Various combinations of nuts and wheat gluten composed the principal ingredients in the imitation meats...

"Kellogg's last major food discovery was an artificial milk made principally from soybeans. He was particularly enthusiastic over soy milk because it proved an excellent host for the *acidophilus* bacteria which the doctor believed needed to be implanted in the intestinal tract in order for it to function perfectly. Shortly after Kellogg had developed soy acidophilus milk, he chanced to read that Marie, smallest of the Dionne quintuplets, was suffering from bowel trouble. Immediately wiring the quints' physician, Dr. A. R. Dafoe, he announced he was sending him a supply of soy acidophilus milk, which he was certain would cure Marie's problem. About ten days later he received a letter from Dafoe which indicated that the soy acidophilus milk had indeed corrected the situation and asked that a continuous supply be sent to Callander, Ontario [Canada], for the five little girls."

In summarizing Dr. Kellogg's major accomplishments,

the author notes (p. 243): "His introduction of peanut butter added another widely accepted item to the American diet, and it probably did more to provide a market for peanuts than did the efforts of any other person, with the possible exception of George Washington Carver. John Harvey's development of meatlike products from nuts and legumes combined with wheat gluten has not only helped to enrich the dietary of thousands of persons who for ethical, health, or religious reasons choose to be vegetarians, but such high-protein foods also hold possibilities for supplementing the diet in countries where the supply of meat is insufficient to provide enough protein for a rapidly expanding population."

Concerning Granola: In the early 1860s, Dr. James Caleb Jackson of Dansville, New York, developed Granula, America's first successful cold breakfast cereal, made solely from wheat. For 40 years, Dr. Jackson operated "Our Home on the Hillside," probably the most successful of the "water-cure" institutions that blossomed in the 1850s. "In an atmosphere approaching that of a European spa, Jackson provided hydropathic treatments and a special diet for as many as a thousand patients a year." In about the 1870s, at the Battle Creek Sanitarium, John Harvey Kellogg developed a similar product, which he named Granola. It differed from Jackson's Granula in that it consisted of several grains, and longer baking dextrinized the starch more thoroughly. "At first he apparently had no thought of selling it. He intended it solely for sanitarium patients. Gradually, however, as former patients and others interested in dietetic improvement sent to the sanitarium for Granola, a small commercial business developed, and Battle Creek thus took its first step toward becoming the 'Breakfast Food Capital of the World.'... Shortly after the production of Granola for patients at the sanitarium began in 1877, Dr. Kellogg organized the Sanitarium Food Company as a subsidiary of the Battle Creek Sanitarium. Operated as an adjunct to the sanitarium bakery, for more than a decade it marketed a variety of oatmeal, graham, and fruit crackers and whole-grain cooked cereals–all originally devised to provide variety in the menu of sanitarium patients." All products were made from whole grains without artificial additives, and all underwent prolonged high-temperature baking designed to dextrinize their starch. "By 1889 the Sanitarium Foods had become popular enough to warrant the establishment of a separate factory; Granola alone sold at the rate of two tons a week." But when Dr. Kellogg wanted to expand the business, other sanitarium doctors refused to vote the funds. So Dr. Kellogg launched the private Sanitas Food Company, relying heavily on his younger brother, Will Keith, who had served as his personal accountant and business manager since 1880. John Harvey's new flaked cereals and vegetable meats became the property of the Sanitas Company. In mid-1906 Dr. Kellogg decided to change Sanitas' corporate name to the Kellogg Food Company. Then: "In the spring of 1921, to avoid further difficulties with Will Kellogg's manufacturing business [Battle Creek Toasted Corn Flake Company], Dr. Kellogg changed his concern's name to the Battle Creek Food Company."

Concerning flaked breakfast cereals: The first ones were developed from wheat jointly by Dr. J.H. Kellogg and his brother Will, in about 1894. Dr. Kellogg named their first successful wheat flakes product Granose Flakes, and on 31 May 1894 he applied for a U.S. patent on "Flaked cereal and process for preparing same." But in 1903 courts declared the doctor's patent invalid. Will Kellogg developed the product into a great commercial success, in part by adding sugar to the malt and corn combination from which he made the flakes. "The sugar greatly enhanced the cereal's taste appeal, and, as a result, the Corn Flakes business was booming by late 1905." Will convinced his brother, John Harvey, to relinquish Sanitas' rights to Corn Flakes, and in early 1906 Will established a separate Battle Creek Toasted Corn Flake Company with outside financing. John Harvey agreed not to take an active part in the new company's management. Six months later John Harvey decided to change Sanitas' corporate name to the Kellogg Food Company. The new company "began operating in July 1908, with Dr. Kellogg owning all but two of its fifteen thousand shares of stock. Not only did the new company absorb the old Sanitas Company, but it also leased the entire plant, machinery, goodwill, and business of the Battle Creek Sanitarium Food Company, thus bringing the manufacture and distribution of all the food products with which Dr. Kellogg was associated into one organization. By then John Harvey had decided that it would be a good thing to put out all company products under the trade name 'Kellogg's.'"

Will became very upset when Dr. Kellogg attached the family name to his new food company and products. Eventually a series of legal battles developed between the two brothers over this and other products. Will Keith Kellogg is discussed on pages 64, 118-20, 122, 144, 148, 192, 210-18, 224, 237-38.

On pages 193-208 are 16 pages of excellent black-and-white photos from the life of Dr. Kellogg, starting with a portrait of him and his wife in 1884.

Reprinted in 2006 by Review and Herald Publishing Association (Hagerstown, Maryland)–but with the new subtitle: "Pioneering health reformer." Adventist pioneer series. On the new cover, on a snipe in the upper right corner: "Father of the health food industry." Address: Andrews Univ., Berrien Springs, Michigan.

2349. Schwarz, Richard W. 1970. Products of an active mind: Peanut butter (Document part). In: Richard W. Schwarz. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. See p. 120-21.
• ***Summary:*** "Another important item in the American diet which Kellogg first introduced was peanut butter. Shortly after 1890, he had a quantity of roasted peanuts ground

up into a paste for use by patients who had difficulty in masticating nuts or peanuts (which are a legume) well enough to digest them properly. Later he decided that roasting caused the fat content to begin to decompose, irritating the digestive organs. From that time forward the sanitarium made its peanut butter from steam-cooked rather than roasted peanuts. Kellogg also devised a variety of nut butters, which he claimed were 'sweeter, more palatable, and more digestible' than regular butter. Making no attempt to secure patents which would let him control the production of either peanut butter or any of his nut butters, he announced that he believed that they were products that 'the world ought to have; let everybody that wants it have it, and make the best use of it.'

"During the decade following the appearance of peanut butter, Dr. Kellogg developed several other food products with a nut base. In 1896 he patented a product labeled 'Bromose,' which he claimed to be a vegetable equivalent of malted milk...

"At about the same time, John Harvey originated a similar product which he named Malted Nuts. Derived principally from peanuts and almonds, one could mix Malted Nuts with water to form a vegetable milk which Kellogg maintained looked 'exactly like milk, and tastes so nearly like it that it is a very satisfactory substitute.' He designed the latter product primarily for infants who could not tolerate cow's milk..." Address: Andrews Univ., Berrien Springs, Michigan.

2350. Singh, Rajeshwari (Mrs). comp. and ed. 1970. Soyahar: Indian recipes of soybean. Pantnagar, Nainital, India: U.P. Agricultural University. xxviii + 216 p. Illust. 25 cm.

• ***Summary:*** Contents: 1. Acknowledgment. 2. List of contributors. 3. Preface (by Singh). 4. General information: Introduction, how to soak soybeans, how to make soybean milk (at home or commercially), how to make soybean curd [tofu] (at home or commercially), how to make soybean flour (at home or commercially), cultivation of soybeans in India. Tables show: (1) The amino acid content of various vegetable and meat products. (2) Nutritive value of important legumes–groundnut, pigeon pea (arhar), chick pea (Bengal gram), soybean. (3) Chemical composition of some soybean products (seed, meal, flour, full fat flour, protein concentrate, isolate, textured food, beef analogue). (4) Nutritional value of the soybean compares with selected other foods. (5) Composition of mature green soybean [green vegetable soybeans, 70% water]. (6) Composition of dry soybeans. (6) Uses of vegetable protein products (soybean flours, soybean concentrates, isolated soy proteins, textured foods–incl. simulated meats). 5. Milk products (including homemade soy milk, homemade soy curd {dahi}, homemade soy cheese {paneer}). 6. Cereals and lentils. 7. Soups, curries, vegetables, chutney & raita. 8. Snack foods. 9. Indian sweets. 10. Cookies and confections. 11. Meat products (mostly meatless / vegetarian). 12. Useful cooking information. 13. Glossary: Hindi-English and English-Hindi. Contains 221 recipes. 4 p. of errata.

Photos show: On the cover, a young Indian girl drinking soymilk from a large glass (color). (1) The seven women who comprise Pantnagar's Soybean Utilization Team. (2) Mrs. D.P. Singh, honorary leader of the Team explain a fine point to Prof. Alvin Nelson. (3) Many Indian ladies in traditional Indian clothing standing behind a long table on which are soybean delicacies prepared in a conventional Indian kitchen. There are many color photos of prepared dishes. (4) A soybean plant with pods and leaves. Address: Pantnagar, India.

• ***Summary:*** Contents: Table of equivalent weights and measures. Cultural hints (for cultivating soybeans in India. Best varieties: Bragg, Hardee, Semmes). Soybean to fight protein hunger. Soy milk (how to make it at home), soy curd (dahi; how to make it at home, with cardamom), soy cheese (paneer; how to make it at home, curded with lemon juice), soy flour (whole, dehulled, ground in a flour mill), soy dal. Sweets. Salty snacks. Cookies and cakes. Soups-dals-curries. Glossary.

2352. Stobart, Tom. 1970. The International Wine and Food Society's guide to herbs, spices and flavourings. New York, NY: McGraw-Hill. 261 p. Illust. (part color). Index. 26 cm.

• ***Summary:*** For a book published in 1970, this book contains a great deal of original and useful information. Note that the word "seasoning(s)" does not appear in the title or the index. For many entries, the equivalent word in various European languages is given. In addition, for plants, the botanical name and family are usually given. Contents: Black and white illustrations. Colour plates. Introduction: The history of flavourings, the importance of flavourings, the origin of this book ("I come to this subject as a traveller who has lived in a number of different countries"), the scientific basis of flavouring, scientific, popular and foreign names, synthetic and harmful flavourings, flavouring in practice, growing herbs. An alphabet of herbs, spices and flavourings (The entries are in alphabetic order). Appendix.

Soy related entries: Harvey's sauce: "One of the old English sauces... In 1870, the courts decided there was no exclusive commercial right to the name 'Harvey's Sauce', as there are recipes for it dating back to at least the 17th century.

"Though there are many formulae, it is, in general, based on walnut and mushroom ketchup–flavoured with anchovy, garlic, and often soy sauce and vinegar. It has the

appearance of Worcestershire sauce, but is not hot although it does contain some chilli."

Soy [sauce]–Soya bean: "The soy bean is undoubtedly the world's most important legume." It can be eaten as a fresh bean [green vegetable soybeans], as a dried bean and as soybean flour. It is a leading source of cooking oil "much used as a substitute for olive oil in Spain." From it one can make a kind of milk [soymilk]. "In the East [East Asia], it is also fermented to make various kinds of curd and bean cheese. The soy product which concerns us is soy sauce."

It originated in China and "is thought to have been brought from China to Japan by a Buddhist priest about A.D. 500. In the West it became well known during the nineteenth century. It is one of the ingredients of Worcestershire sauce and Harvey's sauce."

Worcestershire sauce (p. 236-37): See also the original 1970 ed. published in England.

Also discusses: Ketchup, M.S.G., oil ("The word 'oil' is derived from 'olive'"), sesame (incl. tahina. "The pure oil is almost without taste or smell and does not easily go rancid in hot countries, which is one reason for its popularity"). Address: England.

2353. Varangoon, Pivan. 1970. Development of village scale beverage, coco-soya milk. Bangkok, Thailand: ASRCT Research Project No. 38/9, Report No. 7. 15 p. [3 ref]

• ***Summary:*** Contents: Foreword. Summary. Introduction. Materials and methods. Results and discussion. Ingredients cost. Conclusions. Acknowledgements. References. Appendixes I and II.

"Surveys in Thailand have shown that there is protein malnutrition in many places. Soybean is an important crop available in this country and a good source of protein." Coconut is very popular in Thai cookery for its good flavor.

Mr. Cyril Hunnikin of UNICEF suggested the ideas of combining soymilk and coconut and envisioned the possibility of making it on a village or home scale.

Two formulas for the soymilk are given: (1) Whole dehulled boiled soybeans are used. (2) The milk is extracted from whole soybeans using the "boiling water grind technique," developed by the Food Technology Group at Cornell Univ. (Geneva, New York) (Bourne 1970). Address: Tech. Research Inst., ASRCT, Bangkok.

2354. Weiss, Theodore J. 1970. Food oils and their uses. Westport, Connecticut: AVI Publishing Co., Inc. vii + 224 p. 2nd ed. 1983. [291* ref]

• ***Summary:*** Contents: Preface. 1. Chemical and physical properties of fats and oils (p. 1). 2. Commercial oil sources (p. 26). 3. Basic processing of fats and oils (p. 47). 4. Chemical adjuncts (p. 68). 5. Shortening–Introduction (p. 81). 6. Bakery shortenings (p. 97). 7. Frying shortenings and their utilization (p. 108). 8. Household shortenings (p. 126). 9. Margarine (p. 130). 10. Mayonnaise and salad dressings (p. 145). 11. Peanut butter (p. 177). 12. Confectionery coatings (p. 194). 13. Imitation dairy products (p. 214).

Discusses: Soybean oil and its fatty acid composition. "It is difficult to realize that soybean oil was hardly known in the United States prior to World War II. Since that time, the use of soybean oil has expanded in this country until its consumption for edible purposes amounts to 73% of all vegetable oils consumed." "Partially hydrogenated soybean oil is the major component of vegetable shortenings and ordinary margarines as currently formulated. Fully hydrogenated soybean oil crystallizes at the beta phase which limits its usage in this form (p. 27-28).

Hydrogenation, selectivity, and trans-isomers. Table 12 shows the composition of selectively and nonselectively hydrogenated soybean oil. Table 13 shows the fatty acid composition of hydrogenated soybean oil. Table 14 shows SFI [Solid Fat Index] values for soybean oil hydrogenated to various hardness levels and with a decrease in iodine value. "Contrary to popular opinion, ordinary margarines contain only a trace more of saturated fats than the oils from which they were prepared. They are harder because they contain higher levels of *trans*-acids which are, in fat, unsaturated." "Refractive index correlates very well with iodine value which is a good general method for expressing hardness of an oil. The relationship of iodine value to hardness depends on the type of oil in question. For example, hydrogenated cottonseed oil has a lower iodine value, perhaps by four units, than hydrogenated soybean oil of an equivalent degree of hardness" (p. 53-55).

Table 18 (p. 83) shows the "Hydrogenated soybean oil blend for margarine" with various iodine values, melting points, and SFI values.

"Liquid soybean oil develops a fishy odor on frying which is highly objectionable Soybean oil has been used in kitchens with exceptional ventilation to remove frying odors... Lightly hydrogenated and winterized soybean oils are available for frying purposes" (p. 114). Certain types of soybean oils can be used in frying potato chips (p. 120), or making oil-blanched French-fried potatoes (p. 123) or pressure-fried chicken (p. 123-24).

Solid shortenings: Most lard was used for making pie crusts and for frying. Some all-vegetable brands of shortening use as the base oil hydrogenated soybeans oil with an iodine value of 80-85. Some meat fat shortenings may contain tallow and hydrogenated soybean oil as well (p. 126-27).

Hydrogenated soybean oil with an iodine value of about 60 is widely used in margarine. Some brands of regular margarine contain 5-10% unhydrogenated liquid soybean oil "without apparent flavor problems." But it is normally too unstable to be used at high levels (p. 136). Bakery margarines are different from and more dense than bakery shortenings. They are used in baking cookies, pound cakes, and pastries. Lecithin is often omitted as bakery margarines

are not used for frying (p. 140).

Chapter 11 (p. 177-93) discusses peanut butter and includes a section titled "Soybean butter" (p. 182-83, soynut butter). Special attention is given to the method used by Pichel and Weiss to make "soybean butter."

The chapter titled "Imitation dairy products" (p. 214-18) notes: "There are two types of dairy-like products containing fats other than butterfat. 'Filled' products are made essentially from defatted milk, usually milk solids nonfat (msnf) or fluid skim milk, and a vegetable oil or fat. 'Imitation' dairy products contain no milk as such. In most cases, imitation dairy products are made from sodium caseinate, the major protein derived from milk sources." The sodium salt of soy protein (sodium soy proteinate) is also used in place of isolated milk protein.

Note 1: This is the earliest English-language document seen (Dec. 2012) that uses the term "soybean butter" to refer to soynut butter.

Note 2. This is the earliest English-language document seen (Aug. 2013) that uses the term "dairy-like" (or "dairy like") to refer to products resembling dairy products. Address: Research Chemist, USDA, Agriculture Research Service, Eastern Utilization Research and Development Div., Dairy Products Lab., Washington DC.

2355. Wiener, Joan. 1970. Victory through vegetables: With a section of recipes from the macrobiotic diet by Barbara Thralls. New York, NY, Chicago, Illinois, and San Francisco, California: Holt, Rinehart and Winston. ix + 163 p. Index. 22 cm.

• ***Summary:*** A vegetarian cookbook. The author, whose name on the title page is handwritten as Bordow, Joan Wiener, was born in 1944. Soy-related recipes include: Soybean milk and soy chaff [okara] (p. 15). Bean curd (from soybean milk) and instant bean curd (homemade, p. 15-16). Cream of rice and soybean soup (with "1 c. soybeans, cooked," p. 31). Soy nut salad (with soy nuts, p. 42). Bean curd sukiyaki (p. 49). Far Eastern dumplings (filled with cooked and mashed soybeans, p. 54). Macao noodles and vegetables (with bean curd and soy sauce, p. 56). Whole wheat role filled with bean curd (p. 59). Soybean tomato mix in stuffed peppers (with "2 c. soy chaff {please see p. 15"} [okara], p. 71-72). Soybean nuts (fried in butter, with salt, p. 93). Tahini miso spread (p. 136).

Note. This is the earliest English-language document seen (June 2013) that uses the term "soy chaff" to refer to okara.

2356. **Product Name:** Centrol CA (Emulsifier and Dispersing Agent for Calf Milk Replacer Formulating).
Manufacturer's Name: Central Soya Co., Chemurgy Div.
Manufacturer's Address: 1825 North Laramie Ave., Chicago, IL 60639. Phone: 312/237-8600.
Date of Introduction: 1970?
New Product–Documentation: Central Soya Technical Sales Bulletin. 1970? (Undated). LC 661. "The premium emulsifier and dispersing agent for calf milk replacer formulating." "Centrol CA is a lecithin product of Central Soya. When used at the recommended level of 2% calf milk replacer formulas, Centrol CA will:

"1. Insure prompt wetting and dispersing of the dry product when it is added to water.

"2. Maintain the dispersion in a uniform and stable form."

2357. *Detroit News.* 1971. George Washington Carver's right hand. Jan. 4.

• ***Summary:*** A biography of Austin W. Curtis, Jr., founder and director of the A.W. Curtis Laboratories at 454 Farnsworth in Detroit. A photo shows Curtis. Address: Michigan.

2358. Dimler, R.J. 1971. ED technology applied to commercial soy beverage. *Notes from the Director of the Northern Division* No. 1013. p. 1. Jan. 8.

• ***Summary:*** In Feb. 1969 Mr. J.E. Minesinger (chemist) and D.J. Keeler (manager) of Loma Linda Foods (Mt. Vernon, Ohio) visited the NRRC and learned about their process to inhibit the development of rancid flavors and odors in full-fat soy flour. Loma Linda adopted their process to inactivate lipoxygenase and now reports obtaining a highly significant improvement in the flavor of its soy beverage products.

"After receiving a sample of our new soy beverage, Mr. Minesinger came on Dec. 9 to discuss with Mr. Mustakas (ED = Engineering & Development) our research in more detail. Loma Linda is marketing 'Soyagen,' a spray-dried formulated soy milk powder selling at about $1.00 a pound. Each pound of water dilutes with water to make about 1 gallon of beverage. This new product is highly nutritious and is also available with a carob (chocolate-like) flavoring. Mr. Minesinger commented specifically about using our process to inactivate lipoxygenase to improve flavor quality." Address: Director.

2359. Harris, Jean. 1971. Engineered food is on the way! *News and Observer* (*Raleigh, North Carolina*). Jan. 17.

• ***Summary:*** Henry Ford's desire to make cloth from soy protein started the original research on "meat analogues." The technology for producing spun soy protein products developed from a process to produce casein fibers in Italy in the mid-1920s. A second group of "soy meats," called textured meat analogues, is made by an extrusion process applied to textured vegetable proteins made from soy protein isolates; one example is Bac-Os.

"Most of these soy meats are available only to the institutional trade. They are now in use in prisons, hospitals, and orphanages." Two manufacturers of such products are Loma Linda Foods and El Molino Mills.

In North Carolina a full soybean product, made from toasted soybeans, is sold under the name of Golden Nuggets; all Raleigh seems to be eating them.

Recipes are given for: Soya cake (with sifted soya flour). Soyanaise (with Soyamel soymilk). Golden nut pie crust (with soya flour). Soya cookies (with soya flour). Roasted soybeans (made from canned soybeans, either dry roasted at 350 degrees or deep fat fried). Puree of soybean soup (with sieved soybean pulp). Address: Food editor.

2360. Brozan, Nadine. 1971. If you've never seen a soybean before... *New York Times.* Jan. 23. p. 18.
• ***Summary:*** Denis Barber owns about 75,000 bushels of soybeans at any given time–yet he's never seen a soybean. As president of General Arbitrage, a New York commodity trading company, he buys and sells commodity futures. The soybeans he purchases are usually resold before the date he is required to take delivery; if they are not, they end up in a warehouse in Chicago.

In the financial world, the soybean is known as "the Cinderella crop." It contains more protein than any other vegetable–and costs less. Yet in America, soybeans are not widely available in food stores–except in health food stores and Chinese markets. Although supermarkets do not stock the bean, they do sell many products, ranging from salad dressings to pet foods, that contain soybean oil, meal, or flour. They also carry soy sauce and Worcestershire sauce. Babies allergic to cow's milk will probably be given soy milk. Observers of orthodox [kosher] Jewish dietary laws, which do not permit the consumption of meat and dairy products at the same meal, are now able to enjoy imitation sour cream, ice cream, or steaks–each made from the soybean. According to Mr. Barber, less than one half of one percent of the crop is used for human nutrition; its main use is as a meal for livestock.

Dr. Joseph J. Rackis, principal chemist for the Northern Marketing and Nutritional Research Division of USDA's Agricultural Research Service in Peoria, Illinois, agrees that most soybeans are processed into oil and meal. And even if more were available for sale as food, most people don't like their taste–according to a spokesman for General Foods.

The "future of the soybean probably rests more in what it can become than what it is." The food industry, scientists and nutritionists believe that the wave of the future lies in the simulation of foods from soybeans. Already they are transforming soybeans into "hamburgers, canned stews, bacon strips, hors d'oeuvre dips, chow mein, pasta, sea food, and a wide range of frozen dinners approximating ham, chicken and beef." A photo shows soybeans in a plastic bag.

2361. Robinson, W.B.; Bourne, M.S.; Steinkraus, K.H. 1971. Development of soy-based foods of high nutritive value for use in the Philippines. *National Technical Information Service. U.S. Department of Commerce.* PB-213-758. iv + 100 p. Jan. 31. 28 cm. (Washington, DC). Agency for International Development, Contract AID/csd-1815. [29 ref]
• ***Summary:*** Contents: Introduction. Results in the Philippines: Personnel, the Food Science pilot plant, laboratory studies on soy milk, pilot plant studies on soy milk production, acceptability of soy milks produced in the pilot plant, effect of alkali soaks and alkali addition on flavor acceptability of soy milks, variety trial, tests on soy milk by commercial firms, storage stability of soy milk, other soybean products, quick-cooking mungo beans, coconut milk beverages, coconut protein studies, concentrated coconut water, the future of soymilk research at Los Baños, extension activities. Engineering studies: Grinding, liquid-solids separation, spray drying, concentration of soy milk. Nutritional studies: Complementary and/or supplementary effect of various food proteins, effect of soaking soybeans in NaOH [sodium hydroxide] solutions on flavor and nutritional value, flavor and nutritional attributes of roasted soybeans, utilization of the residue from soy milk manufacture, nutritional value of several soybean varieties. Chemical and physical investigations: Identification of a volatile component in soybeans that contributes to the raw bean flavor, effect of processing methods on off-flavors of soybean milk. Volatile flavor components of coconut meat, effect of physical and chemical processing factors on the redispersibility of dried soy milk proteins, evaluation of monosaccharides, disaccharides, and corn syrups as dispersants for heat-processed dried soy milk proteins, removal of oligosaccharides from soy milk by an enzyme from *Aspergillus Saitoi*, an enzymatic process for a nutritional beverage based on soybean protein and lemon juice. Address: Dep. of Food Science and Technology, New York State Agric. Exp. Station, Geneva, New York.

2362. Bourne, Malcolm C. 1971. Production, acceptability, and nutrition aspects of soy beverages in the Philippines. Paper presented at the meeting on "Potentials for soy beverages in the Philippines" U.P. College of Agriculture, January. 11 p. [1 ref]
• ***Summary:*** An excellent summary, with some history. "About ten years ago the Food Technology Group at Cornell University [Geneva, New York] under the leadership of Dr. D.B. Hand became interested in the soybean as a rich source of low-cost protein. They quickly came to the conclusion that soymilk provided a god vehicle to bring a nutritious, low cost protein food to people in developing countries but that the bad flavor of soymilk was the principal obstacle to its widespread acceptance. A lengthy study of the chemistry, biochemistry and nutritional value of the soybean was initiated. In 1967 the Office of the War-on-Hunger of the U.S. Agency for International Development supported this research program with a grant which enabled the tempo of the research to be greatly increased. When Dr. Hand retired, Dr. W.B. Robinson became the Director of the team working

on this project.

"One member of the Cornell team, Dr. K.H. Steinkraus, who was Associate Director of the project, came to Los Baños in 1967 and initiated an important section of the research program, namely to develop a product under Philippine conditions that was highly acceptable to the Philippine palate." A "research project was started and a pilot plant for making soymilk was established in temporary quarters in the Agricultural Chemistry building. Dr. Steinkraus and his group conducted acceptability studies with 6th grade Filipino children in several schools in this area. In this study they found that it was necessary to add sugar to the soymilk in order to make it acceptable to Filipino schoolchildren and that 7% sugar was the optimum level. They found that the addition of vanilla flavoring improved acceptability Ninety five per cent of the children said they liked a formulation containing 7% sugar with added vanilla flavoring. The addition of chocolate flavoring increased acceptability to 96%." The Steinkraus group "also found that 5% coconut milk incorporated into soymilk containing 9% sugar made a good product with a 96% acceptability. Soymilk frozen in plastic bags in 60 ml. portions was very acceptable to the children as an ice candy."

"Dr. Bourne took Dr. Steinkraus' place as leader of the Los Baños group when Dr. Steinkraus returned to Cornel in June 1969 and continued the research program..." Address: College of Agriculture, Univ. of the Philippines, Laguna, Philippines (Visiting Prof.).

2363. Fries, Joseph H. 1971. Studies on the allergenicity of soy bean. *Annals of Allergy* 29(1):1-7. Jan. [17 ref]
• ***Summary:*** "Soy bean sensitivity is not uncommon and may imply cross sensitivity to other legumes. The soy bean may be carried more than a mile from its source, thus increasing the list of air pollutants." Provides additional evidence of a high incidence of soy sensitivity in older children with atopy on the basis of intracutaneous tests. Thus soy cannot be regarded as hypoallergenic in humans. Address: Dep. of Pediatrics, Nassau Hospital, Mineola, New York.

2364. Lo, Kwee-Seong. Assignor to Hong Kong Soya Bean Products Company, Ltd. 1971. Process for preparing a soybean beverage. *U.S. Patent* 3,563,762. Feb. 16. 5 p. Application filed 2 Aug. 1965. [5 ref]
• ***Summary:*** This invention relates to the production of a soybean beverage from a full-fat soybean powder. The powder, water, and a stabilizer are mixed and then homogenized at 8,000 lb per square inch to form a beverage, which may additionally be centrifuged and homogenized at a lower temperature.

To make the powder, soybeans are cleaned, toasted, quickly cooled by currents of cold air causing separation of the cotyledons and hull, and dehulled (dressed). The hulls and cotyledons are separated by aspiration, then the cotyledons are flaked in a hammermill. The flakes are cooked in a Wenger expansion cooker. Within the cooker they are preconditioned with steam. The resulting full-fat soy flour does not have any objectionable bitterness. The pellets are again toasted to reduce the moisture content to 3.5 to 4%, then rapidly cooled and ground in an Alpine mill to 270-300 mesh.

In making the beverage, homogenization should precede centrifugation. The stabilizer is carrageenan from the seaweed *Chondrus crispus* (Irish moss). The basic raw materials are water 50 gallons, soybean powder 67 lb, sucrose 50 lb, carrageenan 0.55 lb, refined soybean oil 20 lb, table salt 0.63 lb, sodium bicarbonate 0.32 lb, vitamin A 5.81 gm, vitamin B-1 1.31 gm, vitamin B-2 1.56 gm, niacinamide 14.0 gm.

The resulting soy beverage, which contains insoluble carbohydrates, contains 3.0% protein, 3.1% fat, 5.0% sucrose, 1.7% other carbohydrates, 0.4% ash, and 86.8% water.

To produce a soybean beverage with no insoluble carbohydrates, 80 lb of soybean powder were used, 30% of the coarse particles were centrifuged out, and no carrageenan was used. The beverage contained 2.4% protein, 2.7% fat, 5% sucrose, 1.0% other carbohydrates, 0.3% ash, and 88.6% water. The pH was 6.8. Address: Hong Kong.

• ***Summary:*** The author (and many other people she knows) prefers the taste of Granogen to that of Plamil as an alternative to cow's milk. Granogen, however is not made in Britain.

On a different subject, she finds sex outside of marriage to be a glorious and rewarding experience. Address: St. Pancras, London, W.C.1, England.

2366. *Prevention* (*Emmaus, Pennsylvania*). 1971. Milk is not for grown-ups: Most people can't tolerate it and nobody needs it. Why does our government insist on giving it to people who can't use it? Feb. p. 193-94, 196, 201-04. [2 ref]
• ***Summary:*** This article is based on articles in two medical journals: (1) "Adult milk intolerance" in *Medical Digest* (Aug. 1967) and (2) an editorial by Dr. Robert D. McCracken (an anthropologist at the Univ. of California School of Public Health) in the *J. of the American Medical Association* (28 Sept. 1970).

The first is about a man who was unable to sit through the Sunday morning church service without getting "sudden abdominal pain and urgent diarrhea." He was concerned that he might need psychiatric care. However his doctor, after an investigation of his eating habits, found that it was the several glasses of milk that he drank only on Sunday morning before church were the cause of his troubles. He was lactose intolerant. The problem was easily solved.

"Elimination of milk also eliminated the need for psychiatric care."

In the 2nd, Dr. McCracken believes that before the domestication of dairy animals some 9,000 to 11,000 years ago, humans–like all other animals–became lactose intolerant in early childhood, after they were weaned. However in ancient dairying cultures, individuals with the inherited "abnormality" of high lactase production beyond childhood, may have been favored for survival by natural selection. Dr. McCracken calls for "an immediate curtailment of all efforts directed at the feeding of lactose-rich foods to lactase-deficient adults,..."

During the mid-1960s, when the scientific literature reflected a growing awareness that large numbers of people worldwide cannot tolerate milk, there was a debate over whether you can "teach" your body to produce lactase by slowly increasing consumption of dairy foods. The consensus answer was "No."

For those who give up milk or never have consumed it, there are many other good sources of calcium. These include a bone meal supplement, or calcium rich foods such as collards, kale, turnip greens, egg yolk, molasses, soy beans, soy flour, etc.

2367. *Times of India* (*The*) (*Bombay*). 1971. Cheeseless cheese. March 7. p. 8.

• ***Summary:*** Last year, according to a report recently published by the U.N. Conference on Trade and Development, the growth rate of food production was 1% less than the population growth rate. Thus, "all the gains of world food production were eaten up by the population explosion."

Together with the intense worldwide efforts to increase food production are parallel efforts to find inexpensive, nutritious, and tasty substitute foods. Many of these are based on the soya bean, a high quality, low cost source of vegetable protein. Americans, for example, now enjoy meatless turkey roast (complete with a plastic wishbone), milkless milk, and soya sausage.

But will this solve the basic problem? How can people who eat traditional diets in developing countries be coaxed into trying something new–such as soya milk or cheeseless cheese. Perhaps, by making it seem fashionable, exotic, or one of the "in" foods enjoyed by "with it" people.

2368. "The Times of India" News Service. 1971. Crash plan to increase soyabean output. *Times of India* (*The*) (*Bombay*). March 19. p. 11.

• ***Summary:*** Pantnagar, March 18–When Mahatma Gandhi tried to popularise soyabean production and utilization in 1932, he was about 30 years ahead of his time.

Agricultural experts, who have now revived Gandhi's soyabean movement, emphasise that soyabean provides the answer to malnutrition, especially among young children.

According to one soyabean specialist at the Uttar Pradesh Agricultural University here, 'soyabean can effectively close the protein and edible oil gap in India.'"

All that is needed for a crash programme to increase soyabean production to begin is a soyabean processing plant with a capacity of about 250 tonnes a day. An American firm has said it would be willing to collaborate with an Indian partner in setting up such a plant, which would cost about Rs. 3 crores (30 million rupees). The plant would also have export potential.

One can make almost anything from the soybean–soymilk, milk shakes, soups, "kabab" and "Texgran" curry (which tastes very much like chicken curry), and chicken pulao.

Atta is the main ingredient of most varieties of Indian, Bangladeshi and Pakistani bread. It is a whole wheat-flour made from hard wheat grown across the Indian subcontinent. Flatbread made from atta, such as chapati, roti, naan and puri, are an integral part of Indian cuisine. Since hard wheats have a high gluten content, doughs made from atta flour are strong and can be rolled out very thin. Production of atta in India is now about 800,000 tonnes a year. It could be fortified by adding about 5% "soyflour" to make a protein-rich bread.

2369. Anderson, Earl V. 1971. The new priorities. Food: Preventing hunger and malnutrition. *Chemical and Engineering News* 49(10):19-22. March.

• ***Summary:*** This special report looks at new opportunites for chemists and chemical engineers in three areas: food, shelter, and health. Technology can help in solving the problems of world hunger and malnutrition. FAO "estimates that 2 billion people are hungry or undernourished, including several million Americans." USDA's Aaron M. Altschul believes that food technology, properly directed, can help solve these problems. In addition to the Green Revolution, there has been "the other Silent Revolution of this century,"... the explosive growth in our knowledge of foods and nutrition, and in the ability to engineer foods.

The emphasis has been on protein foods "because protein deficiency is the most universal nutritional problem... Of the 82 million tons consumed in the world, only 25 tons [31%] come from animal sources." Most of the animal protein is consumed by the 1 billion people in developed countries.

Protein deficiencies can be overcome by fortifying grains or natural protein concentrates–as from soybeans–with amino acids such as lysine. Or we can use new techniques for converting "inexpensive vegetable proteins into textured foods that look and taste much like the more expensive animal foods. Products have been made from vegetable protein that closely resemble beef, chicken, seafood, ham, and bacon. They cost less than the real thing yet they are nutritious and attractive. Such products from textured soy already are being widely marketed in the U.S., western

Europe, and Japan. In time they may become new protein sources in the less-developed countries.

"In fact, AID now is sponsoring studies of textured products in less developed countries. Archer-Daniels-Midland is conducting one in Thailand and General Mills in Pakistan."

But what should we call these new products? You can't call it meat because it isn't. "You can call it soybeans because nobody would buy it. These products have been called animal protein food analogs... But that's not a marketable name either. The name that industry and the Government seem to be settling on is textured protein products (TPP)." The FDA has proposed a standard for TPP.

"Vitasoy, a soybean soft drink that has been sold in Hong Kong for 25 years, has captured 25% of the soft drink market there." Based on that success, "Monsanto is marketing a soy protein beverage called Puma through a franchiser in Guyana. It is now the second most popular soft drink in the country (Coke is first). Coca Cola, meanwhile, is marketing a fruit-flavored beverage, Samson, in Dutch Guiana (Surinam).

"So far, soybeans are the major source of vegetable proteins used in food fortification and TPP products."

Also discusses: Cottonseed protein, proteins from peanuts, sunflower, and safflower seeds, fish protein concentrate (FPC), and single-cell protein from petroleum, computer controlled food processing lines, etc.

Photos show: (1) A line spinning soy protein fibers in a liquid bath, tended by a man in a white hard hat. (2) A black boy drinking Puma in Guyana. (3) "British Petroleum's protein-from-petroleum plant at Grangemouth, Scotland." It produces 4,000 tons/year of animal-grade protein by fermentation of Candida yeasts on a petroleum substrate. Address: Senior Editor, New York City.

2370. **Product Name:** Samson (Whey Beverage).
Manufacturer's Name: Coca Cola Co.
Manufacturer's Address: P.O. Drawer 1734, Atlanta, GA 30301.
Date of Introduction: 1971. March.
New Product–Documentation: Anderson, Earl V. 1971. "The new priorities. Food: Preventing hunger and malnutrition." *Chemical and Engineering News* 49(10):19-22. March. "Coca Cola, meanwhile, is marketing a fruit-flavored beverage, Samson, in Dutch Guiana (Surinam)." Note: Samson is a soft drink, though probably NOT fortified with soy protein.

S.M. Weisberg. 1972. Food Technology. Sept. p. 62-68. "Developing and marketing low-cost foods protein foods in developing countries."

Soya Bluebook. 1980. p. 50-51. "Georgia, Atlanta 30301–Coca Cola Co., P.O. Drawer 1734. Phone: 404-897-2121. Soymilk beverages for Brazil, Mexico and Surinam. Brand names: Samson and Saci. Note: This entry is misleading. See talk with Gene Tally, below.

Talk with Gene Tally of Coca-Cola Co. 1982. April. Gene is quite sure that none of the early Samson products contained soy. The trademarks say that the protein source can be whey or soy but all have been whey. The Coca-Cola Co. has never marketed a soy based beverage outside of Brazil–where they marketed Saci.

2371. Martin, Roy E. 1971. Edible soy proteins: Challenge and opportunity. *Soybean Digest Blue Book Issue.* p. 26-30, 32-33. March. [6 ref]
• ***Summary:*** Contents: Introduction ("A new frontier is being forged in food technology with the development of soy protein for human consumption"). The proteins defined (Soy flour, flakes, and grits). Types of soy flour (Full-fat, low-fat, defatted). Soy proteins. The concentrates. The isolates. The spun proteins. Textured proteins. Soy milk. Soy beverages. Blended foods (USDA CSM, WSB). Special products for overseas (Puma, Sobee {"A U.S. full-fat soy flour product nutritionally adequate to support infant growth, introduced in Taiwan"}, Cerealina, Pro-Nutro, Saridele, Saci, Nutresco, Nestle's soy-corn flour marketed in Brazil). How large is the market? Further reading.

Soy milk: "Soy milk has been used for centuries in the Orient for infant feeding [sic] and other purposes... the process has been refined and its application greatly extended in the Far East by Dr. H.W. Miller and others. K.S. Lo [of Vitasoy, Hong Kong] has been bottling soy milk as a nutritious low-cost soft drink and selling many millions of bottles yearly." In 1959 the World Health Organization built a $1 million soy milk plant in Indonesia [to make spray-dried Saridele]. In the Western soy protein [isolate] is used in soy-based infant forumlas. "It is also used by adults with allergies, diabetes, or who for other reasons prefer" a non-dairy milk.

Tables show: (1) New Protein Food Program of the Agency for International Development (an independent federal agency). Five columns show: Country. U.S. company. Date of product [launch]. Product description & contract [no product names are given]. Raw materials. Of the 11 products in 7 countries, eight contain soya. They are: Brazil, Krause Milling Co., March 1967. Brazil, Monsanto, June 1967. Brazil, Swift, April 1967 (two products). Kenya, Del Monte, June 1968. Pakistan, General Mills, June 1968. Thailand, ADM, Aug. 1968. India, Swift, July 1968.

(2) Protein cost per pound of various foods:
Beef (retail) $4.44.
Chicken (dressed) $1.50.
Wheat flour $0.60.
Bulgar wheat [bulgur] $0.47.
Peanut meal (defatted) $0.43.
Dry skim milk [nonfat dry milk] $0.40.
Wheat (whole) $0.30.
Cottonseed flour $0.17.

Fish meal (food) $0.14.

Soy flour (food) $0.11 (from Bean 1966).

(3) Efficiency of land use for protein production. Three columns give the name of the crop or animal, average yield per acre, and pounds of protein per acre.

Soya bean, 24.2 bu, 508 lb.

Other legumes, 20.7 bu, 293 lb.

Maize, 64.2 bu, 323 lb.

Wheat, 25.1 bu, 180 lb.

Milk, 2,780.0 lb, 97 lb.

Beef, 342.0 lb, 58 lb.

Note: No earlier source of this table can be found; it is not in Bean (1966).

Photos show: (1) Sukiyaki made with textured vegetable protein. (2) A stable whip of soy protein being ejected from the spout of a pressurized can onto the top of a parfait dessert. (3) Defatted soy flakes, which are the raw material for defatted soy flour, special soy protein, soy protein concentrate, isolated soy protein. Address: General Manager, Vegetable Protein Products, Swift Chemical Co.

2372. Sellars, William A.; Halpern, S.R.; Johnson, R.B.; Anderson, D.W., Jr.; Saperstein, S.; Shannon, B.S., Jr. 1971. New growth charts: Soy, cow, and breast milk comparison. *Annals of Allergy* 29:126-34. March. [16 ref]

• ***Summary:*** Growth of 1,583 infants from birth to one year is reported and new infant growth charts are presented. Supported by a research grant from Borden, Inc. Sub-groups by diet (breast, cow, and soy milk) and family history of allergy were compared using a computer. No differences were observed between the growth of those in the various sub-groups. However, compared to Iowa Growth Norms, these babies were taller.

"Babies were placed in one of three categories according to family history for allergy. It was considered to be immediately positive for allergy if siblings, half-siblings, or parents had a history of atopic disease, such as asthma, allergic rhinitis, atopic dermatitis, allergic gastroenteritis, or hives; remotely positive if atopic disease occurred in grandparents, aunts, or uncles but not cousins, and negative if there was no history of atopy." Address: Dep. of Pediatrics, Univ. of Texas Southwestern Medical School.

2373. Bayless, T.M.; Paige, D.M.; Ferry, G.D. 1971. Lactose intolerance and milk drinking habits. *Gastroenterology* 60(4):605-08. April. [7 ref]

• ***Summary:*** "Current evidence indicates that low lactase levels are the norm in the majority of adults in most populations in the world. Notable exceptions are Scandinavians and those of northern European extraction." Address: Dep. of Medicine, Johns Hopkins Univ., Baltimore, Maryland 21205.

2374. Sugimoto, H.; Van Buren, J.P. 1971. Evaluations of monosaccharides, disaccharides and corn syrups as dispersants for heat-processed dried soy milk proteins. *J. of Food Science* 36(2):346-48. March/April. [11 ref]

• ***Summary:*** Addition of some of these substances to heat-treated soy milk before drying improved redispersibility of resultant dried products. Address: New York State Agric. Exp. Station, Cornell Univ., Geneva, New York 14456. Sugimoto is presently with Kikkoman, at Noda, Japan.

2375. **Product Name:** Neo-Mull-Soy (Infant Formula Based on Soy Protein Isolate) [Ready to Feed, or Concentrated Liquid].
Manufacturer's Name: Syntex Laboratories.
Manufacturer's Address: 3401 Hillview Ave., Palo Alto, CA 94303.
Date of Introduction: 1971. April.
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88.

Syntex. 1990. Press Backgrounder. In April 1971 Syntex acquired the Neo-Mull-Soy and Cho-Free infant formulas from The Borden Company. The acquisition included a primary manufacturing facility at Elgin, Illinois. In March-April 1978 Syntex ceased adding salt (sodium chloride) to the products out of concern that the sodium levels were too high. In July-August 1979 Syntex learned of an illness alleged to be related to the Use of Neo-Mull-Soy and Cho-Free. In Dec. 1980 Syntex ceased production of infant formulas due to lack of demand.

Talk with Linda Thomas, Manager of Media Relations at Syntex. 1990. Dec. 18. The only product Syntex bought from Borden was Neo-Mull-Soy. It was an unfortunate product and the lawsuits are still going on. It is still not clear that Neo-Mull-Soy caused the problems that many parents claim it did. A number of articles (see Michael Malloy's in Pediatrics) have been published in scientific journals vindicating Neo-Mull-Soy. Syntex is a research oriented drug company. Their best-selling product is Naprosyn (naproxen), America's largest selling prescription medicine for arthritis, which has been on the market for about 15 years. The second best seller is Anaprox. In 1944 Syntex, S.A. was founded in Mexico. The name was drawn from the word "synthesis." Several of the founders were Hungarian. Its initial work was with steroid hormones, especially progesterone, which were then used in oral contraceptives. Originally the hormones were extracted from the root of the barbasco yam plant, but soon they were synthesized.

According to the 1990 company brochure titled "Syntex Corporation:" In 1957 Syntex was incorporated in Panama, and in 1958 the company became publicly owned. In 1964 Syntex introduced its own branded oral contraceptive, Norinyl. U.S. administrative/research headquarters were established in Palo Alto, California. In 1972 Syntex introduced Naprosyn (naproxen), a non-steroidal anti-inflammatory drug. In 1981 Syntex was listed on the New

York Stock Exchange. In 1987 Syntex sales reached $1,000 million.

2376. Hansen, Barbara. 1971. Interest in Asia carries into Kitchen. *Los Angeles Times.* May 20. p. J16.
• ***Summary:*** Rosemary Brissenden, an anthropologist from the Australian National University at Canberra, has written a book (a work of love) titled "Joys and Subtleties," about the foods and cookery of Southeast Asia, especially Indonesia, Malaysia, Singapore, and Thailand. In 1957 she "spent three months in Java and Bali with a student delegation from Australia." They lived with Indonesian families and ate their food. The recipes in her book "are as authentic as close observation of cooks at work could make them." Moreover they call for the same ingredients used by the Indonesian cooks, such as Javanese soy sauce, coconut milk, laos [a root], lemon grass, trasi, tamarind, and curry leaves. These are now available in most big cities, mainly at Chinese markets.

Ms. Brissenden and her husband are just finishing a six month stay in Los Angeles.

2377. *Times of India* (*The*) (*Bombay*). 1971. Jagatjit Industries Limited: Speech of the chairman and managing director, Mr. L.P. Jaiswal. Company meeting. May 28. p. 4.
• ***Summary:*** He proposes to promote [establish] a company for the processing of soyabeans. There is protein shortage in India ad the production of Soyabean based products would have great potential. In the United States, soyabean has been a very beneficial crop to producers and Indian farmers are thinking along similar lines. During the next three years, he predicts that soyabean cultivation in India will be extended to near ten lakh [1 million] acres. Processing these soyabeans will yield Soya-Oil and Soya-flour [sic, defatted soyabean meal]. "Soya-flour will form raw material for the production of Soya Protein Concentrates, Isolates and formulated products like Infant weaning foods, High Protein foods, Soya milk and other beverages." This project will cost about Rupees three crores [30 million rupees]. A portrait photo shows Mr. L.P. Jaiswal.

2378. Mustakas, G.C.; Albrecht, W.J.; Bookwalter, G.N.; Sohns, V.E.; Griffin, E.L. Jr. 1971. New process for low-cost, high-protein beverage base. *Food Technology* 25(5):80-84, 86. May. [18 ref]
• ***Summary:*** Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "protein beverage base" or the term "high-protein beverage base." These terms probably refer to soya milk. Address: Northern Agricultural Research Service, Peoria, Illinois.

2379. Wenger Manufacturing. 1971. Extrusion cooking of soy foods (Ad). *Soybean Digest.* May. p. 63.
• ***Summary:*** "Wenger Extrusion Cooking Systems offer a whole range of profitable and industry-proven products to the food processor:

"Textured vegetable proteins from defatted soy flours or flakes, protein concentrates or isolates, can be produced as chewy bits that have great market potential as meat extenders in soups, stews, hamburger, gravies, chili, meat loaf, dry soup mixes, sausages, wieners, curry, pot pies, tacos, enchiladas, stuffing, etc.

"Full fat soy can be cooked in such a way by extrusion cooking methods to control its growth inhibitors... these full fat soy proteins may be reduced to a flour for use in bread, pasta, infant foods, soy milk, soft drinks, allergy foods, and vegetarian diets."

"Precooked, cereal based, protein enriched foods." A photo of soybeans forms the top and right borders of this ad.

Note: This is the earliest document seen (July 2008) concerning textured soy protein concentrates. Address: 1807 Federal Reserve Bank Building, Kansas City, Missouri 64106.

2380. Chandrasekhara, M.R.; Ramanna, B.R.; Jagannath, K.S.; Ramanathan, P.K. 1971. Miltone vegetable toned milk. Use of peanut protein expands supply of milk. *Food Technology* 25(6):32-34. June. [13 ref]
• ***Summary:*** Discusses only peanut milk, not soymilk. CFTRI (Mysore) has developed a process for making neutralized spray-dried peanut protein isolate (92% protein). The isolate is also produced and distributed as a wet paste. Toned and double toned milks are made by mixing the reconstituted product with buffalo or cow's milk to yield toned milks containing either 3% fat and 8.5% nonfat solids or 1.5% fat and 9.0% nonfat solids. This can extend the present inadequate India dairy milk supply for the 100 million children under 6 years of age. Address: Protein Technology Discipline, CFTRI, Cheluvamba Mansion, Mysore–2A, India.

2381. Tabuchi, Ichiro. 1971. Saishoku-shugi no riron-teki haikei: Shokubutsu-sei tanpaku shokuhin kaihatsu ni okeru shûkyô-teki tachiba ni tsuite [Theoretical background on vegetarianism: The religious viewpoint in the development of vegetable protein foods]. *Shokuhin Kaihatsu* (*Up-to-Date Food Processing*) 6(6):31-35. June. [5 ref. Jap]
• ***Summary:*** Contents: Seventh-day Adventists. Ellen G. White's viewpoint. Seventh-day Adventist food enterprises and their purposes. Popularization of Soyalac made by San-iku Foods (Shokuhin) in Japan. The campaign for quitting tobacco in 5 days at the Adventist Tokyo Hospital (*Tokyo Eisei Byoin*).

The section on the popularization of Soyalac states: "Although in a recent issue of *Shokuhin Kaihatsu* magazine, soymilk was described as an illusory food (*maboroshi*), at least for us, it is a very real food, because San-iku Shokuhin has been making soymilk for the last 12 years and providing

it for our school dormitory cafeteria meals. We have gotten good results in both taste and nutrition. With this experience and Loma Linda's formula and technique (they make formulated dairylike [chôsei] soymilk), Neo-Soyalac was born. It is a superior, nutritious infant formula.

"Soyalac was developed by Dr. Harry W. Miller, who was the world's leading authority in the field of soymilk. He spent half a century researching and developing Soyalac. It started to be produced and sold in the 1940s. Since that time it has contributed as an infant formula, and a milk substitute for children who are allergic to or dislike dairy milk. Its effectiveness and safeness have been proved by clinical experimentation. Also, Soyalac was used after World War II as an especially nutritious food for the protein-rich food program of the World Health Organization (WHO), FAO, and UNICEF and it saved many children from starvation and kwashiorkor.

"San-iku Shokuhin is now starting this work in Japan. We are trying to popularize our soymilk through very special methods such as via our religious network, health food stores, and doctors detailings. Babies who can't drink cow's milk or had allergies have been saved. Those with rashes and sweat rashes have been cured. We have received many expressions of thanks. One mother raised her 3 children on soymilk only, and one of the three was selected at a healthy baby contest in her county (*gun*). Formulated soymilk is not a medicine, therefore we are not allowed to promote its medicinal effects. Nevertheless, these various good effects have been proved clinically and in actual experience.

"A century ago, Ellen G. White predicted that 'the time will come when we will not even drink dairy milk.' Now we feel that this prediction is coming true as we see our dairy milk contaminated with penicillin, BHC, DDT, etc. I feel that in this day and age our work to popularize soymilk, which contains no antibiotics, no chemicals, and no cholesterol, and which is so nutritious and healthy, is very meaningful." Address: Product Development Dep. (Kaihatsu-bu), San-iku Foods, Japan.

2382. Morrill, J.L.; Melton, S.L.; Dayton, A.D.; Guy, E.J.; Pallansch, M.J. 1971. Evaluation of milk replacers containing a soy protein concentrate and high whey. *J. of Dairy Science* 54(7):1060-63. July. [13 ref]
• ***Summary:*** The soy protein concentrate used was Promosoy, made by Central Soya Co. Address: 1-3. Depts. of Dairy and Poultry Science, and of Statistics and Computer Science, Kansas State Univ., Manhattan, Kansas 66502; 4-5. Dairy Products Lab., Eastern Utilization Research and Development Div., Washington, DC 20250. Melton's present address: 1804 Bob White Drive, Maryville, Tennessee 37801.

2383. *Soybean Digest.* 1971. Vitasoy observes 30th year. July. p. 30.
• ***Summary:*** "Hong Kong Soya Bean Products Co. Ltd. of Hong Kong has issued a brochure commemorating its 30 years in the food business there... The company will introduce this year, a high-protein weaning food, a soy cheese, and a line of pre-cooked packaged foods at a price within the reach of working people." A small photo shows youthful K.S. Lo.

Note: This 30th anniversary brochure was published in 1970. The company's first plant was opened in March 1940.

2384. *Prevention* (*Emmaus, Pennsylvania*). 1971. Poor countries won't thank us for milk. Aug. *

2385. Nitsan, Zafrira; Volcani, R.; Gordin, S.; Hasdai, A. 1971. Growth and nutrient utilization by calves fed milk replacers containing milk or soybean protein-concentrate heated to various degrees. *J. of Dairy Science* 54(9):1294-99. Sept. [16 ref]
• ***Summary:*** A locally-made "soybean protein concentrate, Hypro" (produced by Hypro {Ashdod} Ltd., Ashdod, Israel) was tested as a substitute for all of the nonfat dried milk in a commercial calf milk replacer formula (Milkvit). Hypro is made from unheated dehulled defatted soybean meal from which some of the high molecular weight carbohydrates have been removed. Heating improved the digestibility of the soybean protein from 72% for the raw to 88% for the heated. Soybean diets diminished markedly the incidence and severity of diarrhea. Address: 1. Dep. of Poultry Science; 2-4. Dep. of Dairy Science. All: The Volcani Inst. of Agricultural Research, Bet-Dagan, Israel.

2386. Sugimoto, H.; Van Buren, J.P.; Robinson, W.B. 1971. An enzymatic process for a protein-containing beverage based on soybean protein and lemon juice. *J. of Food Science* 36(5):729-31. Sept/Oct. [25 ref]
• ***Summary:*** Cooked suspensions of isolated soy protein were mixed with a small amount of acid protease preparation from *Trametes sanguines.* Address: New York State Agric. Exp. Station, Cornell Univ., Geneva, New York 14456. Sugimoto is presently with Kikkoman, at Noda, Japan.

2387. Wallace, G.M.; Khaleque, A. 1971. Studies on the processing and properties of soymilk. III. Factors affecting concentration of soymilk and its stability during heat sterilisation. *J. of the Science of Food and Agriculture* (*London*) 22(10):531-35. Oct. [19 ref]
• ***Summary:*** Soymilk that has been adequately heated to destroy its trypsin inhibitor is difficult to concentrate because its viscosity increases exponentially with the increase in its solids content. At about 17-18% total solids, a gel-like structure is formed. It was found that the sulphydryl-disulfide interchange reaction is largely responsible for the increase in viscosity of the concentrate up to about 16% total solids, but above this level other forces predominated. The conditions

necessary for the production of good quality canned soymilk are presented. The key is forewarming at 115ºC for 5 minutes prior to concentration. Address: Dep. of Food Technology, Massey Univ., Palmerston North, New Zealand.

2388. Wallace, G.M.; Bannatyne, W.R.; Khaleque, A. 1971. Studies on the processing and properties of soymilk. II. Effect of processing conditions on the trypsin inhibitor activity and the digestibility *in vitro* of proteins in various soymilk preparations. *J. of the Science of Food and Agriculture* (*London*) 22(10):526-31. Oct. [26 ref]
• ***Summary:*** Pre-soaking the soybean in 0.4 M sodium carbonate solution for 24 hours as a pretreatment facilitated deactivation of trypsin inhibitor activity. Other effects of carbonate presoaking are also discussed. Address: Dep. of Food Technology, Massey Univ., Palmerston North, New Zealand.

2389. Eden. 1971. Eden: Natural, organic. Serving mid-America with the food of the future (Ad). *East West Journal* 2(18):19. Nov. 30.
• ***Summary:*** "Complete selection of stoneground flour, whole grains, seeds and nuts, beans, nut butter, soap, cosmetics, unrefined vegetable oil, herbs & Tea, dried fruit, pasta, juice. Stardust cereals: Barleycorn, 7-grain, Kokoh, Rising Sun, Sherpa, Grainola, Rice Cream, Tempura."

Note 1. Kokoh (also called Grain Milk or Kokkoh) is a macrobiotic preparation typically containing a finely ground combination of roasted rice, glutinous rice, oatmeal, soybeans, and sesame seeds.

Note 2. Neither miso or soy sauce are mentioned in the ad.

This ad also appeared in the Dec. 15, 1972 issue (p. 19) of this magazine. Address: 330 Maynard St., Ann Arbor, Michigan 48108. Phone: Wholesale: (313) 769-8444. Retail: (313) 761-8134.

2390. **Product Name:** Kokoh.
Manufacturer's Name: Eden Foods.
Manufacturer's Address: 330 Maynard St., Ann Arbor, Michigan 48108. Phone: Wholesale: (313) 769-8444. Retail: (313) 761-8134.
Date of Introduction: 1971. November.
New Product–Documentation: Ad in East West Journal. 1971. Nov. 30. p. 19. "Eden: Natural, organic. Serving mid-America with the food of the future." Stardust cereals: Barleycorn, 7-grain, Kokoh, Rising Sun, Sherpa, Grainola, Rice Cream, Tempura." This ad also appeared in the Dec. 15, 1972 issue (p. 19) of this magazine.

Talk with Royce Seeger. 1993. Oct. 31. He began to work in the Eden Foods retail store in about the fall of 1970. One of his main jobs was roasting and grinding grains. About a year or two after he began work, Eden introduced Kokoh, a macrobiotic baby cereal, which contained roasted soy flour and was packed in the small biodegradable cello bags. All the ingredients were roasted together and then ground; soy was one of the ingredients. The soy was roasted more than it was for the plain soy flour.

Note: Kokoh (also called Grain Milk or Kokkoh) is a macrobiotic preparation typically containing a finely ground combination of roasted rice, glutinous rice, oatmeal, soybeans, and sesame seeds.

2391. **Product Name:** Soybean Flour–Full Fat (Organic, from Deaf Smith).
Manufacturer's Name: Erewhon Trading Co., Inc.
Manufacturer's Address: 33 Farnsworth St., Boston, MA 02210. Phone: (617) 542-1358.
Date of Introduction: 1971. November.
Wt/Vol., Packaging, Price: 50 lb.
How Stored: Shelf stable.
New Product–Documentation: Erewhon Trading Company Inc. 1971. Thanksgiving Day. [Nov.]. Price list. "Stoneground flours: Soybean Flour, full fat, organic Deaf Smith. 50 lb. $11.00."

Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 3, 26. Bulk. "Soy Flour Deaf Smith Organic." 35 lb. Arrowhead Mills, "Soy Flour lightly toasted," 24 oz.

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods.* p. 57. Shows the label for "Organically grown–stone ground soy flour." 24 oz. On the front panel is a description of how to make soy milk from soy flour.

Note: This is the earliest document seen (Dec. 2001) concerning Arrowhead Mills and soy.

2392. Hammacher Schlemmer. 1971. Make your own delicious, healthful yogurt at home: Yogurtera (Ad). *New York Times.* Dec. 5. p. 50.
• ***Summary:*** "Be your own master yogurt-maker... in the convenience of your kitchen and at a savings of up to 75%. Yogurtera lets you make it from skim milk, whole milk, powdered or soybean milk." Add honey, fruits, or preserves for delicious variations. An illustration shows the Yogurtera, which is electric (it plus into the wall), comes with two quart-size brewing jars and instructions. By Bender Associates. $13.00 plus $0.95 for shipping and handling.

2393. Michael, Terry. 1971. Milk the soybeans? Foul-tasting whey not so bad. *News-Gazette* (*Champaign, Illinois*). Dec. 19.
• ***Summary:*** University of Illinois food scientists L.S. Wei and M.P. Steinberg are using enzyme-deactivated soybeans to develop products such as soymilk with added cow's milk whey (a by-product of cheese manufacture), soybean "peanut butter" (it contains no peanuts), and enzyme-deactivated soy flour. A large photo shows food scientists Wei and Steinberg

sitting at a table tasting these two products. Address: News-Gazette staff writer.

2394. *SoyaScan Notes.* 1971. Chronology of soybeans, soyfoods and natural foods in the United States 1971 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1971 Jan. East West Journal starts publication in Boston, Massachusetts.

1971 Feb. Westbrae Natural Foods, founded in late 1970, opens for business in Berkeley, California, as a natural foods retail store.

1971 Feb. Essene Traditional Foods begins operation as a macrobiotic natural foods distributor in Philadelphia, Pennsylvania. They sell miso and tamari.

1971 May. Tree of Life opens as a natural foods retail store in St. Augustine, Florida, founded by Irwin Carasso.

1971. The Food Protein Council (renamed Soy Protein Council in Dec. 1981) is established as a trade association for major manufacturers of soy protein for food use.

1971 Aug. 15. Richard Nixon devalues the U.S. dollar by cutting its tie with gold. It starts to float, thus changing many of the basics of international trade.

1971. India's first soyfoods development project starts at G.B. Pant University.

1971 Feb. Textured soy protein products authorized for use as meat extenders in National School Lunch Program.

1971 Sept. *Diet for a Small Planet,* by Frances Moore Lappé, published by Ballantine Books. A landmark book that plays a major role in the rise of interest in meatless diets.

1971 Sept. 3. Stephen Gaskin and several hundred friends and disciples purchase a 1700-acre farm at 156 Drakes Lane, Summertown, Louis County, Tennessee. Vegans (complete vegetarians) and long-haired hippies, they first planted soybeans in the spring of 1972. In December 1971 Alexander Lyon, who has a PhD degree in biochemistry, begins the community's first serious library research on soyfoods, especially soymilk and tempeh.

1971 Aug. 23. Laurelbrook Foods begins operation as a macrobiotic natural foods distributor in Forest Hill, Maryland–founded by Rod and Margie Coates. They kept a post office box in nearby Bel Air.

1971 fall. Eden Foods in Ann Arbor, Michigan, begins distributing macrobiotic natural foods. In June 1971 they had begun wholesaling these foods out of the back of their retail store.

1971. Shadowfax begins operation as a natural food distributor, founded by Charlie Smail.

1971. This year the natural foods boom in America can be said to have begun, pioneered by macrobiotic food distributors. Soyfoods rode to popularity on this wave. Food for Life in Chicago, Ceres in Colorado Springs, The Well in San Jose (CA), and Lifestream in British Columbia (Canada) also started at about this time.

1971. *Soybeans as a Food Source,* by Wolf and Cowan published by CRC Press. It focuses on modern soy protein products, offering an excellent review of the literature (86 pages and 276 references). A revised edition is published in 1975 (101 p., 416 references).

1971. First modern study on the effect of dietary protein on blood lipids titled "Plasma cholesterol levels and liver cholesterol biosynthesis in rabbits fed commercial or semisynthetic diets with and without added fats and oils," by Dr. K.K. Carroll (Dep. of Biochemistry, University of Ontario, Canada) published in *Atherosclerosis.* From 1977 on a group led by Sirtori in Milan, Italy, was actively pursuing this same line of research which showed that even in fat-free diets, animal proteins raise serum cholesterol and soy proteins lower it. As early as 1908 the Russian Ignatowski had shown that dietary protein plays a significant role in the development of atherosclerosis in rabbits, but his findings had been forgotten.

1971. African soybean production first tops 100,000 metric tons.

1971–Earl L. Butz replaces Clifford Hardin as U.S. Secretary of Agriculture, ushering in an era of free market agriculture which favors large producers.

2395. Gorrill, A.D.L.; Cameron, C.D.T.; Nicholson, J.W.G. 1971. Growth, digestibility and nitrogen retention by lambs fed liquid diets containing milk and soybean proteins. *Canadian J. of Animal Science* 51(3):663-67. Dec. [7 ref]
• ***Summary:*** "The soybean protein concentrate settled out of the liquid diet and therefore was not suitable for *ad libitum* feeding." Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

2396. Kosikowski, F.V. 1971. Nutritive and organoleptic characteristics of non-dairy imitation milks. *J. of Food Science* 36(7):1021. Nov/Dec. [11 ref]
Address: Cornell Univ., Ithaca, New York.

2397. Kretchmer, Norman. 1971. Memorial lecture: Lactose and lactase–a historical perspective. *Gastroenterology* 61(6):805-13. Dec. [48* ref]
Address: Dep. of Pediatrics, Stanford Univ. School of Medicine, Stanford, California.

2398. **Product Name:** [Fortesan Soy Beverage].
Manufacturer's Name: Crav Alimentos S.A.C.I.
Manufacturer's Address: Calle Cochrane 867-2 Piso, Valparaiso, Chile. Plant at Calle Limache 1320, Vina de Mar, Chile.
Date of Introduction: 1971.
New Product–Documentation: *Soybean Digest Bluebook.* 1979. p. 98. Gives the name and address of the manufacturer. Gil Harrison. 1981. J. of the American Oil Chemists' Soc. 58(3):445. March. "What's holding up the introduction of

soya into the human diet in Latin America?" "Since 1971, Chile has had a school lunch beverage called Fortesan, made from wheat flour and soya flour by a formula developed by Fernando Monckeberg."

Note: This is the earliest known commercial soy product made in Chile.

2399. **Product Name:** Dellac 25-28 SX (Whole Milk Powder Replacer).
Manufacturer's Name: Deltown Chemurgic Corp.
Manufacturer's Address: -
Date of Introduction: 1971.
Ingredients: Incl. soy protein isolate.
New Product–Documentation: Wolf and Cowan. 1971. *Soybeans as a Food Source.* p. 69.

2400. **Product Name:** [Jonnapu Soymilk].
Foreign Name: Jonnapu Tônyû.
Manufacturer's Name: Kenbi-sha K.K.
Manufacturer's Address: 4-22-40, Takadono, Asahi-ku, Osaka 535, Japan.
Date of Introduction: 1971.
Wt/Vol., Packaging, Price: 300 ml poly container.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Kenbi-sha first made commercial soymilk in Japan in 1974.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Jonnapu Tônyû was introduced in a 300 ml poly container in 1971 and distributed nationwide.

2405. Black, Patricia Hall; Carey, Ruth Little. 1971. Vegetarian cookery. 5 vols. Mountain View, California, Omaha, Nebraska, and Oshawa, Ontario, Canada: Pacific Press Publishing Assoc. Illust. by Henry Rasmussen. Recipe index. 24 cm.
• ***Summary:*** These are lacto-ovo vegetarian cookbooks. "Most of the recipes in these cookbooks have been collected over many years. Some came from association in years past with Paradise Valley Sanitarium and Hospital and with White Memorial Hospital; others came from more recent association with Loma Linda University." The complete nutritional composition of each recipe is given in that back of each book. Note 1. Monosodium glutamate is used in many recipes (For explanation, see Introduction to each volume). Other interesting meaty seasonings include Savorex, Smokene, and G. Washington Broth. Apparently generic names for meatlike products are used ("gluten burger" rather than "Gluten Burger") when more than one Adventist company makes such a product.

Contents: Vol. 1. Appetizers, beverages, salads, dressings and relishes, cooking guides. Vol. 2. Breads, soups, sandwiches. Vol. 3. Main dishes, vegetables. Vol. 4. Pies, cakes, cookies, desserts. Vol. 5. Exotic foods, candies, cooking for a crowd.

Soy- and gluten-related recipes include: Vol. 1: Nut and Soyameat pinwheels (with light Soyameat, p. 16-17). Soyameat puffs (with canned Soyameat, p. 17). Soybean milk (homemade, p. 30). Green beans and gluten salad (p. 37; Skallops [also spelled Scallops, gluten based] or Soyameat may be substituted for diced gluten). Chop suey salad (with Soyameat, or light or dark nutmeat, p. 44). Note 2. This is the earliest vegetarian or health food cookbook seen (June 2004) with "Appetizers" as one of the recipe categories.

Vol. 2: Whole wheat soy bread (with soy flour, electric mixer recipe, p. 15-16; Sponge method, p. 17). Soy cheese spread (with canned tofu, p. 44). Soy cheese and egg filling (with tofu, p. 44). Gluten spread (with canned gluten burger, p. 45). Hot burger sandwich patties (with canned gluten burger, p. 46). Hot gluten sandwich (with canned gluten steaks, p. 46). Hot savory sandwich (with Proast or other nutmeat, p. 47). Nutmeat and olive filling (with Proteena or Nuteena, p. 47). Savory Soyameat filling (p. 48). Soyameat and egg filling (with light Soyameat, p. 48). Soyameat, nut and olive filling (p. 48). Grilled gluten sandwiches (p. 52).

Vol. 3: Homemade gluten (. 15). Gluten roast (p. 15). Gluten burger loaf (with canned "gluten burger," p. 16). Primeburger loaf (with Primeburger [gluten], p. 16-17). Normandy loaf (with Proteena, p, 17). Walnut Proteena roast. Holiday roast (with gluten burger). Oatmeal herb loaf (with Vegeburger, p. 18). Nut roast (with Proteena, p. 21). Cashew nut and gluten loaf (p. 22). Seaside loaf (with Soyameat, p. 23). Ocean fillets (with Soyameat, p. 23). Soy soufflé burger (with dry soybeans, p. 24). Savory soy loaf (with canned soy cheese [tofu], p. 24). Soy cheese (or tofu) loaf (p. 24). Tofu loaf (no eggs, p. 25). Tofu (or soy cheese) patties (p. 25).

Browned tofu with mushrooms (p. 25). Nuteena balls (p. 26). Basic gluten balls (p. 26). Nutmeat and rice patties (with Proteena and Nuteena, p. 31). Cottage cheese gluten burgers (p. 31). Chum la King (with Vegesteaks, p. 33). Stroganoff (with canned Soyameat, p. 34). Gluten stroganoff (with canned gluten or Soyameat, p. 34). Savory gluten casserole (with canned Chickettes or other gluten preparation, p. 35). Scalloped Soyameat (with light or dark Soyameat, p. 36). Gluten steaks deluxe (with canned gluten steaks, p. 37). Gluten steaks with mushrooms (p. 37). Shish kebab (with gluten steaks or Tender Bits [made of gluten], p. 37-38). Hearty soybean casserole (with canned Zoyburger, p. 42). Garbanzo and cottage cheese loaf (with Vegeburger, p. 44). Stuffed green pepper (with canned Vegeburger, p. 46). Oriental rice casserole (with gluten or Chickettes, p. 49-50). Chop suey (with fresh tofu, p. 51). Quick chop suey or chow mein (with canned Soyameat, p. 51). Spaghetti marzetti (with canned Vegeburger and Smokene, p. 56). Lasagna (with gluten burger, p. 57). Tetrazzini (with canned white Soyameat, p. 57). Quick eggs Benedict (with beef-style smoked Soyameat, p. 61-62). Eggs con burger (with gluten burger, p. 62). Eggs Vienna (with 6 vegetable wieners, p. 63). Baked soybeans (p. 80). Soybeans creole. Soybeans southern style.

Vol. 4: Soy nut cookies (with 1 cup soy flour, p. 97). Vol. 5: Gluten stew (p. 14). Spanish gluten (p. 14). Gluten nut loaf (with canned gluten burger, p. 16). Ocean fillets (with gluten and Soyameat). Browned tofu (p. 22). Chop suey (with soy cheese [tofu], p. 23). Soy cheese patties (with canned tofu, p. 23). Gluten burger sandwiches (p. 31). Chinese sweet-sour gluten (with canned gluten steaks, p. 41). Sweet-sour Tender Bits (with canned Tender Bits or other gluten preparation, p. 42). Chinese evergreen tofu (p. 42). Japanese sukiyaki (with canned gluten, Tender Bits, or Scallops, p. 45). Scrambled tofu (p. 46). Philippine adobo (with gluten, Tender Bits, or Scallops, p. 48). Philippine gluten curry (p. 49). Philippine gluten escabeche (p. 49). Korean seasoned gluten (with canned gluten, p. 50). Indian gluten curry (with canned gluten, p. 52). Kurma (Indian, with Soyameat, p. 53). Soyameat Indian curry (with canned light Soyameat, p. 53-54). Brazilian Palmito soy loaf (with canned or cooked soybeans, p. 57). Brazilian-style gluten (p. 57).

Can sizes: Chickettes (20 oz). Gluten (14 oz or 20 oz). Gluten burger (14 oz, 28 oz, or 30 oz). Gluten steaks (14 oz). Nuteena (14 oz.). Primeburger (20 oz). Proteena (14 oz). Scallops (14 oz). Soyameat (9 oz or 13 oz). Soyameat, white (13 oz). Soy cheese (12 oz or 14 oz; tofu). Tender Bits (20 oz). Vegesteaks (14 oz). Zoyburger (19 oz). Address: 1. M.S.; 2. PhD.

2406. De, Sasanka S. 1971. Technology of production of edible flours and protein products from soybean. *FAO Agricultural Services Bulletin* No. 11. 151 p. AGS: ASB/11. [37 ref]

• ***Summary:*** Contents: Preface. Introduction. Oil milling operations. Quality control of edible flour and grits. Process procedure for production of soya flour and grits. Production of full-fat soya flour: Wenger process, Buehler process, simple process for villagers. Protein isolate: Advantages, process, yield and quality, Alfa-Laval process, estimated cost and calculations on economic return. Production of other soya products: Soy milk, Saridele, Stork method of soy milk production, pilot plant production of tempeh, protein fibers and meat analogs, extrusion-expansion products (meat analogs), bean curd (tofu). List of equipment suppliers. Annexes: PAG Microbiological requirements. 27 tables. 23 figures.

Note: This is the earliest document seen (July 2013) concerning Alfa-Laval's work with soy products (soy protein isolate). Address: Senior Food and Agricultural Industries Officer, Food and Agricultural Industries Service, FAO.

Agricultural Economics, Ohio State University. xi + 160 p. Page 5975 in volume 32/11-A of Dissertation Abstracts International. 28 cm. [35 ref]
• ***Summary:*** Contents: I. Introduction: Background of agricultural economy, production, policy and importation of soybeans, soybean nutrition and utilization (soybean milk, soybean curd), problem identification and main objectives. II. Definitions, methodology, and procedures: Implication of consumption and demand, review of literature, factors identification and hypotheses, data collection and arrangement. III. Consumption of soybeans and their products: Consumption patterns and household expenditures (soybean oil, soybean curd, soybean seasoning, soybean made vegetarian food, soybeans, soybean milk, miscellaneous soybean foods, total soybean foods, soybean feeds), consumption of soybean foods–soybean equivalents, seasonal variation in soybean product consumption (soybean oil, soybean curd, soybean food products), substitutes for soybean products in Taiwan, Significance of Consumption function and elasticities. IV. Demand and marketing of soybeans: Trends in demand and price for soybeans, the demand function and its significance (results and significance), characteristics of soybean food products and their manufacturer (soybean curd, soybean oil and meal, the trends in demand), marketing of locally produced soybeans, projection of the future demand for soybeans. V. Summary and conclusions: Summary of findings, recommendations. Appendix A. Bibliography. Address: Ohio State Univ.

2412. Watanabe, Tokuji; Ebine, Hideo; Ohta, Teruo. eds. 1971. Daizu shokuhin [Soyfoods]. Tokyo: Korin Shoin. 271 p. Illust. Index. 22 cm. [134 ref. Jap; eng+]
• ***Summary:*** This is the best book published to date on soyfoods in Japan; however it is written in Japanese. Contents: 1. Classifications and varieties of soybeans (p. 1). 2. Physical characteristics of soybeans (p. 5). 3. Chemical characteristics of soybeans (p. 9). 4. Standards and methods of examining soybeans (p. 47). 5. Special characteristics and problems of using soybeans for food (p. 53).

6. Current status of the soybean industry in Japan (p. 63). 7. Soymilk and various types of tofu: Aburage (deep-fried tofu pouches), ganmodoki (deep-fried tofu burgers), kôri-dofu (dried frozen tofu), soymilk, and yuba (p. 75). 8. Fermented soyfoods: Natto (p. 123-40), shoyu (p. 141-67), miso (p. 168-95), fermented tofu (*rufu*) (p. 196-202). 9. Other soyfoods: Kinako (p. 203-04), soy sprouts or moyashi (p. 206-08), tempeh or tenpe (p. 209-17). 10. Quality and usage of defatted soybeans (*dasshi daizu*) (p. 219).

11. New food uses of soybeans and especially defatted soybeans (incl. 70% soy protein powder, soy protein curds, soy protein isolate, surimi gel, spun soy protein fibers) (p. 229). 12. Advice regarding supplying protein from organizations such as the United Nations and FAO (p. 257).

A 47-page translation of portions of this book (parts of Chapter 6 and all of Chapter 7) by Akiko Aoyagi and Chapters 8.1 and 8.2 by Alfred Birnbaum are available at Soyfoods Center.

Tokuji Watanabe was born in 1917. Hideo Ebine was born in 1921. Teruo Ota was born in 1926. Address: National Food Research Inst., Tokyo.

2413. **Product Name:** Sipso Soymilk.
Manufacturer's Name: Pantnagar Soymilk Products Pvt. Ltd.
Manufacturer's Address: G.B. Pant University of Agriculture and Technology, Pantnagar, Uttar Pradesh, India.
Date of Introduction: 1971?
Wt/Vol., Packaging, Price: Bottles. By 1986 200 ml Prepac plastic bags.
How Stored: Shelf stable.
New Product–Documentation: Note: This is the earliest known semi-commercial soymilk made in India.

L.K. Ferrier. 1975. INTSOY Series No. 6, p. 183. "Simple processing of whole soybeans." "Soy beverage base is presently marketed by G.B. Pant University, Pant Nagar, India. The selling price (which allows some profit) is about one-third that of cow's milk."

Letter from Surjan Singh. 1979. May. The soymilk plant was at 167 Cycle Market, Jhandewalan Extn., New Delhi.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 110. "By 1978 this plant had produced nearly one million bottles of soymilk, which had been sold to the students and test marketed. A New Delhi plant was established in 1979."

Label. 1986. Lindner. 1987. The World Soymilk Market. In 1987 this product is still on the market, being sold in Prepac aseptic 200 ml plastic bags. Oldest soymilk plant in India, in Delhi.

Letter from Dr. Prem S. Bhatnagar, Project Coordinator, All India Coordinated Research Poject on Sugarbeet, G.B. Pant University. 1985. May 10. A private sector company in Delhi named Sipso is making a soya milk which is now catching on. The address of Sipso is: Shri A.K. Mehra, Director, Pantnagar Soymilk Products Pvt. Ltd., B-68, Mayapuri Phase-1, New Delhi–110064.

INTSOY Newsletter. 1988. No. 40. p. 3. By Oct. 1988 "M/S Pantnagar Soy Products in New Delhi is currently producing about 100,000 packets of soymilk per day. Each packet contains about 200 milliliters of soymilk."

2414. Bourne, Malcolm C. 1972. Re: Equipment necessary to establish a small plant for making soymilk. Letter to Purchasing Dep., Rockefeller Foundation, 111 West 50th St., New York, NY 10020, Jan. 7. 4 p. Typed, with signature on letterhead.
• ***Summary:*** Describes 12 pieces of equipment needed to make 3,000 to 5,000 pints per day of soymilk, using the Cornell method, at a pilot plant in the Philippines. Address: Assoc. Prof., New York State Agric. Exp. Station, Dep. of

Food Science and Technology, Food Research Lab., Geneva, NY 14456. Phone: 315-787-2255.

2415. Mustakas, Gus C.; Albrecht, William J.; Bookwalter, George N. Assignors to the USA as represented by the Secretary of Agriculture. 1972. Production of vegetable protein beverage base. *U.S. Patent* 3,639,129. Feb. 1. 4 p. Application filed 9 April 1970. [4 ref]
• ***Summary:*** A rapid continuous process which utilizes vegetable protein flour to produce a highly nutritive protein beverage base powder that can be easily converted to a liquid product by merely adding water.

Note. This is the earliest English-language document seen (Aug. 2013) that contains the term "vegetable protein beverage base," which probably refers to soya milk. Address: NRRL, Peoria, Illinois.

2416. Arndt, Robert H. Assignor to Ralston Purina Company (St. Louis, Missouri). 1972. Method of preparing a simulated skim milk. *U.S. Patent* 3,642,492. Feb. 15. 6 p. Application filed 1 June 1967. [5 ref]
• ***Summary:*** "A method of preparing a commercially acceptable, nutritious substitute for dry skim milk as a food additive, comprising the basic steps of pretreating sweet dairy whey, separately pretreating isolated vegetable protein, particularly soy protein, by a dynamic physico-thermo-vapor flash treatment to remove objectionable flavors and odors, blending these pretreated ingredients in a certain controlled ratio, and adjusting the hydrogen ion content to a specific controlled range. The product is preferably flash dried to a powder." Address: St. Louis, Missouri.

2417. Arndt, Robert H. Assignor to Ralston Purina Company (St. Louis, Missouri). 1972. Method of preparing a simulated milk product. *U.S. Patent* 3,642,493. Feb. 15. 7 p. Application filed 1 June 1967. [5 ref]
• ***Summary:*** "A method of preparing a simulated whole milk beverage product by physico-thermo-vapor flash pretreating isolated vegetable protein, preferably isolated soy protein, and combining it with sweet dairy whey and special vegetable oil or fat formed by hydrogenating oil in a special procedure, and in controlled proportions, involving mixing of the isolated protein and vegetable oil together while reliquifying or suspending them in water, reliquifying the whey separately, if in dry form, blending the materials, adjusting the pH to a certain range, and homogenizing the materials in a special multiple stage manner." Address: St. Louis, Missouri.

2418. Ament, Marvin E.; Rubin, Cyrus E. 1972. Soy protein–another cause of the flat intestinal lesion. *Gastroenterology* 62(2):227-34. Feb. [25 ref]
• ***Summary:*** Soy protein can cause signs of gastrointestinal intolerance in infants. "This is a prospective study of the pathogenesis of a violent gastrointestinal reaction to soy protein in an infant. Within 24 hours of changing this 6-week-old infant's formula to soy milk, he developed sequentially: fever, leukocytosis, cyanosis, vomiting, massive blood-tinged mucoid diarrhea, dehydration, and metabolic acidosis. All symptoms disappeared after discontinuing soy milk. At 6 and 10 months the patient was given a single test feeding of soy milk formula and soy protein isolate respectively. All symptoms recurred promptly... This is the first documentation of a reversible flat jejunal lesion caused by feeding soy protein to a susceptible infant." Address: Dep. of Medicine, Univ. of Washington, Seattle, WA.

2419. Mahajan, N.C.; Peng, A.C. 1972. Soy milk and tofu: Food technologists test Oriental soybean foods. *Ohio Report on Research and Development* 57(1):14-15. Jan/Feb.
• ***Summary:*** Describes how to make soymilk and tofu on a home scale using an electric kitchen blender, a boiling water grind, and the use of calcium sulfate as a coagulant.

Table 1, "Protein content of soy milk," shows that: (1) When a cold water grind is used, 3.08 gm of protein end up in 100 ml of soy milk; 84.70% of the protein in the soybeans is recovered in the milk. The resulting residue [okara] weighs 12.70 gm and contains 14.73 gm of protein. (1) When a boiling water grind is used, 2.88 gm of protein end up in 100 ml of soy milk; 79.20% of the protein in the soybeans is recovered in the milk. The resulting residue [okara] weighs 16.70 gm and contains 20.71 gm of protein.

Table 1, "Protein content of tofu," shows that: (1) When a cold water grind is used, 50 gm of soybeans yield 24.60 gm of tofu; 73.80% of the protein in the soybeans is recovered in the tofu. The resulting whey contains 10.50% of protein. (1) When a boiling water grind is used, 50 gm of soybeans yield 23.00 gm of tofu; 68.30% of the protein in the soybeans is recovered in the tofu. The resulting whey contains 10.25% of protein.

In short, the boiling water grind gives soymilk with a better flavor but lower recovery of protein. Address: College of Agriculture, Palampur, Hemachal Pradesh, India; 2. Ohio State Univ.

2420. Thio, Goan Loo. 1972. Introduction of soybeans for human nutrition, Republic of Zambia. Amsterdam, Netherlands: Royal Tropical Institute, Dept. of Agricultural Research. iii + 48 p. Feb. 28 cm.
• ***Summary:*** Description of workshops held at 8 places in Zambia in August and Sept. 1971, teaching preparation and use of traditional foods made from soybeans (soymilk, tofu, tempeh, okara). Contents: Summary. Introduction. Programme. Equipment and raw materials. Finance. Language. Workshops: Lusaka morning workshop, Lusaka afternoon workshop, Kabwe workshop, Ndola workshop, Solwezi workshop, Katete workshop, Mansa workshop, Kasama workshop, Monze workshop. Conclusions.

Recommendations. Acknowledgments.

List of Annexes: I. Itinerary. II. Technical programme of soybean workshops. III. Soybeans, soybean products, and their applications (a brochure prepared for Zambia in June 1971; discusses soymilk, tofu, tempeh, fried soybeans [soynuts], boiled young whole soybeans [green vegetable soybeans], fried tofu, dried sliced tofu, soymilk residue flour [ground okara], soy croquettes (soyrolls, made from okara flour and soymilk), soy biscuits [made with okara flour], vegetable soysoup [with soymilk], tofu omelette, tofu salad with peanut sauce, soy-maize bread [with soymilk and tofu], average chemical composition of soybeans). IV. Examples of modified Zambian recipes with the addition of soybean products (using mostly tofu, soymilk, and okara flour). V. Preparation methods for soybean products adapted to village conditions: Soymilk, tofu. VI. Proposed training system. Address: Senior Technologist, Royal Tropical Institute, Dep. of Agricultural Research.

2421. Yasumatsu, Katsuhara; Toda, J.; Kajikawa, M.; et al. 1972. Studies on the functional properties of food-grade soybean products. I. Classification of soybean products by their chemical constituents and protein properties. *Agricultural and Biological Chemistry* 36(4):523-31. April. [17 ref]

• ***Summary:*** Chemical analyses of 43 commercial soybean products were conducted. Figures show: (1) Chemical composition of these commercial products. The horizontal axis shows content of chemical constituent. The vertical axis shows the number of products. (2) Protein properties of commercial products, including: Water dispersible nitrogen. Amount of native protein. Dispersible nitrogen in 3% NaCl. Dispersible nitrogen in acetic acid. Dispersible nitrogen in pH 2.0 solution. Dispersible nitrogen in pH 11.08 solution. Dispersible nitrogen in phosphatase, pH5.

"The principal component analysis was applied to correlation matrix among chemical constituents." "The same procedure was applied to correlation matrix among protein properties."

"Discussion: Food-grade soybean products are generally classified according to their processing method or protein contents. They are usually designated as soy flour, soy protein extract, soy protein concentrate and soy protein isolate, in order of increasing protein contents." A brief description of how each is made and its typical protein content is given. "Soy protein extract consists of water extractable components of defatted soy flour. This is produced by drying the so-called soy-milk."

Note: This is the earliest English-language document seen (June 2009) that contains the term "food-grade soybean" (or "food grade soybean")–referring to edible soy products. It is also the earliest English-language document seen (July 2009) that contains the term "food-grade soybean products" (or "food grade soybean products"). Address: Food Research Labs., Food Products Div., Takeda Chemical Industries, Ltd., Osaka, Japan.

2422. Barbaix, Erik. 1972. La verification scientifique du projet soja [Scientific verification of the soya project]. In: Comité de Coordination pour le Developpement en République du Zaïre (CODEZA). Séminaire National sur le Soja [National Seminar on Soya]. Kananga, Zaire. 191 p. See p. 94-103. Published in 1986. [2 ref. Fre]

• ***Summary:*** Discusses the nutritional value of soya, commercial products containing soya (such as Fortifex from Brazil, Pronutro from South Africa, or Saridele from Indonesia) from other countries, suggestions for establishing statistical health means (such as average birth weight, and infant growth curves) in Kananga, results of a survey measuring infants in Kananga. The author concludes: Theoretically, the soya project offers an ideal solution to the problem of protein deficiency. A series of verification tests will be necessary to prove that this project is living up to hopes. The first results of surveys have furnished a growth curve. These initial experiences have confirmed the beneficial effect of adding soya to the diet in a boarding situation. Address: Dr. at the Military Center, 1st Military Region, B.P. 1773, Kananga, Zaire.

2423. D'Heer, A. 1972. Utilisation du soya [Utilization of soya]. In: Comité de Coordination pour le Developpement en République du Zaïre (CODEZA). Séminaire National sur le Soja [National Seminar on Soya]. Kananga, Zaire. 191 p. See p. 65-93. Published in 1986. [2 ref. Fre]

• ***Summary:*** The author is a woman. Pages 65-68 discusses the use of soybeans in the form of soy flour, roasted soy flour, whole dry soybeans, and soymilk. Pages 69-93 are an appendix by the author titled "Some notes for those who give nutritional education in a traditional milieu." This offers many examples related to the soya campaign in Zaire. Applications include use in bidia (a paste consisting of about 65% water, 26% cassava (manioc) flour, and 9% corn flour), panadas (bread soups for infants), and soy flour (regular or roasted) as a fortifier for cassava flour. Address: Dietitian, O.M.S., B.P. 110, Kananga, Zaire.

In: Comité de Coordination pour le Developpement en République du Zaïre (CODEZA). Séminaire National sur le Soja [National Seminar on Soya]. Kananga, Zaire. 191 p. See p. 135-44. Published in 1986. [Fre]
• ***Summary:*** Contents: Introduction. First trials with soybean utilization (1962-1965). Manufacture of roasted soy flour: Generalities, description of different processes. Commercialization: Purchase of the soybeans by ETSA (Ecole Technique Secondaire Supérieure d'Agriculture, de Tshibashi), transport, storage, resale price by commercial agents, sale and distribution, packaging, the soya cookie project. Conclusion. Appendix 1. Equipment used for a capacity of 15 kg/hour, with the CeCoCo 'Fuji' Coffee roaster (Torréfacteur CeCoCo, P.O. Box 8, Ibaraki, Osaka-Fu, Japan). Appendix 2. Equipment used for a capacity of 80 kg/hour, with Torréfacteur Probat." Appendix 3. Costs of actual daily production: 75% yield, 400 kg in 5 hours, 4 workers. Appendix 4. Recipe for cookies with soy flour used at the Inabanza Center from 1968-1973: wheat flour 600 gm, soya flour 300 gm, sugar 200 gm, lard or oil 120 gm, salt 5 gm, sodium bicarbonate 5 gm, ammonium bicarbonate 5 gm, water 200-250 cc. Recipe with corn, soya, and wheat to make 55 kg of cookies, containing 14% protein, 59% carbohydrates, 16% lipids, and 436 calories per 100 gm. Machines used at Bisoka for making soya cookies at the end of 1974 (type, brand, function, power use, capacity).

At the start of this project in 1961, the directors focused all of their attention on soybean cultivation, giving none to preparation of foods. But noting the lack of interest shown by the local people in consuming soybeans as such, they saw the necessity of giving more attention to utilization. The first utilization trials ran from 1962 to 1965; under the direction of Mrs. d'Heer, they tried unsuccessfully to use soybeans as whole soybeans, as soymilk, and as products made from soymilk. They tried to make a fermented soy yogurt using cultures sent from Wageningen. The product turned out well but the taste was foreign to the local people and it was too perishable. Investigation of powdered soymilk revealed that the equipment was too expensive and complicated. Then in 1969 they found that roasted soy flour worked very well in the local diet, to fortify cassava and corn products. A detailed description of the process and equipment is given. Key assistance was provided by ETSA (Ecole Technique Secondaire de Tshibashi). Address: ETSA–Tshibashi, B.P. 110, Kananga, Zaire.

• ***Summary:*** Treatment of dry soy flour with anhydrous HCl (hydrogen chloride) improved its nutritional value for the calf. Address: North Carolina State Univ., Raleigh, North Carolina.

2428. Nitsan, Zafrira; Volcani, R.; Hasdai, A.; Gordin, S. 1972. Soybean protein substitute for milk protein in milk replacers for suckling calves. *J. of Dairy Science* 55(6):811-21. June. [20 ref]
Address: The Volcani Center, Agricultural Research Organization, Bet-Dagan, Israel.

2429. Nitzan, Zafrira; Volcani, R.; Hasdai, A.; Gordin, S. 1972. Soybean protein substitute for milk protein in milk replacers for suckling calves. *J. of Dairy Science* 55(6):811-21. June. [20 ref]
• ***Summary:*** Soy protein concentrates give better results than soy flour. Address: The Volcani Center, Agricultural Research Organization, Bet Dagan, Israel.

2430. **Product Name:** [Soja Semp {Powdered Infant Formula Based on Soy Protein Isolate}].
Foreign Name: Soja Semp.
Manufacturer's Name: Semper AB.
Manufacturer's Address: Sektor Industri, Sveavagen 166, Box 231 42, S-104 35 Stockholm, Sweden. Phone: 08-729-9700.
Date of Introduction: 1972. June.
Ingredients: Incl. soy protein isolate.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88. Form filled out by Anders Eriksson. 1981. Nov. "Soja Semp is similar to Pro-Sobee, an infant formula based on soy protein isolate."

Soyfoods Center Computerized Mailing List. 1982. July 23. Phone: 08 24 77 00.

Talk with Ted Nordquist of Aros Sojaprodukter. 1988. March 27. He thinks the product was introduced in about 1970-72. The key man was Leif Christensen, with whom Ted now works; it was his formula. AB means Corporation (*Aktiebolag*).

Talk with Leif Christensen. 1990. July 6. Followed by letter (fax) of July 10. This was Semper's first product made from soybeans. The name is pronounced "SO-ya Semp." It was introduced in June 1972 as a complete mother's milk substitute in the form of a powdered infant formula based on soy isolate. At the time the following imported products were competitors: Sobee powder, based on soy flour, from Mead Johnson. Mullsoy liquid concentrate, based on soy flour,

from Syntex. In the Netherlands Abbott (M&R Laboratories) had a factory where they produced Isomil powder, based on soy isolates. In Feb. 1975 Semper introduced a new Soja Semp, a liquid concentrate, which see. Note: Anders Eriksson recently left to work at another company.

Note: This is the earliest known commercial soy product made in Sweden.

2431. *Soybean Digest.* 1972. A tasty soy-whey milk. June. p. 30.
• ***Summary:*** "Last year, University of Illinois food scientists A.I. Nelson, L.S. Wei, and Marvin Steinberg [at the University of Illinois] discovered a simple process to keep soybeans from developing an undesirable flavor and odor– by boiling the whole soybean before it was broken." The process inhibits or inactivates enzymes that cause this off-flavor. A photo shows Steinberg and Wei proposing a toast to the success of their soybean-cheese whey milk.

2432. Webber, Ella V. 1972. Perry A. Webber: Pioneer missionary in true education to Japan. Chattanooga, Tennessee: Southern Missionary College. 87 p. *
• ***Summary:*** Perry A. Webber was born on 15 June 1890 in Northville, Michigan. His parents became Seventh-day Adventists (SDAs) during his early childhood. In 1904 the family moved to Berrien Springs, Michigan, and Perry was educated there. In 1911 Perry graduated with a BA from Emmanuel Missionary College [in Berrien Springs] and in 1912 he was married to Ella Mae Verney.

In 1913 he was appointed by the SDA General Conference Foreign Mission Board to go, with his wife, as missionaries to Japan. In Tokyo they studied Japanese language for 2 years, then began pioneering educational work in Japan until 1927. For 4 years (1915-19) they worked in Fukuoka (in northern Kyushu), then returned to Tokyo. A son, Alfred B. Webber, was born in Dec. 1919; he later became a medical doctor. In Tokyo they worked at a school in Ogikubo. By 1921 Perry was teaching about the virtues of brown rice. In 1923 Perry found 25 acres of land in Sodegaura; in September of that year the Great Tokyo Earthquake (*Kanto Daishinsai*) took place. Later in 1923 the family returned to California because of the wife's respiratory problems. Harry Webber was born in Glendale. After a year in Honolulu, Hawaii, in 1934, they returned to Japan in the summer of 1925 and moved the college into the country. In the spring of 1926 the students and teachers started to build their own self-supporting school, with Perry as principal. This school later grew into the Japan Missionary College (*Saniku Gakuin*). The Japanese name means "three-sided school" since equal emphasis was placed on mental, moral, and manual development.

During these years Perry grew very fond of Japanese food and especially of Inari-zushi (made of deep-fried tofu pouches filled with vinegared rice). On his way to language school, he used to stop in regularly at the Shinoda Sushi Shop in Kanda (in Awaji-cho by the 1970s) to enjoy their Inari-zushi. The shop once developed a special Webber Sushi, named after him, and they used his name in some of their promotional materials. He was also very fond of regular tofu and of miso soup.

In 1927 the Webbers returned to America to educate themselves in good health. At this time Adventists believed that the true remedies are "pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, and trust in Divine power (*Ministry of Healing*, p. 127). In the fall of 1928 Perry entered Michigan State University to study biological chemistry while his wife, Ella Mae, studied nutrition; both were deeply interested in understanding the principles of good health. By May 1929 Perry was considered "one of our teachers" by Madison College in Madison, Tennessee.

During the early 1930s and the Great Depression, many students' only hope of getting an education was to rely on their own efforts. Madison, which offered a work-study program, became a very attractive alternative school.

In Sept. 1930 the family moved to Madison while Perry finished his thesis. In June 1931 Perry was awarded his PhD degree in biological chemistry, with special interest in chemistry and soyfoods development. At Madison he became a instructor of chemistry with a strong interest in food chemistry. In the following years he became the main person at Madison responsible for the school's growing involvement with soyfoods. In Nov. 1931 Perry wrote a long two-part article for *The Madison Survey* titled "Facts Concerning the Soybean." During the early 1930s he put a great deal of creative energy into expanding Madison's line of commercial soyfood products. Most of the products that were introduced between 1931 and 1934 were the result of his work. In August 1933 Perry Webber and Frances L. Dittes attended the annual convention of the American Soybean Association (ASA) in Baton Rouge, Louisiana. Webber presented a lecture with slides about the importance of soyfoods in Asia and their potential in America. He also prepared an exhibition of Madison soyfoods that was displayed at the convention. Webber was secretary-treasurer of the ASA for one year at this time. He visited Edsel A. Ruddiman at the Ford Motor Company and gave a talk to him and other leading research scientists about soyfoods. He was also a close friend of Dr. John Harvey Kellogg. He visited Kellogg, talked about soyfoods, and did some work developing a preservative for some of Kellogg's crackers.

Perry Webber worked at Madison until Sept. 1935 when, after a big farewell party, he returned to Japan to serve as principal of the Japan Missionary College (Saniku Gakuin). There he taught a lot about nutrition and the value of a vegetarian diet. In about 1936 Webber visited Dr. Harry Miller in Shanghai, China, and helped him set up a sanitation and research lab for analyzing the Vetose soymilk products at

his new plant.

From 1939 to 1943, during World War II, Webber was back in the USA, teaching at Madison as head of the chemistry department. He was also at Madison from 1946 to 1953 and from 1959 to 1962, each stay punctuated by work in Japan. While serving as an administrator at Madison Foods (1959-1963) he and Sam Yoshimura pulled the factory out of debt and put it several thousand dollars into the black in one year's time.

During his trip to Japan that began in the spring of 1953, he taught one food plant how to make gluten, soymilk, and soy croquettes. Also in 1953 he started a self-supporting organization at Mt. Akagi, about 125 miles northwest of Tokyo; there he worked for more than 7 years. In the winter of 1956 he suddenly became ill with pneumonia. He returned to America in the summer of 1958 and was found to have Parkinsonism; no medicine was prescribed until 1962. In 1966 Perry was an outpatient at the Madison Sanitarium / Hospital for a time, then he became a inpatient from Oct. 1967 to Jan. 1968. In Sept. 1968 he went to a convalescent home in Lodi, California. His son, Dr. Alfred B. Webber, was living and practicing medicine in Lodi. In 1969 he returned to the Wildwood Sanitarium, a self-supporting Seventh-day Adventist convalescent home and health care facility in Wildwood, Georgia (northern Georgia). He passed away there in January 1973 at age 82 of Parkinsonism.

2433. *Food Engineering.* 1972. Point up new developments. 44(7):121-26. July. See p. 121. [2 ref]
• ***Summary:*** Alfa-Laval is "experimenting with soya milk to improve its qualities." The company also sees enormous potential in leaf protein, with yields of 1-2 tons of crude protein per hectare. Alfa-Laval/De Laval Group is "one of the world's greatest food equipment and process engineering companies." Their equipment showroom is at Tumba, near Stockholm, Sweden.

Note: This is the earliest document seen (Aug. 2002) concerning Alfa-Laval's work with soya milk.

2434. *Food Processing* (*Chicago*). 1972. 'Good tasting' soy products. 33(7):F7-F9. Foods of Tomorrow section. Summer/ July.
• ***Summary:*** "Flavor plus processing advances improve marketability, parallel consumer interest and demand." Discusses soyfoods developed by Nelson, Steinberg, and Wei at the University of Illinois, Food Science Dept.: drum-dried whole soybeans and bananas, vanilla and chocolate flavored soybean milk shakes, soymilk and whey blend, canned soybeans, a soy spread resembling diet margarine, and soynut butter. "Additional products that appear possible are: a frozen ice cream type product using soy milk, powdered drink that could be added to regular or skim milk to make an instant breakfast type drink, ice cream bar, frozen puddings, high protein extruded snacks, nutritious breakfast cereal, and baby food cereal."

Photos show: (1) Soybean spread and soybean butter spread on crackers, bread, etc. (2) Vanilla and chocolate flavored soybean milk shakes. (3) "Pork & beans" (navy beans on left; soybeans on right).

Note: This is the earliest English-language document seen (Dec. 2003) that contains the term "soybean milk shakes."

2435. Jagatjit Industries Limited. 1972. Display ad: Company meeting. *Times of India* (*The*) (*Bombay*). Aug. 19. p. 8.
• ***Summary:*** This ad contains the text of a speech delivered by Mr. L.P. Jaiswal, chairman and managing director, at the company's 27th annual meeting.

"In regard to the Soya Bean Project you will be pleased to note that the State Industrial and Investment Corporation of Maharashtra Ltd. (SICOM) have agreed in principle to collaborate in the said project. This is a very interesting project. We propose to enter the protein field in a big way realising that mal-nutrition is one of the greatest problems facing our country at present. The problem of protein shortage and mal-nutrition is faced by most of the developing countries. We propose to be of help in tackling this problem by developing and marketing cheap protein foods made from Soya, which is a vegetable source, to supplement the diet of the vulnerable sections of the vast population of our country. It is proposed to set up in the State of Maharashtra, Plants for the manufacture of Soya-flour, Soya Protein Concentrates, Isolates, Formulated Products and Soya Milk Beverages."

A portrait photo shows Mr. L.P. Jaiswal. Address: Jagatjit Nagar, District Kapurthala, Punjab, India.

2436. Loring, Kay. 1972. Korean cafes keep growing. *Chicago Tribune*. Aug. 24. p. S_A6.
• ***Summary:*** This is a review of the restaurant Korea House in Chicago, where an estimated 10,000 people of Korean ancestry now reside. Four years ago there was only one Korean restaurant in the city; now there four. The main Korean seasonings are garlic, onion, red pepper, soy sauce, and sesame–plus kim chee (kimchi).

"No dairy products are used, because as in Japan and China, there is no room in this thickly populated country for dairy industries. Soy bean curds and soy milk are among substitutes." Vegetable oils, such as sesame oil and [soy] bean oil, are widely used in place of animal fats for cooking.

2437. Orr, Elizabeth. 1972. The use of protein-rich foods for the relief of malnutrition in developing countries: an analysis of experience. *Tropical Products Institute Report* No. G73. 71 p. Aug. Summary in PAG Bulletin (1973) 3(2):59. 28 cm. [17 ref]
• ***Summary:*** Contents: Acknowledgements. Foreword. I. Introduction: the protein problem and approaches to it.

II. Protein-rich food schemes (69 schemes are described): Introduction, schemes no longer in operation–and which ceased within a year of inception or after a market trial period, schemes no longer in operation–but which ran for more than one year before termination, schemes operating irregularly, schemes currently in regular production (beverages, other products), schemes at exploratory stages. III. Some aspects of protein-rich food schemes: Location, source of the idea, ownership of the enterprise, characteristics of the products (ingredients, composition, type of product), promotion, external assistance. IV. Evaluation of the protein-rich food approach: Summary of the outcome of the various schemes: Operational status, sales volume (the largest are Bal-Ahar, Vitasoy, and Pronutro), sales trend, distributive outlets. Reason for the outcome (success or failure). Impact on the protein problem: Production capacity, sales of Incaparina in Guatemala, income levels, prices of protein-rich foods (Bal-Amul is the most expensive since it is canned, followed by Pronutro), prices in relation to incomes, prices of competing products, distribution of protein-rich foods in rural areas. Impact made by protein-rich food schemes on the protein problem: Summary (very small). Future contribution of protein-rich foods to the protein problem. V. Initiation of protein-rich food schemes: guidelines for Government Administrators. References. Statistical appendix.

List of tables: Text: I. Daily protein requirements. II. Protein contents and protein biological values. III. Protein products/enterprises. IV. Cost of product allowances per child at retail prices. Appendix: I. Ownership of enterprise. II. Ingredients of protein-rich foods. III. Composition of protein-rich foods. IV. Outlets for protein-rich foods. V. Capacity of plant/sales. VI. Retail prices/protein prices. VII. National income in selected countries.

The following foods containing soya are discussed (see Table II, p. 66, for full list of ingredients, and Table III, p. 67, for nutritional composition). The percentage of soya in the product, when known, is shown in parentheses: Brazil: Incaparina (38%), Golden Elbow Macaroni (30%), Fortifex (47.5%), Solein, Cerealina, Saci (3% protein). Colombia: Incaparina Blanca (30%), Colombiharina (30%), Incaparina (20.9%), Duryea, Pochito (20.0% protein). Ethiopia: Faffa (18%). Guyana: Puma. Hong Kong: Vitasoy (3% protein). India: Bal-Amul (20-25%). Indonesia: Saridele (18-19% protein). Madagascar: Weaning Food (38%). Malaysia: Vitabean (2.75% protein). Mexico: Conasupo products (30%), Protea (24.0% protein). Mozambique: Super Maeu (10%). Singapore: Vitabean (2.75% protein). South Africa: Kupangi Biscuits, Pronutro. Taiwan: Weaning Food (30%). Thailand: Noodles, Poluk, Kaset Cookies, Kaset Protein. Turkey: Weaning Food (20%). Uganda: Soya Porridge (38%; 21.0% protein), Soya Maize (16.0% protein), School Porridge (15.0% Protein). U.S.A.: WSB (Wheat-soya blend, 20%), CSM (Corn-soya milk, 25%). Venezuela: Incaparina (19%). Zambia: Milk Biscuit (7.1%). Address: Foreign and Commonwealth Office (Overseas Development Administration), TPI, 56/62 Gray's Inn Rd., London WC1 8LU, England.

2438. Orr, Elizabeth. 1972. Vitasoy, made by Hong Kong Soya Bean Products Co. Ltd (Document part). *Tropical Products Institute Report* No. G73. p. 15. Aug.

• ***Summary:*** "The earliest of the enterprises making a soya-based beverage is the Hong Kong Soya Bean Products Co. Ltd. which began making Vitasoy in 1940, ceased operations when the factory was taken over by the Japanese in 1942, and recommenced in 1945. Vitasoy is made by the traditional Oriental process. Originally it was promoted primarily as a substitute for cow's milk, particularly for use by children, and it was delivered daily from the factory to consumers' homes in the same way as fresh milk. Initially sales were so poor that the company was on the verge of bankruptcy. There were a number of reasons for the unfavourable market reaction. The organoleptic appeal was poor, the product having a strong 'beany' flavour, and its keeping qualities–it was packed 'fresh' in milk bottles with paper closures–were even poorer than those of fresh cow's milk, and constant refrigeration was required. The major reason for the low sales was probably, however, the promotional approach. It was found that even among the Chinese population, who are well used to soya products, there was a prejudice against soya milk. It was not considered to have nutritional value and it was also thought to have undesirable side effects. Moreover, it was not the local custom to give cow's milk to children, this being regarded as a Western luxury. After the war these problems were tackled. The technology was improved, and with it the organoleptic qualities of the product. It was also sterilized, giving it a shelf life of several months. Most importantly, perhaps, the promotional approach was completely changed: it was promoted as a 'thirst-quenching drink' and distributed through the conventional soft drink outlets. The company also exploited a quality which soya milk has and the typical soft drink does not have: it is very palatable when heated. Heaters were sold to retailers, with the result that Vitasoy became much less of a seasonal product (80 per cent of the sales of soft drinks in Hong Kong normally take place during the six summer months). Along with these changes went a vigorous promotional effort which is said to have been maintained to the present. The company later took on the license for a conventional soft drink popular in the Far East, Greenspot, and in recent years has replaced Greenspot with the Pepsi Cola franchise. The handling of these two closely related products has obvious economic advantages. Demand for Vitasoy has been buoyant for many years and appears still to be following a rising trend. Sales increased from 2½ million cases per year in the mid-1960s to 5 million cases (120 million bottles) in 1970, and the capacity

of the plant has been trebled over the years. Vitasoy is undoubtedly a commercial success. In contrast to many of the other enterprises dealt with in this report, the producer responded to the market situation and showed considerable staying power. It may be significant that the company was not a multi-product enterprise: its prosperity depended for many years solely on the success of Vitasoy." Address: Foreign and Commonwealth Office (Overseas Development Administration), TPI, 56/62 Gray's Inn Rd., London WC1 8LU, England.

2439. Orr, Elizabeth. 1972. Full fat soya flour tested by Wei Chuan Foods Corp. in Taiwan (Document part). *Tropical Products Institute Report* No. G73. p. 31. Aug.
• ***Summary:*** "In Taiwan the Wei Chuan Foods Corporation has developed, with the assistance of the United Nations Agencies, a weaning food based on full fat soya flour cum dried skim milk. USAID has assisted with the provision of equipment and the Agencies have allocated US$50,000 for use primarily in market promotion and in subsidising the selling price in the interests of low-income consumers. This project provides an example of the length of time that can be required to finalise a scheme for the production of a protein-rich food. The Agencies began discussions with Government on the possible use of a soya-based product (originally a dried soya milk) for nutritional purposes as long ago as 1960 and the Wei Chuan company became interested at the end of 1964. Since then delays have been caused by technical problems involving processing (solved by assistance from the Agencies) and obtaining a formula acceptable to WHO, on whose approval continuing support by the other United Nations Agencies was dependent. The latter involved very extensive clinical tests, which demonstrated clearly the value of full-fat soya flour as a weaning food protein supplement. As a result of this work the time required for product formulation in schemes using this type of protein concentrate may be expected to be reduced.

"Another delaying factor has been the Wei Chuan company's very cautious approach to the market launch. The company has been concerned about the local availability of foodstuffs donated by the World Food Programme, and of commercial weaning foods, which are said to be of inferior quality but low in price." Address: Foreign and Commonwealth Office (Overseas Development Administration), TPI, 56/62 Gray's Inn Rd., London WC1 8LU, England.

2440. Williams, S.W.; Rathod, K.L. 1972. Prospects and emerging problems of market development for soybeans in India. *Indian Society of Agricultural Economics, Seminar Series* X. p. 65-84. Aug. (Seminar on Emerging Problems of Marketing Agricultural Commodities). [16 ref]
• ***Summary:*** This paper begins: "During the past six years, extensive trials have been made of improved, cream-colored varieties of soybeans in India. These trials were started at Uttar Pradesh Agricultural University, Pantnagar and at Jawaharlal Nehru Krishi Vishwa Vidyalaya, Jabalpur. However, under an All-India Co-ordinated Research Project, in the last two or three years they have been carried on in many parts of the country. These trials have shown that, particularly in North-Central India, potential yields from soybeans should be comparable with yields in the United States, which now is the major soybean producing country. So far, most of the attention has been upon soybeans as a *kharif* season crop, but experiments in other growing seasons have suggested that, particularly in some parts of Uttar Pradesh, there may be a place for soybeans as an early spring crop.

"As a result of these findings, farmers have started to grow soybeans. In the first two or three years production was used almost entirely for seed multiplication but in 1970, with a crop of approximately 20,000 hectares, soybeans began to be available for commercial use (Table I)."

Tables show: (1) Progress and target of soybean acreage in India by state: In 1971 the total acreage (sole crop + mixed crop) was: Maharashtra 8,461 ha. Gujarat 3,200 ha. Uttar Pradesh 2,862 ha. Madhya Pradesh 1,600 ha. Himchal Pradesh 8000 ha. Four other states: 494 ha. Total: 17,417 ha.

(2) India's imports of soybean oil from the United States, 1966-67 to 1970-71. Year is April to March. 1966-67: 31,300 tonnes (metric tons). 1967-68: 109,400 tonnes. 1968-69: 76,400 tonnes. 1969-70: 101,400 tonnes. 1970-71 (until October): 47,800.

Food uses of soybeans: (1) Soybean flour. "A few private organisations have already come into the market with soy flour and biscuits and others plan to enter the market soon. Amul, an enterprising farmers' co-operative in Gujarat, has been selling Balamul, a weaning' food which contains ingredients from soybeans. The Indian Government has a supplementary feeding program involving Balahar, a food containing 15 per cent soybean flour, 15 per cent groundnut flour; and 70 per cent wheat flour. Production of Balahar approximates 50,000 tons this year with a goal of 60,000 tons next year."

(2) Soybean beverage (milk). (3) Textured soybean products, soybean concentrates and soybean isolates are more sophisticated high protein foods that have numerous potential uses. (4) Simple processed foods containing soybeans are now being developed. Examples include a soy-banana weanling food and use of whole soybeans in canned foods.

Problems in developing soybean marketing. Decisions in establishing processing facilities: In India, the scarcity and high price of edible oil will provide a strong incentive to extract oil from soybeans to be sold separately from the meal." The most efficient way to extract this oil is using large-scale solvent extraction plants.

Making best use of soybean meal. With "minor

exceptions, the soybean foods of the Orient are not made from soybean meal. Consequently, if India is to develop large-volume use of soybean meal in human foods, it must find ways to do it which no other country has yet developed on that scale." "Exports offer a potentially larger market soybean meal."

USAID is the U.S. Agency for International Development. Address: Univ. of Illinois/USAID and Jawaharlal Nehru Krishi Vishwa Vidyalaya, Jabalpur -4, Madhya Pradesh.

2441. Gorrill, A.D.L.; Nicholson, J.W.G. 1972. Effects of neutralizing acid whey powder in milk replacers containing milk and soybean proteins on performance and abomosal and intestinal digestion in calves. *Canadian J. of Animal Science* 52(3):465-76. Sept. [15 ref]
• ***Summary:*** "We conclude that acid whey powder can be added to milk replacers at levels of about 23% and that adjusting the pH improves calf performance." Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

2442. Weisberg, Samuel M. 1972. Developing and marketing low-cost protein foods in developing countries. Experience indicates that private industry must play a major role. *Food Technology* 26(9):60, 62, 64, 66, 68. Sept.
• ***Summary:*** Presents case histories of the following low-cost protein foods: Reconstitutable powder products–ProNutro (Durban, South Africa), Nutresco (Salisbury, Rhodesia), Incaparina (Guatemala, Colombia, El Salvador, Brazil). Milky beverages–Vitasoy (Hong Kong), Vitabean (Yeo Hiap Seng Ltd., Singapore), Vitamilk (Bangkok, Thailand), Miltone (India). Soft drinks–Puma (soft drink developed by Monsanto and franchised to D'Aguiar Brothers (DIH) Ltd., Georgetown, Guyana), Samson (made by Coca-Cola Co., sold in Paramaribo, Surinam). Soup products–Nutrovite (Salisbury, Rhodesia; it "has been marketed for 7 years in Rhodesia, Mozambique, and Angola"), Protone (South Africa, no soy). Baked goods–Modern bread (India. "It is planned to improve the protein quality of the bread by means of groundnuts or soybeans, instead of through the use of amino acids)." Pasta products–Golden Elbow Macaroni, Sam Yang Noodles.

"Production of Vitasoy at present is at the rate of over 100 million 6½- and 8½-oz. bottles/yr, and sales have recently been exceeding the sales of conventional soft drinks such as Coca-Cola." Six reasons for the product's success are given, including strong marketing and advertising (5% of sales price goes for promotion and advertising). Address: Executive Director, League for International Food Education.

2443. Rodale, Robert. 1972. Milking the soybean. *Washington Post, Times Herald.* Oct. 26. p. H10.
• ***Summary:*** "The versatile, high-nutrient soybean can be processed easily into a kind of milk with several nutritional advantages over cow's milk. That may come as a shock to dairymen, but it's true."

Soy milk, which comes from a plant, contains little saturated fat, and is an alternative for people who are allergic to dairy milk. Describes how to make soymilk at home. Although it is easy to make an inexpensive, it is not popular in the USA; most Americans don't like the slight "beany" flavor.

However a food made from soy milk, whose taste does please our palates, is slowly gaining popularity. "That food has the rather unattractive name 'bean curd.'" You may have seen it on the menu at a Chinese or Japanese restaurant. The Chinese themselves call it [in Cantonese] *dow foo yuen* and the Japanese call it *tofu,* a name that is gaining popularity in the United States. Surprisingly, bean curd made in Taiwan and shipped to the U.S. in cans is labeled *tofu.*

"The big value of bean curd is that it offers a high-protein, good-tasting alternative to meat. It's a true convenience food, with outstanding culinary and nutritional values." Describes the many ways it can be used. It is not an exotic oriental food, but one that "has the potential to become a basic food eaten and enjoyed regularly by millions of Americans."

A recipe for Bean curd and Chinese cabbage soup calls for 4 cups homemade chicken stock and "¼ pound bean curd."

2444. Kretchmer, Norman. 1972. Lactose and lactase. *Scientific American* 227(4):70-78. Oct.
• ***Summary:*** The subtitle reads: "Lactose is milk sugar; the enzyme lactase breaks it down. For want of lactase most adults cannot digest milk. In populations that drink milk the adults have more lactase, perhaps through natural selection."

The adults of all animal species other than humans lack the enzyme lactase–"and so, it is now clear, do most human beings after between two and four years of age." The few human populations in which those who can tolerate lactose outnumber those who cannot include most northern European and white American ethnic groups."

Lactose is a disaccharide composed of the monosaccharides glucose and galactose. Lactase splits the disaccharide into its two monosaccharides. Human milk contains 7.5 grams of lactose per 100 ml whereas cow's milk contains 4.5 gm. Thus human milk tastes much sweeter. The only mammals whose milk is completely free of lactose–or any other carbohydrate–are certain of the Pinnipedia: the seals, sea lions and walruses of the Pacific basin.

Frederick J. Simoons of the University of California at Davis has developed a hypothesis to try to explain what events in human cultural history might have influenced the developed of tolerance to lactose in the adults of some groups. Humans apparently first began to milk animals such as cattle, sheep, goats, or reindeer about 10,000 years

ago. This was roughly 100 million years after the origin of mammals and long after the pattern of lactase activity had been well established in mammals. Because of a chance mutation, a selective advantage would have been conferred on those who had high enough lactase activity to tolerate lactase. That genetic mutation probably occurred at least 10,00 years ago. The people with the mutation for adult lactase activity could be members of a dairying culture, consume their own dairy products as food, then sell dairy products in the form of yogurt or cheese (whose fermentation process reduces the lactose content) to the general lactose-intolerant population.

These ideas have implications for national nutrition policy. Programs of indiscriminate, large-scale distribution of nonfat dry milk to lactose-intolerant populations should be modified, or the current attempts to supply lactose-free milk powder should be encouraged.

2445. Rodale, Robert. 1972. Milk from soybeans is a treat to cows. *Hartford Courant* (*Connecticut*). Nov. 1. p. 31.
• ***Summary:*** Soy milk can easily be made at home from the versatile, high-nutrient soybean. Dairymen should take notice that a food made from soy milk has a good taste and is slowly gaining in popularity. "That food goes under the rather unattractive name bean curd." It is widely served in Chinese restaurants. "The Chinese themselves call bean curd *dow foo yuen*, and to the Japanese its tofu, a name that's gaining popularity."

Bean curd or tofu is not an exotic Oriental food; it has the potential to become a basic new food, enjoyed regularly by millions of people. Tofu has already become popular on the West Coast; *Sunset* magazine recently published an article about it. The soybean is a huge crop for American farmers, yet only about 2% of it is used for human food. The rest is fed to animals or used to make industrial products.

There is also an interesting parallel between tofu and yogurt. Both are made by culturing milk, have special health benefits, and started as foreign foods with seemingly little appeal to Americans. Yogurt is now a mainstream American food, and the same could happen to tofu. Address: [Rodale Press, Emmaus, Pennsylvania].

2446. *Times* (*London*). 1972. Mechanical milkman by-passes the cow: Philip Howard looks at London–Non-bovine dairy producer. Nov. 1. p. 3, cols. 1-4.
• ***Summary:*** "There are men alive who can remember when cows were tethered in the parks of London, and small boys being taken for a walk, could buy a glass of milk, tepid from the udder, for a penny."

But Dr. Hugh Franklin has taken his "mechanical cow" from London to the countryside. A chemical engineer and nutrition consultant, Franklin has spent the past 8 years "in a poky Heath Robinson laboratory in darkest Fulham, developing an "artificial milk without the help of a cow.

"He has succeeded so well that he has removed his factory to Folkestone, where it produces three tons of Plantmilk a day. Today Dr. Franklin, who claims to be the first [sic] non-bovine industrial producer of milk in the world, is closing the Fulham laboratory where he invented the philosopher's stone that can turn old cabbage leaves into milk."

"Dr. Franklin has made Plantmilk from almost everything from pea pods to lucerne to pine needles and bracken, Jerusalem artichokes are particularly satisfactory milk producers; he has plans to extrude his milk from sugar cane leaves in Mexico and rice stalks and soya beans in India." The process is described in detail. He hopes to be producing "'instantizable' powder in 2-3 months.

Note: Fulham is in central London. Folkestone is on the English Channel, near Dover, southwest of London. Plantmilk Ltd. also came to be located in Folkestone, Kent, England.

2447. *Loma Linda University Observer* (*California*). 1972. China doctor noted surgeon, scientist, and missionary. Nov. 30. p. 7. [1 ref]
• ***Summary:*** A brief biography of Harry W. Miller, MD, "surgeon, scientist, financial genius, and missionary." He was "named alumnus of the year for 1968 by graduates of the School of Medicine [at Loma Linda University in California]. Dr. Miller, now 93, has been classed with Livingston, Judson, and Schweitzer as one of the greatest modern missionaries. When only 23 years of age, he turned his back on a promising career at the University of Chicago and went to China as a missionary."

"The Brilliant Blue Cross, highest awarded conferred by the government of the Republic of China, was presented to Dr. Miller by Generalissimo Chiang Kai-shek for his development of palatable milk from soybeans. This discovery is credited with saving the lives of countless Chinese children who otherwise would have starved."

A portrait photo shows Dr. Miller. Note: (1) Livingston was David Livingston (lived 1813-1873), Scottish missionary and explorer in Africa. Henry M. Stanley, who finally met him in Ujiji, Central Africa on 10 Nov. 1871 said "Doctor Livingstone, I presume?" (2) Judson was Andoniram Judson (1788-1850), American missionary to Burma. (3) Schweitzer was Albert Schweitzer, MD, (1875-1965), French theologian, philosopher, physician, and music scholar. Missionary physician and founder of Lambarene Hospital in French Equatorial Africa in 1913. He earned the PhD degrees and won the Nobel Peace Prize in 1952.

2448. Ram, Mahabal; Kempanna, C.; Balasubramanian, A. 1972. Soybean can raise nutritional status of human diet. *Indian Farming* 22(8):19, 21-22. Nov. Series 2.
• ***Summary:*** Malnutrition is a major problem in India and there is a shortage of proteins. On the national level, several

measures have been taken to augment the supply of protein-rich products like milk, egg, meat, fish, vegetables, pulses, etc. Yet is it alternative to explore alternative protein sources, such as the soybean, which has a high protein content (42%) and "occupies an exalted position amongst the protein-rich legumes."

Tables show: (1) Average nutritional composition of soybean. (2) Production of soy-protein in comparison with that of major pulses, cereals, milk, meat, etc. (3) Nutritive value of soybean and the other pulses. (4) Average weekly growth rate of rats on basal poor diet chapati containing soy-flour.

The final section briefly describes 13 methods of preparing different soybean recipes: (1) Soak soybeans in water then fry in deep fat. (2) Roast green soybeans in their pods. (3) Soak soybeans in water then bake. (4) Sprout soybeans. (5) Dahi bada. (6) Pakoda namkin [Pakora namkin; a pakora is a fritter–any kind of food coated in batter and deep fried]. (7) Pakoda sweet. (8) Gullab jamun. (9) Puri and chapati. (10) Vegetables. (11) Curd, made from soybean milk. (12) Add soymilk to tea in place of buffalo milk. (13) How to prepare soymilk at home. Also: Soybean oil can be used at home in place of mustard oil, coconut oil, groundnut oil, etc. Address: Indian Council of Agricultural Research, New Delhi.

2449. *SoyaScan Notes.* 1972. Chronology of soybeans, soyfoods and natural foods in the United States 1972 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1972 Jan. Janus begins operation as a macrobiotic natural foods distributor in Seattle, Washington. It is founded by George Gearhart and Blake Rankin.

1972 Feb. Tree of Life in St. Augustine, Florida, starts distributing natural foods. Founded by Irwin Carasso, this company would soon become the largest and most successful of its type.

1972 March. The Farm in Tennessee sets up a small plant and begins to make soymilk, which is rationed for use by babies and children.

1972 Sept. Frank Shorter wins the Olympic marathon, the first marathon victory by an American. A major boost to interest in running, exercise and fitness.

1972 Oct. William Shurtleff and Akiko Aoyagi start full time research on tofu in Japan, writing a book on the subject.

1972. *Soybeans: Chemistry and Technology,* by A.K. Smith and S.J. Circle, published.

1972. The Farm, a large spiritual and vegetarian community in Summertown, Tennessee, sets up a small "soy dairy" to make soymilk and tempeh for members, whose vegan diet contains no animal products, not even dairy products or eggs. This is the earliest known tempeh produced in a Caucasian-run tempeh shop in the U.S., although it is not sold commercially.

1972-74. World food crisis years. Photos of malnourished and starving children appear on the covers of leading magazines and in the TV news.

1972, July. Soviet wheat deal. The USSR suddenly purchases 18 million tons of wheat from the USA via Continental Grain, making it the largest food import deal in history. This starts an era of expanded U.S. agricultural trade with socialist countries. This massive Soviet purchase ends the long postwar period of food price stability.

1972. National Soybean Project established in Brazil.

1972. Soybean research starts at the International Institute of Tropical Agriculture (IITA), in Ibadan, Nigeria. The focus is on soybean production and varietal development. This gradually becomes the most important soybean research program in Africa, and plays a key role in helping national programs in Africa to get started.

2450. Gorrill, A.D.L.; Nicholson, J.W.G. 1972. Alkali treatment of soybean protein concentrate in milk replacers: its effects on digestion, nitrogen retention, and growth of lambs. *Canadian J. of Animal Science* 52(4):665-70. Dec. [11 ref. Eng; fre]

• ***Summary:*** "Alkali treatment to disperse a soybean protein concentrate (SPC) was studied in two milk replacer experiments, in which the SPC supplied 50% of the total nitrogen." Six lambs were used. Growth to 10 weeks of age was similar. Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

2451. Leung, W-T.W.; Butrum, R.R.; Chang, F.H. 1972. Food composition table for use in East Asia. Atlanta, Georgia: Center for Disease Control, U.S. Dept. of Health, Education, and Welfare. xiii + 334 p. Dec. No index. 30 cm.

• ***Summary:*** Part I. Proximate composition, mineral and vitamin contents of East Asian foods, by Woot-Tsuen Wu Leung, Ph.D. (Nutrition Program, Center for Disease Control, Dep. of Health, Education and Welfare), and Ritva Rauanheimo Butrum, M.S., and Flora Huang Chang, B.S. (Federation of American Societies for Experimental Biology).

Part II. Amino acid, fatty acid, certain B-vitamin and trace mineral content of some Asian foods, by M. Narayana Rao, Ph.D., and W. Polacchi (Food Policy and Nutrition Division, Food and Agriculture Organization of the United Nations).

In Part I, Food Group 3 titled "Grain legumes and legume products" (p. 16-22) gives the composition of the following (100 grams edible portion and as purchased): Adzuki beans (*Phaseolus angularis;* incl. "Azuki-an," and boiled sweetened). Asparagus bean: See Cowpea, yardlong. Asparagus pea: See Goabean. Bambara groundnut or jugo bean (*Voandzeia subterranea*). Bengal gram: See Chickpea. Blackeyed pea: See Cowpea, catjang. Blackgram: See Mung bean. Broad bean or horse bean (*Vicia faba;* incl. "Fuki-

mame" and "Otafuku mame"). Burma bean: See Lima bean. Butter bean: See Lima bean. Catjang pea: See Pigeonpea. Chickpea or Bengal gram (*Cicer arietinum*). Cowpea, all varieties (*Vigna* species). Cowpea, yardlong: See Cowpea, all varieties. Dhal: See Lentil. Dolichos, Australia pea (*Dolichos lignosus*). French bean: See Kidney bean. Goabean [goa bean], asparagus pea, or winged bean (*Psophocarpus tetragonolobus*). Golden gram: See Mung bean. Green gram: See Mung bean. Haricot bean: See Kidney bean. Hindu cowpea: See Cowpeas, all varieties. Horse grain or horse gram or Madras gram (*Dolichos uniflorus; D. biflorus*). Horsebean: See Broadbean. Note 1. This is the earliest English-language document seen (Jan. 2005) that uses the word "horsebean" or the word "broadbean" to refer to *Vicia faba*.

Horsegram: See Horse grain. Hyacinth bean or Indian butterbean (*Lablab niger; Dolichos lablab*). Indian bean: See Mung bean. Indian butterbean: See Hyacinth bean. Jackbean, common (*Canavalia ensiformis*). Jugo bean: See Bambara groundnut. Kidney bean, French bean, navy bean, pinto bean, snap bean, or string bean (*Phaseolus vulgaris;* incl. "Usura-mame"). Lentil or dhal (*Lens culinaris; Lens esculenta; Ervum lens*). Lima bean, butter bean, or Burma bean (*Phaseolus lunatus; Phaseolus limensis*).

Note 2. This is the earliest English-language document seen (May 2003) that uses the scientific name *Lens culinaris* to refer to lentils.

Note 3. This is the earliest English-language document seen (Jan. 2009) that uses the name "Burma bean" to refer to the lima bean.

Madras gram: See Horse grain. Mung bean, Indian bean, red bean, green gram, golden gram, or blackgram / black gram (*Phaseolus aureus; Vigna radiata;* incl. vermicelli, dried starch, starch jelly, instant powdered green or red products with sugar and flour added). Mung bean, black gram or urd (*Phaseolus mungo; Vigna mungo*). Navy bean: See Kidney bean. Peanut or groundnut (*Arachis hypogaea;* incl. raw, roasted, with or without shell, salted, parched, seasoned, fried, peanut flour, peanut butter, peanut milk, peanut cake–defatted, peanut cake–defatted and fermented [onchom]). Peas, garden or field (*Pisum* species; incl. parched–salted, "Uguisu-mame"). Pigeonpea, or catjang pea (*Cajanus cajan; Cajanus indicus*). Pinto bean: See Kidney. Red bean: See Mung bean. Rice bean (*Phaseolus calcaratus; Vigna calcarata*). Soybean and soy products (Glycine max; G. hispida; G. soja; p. 19-21), incl: Whole mature seeds–dried (yellow, black), whole immature seeds dried, whole seeds–salted (black, green, green soaked, fried, fermented {natto}, pickled, roasted), flour made from roasted soybeans, defatted soybeans–whole seeds. Soybean products: Curd–unpressed, curd–tofu–raw (plain, kinugoshi, fukuroiri), curd–tofu–fried (moist type, dried type–regular size, dried type–small size, canned, abura age), curd–roasted [grilled], curd–tofu–fermented (home-prepared, jarred), curd–tofu (dried–spongy square, preserved, dried–rope-like, commercial {fermented with chili pepper}–jarred), curd cheese, curd sheet (milk clot sheet {yuba}) (moist type, dried type, pickled in soysauce), curd–pressed–raw (plain, fermented, spiced, strips–semi-dry), miso (Japan) (plain, sweet {5.3% salt added}, salty–light {10.4% salt added}, salty–dark {11.7% salt added}, mame-miso {9.7% salt added}, powdered {18.5% salt added}), paste [jiang] (plain, fermented, red pepper added, sweet, malt), soybean milk (unenriched–unsweetened, "Kaset" {Thailand; canned–concentrated, fluid}, Saridele {a mixture of soybeans, sesame seeds or peanuts, with vitamins and calcium added–Indonesia}), soybean sauce (dark–thick, light–thin, unspecified), tempeh (fermented soybean product, Indonesia), "Budo-mame" (cooked [whole soybeans]–Japan), Soybean residue [okara] (liquid, powder). Urd: See Mungo bean. Velvetbean (*Mucuna utilis; Stizolobium utilis;* incl. dried or mold-treated {tempeh}). Winged bean: See Goabean, Indes.

Food Group 4 titled "Nuts and seeds (p. 23-29) includes: Almonds, hemp seeds–whole, perilla–common (*Perilla frutescens*), safflower seeds, sesame seeds, sunflower seeds (*Helianthus annuus*), watermelon seeds.

Food Group 5, titled "Vegetables and vegetable products" (p. 30-75) includes: Amaranth, mungbean sprouts, seaweeds (many types), soybeans–immature seeds [green vegetable soybeans], soybean sprouts (raw, cooked).

Note 4. This is the earliest English-language document seen (April 2013) that mentions silken tofu, which it calls (in a table): "Curd, tofu, raw: 'Kinugoshi,' Japanese preparation."

Note 5. This is the earliest English-language document seen (Nov. 2012) that contains the term "flour of roasted soybeans."

Note 6. This is the earliest English-language document seen (Oct. 2006) that uses the term "Blackeyed pea" to refer to the cow pea. Address: Dep. Health Education and Welfare.

2452. Manes, J. Damon; Fluckiger, H.B.; Schneider, D.L. 1972. Chromatographic analysis of vitamin K-1; Application to infant formula products. *J. of Agricultural and Food Chemistry* 20(6):1130-32. Nov/Dec. [12 ref]
• ***Summary:*** Vitamin K-1, the antihemorrhagic vitamin, occurs primarily in green plants. Infant formulas based on soy protein isolates have higher levels of vitamin K (74-94 micrograms/quart) than does cow's milk (18-53 mcg/quart). Address: Dep. of Nutritional Research, Mead Johnson Research Center, Evansville, Indiana 47721.

2453. **Product Name:** [Isomil {Powdered Infant Formula Based on Soy Protein Isolate}].
Foreign Name: Isomil.
Manufacturer's Name: Abbott (M&R Laboratories).
Manufacturer's Address: The Netherlands.

Date of Introduction: 1972.
Ingredients: Incl. soy protein isolate.
How Stored: Shelf stable.
New Product–Documentation: Letter (fax) from Leif Christensen of Semper. 1990. July 10. At the time Soja Semp was launched by Semper in June 1972, Abbott (M&R Laboratories) had a factory in the Netherlands where they produced Isomil powder, based on soy isolates.

2454. Chander Parkash. 1972. Utilization of soymilk in formulating some of the dairy products. MSc thesis, Panjab University, Chandigarh, India. *
Address: National Dairy Research Inst., Karnal (Haryana).

2455. Chen, W.L.; Chen, C.M. 1972. [Studies on processing of instant soy milk powder]. *Food Industry Research and Development Institute* (*Taiwan*), *Research Report* No. 35. [Chi]*
Address: Hsinchu, Taiwan.

2456. **Product Name:** Vitamite Non-Dairy Beverage Mix.
Manufacturer's Name: Dairy Specialties International (DSI).
Manufacturer's Address: 10800 Ambassador Blvd., St. Louis, Missouri.
Date of Introduction: 1972.
Wt/Vol., Packaging, Price: 25 oz. can.
How Stored: Shelf stable.
New Product–Documentation: Talk with Tom Mekus, Vice President of Sales and Marketing, at DSI toll-free number (1-800-643-3930). 1995. Nov. 13. The company's first product was a powder, introduced in 1972 and sold by mail order. Vitamite powder now comes in a 25 oz can which makes 8 quarts of liquid for less than the cost of cow's milk. It is sold at some drug stores (retails for about $6.99) and supermarkets ($5.99), but much of their business is by mail order. Two canisters via mail order cost $14.00 postpaid, delivered by UPS; so 16 quarts of liquid cost $0.88/quart. Six canisters at $34.50 delivered make 48 quarts, costing about $0.72/quart.

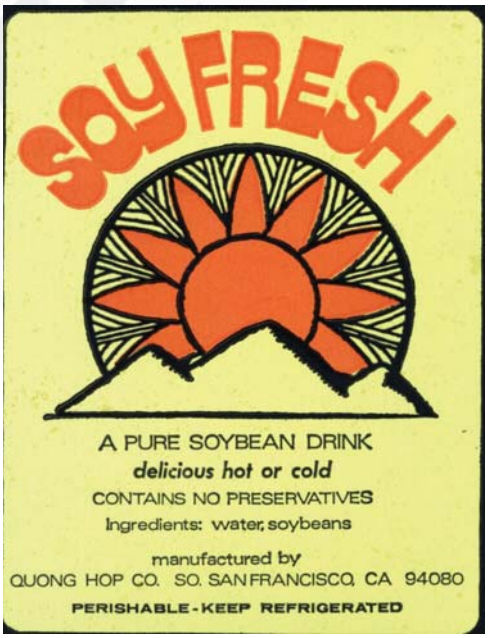
2457. **Product Name:** [Soymilk].
Foreign Name: Tônyû.
Manufacturer's Name: Ishihara Food Center K.K.
Manufacturer's Address: 2-8-11, Wakamiya, Ichikawa-shi, Chiba-ken 272. Japan.
Date of Introduction: 1972.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Ishihara Food Center first made commercial soymilk in Japan in 1972.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk*. 2nd ed.]. p. 74. Ishihara Fuudo Sentaa introduced soymilk in 370 ml puroo packs. No date of introduction is given.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. This was Japan's fourth commercial branded soymilk.

2458. Mahfouz, M.B. 1972. The use of soybean milk in dairying. MSc thesis, Ain Shams University. *
Address: Dep. of Food Science, Ain Shams Univ. Cairo, Egypt.

2459. **Product Name:** Soy Fresh Soy Drink (Soymilk) [Carob, Honey, Pure/Plain, Sugar Sweetened, Maple, Almond Honey].
Manufacturer's Name: Quong Hop & Co.
Manufacturer's Address: South San Francisco, CA 94080.
Date of Introduction: 1972.
Ingredients: Carob: Water, soybeans, carob, honey.
Wt/Vol., Packaging, Price: 1 quart plastic bottle, or 10.66 fluid oz (315 ml) Pure-Pak carton.
How Stored: Refrigerated, 7-10 day shelf life. Or frozen.
Nutrition: Per 1 cup: Calories 150, protein 8 gm, carbohydrate 17 gm, fat 4 gm.



New Product–Documentation: Label. 1981. 2.5 by 3.5 inches. Self adhesive. Orange and black on yellow. Sun-shaped Indian-like motif. "A pure soybean drink." Labels. 1981. 2 by 3 inches. Paper. Brown, orange or blue, respectively, on white. Sun-shaped Indian-like motif. "Delicious hot or cold." Soya Bluebook. 1980. p. 50. "Bottled soymilk." Address: 161 Beacon St., South San Francisco, CA 94080. Leviton. Soya Bluebook. 1981. p. 60. "Bottled soymilk; Carob, Honey, Plain, and Sugar." 1981. Soyfoods. Winter. p. 17. "They began Soy Fresh production in 1972, turning out a sugar-sweetened variety for the Oriental market and a honey-flavored soymilk for

the Caucasian natural foods market." Labels, 2 by 3 inches each, 1 color. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Labels. 1984. 10.66 fl oz: 2.75 by 2.5 inches by 2.75 wide. 1 qt.: 2.75 by 7.5 inches by 2.75 wide. Paper carton. Brown, tan and orange. "Soyfresh is a delicious protein drink with no animal fat. Rich and satisfying. A great picker-upper anytime of day. Today, fresh soymilk products serve as a protein staple for over one third of the world's population. The soybean held such high esteem in China for centuries that this common legume has been called the 'Cow of China.' Soyfresh is a non-dairy beverage that delivers full-bodied taste and flavor. It has a consistency of rich whole milk without animal fat, and is easily substituted in your favorite cereal." Spot in Soyfoods. 1984. Summer. p. 43. Now in maple, natural, almond, and carob flavors., Pure-Pak quarts and half pints. Leaflet. 1986. 8½ by 11 inches, color. "There is Quality & Variety after 80!" Shows all products. Two-third of the product is sold refrigerated and one-third is sold frozen.

Product with Label purchased for $2.09 at Safeway supermarket in Lafayette, California. 1999. Jan. 17. This tall plastic quart of "SoyFresh Unsweetened Soy Beverage" was being sold in a large open-front refrigerated case with the Odwalla juices. Self-adhesive label. Blue, black, green, and yellow on white. Sticker: "Made with organic soybeans." Ingredients: Water, whole organic soybeans.

2460. Aihara, Herman. 1972. Miso & tamari. *Macroguide* (*San Francisco: George Ohsawa Macrobiotic Foundation*). No. 12. iii + 34 p. [3 ref]

• ***Summary:*** Contents: Preface. Part I: Miso. Introduction, the origin of miso, kinds of miso, ingredients (soybeans, barley, rice, salt, water) how to make miso [at home] (barley miso, rice miso, soybean miso, analytical comparison of the three kinds of miso, other types of miso, miso pickles) value of miso (protein, fat, minerals, poison prevention, heart disease, miso for beauty, stamina, miso for radiation and other diseases, miso soup), miso in the treatment of tuberculosis and atomic radiation exposure.

Part II: Tamari or traditional soy sauce. Introduction, history, chemical change of tamari, how to make tamari soy sauce at home, how to use soy sauce.

Part III: The other soybean foods. Tofu (preparation of soybean milk at home, coagulation of soybean protein, the formation of tofu in a mold [for homemade tofu], tofu for external treatment–tofu plaster, age–deep fried tofu [how to make at home]), natto (introduction, how to make natto at home).

Part IV: Appendix. Available publications, G.O.M.F. message.

Illustrations by Carl Campbell show: (1) Two traditional kegs of miso and a glass jar of tamari (title page). (2) Making mugi (barley) miso in Japan (9 steps; p. 10).

Note 1. This is the earliest English-language document seen (March 2009) that describes how to make miso at home. Recipes for three types of miso are given: Barley miso, rice miso, and soybean miso. The method is translated from *Miso University*, by K. Misumi (in Japanese). Fortunately, the exact amount of each of 5 ingredients is given, and nine excellent illustrations show the main steps in the traditional process. Unfortunately, the instructions are somewhat vague.

Note 2. This is the earliest English-language document seen (Jan. 2012) that describes how to make natto at home. Address: San Francisco, California.

2461. Food and Agriculture Organization of the United Nations (FAO). 1972. A selected bibliography of East-Asian foods and nutrition arranged according to subject matter and

area. [Washington, DC]: Food and Agriculture Organization of the United Nations; U.S. Dept. of Health, Education, and Welfare. vii + 296 p. Dec. 27 cm. [1500* ref]
• ***Summary:*** This book has two title pages and can be cited in two ways. See Leung (1972). Address: Dep. of Health Education and Welfare.

2462. Furia, Thomas E. ed. 1972. CRC handbook of food additives. 2nd ed. 2 vols. Cleveland, Ohio: CRC Press (a Division of The Chemical Rubber Co.). Vol. 1: xi + 998 p. Vol. 2. 412 p. Index. 27 cm. [624* ref]
• ***Summary:*** The many chapters are published by various authors. Contents of Vol. 1: Introduction. 1. Enzymes. 2. Vitamins and amino acids. 3. Antimicrobial food additives. 4. Antioxidants as food stabilizers. 5. Acidulants in food processing. 6. Sequestrants in food. 7. Gums. 8. Starch in the food industry. 9. Surface active agents. 10. Polyhydric alcohols. 11. Natural and synthetic flavorings. 12. Flavor potentiators. 13. Nonnutritive sweeteners. 14. Color additives in food. 15. Phosphates in food processing.

Contents of Vol. 2: Legal considerations on food additives. Antioxidants as stabilizers for fats, oils, and lipid-containing foods. Enzymes. Nonnutritive sweeteners: Saccharin and cyclamate. New sweeteners. Natural and artificial flavors. Synthetic food colors.

Vol. 1: Chapter 12, titled "Flavor potentiators" (p. 513-21), by Loren B. Sjöström (Vice-President, Arthur D. Little, Inc., Cambridge, Massachusetts) notes (p. 513): "In the context of flavor, the term 'potentiator' is only a few years old. The identification of flavor potentiators is a twentieth century accomplishment, an area of research still in its infancy." Yet seasonings (such as salt), as well as herbs and spices, have been used since ancient times.

The section on "Flavor enhancers" begins (p. 515): "The best known and most widely used flavor enhancer is monosodium glutamate (MSG). In 1866, a German chemist, Ritthausen, isolated glutamic acid. Later another chemist converted the acid to a sodium salt, monosodium glutamate. In doing their work, neither had any interest in flavor.

"More than 40 years later, in 1908, a Japanese chemist at the University of Tokyo, Dr. Kikunae Ikeda, discovered the flavor enhancing properties of MSG. Dr. Ikeda had set out to find out why and how a certain seaweed, *Laminaria japonica,* affected flavor. Japanese cooks had used this seaweed for centuries to improve the flavor of soups and certain other foods. Dr. Ikeda discovered that the ingredient in the seaweed that made the difference was MSG, and that it had an unusual ability to enhance or intensify the flavor of many high protein foods.

"After isolating MSG, Dr. Ikeda developed a process for extracting it from wheat flour and other flours. Working with the Japanese chemical company, Suzuki and Co., he supervised the construction of a plant and, as a partner with the company, began commercial production of MSG in 1909.

"There were several attempts to produce MSG in the United States in the years following, but it was not until the 1940's that large-scale MSG production began in this country. By 1968, U.S. production had grown to 46 million pounds per year and world consumption had increased to more than 150 million pounds per year."

The section titled "Types of potentiators" discusses 5'-nucleotides, maltol, dioctyl sodium sulfosuccinate, and several others. The 5'-nucleotides are synergistic with salt, and especially with MSG; they can have something like a multiplier effect in increasing the effectiveness of salt or MSG.

Note: Soy does not appear in the index of this book. Nor can we find it mentioned in Chapter 12. Yet there are scattered mentions throughout the book: Soy protein concentrate (p. 5). Soy sauce, tamari sauce, and miso–made for centuries in the Orient using fungal protease (p. 59). Studies on breads supplemented with soy, nonfat dry milk, and lysine (p. 114).

Experimental use of esters of *p*-hydrobenzoic acid in soy sauce and other foods (p. 128). Gas sterilants: Ethylene and propylene oxides. The ethylene oxide process was used during World War II to reduce the bacterial counts in soy flour and cereal products used in processed meat products for the Armed Forces (p. 156). An excellent acidulant for hams and soy bean curds [tofu] has been obtained by coating citric acid with suitable animal or plant oils (p. 242-43).

"Synthetic aroma for soy sauce," by K. Ebihara. 1954 Japanese patent No. 5250'54 (p. 258). Soy flour as a widely used binder for processed meat (p. 425). Soy flakes (31.5% parts by weight) and soy hulls (3.0%) as ingredients in "Soft moist pet food" (p. 445).

Cake doughnut mixes sometimes contain soy flour (p. 656). Completely synthetic coffee whiteners usually contain a combination of vegetable fats, sodium caseinate or soy protein, gums as viscosity stabilizers, phosphate or citrate salts as stabilizers for the proteins and as buffering agents, corn syrup solids or sugar as sweeteners and bodying agents, liquid-type emulsifiers, and colors to duplicate the color of cream (p. 671-72). Whipped toppings are used to replace high-fat cream products just as coffee whiteners are used to replace low-fat cream products. Both use protein, which may be soy protein (p. 672).

Imitation sour cream, sour cream dressings, and chip dips. Replacements for fermented cream products represent a growing market These non-dairy products contain vegetable oil / fat, protein (either soy protein or sodium caseinate [derived from milk], gum stabilizers, etc., p. 673). When partially hydrolyzed soy protein and sodium hexametaphosphate (SHMP) are added to dried egg white, an angel food cake mix can be prepared in which all of the ingredients can be included in a single mixing stage (p. 679). Gelsoy, a patented soy protein made from specially processed, defatted and dehulled soybean flakes, is reported

to have improved water- and fat-binding capabilities when treated with SHMP (p. 746, 778).

Improving protein whipping properties: Sevall and Schaeffer prepared protein whipping compositions from soy protein by combining the protein with SHMP etc. (p. 747). Gunther made an entirely new whipping protein composition by combining an enzyme-modified soy protein similar to Gelsoy, with gelatin and a polyphosphate (p. 747). A long table on the regulatory status of direct food additives mentions "Isolated soy protein" (p. 874-75); its use as a binder is regulated by the Meat Inspection Division (MID) of the USDA.

The word "soybean" is mentioned on 22 pages; all of these concern soybean oil except when noted (p. 65 {soybean protein}, 67 {soybean meal, soybean flour / flours}, 99, 114 {soybean products}, 192, 193, 197, 198, 207, 221, 222, 263, 264, 280, 289, 290, 319 {the soybean plant resembles the guar plant}, 350 {soybean protein, soybean methylcellulose}, 424, 746 {soybean flakes}, 747 {soybean protein}, 749 {soybean milk}). Address: Technical Development Manager, Industrial Chemicals Div., Geigy Chemical Corp., Ardsley, New York; President, Intechmark Corp., Palo Alto, California.

2463. *Gazeta do Agricultor* (*Mozambique*). 1972. A soja à sua mesa [The soybean at your table]. 24(272-283):255-56. [Por]

• ***Summary:*** The soybean is widely considered by nutritionists and dietitians to be a very nutritious food. The negro scientist George Washington Carver was a pioneer in its study. Among his discoveries were soy flour, soy oil, and substitutes for milk and for coffee. A detailed discussion of soy lecithin and its possible benefits is given. A stable soy flour is named Soyolk.

2464. Goldbeck, Nikki. 1972. Cooking what comes naturally: A natural foods cookbook featuring a month's worth of natural-vegetarian menus. Garden City, NY: Doubleday & Company, Inc. x + 230 p. Illust. by Bill Goldsmith. Index. 22 cm.

• ***Summary:*** In the section on Flour (p. 14-15), soy flour is mentioned. Under seasonings, the author advises (p. 22) to "Use Tamari or pure soy sauce, which has only water, whole wheat flour, and salt added." Recipes for Fried Brown Rice and Vegetables (p. 52) and Cabbage Salad with Carrot Dressing both use "Tamari Soy Sauce" and notes: "It is sold in all health food stores. If you cannot find it, substitute pure soy sauce to which no flavorings, colorings, or artificial ingredients have been added." Page 131 gives a recipe for Tamari Broth. In the section on "Ingredient Substitutions" under "Dairy Products," 1 cup milk is said to equal 1 cup soy milk. Address: R.D. 1, Box 452, Woodstock, New York 12498.

2465. Hewitt, Jean. 1972. The New York Times natural foods cookbook. New York, NY: Avon. 434 p. Index. 18 cm. [147* ref]

• ***Summary:*** Contains a surprisingly large collection of soy-related recipes, and several innovative uses for tofu, considering this relatively early date. The following recipes list soy in the title. Note that all use cooked or dry soybeans as the main soy ingredient unless otherwise stated in the title or in parentheses: Soy cheese appetizer (with tofu, p. 7). Soybean dip (p. 14). Vegetable-soy soup (with "1½ cups cooked soybeans {or 15½-ounce can, drained; see p. 157}," p. 47). Soy chili (p. 73). Soy meat loaf (p. 80). Vegetarian sausages (p. 111). Soybean soufflé (p. 111). Soybean and nut loaf (p. 112). Soybean and vegetable casserole (p. 112). Pressure cooked soybeans (p. 113). Baked soybeans I and II (p. 113-14). Soy burgers (p. 115). Soy-rice burgers (p. 115). Soybean patties (p. 116). Broiled soy cakes (p. 116). Curried soybeans (p. 155). Soybean pistou (p. 156). Soybeans with tomato sauce (p. 156). Cooking dried soybeans (with 2 cups {1 pound} dried soybeans, green or yellow," p. 157-58). Soybean cheese or curd (p. 158; how to make tofu at home using 1½ cups dried yellow soybeans and 1/3 cup lemon juice; this recipe will not work since the soybeans are never ground!). Marinated soybean salad (p. 181). Avocado-tofu dressing (p. 187). Basic tofu dressing (p. 190). Corn meal mush and soy grits (p. 211). Soya-carob bread (with soy flour, p. 257). Soy butterscotch pudding (with soy milk, p. 322). Soy nut coffeecake (with soy flour, full fat or low fat, p. 353). Soya cookies (with soy grits, p. 376). Soy mayonnaise (with soy flour, p. 394). Soybean spread (with "½ cup mashed cooked soybeans or soy flour," p. 394).

Although this book is not wholly vegetarian, it does contain a large selection of vegetarian entrees.

Note: This is the English-language document seen (Jan. 2007) that contains the term "Soy burger" (or "soy burger").

2466. Hill, Howard E. 1972. Introduction to lecithin. Los Angeles, California: Nash Publishing Corp. 81 p. No index. 21 cm.

• ***Summary:*** Contents: Introduction: What this book is all about. 1. Lecithin brings startling results: Case histories. 2. Are the claims made for lecithin valid? Lecithin and heart disease, cholesterol, soy oil. 3. Oil for the health of America: Soy oil, the source of lecithin, three main uses of soy oil, from hog fat to vegetable oil. 4. Commercial uses of lecithin in foods: Our number one cash crop. 5. From backstage to center stage: Lecithin enters new fields. 6. Do you need choline" A vital organ protection. 7. How to milk a soybean: Control of food allergies, lecithin as an emulsifier, the use and value of soy milk. 8. Health seed of a million uses: The uses and effects of lecithin, comparative protein values of common foods. 9. Faith without action: Primary energy boosters, secondary better-living boosters, biorhythm, the principle of daily growth.

The last 4 unnumbered pages of the book contain advertisements.

2467. Koaze, Yoshihisa; Nakajima, Yutaka; Eida, Toshiaki. 1972. Improvement of soybean products by microbial means. In: Proceedings of the [Sixth] International Symposium on Conversion and Manufacture of Foodstuffs by Microorganisms. Tokyo: Saikon Publishing Co. viii + 297 p. See p. 41-52. Held 5-9 Dec. 1971 at Kyoto, Japan. [19 ref]
• ***Summary:*** Starting with dehulled defatted soybean flour, and using a fermentation process followed by a purification process, the authors have developed a series of "Bland Soybean Protein Products." These products consistently received higher scores than isolated soy protein in organoleptic evaluation tests. Address: Food Research & Development Labs., Meiji Seika Kaisha Ltd., Kanagawa, Japan.

2468. Liener, I.E. 1972. Nutritional value of food protein products. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 203-77. Chap. 7. [417 ref]
• ***Summary:*** Contents: 1. Introduction. 2. Protein and amino acid requirements of man: Protein requirements, amino acid requirements. 3. Evaluation of protein quality: Amino acid composition, biological techniques involving animals, protein efficiency ratio (PER), N-balance studies, plasma amino acids, experiments with human subjects, amino acid availability, in vitro techniques (physical tests, available lysine, tests for biologically active components [urease, trypsin inhibitor], enzymatic and microbiological techniques). 4. Nutritional significance of other soybean constituents: Available energy, vitamins (fat-soluble vitamins, water-soluble vitamins), minerals (calcium, phosphorus, zinc, other minerals), unknown growth factor(s).

5. Factors affecting the nutritive properties of soybean protein: heat treatment, supplementation with amino acids, storage, germination, effect of antibiotics, dietary source of carbohydrate. 6. Soybean products used for human consumption: Soybeans as a vegetable, soybean flour (incl. Multi-Purpose Food (MPF), "toasted full-fat soy flour" {referred to in Japan as "kinako"}, soybean milk, soybean curd, other fractions, protein concentrates, protein isolates (use in infant foods, use in textured foods), fermented products (tempeh, natto, miso).

Note. This is the earliest English-language document seen (Nov. 2012) that uses the term "toasted full-fat soy flour" to refer to kinako.

7. Use of soybean products as protein supplement: As supplement to wheat protein (bread, other baked goods), as supplement to corn, as supplement to rice, use in vegetable protein mixtures, peanut and other oilseed proteins, blends containing corn, other cereals and legumes. Address: Univ. of Minnesota.

2469. Roden, Claudia. 1972. A book of Middle Eastern food. New York, NY: Alfred A. Knopf. 453 + xiv p. Illust. 23 cm. [80 ref]*
• ***Summary:*** The contents of this book is similar to that of the original 1968 edition.

2470. Smith, A.K.; Circle, S.J. 1972. Protein products as food ingredients. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 339-88. Chap. 10. [180 ref]
• ***Summary:*** Contents: 1. Flavor: Taste panel results, flavor components, plastein formation and flavor, plastein formation and nutrition, some food uses tolerant of soy flavor. 2. Bread and pastries: Soy flour history, effect of soy flour on baking characteristics, soy protein isolate in bread, soy flour and flavor, enzyme active soy flour, soy flour in Britain, detecting of soy flour in wheat flour. 3. Other baked goods: General, doughnuts, snack products. 4. Breakfast cereals. 5. Macaroni products. 6. Dairy-type products: Imitation milk, soy milk, filled milk, soybean cheese, imitation cream cheese, coffee whiteners, whip toppings, and frozen desserts, yogurt type products. 7. Comminuted meat products and meat analogs: Comminuted meat products, meat analogs, spun fiber type meat analog, extrusion-cooked type meat analog, heat-gelled type meat analog, meat fibers in heat-gelled protein matrix, assay of soy protein products in meat-type foods. 8. Gelling and aerating agents: Gelsoy as gelling agent, soy protein isolate as gelling agent, soy protein isolate as aerating agent, soy whey protein as aerating agent, enzyme modified isolates as aerating agent, foam-mat drying adjunct, foaming agent for soda water. 9. Miscellaneous food applications: Brew flakes, soups, gravies and sauces, confections, imitation nut meats, and [soy] nut butters, spray drying adjunct. 10. Nonfermented Oriental soybean foods: Introduction, Chinese soy milk, dried soybean whole and defatted milks, tofu (fresh tofu, bagged tofu, dried tofu, fried tofu), yuba, kinako ("The Japanese have a product which is similar to full-fat soy flour except that it is made from whole roasted soybean and this contains the seed coat"), soybean sprouts (compositional changes).

Concerning Brew Flakes (p. 373): "Soy flakes, grits, and peptones have been used since about 1937 or earlier (Burnett 1951) as adjuncts in brewing beer. Grits and ground meal from screw press processing were the first products used in brewing but later they were replaced by solvent-extracted flakes. The best results are obtained with flakes or flour having a high NSI (nitrogen solubility index) with a minimum of heat treatment in processing. Up to 0.75 lb. of flakes per barrel of beer has been recommended by Hayward (1941).

"The flakes may be used in the normal mashing operation to provide amino acids, peptides, minerals, and

vitamins as nutrients for the yeast. It was reported by Wahl (1944) and Wahl and Wahl (1937) that addition of hydrolyzed soybean protein directly to the beer improves foam stability, flavor, and body of the beer." Address: NRRL, Peoria, Illinois.

2471. Smith, A.K.; Circle, S.J. 1972. Historical background (on soybeans and soybean foods). In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 1-26. Chap. 1. [53 ref]

• ***Summary:*** Contents: 1. Introduction. 2. U.S. history: Introduction of soybeans, processing for oil, soybean oil. 3. Soybean meal and protein: Animal feed industry, poultry industry, industrial uses. 4. Soybean production. 5. Oriental history: Ancient history, Oriental fermented foods (shoyu, miso, tempeh, ontjom, natto, hamanatto, tao tjo [Indonesian-style miso], kochu chang, ketjap), Oriental nonfermented foods (soybean milk, tofu), wedge press. 6. Soybeans and world food problems: Green Revolution, protein supplements (high protein food formulations, AID funded), amino acids, CSM, cottage industries (tofu, kinako).

Concerning industrial uses (p. 8-9): Soybeans rose in popularity as an agricultural crop in the USA at a time when other crops such as corn, wheat, cotton, and tobacco were being produced in surplus quantities. Soybeans took over much of the acreage vacated by these crops. "At that early period it was the hope of many leaders of agriculture, government, and industry that much of the oil and protein of the soybean could be diverted from the food and feed industries into industrial products such as paints, varnishes, soap stock, plastics, adhesives, plywood glue, paper coating and lamination, paper sizing, textile fibers, and other uses... In 1936 the US organized the Regional Soybean Industrial Products Laboratory for this purpose. These new industrial uses were expected to help relieve the problem of farm surpluses... In 1935 the Glidden Company built the first plant for the isolation of industrial grade soybean protein (transferred to Central Soya in 1958). The largest use of industrial grade protein is in the paper-making industry, for coating and sizing of paper board.

"After World War I, soybean meal, because of its low cost, replaced casein as an adhesive for Douglas fir plywood glue, where it still retains a substantial part of the market for the interior grade product."

"While soybean proteins have several important industrial applications, especially in the paper industry for coating and sizing paper, which are expected to continue for years to come, the original dream of an ever-expanding industrial market [for soy proteins] has faded. In the polymer market it appears that for most applications the proteins cannot be made competitive with the increasing number of low cost, high quality synthetic resins... It is generally recognized that the increasing demand for proteins for feed and food will greatly surpass the anticipated industrial uses."

A graph (p. 1) shows: Soybean production in the United States for seed, 1940-1970. Address: 1. Oilseeds Protein Consultant, New Orleans, Louisiana; 2. Director, Protein Research, W.L. Clayton Research Center, Anderson Clayton Foods, Richardson, Texas.

2472. Smith, Allan K.; Circle, Sidney J. eds. 1972. Soybeans: Chemistry and technology. Vol. 1. Proteins. Westport, Connecticut: AVI Publishing Co. xi + 470 p. Illust. Index. 24 cm. [500+ ref]

• ***Summary:*** One of the best and most comprehensive reviews on the subject, with extensive information on modern soy protein products. Each of the 12 chapters is written by an expert on the subject, and each is cited separately. Volume 2 was never published. Address: 1. PhD, Oilseeds protein consultant, New Orleans, Louisiana; 2. PhD, Director, Protein Research, W.L. Clayton Research Center, Anderson Clayton Foods, Richardson, Texas.

2473. Smith, A.K.; Circle, S.J. 1972. Appendixes: Glossary of soybean terms: Terms used in conjunction with the processing of soybeans and the utilization of soy products. Official standards of The United States for soybeans. In: A.K. Smith and S.J. Circle, eds. 1972. Soybeans: Chemistry and Technology. Westport, CT: AVI Publishing Co. xiii + 470 p. See p. 438-56. Appendix. [4 ref]

• ***Summary:*** Glossary: Soybean(s), soybean processor, soybean processing (solvent extraction, mechanical processing, pre-press solvent processing), soybean oil, crude soybean oil, edible crude soybean oil, refined soybean oil, edible refined soybean oil, hydrogenated soybean oil, degummed soybean oil, winterized oil, technical grade refined soybean oil, soybean fatty acids, soybean soapstock, acidulated soybean soapstock, soybean lecithin, break material, sludge.

Soybean products: Ground soybeans, ground soybean hay, soybean hulls, solvent extracted soybean feed, soybean meal, dehulled solvent extracted soybean meal, soybean mill feed, soybean mill run, heat processed soybeans, nitrogen free extract (N.F.E.).

Standard specifications: Soybean chips, soybean cake, 41% protein soybean meal, soybean flakes, 44% protein soybean meal, dehulled soybean flakes, 50% protein solvent extracted soybean meal.

Soybean proteins: Soy flour, soy grits, soybean meal, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, protein, isolated protein, toasting, textured protein products (TPP), meat analogs. Definitions: Soy grits and/or soy flour, isolated soy protein, soy protein concentrate.

Vegetable fats: Margarine, vegetable shortening.

Oriental foods: Soy sauce (shoyu), soy milk, miso, tofu, dried tofu, aburaage, kinako ("Ground toasted soybeans,

used for making Japanese-style cakes" [confections]), namaage, ganmodoki, tempeh, natto, yuba, moyashi (soybean sprouts), vanaspati, ghee.

Official standards of the U.S. for soybeans. Soy flour standards. Analytical data range of commercial soy protein. Some U.S. companies marketing soy protein food ingredients. Nitrogen solubility index (NSI). Protein dispersibility index (PDI). Urease activity. Water absorption of soy flour. Address: 1. Oilseeds Protein Consultant, New Orleans, Louisiana; 2. Director, Protein Research, Anderson Clayton Foods, Richardson, Texas.

Royal Tropical Institute, 63 Mauritskade, Amsterdam-East, Netherlands. 48 p. Annex III in Thio 1972, Introduction of Soybeans for Human Nutrition, Republic of Zambia. See p. 19-36. June. [Eng]
• ***Summary:*** Contents: Introduction. Soybeans. Soybean products (incl. immature soybeans in the pods): Soymilk, soybean curd (soybean cheese or toufu [tofu]), soy steak (tempeh). Applications of soybeans and soybean products: Fried soybeans, boiled young whole soybeans, fried soybean curd (fried toufu), dried sliced toufu (toufu crisp), soymilk residue flour [okara ground to finer than 40 mesh], soycroquettes (soyrolls, with soymilk residue flour {finer than 40 mesh}), soybiscuits (with 50 grams of soymilk residue flour), vegetable soysoup (with 600 ml of soymilk), soy-omelette (toufu omelette, with "100 grams of toufu and 1 chicken egg"), toufu salad with peanut sauce (with "fried toufu slices"), soy maize bread (with "600 ml of soymilk" and "60 grams of soybean curd {toufu}, very finely mashed"). Appendix: Average chemical composition of soybeans. Address: RTI, Amsterdam East, Netherlands.

2475. **Product Name:** [Defatted Soy Flour, and Soy Beverage].
Manufacturer's Name: General Mills.
Manufacturer's Address: Lago Muritz 84-B, Mexico 17, D.F., Mexico. Phone: 531-31-15.
Date of Introduction: 1972?
New Product–Documentation: Talk with Gil Harrison of American Soybean Assoc. 1989. April 21. General Mills was the first company to make a defatted soy flour in Mexico. They had had their own little cereal-soy mixing plant. Their first experiments were done with a soy beverage (made from defatted soy flour and flavor) served to government dam workers. They probably started in the late 1960s and were definitely there by 1971. When they couldn't make it go, Don Reese purchased all the machinery from General Mills. He wouldn't let Gil Harrison into his plant on Lago Muritz in 1971. He made cereal-soy blends and a soy beverage, both containing sesame.

2476. Fomon, Samuel J.; Thomas, L.N.; Filer, L.J., Jr.; Anderson, T.A.; Bergmann, K.E. 1973. Requirements for protein and essential amino acids in early infancy. Studies with a soy-isolate formula. *Acta Paediatrica Scandinavica* 62(1):33-45. Jan. [23 ref]
• ***Summary:*** Rates of gain in length and weight by fullsize infants receiving 6 to 7 percent of calories from cow milk protein or soy protein were found to be similar to those by breastfed infants. Address: Dep. of Pediatrics, Univ. of Iowa, Iowa City.

2477. Misko, Karin. 1973. SeVa longevity cookery cookbook. Columbus, Ohio: Soybean Press. viii + 113 p. Jan. Illust. by Judy Post. Edited by Debora Bittaker. Introduction by Catherine Bicknell. 22 cm. [45 ref]
• ***Summary:*** A vegetarian cookbook from the SeVa Restaurant, printed on 100% recycled paper. Soy-related recipes include: Soy milk (p. 18). Tahini milk. Nut milk (p. 18). Miso vegetable soup (p. 25). Variety muffins (with soy flour, p. 36). Salad for Virgo (with green soybeans and roasted soybeans, p. 45). Miso-tahini sauce (p. 51). Brown sauce (with Tamari soy sauce or miso, p. 51). Stuffed cabbage rolls (with green soybeans and brown rice, p. 65). Campfire dinner (with cooked or canned soybeans, p. 65). Soy bean loaf (p. 73). Roasted soybeans (dry roasted, p. 84). Granola (with Soya granules, p. 84).

The glossary (p. 98-100) includes listings for cold-pressed oils, fertilized eggs, ginseng, glutin [sic, gluten], miso, seaweed, tamari soy sauce, and tofu ("a bean curd made from soybeans which is used for flavoring soups and sauces.")

Brand name products we use (p. 101; Note: Each contains soya). Smokene, Soyagen (spray-dried soymilk), and Vegeburger (Loma Linda Foods). Soya Granules (Fearn Soya Foods). Stripples (bacon alternative from Worthington Foods). Vege-Sal (Modern Products; flavored with soy bean extract). "Smokene: smoked seasoning spice made from toasted soy powder, dried yeast, soy sauce and condensed wood smoke. It is used for flavoring soups and sauces." Address: Columbus, Ohio.

Address: Dep. of Pediatrics and Div. of Biomathematics and Biostatistics, Dep. of Biophysics, Southwestern Medical School (Dallas), Univ. of Texas.

2481. Meals for Millions Foundation. 1973. Annual report 1972. Santa Monica, California: MFM Foundation. 16 p. 22 cm.
• ***Summary:*** Submitted by Mark M. Sterner, the new Executive Director. Cover is printed in beige, gold, and dark brown ink showing a stylized Mercator projection map of the world on a white background. The pages are unnumbered.

Contents: A letter from Charles Sweeney, President. Meals for Millions–an idea whose time has come [a phrase later used by the Hunger Project, founded by Werner Erhard, 1977]. Technical assistance: Ecuador (including growing soybeans), Sri Lanka (grow soybeans, make a soy beverage), Korea (developing a soy beverage in Santa Monica). Education: Training school, nutritional instruction. Nutritional programs: United States, overseas. MPF distribution during calendar year 1972: 145,395 lb were sent to 16 countries overseas and 31,215 lb were sent to locations in the USA for a grand total of 176,610 lb [71% as much as last year]. MFM in the news. Balance sheet (as of 31 Dec. 1972): Contributions and other revenues $399,147. Expenses $380,000. Assets and liabilities. History. Volunteers support MFM. Northern California advisory board. Bay Area committee. Board of Directors. A letter from Mark M. Sterner, Executive Director.

Photos show: (1) Charles Sweeney, President. (2) Mark M. Sterner. Plus many small photos. Address: 1800 Olympic Boulevard (P.O. Box 1666), Santa Monica, California 90406. Phone: 870-0451.

2482. Badenhop, A.F.; Hackler, L.R. 1973. Methionine supplementation of soy milk to correct cystine loss resulting from an alkaline soaking procedure. *J. of Food Science* 38(3):471-73. March/April. [15 ref]
Address: Cornell Univ., Geneva, New York.

2483. Rice, William. 1973. The fair-skinned soybean. *Washington Post.* May 10. p. E1, E16.
• ***Summary:*** The title of the continuation of the article on p. E16 is "The treasures beneath the surface of the fair skinned soybean." Mirror, mirror on the wall... The soybean is the fairest vegetable of all, for its dull yellow surface covers a treasure of protein and other nutrients. It is presented in many guises: "tofu (used in Oriental cooking as bean curd), green (fresh) soybeans (prepared as fresh limas, or eaten blanched or raw when very young), dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes), soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes), soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many Americans 'eating Chinese'), tamari (pure soy–preferred by vegetarians), miso (fermented soybean paste), soybean milk (liquid or powdered), soybean grits and flakes, lecithin (supplement to control cholesterol build-up) and some others. Soybeans have long been available in health food stores."

Rising beef costs have led to the use of "textured vegetable protein" as an "extender" in ground beef products. Contains 4 recipes using cooked, canned or dry soybeans, or soy flour.

2484. Baker, E.C.; Mustakas, G.C. 1973. Heat inactivation of trypsin inhibitor, lipoxygenase and urease in soybeans: Effect of acid and base additives. *J. of the American Oil Chemists' Society* 50(5):137-41. May. [19 ref]
Address: NRRL, Peoria, Illinois.

2485. Johnson, P.E. 1973. High-protein foods for peace. *Cereal Science Today* 18(5):138-41, 148. May. [1 ref]
• ***Summary:*** A photo shows Nigerian children, suffering from acute malnutrition, being sweetened and flavored Instant CSM (corn-soya-milk) by UNICEF. There is a great need to fortify cereal foods in developing countries. Recently bread flour (fortified with soy flour at 6 parts per 100) has been approved for worldwide distribution. The first purchases of this soy-fortified flour on 18 Oct. 1972 totaled 6 million lb. As a start, it is planned to use soy-fortified flour in biscuits and buns for child-feeding programs in India and the Philippines. "In Hong Kong, a beverage called Vitasoy, made with a soya base, fortified with vitamin A, B vitamins, and sugar, has been highly successful, being marketed over a 30 year period. Present production is at the rate of more than 100 million bottles per year. A major expansion is now underway which will provide capacity for production of 400 million bottles of Vitasoy annually within 3 years." Address: Chief, Operations Div., Office of Food for Peace, Agency for International Development.

2486. *Toronto Star* (*Ontario, Canada*). 1973. The ugly soybean contains a wealth of protein, vitamins. June 6. p. 77.
• ***Summary:*** The article begins: "Mirror, mirror on the wall, what is the ugliest vegetable of all? The soybean. Some call it 'tasteless.' Others ask 'What do you do with it?' Cost-conscious cooks, nutritionists, and the food industry would be far more understanding."

Under the soybean's dull yellow surface is "a treasure

of protein, more than any other vegetable, and substantial amounts of calcium, iron, other minerals and vitamins B and E. Also the soybean has more changes of clothes than any beauty queen." Consider the following guises:

"Eaten like peanuts: Tofu (used in Oriental cooking as bean curd); green (fresh) soybeans (prepared as fresh, or eaten blanched...); dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes); soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes).

"Other aspects of the bean are: Soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many North Americans 'eating Chinese'); Tamari (pure soy–preferred by vegetarians); miso (fermented soybean paste); soybean milk (liquid or powdered); soybean grits and flakes; lecithin (supplement to control cholesterol build-up)..."

"Soybeans have long been available in health food stores, and some of the larger supermarkets now carry them." The best variety for food use is said to be Bansei. Canned soybeans, which take less time to prepare, make a good beef extender.

Gives recipes for: Soybeans and mushrooms (with "2 cups cooked soybeans" and 1 tbsp. tamari or soy sauce). Baked soybeans (with "1 pound yellow soybeans picked over and washed." Let the beans soak in a large freezer container for 5 hours, then place them in the freezer for at least 24 hours to reduce the cooking time required. "Place frozen beans and liquid in a large kettle. Bring to a boil and simmer gently until tender, adding more hot water if necessary. This takes 2½ to 3½ hours"). Soybean-mint salad (with 2 cups cooked soybeans or 1 can {15½ ounces}), drained. Soy mayonnaise (with ½ cup soy flour).

2487. Robson, J.R.K.; Konlande, J.E.; Larkin, F.A.; O'Connor, P.A.; Liu, Hsi-Yen; Horner, J.M. 1973. Zen macrobiotic diets. *Lancet* i(7815):1237. June 9. [4 ref]
• ***Summary:*** An evaluation of Kokoh, a Zen macrobiotic vegetarian infant feeding mixture, which contains brown rice, glutinous rice, aduki beans, soybeans, oats, sesame seeds, and wheat. Two infants, ages 7 and 14 months, had been feed Kokoh in varying proportions before being admitted to the hospital. Both infants were very small and both had an energy intake of only 40% of the RDA. "The apprehension expressed by the American Medical Association (1971) concerning Zen macrobiotic diets appears to be well founded..." Address: School of Public Health, Univ. of Michigan, and Dep. of Pediatrics and Communicable Diseases, Medical Center, Univ. of Michigan, Ann Arbor, MI 48104.

2488. Dean, M.E. 1973. A study of normal infants fed a soya protein isolate formula. *Medical J. of Australia* 1(26):1289-93. June 30. [8 ref]
• ***Summary:*** A powdered soy formula (Similac-Isomil) when fed for 6 months to healthy, full-term infants, gave good growth. "The soya bean isolate formula appears to be an adequate nutritional source for normal Australian babies and compares at least as well as one of the most commonly used infant feeding formulæ in this country. The newer soya bean isolate appears to have none of the disadvantages previously associated with soya bean formulæ, apart from some perianal irritation in the first two weeks of life." This study was supported by Ross Laboratories. Address: Dep. of Pediatrics, Adelaide Children's Hospital, North Adelaide, SA 5006, Australia.

2489. Knapp, J.; Barness, L.A.; Hill, L.L.; Kaye, R.; Blattner, R.J. 1973. Growth and nitrogen balance in infants fed cereal proteins. *American J. of Clinical Nutrition* 26(6):586-90. June. [14 ref]
• ***Summary:*** "Fortified cereals have been recommended as sources of protein to combat protein deficiency, particularly in developing countries." Products provided: Soyalac, Loma Linda Company, Riverside, California; Toasted Soy Protein, General Mills, Minneapolis, Minnesota; and Indonesian Saridele.

"In short-term balance studies, little difference was found in nitrogen retention between milk and various vegetable protein mixtures, and cottonseed and rice alone..." Address: Driscoll Foundation Children's Hospital, Corpus Christi, Texas; Depts. of Pediatrics, Baylor Univ. College of Medicine and the Univ. of Pennsylvania School of Medicine [Texas].

2490. **Product Name:** Similac (Soy-Based Infant Formula).
Manufacturer's Name: Ross Laboratories.
Manufacturer's Address: 625 Cleveland Ave., Columbus, OH 43216.
Date of Introduction: 1973. June.
New Product–Documentation: H.F. Meyer. 1960. Infant foods and feeding practices. p. 88, 90, 109, 111. Ross Laboratories (Columbus 16, Ohio), makes four infant foods: Similac Liquid, Similac Powdered, Similac with Iron Liquid, and Similac with Iron Powdered. All are made from cow's milk. They are in the category "One-formula (ready-modified) mixtures." Dean. 1973. Medical Journal of Australia. 1(26):1289-93. June 30.

2491. United Press International (UPI). 1973. New soybean drink 'tastes like nothing–Unless it's flavored. *Detroit News.* July 4. p. F-7, col. 3.
• ***Summary:*** Three professors (Steinberg, Wei, and Nelson) at the University of Illinois (Urbana) say they have developed a soybean drink that offers all the nutritional benefits of milk at about one-third the cost. However, it is bland unless flavored.

2492. *Loma Linda Bulletin* (*Loma Linda, California*). 1973. China doctor [Harry W. Miller] decides against retirement at 94. July 18.
• ***Summary:*** Dr. Miller decided at the last moment to stay on for another year at the Seventh-day Adventist Hospital in Hong Kong. For 70 years he has served the Chinese people as a medical missionary. A large photo shows him, dressed in a shirt and tie, and holding a cop in one hand. The caption: "'Orient Angel–Dr. Harry Miller, Seventh-day Adventist medical missionary, doing what he loves best, passes out cups of soybean milk to undernourished children in a houseboat city on the Hong Kong waterfront."

2493. Taylor, Brent; Norman, A.P.; Orgel, H.A.; et al. 1973. Transient IgA [immunoglobulin A] deficiency and pathogenesis of infantile atopy. *Lancet.* ii(7281):111-13. July 21. [14 ref]
• ***Summary:*** Atopy runs in families. Prick sin tests were done with seven allergens–not including soy. Address: 1-2. Hospital for Sick Children and Queen Charlotte's Maternity Hospital, London.

2494. *Dairy Record.* 1973. Soybean "milk" producer gets underway in Florida. 74(2):23. July.
• ***Summary:*** "Dairene of Florida, a manufacturer of a soybean 'milk,' has announced plans to construct Dairene plants in Charlotte, North Carolina; Springfield, Missouri; Woonsocket, Rhode Island; and El Paso, Houston, and Dallas, Texas.

"Dairene received a favorable ruling last December when a Circuit Court judge ruled that the Dairene firm should be classified as a food producer, and not subject to regulation by the state agriculture department's dairy division.

"President of Dairene of Florida is Eddie Goldstein, who was previously associated with Reddi-Whip and Fount-Whip, imitation whipped cream manufacturers. Goldstein says the soybean milk powder, called Pureblend, is manufactured from 35 ingredients in Newark, New Jersey. His processing operation is simple: 'Mix the powder with water, run it through a pasteurizer at 170º, cool it down to 36º and you have milk.'

"Goldstein says that Miami will become the big test market for his products. He notes that 'Imitation Vitamin D Milk' will retail for 59 cents a half gallon in Miami stores and will have the advantage of 'complete uniformity.'"

2495. Harper, Anne. comp. 1973. Soybean processing and utilization: A partially annotated bibliography. Jakarta, Indonesia: Lembaga Ilmu Pengetahuan Indonesia (Indonesian Inst. of Sciences), Jl. Tjhik Ditiro 43, Jakarta. vi + 56 leaves. 30 cm. [440 ref. Eng]
• ***Summary:*** Contents: Preface (by Prof. Sarwono Prawirohardjo, Chairman, ASEAN Permanent Committee on Science and Technology). Introduction: The soybean (Glycine max), soybean meal and oil, food uses, industrial uses, scope of the bibliography ("excludes references to non-alimentary utilisation of soybeans" and to "references to alimentary utilisation where the harvested plant has not undergone processing by either fermentation or oil extraction"), terminology of soybean processing (soybean meal, soy flours and grits, solvent extraction, miscella, desolventizer-toaster, defatted soy flour, low-fat soy flour, high-fat soy flour, full-fat soy flour, lecithinated soy flour, soy protein concentrates, soy milk, Saridele, yuba, soybean curd [tofu], aburage, koritofu [kori-dofu, dried frozen tofu], soy protein isolate, protein fibre products {spun, spinnerettes}, extrusion-expansion products, fermentation products {ontjom, Neurospora sitophila, soysauce, shoyu, Aspergillus oryzae, koji, moromi, tamari, koikuchi, natto, miso, tempeh, Rhizopus oligosporus, soybean cheese, sufu, Mucor sufu}, Zygosaccharomyces).

General (p. 1). Fermentation products (p. 2-16). Soybean oil, meal, and protein (p. 17-42). Nutrition (p. 43-56). Note: 500 copies were printed. Address: Indonesia.

2496. Simoons, Frederick J. 1973. New light on ethnic differences in adult lactose intolerance. *American J. of Digestive Diseases* 18(7):595-611. July. Series II. [91* ref] Address: Dep. of Geography, Univ. of California, Davis, CA 95616.

2497. Williams, S.W.; Rathod, K.L. 1973. Potential utilization of soybeans for human food. *Agriculture and Agro-Industries Journal* (*Bombay*) 6(8):11-17. Aug. [18 ref]
• ***Summary:*** Contents: Introduction. Considerations in using soybeans for foods. Soybean products for human food. Whole bean food products: Fermented soy products (shoyu {soy sauce}, miso, sufu, tempeh, natto and hamanatto). Soybean beverage ("milk"). Simply processed soybean foods ("Boiled immature soybeans are a tasty vegetable." Also soy-banana weanling food). Soy protein products. Soybean flour and grits. Refined high protein soy foods (soy protein concentrate, soy protein isolate). Opportunity and challenge: "If soybeans prove to be a competitive crop on a large scale, they could plan an important role in alleviating nutritional deficiencies in India. But, if they are to do this, vast quantities of acceptable soybean products must be made available for human food at low cost. To accomplish this will be a tremendous challenge to both industry and government."

Endnote 7 states that CFTRI at Mysore is reported to have developed a spray-dried soy beverage powder having a good flavor. Address: 1. Prof. in Agricultural Economics, Univ. of Illinois, Illinois; 2. Marketing Economist for Soybean, Jawaharlal Nehru Krishi Vishwa Vidalaya, Jabalpur, Madhya Pradesh, India.

2498. *British Medical Journal.* 1973. Dietary advice for a

pregnant, vegetarian patient. iii(5882):689. Sept. 29. [1 ref]
• ***Summary:*** This question and answer column replies that the pregnant lacto-vegetarian probably obtains an adequate supply of nutrients for herself and the fetus, however it is recommend that she take vitamin and iron supplements. "If, however, the woman is a 'vegan' and refuses eggs and all dairy products, she may well be deficient in essential nutrients, mainly as a result of lack of animal protein. Several milk substitutes of vegetable origin are marketed and these can help to make good the deficiency. Nevertheless, many vegans have had to return to consuming milk and eggs to restore their health and it is likely that a vegan woman who is pregnant may need to do the same for the health of her future baby. Furthermore the vegan is very likely be to be very short of vitamin B-12. There is no satisfactory vegetable source of this vitamin but products of vegetable origin to which the vitamin has been added are available."

2499. **Product Name:** [Vegimil Vegetable Milk {Soymilk; Renamed Vegemil in 1984} (Vegemil A, Vegemil B, or Vegemil C)].
Foreign Name: Vegimil.
Manufacturer's Name: Dr. Chung's Foods Company, Ltd.
Manufacturer's Address: 194-24 Hwoi Hyun-dong 1-ka, Chung-ku, Seoul, South Korea.
Date of Introduction: 1973. October.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Soya Bluebook. 1981. p. 60. "Vegimil Soy Milk. Other location: 296-5 Hagal-ri, Kihyeung-myon, Yong In-kun, Kyungki-do." Soya Bluebook. 1983. p. 63. "Vegimil."

Letter from Kyung Lee, ASA country director, Korea, to William Shurtleff at Soyfoods Center. 1983. Nov. 23. Gives history and production statistics. Soya Bluebook. 1984. p. 62. "Vegemil Soy Milk." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 16, 81-83. This was Korea's first commercial soymilk to be produced on a large scale and bottled. In 1981 their output was estimated at 432 tonnes, increasing to 46,373 tonnes in 1983. STS. 1985. Containers for Soymilk. Shows bottle, green lettering, 180 ml.

Photocopy of Label sent by Anders Lindner. 1989. 200 ml. "Sweet Vegemil B, Soybean Milk."

Note: This is the earliest known commercial soy product made in Korea.

2500. Ilany (Feigenbaum), J. 1973. Soybean food for today and tomorrow. *Gordian* (*Hamburg*) 73(10):390-91. Oct.; 73(11):428-30. Nov.; 73(12):464-65. Dec. [21 ref. Eng; ger]
• ***Summary:*** "This is a short review of what is chiefly known at present of this wonderful bean, which only a few years ago, constituted a strange and exotic food." Contents: Introduction. Composition and nutritional value. Green soybeans. Sprouted soybeans. Soybean flours. Isolated proteins. Soy-food products of the Far East: Kinako, soymilk, yuba, "tofu or curd–soycheese," aburage, natto, Hamanatto, tempeh, miso, shoyu or soy sauce. Soybean oil. Lecithin.

Concerning tofu: Tofu made in the regular way "is called 'Fresh Tofu.' It does not keep long, even under refrigeration, unless it is further processed. For this purpose it may be canned, frozen, fried, smoked, or fermented."

Note: This is the earliest English-language document seen (April 2013) that contains the term "soycheese"; it uses this term to refer to regular tofu.

2501. **Product Name:** [Soya Vital].
Foreign Name: Soya Vital.
Manufacturer's Name: Lucas Meyer GmbH & Co.
Manufacturer's Address: Ausschlaeger Elbdeich 62, 2000 Hamburg 28, West Germany. Phone: (0411) 78 17 01.
Date of Introduction: 1973. November.
New Product–Documentation: Manufacturer's leaflet. 1973. Nov. 7. "Soyavital." It is a dietetic beverage of high biological value, to normalize fat and cholesterol metabolism. A powdered soybean extract, it is obtained from soybeans by a newly developed process. A table shows the nutritional composition: Protein 20.0%. Fat 15.0%. Carbohydrates 61.0%. Water 3.6%. 100 gm contains 460 calories.

2502. *Soybean Digest.* 1973. Milk without the cost of the cow. Nov. p. 36.
• ***Summary:*** About the work of Nelson and Wei at the University of Illinois.

2503. *SoyaScan Notes.* 1973. Chronology of soybeans, soyfoods and natural foods in the United States 1973 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1973. The Asian Vegetable Research and Development Center (AVRDC), an international agricultural research center in Taiwan, starts soybean research. It does early work in introducing soybeans to the tropics and semi-tropics.

1973. Nelson, Steinberg, and Wei at the University of Illinois develop the pre-blanch wet-grind method of making a suspended soymilk–without removing the okara and by using an homogenizer to pulverize the okara into tiny particles.

1973 March. Beef-soy blends, containing 25% hydrated textured soy flour and 75% ground beef, introduced to U.S. supermarket chains in response to skyrocketing hamburger prices. This opens a second large new market for such products, following the school lunch market. Early brands include Burger Pro, Plus Burger, and Pro/Teen. Advertising stresses lower cost than all-beef products and less shrinkage in cooking. By Sept. 1973 they had captured 29% of the ground beef market. At that time beef prices tumbled and by

Nov. 1975 the market share of the blends had fallen to only 10%.

1973, April-July. INTSOY (International Soybean Program) established at the University of Illinois, with funding from USAID, to do applied research on soybean production, varietal development, and utilization in tropical and subtropical environments and low-income countries. The International Soybean Variety Experiment (ISVEX) begins and by 1980 is being conducted in 110 countries.

1973 June. U.S. imposes a soybean export embargo, fearing that the drought-induced short supply will drive up domestic meat and poultry prices. Soybean prices soon explode into a new world of double digits, temporarily hitting $12 a bushel.

1973 June. Kikkoman opens the largest shoyu plant in the Western world at Walworth, Wisconsin, and starts production. Capacity is 10,000 kiloliters (2.6 million gallons) a year.

1973 Sept. The USDA removes all regulations for exporting agricultural products, thus lifting the June soybean embargo. But permanent damage has been done that undercuts confidence in the USA as a reliable soybean supplier and trading partner and stimulates numerous foreign countries (including Brazil and France) to expand their soybean production.

1973 Oct. Arab oil-producing nations (OPEC) abruptly increase petroleum prices fourfold, regulate the production of petroleum, and impose a total ban on oil exports to the U.S. after the outbreak of the Arab-Israeli war. The first oil shock results. Gasoline prices skyrocket. The ban is lifted on 18 March 1974.

1973 Nov. The first World Soy Protein Conference held in Munich, Germany, attended by over 1,100 delegates from 45 countries, and sponsored by the U.S. Foreign Agricultural Service and the American Soybean Association.

1973. Pro-Nuts, the first dry-roasted soynuts in the Western world, launched by Edible Soy products in Hudson, Iowa.

1973. Energy and Protein Requirements published by the Joint FAO/WHO Ad Hoc Expert Committee. It reduces protein requirements for adults by 20%. The National Academy of Sciences in the USA follows suit by lowering its RDA for protein by 25%. These two events essentially define away the "protein crisis," and mark a crucial turning point in the ongoing "protein versus calories" debate. Insufficient food energy comes to be viewed as the main nutritional problem in poor countries. If a person has sufficient calories (i.e. sufficient food), it is argued, protein intake is also likely to be adequate.

1973. Oregon enacts America's first organic food labeling law. A boost to organically grown crops.

1973. The era of biotechnology begins when Stanley Cohen of Stanford University and Herbert Boyer of the University of California at San Francisco successfully recombine ends of bacterial DNA after splicing a foreign gene in between. They call their handiwork "recombinant DNA," but the press preferred to call it "genetic engineering."

2504. Fung, W.P.; Tye, C.Y. 1973. Evaluation of soya bean milk as an antacid. *Singapore Medical Journal* 14(4):515-18. [5 ref]
• ***Summary:*** Soymilk has neutralizing properties like an antacid but is significantly less effective than a standard antacid like SIMECO, although it has no side effects. Address: Dep. of Medicine, Univ. of Singapore.

2505. Schroder, D.J.; Elliot, J.I.; Jackson, H. 1973. Nutritional studies on soybean curd produced by calcium sulfate precipitation of soybean milk: A research note. *J. of Food Science* 38(6):1091-92. Nov/Dec. [13 ref]
• ***Summary:*** In this study, soybean curd [tofu] was fed to rats as part of a test diet. The level of dietary protein in this diet was 22.31% and the PER was 1.71. The average protein quality (PER soybean curd / PER casein x 100) in this study was 84.6. This test diet meets the amino acid requirements of the rat for all amino acids except methionine. Address: Depts. of Food Science & Animal Science, Univ. of Alberta, Edmonton, Alberta, Canada.

2506. Escueta, E. 1973. Development of a process for the preparation of soymilk in rural areas. MSc thesis, University of the Philippines at Los Banos, Laguna, Philippines. *
• ***Summary:*** Presoaking soybeans in boiling water shortens the time of boiling necessary to inactivate the soybean trypsin inhibitor.

2507. **Product Name:** [Soymilk].
Manufacturer's Name: Haus Luppy.
Manufacturer's Address: Offices: Hakusan 4-30-12, Bunkyo-ku, Tokyo 112, Japan; Factory: Minami Gotani 360-2, Yashio-shi, Saitama-ken 340, Japan. Phone: 03-815-0159 (Offices). 0489024-5011 (Factory).
Date of Introduction: 1973.
New Product–Documentation: Shurtleff & Aoyagi. 1975. *The Book of Tofu.* p. 202. Shows an illustration of Luppy soymilk in a tetrahedronal aseptic Tetra-Pak carton.

Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 199. Shows an illustration of Luppy soymilk in a tetrahedronal aseptic Tetra-Pak carton. Page 313 gives the company name and address. The founder and owner is Mr. Teisuke Yabuki who wrote *Tonyu no Shimpi* ("The Wonders of Soymilk"), Japan's first book on soymilk, a 160-page work published in 1974.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. This was Japan's fifth commercial branded soymilk.

2508. **Product Name:** Lo's Weaning Food (Soy-Based, High Protein).
Manufacturer's Name: Hong Kong Soya Bean Products Co. Ltd.
Manufacturer's Address: Kowloon, Hong Kong.
Date of Introduction: 1973.
New Product–Documentation: The Hong Kong Soya Bean Products Co. Ltd. 1970. 30th anniversary annual report, 1940-1970. The Extrusion Foods Division is developing a high protein weaning food. "It has been clinically tested under the supervision of the Professor of Paediatrics at Hongkong University and further tests in Welfare Clinics and Homes are now in progress... Apart from weaning food and other types of baby food, this Division will also branch out its activities into the field of Snack Foods and Meat Substitutes. In fact, the Extrusion Foods Division offers the company the biggest scope for diversification, and the possibilities are unlimited."

Shurtleff & Aoyagi. 1983. Soymilk Industry & Market. p. 142. Talk with K.S. Lo. 1989. Oct. 6. This product was developed by Eugene Lo as a project requested by his father, K.S. Lo. It was introduced in about 1973 and was sold to nurseries and government health care centers. But after about 1-2 years, it was discontinued.

At about the same time Frank Lo, another of Mr. Lo's sons, developed a soymilk-based blue cheese. Taste tests were done on the product in Hong Kong, but it was never given on official name or trademark, and was never really marketed commercially.

2509. **Product Name:** [House Hon Tofu Mix (Instant Soybean Curd Mix)].
Foreign Name: Hausu Hontôfu.
Manufacturer's Name: House Food Industrial Company Ltd. (Hausu Shokuhin Kogyo).
Manufacturer's Address: Plant: Sano city (100 km north of Tokyo), Japan. Head offices: Mikuriya-Sakaemachi 1-5-7, Higashi Osaka City, Osaka, Japan.
Date of Introduction: 1973.
Ingredients: Soy bean [powdered soymilk], glucono delta-lactone.
Wt/Vol., Packaging, Price: 2.3 oz In USA $0.99 in 1983.
How Stored: Shelf stable.
New Product–Documentation: Article in *Japan in Pictures.* 1974. 16(1):12-15. "Bean curd, a subsidiary food as nutritious as meat. Instant bean curd developed in Japan." Two photos are given of the equipment in the plant and 6 of the package and how this instant silken tofu is prepared at home. At the modern plant, a mixture of ground soybeans and water "is applied to a centrifugal separator, which separates it into soymilk and refuse. The soymilk, which has been concentrated by being heated, is sprayed into a tank heated to 100ºC, a process which dehydrates the milk to produce a bean curd base in powdered form [powdered soymilk]. A unit quantity of this powder is packed in an aluminum-foil bag containing nitrogen gas, which is put on the market accompanied by a small amount of coagulant.

"Process to prepare bean curd on the spot. Put a bag of 'Hontofu' in 600 cc of water, which is to be agitated [with a whisk]. Boil about 3 minutes. Mix the accompanying coagulant [glucono delta-lactone] immediately after the flame is put out. Transfer the substance into the container [a plastic box shaped like a cake of tofu]. Leave it for about 20 minutes and a block of bean curd is ready. Bean curd taken out of container [into a bowl of water]." Spot (½ page with photo of package) in *Food Product Development.* 1976. May. p. 88. Discusses: Ingredients and description. Product application. Product history. Product concept.

Label. 1985, undated. Photo on front panel of Chilled Tofu in clear glass bowl and Simmering Tofu in a *nabe* pot.

Sakai. 1988. Bestways. March. p. 21. The powdered tofu market is dominated by House Food, an Osaka based manufacturer, that launched powdered tofu in 1973. Note: Actually House launched a packet of powdered soymilk with a coagulant.

House Foods America Corporation. Annual report 1996. p. 13. This product, *Hontofu,* was launched in 1973.

2510. **Product Name:** [Prolait {Soymilk}].
Foreign Name: Prolait.
Manufacturer's Name: Prolait S.A.
Manufacturer's Address: 14 rue Inkermann, B.P. 37, 79001 Niort, France. Phone: 49.24.09.42.
Date of Introduction: 1973.
New Product–Documentation: Richard Leviton. 1983. Trip to Europe with American Soybean Assoc. p. 6. Prolait Company in Southwest France has been making powdered soymilk since 1973. They have a Takai system.

Letter (fax) from Bernard Storup. 1990. June 6. Prolait S.A. (14 rue Inkermann) is a private, family-owned dairy group that makes mainly dry powdered milk (cow and goat milk). They were one of the first to get involved with soya culture in France. They began to make soymilk using a small Takai system in 1985, mainly for one distributor, Celnat (Z. Industrielle de Blavozy-St. Germain, 43700 Brives Charensac). This was a poor quality soymilk with a strong beany taste. They stopped production in 1988, when Celnat switched to selling soymilk made by Vandemoortele.

2511. Pupo, L.M.; Chaib, M.A.; Garruti, R.S.; Ferreira, L. 1973. Estudo sensorial do sabor de leite de soja [Taste-panel study of the flavor of soymilk]. *Suplemento de Ciencia e Cultura, Resumos* 25(6):429. Presented at the 25th Reuniao Anual da Sociedade Brasileira para o Progresso da Ciencia, Sao Paulo. 1973. [Por]*
Address: Brazil.

2512. **Product Name:** Soyalac (Soymilk) [Sweetened].

Manufacturer's Name: Spicer Health Foods, Spicer Memorial College.
Manufacturer's Address: Aundh Road, Ganeshkind Post, Poona 1, Maharashtra, India.
Date of Introduction: 1973.
Wt/Vol., Packaging, Price: Bottle.
New Product–Documentation: Note: This is the earliest known commercial soymilk made in India. Letter from Mr. Emerson David (Spicer Memorial College, Food Factory, Aundh Road, Ganeshkhind, Poona 411 007 India). 1975. July. He orders information about miso.

Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 110. The plant started in 1972 or 1973.

Color photo sent by Anders Lindner of STS. 1987. Nov. 14. 150 ml bottle. Orange, white, black and yellow Label, with photo of baby's face. "Concentrated formula for infants and children (Hypoallergenic). Add water." This product is still on the market, sold in sterilized bottles.

2513. Albright, Nancy. 1973. The Rodale cookbook. Emmaus, Pennsylvania: Rodale Press Book Division. 486 p. Illust. Index. 25 x 20 cm.
• ***Summary:*** This book is based on natural foods but makes widespread use of meat, poultry, fish, and dairy products. Raw, unstrained clover honey is used as a sweetener instead of white sugar which "is dangerous to health..."

Basic information on soy: Soybean oil is good for sautéing (p. 4, 20). Tamari soy sauce is used for seasoning in preference to salt (p. 5, 20). Hints for cooking whole soybeans ("1. Soybeans require at least 8 hours of soaking and 2-3 hours of cooking–longer than any other legume." 2. Freezing soybeans after soaking decreases the amount of time needed to cook them, p. 16). Use soy powder or grits to add protein to meals (p. 21). Basic soy milk (from whole soybeans, p. 63). Cashew milk (p. 64). Sesame milk (p. 68).

Chapter 5, titled "Soybeans, eggs, and cheese," has an introduction to soybeans which begins: "For us in the Fitness House Kitchen 'discovering' the soybean has been a pleasant and surprising adventure. The soybean is one of the most versatile, fascinating and valuable of all plants" (p. 237-38). The chapter contains and many soy related recipes (p. 243-51): Methods for cooking soybeans ("Cover soybeans with cold water. Refrigerate or freeze overnight." Freezing will decrease the amount of cooking time needed. "Next day put the soybeans and their soaking water on to cook, using a large enough pot and leaving the lid slightly to one side so the soybeans will not boil over. Bring the beans to a boil then turn the heat down and simmer until they are tender, 2-3 hours." "1 cup dry soybeans will swell during soaking to 2½ to 3 cups. One pound of dry soybeans is about 2¼ cups"). Baked soybeans (with "1 lb. dry soybeans, soaked and cooked... Water soybeans were cooked in"). Barbecued soybeans. Soybean-cheese stuffed peppers (with cooked whole soybeans and cheddar cheese). Soy stuffed peppers (with pureed, cooked soybeans). Soybean chili. Soybean curry. Soybean loaf. Soybean-rice surprise casserole. Soybean-vegetable casserole. Soybean-stuffed eggplant.

Soy related recipes later in the book: Rice-bulgur-soy pilaf (with soy grits, p. 311). Wheat-soy-sesame bread (with soy flour & soy grits, p. 356). Soy milk custard (pudding, p. 400). Wheat-soy dessert (with soy flour, p. 401). Soybean pie (with chopped, roasted soybeans, p. 414). Soy peanut butter cookies (with soy flour).

Note: Neither tofu nor green vegetable soybeans are mentioned (by any name) in this book. In late 1976 (Dec. 6-7) Shurtleff and Aoyagi presented a program (lecture, slide show, food samples) at Rodale Press in Emmaus, attended by 40 members of the staff and employees. Hosts: Nancy N. Bailey and Robert Rodale. There was widespread interest in learning more about these foods. Shurtleff was "surprised they serve white sugar on their dining tables" at Fitness House.

Contains a very interesting directory of natural food stores in the United States (p. 448-76), including phone numbers and specialties.

On p. 242 are simple directions (and 2 photos) for making "yogurt 'cheese' to be used in place of cream cheese" in making dips, salads, or desserts. Address: Chef-Manager of Fitness House, the Rodale Press Dining Room, Emmaus, Pennsylvania 18049.

2514. Altman, Nathaniel. 1973. Eating for life: A book about vegetarianism. Wheaton, Illinois: The Theosophical Publishing House. xv + 142 p. Index. 21 cm. Series: A Quest Book Original. 2nd ed. 1977. Revised ed. 1984 (New York: Vegetus Books). [150+* ref]
• ***Summary:*** A scientifically sound and very well documented book about vegetarianism by a young man who draws a clear and logical picture for the need to eliminate excessive amounts of animal products from an ecological view as well as from the view of human physiology and humane standpoints.

Contents: 1. Dedication. Acknowledgments. Introduction, by Geoffrey Hodson. Preface. 1. The history of vegetarianism. 2. Comparative anatomy and physiology. 3. Vitality, health, and strength through a vegetarian diet. 4. Hygiene. 5. The world food shortage, economy, and ecology. 6. A vegetarian diet can save you money. 7. The sin of the slaughterhouse. 8. Rights for the animals? 9. Questions answered. 10. Vegetarianism: Not an end in itself. 11. Scientific nutrition. Appendices: A. What to eat if you don't eat meat. B. Selected vegetarian recipes. C. Vegetarianism in literature. D. Veganism? E. Some livestock by-products and their uses. F. Food values. G. Recommended reading.

Soybeans are discussed on p. 41 (inefficiency of a meat diet; efficiency of soybeans in producing protein per acre), p.

42 (77% of the soybean meal in the USA was fed directly to livestock in 1971), p. 83 (table showing daily requirements of essential amino acids, incl. those in cow's milk, soybean milk, whole wheat bread, etc.), p. 84 (table showing the protein content in various foods, including soybean milk, low-fat soybean flour, peanuts, peanut butter, etc.), p. 88 (table of saturated and unsaturated fats in foods, incl. soybeans, soybean milk, soybean oil, sesame seeds, etc.), p. 92 (table of calcium content of foods, incl. cooked soybeans, soybean milk, almonds, sesame seeds).

About the author: "Nathaniel Altman was born in 1948 in New York City, and graduated from the University of Wisconsin. He was raised as a meat eater but became a vegetarian at the age of twenty-one when he was studying in Latin America. He says that he decided to stop eating meat when he learned that man's violence toward the animals is related to the wars he wages with his own kind. At the age of twenty-three he decided to find out more about the subject of vegetarianism and this book is the result." Address: Ojai, California.

2515. Andersen, Lynn. 1973. Rainbow Farm cookbook. New York, NY: Harper & Row. 222 p. Illust. Index. 24 cm. Preface by Allen Gordon.

• ***Summary:*** This vegetarian cookbook, which has a macrobiotic flavor, is from Rainbow Farm, located on over 300 acres of mountain land in Phonecia, New York. Soy-related recipes include: Basic miso broth (p. 34). Miso vegetable soup #1. Miso soup #2 (p. 35). Soy butter dressing (made with 2 cups each oil and water, 3 tablespoons soy flour, and the juice of 2 lemons, p. 57). Miso vegetables (p. 67). Carrots and onions with tekka (miso, p. 67). Miso-onion spread (p. 76). Miso rice (p. 85). Tahini-miso spread (p. 108). Tahini-miso spread with vegetables (p. 108). Tahini-miso spread with seeds (p. 108). Tahini-tamari spread (p. 108). Miso balls (p. 111). Soy butter ("This is exactly the same as the whipped soy cream recipe" [which does not appear in this book], made with "soy powder," p. 111). Soy milk (with a blender, from soy beans, p. 118). Soy milk (without a blender, from soy flour, p. 118). Soy burgers (from okara, p. 119). Soy loaf (with cooked soy beans, p. 120). Tofu "(Chinese Soy Bean Cakes)" (curded with Epsom salt, p. 120). Miso sauce #1 and #2 (p. 126). Hiziki and tofu ([hijiki], p. 132). Egg noodles (with wheat and soy flours, p. 144). Soy milk with whole beans (p. 205). Soy milk with soy flour (p. 205).

A glossary of "New or Unfamiliar Foods" (p. 212-14) includes good descriptions of tamari, miso soy bean paste, kuzu, and tekka. Address: Phonecia, New York.

2516. Batt, Eva. 1973. What's cooking? A guide to good eating. Enfield, England: The Vegan Society. xxxii + 96 p. Illust. 21 cm. *

• ***Summary:*** This work has become widely accepted as the classic work on vegan cookery. In 1988 the address was: Vegan Society, 33/35 George St., Oxford OX1 2AY England. The society had 4,500 members. After Aug. 1990 the address became: 7 Battle Road, St. Leonards-on-Sea, East Sussex TN37 7AA, England. Address: UK. Phone: 865 722166.

2517. Carroll, Anstice; Vona, Embree De Persiis. 1973. The health food dictionary with recipes. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. vii + 200 p. Illust. by Vincenzo de Persiis Vona. Index. 24 cm.

• ***Summary:*** The foods, listed alphabetically, include: Adzuki (p. 1-2). Beans, dried (incl. soy beans, p. 17). Gluten flour (p. 74-75, incl. Gluten soy bread). Miso and Miso butter (p. 101). Morromi (p. 102). Mu Tea (p. 102). Nori (p. 106). Oil, vegetable (p. 113-14, incl. lecithin, peanut oil, olive oil, always refrigerate vegetable oil after opening; "Vegetable oils can (and should) be substituted for hydrogenated fats such as margarine, shortening, and lard in many recipes"). Peanut (p. 119-21). Peanut butter (p. 121-22). Soy grits (p. 156). Soy milk powder. Soy oil. Soy sauce (p. 156-57). Soybean (p. 159, incl. Soybean salad). Soybean, roasted (p. 160, incl. recipe for making at home). Tofu (p. 174-75, incl. recipe for Tofu-vegetable soup). Umeboshi (p. 175).

2518. Chen, Philip S.; Chung, Helen D. 1973. Soybeans for health and longer life. New Canaan, Connecticut: Keats Publishing, Inc. (A Pivot Health Book). xii + 178 p. Index. 18 cm.

• ***Summary:*** A revised and condensed pocketbook version of Chen and Chen 1956. Contents: Preface. Foreword. Introduction. Part I: Nutritive value of the soybean. 1. Protein. 2. Fat. 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease.

Part II: Soy products. 8. Soybean oil: Phosphatides, margarine. 9. Soybean oil meal: Gelsoy, Multi-Purpose Food. 10. Soy flour. 11. Concentrated soy protein products: Soy protein concentrates (Griffith Laboratories makes Isopro and GL-301), soy protein isolates, and textured or spun soy proteins. 12. Soy milk. 13. Soy cheese (tofu). 14. Soy sauce. 15. Soybean sprouts.

Part III: Soybean culture and preservation. 16. Soybean culture. 17. Preservation of soybeans (preserving green soybeans by canning, freezing, and dehydration).

Part IV: Recipes. 18. Soybeans and soybean pulp. 19. Soy flour: Breads, cakes, cookies, pies, soups, other recipes. 20. Soy grits and soy flakes. 21. Soy milk. 22. Soy cheese. 23. Soybean sprouts. Appendix: Soybean utilization (chart). References. Address: USA.

2519. Cowan, J.C. 1973. Processing and products [soybeans]. In: B.E. Caldwell, ed. 1973. Soybeans: Improvement, Production, and Uses. Madison, Wisconsin: American Society of Agronomy. xviii + 681 p. See p. 619-

64. Chap. 20. [52 ref]

• ***Summary:*** Contents. 1. Introduction. 2. Processing for oil and meal: Preparation of flakes, solvents, extraction, desolventizer-toaster, degumming. 3. Conversion to edible oil products: Refining, bleaching, deodorization, hydrogenation. 4. Edible fat products: Salad and cooking oils, status of flavor stability, shortenings and margarine oils, lecithin. 5. Essential fatty acids and atherosclerosis. 6. Industrial uses of oil. 7. Meal for livestock and poultry: Nutritional aspects, factors affecting use of meals. 8. Edible protein products: Soy flour, concentrates and isolates, textured protein products (textured soy flour or textured soy protein fibers made into "meat analogues" resembling chicken, bacon, etc.). 9. Fermented and specialty foods: Tofu, soybean milk (an intermediate step in the manufacture of tofu), miso, shoyu (tamari, light-colored shoyu), sufu, tempeh, hamanatto, and natto.

Soybeans flow through a crushing plant as follows: First, they are cracked to release or loosen the hull and to break the cotyledon into about 4 parts. Shakers and aspirators separate the hull from the cracked cotyledons and rollers flake them. "Purified petroleum hydrocarbons known as hexane extract the oil from the flakes and the solvent is recovered. Moistened flakes are heated to inactivate the antinutritional factors and are converted to feeds for livestock and poultry. A small proportion of the flakes goes to a wide variety of soybean protein products including flour, isolates, and concentrates."

Tables show: (1) Utilization of soybean in U.S. in million pounds, every 5 years from Oct. 1933 to 1970 (Kromer 1970). (2) Use of soybean meal in the USA for feeding livestock and poultry (million tons). In 1969, the estimated amounts used were as follows: Cattle 3.43. Hogs 1.69. Other livestock 1.73. Total livestock: 6.85. Broilers 3.07. Hens and pullets 1.28. Other poultry 1.10. Total poultry 5.45. Total livestock + poultry 12.30. Note that cattle are the single biggest users. (3) Bleaching soybean oil (process, % clay and type, change in Lovibond color rating). (4) Effect of bleaching, citric acid, and light exposure on soybean salad oil. (5) Specifications for soybean oil. (6) Effect of linolenate content on flavor of soybean oil at elevated temperatures. (7) Composition of certain edible oil products from soybean oil and related products (salad oil, hydrogenated-winterized soybean salad oil, hydrogenated soybean oil liquid shortening, plastic shortening types I and II). (8) Changes in iron and copper content of soybean oil in commercial refining. (9) Properties of all-purpose and high-stability shortenings from all-hydrogenated vegetable oils and blends of animal fat and/or vegetable oil (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (10) Typical analyses for mellorine and cookie and confectioner's fat. (11) Analytical data for typical margarine oils low and high in polyunsaturates (iodine value, melting point, % linoleic acid, solid fat index {% solid at temperatures indicated}). (12) NSPA–tentative lecithin specifications (NSPA, 1969-1970). (13) Composition of soybean lecithins. (14). Approximate composition of soybeans and meal products (whole bean, cotyledon, hull, hypocotyl, meal {cake–extruded, flakes–solvent extracted, dehulled flakes–extracted, mill feed–separated hulls, mill run–separated hulls}). (15) Amino acid analysis of soybean meal (44% protein and 49% protein {dehulled}) and corn. (16) Amino acid analysis of blends of soy flour with cereals and milk (Inglett 1968; Corn soy milk {CSM}, Millet soy milk, Wheat soy milk, etc.). (17) Partial formulas for young swine and boiler rations in percent total rations. (18) Partial formulas for dairy feeds (14% protein). A supplement to forage or roughage. (19) Soybean grits and flour–screensize. (20) Composition of soy flour. (21) Composition of 4 types of soy protein concentrates. (22) Uses for high-protein soy products (protein 70 [concentrates] and protein 90 [isolates]). Note: This is the earliest English-language document seen (Dec. 2004) that uses the term "protein 90" to refer to a soy protein isolate. (23) Amino acid analysis of fractions derived from dehulled extracted flakes (Rackis et. 1961, 1970). (24) Effect of cooking in salt solutions on texture of structured granules. (25) Composition and use (1,000 metric tons in 1964 and 1967) of soybeans for traditional foods in Japan (Use of whole soybeans in 1967 in 1,000 metric tons: Miso 169. Shoyu 15. Natto 47. Tofu 329. Total 642. Use of defatted flakes or grits in 1967 in 1,000 metric tons: Miso 8. Shoyu 154. Natto 0. Tofu 77. Total 284).

Figures show: (1) Flowchart: Processing of soybeans to oil and meal using hexane extraction. (2) Illustration: A modern soybean processing facility (aerial view, Central Soya, Inc.). (3) Schematic diagram / flowchart: Manufacture of edible soybean oil products (salad oil, salad and cooking oil, shortenings, margarines, liquid shortening). (4) Illustration: A continuous deodorizer for soybean oil. (5) Graph: Effect of prolonged storage at 100ºF on flavor score of hydrogenated-winterized soybean oil or soybean salad oil (nitrogen packed, air packed). (6) Illustration: Continuous chilling and working equipment for margarine production (Votator Div., Chemetron Corp.). (7) Flow diagram; Conversion of emulsions of margarine oils and ripened milk to conventional stick, whipped stick, and tub margarines (Votator Div.) (8) Chemical structure of prostaglandin-E_2, a fatty acid with hormone activity. (9) Diagram: Vapor-desolventizer- deodorizer for soybean flakes (Blaw-Knox Co.). (10) Flowchart and diagram: Operations with extruder-cooker. (11) Flow diagram: Manufacture of protein 70 [soy protein concentrate]. (12) Schematic diagram: Manufacture of soy protein isolate (Protein 90). (13) Photo: Chicken-simulated soy protein "meat" in three forms (Swift Edible Oil Co.). (14) Photo: Protein tow containing 16,000 monofilaments spread apart to show its fibrous nature; other tows in background (General Mills, Inc.). Address: NRRL, Peoria, Illinois.

• ***Summary:*** A tempting collection of more than 100 natural, healthful desserts made without sugar, honey, or artificial sweeteners. Recipes adapted from Far Eastern, Traditional European, and Classical American desserts. Soy-related information and recipes are (page numbers refer to the pocketbook edition): soy milk as an alternative for cow's milk (p. 12). Unrefined soy oil (p. 27). Koji and amasake (p. 29). Soy milk (p. 30). Soybean crêpes (with soybean flour, p. 65). Mock cream cheese cake (with tofu, p. 75-76). Tofu or soy cheese (homemade, 76-77). Amasake cookies (p. 83). Amasake (homemade from koji, p. 154-55). Soy cream sauce (with soybean flour, p. 161-62). Eggnog (with 3 eggs separated, 2 tablespoons barley malt extract or Amasake Syrup, 4 cups chilled Soy Milk, 1 teaspoon vanilla extract, and nutmeg, p. 172-73). Soy milk (homemade, p. 180). Food value charts (p. 185-87). Address: Food for Life store, Chicago.

2522. Fernando, G.W.E. 1973. Soya bean. The miracle crop of the 20th century. In: Ceylon Meals for Millions Foundation, ed. 1973. All about Soya Bean. Ceylon. 29 p. See p. 13-20. Abstract in: Ceylon Assoc. Advancement of Science, Proceedings, 29(1):69.
• ***Summary:*** Contents: Introduction. Recommended varieties: Hernon, Tainung (RI), Bragg, TK No. 5, Improved Pelican. Soya bean in multiple cropping programmes ("It produces two to three times more protein per acre per day than most other pulse crops"). Soil, climate and areas of production ("All well drained soils of the Dry Zone are suitable for the cultivation of the soya bean." "Soya bean can withstand short periods of drought and is not affected by excessive moisture in the soil compared to most other pulse crops"). Seed rate and spacing. Yields of soya bean. Oil and protein content (of 5 varieties. The protein content is over 40% and the oil content over 20%). Efficiency of land use for protein production. Fertilizers. Inoculation. Pests and diseases. Weed control. Storage. Uses of soya bean (defatted meal for animal food, oil for industrial uses as a paint vehicle or by condensation to alkyd resins, and for human food). Production of soya bean milk (summary of research by Malcolm C. Bourne). Crop budget: One acre of soya bean (Cost of inputs, outputs, and gross surplus [gross profit]). The irrigated output is 2,200 lbs worth 90 cents per lb = 1,980. Irrigated input costs = 565. Gross surplus = 1415 per acre.

"Experiments in Taiwan have shown that infants fed on soya milk gained body-weight and height at a rate comparable to that achieved by infants on cow's milk..."

In 1967 a programme was initiated "at the Agricultural Research Station, Maha-Illuppallama, where over 90 varieties were screened for their productivity under dry zone [irrigated] conditions." Five varieties are recommended.

Tables show: (1) Yields of six recommended varieties of soybean from 1966/67 Maha Rainfed to 1972/73 Maha Rainfed. The highest yields were all obtained during the 1969 Yala Irrigated season, ranging from 2708 to 2766 lbs / acre.

(2) Efficiency of land use for protein production (Source: Roy E. Martin, *Soya Bean Digest Blue Book Issue*, March 1970, p. 27). Three columns give the name of the crop or animal, average yield per acre, and pounds of protein per acre.

Soya bean, 24.2 bu, 508 lb.
Other legumes, 20.7 bu, 293 lb.
Maize, 64.2 bu, 323 lb.
Wheat, 25.1 bu, 180 lb.
Milk, 2,780.0 lb, 97 lb.
Beef, 342.0 lb, 58 lb. Address: Asst. Director of Agriculture (Research), Maha-Illuppallama.

• ***Summary:*** A pioneering natural foods cookbook, produced and copyrighted by Arrowhead Mills, Inc. of Hereford, Texas. Soy-related recipes include: Roasted soybeans (p. 42-43). Miso soup (with wakame, p. 53). Tamari bouillon (p. 57-58). Todo en la caldera (with soybeans and miso, p. 58). Miso sauce (p. 90-91). Thick tamari sauce (p. 91). Tofu (soybean cheese or bean curd, p. 98-99; an early recipe for homemade tofu made with vinegar or lemon juice as a coagulant. Lists 6 serving suggestions for tofu and 1 for the "soy mash" [okara]). Cooking flaked soybeans (p. 132-33). Soy sesame burgers (with 1/3 cup whole sesame seeds, p. 135-36). Rice pancake with tofu (p. 136). Soybean loaf (p. 138-39). Cooking with soybean flakes (p. 156). Blazing star timbales (with soybean flakes, p. 156-57). Tamale soy pie (with cooked soybeans or soybean flakes, p. 182-83). Soy milk (homemade, p. 292). In the last chapter titled "Natural Foods from Deaf Smith County," the following soy-related

foods are discussed: Soybean flakes (p. 324, 327), black beans (a type of soybeans, p. 326), soybeans and foods made from them (p. 327). Soybean flour (p. 328). Tamari roasted nuts and soybeans (p. 331). Tamari soy sauce (p. 334). Miso soybean paste (p. 334). Wheat gluten is not mentioned in this book. Frank Ford's preface shows him to be a devout Christian, organic farmer (in Deaf Smith County, Texas), and advocate of natural foods.

In about Sept. 1991 this early natural foods cookbook was reprinted with a new cover and subtitle ("Natural Foods for Natural Kitchens"). Over 300,000 copies are now in print. Address: 1. Arrowhead Mills, Hereford, Deaf Smith County, Texas; 2. Soquel, California; 3. Foods editor, *The Texas Star*.

• ***Summary:*** An entertaining, informative guide to natural foods, vegetarian and fruitarian diets, raw foods, juices, and fasting. The author became a vegetarian in 1965 in part because of the influence and teachings of Dr. Martin Luther King on nonviolence. When he first fasted, in late 1967 for 40 days, his weight dropped from 280 lb to 97 lb. In 1972 he became a fruitarian.

On page 87 the author lists soybeans as a good source of protein, vitamin B, and calcium. "I'd say the soybean is the most likely 'hair restorer' around." Page 113 contains a recipe for making soybean milk at home; other health milks can also be made from sesame seeds, almonds, or pecans.

Pages 130-32 state: "Milk is the perfect food for Mother Nature's babies *only* if it is mother's milk. If babies are bottle fed they should only have Mother Nature's milk–soy, seed or nut milk–the milk intended for *human* baby consumption." 8 formulas containing soy, nut, or seed milk are given.
Address: USA.

• ***Summary:*** Chapter 6, "Poor man's meat: the legumes," contains a section on "Soybeans" (p. 131-33). Photos show: (1) A field of soybeans in the USA planted in rows, free of weeds. (2) Soybean plants ready for harvesting. For more detail, see the 1990 revised edition. Address: Prof. of Botany, Indiana Univ.

2528. It's your world vegetarian cookbook. 1973. Glendale, California: Seventh-day Adventist Church. 128 p. Foreword by U.D. Register, and Clive McCay. Illust. 23 cm.
• ***Summary:*** It's Your World" is a television series hosted by Art Linkletter (his photo faces table of contents) and sponsored by the Seventh-day Adventist Church in Glendale, California. Soy-related recipes include: Saucy soy sizzlers (no eggs, p. 10). Carrot nut loaf (with soy flour, p. 12). Millet gourmet balls (no eggs, with soy beans, p. 13). Danish Proteena balls (p. 17). Rediburgers (with Rediburger, p. 18). Festive loaf (with Vegeburger, p. 22). Mayflower loaf (no eggs, with soy beans, p. 22). Fresh tofu loaf (p. 25). Soy beans Hawaiian (with Loma Linda Boston Baked Beans, p. 37). Baked soybeans Americana (p. 39). Plantation soy special (with soy beans, p. 39). Browned tofu with mushrooms (p. 42). Viking Roast (with Holiday Roast [frozen, ready-to-bake soy loaf with a smoked turkey flavor], p. 56). Scrambled tofu (p. 56). Crispy tofu sticks (p. 57). Bit o'soy waffles (with soy flour, p. 65). Soy-oat waffles (with soy beans, p. 66). Soy cream topping (with Soyamel powder, p. 114). Soy nut milk (with soy milk powder, almonds, and cashews, p. 116). Soy half-and-half (with All Purpose Soyagen, p. 116).

Pages 118 and 119 list all commercial vegetable protein analogs made by Loma Linda Food Co (Arlington, California) and Worthington Foods, Inc. (Worthington, Ohio). Address: Glendale, California.

2529. Miller, Harry W., Jr. 1973. Observations from forty years of soy protein processing and engineering (Continued–Document part II). Cedar Falls, Iowa: Soypro International, Inc. 8 p. Undated. Unpublished manuscript.
• ***Summary:*** Continued: "Flavor was no problem as the public enjoyed the bean-like cereal flavor of soy. We calculated that, if we could produce a product of high keeping quality and automate the production, we could produce and sell soy milk for $0.20 a quart in comparison to cow's milk at $1.00 per quart. To do this we used wide mouth bottles with a metal crown cap. By sterilizing these bottles in a pressure retort, we had a milk that kept indefinitely without refrigeration. This allowed us to divide the city into four quarters, and by delivering a week's supply at a time we were able to provide house delivery with one fourth the equipment and personnel of our competitors. We had many customers living in other cities that bought a month's supply at a time and carried the empty bottles back to us.

"During our first month of operation, the cost was $1.10 per bottle. The second month was $0.40 per bottle, the third month $0.19 per bottle and the fourth month $0.12 per

bottle, which allowed a reasonable profit. We were unable to proceed further as the Japanese blew up the plant on August 7, 1937.

"Realizing the nutritive value of soy and its possibilities, and no longer being able to continue in the Far East, we established the 'International Nutrition Laboratory' in Mt. Vernon, Ohio.

"At first our endeavor was to perfect manufacturing equipment so we could return to the Orient and develop foods for low-income population. As a result, we worked with soy flour manufacturers and oil meal developers. Although many experiments were conducted in testing baking and roasting the bean, we learned very early that moist heat was best for developing high assimilability of this rich protein source.

"I believe I built some 21 different types of moist heat processors from pressure steam cookers to blowing line steam jets through liquid falls of the extracted protein. One day my father remarked, 'Son, you have more equipment out on the scrap pile than you have in the plant.'

"As World War II progressed, we found ourselves producing high protein products for feeding of people that had been undernourished due to the enemies' confiscation of food materials. However, as the war drew to a close, we saw a need for a change of income source. So, with the assistance of Dr. Baxter of Ohio State University, Soylac was brought on the market. Although we had to overcome diarrhea and other feeding problems, it was found that, with proper moist heat treatment and a proper balance of various carbohydrates and vegetable oil, we produced an infant milk that was readily accepted by the pediatricians.

"As we had a greater amount of soy protein fiber [okara] than extracted protein, we at first dried this and sold it for livestock feed.

"It was felt that meat analogs could not be produced from this protein casein residue. Again special equipment had to be made to handle and process this product so that palatability and high food value would result. With specially designed heat processes and modified meat manufacturing equipment, bolognas and beef-like cutlets were produced at first with the addition of wheat protein, later with soy spun protein fibers. As discussed in the latter part of this dissertation, we were also able to produce very satisfactory meatlike products entirely from the residue.

"In the late summer of 1960, I received a call from my father inviting me to a luncheon conference. Here I met Ronald Hill of UNICEF.

"After being introduced I was informed that UNICEF intended to install an infant formula plant in Indonesia under the direction of Dr. S.S. De of F.A.O.

"We were invited to be designers of the plant and I was to supervise the installation and training of the personnel to operate the installation.

"I was most fortunate to be assisted in the project by Dr. E.L. Rowe, a graduate Ph.D. from the University of Southern California. With his help at the Institute of Nutrition of Indonesia, and the assistance of the College of Medicine of the University of Indonesia we were able to determine the causes of diarrhea in infant feeding and correct it in our formula and processing methods.

"As in every country the natives of that locale must have a product that suits their individual organic reaction to nutrition in-take.

"It has not been possible to produce a product acceptable in all countries and cultures. Thus it has been necessary to adapt both production methods and formula to each area individually. In Indonesia we had a very delicate pH balance to maintain, and moisture quantities had to be regulated so the infant obtained a nutritious substance that its body could absorb without ill effects.

"Shortly after my return to the United States and during a periodic visit of my father, Dr. Perry Webber called upon us to assist Madison Foods to develop their soy products for greater market acceptance. They had some very commendable meat analogs using the combination of both soy and wheat derivatives. However, they wished to explore in the infant formula field which was creating a sizable market. Infasoy was originated at this time and a process was developed to increase the normal extracted quantity of protein from the traditional extraction method. This was done by the use of mechanical equipment and formulations. It was here, with a great quantity of wheat fiber in use, that we derived a method of using the soy residues [okara] to manufacture meat loaves, sausages, wieners, and bolognas entirely of soy except for seasoning materials and added fats. This greatly increased the nutritional value as well as the income derived from the sale of these products.

"As we were perfecting and developing equipment and products at Madison, a call came from Brazil for assistance in developing a soy and cow milk formula.

"As the Brazilian government felt that some animal product should be incorporated in this kind of formulation, processing experiments were carried out. As a result much was discovered in flavor control. It had long been determined that you could not mask the flavor of the soybeans. It was entirely a matter of using some of the flavors in the bean and eliminating the objectionable ones.

"While still at Madison I had a call to install a traditional soy milk plant in the Far East. Our technologies had progressed to the point that we had difficulty at first to retain sufficient soy flavor to satisfy the palate of the local clients. However, this was accomplished to the satisfaction of the customers.

"The last three years have been used in developing sophisticated analogous types of meat and milk. This has been accomplished in the laboratory and we feel will soon be available for countries now pressed with shortage of milk. Should milk fall short in dairy farming countries, we know

we can supplement this shortage with a vegetable source as acceptable as the product in shortage.

"In summary let me review:

"1. We are facing shortages in milk, which is produced with a ratio of 8 lbs. of feed to produce one gallon. We can produce a gallon of vegetable milk with a total of l lb. of fat, carbohydrate, and beans.

"2. A breakthrough in flavor control has been achieved, which eliminates the former taste objections.

"3. Breakthroughs have also been made in using the soy milk by-products for low cost meat analogues which are highly acceptable and nutritious.

"We have approached the time that the soybean protein will not only relieve food shortages but will also satisfy the most sophisticated taste." Address: Cedar Falls, Iowa.

2530. Miller, Harry W., Jr. 1973. Observations from forty years of soy protein processing and engineering. Cedar Falls, Iowa: Soypro International, Inc. 8 p. Undated. Unpublished manuscript.

• ***Summary:*** "It was a late summer morning 1922 in the State of Maryland that my father announced at the breakfast table that I would accompany him on a short trip to Frederick, Maryland to look at a stone burr mill he wished to purchase for some soy milk experiments he wanted to conduct.

"Protein had always been a high priority topic in our house as Dr. John Harvey Kellogg had made a deep impression on my father (Dr. Harry W. Miller, Sr.) during his student medical days at Battle Creek, Michigan.

"On the way to Frederick my father explained to me that the mill he wished to purchase was to be used to prepare soybeans so that a white milky fluid of suspensible protein could be extracted from the beans. Little did I realize that I was to be introduced to a research field that would dominate my work and studies the rest of my life.

"Having purchased the mill the next step was to find a proper location to conduct the experiment. One of Maryland's larger dairy farms was chosen for this, and after transporting the mill to the farm, it was bolted to heavy timbers and one of the dairy's tractors was used to turn the pulley on the mill.

"To a boy of ten it was more interesting than spectacular to see a white milky liquid run down out of the mill instead of seeing the milk being drawn from the udder of a cow. However, this experiment made a lasting impression on a ten year old who was always experimenting and constructing contraptions of his own.

"No, the liquid from that mill did not replace the milk produced on the farm. However, at the present rate of population increase, and ever-increasing shortages of grazing area to produce milk, we may in the future be looking to the use of this mill and its complementary equipment to supplement the animal products in lands of large dairy production.

"Shortly after my introduction to the first experiments on that dairy farm, I traveled to the land of the soybeans. This country was to become my home and source of information as my parents had accepted a call to mission service in China.

"Having been raised a strict vegetarian, the foods made from vegetables and grain sources were always a challenge to my curiosity.

"Roaming the streets of Shanghai every portable food caterer, street sidewalk restaurant, as well as the more sophisticated Buddhist (vegetarian) restaurant held a new horizon of future products made from the soybean.

"It was indelibly inscribed on my young mind that each procedure in each shop had a very definite and end-resulting purpose behind it.

"The first visit I made to a shop which produced these foods, the owner would address me. 'What is your honorable name,' and my answer would be, 'my humble name is "Show Me,'" translated small rice.

"My childish curiosity either amused the shop keepers or my youth intrigued them. Regardless, I was soon known as 'small rice.' in all these shops and home processing establishments and was allowed to roam at will and have my questions answered frankly–so much so, that I was able to get answers and ingredient names that my elders were unable to secure.

"Basically, the first step in extracting protein was to hydrate the bean. I found that each shop had some variation in soaking the bean. Hot water was used in one place and cold in another. Some added chemicals to the soaking water and others varied by prewashing the bean before soaking while others washed the beans after soaking.

"Although I knew that all their variations were vital to the end product, it was to be several years before I would be using these various steps to achieve end results.

"During my earliest experience with processing, I learned that enzyme action is definitely affected by these variations in procedure.

"The Orientals extract soy protein to produce soy curd, in its various forms, and soy skin or film membrane. Note: This is the earliest English-language document seen (Oct. 2012) that uses the term "soy skin" or the term "film membrane" to refer to yuba.

"Soy curd is produced by coagulating the extracted, liquid-suspended protein. After being pressed from the granular residue [okara] of the bean, a liquid white protein suspension is left. Each shop had a different heat to bring the liquid to before adding the coagulatory chemical.

"Each producer had a different product for the customer. One would have a large cake of rather coarse curd. This they cut into blocks according to the purchaser's need. The buyer taking it would flavor and prepare it as he desired.

"Another shop would produce a firmer curd which was pressed into small cakes; some were flavored with sesame

oil; some peanut oil in which they were deep fried; and others were boiled in soy sauce and sold in this form to the customers.

"They also had what I called the yogurt shop. This was a very exacting procedure of heat control and quantity of coagulant to produce a yogurt-like curd which was chilled in bowls and served with rice malt poured on top to flavor it.

"There was one shop that pressed a fine curd till it was rather dry. These cakes were cut into square pieces about 3/4 of an inch square, were stacked on bamboo mat trays and placed in a culture-inoculated, heat-controlled room for three days. After this period the mold-covered squares were put loosely in glass jars in a hot pickling juice with ginger, ground red peppers, rice wine, brown sugar, and salt, and were sealed so the sauce would preserve the curd and flavor it [to make fermented tofu]. This product is sent all over the world to delight the palates of the Orientals.

"Perhaps the most interesting to me was the film protein [yuba] produced by heating the liquid extract to a definite regulated temperature and allowing a film to form on the top of it. This is picked up with a long chopstick and hung on a wire line to dry.

"Here again, liquid flavored films were produced by temperature changes. One way of changing the thickness of the film was to allow the liquid to evaporate so that the last films to be produced from a pot of liquid would be thicker than the first. Also, the fuel used would change the flavor of the film as the smoke from coal, charcoal rice straw and wet saw dust, or bamboo splints each had a definite taste.

"Not being satisfied with seeing these products made, I was determined to see how they were used; so 'Small Rice' would go to the kitchen of the Buddhist Restaurant long before dawn to watch the cooks soak these film in various sauces, some to be rolled tightly into bologna-like rolls and broiled for hours in a soy sauce, ginger, and anise flavored juice. This roll, when sliced, had a beef-jerky like flavor. Another was to lay the films one after another on top of each other to be sprinkled (each one) with rice wine, sesame oil and monosodium glutamate. These films were folded into a half moon shape, placed in bamboo trays and steamed for several hours. They were then placed on a screen to dry the surface moisture, then fried in deep sesame oil or peanut oil whichever flavor was desired.

"When these foods with various seasonings were served you would have anything from fish to turkey or duck.

"It was the eating of these Buddhist meats that gave me the courage in later life to learn to eat animal tissue, as I had been raised a strict vegetarian.

"Had I not learned to eat and taste these various animal products, I am afraid I would be like the official in India: when describing to him how we could make meat analogs from soy milk residue he asked, 'Well, what does chicken taste like?'

"This early experience in China was a challenge to make extensive study into each country's dietary and food flavor habits before designing a product for them.

"In the early 1930's with the encouragement of W.J. Morse and La Clara Reed of the U.S. Department of Agriculture, my father and I, using equipment supplied jointly by the Department and ourselves, produced a spray-dried soy milk formula which was granted a patent by the U.S. Patent Office, and which the American Medical Association accorded its own highly valued seal of acceptance for an infant formula.

"The first commercial plant was installed in Shanghai, China, during 1936 and 1937. Although we were using soy milk for feeding babies and institutional employees, due to the high price of pasteurized cow's milk there was a challenge to install a soy dairy to produce a vegetable milk at a low price."

Note 1. This is the earliest document seen (Aug. 2013) that uses the term "soy dairy" to refer to a facility which makes soymilk and related products from soybeans. Continued. Address: Cedar Falls, Iowa.

2531. Patwardhan, V.N.; White, Jonathan W., Jr. 1973. Problems associated with particular foods. In: National Academy of Sciences, National Research Council, Food and Nutrition Board, Food Protection Committee. 1973. Toxicants Occurring Naturally in Foods, 2nd ed. Washington, DC: National Academy of Sciences. vii + 624 p. See p. 477-507. Chap. 22. [47 ref]

• ***Summary:*** Includes a detailed discussion of disaccharide intolerance (lactose intolerance): Introduction, methods for detection, disaccharidase deficiency in infancy, lactase deficiency in children, adolescents, and adults, secondary lactase deficiency. Lactose intolerance was first reported as a congenital defect by Holzel, Schwarz, and Sutcliffe in 1959 (*Lancet* 1:1126). Address: 1. Div. of Nutrition, School of Medicine, Vanderbilt Univ., Nashville, Tennessee 37203 (Deceased 8 July 1971); 2. Eastern Regional Research Center, Northeastern Region, ARS/USDA, Philadelphia, Pennsylvania (authored section on Toxic Honeys only).

2532. Rosen, G.D. 1973. Factors governing the use of soya-bean and other oilseed proteins. In: J.W.G. Porter and B.A. Rolls, eds. 1973. Proteins in Human Nutrition. London and New York: Academic Press. See p. 383-95. Chap. 25. [2 ref]

• ***Summary:*** Contents: The importance of economic factors. Production influences. Protein-containing derivatives of oilseeds. Non-protein factors affecting utilization. New specialty products. Current and future competition for oilseed proteins.

Table IV on p. 292 lists the "Use of some soya-bean specialty products in the USA in 1969-70." Figures are in tons. Values in parentheses are in million dollars: Products: Coffee whiteners 35,000 ($63.0; Relatively little soya-bean material is used as yet in these materials due to inadequate

functional and flavor properties), Industrial isolates 26,000 ($12.5), Protein concentrates 18,000 ($7.5), Edible isolates 16,000 ($11.5), Textured soy flours 13,000 ($7.5), Soya-bean milk products 6,000 ($?), Soya-bean isolate meat analogs 1,500 ($3.2), Whipping isolates 600 ($1.0).

Applications: Pet foods 100,000, Industrial applications 70,000, Food aid programs 50,000, Baked goods 40,000, Meat products 20,000, Other food uses 18,000, Calf-milk replacers 10,000, Fermentation processes 6,000. The author concludes: "Table IV refers to approximately 400,000 tons of soya-bean-based specialty products in the USA, and this should be compared with 17½ million tons of soya-bean cakes and meals used in animal feeding." Address: Birchwood Lodge, The Birches, Farnborough, Kent, England.

2533. Singh, K.B.; Gill, K.S. 1973. Soybean. Ludhiana, India: Communication Centre, Punjab Agricultural University. 22 p. Plus 3 leaves of plates. [1 ref]
• ***Summary:*** Contents: Introduction. Climatic requirements. Soil. Rotation. Preparation of land. Manuring. Improved varieties. Sowing: Good seed, seed treatment, seed inoculation, time of sowing, seed-rate and spacing, methods of sowing, depth of sowing. Control of weeds. Irrigation. Diseases. Insect pests. Harvesting. Storage. Uses. Conclusions. Appendix (15 recipes).

Recipes include those for soy milk, soy-curd (dahi), soy-flour, soy-dal and many Indian dishes. Page 12 notes: "Soybean has wide industrial uses. Edible oil is used in the manufacture of *vanaspati.* Refined oil is used in the manufacturing of a large number of products, such as candles, electric insulations, fuel-oil, insecticides, greases, resins, paints, soaps, varnishes, etc. The oil is also used in the preparation of candy, ice-cream, chocolate coating, rubber, cosmetics, etc. Crude soybean fatty acids are used in manufacturing adhesive tape, lubricants, leather dressings, typewriter ribbons, carbon papers, etc." Address: 1. PhD, Senior pulse breeder; 2. PhD, Prof. & Head, Dep. of Plant Breeding, Punjab Agricultural Univ., Ludhiana, India.

2534. Sri Lanka Dept. of Agriculture. 1973. Soya bean: The miracle crop of the 20th century. Agricultural Information Div., 102 Union Place, Colombo 2. 8 p. 22 cm pr panel.
• ***Summary:*** This is a poster-size sheet of paper folded into fourths. On the cover is a photo of four men in a field of soya beans. The bottom half of this side, titled "Soya bean is the richest and cheapest source of proteins and fats in the world" discusses the country's need for soya bean oil (as a substitute for coconut oil) and meal. "The Oils and Fats Corporation, which requires 6,000 to 8,000 tons of soya bean annually for use in livestock rations over the five year plan period 1972-76, is prepared to pay producers Rs. 1,250/- per ton of soya bean delivered at its factory in Seeduwa. Meanwhile the Milk Board is exploring the possibilities of utilizing soya milk both as a substitute and a supplement to cow's milk in the manufacture of condensed milk and full-cream powdered milk.

Facing the title page is the "Crop budget"–Rainfed, one acre, and Irrigated one acre. The profit on irrigated land is Rs. 500 vs. only Rs. 175 on rainfed.

The fully opened poster is titled "Here's how to cultivate soya bean successfully." The 10 points are: "1. Potential area of production and planting seasons. 2. Recommended varieties (Hernon, T.K. No. 5, Tainung, Shi-Shi). 3. Land preparation and manuring. 4. Planting. 5. Irrigation. 6. Weeding. 7. Fertilizer top-dressing. 8. Plant protection. 9. Harvesting and yields. 10. Storage."

2535. Theroux, Paul. 1973. Saint Jack. Boston, Massachusetts: Houghton Mifflin Co. 247 p. See Chap. 5, p. 46, 50. 22 cm.
• ***Summary:*** This novel is set in Singapore. "Smale, Yates, and Coony were at the bar and over in an armchair drinking soybean milk and absorbed in the *Reader's Digest* sat old Mr. Tan Lim Hock" (p. 46).

"When Mr. Tan left the bar I sometimes did an imitation of him with his *Reader's Digest* and bottle of Vimto soybean milk" (p. 50).

2536. Valnet, Jean. 1973. Traitement des maladies par les légumes, les fruits, et les céréales. 4. édition, revue et augmentée [Treatment of illnesses using vegetables, fruits, and cereals. 4th ed. revised and enlarged]. Paris: Librairie Maloine S.A. 409 p. See p. 326-28. 19 cm. [Fre]
• ***Summary:*** The section titled "Soja" (p. 326-28) discusses: Synonym: Haricot d'Asie. Introduced to France in 1739. First cultivated on a large scale in 1932. Chemical composition. Dietetic properties. Uses: As a food supplement, above all for infants, and for those suffering from fatigue, demineralization, or nervousness. Methods of use: Whole soybeans, soy flour, soymilk, or soy oil may be used as part of the diet. In 1962 M.H. Vergnaud (secretary general of the Agricultural and Industrial Institute of Soya in Paris) prepared a dinner for the press entirely from soya. Details on soy oil.

The first edition was published under the title *Thérapeutique Journalière par les Légumes et les Fruits.* Address: Docteur, France.

2537. Wade, Carlson. 1973. Health secrets from the Orient. West Nyack, New York: Parker Publishing Co., Inc. 252 p. Index. 24 cm. Foreword by William S. Keezer, M.D.
• ***Summary:*** This "Hollywood-style" book of miracle foods, magic bullets, and eternal youth, unfortunately has no bibliography and only one reference (a footnote) in the chapter on soybeans. Chapter 12, titled "The miracle vegetable protein from the Orient–A key to forever-young vitality" (p. 153-63) is about soybeans and soy products.

Its contents: Introduction. Soybeans–A meatless source of complete protein. Soybeans–Meat without a bone. The magic ingredient in soybeans that helps promote perpetual youth: Secret youth power of soybean's lecithin, the magic power of lecithin, the ten youth-building powers of lecithin in soybeans, soybeans for better energy, improved memory and steady hands, secret ingredient (lecithin contains auxines). Why Orientals call soybeans their "perfect food." How soybeans gave Rose B. the look and feel of youth. A customer-friend offers Rose B. an Oriental soybean secret: Soybeans offer digestive balance, soybeans improve skin and hair health, soybeans improve the posture and finger flexibility, soybeans help create a youthful feeling internally and externally. How cooked soybeans offer protein-plus health benefits: Here's how it works (soybeans contain all essential amino acids but three of them–lysine, methionine and trypsin–are enhanced by cooking. "The soybean deserves its name–the 'holy bean'"). How to prepare soybeans (try to use organically grown soybeans; drink the cooking liquid as "soybean tea"). Soybeans offer vitality-boosting nutrients (and no starch). For health-plus, try soybean flour. The Oriental way to make soybean milk (recipe for "vegetable milk"). Why Orientals value soybean protein above meat protein. Meat protein may be less effective. Main points (Summary).

2538. Wilson, C. Anne. 1973. Food and drink in Britain: From the stone age to recent times. London: Constable. 472 p. + 16 unnumbered pages of plates. Illust. Index. 20 cm. Reprinted in 1984 by Penguin. [635 endnotes + 205 ref]
• ***Summary:*** An excellent, in-depth book, with sources carefully cited and an fine, extensive bibliography that is especially strong in the most ancient documents.

Discusses almond cream and almond milk, how they were prepared, and their role in medieval society. Almond milk was widely used (in place of animal milks) as part of the Lenten fast. But by the mid 1600s, the almonds were often omitted altogether and only animal milk used (p. 168).

Rice pottages were often cooked in almond milk. "Rice for fish days was tempered with almond milk only, and was usually sweetened with sugar" (p. 201).

Almond milk could be sweet or savory, depending on how it was drawn. "'Take fair almonds and blanch them and grind them with sugar into fair milk; or, 'Take raw almonds and blanch them and grind them and draw them through a strainer with fresh broth and wine into good stiff milk.' Even, on occasion, 'Take almonds, and draw a good milk thereof with water.' The great advantage of almond-milk was that it could be used as a substitute for cow's milk in fasting-day dishes. Drawn thicker, it became cream. And if it was boiled with a little wine or vinegar and strained through a canvas, the solid part could be eaten as almond-butter on fish days, especially in Lent. Poor people used bean-butter as a substitute.

"Marchpane or marzipan was a discovery of the later Middle Ages, dependent as it was upon the union of ground almonds with sugar. It may have been invented in Italy; at any rate the name is believed to have originated there, though it quickly spread into the other main languages of Europe" (p. 336). Address: Leeds, England.

2539. *Wind Bell* (*Zen Center, San Francisco, California*). 1973. Ejo Takata-Roshi. 12:21.
• ***Summary:*** "In December, 1972, Ejo Takata-roshi, the founder of the first Zendo in Mexico and long-time disciple of Yamada Mumon-roshi, visited San Francisco and Zen Center. He had visited once before when on the day of the opening ceremony of Tassajara in 1967 he appeared at the front gate on foot and presented Suzuki-roshi with a *kyosaku* (stick used to hit students during zazen).

"In Mexico he divides his time between his Zendo in Mexico City and an experimental soybean farm he has founded in mountainous Oaxaca province. He has taught the villagers there how to make milk and other derivative products from the soybeans in an effort to supplement the protein-deficient local diet.

"At Zen Center he spoke to the students in the Buddha Hall, using three different languages and as many translators, explaining his work with Mexico's poor people and his difficulties explaining Zen to the Mexican authorities."

A photo shows Takata-roshi with Oaxaca villagers.

Note: This is the earliest document seen (May 2009) concerning the modern soyfoods movement in Mexico and Central America.

2540. Woodroof, Jasper Guy. 1973. Peanuts: Production, processing, products. 2nd ed. Westport, Connecticut: AVI Publishing Co., Inc. xi + 330 p. Illust. Index. 24 cm. [100+* ref]
• ***Summary:*** Contents: 1. Historical background. 2. World production and marketing of peanuts. 3. The culture of peanuts. 4. Harvesting, curing, and shelling. 5. Storing peanuts. 6. Composition and nutritive value of peanuts. 7. Peanut butter. 8. Salted peanuts. 9. Peanut confections. 10. Peanut oil. 11. Technological developments in peanut uses (incl. peanut milk, flour, protein, peanut cheese, peanut baby and invalid food, peanut paste for shortening, peanut butter ice cream). Appendices: U.S. standards for farmers' stock white Spanish peanuts, Virginia-type peanuts, and runner peanuts (unshelled or shelled), U.S. standards for grades of peanut butter, technical inspection procedures for peanut butter, peanut butter: definition and standard of identity.

Peanuts (*Arachis hypogaea*, of the Leguminosae family) are also called groundnut, earth-nut, monkey nut, goober, pinda, pinder, or Manilla nut. They are indigenous to South America, probably Brazil or Peru, where they were known as early as 950 B.C. They were taken from there to Africa by early explorers and missionaries. They were brought

to North America from Africa by slave traders in the early colonial days and used as food for slaves while on shipboard. In America, peanuts were not extensively used until after the Civil War in 1865, and then for many years the crop was confined to Virginia and North Carolina. In about 1920 the ravages of the boll-weevil forced farmers in Georgia, Alabama, and Florida to substitute peanuts for cotton. In the early days peanuts were used almost entirely for fattening farm animals, especially pigs, turkeys, and chickens.

In 1899 a missionary, Archdeacon Thompson of the American Missionary Society, took quarts of peanuts in his luggage to China. Production of peanuts spread to every province of China and China is now the world's number two producer with approximately 2 million tons annually. India is by far the world's largest producer of peanuts, while the USA ranks fifth with 1 million tons. George Washington Carver made more than 300 food and industrial products from peanuts in Alabama before World War I. The American Museum of Peanut Butter History has been established in Chicago, Illinois; it covers the period from 1890 to 1925 [and is sponsored by Peter Pan Co.].

One of the first industrial organizations for the promotion of peanuts in America was the American Peanut Corp., founded by L.F. Bain in 1849 near Wakefield, Virginia. The next major company, Lummis and Co. in Norfolk, Virginia, was not founded until 1879, after the Civil War. The next four major companies, founded in 1890, 1892, and 1895, and 1900, were all founded in Virginia. Peanuts were the foundation of the swine industry in much of the Coastal Plain area of the Southeast. But peanuts were found to cause soft pork.

The spokesman for the industry since 1920 has been the *Peanut Journal and Nut World*, published in Suffolk, Virginia. The National Peanut Council was organized in 1940 in Pensacola, Florida, as a trade association for all branches of the industry.

Chapter 7, titled "Peanut Butter," contains a history of the subject: "Peanut butter is by far the most important product made from peanuts in the United States. Even though large quantities of peanuts are grown in other countries, practically none is consumed as peanuts. The history of peanut butter is obscure but dates from about 1890 when it was discovered that a very palatable paste or butter could be obtained by grinding peanuts. It soon became known as peanut butter, and presumably, was made from raw peanuts. A physician in St. Louis, Missouri, was reportedly the first to manufacture peanut butter commercially (Beattie 1936) [Note: Beattie 1936 makes no mention of any physician in St. Louis, Missouri in connection with peanut butter!] He recommended it for invalids because of its high nutritional value. It was said to be used in sanitariums elsewhere, especially at Battle Creek, Michigan, due to its high protein content, low carbohydrate content, and palatability. Due to the limited sale at first and lack of adequate equipment for manufacture, the price was too high for general use.

"Although roasted (parched) peanuts have been ground into a paste and mixed with honey and cocoa in South America for centuries, peanut butter as a North American food was apparently invented independently. The first product was shelled roasted peanuts chopped, ground, or beaten into a pulp in a cloth bag with salt added...

"About 1900 it was learned in the south that peanuts could be ground into a paste butter in the home. Soon it became a staple food and commercial production was greatly stimulated."

"The making of peanut butter was largely a local hit-or-miss operation until the Peanut Butter Manufacturers Association was organized about 1940. Until that time only 25% of edible peanuts were used in butter and little attention was given to varieties of peanuts, methods of roasting and blanching, grades of peanut butter, effect of particle size, means of preventing oil separation, improving speadability, preventing sticking to the roof of the mouth, extending the shelf-life, and formulas for using. By 1950, about half of all edible peanuts were used in butter, and by 1964 the proportion had risen to 63%."

As of 1962 about 53% of U.S. peanut butter was made from runner peanuts, 34% from Spanish peanuts, and 12% from Virginia peanuts.

Note: Talk with Jasper Guy Woodroof in Griffin, Georgia. 1993. Feb. 17. He does not know where he heard that a physician in St. Louis, Missouri, was the first to make peanut butter. Address: Prof. Emeritus of Food Science, Univ. of Georgia, Experiment, Georgia.

2541. Oles, Shayne. 1973? The new Zen cookery: Practical macrobiotics. Woodland Hills, California: Shayfer Corporation. 86 p. Undated. Index. 22 cm. Spiral bound.
• ***Summary:*** A revised edition of the first American macrobiotic cookbook, containing a wide variety of recipes from many sources. The cover is light orange. In the lower right corner is a sumi-e type brush illustration of some grasses and flowers. All recipes are numbered. The recipe numbers and page numbers are a little different from those in the 1966 edition published by Ignoramus Press in Los Angeles. Pages 59-62 (recipe nos. 210-21) are about Miso soybean paste. Pages 62-64 (recipe nos. 222-28) are about Tamari soy sauce.

Herman Aihara (Nov. 1990) has no idea why there are two versions of this book, both undated. Shayne Oles must have published one or both of these after Herman Aihara started the George Ohsawa Macrobiotic Foundation (any time after 1969). Only Shayne Oles would know. One clue is given in *Macrobiotics: Yesterday and Today* by Ron Kotzsch (1985, p. 170). "In 1966 Lou Oles, who with his wife Shane [sic, Shayne] had managed the revived Ohsawa Foundation, died, and Shane asked Herman [Aihara] to assist her. Herman began to travel to Los Angeles once a month to give lectures

at the Foundation headquarters. He was also instrumental in the publishing of Ohsawa's books, which were selling well on the East Coast as well as the West. By 1969, however, dissention had developed over the role of Shane's new husband in the organization. Herman resigned. In 1970 the Ohsawa Foundation dissolved. Aihara, who had moved to San Francisco [from Carmichael, near Sacramento], established the George Ohsawa Macrobiotic Foundation as a new educational and publishing organization."

No. 293, a recipe for "Grain coffee pudding," calls for "1 cup grain milk powder" [perhaps Kokkoh]. No. 300 is "Ohsawa coffee," a "grain coffee." Address: President of Ohsawa Foundation, California.

2542. American Soybean Assoc. ed. 1974. Proceedings: World Soy Protein Conference. *J. of the American Oil Chemists' Society* 51(1):47A-216A. Jan. Held 11-14 Nov. 1973 in Munich, Germany. 28 cm. [566 ref]
• ***Summary:*** Contents: Session I: World protein markets. Session II: Soy protein products, their production, and properties. Session III: Legal and regulatory aspects of soy utilization in foods. Session IV: Utilization of soy proteins in foods. Session V: Utilization of soy protein in foods. Session VI: Nutritional aspects of soy protein foods. Session VII: Future developments and prospects. Round-tables papers. Registration list (directory of participants). Directory of exhibitors and press.

Berwin Tilson, president of the American Soybean Assoc., notes in the introduction (inside front cover): In Oct. 1972 "It was felt that the time was right to gather together top representatives from all areas affecting the soy foods industry... 1,100 representatives from 47 countries actually attended." This was a pioneering and very important conference. It was opened by the U.S. Secretary of Agriculture Earl L. Butz, and senator Hubert Humphrey delivered a memorable, inspirational address. Many distinguished scientists and politicians also presented papers.

Exhibitors: Purina Protein Europe (Brussels, Belgium). Archer Daniels Brussels S.A. (Belgium). Cargill Inc. (Minneapolis, Minnesota). McKee CTIP (Rome, Italy). Central Soya International Inc.–Chemurgy Division (Brussels, Belgium), Alfa Laval AB (Tumba, Sweden; soymilk equipment). Staley Europe (Amsterdam, Holland). A/S N. Foss Electric (Hilleroed, Denmark). Westfalia Separator AG (Oelde, West Germany). A/S Nirg Atomizer (Soeborg/Copenhagen, Denmark). Nabisco Inc.–Protein Foods Div. (Fairlawn, New Jersey). Miles GmbH (Frankfurt am Main, Germany). Lucas Meyer und Edelsoja GmbH (Hamburg, Germany). General Mills Inc. (Minneapolis, Minnesota). Address: Hudson, Iowa.

2543. Circle, Sidney J. 1974. Soy proteins in dairy-type foods, beverages, confections, dietary, and other foods. *J. of the American Oil Chemists' Society* 51(1):198A-199A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973.
• ***Summary:*** Preparation and properties of the following soy-based product groups are given: Beverages: traditional unfermented soy milks, traditional fermented–yogurt-like milks, simulated milks based on soy protein isolate incl. fermented yogurt-like types, still non-carbonated beverages, carbonated beverages.

Simulated sweet creams. Sour cream. Margarine and spreads. Cheese-like foods: Tofu, sufu, simulated cream cheese, simulated cured and processed cheese, cheese spreads and dips. Frozen desserts (incl. ice cream and sherbet). Whipped toppings. Substitute nuts and fruits.

"Table vegetable, green soybeans, and [soy] bean sprouts. Available in canned form, also fresh in season in some areas. Dry beans can be sprouted in home.

"Soups. Protein fortification as thickener (soy flour, soy protein concentrate, or soy protein isolate) or in high protein noodles or croutons. Oriental use of yuba." Address: Anderson Clayton Foods, Richardson, Texas.

2544. Decock, Alain. 1974. Soy protein isolates in hypoallergenic infant formulations and humanized milks. *J. of the American Oil Chemists' Society* 51(1):199A-200A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973.
• ***Summary:*** Contents: Introduction. Soy protein isolates. Humanized milks. Address: Purina Protein Europe, Brussels, Belgium.

2545. Hutton, George H.W. 1974. International programs utilizing soy foods: The World Food Program. *J. of the American Oil Chemists' Society* 51(1):146A-148A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973.
• ***Summary:*** Contents: Abstract. Introduction. Use of soy foods in WFP [World Food Program] aid. Address: Resource Management Div., World Food Program, Food and Agriculture Organization (FAO), Rome, Italy.

2546. Meyer, Edwin W. 1974. Introduction to round-table discussion on soy protein in dairy-type foods, beverages, confections, dietary, and other foods. *J. of the American Oil Chemists' Society* 51(1):197A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973.
• ***Summary:*** "This session provides a forum for the discussion of the uses of soy protein products in specific foods such as: infant formulations and baby foods; coffee whiteners; whip toppings; cheese-like foods; frozen and chilled desserts; margarine and other spread products; beverages, including dietary and nutritional beverages of the carbonated, still, or milk-like varieties; confections, including candies; imitation nut meats and nut butters; whipping agents; and dietary foods, including calorie-

reduced foods." Address: Central Soya Co., Chicago, Illinois.

2547. Sterner, Mark M. 1974. Low-cost protein foods: Increasing their supply and acceptance in developing countries. *Cereal Science Today* 19(1):14-17. Jan. [2 ref]
• ***Summary:*** Contents: Introduction. Poverty and hunger. Population factors. Inexperienced leadership. Culture-oriented protein foods. Soy products. A total-development approach. New solutions needed. The tragedy of protein deficiency. Technical assistance and training.

World population is growing at about 1.5% each year while world agricultural production is increasing at the rate of about 2% annually. However, the heart of the problem of world protein supply is not what is happening on average or on the whole. "It is the fact that there are great differences in the consumption of proteins between countries, between socioeconomic groups within a country, and between family members in the home."

Today 64% of the world's population are "protein hungry." They do not consume enough protein. Sterner lived in Korea until 5 months ago and has seen the problem first hand. To his surprise, he was told by the administrator of a college in Sri Lanka, Ceylon, that the school's small soy-milk plant (put there by the father of soy milk, Dr. Harry Miller) is kept running at full capacity, when soybeans are available, to keep up with the demand of the college cafeteria. He explained that the students much prefer this unsophisticated form of soy milk to the dried soy milk (DSM) provided by CARE.

The article discusses the work of Meals for Millions and contains four photos related to that organization. Address: Exec. Director, Meals for Millions Foundation, Santa Monica, California.

2548. Weisberg, Samuel M. 1974. Nutritional experience with infant formulas containing soy. *J. of the American Oil Chemists' Society* 51(1):204A-07A. Jan. Proceedings, World Soy Protein Conference, Munich, Germany, Nov. 11-14, 1973. [35 ref]
• ***Summary:*** Contents: Introduction. Development of soy-based infant formulas. Problems with soy-based formulas and remedial measures. Clinical feeding results. Soy-cereal food blends. Technological and marketing aspects. References.

Of the various commercial soy-based infant formulas made in the USA, Isomil (Ross), Neo-Mull-Soy (Syntex), and ProSobee (Mead) are made from soy protein isolates, whereas Sobee (Mead) and Mull-Soy (Syntex) are made from soy flour. A detailed nutritional analysis of the two types of products is given.

"Development of soy-based infant formulas: It has been estimated that in 1973 ca. 10% of infants in the U.S. will be fed formulas based on soy protein isolate (1). In the U.S. in the 1950's and 1960's, infant formulas based on soy flour as the protein source in place of milk proteins were developed and marketed. These were among the better milk substitutes. However, the formulas often produced loose, malodorous stools and caused chafing in the diaper area.

"In the mid 1960's, water dispersible soy protein isolates became available. These permitted the formulation of infant foods white in color nearly odorless, and seldom causing loose or malodorous stools. In the process for producing the soy protein isolate, it became possible to remove indigestible or irritating components. In the 1970's, formulas based on soy protein isolate have largely replaced the soy flour formulas." Address: League for International Food Education, Washington, DC.

2549. Lundstedt, Erik; Lo, Frank Y. Assignors to Hong Kong Soya Bean Products Co., Ltd. (Kwun Tong, Kowloon, Hong Kong). 1974. Heat stable curd from soya bean milk and process of manufacture thereof. *Canadian Patent* 941,228. Feb. 5.
• ***Summary:*** Prepare soymilk with 6% solids. Add 1-10% by weight of edible fat. Heat to 93.5ºC with steam for 10 minutes. Homogenize at 2,500 lb. pressure. Cool to 24ºC. Add calcium chloride coagulant under strong agitation to form curds at below 49ºC. Heat to 71ºC. Cool to separate whey for superior smooth, silky curds. Hot pack by heating to at least 66ºC. Homogenize. Pump and pack hot. This is a curd, not cheese; there is no fermentation. Address: 1. South Chatham, Massachusetts; 2. Kwun Tong, Kowloon, Hong Kong.

2550. *Los Angeles Times.* 1974. Seldom-used soybean high in protein, unsaturated fats. Feb. 7. p. F2.
• ***Summary:*** Genevieve P. Ho, PhD, of the Agricultural Extension Service, USDA, University of California, explains that soybeans and soybean products have been staples in China for 4,000 years [sic, 3,000 years]. Among these products are "soybean curd, soybean milk, soybean sprouts and soy sauce..."

"In 1972, soybeans retailed for 14 cents a pound. Today they sell for 54 cents a pound in health food stores and 31 cents a pound in Oriental markets."

Describes how to cook dry soybeans at home. Soak soybeans overnight before cooking. they will swell to between 2½ to 3 times their original size.

To speed the process: Combine 3 cups water and 1 cup dry soybeans, bring to a boil, and continue to boil for 2 minutes. Turn off heat, cover, and let stand 1 hour. Soybeans are best cooked slowly and at low temperatures–for 3/4 to 1 hour.

Gives recipes for: Soybean casserole (with "2 cups soybeans, cooked, coarsely chopped"). Soybean cookies (with "1 cup cooked soybeans"). Bean curd soup (with "1 cup bean curd (tofu), broken in small pieces"). Bean curd and shrimp (with "1½ cups bean curd (tofu)" and "1 tbsp.

soy sauce").

2551. Kushi, Michio. 1974. Natural agriculture and food processing. *Michio Kushi Seminar Report* (*Brookline, Massachusetts*) No. 2. Feb. 12. p. 1-4. Edited by Ane & Mark Riegel.
• ***Summary:*** On Feb. 12 Mr. Kushi, a macrobiotic teacher, lectured on: Soybeans. Making tofu: Lemon juice and vinegar vs. nigari. Making natto.

For making tofu, Kushi recommends using nigari rather than lemon juice or vinegar, since the yang nigari balances the yin soybean.

The soybean, "according to our Unifying Principle of macrobiotics, belongs to the yin category. And if you are taking plenty of soybeans, then you become a fool... if you cook kombu together with soybeans, the taste is very good, and nutritionally it is a better balance."

Soybean milk is easy to make. It can often be a substitute for cow's or goat's milk. Soybean milk is yin. If you give this to a baby for a long period, the baby becomes very yin. It is better to give soybean milk for a short period. Address: Brookline, Massachusetts.

2552. Kushi, Michio. 1974. Natural agriculture and food processing. *Michio Kushi Seminar Report* (*Brookline, Massachusetts*) No. 3. Feb. 26 and 27. p. 5-30. Edited by Ane & Mark Riegel.
• ***Summary:*** On Feb. 26 Mr. Kushi, a macrobiotic teacher, lectured on: Tekka–"Tekka is used not only as a condiment, but also for medicinal use. Tekka is made from three different roots–carrots, burdock, and lotus roots." The "volume of miso is flexible... Homemade tekka is traditionally made in a cast iron frying pan." The Japanese word "tekka" derives from *tetsu* (which means iron) and *ka* (fire). "For medicinal use, yang miso is better."

Miso and miso manufacturing, including how to make malt (rice koji) (8 pages). Note: This section indicates that Mr. Kushi has some basic knowledge of the subject but there are many errors. 1. Koji is not malt (which refers to soaked, germinated cereal grains), but molded cereal grains or soybeans. 2. Koji kin is not malt bacteria, but koji molds. 3. One does not add enzymes to miso and enzymes do not grow. Even modern miso factories do not add enzymes when making miso. 4. The entire mixture is not stirred after 20-25 days to add oxygen. Kushi says you must keep miso for a least 6 months, but to cure sickness it must be kept for 2-5 years. Miso soup can compensate for the bad qualities of meat and eggs–so everyone should eat miso soup daily. Soup stocks and miso soup.

On Feb. 27 he discussed: General outline for making shoyu–soy sauce (4 p.), including discussions with Kikkoman on making natural shoyu starting with whole soybeans. In the early years after 1973, Kikkoman wanted to make natural shoyu and sent Kushi several samples, but he turned them all down, in large part because Kikkoman wanted to use defatted soybean meal instead of whole soybeans. Erewhon is buying shoyu from 3 companies in Japan. But Kushi says the quality is declining compared to five years ago [i.e., 1969], when it had powerful healing effects when taken with bancha or kuzu. He adds: "Around Boston or on our Ashburnham land, I really hope we can begin to make miso or soy sauce." Kushi says that now, after pasteurization, coloring and flavoring is added [not true, except in HVP soy sauce]. "Traditionally [in Japan] for this they used natural herbs. For a sweeter taste and darker color they traditionally used kanzô [kanrô?] or 'sweet grass = sweet herb.'"

"Formerly, until modern technological methods started to be applied, almost each village made their own shoyu like this, either as a joint community project, or someone with money made it and sold it to several villages."

Using bean and grain sprouts–moyashi (including soy sprouts). Other soybean products: Fried tofu (two methods for agé). Ganmodoki. Kori-tofu or koya-tofu (freeze-dried tofu). Soybean milk ("Soy milk is very yin." Note: Most Japanese and Japanese scientists consider soymilk to be an "alkaline" {*arukari-sei*} beverage, which therefore promotes good health). Yuba. In the discussion (p. 28), yogurt made by leaving soymilk unrefrigerated and "Chinese fermented tofu... fu nyu" are mentioned. The U.N. [United Nations] recommendations on food, using vegetable proteins.

Note: This is the earliest English-language document seen (April 2013) that uses the term "freeze-dried tofu" to refer to dried-frozen tofu. Freeze drying, which is an expensive, modern, high-tech process that uses a vacuum chamber to dry a frozen food, is not a good term to use for this traditional Japanese food which is air-dried naturally. Address: Brookline, Massachusetts.

2553. *Better Nutrition.* 1974. Food for thought. Feb. [1 ref]
• ***Summary:*** "The Overseas Development Council is calling for a Sino-American Soybean Research Institute for developing soybeans which will produce more beans per acre...

"Unfortunately, our country uses most of its domestic supply of soybeans as food for poultry and cattle. In the Far East soybeans are used directly as food for people, which is, of course, much more sensible. Soybean protein is as nearly complete a protein as exists in vegetarian food. Combined with cereals or nuts at the same meal, soybean food offers complete protein very inexpensively at the rate of 11 grams for every serving of the cooked dried beans.

"Other soybean products available in our country are loaded with high quality protein: soy flour, with up to 47 per cent protein, soybean curd (a kind of cheese) with almost 8 per cent protein, *miso* and *natto* with 11 and 17 per cent protein respectively.

"Soybean milk products are equally nourishing where

protein is concerned."

2554. Central Food Technological Research Inst. (CFTRI). 1974. International Symposium on Protein Foods and Concentrates, Proceedings. Mysore, India: CFTRI. vii + 450 p. Held 27 June–4 July 1967 at CFTRI, Mysore.
• ***Summary:*** This symposium was sponsored by the Council of Scientific and Industrial Research, India, and the Office of International Research, National Institutes of Health, U.S.A., and co-sponsored by the Food and Agriculture Organisation of the United Nations, with the active participation of the World Health Organization and the Association of Food Technologists, India.

Page 293 discusses kinugoshi tofu. Address: Mysore, India.

2555. Erhard, Darla. 1974. The new vegetarians. II. The Zen macrobiotic movement and other cults based on vegetarianism. *Nutrition Today* 9(1):20-27. Jan/Feb.
• ***Summary:*** This article is mainly a very critical assessment of the macrobiotic diet and movement introduced as a cure by George Ohsawa. It also discusses Sufi groups, the new Vrindaban International Society for Krishna Consciousness (founded in 1966 by his Divine Grace A.C. Bhaktivedanta Swami Prabhupada), and various vegan groups.

A pie chart on page 21 shows the various major food movements in the U.S. counterculture "and how they all lead to unscientific vegetarian forms of food faddism." Within the natural food movement are organic communes, Krishnas, vegans, Sufis, followers of the Ehret's mucusless diet healing system, and practitioners of Yoga. Within the health food movement are four major teachers: Paul C. Bragg, Herbert Shelton, Carleton Fredericks, and Adelle Davis. Within the "Cosmic Nutrition Movement" are Zen macrobiotics (yin/yang polarity), and the Messiah's Crusade (positive/negative polarity).

"Veganism is the philosophy and practice of compassionate living. Founded in England in 1944, the Vegan Society originally stressed the ethics of eating. The American Vegan Society, based in New Jersey, was founded in 1960 and is composed of individuals who are more health oriented. This Vegan philosophy was essentially based on Dr. Albert Schweitzer's concept of reverence for life, and Mahatma Gandhi's concept of Ahimsa, a Sanskrit term meaning non-killing and non-injury" [dynamic harmlessness] (p. 27). "Vegans who practice more restrictive diet interpretations may use Dr. Shelton's Food Combining System." Vegans and their children often use soya milk.

The reason is that the general natural foods movement is an example of unscientific food faddism is that the "Diet emphasizes natural and/or organic vegetables, fruits, legumes, grains, and usually dairy products, and restricts meat."

A sidebar briefly defines "Vegetarian terms" including amasake, miso, mochi, nirvana, tamari, tofu, and umeboshi.

Note: This is the earliest document seen (May 2002) concerning Sufism (or Islam) and Vegetarianism. Address: RD, MPH, Research Nutritionist, Clinical Study Center, San Francisco General Hospital, California.

2556. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part I (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm.
• ***Summary:*** 1974 Feb. 28. Meet Bill Shurtleff and Mr. Masa Miyashita of Kikkoman export dept. (good man, speaks fluent English) at the Imperial Hotel (*Teikoku Hoteru*, built in the 1920s by Frank Lloyd Wright) in Tokyo. Talk for 4 hours. Westbrae hires Shurtleff as an interpreter and guide.

March 1. Dinner at Sasa-no-Yuki, beautiful old restaurant that specializes in tofu cuisine.

March 4, Monday. Visit Kikkoman in Noda with Shurtleff and Miyashita. Tour Plant #7, then Plant #4 (the Goyo-Gura), which produces the emperor's shoyu in the traditional, natural way. "Saw 5 batches of moromi mash from 1 month old to 12 months old, and tasted each one. Delicious. Great color change between the 1 month and the 12 month moromi. We saw all the traditional tools. The moromi vats were made of cedar and last approximately 200 years." See a movie on how shoyu is made. Lunch at a sushi shop. Visit two miso retail shops with Shurtleff near his home. One had 42-45 types of miso (mostly rice miso, with 1 each Hatcho, barley, and cooked miso), the other 32-35 types. Tasted many and learned the differences. I buy Saikyo sweet white miso and Hatcho miso.

March 5, Tues. Attend a cooking class at Lima Ohsawa's house, then have dinner with Lima and the class members. Sick for the next 2 days.

March 9, Sat. Call then meet Mr. Kazama of Mitoku. He represents Erewhon. We may import through Kikkoman's Pacific Trading. Plan trip to Sendai Miso-Shoyu. Sendai is interested in using organic soybeans to make shoyu but would like a contract stating that all of it will be purchased when done. Dinner at the natural foods restaurant, Hakumon run by a Frenchman named Pierre.

March 11, Mon. Meet Shurtleff early at Tokyo station. Take bullet train (Shinkansen) to visit two Hatcho miso plants (Hayakawa Kyuemon Shoten, and Ota Shoten in Okazaki city, Aichi prefecture). Both plants claim to be over 600 years old. They use modern steamers and koji rooms. They pile 4-6 tons of rocks atop each large vat of miso, age it for 2 summers. It becomes very mellow when fully aged. They also use about half of their Hatcho miso to make Akadashi miso. It also contains caramel coloring, barley syrup, MSG, shoyu, a white miso, and preservatives. They sell a lot of Akadashi but only a little Hatcho miso. Lunch at an udon noodle shop that hand makes and cuts the noodles. Lots of slurping. Then visit a plant that makes real tamari

and shoyu. All the tamari is mixed with junk. Train to Kyoto; stay at Friends World College. Note: This is the earliest English-language document seen (March 2012) that contains the term "real tamari."

March 12, Tues. Visit a tofu maker, a yuba maker (*Yuba Han*), then the company that makes Saikyo sweet white miso. The owner lies to us initially about his miso aging and caramel coloring (which tastes and looks like tar). Then he reverses himself without batting an eye. Lunch at a 300 year old Zen vegetarian restaurant (*Okutan* near *Nanzenji* temple); so beautiful that I start crying. Fantastic place. Light snow falling by the pond. Enjoy Simmering Tofu (*Yu-dofu*) in a broth. Then we go to a 400-year old tofu restaurant (*Nakamura-ro*) at a shrine (*Gion*) for dessert of *amazake* and *Dengaku* (skewered and braised with sweet miso). On to a second miso factory. It is a bore and the owner does not seem sincere but he has a great reputation among macrobiotics. He makes both natural and sweet white miso. Shurtleff visited him last year. For white miso the soybeans are boiled; for red miso they are steamed. Some white miso contains sodium thiosulphate bleach. Visit another yuba shop. They use granite grinding stones to make soymilk, cast iron pot to cook it in and copper skimming tables. A very beautiful place. Meet Ty Smith at a soba shop. He is a chain smoker, just quit working for Muso, and promoting a cooperative effort between Janus, Chico-San, Erewhon, and The Well to import foods from Japan. Evening at Jittoku coffee house, owned by an American, in a large old Japanese treasury (kura). Back to Tokyo by train. Talk until 1:00 A.M.

March 14, Thurs. Meet Kazama and Shurtleff, and take express train to Sendai Miso-Shoyu. We are treated royally by Mr. Muro. Long introduction and discussion. Visit their 2 plants, one modern, one traditional, natural. They make only rice miso. Their production of natural miso is more than all that imported to America by Erewhon and Janus. They age their natural shoyu 18-24 months at the request of Michio Kushi and Erewhon. They have 9 aging vats for the first year, then it is switched to other tanks. They invite us to have a shoyu taste test among 3 products: Kikkoman regular shoyu, Sendai regular, Sendai natural. Both Bill and I choose Kikkoman as best; good aroma, color, and taste. They congratulate us on our good taste. Sendai regular had very strong salty taste. We both liked the Sendai natural least; good color, no aroma, very mild taste. Sendai people say only one year is needed to ferment shoyu naturally. We might sell them organic soybeans (we had purchased 12 truckloads from a farmer) and get shoyu back in 1 year. We meet the president (Sasaki?), born 1928. Elegant geisha-hosted tempura and sushi dinner with president, 2 vice presidents, production manager, and a consulting professor (Shibasaki sensei). After dinner to a traditional bar for *doburoku* (thick, unrefined sake with a low alcohol content [or was it nigori-zake?]), then a sushi house. Shurtleff leaves for Tokyo on night train.

March 16, Sat. Visit Shurtleff and Aoyagi's home for lunch. We have dried-frozen tofu main dish, salad with creamy tofu dressing, strawberries with tofu whipped cream. Delicious. Then we learn how to make tofu at home. It's easy. I'll make it at home in California, then at our Westbrae Natural Foods retail store on Gilman Street (Note: This led to a long series of tofu classes by Gerner, Liz Horowitz, and later Shurtleff & Aoyagi; The retail store changed its name in late 1976 to Gilman Street Gourmet).

Note 1. This is the earliest document seen (April 2006) concerning Westbrae Natural Foods.

Note 2. This is the earliest English-language document seen (Jan. 2012) that contains the term "creamy tofu dressing" (or "dressings") a term coined by Shurtleff and Aoyagi in *The Book of Tofu* (p. 108).

Note 3. This is the earliest English-language document seen (April 2013) that uses the term "dried-frozen tofu." Continued. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

2557. Gerner, Bob. 1974. Log of trip to Japan to study traditional natural foods, 28 Feb.–2 March 1974. Part II (Log–unpublished). Westbrae Natural Foods Inc., Berkeley, CA 94710. 26 p. Unpublished log. Handwritten. 20 x 8 cm. • ***Summary:*** Continued: March 19, Tues. Take bullet train to Kyoto to meet Steve Earle of Muso Shokuhin. We 3 go to Okayama to see Fuchu Miso, that makes mugi miso (the barley miso sold in our store) and sweet white miso. The president's wife is the epitome of Japanese woman. For lunch we have tofu burgers with Italian sauce and mushrooms in a bento made by Akiko. Delicious. Take a boat to Shodo-shima where Marushima Shoyu Co. is located. Island is also famous for toasted sesame oil. Arrive at a ryokan at 6:30 P.M. VIP treatment. Bath before dinner and served in private room by geisha. Too much fish! Note: This is the earliest English-language document seen (April 2013) that contains the term "tofu burgers."

March 20, Wed. Miso soup for breakfast. Visit Marushima Shoyu where Muso gets its "natural" shoyu for export to America. They have the newest wheat roasters (they roast it with sand), biggest presses. We see cement aging tanks in a temperature-controlled room, then onto a large red building with 150 aging tanks. But we see no whole soybeans, only soybean meal (*dasshi daizu*). "I feel the owner is a liar and this is a bogus operation. The scene gets heavy and ugly. Bill is great and presses on with questions." The owner claims that 40% of their shoyu is natural, aged for 3 years and made with whole soybeans; 60% made with soybean meal, temperature controlled for 7 months. Thus there should be about 120 vats of natural versus 60 regular. But where is the natural? Their faces turn red. We have caught them red handed. The owner take us to one musty, dirty old building with 25 vats, only 8 of which contain

shoyu, some only half full. Lots of cockroaches. Looks like no one ever goes here. Still no sign of a single whole soybean. Uneasy departure. Steve Earle is embarrassed. We take a train to Tokyo. We present Earle/Muso with a list of inconsistencies and ask for a written reply.

March 21, Thurs. Visit Mr. Kazama's miso factory (*Ikeda Kojiro Miso Shoten* in Kawaguchi-shi near Tokyo), that makes barley miso, the only brown rice miso in Japan, and shoyu. Call Ty Smith of Muso. He says Muso was very happy with our findings concerning the problems at Marushima, and that they have contacted a new source in Kyushu. Marushima said their president died a year or so ago and his son took over. They have lost the old feeling and tradition.

March 22, Fri. 6:00 A.M. Meet with Bill Shurtleff at his tofu master's tofu shop (*San-Gen-Ya*, run by Mr. Toshio Arai). We watch how he makes tofu. Beautiful place (12 feet square) attached to their home. Beautiful people; they don't speak English. Both make tofu starting early in the morning. He delivers in the afternoon and she sells out of the shop. He gave me hot rich soymilk (from *kinugoshi*) with wild mountain honey. Both incredible. So sweet and delicious. They also serve us freshly made agé, kinugoshi, and natto. Lunch at Shurtleff and Aoyagi's home: Noodles and tofu, Chinese fried tofu, tofu pudding, agé, kinugoshi, and mikan orange. We go over my notes from the miso factory. We copy all of his notes. Then I leave, very sad, but the friendship will remain. Akiko is a remarkable lady. Meet Mr. Kazama and go to Pacific Trading. Lousy meeting with Mr. Masaaki Miki (sales manager), and Masa Miyashita (export dept). Go to airport.

Results of the trip: (1) Westbrae started (about 9 months later) to import many varieties of miso, plus shoyu, and other products from Mr. Kazama in Japan. Bob Gerner was the founder, president, and chairman of the board of Westbrae; (2) Bob Gerner and Liz Horowitz taught "Tofu and Miso Cookery Classes" in Berkeley during 1976; (3) Westbrae published and distributed widely two brochures, *What is Miso?* (May 1976) and *What is Tofu?* (July 1976) written by Shurtleff and Aoyagi; (4) In 1976 Westbrae Natural Foods Inc. decided to sell its retail store at 1336 Gilman St. in order to focus on being a distributor and importer. The store had been losing money. Bob Gerner bought it in June 1976 for the low price offered by the highest bidder. He remodeled the store, renamed it Gilman Street Gourmet, and re-opened it in Sept. 1976. In the spring of 1977 Gerner added a deli to the store; there he made and sold Tofu Burgers, Tofu Treasure Balls, and Tofu Steaks Sauteed in Ginger Sauce. The same week that the deli opened, Gerner sold 3,000 to 4,000 of his new Tofu Burgers out of the Westbrae booth at the New Earth Exposition in San Francisco. Bob's nephew and sister (Margaret) made the tofu burgers. The burgers sold equally well at the same Expo in 1978 and 1979; (5) Shurtleff and Aoyagi wrote *The Book of Miso* and their New-age Foods Study Center moved toward becoming Soyfoods Center.

Note: In late November 1974 Mr. Kazama came to a meeting at Pajaro Dunes by Santa Cruz, sponsored by The Well. The idea was to set up a natural foods trade association. Erewhon wanted to control all imports of Japanese natural foods from Japan. Janus and The Well both had to import through Erewhon. They said Westbrae must buy through them via The Well (Roger Hillyard/Pure & Simple), and pay a 5% commission. Kazama had to defer to them. Gerner refused and they backed off. Ty Smith, now head of Erewhon, was upset that Westbrae was not paying a commission. Gerner told him "Tough." So Westbrae ended up importing from Kazama. Address: President & Chairman of the Board, Westbrae Natural Foods Inc., 1224 10th St., Berkeley, California 94710.

2558. Huang, Su-Huei. ed. 1974. Chinese snacks: Wei-Chuan cooking book. Taipei, Taiwan: Dept. of Home Economics, Wei-Chuan Foods Corp. 184 p. Illust. No index. 25 cm. [Eng]

• ***Summary:*** Almost every page contains a large color photo of a finished dish. Recipes include: Seaweed-bean curd broth (p. 7). Bean curd-rice noodle soup (p. 8-9). Egg flower soup with tofu (p. 10). Steamed spareribs with black beans over rice (with "fermented black beans," p. 14). Bean curd and vegetable soup (p. 14). Bean curd and oyster broth (p. 24). Chicken in black bean sauce over rice (p. 25). Red-cooked beef noodles (with black bean paste {pronounced "he do ban jiang"} and hot bean paste {"la do ban jiang"}, p. 47). Saucy noodles–"Ja jiang mien" (with pressed bean curd and sweet bean paste {"tien mien jiang"}, p. 59). Sweet almond-beancurd soup (p. 143). Sweet soybean milk ("Do jiang," p. 156). Salty [soy] bean milk (p. 156). Crispy Chinese crullers ("You tiau," p. 157; serve with sweet or salty soybean milk).

Also: Cantonese moon cakes (with red bean paste [azuki] filling, p. 133, with color photo). Crunchy sesame cakes (with red bean paste filling, p. 135). Tasty fried bean cakes (with red bean paste filling, p. 137). Sesame-bean paste puffs (with red bean paste filling, p. 141). Sweet almond-beancurd soup ("beancurd" made with agar and evaporated milk–no soy, p. 143). Address: 19 West Nanking Road, Taipei, Taiwan. Phone: 551-13564.

2559. *Japan in Pictures.* 1974. Bean curd, a subsidiary food as delicious as meat. Instant bean curd developed in Japan. 16(1):12-15. [1 ref. Eng]

• ***Summary:*** The first 2 pages of this article contain 6 color photos showing tofu in Japanese-style (Yu-dofu, Dengaku, Sukiyaki, and Clear Soup), and Chinese-style (Sheng Pan Tofu, Guo Tie Tofu) recipes. "A block of bean curd weighing 340 grams, measuring 7 x 10.5 x 3.5 centimeters and being sold for US$0.20, contains as much as 21 grams of protein. To take this much protein, one must drink 3 bottles (or 600 cc) of cow's milk at the cost of US$0.35.

The conventional (traditional) process for preparing bean curd is described. "In Japan as many as 38,000 bean curd makers are operating on a small scale. Under these circumstances the bean curd industry has been far from modernized."

The next two pages, titled "Modernization of bean curd making," compare the traditional process for making tofu (6 black-and-white photos show the Yuba Han yuba shop in Kyoto) with a modern process developed by House Food Industrial Company, and used to make "House Hontofu" at their new modern factory in the city of Sano, 100 km north of Tokyo. Two photos are given of the equipment in the plant and 6 of the package and how this instant bean curd [silken tofu] is prepared at home. At the modern plant, a mixture of ground soybeans and water "is applied to a centrifugal separator, which separates it into soymilk and refuse. The soymilk, which has been concentrated by being heated, is sprayed into a tank heated to 100ºC, a process which dehydrates the milk to produce a bean curd base in powdered form [powdered soymilk]. A unit quantity of this powder is packed in an aluminum-foil bag containing nitrogen gas, which is put on the market accompanied by a small amount of coagulant.

"Process to prepare bean curd on the spot. Put a bag of 'Hontofu' in 600 cc of water, which is to be agitated [with a whisk]. Boil about 3 minutes. Mix the accompanying coagulant [glucono delta-lactone] immediately after the flame is put out. Transfer the substance into the container [a plastic box shaped like a cake of tofu]. Leave it for about 20 minutes and a block of bean curd is ready. Bean curd taken out of container [into a bowl of water]." Address: Japan.

Address: Hong Kong.

2561. Mustakas, G.C. 1974. A new soy lipid-protein concentrate for beverages. *Cereal Science Today* 19(2):62-64, 69-73. Feb. [29 ref]
• ***Summary:*** Describes a new way to make liquid or spray-dried soymilk from finely pulverized tofu. A lipid-protein concentrate (LPC) curd was isolated from full-fat soy flour by isoelectric acid wash at pH 3.5. 94% of the protein in the original soybeans was recovered in the LPC. "Wet-milling in a colloid mill and homogenizing reduced the LPC to a fine particle size and gave a product with excellent suspension properties in water. The resuspended concentrate yielded a drink that was very bland, had smooth mouth-feel, was low in viscosity, and had other desirable beverage characteristics... The liquid product can be spray-dried to a reconstitutable powder, if desired, for convenience and for reduced shipping costs." The whey by-product has a high biological oxygen demand (BOD), which represents a serious disposal problem. Address: NRRL, Peoria, Illinois 61604.

2562. Nasution, S.; Sari Hasuda, P.N.; Nagera, D.J.L.K. 1974. Consumer acceptance and marketing of Saridele. In: International Symposium on Protein Foods and Concentrates, Proceedings. Mysore, India: Central Food Technological Research Inst. (CFTRI). See p. 398-406. Held 27 June–4 July 1967 at CFTRI, Mysore. *
Address: Indonesia.

2563. Pompei, Carlo; Bazzoni, Daniela. 1974. Formulazione di un sostituto del latte a base di proteine vegetali [Formulation of a milk substitute based on vegetable protein]. *Latte* (*Il*) 2:540-43. Feb. English-language summary in Dairy Science Abstracts 36:3400. [15 ref. Ita]
• ***Summary:*** Describes how to make soymilk, and gives its nutritional composition. Address: Inst. of Food Technology, Univ. of Milan, Milan, Italy.

2564. Fleming, Cecil. 1974. How to save on milk: Get it in a box. Powdered product a good calcium source. *Los Angeles Times.* March 14. p. G1.
• ***Summary:*** "Sacramento (AP)–California's 4,000 dairymen may have to slaughter 25% of their milk cows unless they are granted a price increase of 16 cents per gallon, an industry spokesman warned Wednesday.–LA Times, Feb. 28."

Dr. Genevieve Ho, nutritionist at the UC Agricultural Extension Service, suggests that consumers consider other less expensive dairy sources of calcium, such as instant nonfat dry milk, which can be reconstituted quickly and easily.

A table shows other sources of calcium, with the number of milligrams of calcium per unit. These include "Soybean curd (tofu)," which contains 64 mg of calcium per ¼ cup [= 256 mg per cup].

2565. Dullea, Georgia. 1974. You don't have to be a Seventh-Day Adventist to like their cooking. *New York Times.* March 25. p. 37.
• ***Summary:*** They are teaching vegetarian cooking classes, and they are good at it. One couple took the classes and have been meatless for five months. To satisfy their taste for meat, they are eating the "vegetable protein food the Adventists produce under the Loma Linda label. Four soy patties cost 50 cents compared to about $2 for the same amount of meat."

The world's 2 million Adventists are not all strict vegetarians; while such a diet is recommended by the church, it is not considered a test of faith. Most Adventists avoid coffee, tea, cola beverages, and strong spices. A recipe for eggless "Soy mayo" (using ½ cup soy milk powder) is given.

2566. Chiang, Cecilia Sun Yun; Carr, Allan. 1974. The Mandarin way. Boston, Massachusetts: Little, Brown and Co. xiv + 274 p. Index. 23 cm.
• ***Summary:*** This charming, interesting book ("as told to Allan Carr" by Cecilia) is combination biography and Chinese cookbook organized by months (moons)–so that it flows with the seasons and seasonal foods. For each of the twelve moons of the old lunar calendar, there is one chapter (e.g., First Moon) of Cecilia's memories of growing up in China, as one of 13 children in a family of great wealth, followed by an "Interlude" chapter on a particular theme (e.g., "Of shopping and its pleasures") with her favorite recipes for that time of year.

Soyfoods (including "soy" or "soy sauce," "fresh bean curd," and "preserved bean curd") are mentioned throughout the book–for example: Freshwater "dancing shrimp" were "eaten raw after being dipped in a tangy sauce of preserved bean curd [fermented tofu], pepper, soy sauce, coriander and wine" (p. 8). The pork shoulder was "'red-cooked' in soy [sauce] and wine..."

Note: This is the earliest English-language document seen (Oct. 2010) that uses the term "preserved bean curd" to refer to a type of fermented tofu.

Some measure of success in reproducing authentic meals outside of China "can be achieved if the basic supplies are obtained either by purchasing them in Chinese shops or ordering them by mail (several sources, with addresses, are given..." These include: "fresh ginger root, dried bean curd, dried bean curd [pressed tofu; doufu-gan], sheets [yuba], sesame seed paste, sesame seed oil,... soy sauce,... red bean paste [azuki, also called "1 can sweet red-bean paste" (p. 164)], hot bean sauce" (p. 21)).

Fish with hot spicy bean curd sauce (*Tou-pan la-yü*, with "1 tablespoon Szechwan hot bean curd paste," p. 50). Five-spiced spareribs, Peking style (with "2 tablespoons pale soy sauce," p. 71). Peking duck (with "hoisin (duck) sauce," p. 96). Red-cooked chicken with chestnuts (with "4 tablespoons dark soy sauce, Japanese Kikkoman or imported," p. 116). Chopped spinach with shredded bean curd (*Po-ts'ai pan tou-fu kan*, with "dry pressed bean curd," p. 138). Szechwan four season beans (with "1 heaping tablespoon hot soy bean paste," p. 162).

In San Francisco's Chinatown, where the shops are predominantly Cantonese, the "dry goods store provides me with pressed bean curd and bean curd sheets [yuba, doufu pi],..."

Talk with Cecilia Chiang. 2008. Nov. 15. She says that "bean curd sheets" refers to doufu pi or yuba; pressed bean curd to doufu-gan. "Hot bean sauce" is *la douban jiang*, which is *douban jiang* with hot chili peppers; both are made with soybeans. Red bean paste is the same as "sweet red bean paste," made with azuki beans (*xiao hong dou*), and the same as Japanese *an*. Address: 1. Founder and owner, The Mandarin restaurant, Ghirardelli Square, San Francisco, California.

2567. Leake, Rosemary D.; Schroeder, Kathleen C.; Benton, D.A.; Oh, W. 1974. Soy-based formula in the treatment of infantile diarrhea. *American J. of Diseases of Children* 127(3):374-76. March. [12 ref]
• ***Summary:*** A lactose-free formula containing isolated soy protein has been successful in treating infants with diarrhea during the gastroenteritis recovery phase. Twenty-two infants hospitalized for severe diarrhea were given, at random, a formula based on either soy protein isolate or skim milk. Infants recovering from nonbacterial gastroenteritis and fed a soy-based lactose-free formula had a 9% rate of diarrhea recurrence, contrasted with a 64% rate of recurrence for a similar group fed a milk-based formula. The researchers speculated that lactose intolerance secondary to diarrhea could be an important factor in causing recurrent diarrhea in infants fed a milk-based formula.

"The carbohydrate source is another major difference between soy- and cow's milk-based formulas. The lactose-free characteristic of soy-based formula could account for the higher success rate." "Lactose intolerance is particularly common among black and Oriental infants (Chung 1968; Bayless 1969). Black and Oriental infants were of equal distribution in our two groups and constituted 45% of the patients studied." Endnote: "A grant for this investigation and the formula used were provided by Ross Laboratories, Columbus, Ohio."

Note: This is the earliest document seen in which a soy formula or beverage is specifically recommended as a solution to the problem of lactose intolerance. Address: Dep. of Pediatrics, Harbor General Hospital, UCLA School of Medicine, 1000 W. Carson St., Torrance, California 90509.

2568. Robson, John R.K.; Konlande, J.E.; Larkin, F.A.; O'Connor, P.A.; Liu, Hsi-Yen. 1974. Zen macrobiotic dietary problems in infancy. *Pediatrics* 53(3):326-29. March. [20 ref]
• ***Summary:*** Two children, ages 7-13 months, fed Kokoh, a Zen macrobiotic food mixture consisting of cereal grains, legumes, and oil seeds, for several months had energy and protein intakes that were low enough to cause deficiencies to the point of retarded growth. Stresses increased nutritional supervision and education of families following macrobiotic diets. Address: Nutrition Program, School of Public Health, and the Dep. of Pediatrics and Communicable Diseases, Medical Center, Univ. of Michigan, Ann Arbor.

2569. Kay, Theodore. 1974. Soybeans in the Nigerian diet. *Samaru Agricultural Newsletter* 16(1):18-22. May. [Eng]
• ***Summary:*** Contents: Introduction. Nutritional value of the soya bean. Daily amino acid requirements for men, women, and children. Suggested methods of incorporating soya bean

into the Nigerian diet: Soya bean paste (soaked, uncooked soya beans, with the hulls on, ground to a white paste) and whole beans (not dehulled). Utilization of the paste: Directly for kosei (akara ball) and panke (puff-puff), for preparation of soya bean milk, which can be used to make protein-enriched pap, fu-fu, bean curd (to-fu), awara or wara. Use of the residue from preparation of soy bean milk [okara]: In Alele (moin-moin), or biscuits. Utilization of whole soya beans: baked, sweet baked powder, stew. Discussion: Why do we need soya bean in Nigeria? Five reasons are given. Acknowledgments to many co-workers.

The soya bean has been cultivated in the Far East since about 2800 B.C. It has [been] the main source of protein for all of East Asia, particularly for the vegetarian Buddhist. It has been used as bean curd (To-fu) and soya sauce in most parts of the Far East from Indonesia up to the Northern end of Japan, as soya bean milk in China, as soya paste (mi-so) in Japan, and as a fermented product (Tempe) in Indonesia.

The crop is well established in Benue Plateau State south of Makurdi, in the North-Western State around Abuja and in the southern part of North-Central State. However, it has been very difficult to cook the beans in a traditional West African way so it has never become popular in this country. Most of the soya bean produced in Nigeria has been exported as a cash crop, except a little for animal consumption. Address: Inst. for Agricultural Research, Samaru, Ahmadu Bello Univ., PMB 1044, Zaria, Nigeria.

2570. Moede, Herbert H. 1974. Cost of whey-soy-drink mix for human consumption. *Marketing Research Report* (*USDA Agricultural Marketing Service*) No. 1021. 8 p. May. [1 ref]
• ***Summary:*** "The estimated cost for a whey-soy-drink mix being tested for use as a supplementary food in beverage form for use in overseas preschool feeding programs was 20.30 cents per pound in August 1973 and 19.44 cents in January 1974. These figures are based on packaging in 50-pound export-type bags... Purchase price per pound of instant corn-soya-milk mix in June 1973 and January 1974 was 15.05 cents and 14.80 cents, respectively. In June 1973, the wholesale price of nonfat dry milk was 48.40 cents per pound and in January 1974 it was 54.04 cents per pound."

The ingredients in whey-soy-drink mix (Jan. 1974) are whey solids, full fat soy flour, soybean oil, corn sugar, mineral mix, vitamin mix. The ingredients in instant corn-soya-milk mix are corn meal (processed gelatinized), full fat soy flour (in lieu of defatted soy flour and oil), nonfat dry milk, mineral mix, vitamin mix, calcium phosphate. Address: Washington, DC.

2571. Nelson, A.I.; Ferrier, L.K. 1974. Foods from whole soybeans. *INTSOY Series* No. 2. p. 173-78. Proceedings of the Workshop on Soybeans for Tropical and Subtropical Conditions (College of Agric., Univ. of Illinois at Urbana-Champaign). [8 ref]
• ***Summary:*** Properly hydrated and blanched soybeans offer great potential for processing into a wide variety of food products. The following are some of the foods made at the University of Illinois: 1. Drum dried flakes: 100% whole soybean, soy-rice (50:50), soy-corn (50:50), soy-brown sugar-peanut (50:35:15), soy-banana (50:50) weaning food. 2. Canned and homecooked soybeans: Vegetarian soybean, three bean salad, soy with chicken, soy with pork, soy with lamb, pork with soybeans. 3. Soy beverages and beverage products: Plain beverage, chocolate beverage, blend of soy beverage and cottage cheese whey, ice cream (mocha flavor), yogurt. 4. Spreads: Diet spread (margarine flavor), dip, peanut butter analog [soynut butter]. 5. Snacks: Roasted soybean cotyledons [soynuts], extruded puffed rice and corn fortified with full fat soy flour. Address: 1. Prof.; 2. Asst. Prof. Both: Dep. of Food Science, Univ. of Illinois at Urbana-Champaign.

2572. *Times of India* (*The*) (*Bombay*). 1974. Soyamilk becoming a big draw. June 19. p. 6.
• ***Summary:*** Pantnagar–The soya-milk and beverage that has been produced at Pantnagar Agricultural University's pilot plant since last year has already become a big attraction, not only on campus but also in nearby towns, such as the hill station of Nainital, 75 km. away.

Nutritious, tasty and moderately priced, soyamilk that is mass produced is expected to help bridge the huge gap between the supply of and demand for regular milk in India.

The cost of making soyamilk is expected to be one-third to one-fourth the price of regular milk.

This soyamilk was developed at Pantnagar by three Indian and American scientists after three years of research under a PL-480 grant; Prof. B.P.N. Singh, Dr. Surjan Singh, and Prof. A.I. Nelson. The patent for the process and the equipment, filed in both India and the USA, is held jointly by Pantnagar University and Illinois University.

The development of the process for making soyamilk is just the beginning, said Dr. Surjan Singh. His team is in an advanced stage of research and development for making a variety of other soyamilk products "such as ice cream, curds [tofu], sweets and baby food."

2573. Kakade, M.L.; Rackis, J.J.; McGhee, J.E.; Puski, G. 1974. Determination of trypsin inhibitor activity of soy products: A collaborative analysis of an improved procedure. *Cereal Chemistry* 51(3):376-82. May/June. [4 ref]
• ***Summary:*** Describes a more accurate and reproducible process for measuring the trypsin inhibitor activity of soybeans than the method developed by Kakade in 1969 for measuring the antitryptic activity in raw soybeans. This new method is recommended for use in evaluating the percentage of trypsin inhibitors destroyed by heat in soybean samples. "Both raw and toasted, dehulled, defatted soy flours were evaluated for their trypsin inhibitor activity." Address: 1.

Land O'Lakes, Minneapolis, Minnesota; 2-3. NRRL, Peoria, Illinois. 4. Central Soya.

2574. Kalbrener, J.E.; Warner, K.; Eldridge, A.C. 1974. Flavors derived from linoleic and linolenic acid hydroperoxides. *Cereal Chemistry* 51(3):406-16. May/June. [16 ref]
• ***Summary:*** Hydroperoxides of linoleic and linolenic acid were prepared using soybean lipoxygenase. The flavor of linoleic acid hydroperoxide (50 ppm) was described by a trained taste panel as predominantly grassy/beany, musty/stale, and bitter. Linolenic acid hydroperoxide (10 ppm) was described was described with a variety of terms, the most predominant being grassy/beany, followed by bitter and astringent. Address: NRRL, Peoria, Illinois.

2575. Sinclair, Patricia; Vettel, Ruth S.; Davis, Carole A. 1974. Soybeans in family meals. *USDA Home and Garden Bulletin* No. 208. 26 p. June. Reprinted in 1977.
• ***Summary:*** Contents: Nutritive value. Using soybeans: Fresh soybeans, dry soybeans, soybean sprouts, soy flour, soy grits, soy milk, soybean mash (or pulp), soybean curd [tofu, sold in squares called "cakes"], soybean oil. Recipes: Main dishes, vegetables, salads, breads, soups, desserts, sauces, snacks. Index to recipes. Address: Consumer and Food Economics Inst., Agricultural Research Service.

Madrid, Spain: International Union of Food Science & Technology. 6 vols. See vol. 5, p. 257-66. Held 23-27 Sept. 1974 at Madrid, Spain. [14 ref]
• ***Summary:*** Edible peanut flour is used in India to help the hungry and malnourished. Bal Ahar ("children's food") is a dry blend of flours from cereals, oil seed meals, and pulses; several formulas have been used, including one (Formula IV) containing 15% soya flour. Miltone, a milk-like preparation containing peanut protein isolate, has been produced at the Bangalore Dairy for the past six years; production has increased from 5,180 liters in 1966-67 to 1,047,797 liters in 1973-74.

Aflatoxin is a problem in peanut meal. In India, edible peanut protein concentrate is mostly used in child feeding programmes. Soya flour has recently been introduced, however large quantities are not yet available for feeding programmes. Yet the CARE organization in India is importing CSM (85% bulgar wheat flour and 15% solvent extracted soya flour) as well as soya flour, and using both in its programmes. Sesame flour is still in the developmental stage. A high protein food named India Multipurpose Food was used in school feeding programmes as a supplement to staple food; it was a blend of 75 parts edible peanut flour and 25 parts of chick pea flour–fortified with vitamins and minerals. Address: Project Administrator and Coordinator, Miltone Project, (Ministry of Agriculture) Bangalore Dairy, Bangalore–560029, India. Present address: 53, 13 Cross Road, Malleswaram, Bangalore, 560003, India.

2577. Holsinger, V.H.; Sutton, C.S.; Vettel, H.E.; et al. 1974. Production and properties of a nutritious beverage base from soy products and cheese whey. In: Proceedings Fourth International Congress Food Science and Technology. Madrid, Spain: International Union of Food Science & Technology. 6 vols. See vol. 5, p. 25-33. Held 23-27 Sept. 1974 at Madrid, Spain. [17 ref]
• ***Summary:*** The beverage base is made from fluid sweet cheese whey, full fat soy flour, soybean oil, and corn syrup solids; they are combined, pasteurized, homogenized, and condensed. Address: USDA, ARS, Eastern Regional Research Center, Philadelphia, Pennsylvania 19118.

2578. P.T.I. 1974. Pant varsity plans milk for millions project. *Times of India* (*The*) (*Bombay*). Oct. 4. p. 8.
• ***Summary:*** Pantnagar (Uttar Pradesh)–"The G.B. Pant university of agriculture and technology here proposes to start a 'milk for millions' project in collaboration with the World Bank, the Life Insurance Corporation, Central and state governments and the proposed cattle development corporation."

The project includes the introduction of "soymilk" (soyabean milk) as a supplement to regular milk for the first time. A new plant with an installed capacity of 10,000 liters per day of soymilk would cost only 1 million rupees. Except for the homogenizer, all of the equipment is available in India. The cost of production is expected to be 50-60 paise per litre.

The protein and fat content of the soymilk are equal to those of cow's milk. The milk can be transformed into curds [tofu], which will stay fresh for a week when stored at 5ºC.

2579. Brody, Jane E. 1974. Soybean has become the focus of drive to give more protein to world's hungry. *New York Times.* Oct. 12. p. 62.
• ***Summary:*** "This is the second of two articles on the drive to increase the amount of protein in the human diet." These are part of a series of articles examining the world food situation.

Americans are already familiar with at least two products made from soybeans: bacon-flavored bits and hamburger extender (also known as "textured vegetable protein"). Scientists believe that Americans will be among the hardest to please with new protein sources. General Mills, Inc. is presently test-marketing two soy protein meat analogues named "Country Cuts"–frozen, ready to eat cubes with the texture or flavor of chicken or ham. They are 25-40% less expensive than the meats they imitate. These products contain meat-like fibers made from defatted

soybean flour and pumped through a "spinnerette," which resembles a showerhead. The chewiness of the "Cuts" can be changed by adjusting the stretch on the fibrils as they pass through the spinnerette.

University of Illinois food scientists Steinberg, Wei, and Nelson are taking a different approach. Starting with the whole soybean (oil and all), they have developed a wide range of foods from soy "milk" and "yogurt" to an ice cream-like dessert, custard, and flakes–and gotten rid of the normal "beany" or "painty" flavor by heating the beans to inactivate the enzyme that causes it.

Another approach is fortification of foods with soy flour or the missing amino acids. Some are working to extract protein from green leaves or from waste, others to grow single-cell protein.

Some of these approaches are little more than ideas, on which a great deal of research needs to be done. However for others, such as "various soy foods" and fish protein concentrate, the technology has been nearly or completely worked out, at least on a pilot scale, and "could theoretically be incorporated soon into the diets of protein-starved people. But the obstacles to such incorporation are substantial."

Note 1. This is the earliest English-language document seen (Aug. 2013) that uses the term 'soy "milk"' in connection with soy milk.

Note 2. This article was reprinted in the *Times of India* (New Delhi) on 16 Oct. 1974 (p. 6) under the title "Looking for new protein sources in war on malnutrition."

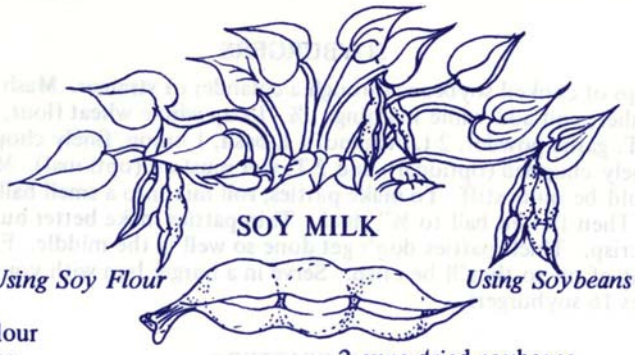
2580. Dinshah, Freya. 1974. The vegan kitchen. 9th ed. Malaga, New Jersey: The American Vegan Society. 48 p. Illust. Index. 29 cm. Spiral bound.
• ***Summary:*** A lifetime vegetarian, the author has been a vegan since 1959, and the Secretary of the American Vegan Society since 1960. Married to AVS President H. Jay Dinshah, she is an accomplished author, lecturer, and teacher. In this 9th edition, soy-related recipes include: Soya sprouts (p. 14). Soya patties (with soya flour, baked in an oiled dish, p. 23). Soya rounds (with whole soybeans, baked on a lightly oiled baking sheet, p. 24). Soya beans (dry roasted [soynuts], p. 25). How to shell green soya beans (p. 25). Soya loaf (with cooked soya beans, baked, p. 28). Soya butter (made with soya powder/flour, p. 29; this is not really soynut butter). Sesame/soya milk (with soya powder/flour and dates, p. 30-31; a photo shows a bag of Fearn Natural Soya Powder). Quick soya/tahini milk (with soya powder/flour, p. 32). Soya cheese Americana (tofu made with soya powder/flour and coagulated with lemon juice, p. 32). British Plantmilk cheese (tofu made with Plamil and lemon juice). Australian soya cheese (with soya powder, p. 33). Vegan soya/potato mayonnaise (with soya milk, p. 33). Basic jelled ice cream (with soya milk and agar-agar, p. 38).

The cover of this cookbook states: "Comprehensive total-vegetarian natural food system. Nutritionally balanced. Scientifically sound. Healthful and humane. Ethically unassailable. Ecologically superior. Recipes, menus, ideas, illustrations." Address: The American Vegan Society, 501 Old Harding Highway, Malaga, New Jersey.

2581. Farm, The. 1974. Yay soybeans! How you can eat better for less and help feed the world. Summertown, Tennessee: The Book Publishing Co. 14 p. Illust. 22 cm.
• ***Summary:*** This highly creative little booklet, printed with blue ink on white paper (a similar 1978 edition used brown ink on white paper), contains many original / pioneering soyfoods recipes (marked with an asterisk (*)). Contents: Living on soybeans. Some of our favorite ways to eat soybeans. Basic cooked soybeans: Soybeans and tortillas, Soybean stroganoff, Soyburgers, Soy fritters, Cheezy soybeans (Good Tasting Nutritional Yeast gives the cheezy flavor), Soy nuts (dry roasted), Soy coffee. Soy milk: Homemade using soy flour or using soybeans, Soy ice cream–"Ice Bean,"* (made with soy milk in vanilla or cocoa flavors), Soy yogurt* (p. 5, made with soymilk and starter from Chr. Hansen's Lab. in Milwaukee, Wisconsin). Soy flour: Basic salad and sandwich spread, Seasoned sandwich spread. Soy cheese* (made from fermented / soured soymilk), Soy cheesecake* (made with "soy cheese"), Cookie crust for cheesecake, Soy mayonnaise* (made with soymilk). Soy pulp [okara]: Introduction, Soy pulp burgers*, Scalloped potatoes and pulp, Soysage*, Protein spice cake (with soy pulp), Soy pulp cookies, and Soyola* (soy pulp granola). Eggless cookery: Introduction, Pancakes (with soymilk), Chocolate cake (with sour fresh soymilk), Soy soufflé (with soy flour). Good Tasting Nutritional Yeast: Introduction, Melty nutritional yeast "cheese," Nutritional yeast "cheese" crackers, Golden gravy. Nutrition of soybeans: Nutritional composition of 1 cup whole cooked soybeans, 1 cup sweetened soymilk, 1 cup mother's milk, 1 cup cow's milk. "We supplement our soymilk with vitamin A (150 mcg./cup), vitamin D (2.5 mcg./cup), and vitamin B12 (6 mcg./cup)." Composition of soymilk and soypulp (wet and dry, including PER). Some facts about people and food. Plenty.

Page 1 begins, "On The Farm we live on soybeans. They supply us with the protein part of our diet, taking the place of meat, fish, eggs, milk, and dairy products. We are complete vegetarians and don't eat any of those foods. We are growing 150 acres of soybeans this year to feed our community of 800 folks... We've been living, working, and growing on this diet for four years now, as a community, and many of us have been vegetarians longer than that. So far we've delivered 230 babies here on the Farm..." The last page notes that The Farm has "formed a new non-profit corporation called Plenty, with the following purposes, as stated in its charter: To help share out the world's food, resources, materials, and knowledge equitably for the benefit of all..."

The section titled "Soy Pulp" (p. 7) states: "If you make



SOY MILK

Using Soy Flour

4 cups soy flour
12 cups water

Bring water to a boil. Sprinkle soy flour into boiling water, stirring to prevent lumping. Lower heat (soymilk boils over easily so pay good attention) and simmer for one hour, stirring occasionally. (Some folks prefer to dip some of the boiling water out of the pot and mix it with the dry soy flour to make a paste, which is then poured into the remainder of the boiling water. This method prevents the lumps that sometimes form when dry soy flour is poured directly into the water.)

Using Soybeans

2 cups dried soybeans

Sort the soybeans and wash in cold water. Soak the soybeans until double in size – or overnight. (In hot weather, soak them under refrigeration. Slightly soured beans make thinner milk.) Rinse in colander after soaking.

Using three cups of water to one cup of soaked beans, liquefy in a blender or fine grind in a food grinder. Heat the mixture to a boil in a double boiler or heavy pot. Then simmer for 20 minutes stirring often.

Strain through a clean cloth (nylon, folded cheese cloth, diaper) placed in a colander or strainer. (For recipes using the pulp left in the cloth, see page 8 of this booklet.) Add a pinch of salt and sweeten the soymilk to taste. Serve it warm (delightful on a cold winter morning!) or chilled.

You can also flavor your soymilk with vanilla, almond, maple or other extracts, or with fruit or cocoa. Mixed in a blender, with a little oil, sugar and flavoring, it makes a smooth milkshake. Soymilk makes good puddings and soups, too. It can be made thicker or thinner, as desired, by adjusting the amount of water used. And it's good just plain, too.

Keep your soymilk refrigerated. It will sour overnight if left unrefrigerated in warm weather. (If your milk does sour, see page 6 of this booklet for how to make soy cheese out of it.)

SOY ICE CREAM – "ICE BEAN"

1¼ cups sugar
4 cups soy milk
a pinch of salt
¼ cup oil (more or less, depending on how rich you want it)
your favorite flavoring (e.g., 2 tsp. pure vanilla or 4 T. cocoa)

Blend ingredients together and pour mixture into your ice cream maker.

soymilk, you'll have soy pulp left in the cloth when your milk is done. Our soy dairy produces lots of pulp every day, and although the pulp contains less protein than the milk, the protein it has is high quality, so we've been putting our creative kitchen instincts to work developing new ways to use this nutritious foodage. We've found that soy pulp can be substituted for rice in many recipes. It also can be used in baked goods like cakes and cookies, where it gives a coconutty flavor when combined with sugar and vanilla extract..." Three recipes are given.

The last page is about "Plenty." "Living in Tennessee and eating our soybeans hasn't seemed like quite enough to be doing about world hunger and other areas of human need around the planet. So we have formed a new non-profit corporation called Plenty, with the following purposes, as stated in its charter:

"'To help share out the world's food, resources, materials, and knowledge equitably for the benefit of all.

"'To help and aid any people anywhere in the world who due to any natural or man-caused disaster such as drought, famine, flood, earthquake, tidal wave, weather imbalance, disease epidemic, storm, fire, insect devastation, crop failure, population imbalance, war, political oppression, religious oppression, racial discrimination, or greed, are in need of food, clothing, shelter, medical aid and supplies, resources, materials; agricultural, engineering, or scientific assistance or education; or anything else, to enable them to lead healthy, comfortable, responsible, and productive lives in the pursuit of happiness...

"'To accept donations, gifts, devises, bequests, and loans of food resources, materials, equipment, funds, stocks, bonds, and property of all kinds from any and all sources to help achieve the purposes of the corporation;

"'To establish and coordinate a group of volunteer workers who will help achieve the purposes of the corporation; such volunteers will not be salaried, but will receive only necessary subsistence...

"'To enter into any partnership or union of interest with others... or produce food, resources, materials, funds, or knowledge that will help achieve the purposes of the corporation;

"'To establish and operate orphanages and foster homes to care for and provide homes for orphans from all countries of the world...

"'To help and aid in finding homes with adopting parents for orphans from all countries of the world, and to help these orphans settle in these homes with adopting parents...'

"We really do have Plenty. Let's spread it around!

"For further information, write: Plenty, Route 1, Box 289, Summertown, Tennessee 38483."

Note 2. This is the earliest English-language document seen (June 2013) that uses the term "soy pulp" or the word "soypulp" to refer to okara.

Note 3. This is the earliest document (Oct. 2001) seen that contains a recipe for a soy cheesecake (one of two documents).

Note 4. This is the earliest document seen (June 2013) that uses the word "soysage" to refer to a meatless sausage-like food product in which soy pulp is the major ingredient. Whereas the original 1943 Soysage was a meatless dry mix, a yellow meal containing soy flour, peanut flour, cottonseed flour, etc., this Soysage is ready to be sliced and fried.

Note 5. This is the earliest document seen (Jan. 2010) concerning Plenty (Summertown, Tennessee).

Note 6. This is the earliest document seen (Feb. 2002) that mentions tofu (called "soy cheese") in connection with The Farm.

Note 7. This is the third earliest publication seen (Jan. 2003) in the SoyaScan database under the subject heading "Soyfoods Movement." Address: Tennessee.

2582. **Product Name:** [Marusan Soymilk (Plain, or with Barley Malt Syrup and Konbu); Mineral Soymilk (Plain, or with Barley Malt)].
Foreign Name: Marusan Doujan (or Doujang) (Plain or Bakuga-iri); Mineraru Doujan (or Doujang) (Plain or Bakuga-iri).
Manufacturer's Name: Okazaki Marusan K.K. (Marusan-Ai Co., Ltd.).
Manufacturer's Address: 1 Aza Arashita, Niki-cho, Okazaki-shi, Aichi-ken 444-21 Japan.
Date of Introduction: 1974. October.
Wt/Vol., Packaging, Price: 180 ml foil retort pouch (Doi-Pak).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. In Oct. 1974 Okazaki Marusan introduced 4 soymilk products, each in 180 ml Doi Pak: Mineraru Doujan, Mineraru Doujan Bakuga-iri, Marusan Doujan, and Marusan Doujan Bakuga-iri.

Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Okazaki Marusan first made commercial soymilk in Japan in 1974.

Label. 1983. Tetra Brik carton, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-68, 70-71. Their first soymilk, called Doujang (or Doujan, the Chinese word for "soymilk") contained extracts of pearl barley and konbu (a mineral-rich sea vegetable) and was sold at health food stores. In 1979 they introduced a 250-ml gable top carton and in 1980 a 200-ml Tetra Brik. By 1982 Marusan was Japan's second largest soymilk manufacturer. They may have been the largest, since much of their soymilk was sold in bulk to other companies, who repackaged it and sold it under their own brands.

Soya Bluebook. 1987. p. 90.

2583. Spira, Ruth Rodale. 1974. Naturally Chinese. Emmaus,

Pennsylvania: Rodale Press, Inc. iii + 346 p. Illust. Index. 25 cm. [8 ref]

• ***Summary:*** Soy-related recipes include: Deep-fried bean curd with sesame sauce (p. 91, with "4 cakes bean curd," each of which is cut into 9 pieces, dried on paper toweling, then deep fried at 375ºF). Chicken and bean curd stick soup (p. 109, with "¼ pound bean curd stick" [dried yuba sticks]). Bean curd and greens soup (p. 115, with "1½ pieces fresh bean curd" [tofu]). Stir-fried eggs with soybean sprouts (p. 226). Stir-fried eggs with bean curd (p. 227, with "2 fresh bean curd cakes or 1/3 pound homemade bean curd"). Bean curd sautéed with eggs (p. 258, with "4 cakes fresh bean curd"). Stir-fried bean curd with black mushrooms (p. 259). Stir-fried bean curd with squash (p. 260). Homemade bean curd with soybeans (p. 261-62, curded with vinegar or gypsum / calcium sulfate. The residue [okara], which is called "Soybean pulp, may be added to ground beef up to a 1 to 2 ratio." Step 8. "Remove curd from bag and mix with salt" is a new invention in making tofu–which ends up with a texture like cottage cheese and seasoned with salt). Homemade bean curd with soybean powder (p. 262-63, curded with vinegar or gypsum). Celery cabbage creamed in soy milk (p. 269, with "4 heaping teaspoons soybean powder." "2. Place soybean powder and water in a pint jar. Tighten lid and shake well. Add cornstarch and honey to soybean 'milk'"). Soybean sprouts with celery (p. 273). Spinach in soy sauce (p. 276). Vegetarian dish of the Buddhists (p. 277-78, with "2 ounces dried bean curd" [probably dried yuba sticks] and "3 cakes fresh bean curd").

"A guide to Chinese cooking ingredients" (p. 289-324) and "Glossary" (p. 325-26) describe: Bean curd (dow foo–tofu, incl. pressed curd {firmer}, canned bean curd {somewhat less creamy than the fresh}). Bean curd, dried (foo jook [dried yuba sticks]; tiem jook is sweeter than foo jook). Bean curd cheese (fooh yu [fermented tofu]). Bean paste, yellow (wong dow sa). Bean sauce, brown (min see jeung). Beans, black soy (kei tou). Beans, black fermented (dow see; these black soybeans are fermented, dried and salted). Hoisin sauce (hoy sin jeung. "A soybean-based sauce..."). Soybean sprouts (Da dow ngah).

Photos show: (1) Three squares ("pillows") of pressed bean curd. (2) A box of "Dried bean curd" [foo jook] (p. 296). (3) Black soybeans (enlarged) (p. 299). (4) A bag full of "Salted black bean (spiced)" (fermented black beans). Made by Koon Chun Sauce Factory, Hong Kong. (p. 300). Note: As of Nov. 2011 the company (in the New Territories, Hong Kong, with a website) is named "Koon Chun Hing Kee Soy & Sauce Factory Ltd."

2584. Stone, David E. 1974. Profile: Francis E. Calvert pioneer of soybean protein. *Food Engineering* 46(10):40, 42. Oct.

• ***Summary:*** Francis Earle Calvert was born in 1912 in Cambridge, Massachusetts. He was selected by Henry Ford to be part of a special group attending Ford's Wayside Technical School in Sudburry, Massachusetts. There was no tuition–a Godsend during the Great Depression. Then he attended Ford's Edison Institute at Dearborn, Michigan. Calvert's introduction to the soybean came directly from Ford himself–in the early 1930s. One day the great entrepreneur dropped in lugging a 100-pound sack of soybeans, saying that there must be something valuable in them since Orientals had been using them for 4,000 years. He challenged the young students to find out how to use them.

He and his young co-workers at the Greenfield Village laboratory had developed a destructive distillation process. It decomposed the soybeans using heat in a closed container. Later Calvert helped to design a new solvent extractor for soybean built like an Archimedes screw; it removed soybean oil using a counter-current solvent. Soon Calvert, and colleague Robert Boyer, were making spun protein fibers for upholstery in Ford cars, as well as plastic car parts.

Because soybeans were hard to get, the young men had to grow their own. They planted several thousand acres of soybeans, then had to develop mechanical equipment to harvest them. Now they set out to adapt them to human consumption. In 1936 the lab delivered fortified soymilk to Dearborn families, made a soy sherbet that was sold in the Ford employee cafeteria, and canned green soybeans for use as a vegetable.

Why do soybeans have a bitter taste? Its a survival mechanism.

The Drackett Corporation hired Calvert, and shortly thereafter they purchased the Ford Textile Fiber Division. They put Calvert in charge of basic protein research. In 1949 he was appointed research director at Drackett. In 1962 Calvert joined Ralston Purina Co. in special soy products research. He retired in Aug. 1973. Address: Product Mgr., Food Protein Div., Ralston Purina Co.

2585. Amchem Products, Inc. 1974. The soybean cookbook. Ambler, Pennsylvania: Amchem Products, Inc. 16 p. Nov. 21. 22 cm.

• ***Summary:*** "Acknowledgements: Most of the recipes contained in this booklet were prepared by: Miss Areva M. Abernathy, Univ. of Missouri; Univ. of Hawaii Extension Division; Miss. Dorothea Van Gundy Jones; Frances O. Van Duyne, Univ. of Illinois." Contents: The new food–Soybeans. History. Why use soybeans? Soybean varieties: Vegetable type and field variety. Soybeans are used in many forms: Green soybeans (served as a hot vegetable dish), freezing, canning. Soy flour and grits (14 recipes). Dried soybeans (9 recipes). Making and using soy milk (3 recipes). Grits (1 recipe). Soy sprouts (how to make + 5 recipes). Roasted soybeans (deep fat roasting or oven roasting; 2 recipes). Address: Ambler, Pennsylvania.

2586. *SoyaScan Notes.* 1974. Chronology of soybeans, soyfoods and natural foods in the United States 1974 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1974 March. The first issue of *Vegetarian Times* published by Paul Obis in Chicago.

1974 April. Bob Gerner (of Westbrae) and William Shurtleff (guide) travel throughout Japan searching for quality sources of traditional miso and soy sauce. Right after the trip, Westbrae starts importing these products.

1974 Aug. 9. President Nixon, elected in 1968 and 1972, resigns after the Watergate scandal. Gerald Ford succeeds him as president. Butz continues as Secretary of Agriculture.

1974. Brazil passes West Germany to become the world's second largest soybean crusher, after the U.S.

1974 late. Miles Laboratories / Worthington introduces the Morningstar Farms line of meat analogs based on spun soy protein fiber. Sold nationally at U.S. supermarkets.

1974 late. The Farm in Summertown, Tennessee, publishes *Yay Soybeans!*, a 14-page booklet containing many innovative soyfoods recipes, such as "soy ice cream–ice bean," soy yogurt," "soy cheese," "soy cheesecake," "soy mayonnaise," and "soysage" (a meatless okara & soymilk sausage). Most of the dairylike products were made with fresh or cultured soymilk. The Farm now grows 150 acres of soybeans to feed its community of 800 people. It has just established Plenty, a non-profit corporation "To help share out the world's food, resources, materials, and knowledge equitably for the benefit of all."

1974. The Farm in Summertown, Tennessee, publishes *Hey Beatnik*, which contains the earliest know use of the term "Soy Dairy." The Farm's soy dairy now makes 60 gallons of soymilk a day at a total cost of $0.30 per gallon.

1974. *Tofu Recipes*, the first book on tofu in English, written and self-published by Grace Kikuchi in Ann Arbor, Michigan. Spiral bound and 47 pages long, it gives a recipe for homemade tofu and uses tofu largely with fish and meat.

1974 Nov. World Food Conference in Rome. Delegates from 130 UN member countries adopt an international strategy to overcome world hunger and malnutrition.

1974-1975? Eden Foods starts to import natural foods, including miso and shoyu, from Japan.

2587. Stapleton, Thomas. 1974. Infant feeding in the People's Republic of China. *PAG Bulletin* (*Protein Advisory Group, WHO / FAO / UNICEF*) 4(4):31-33. Dec. Abstracted from Notes by a Visitor to China. [1 ref]
• ***Summary:*** "To nearly every medical observer who visits China, one of the most remarkable achievements is the virtual elimination of infant and childhood malnutrition." Breastfeeding and cow's milk have played an important role in this process. "In the early stages following Liberation, when cow's milk was in short supply, the Chinese developed a number of infant foods prepared from locally grown products, such as rice and soybeans." Address: Prof. of Child Health, Univ. of Sydney, Australia.

2588. **Product Name:** Promocaf (Soy Protein Concentrate Calf Milk Replacer).
Manufacturer's Name: Central Soya Co., Chemurgy Div.
Manufacturer's Address: 1825 North Laramie Ave., Chicago, IL 60639.
Date of Introduction: 1974.
New Product–Documentation: Central Soya Technical Service Bulletin. 1974? (Undated). "Product information sheet. Promocaf–Soy protein concentrate." "1. Definition. Promocaf is a soy protein concentrate developed by Central Soya's Chemurgy Division for use in animal rations; its application in calf milk replacers has proved particularly effective." It contains 70.0% protein (minimum) on a moisture-free basis. It is a cream-colored powder ground to 100 mesh particle size. Gives the nutritional composition, typical amino acid composition, and vitamin and mineral content. Note: The Chemurgy Div. is located at 1825 North Laramie Ave., Chicago, Illinois 60639.

Soya Bluebook. 1983. p. 64; 1984. p. 63.

2589. Chattaraj, J.; Ray, T.K. 1974. Utilization of soybean for the manufacture of milk and milk products. Unpublished data cited from National Dairy Research Inst. (NDRI), Karnal, Annual Report, 1974. *
Address: India.

2590. Farahat, S.E.; Abou El-Ella, W.M.; Mahran, G.; Hofi, A.A. 1974. The use of soy milk in fermented milk (Zabadi) manufacturing. *J. of Agricultural Research* (*Riyadh, Saudi Arabia*). 1:187-93. *
Address: Dep. of Food Science, Ain Shams Univ. Cairo, Egypt.

2591. Haque, M.M.; Rahman, K.; Begum, J.A. 1974. Studies on the utilization of soybean and soybean products. A Project Report: BSc (Agric. Engineering) Final Exam. Dept. of Food Technology and Rural Industries, Bangladesh Agricultural University, Mymensingh. Summarized in Soybean Research Abstracts (Bangladesh). 1978. p. 58.
• ***Summary:*** Three locally grown soybean varieties (C.N.S., Barmili, and C-Malaya) were analyzed for their nutritional composition. They contained 10.35% moisture, 45.2% protein, 18.35% fat, and 5.42% ash. They were made into soy biscuits (with wheat flour, and containing 18% protein) and soymilk, both of which were found to be acceptable to a taste panel.

Note: This is the earliest document seen (Oct. 2010) concerning soybeans in Bangladesh, or the cultivation of soybeans in Bangladesh after it became an independent nation in 1971. This document contains the earliest date seen for soybeans in Bangladesh, or for the cultivation

of soybeans in Bangladesh (1974) after it became an independent nation in 1971. It was named East Pakistan from 1947 to 1971. Before 1947 it was part of Bengal. Address: Dep. of Food Technology and Rural Industries, Bangladesh Agricultural Univ., Mymensingh, Bangladesh.

2592. Hinojosa, G.R.L.; Moretti, R.H. 1974. Contribuicao ao estudo de concentracao de leite de soja [Contribution to the study of the concentration of soymilk (Abstract)]. *Suplemento de Ciencia e Cultura, Resumos* 26(7):433. 2593. Kay, Theodore. 1974. Le soja dans le regime alimentaire Nigerian [Soybeans in the Nigerian diet]. See p. 19-24. Unpublished manuscript. [Fre]
• ***Summary:*** Contents: Suggestion for incorporation in cooking: Soya bean paste and whole beans (not dehulled). Utilization of the paste: A. Directly (mix with flour of wheat or corn and beaten eggs to make deep-fried balls). B. To prepare soya bean milk: (a) From the paste with boiling water. (b) Using the Cornell method from soymilk. Use of the residue from preparation of soy bean milk [okara]: In biscuits, etc. Utilization of whole soya beans: baked, sweet baked powder, stew.

Recipes from the Mission of Toussiana (Upper Volta). 1. Sumbala, an aromatic product usually made from néré seeds was developed by the Centre Ménager [a family assistance center] of Toussiana. It is ready after 3 days. 2. Soymilk. 3. Soy fritters (deep fried balls made from soy flour, and seasoned with salt and pimento). 4. Soya Faros (a small white tuber whose nutritional value can be greatly improved if served with soy flour in a preparation steamed in leaves). 5. Soya *To*, a porridge made traditionally with sorghum and millet flour, but fortified with soy flour. Address: Inst. for Agricultural Research, Samaru, Ahmadu Bello Univ., PMB 1044, Zaria, Nigeria.

2594. **Product Name:** Soy Beverages.
Manufacturer's Name: Mandalay Food Products Inc.
Manufacturer's Address: 450 Broome St., New York, NY 10013.
Date of Introduction: 1974.
New Product–Documentation: Soya Bluebook. 1983. p. 62. John Tun, Mgr. Talk with Thein Win. 1987. Dec. 29. He is from Burma.

2595. **Product Name:** [Soymeal brand Soymilk (Sweetened, or Orange)].
Foreign Name: Soymeal.
Manufacturer's Name: Nikken / Tokyo Soymeal Co.
Manufacturer's Address: Nakakami-cho 110, Akishima-shi, Tokyo 196, Japan. Phone: 0425-43-1815.
Date of Introduction: 1974.
How Stored: 7 oz Pure-Pak cartons. Retail prices: See below.
New Product–Documentation: Shurtleff & Aoyagi. 1979. *Tofu & Soymilk Production.* Page 229 gives a detailed description of the process for making Soymeal brand soymilk based on a plant visit by William Shurtleff in 1977. It states: "The Nikken Company in Tokyo is a large maker of both sweetened and orange soymilk, producing about four thousand 7-ounce Pure-Pak cartons daily at the rate of 5,000 cartons per hour. In 1977, the sweetened soymilk sold for $0.21 per carton and the orange for $0.28. The former contains 12.1% solids (8.5% before formulation), 3.0% protein, 3.2% fat, 5.5% sugars, and 0.51% ash. The remarkably long shelf life (20 days) is made possible by strict cleanliness and thorough pasteurization. The live bacteria count per milliliter of milk averages 30; the legal limit for soymilk is 3,000 and for dairy milk 50,000. The total equipment, which is mostly modern stainless steel, was worth $230,000 at 1977 prices not including the packager which was worth $46,000. The patent holder for the process, Mr. Kanji Tsuchiya, is extremely helpful and has over 30 years of experience making soymilk."

Page 313 gives the company's name as "Nikken (Soymeal Co.)," the address, and phone number.

Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Tokyo Soymeal first made commercial soymilk in Japan in 1974.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. The company name is given as "Tokyo Soymeal."

2596. **Product Name:** Soyamilk.
Manufacturer's Name: Soyghurt Food Products & Co.
Manufacturer's Address: Wardha Rd., Sitabuldi, Nagpur 440012, Maharashtra (MS), India.
Date of Introduction: 1974.
New Product–Documentation: S.L. Kothari. 1975, Nov. "Soyamilk: An ideal food." 13 p. This company was started in about 1974 by Dr. S.L. Kothari, formerly of the Dep. of Food Science & Technology, G.B. Pant Univ. of Agriculture and Technology, Pantnagar (Nainital), UP, India.

Letter from Peter Chowfin. 1983. The company (Soy Ghurt Food Products & Co.) was started in 1974-75.

2597. Altschul, Aaron M. ed. 1974. New protein foods. Vol. 1A. Technology. New York, NY: Academic Press. xiv + 511 p. [1750* ref]
• ***Summary:*** Contains 10 chapters by various authors. Five of these are cited separately. Address: Dep. of Community Medicine & International Health, Georgetown Univ. School of Medicine, Washington, DC.

2598. Altschul, Aaron M. 1974. Protein food technologies and the politics of food: An overview. In: A.M. Altschul, ed.

1974. New Protein Foods. Vol. 1A. Technology. New York: Academic Press. 511 p. See p. 1-38. Chap. 1. [43 ref]
• ***Summary:*** Contents: 1. The food problems–Political imperatives: General considerations, problems of insufficiency, problems of affluence. 2. The special role of protein: When food supply is limited, when food is abundant, protein in the abstract, implications. 3. Means for increasing protein supply. 4. The introduction of new food technologies: The role of the technology community, technology assessment. 5. The role of government: In the development of technology, reorientation of ongoing activities, food regulations, setting priorities. 6. Politicians and the scientific and technology community. 7. Commentary.

Page 26 states: Incaparina, developed by the Institute of Nutrition of Central America and Panama (sponsored by USAID), showed that "solely vegetable food mixtures could be formulated to supply all the protein and other nutrient needs of infants."

CSM, consisting of corn, soy flour, and dry milk, has been widely distributed by the U.S. government as a donation in times of crisis; it is not sold commercially.

"Bottled protein beverages on the soft drink model, pioneered by Vitasoy in Hong Kong, are being sold in Guyana, Surinam, Brazil, Thailand, and India. Some of these are carbonated." Most use soy as the source of low-cost protein. Address: Georgetown Univ. School of Medicine, Washington, DC.

2599. Ciancio, Pedro N. 1974. La soja y el problema alimentario del Paraguay. ed. 2 [The soybean and Paraguay's nutritional problem. 2nd ed.]. Asunción, Paraguay: Imprenta Nacional. 585 p. 22 cm. [50 ref. Spa; eng]*
• ***Summary:*** At head of title: *Ciencia de la nutrición* (*metabolismo*). Address: Prof., Dr., Asunción, Paraguay.

2600. Cottrell, Edyth Young. 1974. Soybean magic. Loma Linda, California: PHMS. 17 p. 12 cm. Accompanied by a color slide show.
• ***Summary:*** A title and brief description of each of the 79 slides is given. Address: Research Nutritionist, Loma Linda Univ. School of Health, Loma Linda, California.

2601. Cottrell, Edyth Young. 1974. The oats, peas, beans & barley cookbook. Santa Barbara, California: Woodbridge Press. 271 p. Illust. Index. 24 cm.
• ***Summary:*** This very creative Seventh-day Adventist vegetarian cookbook, featuring nature's most economical foods, contains 450 recipes including many using soybeans and gluten (see p. 59-68), and many color photos. One acre of soybeans will supply 34 times as many calories, 49 times as much protein, and 33 times as many vitamins as beef produced on one acre. Soy-related recipes include: Garbanzo-soy-oat patties with Brazil nuts (p. 39). Soybeans–Prairie gold (Boiled soybeans, p. 51. Freezing soaked soybeans helps to shorten the cooking time. The use of soft or spring water in soaking and cooking also helps to reduce the cooking time. The author adds salt to soybeans after they have been boiled for at least 1 hour. Baked soybeans (p. 52). Soy-oat patties with tomato sauce (with whole soybeans, p. 53). Tofu (p. 54, curded with calcium lactate or calcium carbonate, then seasoned with Vegex or Savorex). Creamed curd cheese: May be used as cottage cheese (p. 55; made with tofu curds and soy sour cream). Scrambled tofu (p. 56). Rice with tofu–Chicken style (p. 56-57). Home-baked bread (with soy flour, p. 70-76). Modified pioneer bread (with soy flour, p. 81). Pioneer soy bread (p. 82). Soy-oat waffles (p. 109). Barley-soy waffles. Cornmeal-soy waffles. Millet-soy waffles (p. 111). Rice-soy waffles (p. 112). Soya French toast (p. 116). Cornmeal with soy grits (p. 117). Corn granola (with soy flour, p. 118). Good earth granola (with soy flour, p. 119).

One chapter, titled "Soybean Magic" (p. 121-26) contains the following soy-related recipes: Soybean concentrate: Replaces milk and eggs in many recipes (Note: This is fresh soybean puree, or gô, made with the hot water grind method). Soy milk and concentrated soy milk. Cream sauces. Soy whipped topping. Soy cream. Soy sour cream. Sweet cream custard sauce.

Whipped soy topping (with fortified soy milk powder, p. 141). Cabbage baked in 'soy sour cream' (p. 165). Cauliflower baked in soy cream (p. 167). Soy mayonnaise (with concentrated soy milk, p. 195). Savory yeast spread with soy milk, p. 196).

Pages 255-67 give a nutritional analysis of each of the recipes in this book. A photo on the rear cover shows Cottrell. A second edition was published in 1980 by Woodbridge. As of early 1993 some 157,000 copies of this book are in print. Address: Research Nutritionist, Loma Linda Univ. School of Health, Loma Linda, California.

2602. Cristofaro, E.; Mottu, F.; Wuhrman, J.J. 1974. Involvement of the raffinose family of oligosaccharides in flatulence. In: H.L. Sipple and K.W. McNutt, eds. 1974. Sugar in Nutrition. New York, NY: Academic Press. See p. 313-26. *
• ***Summary:*** α-Galactosidase is useful in removing raffinose and stachyose from soymilk and soy whey.

2603. Dawson Mills. 1974. Annual report. Dawson, Minnesota. 16 p. 22 x 28 cm.
• ***Summary:*** The "Manager's report," by Joe Givens (p. 1-2), notes that the fiscal year ended 31 Aug. 1974 was "an extraordinary year in the life of your cooperative. New records were established in all phases of your business. Net savings for patrons reached a new high of $7,039,188. Over 13 million bushels of soybeans were processed into oil and meal. Prices paid for soybeans were at the highest in our history and averaged $6.01 a bushel." "A Soy Specialties

Division has been established... The processing equipment being installed in the new soy specialties tower should be operational in early 1975. A new product development and technical service laboratory is also under construction."

A page titled "DawSoy" states: "The world's requirement for food and especially for vegetable protein is ever increasing. The new soy food specialties plant provides Dawson Mills the opportunity to be involved in meeting this pressing need" by manufacturing soy grits, soy flour, and textured soy flour. "By using various heat treatments, soy flour and grits provide materials with a wide range of applications. Lightly toasted soy flour in combination with wheat flour produces a high protein material used in baking products. Moderately toasted flour and grits are used extensively in the pet food and milk replacer industries. Toasted soy grits combine with various grains to improve the nutritive value of these many food products. Textured soy flour is a fibrous material which is used to simulate meat in many meat and food products."

Pages then show: Patronage refunds by state (Minnesota, South Dakota, Iowa, and North Dakota), and within each state by cooperative elevator name. A decade of progress (processing and financial statistics 1965-1974). Bushels of soybean processed 1952-1974. Balance sheet. Contains many photos–both color and black-and-white. Address: Dawson, Minnesota. Phone: 612/769-4386.

2604. Estado do Rio Grande do Sul, Assembleia Legislativa, Comissao de Agricultura e Pecuaria. 1974. $oja [Soja] [Soya]. Rio Grande do Sul, Brazil: A Comissao. 414 p. No index. 23 cm. [53 ref. Por]

2605. Fomon, S.J. 1974. Infant nutrition. 2nd ed. Philadelphia, Pennsylvania: W.B. Saunders Co. xiii + 575 p. Illust. Index. 25 cm. [84+* ref]
• ***Summary:*** Soy is mentioned on pages 136, 223, 381, 386-89. Address: Dep. of Pediatrics, College of Medicine, Univ. of Iowa, Iowa City, IA 52242.

2606. Fomon, Samuel J.; Filer, L.J., Jr. 1974. Milks and formulas. In: S.J. Fomon, ed. 1974. Infant Nutrition. 2nd ed. Philadelphia, Pennsylvania: W.B. Saunders Co. xiii + 575 p. See p. 359-407. Chap. 15. [169* ref]
• ***Summary:*** A full-page table (Table 15-9. p. 381) titled "Examples of commercially prepared formulas with protein from soy isolate or soy flour" gives a detailed composition of each of the following two groups, each of which contains fats in the form of vegetable oils and carbohydrate in the form of corn syrup solids and/or sucrose: (1) Protein source–Soy isolate: Isomil (Ross Labs.), Neo-Mull-Soy (Syntex), ProSobee (Mead), and Nursoy (Wyeth). (2) Protein source–Soy flour: Sobee (Bristol Myers–* Not marketed in the United States). Mull-Soy (Syntex).

Soy is discussed in detail in the section on "Milk-free formulas and special formulas" (p. 386-90). This section begins: "Milk-free diets are utilized most commonly in management of infants who are allergic to milk or suspected of milk allergy" (p. 386).

The subsection on "Soy-based formulas" (p. 387) contains a good history of the development of such formulas: "In the United States in the 1950s and 1960s, formulas with protein contributed from soy flour were utilized as milk substitutes. Although more satisfactory than most other milk substitutes available at the time, parents complained that the formulas produced loose, somewhat malodorous stools that stained the diapers and not infrequently resulted in excoriation of the diaper area. The formulas were pale tan in color and had a slightly nutty odor.

"Formulas based on soy flour are rarely used in the United States at present. However, a great deal of information is available from animal studies and clinical experience With such formulas as Mull-Soy and Sobee (Table 15-9). Bebenago [Bebe Nago] (Nago) and Lactopriv (Töpfer

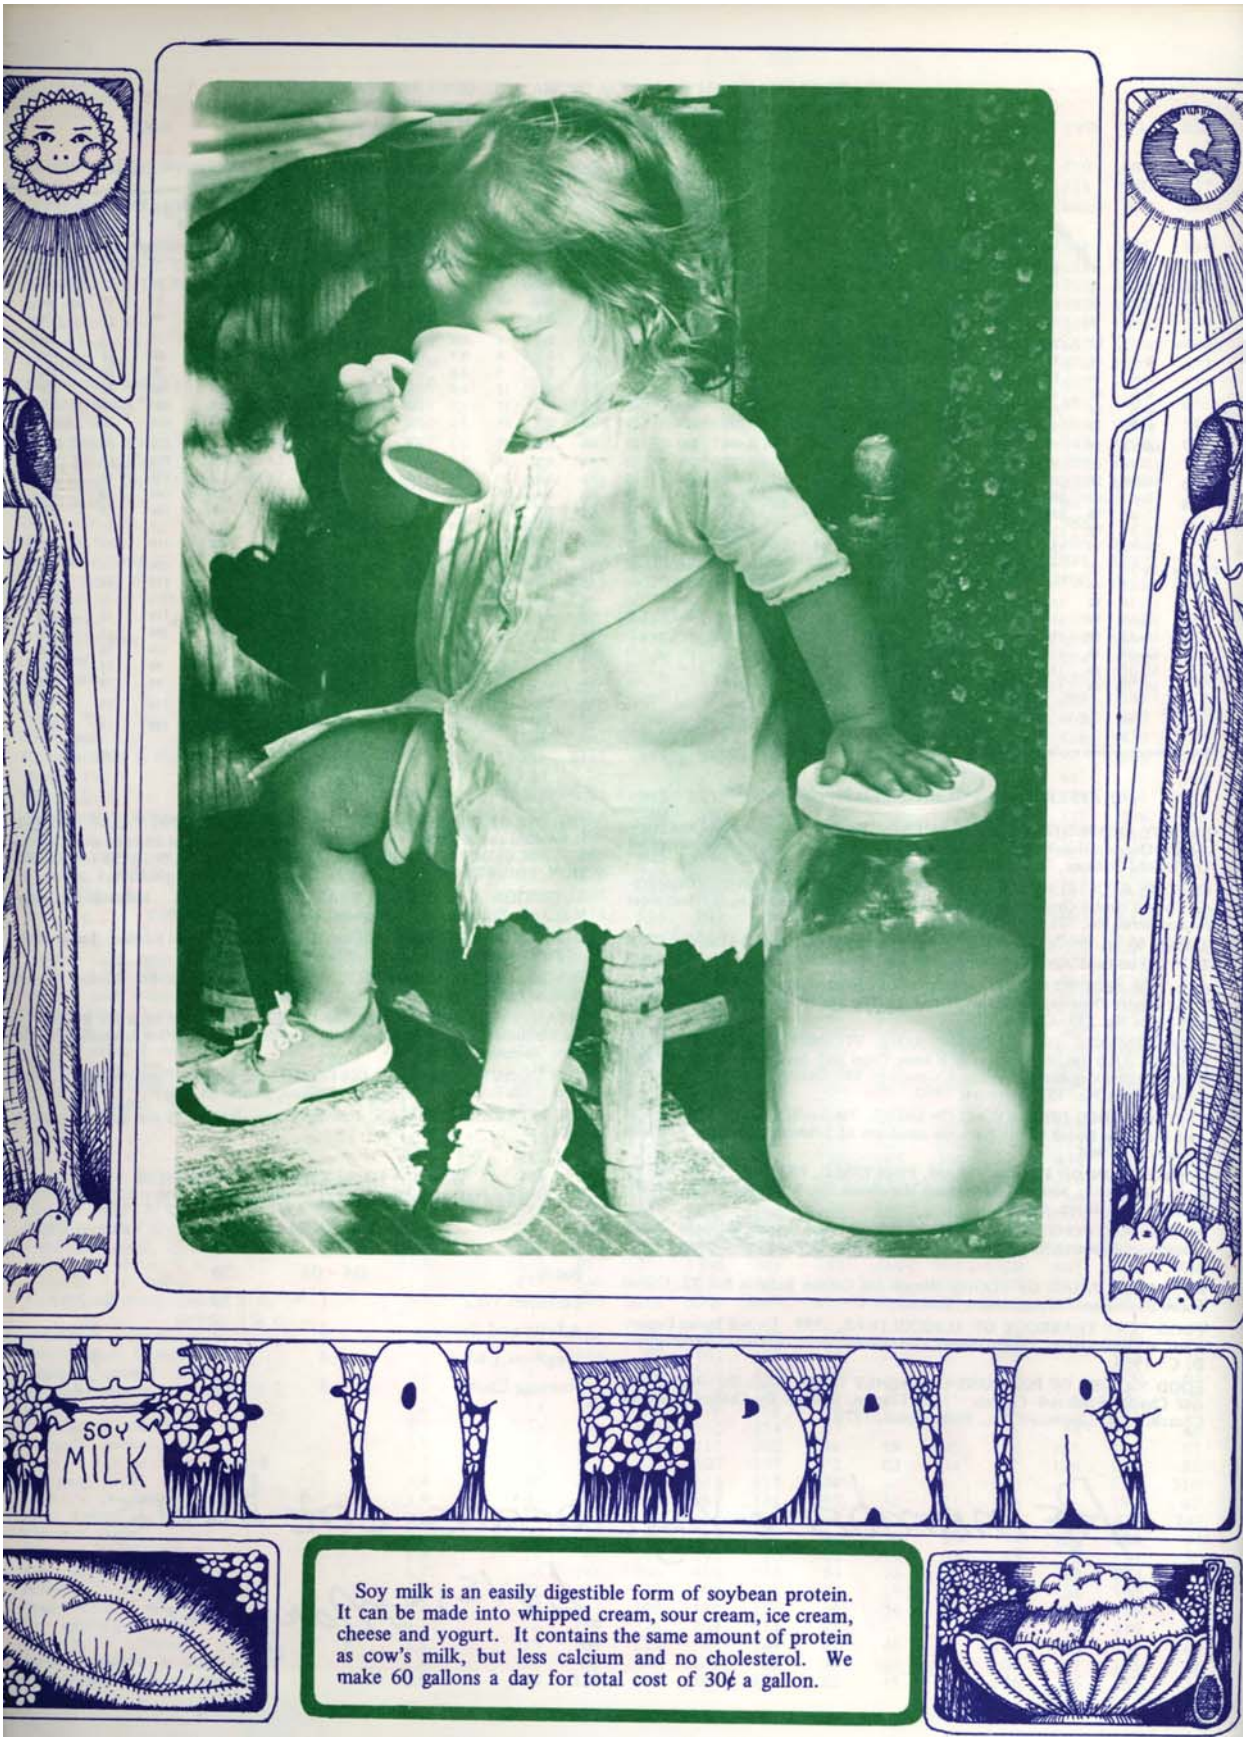
Topfer) are soy flour-based formulas marketed in Europe.

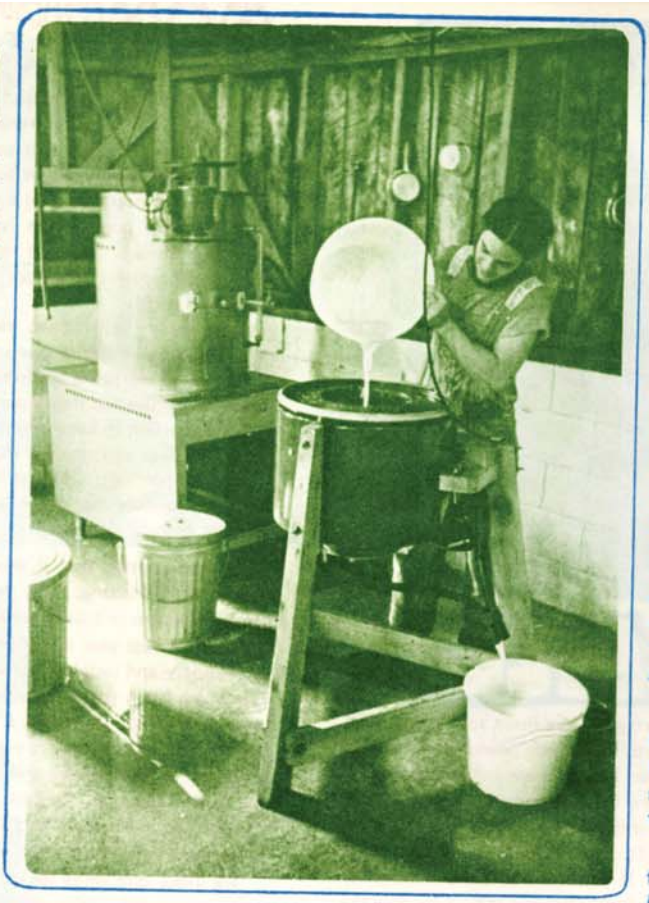
"In the mid 1960s, formulas with protein from water-soluble soy isolates rather than from soy flour became popular in the United States, and early in the 1970s these formulas almost completely replaced soy flour formulas. Soy-isolate formulas * are white in color, nearly odorless and are rarely reported to cause loose or malodorous stools. Unofficial estimates by manufacturers of infant formulas suggest that, in 1973, about 10 per cent of infants in the United States were fed soy-isolate formulas. Examples of soy-isolate formulas are included in Table 15-9."

Footnote: *"For convenience we have referred to soy protein isolate based formulas as 'soy isolate formulas' or 'soy isolate-based formulas.'" Address: Iowa.

2607. Gaskin, Stephen; Farm, The. 1974. Hey beatnik! This is The Farm book. Summertown, Tennessee: The Book Publishing Co. 100 p. Illust. No index. 28 cm. Pages are unnumbered.
• ***Summary:*** The Farm is a community of 600 people living on a 1,700 acre farm in Summertown, Tennessee. They have about 300 acres under cultivation, and during the summer about 200 of this is in soybeans. They practice a complete and total vegetarian diet; no one eats flesh foods or dairy products, drinks alcohol, or smokes tobacco. They do this for religious reasons, to be compassionate to animals and to leave enough food for everyone. "It is so grossly uneconomical and energy expensive to run soybeans through a cow and then eat the cow instead of just eating the soybeans that its virtually criminal."

One two-page spread titled "Yay Soybeans!" begins: "Here's a spiritual reason for being a vegetarian. You can





We fortify our milk with a standard dairy vitamin mixture containing vitamins A, B1, B2, D2, niacin, iron and iodine. We also add vitamin B12. Supplemental calcium can also be added.

Here's a recipe for making soy milk at home: Soak 4 cups of dry yellow soybeans overnight in cold water. Drain and rinse. Grind to a paste in a hand mill or blender. Add 1 gallon of water to the paste. Simmer one hour in a large double boiler, stirring frequently. Let it cool some, but keep stirring to keep the milk from "skinning." Strain through a diaper or cheesecloth to remove the pulp. Wring out the cloth with your hands until the pulp is fairly dry. Add a pinch of salt, and sugar to taste. Yield: 3 quarts.

In our soy dairy we use a slightly different process. We grow or buy bulk soybeans, which are cleaned in a small clipper-type seed cleaner. Then we grind them into grits—a little finer than cracked wheat. Next the grits are sifted to remove a certain amount of fine flour generated during grinding.

We make milk in 15-gallon batches in a large propane-fired double boiler equipped with a stainless steel stirrer driven by an electric motor. It takes 22 pounds of grits per batch, and each batch gets cooked at a simmering temperature for one hour. During cooking the grits soak up about an equal weight of water and double in volume. They're separated from the milk by pouring the mixture through a basket centrifuge, which works on the same principle as the spin-dry cycle in a washing machine. Then the milk is cooled and stored in a 100-gallon bulk milk tank, which has a built-in refrigeration unit. Vitamins and a little salt are added, and the milk is distributed to folks around the Farm the next day in milk cans and gallon bottles.

Our double boiler is made from a restaurant-sized coffee urn. We got it for $15 at an army auction. The basket centrifuge was made from an old front-loading washing machine, also obtained at an auction ($5). We removed the basic spinning basket, outlet hoses, motor and drive belt, and built a stand out of oak 2x4 to hold it as shown in the picture. The inside of the spinning basket is divided into three sections. We cut a double layer of standard aluminum window screen to fit each section. These screens need to be replaced about once a week.

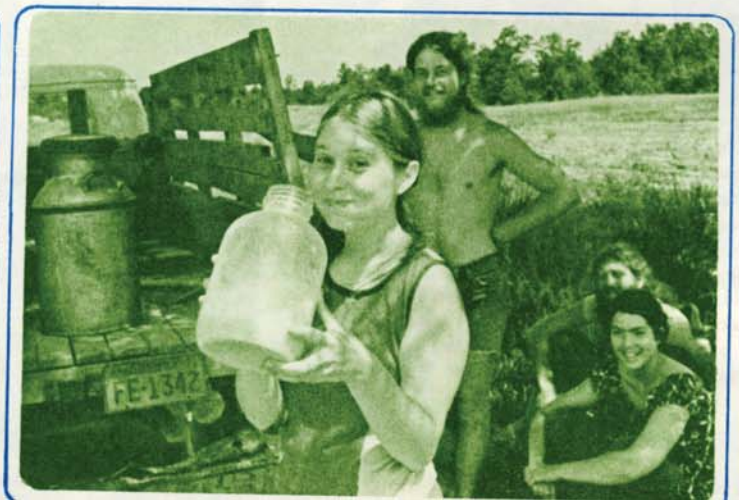
An alternate method, which we haven't tried but which would surely work, would be to use a press such as an old wine or cider press to squeeze the milk out of the pulp.

The bulk milk tank we got used for $150. The *Tennessee Farmer's Market Bulletin* frequently lists bulk milk tanks for sale. Most states probably have such a publication, and it would be a good place to look for equipment. Farm auctions are another good place to look.

Please write to the soy dairy if you have any questions about soy milk, or stop by for a visit and tour, and we'll be happy to give you a glass of milk to taste.

Love,

Alexander & the Soy Dairy



get ten times as much protein growing soybeans than eating beef cattle. If everyone was vegetarian, there would already be enough to go around, and no one would be hungry." It contains recipes for: Soy milk. Soy cheese (let soy milk stand in a warm place until the curd has separated from the whey, then boil the curds with salt, drain and press). Soy yogurt (cultured). Soy butter (made with 3/4 cups each soy flour and water, 1 teaspoon salt, and 1 cup oil). Soy mayonnaise. Granola (with soy flour). Raw gluten. Gluten roast. Fried gluten. Gluten burritos. Soybean stroganoff.

Another two-page spread is titled "The Soy Dairy: Soy Milk," by Alexander and the Soy Dairy. It begins: "Soy milk is an easily digestible form of soybean protein. It can be made into whipped cream, sour cream, ice cream, cheese and yogurt. It contains the same amount of protein as cow's milk, but less calcium and no cholesterol. We made 60 gallons a day for total cost of 30 cents a gallon." There follows a description of exactly how The Farm's soy dairy makes soymilk, what equipment is used, and where it was obtained. The text ends: "Please write to the soy dairy if you have any questions about soy milk, or stop by for a visit and tour, and we'll be happy to give you a glass of milk to taste. Love, Alexander and the Soy Dairy."

This book is loaded with wonderful photos, including: (1) Shunryu Suzuki, roshi. (2) A large field of soybeans. (3) Three long-haired members of The Farm eating (L-R): David Chalmers, Charles Hunnicutt, and Wilbur Jordan. (4) A little girl, Susannah Frohman, sitting on a stool drinking a cup of soymilk, with her other hand on a gallon jar of soymilk. (5) The inside of the soy dairy. (6) Leslie Jordan happily drinking soymilk from a gallon jar in front of a truck that is delivering soymilk in milk cans. Standing by the truck is Roger Kanies. Mitchell and Nancy Shapiro are sitting on the ground nearby. (7) Many views of Stephen Gaskin. (8) Growing, harvesting, crushing, and cooking sweet sorghum for use as a sweetener (a light, sweet syrup). Address: Summertown, Tennessee.

2608. Hannaford, Kathryn. 1974. Cosmic cookery. Berkeley, California: Starmast Publications. xixd + 264 p. Illust. by Lorena Laforest. 21 cm.
• ***Summary:*** This vegetarian cookbook contains 190 recipes created and tested at the communal One World Family Natural Foods Restaurant. Page 35 lists uses and seasonings of beans, including aduki beans and soy beans. Favorite seasonings for the latter are thyme, oregano, basil, green pepper, tomato, cheese, soy sauce, onion, or garlic. Soy-related recipes include: Soy grits (p. 75). Macroburger mix (with cooked soybeans, p. 83). Soy mayonnaise (with soy milk powder, p. 111). Chunky soy spread (p. 130). Miso tahini spread. Creamy soy spread (p. 131). Miso soup (p. 144). Miso-scallion broth (p. 145). Macro-sausage (with Soy Spread, p. 163). Spaghetti with miso sauce (p. 176). Super soybean casserole (p. 182). Miso sauce (p. 200). Soya carob nut brownies (with soy milk powder, p. 227). Address: Berkeley, California.

2609. Hanson, L.P. 1974. Vegetable protein processing. Park Ridge, New Jersey: Noyes Data Corporation. xii + 308 p. See p. 264-77. Illust. 25 cm. Company index. Inventor index. U.S. patent number index. Series: Food Technology Review, no. 16.
• ***Summary:*** The Foreword begins: "The detailed, descriptive information in this book is based on U.S. patents relating to the processing of proteins of vegetable origin.

"The book has a double purpose in that it supplies detailed technical information and can be used as a single guide to the U.S. patent literature in the field."

Contents: Introduction. General process for vegetable proteins: Removal of lipids, protein isolation processes, protein treatment processes, protein hydrolysates. Processing whole soybeans. Processing full fat soy products. Defatted soy products. Soy protein concentrates. Soy protein isolates. Soy hydrolysates: Enzymatic hydrolysis, hydrolysis under acid conditions nutrient amino acid compositions.

Cottonseed protein. Grain proteins (incl. wheat gluten and zein). Processing other vegetable proteins (sunflower meal, safflower seeds, sesame seeds, castor beans, peanuts, rapeseed, alfalfa, coconut, mistletoe).

Extruded fiber processing (incl. Boyer process). Other protein fiber production methods. Textured protein gels and expanded products. Consumer products (simulated milk products {high yield process from soybeans, soy milk from sprouted beans, deodorizing soybean and peanut milks, wet milling of vegetable protein, dispersible soy protein for milks, dual inoculation for flavor improvement of soy milk, lipoxygenase inactivated full fat soy flour for milk}, other dairy type products {soy yogurt, heat stable cheese from soy milk, blue cheese from soy milk}, paste spread, tofu, miso and tempa [tempeh] products, flavoring materials, miscellaneous products {whipping agents from soy protein, malt treatment of soy for use in cereals, soy protein–soy lecithin mixture}). Address: USA.

2610. Hinojosa, G.R.L. 1974. Contribuicao ao estudo da extracao e concentracao do leite de soja [Contribution to the study of the extraction and concentration of soy milk]. Master's thesis: Faculdade de Tecnologia de Alimentos, Campinas. 47 p. [Por]*
Address: Brazil.

2611. Hunter, Beatrice Trum. 1974. Favorite natural foods: Adapted from a series of programs on WGBH, Boston. New York, NY: Simon and Schuster. 219 p. Index. 21 cm. [154 ref]
• ***Summary:*** Contents: Foreword. 1. Vegetables, vegetables. 2. Perking up the salad bowl. 3. Sprouts (incl. legume seeds {alfalfa, chick pea, lentil, mung bean, peanut, pinto

bean, soybean}, grain seeds, vegetable seeds, herb seeds, weed seeds, oil seeds {flax, safflower, sesame, sunflower}). 4. Whole grains. 5. The Cornell mix [for bread; Dr. Clive McCay]. 6. Sourdough. 7. Sauerkraut. 8. Yogurt. 9. Soybeans. 10. Satisfying that sweet tooth: Dried fruit desserts, confections, snacks. 11. Of special concern: Baby foods, brown-bagging, party fare, making good foods even better. Appendix.

Contents of chapter 9, Soybeans: Introduction. Soybean sprouts. Fresh green soybeans as a vegetable: Freezing, canning, drying. Recipes for dry soybeans (Baked soybeans. Soybean tomato aspic). Making soybean pulp ("put cooked, drained soybeans through a meat grinder"; recipe for green peppers stuffed with soybean pulp). Roasting dry soybeans (soak, drain, and dry roast). Making soybean milk (recipes for spiced soybean milk, brown rice pudding with soybean milk). Making soybean curd (also called "soybean cheese" or "tofu." From soybean milk, from fermented soybean milk, from soybean flour, from soybeans). Using soybean flours (three types: high-fat or full-fat, low-fat or medium-fat, minimum-fat or fat-free). 100% soybean flour cookies (grain-free). Other soybean products you can buy: Soybean grits and soybean flakes (with 1 recipe). Soybean lecithin (with 2 recipes). Tamari, miso. The soybean and you: Meat alternatives, tempeh, textured vegetable protein products (inferior), fabricated soy foods in school lunch programs ("a nutritional crime"). Avoid mock foods.

About the author: She is the author of numerous books and winner of the French Company's Tastemakers Award. She and her husband, John, live in New Hampshire. Nationally known for her lectures and demonstrations on natural foods, she is a member of the Price-Pottenger Nutrition Foundation and twice a speaker for the Martha Jones Lectures in Nutrition at the Ashbury Theological Seminary in Kentucky. She holds a B.A. from Brooklyn College and a Master's degree from Columbia University. She has done graduate work at State Teachers College in Buffalo, New York, and at Harvard University. A small photo of Beatrice Trum Hunter appears on the front dust jacket of the hardcover edition. Address: New Hampshire.

2612. Johnson, John D.; Kretchmer, N.; Simoons, F.J. 1974. Lactose malabsorption: Its biology and history. *Advances in Pediatrics.* p. 197-237. [208* ref]
• ***Summary:*** Contents: Introduction. Lactose synthesis. Lactose digestion and absorption (beta galactosidase, lactase). Lactose malabsorption. Physiology of lactose malabsorption. Terminology. Diagnosis: Lactose loading test, intestinal biopsy, other tests. Types of lactose malabsorption: Congenital, secondary, ontogenetic. Historical geography of dairying and its relevance to the problem of lactose malabsorption among adults (A map, p. 216, shows that nonmilking predominates in East Asia, Southeast Asia, and central Africa). The genetic hypothesis (Table 3, p. 221, shows the lactose content of certain Old World fermented milk products, including products from mare's milk [kumiss], camel's milk [chal], cow's milk [kefir, yogurt], and water buffalo milk [dahi]). Summary. The question of policy.

"On the basis of historic and biologic data, it appears that the ability to digest lactose by an adult human is inherited as a dominant characteristic." "Lactose is a complex carbohydrate composed of glucose and galactose. It is synthesized in the epithelial cells in the mammary gland and then secreted into the milk of all mammals except those belonging to the general class of sea lions and seals of the Pacific basin." Most baby mammals can digest lactose because they have the enzyme lactase in their intestine. Lactase activity then decreases after early infancy. "All mammals are incapable of digesting lactose in adult life except for certain ethnic groups of humans." Address: 1. Section of Developmental Medicine, Dep. of Pediatrics, Stanford Univ., Stanford, California; 2. School of Medicine, Stanford; 3. Dep. of Geography, Univ. of California, Davis.

2613. Kloss, Jethro. 1974. The Back to Eden cookbook. Santa Barbara, California: Lifeline Books. "Published in arrangement with Woodbridge Press Publishing Company." 158 p. With Promise Kloss Moffett and Doris Kloss Gardiner. Illust. by Daniel Guild. 22 cm.
• ***Summary:*** For the bittersweet story of how this book came to be published, see interview with Doris Kloss Gardiner (Nov. 1990).

Facing p. 7 are photos of Jethro Kloss, his daughter Promise Kloss Moffitt, his granddaughter Doris Kloss Gardiner, and his son, Eden Kloss.

The chapter titled "Soy milk, soy cheese, soy butter and cream" (p. 35-40) has this contents: Introduction. Soy milk (homemade from whole soybeans). Quick soy milk (from soy flour). How to curd soy milk (with citric acid to make a smooth cheese [tofu]). Soy buttermilk. Soy butter (from soy flour and soy oil). Soy cream (from rich soy milk and soy oil). Soy cream cheese ("Use unsweetened Soy Milk. Let it stand until it thickens {not sour}, put it on the stove and boil a minute or two..."). Soy cottage cheese. Soy cheese (from raw peanut butter, tomato puree and Soy Milk). Quick soy cheese (from soy flour). Original soy cheese (using whole soybeans, hot water grind in a liquefier; curded with the juice of 2 lemons). A substitute for egg yolk (made from water, soy flour and soy oil). Address: USA.

2614. Kozel, Carlos. 1974. Guía de medicina natural. I. Salud y curación [Guide to natural medicine. I. Health and healing]. Viladrau (Gerona prov.), Spain: Ediciones Cedel. xii + 467 p. Illust. 23 cm. Vol. 1 of his Guía de Medicina Natural [Guide to Natural Medicine]. [Spa]
• ***Summary:*** About natural food and vegetarianism. Pages 185-91 discuss soya, which is called "vegetable meat" and from which one can obtain lecithin, soymilk, whole soy

flour, miso, tofu, shoyu, etc. The nutritional composition of soybeans is given.

2615. Luttrell, William Reed. 1974. Microbiological study of a pasteurized whole soybean beverage. MSc Thesis, Dep. of Food Science, University of Illinois. 116 p.
• ***Summary:*** Contents: Introduction. Literature review: Protein: Requirements and sources, soybeans, soymilk or soybean beverage and related products, microbiology of soymilk and soybean beverages. Materials and methods: manufacture of whole soybean beverage, physical and chemical analyses performed on whole soybean beverage, microbiological analyses, comparison of the storage stability of whole soybean beverage to that of cow's milk, isolation and classification of the bacterial flora in whole soybean beverage. Results and discussion: Composition of the whole soybean beverage, microbiological counts taken during the production of whole soybean beverage, changes in microbiological counts of whole soybean beverage during storage, changes in pH of whole soybean beverage during storage, changes in titratable acidity of whole soybean beverage during storage, changes in viscosity of whole soybean beverage during storage, changes in color of whole soybean beverage during storage, changes in organoleptic quality of soybean beverage during storage, storage stability of whole soybean beverage compared to cow's milk, classification of the bacterial flora present in soybean beverage, correlation of redox potential with changes in total count. Summary and conclusions. References. Appendix. Address: Dep. of Food Science, Univ. of Illinois.

2616. Masuda, Koh. editor in chief 1974. Kenkyusha's new Japanese-English dictionary. 4th edition. Tokyo: Kenkyusha. xiii + 2111 p. 27 cm. [Eng; jap]
• ***Summary:*** The first edition of this superb dictionary was published in 1918, the second in 1931, and the third in 1954. The words are listed in alphabetical order. Some of the definitions of soy-related terms are quite poor. Examples:

Daitokuji natto: not listed.

edamame: "green soybeans." [Better: Green vegetable soybeans, or Edamamé].

Hamananatto: not listed.

Hamanatto: not listed.

hiryôzu: not listed.

kinugoshi [tofu]: fine-grained *tofu.*

kogori-dôfu = kôya-dôfu.

Note. This is the earliest English-language document seen (April 2013) that uses the the term *kogori-dôfu* or the term *kôya-dôfu* to refer to dried-frozen tofu.

koikuchi shoyu: not listed.

kôji: *"koji."* Good.

miso: *"miso."* Good. Also defines: [ama-miso]: slightly-salted miso.

[miso-koshi]: a miso strainer.

[miso mame]: a soybean; a soya (bean).

[miso-shiru]: miso soup. And many more.

nattô: "fermented soybeans." [Better: Whole soybeans fermented with *Bacillus subtilis*]. Nattô-jiru: "Miso soup with minced fermented soybeans." Good.

nomame: not listed.

okara: bean-curd (*tofu*) refuse; lees of bean curd.

omiotsuke [Jap: Misoshiru] See miso [Miso soup; word used by women only].

otsuke [Jap: Misoshiru] Miso potage (soup).

saishikomi shoyu: not listed.

shitaji: soy. See shôyu.

shôyu: "soy (sauce)." Better: Soy sauce.

tamari: "(a kind of) soy; soy sauce; sauce from refined soy."

tôfu: "bean curd [cheese]; *tofu.*

[yaki-dofu]: "roasted bean curd."

[tofu itcho]: a piece (cake) of bean curd.

[tofu-ya]: "a tofu dealer (seller, maker)."

tônyû: "soybean (soya) milk." [Better: Soymilk, soya milk, or soybean milk].

tsurumame: not listed.

usukuchi shoyu: not listed.

yuba: "dried bean curds" [sic. Better: The protein-lipid film formed atop soymilk when it is heated].

2617. Null, Gary; Null, Steve. 1974. Protein for vegetarians. New York, NY: Pyramid Communications, Inc. 174 p. No index. 18 cm. [21 ref]
• ***Summary:*** Contents: 1. Vegetarianism. 2. Understanding proteins. 3. Understanding food values. 4. Understanding food combining. 5. Rational fasting. 6. Food value tables.

Soy related information: Soybean flour contains over 40% protein (p. 28). Table titled "Legumes" (p. 51) showing the average serving size, total protein, and usable protein, incl. soybeans or soy grits, and tofu. Table titled "Flour" (p. 56) including soybean flour, both defatted and full fat. Table titled "Vegetables" (p. 57) including soybean sprouts. Soybeans and products are also included in the long USDA food composition tables that fill pages 108-72. See p. 158 for dry soybeans, soy flour, flakes and grits, soybean curd, and soybean milk. See p. 171 for the minerals and excess of acidity (HCl) or alkalinity (NaOH) in mature soybeans. On the rear cover of the book: "Public enemy #1: The American diet."

Despite the title of this book, it has a color photo of a fish (and dry soybeans) on the cover. In chapter 3, the first two pages are about fish and seafood, starting with this puzzling statement: "Many people on a vegetarian diet will include seafood in their diets." Address: Nutrition Inst. of America, Inc., 200 West 86th St. #17A, New York, NY 10024.

2618. Ochomogo, M.G. 1974. An unfermented cheese from

soy-cow's milk mixture. Thesis, Louisiana State University. *
Address: Louisiana State Univ.

2619. Rachie, K.O.; Roberts, L.M. 1974. Grain legumes of the lowland tropics. *Advances in Agronomy* 26:1-132. See p. 83-85. [493 ref]
• ***Summary:*** The main plants discussed are peanuts, pigeon peas, cowpeas, and mung beans. However under "Humid Tropics" (p. 83-85) is a rather long discussion of soybeans, which "has been extensively grown for a long time as a basic food crop of the low elevations in southeastern Asia (Indonesia, Philippines, Malaysia). More recently, investigations in India, the West Indies, and both East and West Africa have demonstrated that soybeans can be very successfully grown in the lowland tropics under favorable conditions. At present there is no other species that can so consistently produce on a hectare per day basis both high yields of good quality protein and oil. The main deterrent to increasing production of this species in many tropical regions is lack of markets and understanding of its cultivation and utilization." Discusses: Adaptation and problems. Utilization ("green beans (vegetable)," split, sprouted, soy milk, soy sauce, tofu, tempeh). Recent investigations.

"Perhaps the most successful campaign to introduce soybeans and find solutions to production and utilization problems has been in India with assistance from a USAID-sponsored contract with the University of Illinois. In Africa, French-sponsored research organizations have centered their activities mainly in Madagascar with testing and management experiments in the Cameroons [Cameroon] and Centralafrique [central Africa]." In English-speaking Africa, breeding programs are in place in Tanzania and Nigeria. Address: 1. International Inst. of Tropical Agriculture, Ibadan, Nigeria; 1-2. The Rockefeller Foundation, New York, New York.

2620. Reed, Pierce M. 1974. Casein and caseinate. In: A.H. Johnson and M.S. Peterson, eds. 1974. Encyclopedia of Food Technology. Westport, Connecticut: AVI Publishing Co. xiv + 993 p. See p. 174-75. Illust. Index. 26 cm. [3 ref]
• ***Summary:*** Casein, one of man's oldest manufactured products, is the protein fraction of cow milk. Housewives may be most familiar with the product "in its purest dairy food form, not as casein, but as 'low fat" cottage cheese. Casein comprises about 3% of the weight of whole milk. Until the late 1940s, almost all casein produced was for industrial applications, such as glue and paper coating. However today, an estimated 60-70% of the casein produced is for edible use in the form of casein or caseinates.

Caseinates: Casein, because of its amphoteric properties, reacts with acids or bases to form salts–such as sodium caseinate or calcium caseinate. Casein solubilized with alkalies is known as caseinate. Caseinates provide both nutritional and functional properties. They are used nutritionally to fortify and give texture to breakfast foods, breads, etc. They are used functionally in nondairy coffee creamers, nondairy whip toppings, icings, etc. Address: Sheffield Chemical Div., Kraftco Corp., 2400 Morris Ave., Union, New Jersey 07083.

2621. Seventh-day Adventist Dietetic Assoc. 1974. About nutrition. Revised ed. Nashville, Tennessee: Southern Publishing Assoc. 192 p. Index. 20 cm. 1st ed. 1971. [50 ref]
• ***Summary:*** A layman's guide to vegetarian nutritional principles, including food groups, menu planning, and nutritional needs of various age groups. Individual authors are listed as Alice G. Marsh, Dorothy Christensen, Rose G. Stoia, and Sylvia M. Fagal. Coordinator: Darlene R. Schmitz.

Chapter 1 introduces the "Four Food Groups" which resemble a simple preschool puzzle. They are: Fruits and vegetables, cereals & breads, protein foods, and milk products. Soy products (including soy beverages) and gluten (wheat protein) are included in the protein foods group. A surprisingly strong (apparently slightly defensive) anti-food-faddist message runs throughout this book. Chapter 16 is titled "Current quackery." Chapter 17, titled "Food fads and facts," gives 13 examples of commonly encountered fallacies with explanations of the facts.

2622. Watanabe, Tokuji; Ebine, H.; Okada, M. 1974. New protein food technologies in Japan. In: A.M. Altschul, ed. 1974. New Protein Foods. Vol. 1A. Technology. New York: Academic Press. 511 p. See p. 414-53. Chap. 9. [80 ref]
• ***Summary:*** Contents: Introduction: Soy products, fish products, enzyme applications. Tofu: General description, new materials, new type products, large-scale production, trends in cost, kori-tofu and aburaage. Miso: General description, new technologies, new type products, problems of mycotoxin, packaging and preservation, trends in cost and consumption. Kamaboko and fish sausage–fish jelly: General description, new technologies, new materials–frozen surimi, packaging and preservation, trends in consumption. Textured vegetable protein: Soybean protein curd, wheat gluten, soybean protein sponge. Hydrolyzed vegetable protein (HVP). New enzyme applications: Liquefied fish protein concentrate (LFP), collagenase for poultry processing, removal of beany flavor from soybean by enzyme treatment, microbial rennet. The protein food structure of Japan.

Fig. 13 (p. 47) shows 3 pie charts, each giving the percentage of protein intake per capita from various sources at three different time periods. In 1921-25 only 9% of the total protein came from animal sources (6% from fish and 3% from other animal sources); 42% came from rice, 21% from soybeans, and 14% from cereal grains other than rice. In 1951-55, shortly after World War II, some 23% of the total protein came from animal sources (17% from fish and 6% from other animal sources–such as milk, eggs, chicken, pork,

and beef); 32% came from rice, 15% from soybeans, and 20% from cereal grains other than rice. In 1969, some 30% of Japan's total protein intake came from animal sources (21% from fish and 19% from other animal sources); 22% came from rice, 12% from soybeans, and 13% from cereal grains other than rice. Thus the main trend seen during this period is the steady increase in the percentage of protein from animal sources and the corresponding decrease from plant sources. Source: Food Balance Sheet. 1970. Ministry of Agriculture and Forestry. Fig. 14 shows that these trends are apparently related to increasing per capita income and GNP. Address: 1-2. National Food Research Inst., Ministry of Agriculture and Forestry, Tokyo, Japan; 3. Tokai Regional Fisheries Research Lab., Fishery Agency, Ministry of Agriculture and Forestry, Tokyo, Japan.

Address: Hudson, Iowa.

2627. Pant (G.B.) University of Agriculture & Technology. 1974? A brief note on soy milk / beverage process. Pantnagar, Nainital, India: G.B. Pant University of Agriculture and Technology. 16 p. Undated. 24 cm.
• ***Summary:*** Contents: Introduction. Soymilk: Description and composition compared with cow's milk. Processing of soymilk (incl. flow chart; except for the imported homogenizer, all other pieces of equipment have been developed and designed at Pantnagar). Estimates of investment. Cost of production. Present scale of production ("A commercial unit having a capacity of 10,000 litre/ day for which designs etc. have already been developed is being established at Pantnagar"). Availability of know-how. Appendix: Cost of soymilk production (factory cost–10,000 liters per day): Variable cost, fixed cost, indirect cost. Cost of sweetening. Cost of packaging and distribution: In bulk cans (3.65 paise/liter), in 1 liter milk bottles (8.31), in sachets (11.71), in beverage bottles (29.00). Photos show: Soybean dehuller. Equipment in soymilk production plant; each piece is labelled, incl. heating tank, homogenizer, blending tank, colloid mill, wet grinder, blancher, etc. Address: Pantganar, Nainital, India.

2628. *Christian Science Monitor.* 1975. Low-cost soybeans: 'meat that grows on vines.' Jan. 16. p. 11.
• ***Summary:*** Soybeans come in many forms. There "are fresh soybeans in their fuzzy pods, dried soybeans, soy and wheat noodles, spaghetti and macaroni, soy grits, soy flour, soy milk, soy cheese [tofu], nutlike roasted soybeans, sprouted soybeans, textured soy, soy oil, and soy butter." When these are combined with other foods, the possibilities are almost without limit.

Soybeans are high in protein and low in cost–about 35 cents a pound.

Recipes: How to cook basic whole dried soybeans. Soyburgers (with 2 cups cooked soybeans and 1 cup cooked brown rice). Four ideas are given for adding cooked soybeans to other recipes. Finally, soy flour and its uses are discussed in detail. Now is a "perfect time to get acquainted with the versatile soybean." Address: Special to the Monitor.

2629. Andreas, Dwayne O. 1975. Presentation on ADM. Paper presented to the New York Society of Security Analysts. 11 p. Jan. 21. Unpublished manuscript.
• ***Summary:*** Mr. Andreas has been processing soybeans and other agricultural commodities constantly since 1938. Four of ADM's top executives come from competing companies: Mr. Walker from Ralston [Purina], Mr. Burket from Central Soya, Mr. Randall from Cargill, and Mr. Bean from Anderson-Clayton. In 1965, thanks to an entirely new technology that was developing for soybean processing,

ADM was transformed from a conglomerate into a non-conglomerate focusing on food technology. "Thanks to a great job that had been done in research, ADM received basic patents on TVP (Textured Vegetable Protein; TVP is a registered trademark). This knowledge was immediately commercialized and TVP has been very successful... it is now produced by some 12-13 different companies."

"The Marshall Plan developed Western Europe and Japan into the greatest cash customers that the United States ever had... This global internationalizing of food distribution had the effect of disorienting much of the entire food processing industry. That is, a plant that was not located so that it had access to the world markets might have become worthless or obsolete overnight. And dozens did."

Currently ADM has about 17% of the soybean processing business in the U.S., 17% of the wheat milling, 25% of the barley malting, 25% of the margarine oil business, 30% of the linseed oil, and 27% of the durum flour business (the basic flour for making pasta products).

A four-horse team is pulling ADM in a certain direction for the future. "One is the edible soy business which includes our TVP and soy flours, in which we are the leaders, and will soon include our soy protein concentrates. It is inevitable that edible soy proteins will increase in use over the next 20 years by leaps and bounds on a worldwide basis. And it is for no other reason than economic compulsion. The cost of making good quality high protein edible products out of soy is so low compared to other protein sources that it is just a matter of how long it will take the food companies to learn how to use it in more ways. In the soy flour business many soy flours are now being used to replace dried milk products just as margarine once replaced butter and this use is due to grow substantially in the next few years. The soy fortified bread and roll products you saw today are examples of how protein levels can be boosted by 50% with little or no increase in cost. ADM is the largest producer in the world of soy flour.

"TVP business has an enormous potential, maybe largely outside of the United States. In every country where there is a balance of payments problem, and where they are importing meat, we get a terrific tail wind from the government in selling TVP...

"The second thing going in our favor is the continuing worldwide expansion of the margarine business. Margarine is replacing butter, and that's a trend that is unstoppable. This trend is fundamental to our business, since about eighty percent of all of our fats and oils, corn oil, soybean oil, go in margarine.

"A third part of our business which has almost unlimited future growth is the soybean meal portion, where we make a refined [dehulled] grade of soybean meal that's used by the poultry industry all over the world. Under today's technology, poultry is by far the cheapest form of meat that's commercially produced. It will expand very much faster than either pork or beef, because it's so much cheaper and so easy to produce, and that business will continue to grow enormously, worldwide.

"The fourth horse of our four-horse team is the corn refining business." We produce corn syrup and fructose [two different products], which are experiencing very rapid growth in demand. Two other very good firms, Standard Brands and the A.E. Staley Co. are now producing fructose, but suddenly most of the soft drink people have decided to use fructose, creating an enormous demand. So "we changed our plans and now plan to produce about 480 million pounds of fructose by next winter and to double that by sometime in 1976."

So the four-horse team pulling ADM into the future is edible soy products, margarine, soybean meal, and refined corn sweeteners (corn syrup and fructose). Address: Chairman and CEO of ADM.

2630. deMan, J.M.; Stanley, D.W.; Rasper, R. 1975. Composition of Ontario soybeans and soymilk. *Canadian Institute of Food Science and Technology Journal* 8(1):1-8. Jan. [4 ref. Eng; fre]

• ***Summary:*** Samples of 55 varieties Ontario-grown soybeans were analyzed. All samples were made into soymilk and the composition of the milk was determined, including the content of phosphorus, calcium, and magnesium. The soymilk was subjected to ultrafiltration and the diffusate analyzed for soluble constituents. "Correlations of variables indicated that an increased protein level in the soybeans was accompanied by a decrease in fat." Sucrose was the predominant sugar; certain varieties were found to have a very low content of raffinose and stachyose, the oligosaccharides that cause flatulence. On average, 63.5% of the calcium in the soybeans was recovered in the soymilk. The soymilk from the 55 samples had the following mean composition: total solids 5.98%, protein 2.71% (3.64% maximum), fat 1.24% (0.72% minimum), soluble solids 2.03%, calcium 9.87 mg/100 ml (13.0 mg max.), protein recovery 72.69% (94.1% max., i.e. the percentage of protein in the soybeans that was recovered in the soymilk). Address: 1. Dep. of Food Science, Univ. of Guelph, Guelph, ONT (Biz 1985: Food Technology Services, 58 Applewood Cres., Guelph, ONT N1H 6B5). Phone: 519-821-3436.

2631. deMan, J.M.; Tanaka, M.; Stanley, D.W. 1975. Coagulation properties of soybean milk. *Canadian Institute of Food Science and Technology Journal* 8(1):9-11. Jan. [4 ref. Eng; fre]

• ***Summary:*** The coagulation properties of 55 samples of soybean milk coagulated with calcium sulfate were investigated. Clotting time was generally in the range of 10-50 seconds. "Clotting time decreased with the age of the soymilk. Addition of phosphates and citrate prolonged the clotting times. All samples produced a firm gel, even when the soymilk was three days old." Address: Dep. of Food

Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

2632. Jonas, John J. 1975. Impact of vegetable proteins on dairy products. *J. of Milk and Food Technology* 38(1):39-43. Jan. [48 ref]

• ***Summary:*** A good review of the subject of vegetable protein milks. Contents: Abstract. Introduction. Milk analogues based on soy protein. Milk analogues based on peanut protein. Milk analogues based on coconut protein. Objective sensory methods. Cheese analogues based on soya. Cheese analogues based on other vegetable sources. Conclusions.

Note. This is the earliest English-language document seen (Aug. 2013) that contains "Milk analogues" used in connection with soymilk. Address: Kraftco Corp., Research and Development, Glenview, Illinois 60025.

2633. Pearce, Jean. 1975. Jean Pearce's How to get things done in Japan. Vol. 1. Tokyo: Japan Times Ltd. [iv] + 245 p. Jan. Index. 19 cm. [Eng]

• ***Summary:*** This book is composed of reprints of the popular and informative articles, answering questions from readers on a wide variety of subjects, that Jean Pearce wrote in her column in *The Japan Times* from 1 Jan. 1972 to 27 July 1974; they appear in this book in chronological order.

From 16 Oct. 1973 (p. 76): "Health foods" are now widely available in Japan, but familiar products are not always to be found. You can, however, find many soybean products, including natural soy sauce, and natural miso. "Try Nihon Kenko Shizenshoku in Shinbashi [Tokyo], phone 573-4181, or Shizenshoku Center in Shibuya, 461-7988. Both have restaurants that serve natural foods only."

Note: On pages 77-78 is a good history of Calpis.

From 8 Jan. 1974 (p. 118-19): "Health food remains a subject of interest... The basic Japanese diet, with a little discretion in the use of salt, is a health faddist's delight. Also on natural foods, a shop (Ishii Shoten, 1-2-7 Nishikata, Bunkyo-ku [Tokyo], phone 811-2457 in Japanese), that still makes by traditional methods roasted soybeans from mid-December through June, far superior, I'm told, to any of the imported varieties... 'A nice low-cal snack, and a good hors d'oeuvre...' They come with or without salt."

From 5 Feb. 1974 (p. 134): "A woman wants to learn how to make tofu. I have a recipe but I don't think I'll give it again. It is very difficult to do and the end result is more often failure than success. However, anyone can buy instant tofu at most Japanese food stores. It's easy to make, will be better than trying to do it yourself, and is inexpensive, ¥80 the last time I bought it but it has no doubt gone up. It makes two squares. The nigari she asks about is bittern, necessary for thickening [curding, coagulating]. Tofu is now available in many foreign countries. If you don't know where to look, call anyplace listed under Buddhist in the classified directory. Ask where they buy theirs."

From 12 March 1974 (p. 154-55): "Tofu lovers, united! There are lots of them and their sympathy was with the woman who was denied a do-it-yourself recipe in this very column. So kinder hearts provide the following.

"Two collectors [Shurtleff and Aoyagi] are compiling a book of tofu recipes, which includes a number for making tofu, using various solidifiers and soybean products. I'll let you know when it's published.

"A book, *Tofu Recipes,* was published by a tofu enthusiast after a year's visit to Japan. It is her first literary endeavor, a labor of love which will be understood by anyone who is a tofu devotee. Grace Kikuchi tells you how to make it and how to use it, relying on childhood memories and modern innovations. I'll be in the kitchen when I finish this column. You can be equally inspired if you send your order to Grace Kikuchi, 260 Sumac Lane, Ann Arbor, Michigan, U.S.A. Enclose $2.00. Somehow."

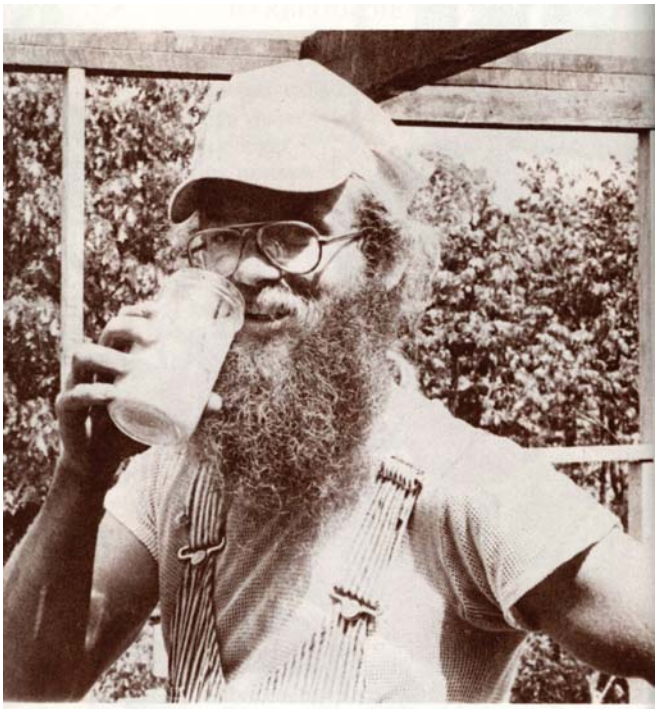
From 7 May 1974 (p. 184-85): "There is a new health food [natural food] restaurant in Tokyo, Hakumon ("White Gate"), just across from the Chuo University exit to the Shin Ochanomizu Station on the Chiyoda subway line, phone 291-9762. French owner Jimmy Dejeammes... I'd like to go back daily for the tofu that they make. Try the mochi made of brown rice and prepared in a variety of ways... All bread is baked there; high nutritional value... Among the beverages is Soyalac, made of soybean milk." It is made and distributed here by Saniku Shokuhin, the Seventh Day Adventist health food company. Neuroca, a Swiss coffee substitute, is also available at Hakumon. Phone before you go. Hakumon may be moving soon. Address: The Japan Times, Tokyo, Japan.

2634. Farm, The. 1975. The Farm vegetarian cookbook. Summertown, Tennessee: The Book Publishing Co. 128 p. Illust. Index. 18 cm. Revised edition by L. Hagler. 1978. 223 p.

• ***Summary:*** Expanding on the pioneering "Yay Soybeans!" (1974), this creative and creatively illustrated vegan cookbook contains many extremely innovative and original recipes including: Soybean Stroganoff. Soyburgers. Spaghetti Sauce with TVP. Soysage. Soy fritters. Indonesian fried tempeh. Soymilk. Tofu. Tofu spreads. Soy "yogurt." Soy "cheese." Soy "butter" (made with soy flour). "Cream cheese" (made with soymilk). Soy "mayonnaise." Soy "whipped cream." Soy "coffee." "Soy 'nuts.'" Soy pulp granola. Ice Bean [soy ice cream] (Recipes include: Pineapple "sherbet" and "Vanilla ice bean," each made with soy milk instead of dairy milk). Mellowmeal (breakfast cereal containing soy flour). Soy "yogurt" Danish pastry. Soy bread. Soy pulp cookies. Soy "cheese cake." Blintzes (filled with tofu).

Gluten recipes (p. 54-59) include: Basic gluten (feeds 8 generously). Gluten roast. Gluten burritos. Chili gluten. Oven-fried gluten. Janice's barbeque [barbecue] gluten ribs.

The rear cover states: "We are a large, long-haired



RICH SOY MILK
5 gallons

Sort and wash 10 cups of dry soybeans for every 5 gallons of milk you're going to make. Soak them overnight, or if you forgot to soak them, you can put the beans in warm water and they will swell up soft in 4 hours.

To strain the soy milk

Strain through a clean cloth (nylon, folded cheesecloth, diaper) placed in a colander or strainer. Add a pinch of salt and sweeten the soy milk to taste.

Serve it warm, chilled, flavored with vanilla, almond, maple or other extracts, or with fruit or cocoa. Mixed in a blender, with a little oil, sugar and flavoring, it makes a smooth milk-shake. Soy milk makes good puddings and soups.

spiritual community in Tennessee. We came together through open meetings in San Francisco with Stephen. We have 750 people, including 250 kids, living on 1,750 acres. This cookbook is to help as many people be vegetarians as possible without turning any of them off and making them think its strange or weird and to let people know that it tastes good, is nice, graceful, and it can be a turn-on, that it'd be really neat to eat, and make you look forward to meal-times and make you really happy to eat such good food." The Introduction, by Stephen, begins: "The thing about our cookbook is we don't want to be faddish or cultish or scare people off. We just honestly want them to know how to make it on vegies, even somebody who doesn't particularly have a moral reason for being a vegetarian, but just wants to eat a little cheaper, or somebody who learns to be a vegetarian to lose weight, 'cause you maintain a really healthy natural weight on vegetables... The main thing is that we're absolute vegetarians. We don't do meat or milk or eggs or cheese or fish or fowl."

"You can increase the world's food supply by being a vegetarian. So its good for everybody else, its good for the individual for health, and its good for the soul and the spirit not to be involved in killing. And I understand that vegetables are alive, but like I've said before, I've been to pig stickings, and I've been to rice boilings, and rice boilings have better vibrations than pig stickings."

Photos show: Facing title page: People planting white potatoes at the edge of a large field in front of the woods. The lady in front is Sylvia Tepper, Robert Tepper's wife. Pages: (1) Little Susannah Frohman eating a rolled up soybean tortilla. (3) Stephen Gaskin. (18) Ruth Thomas, making lunch in the kitchen of the only house on the property when Farm folks first came here. It housed The Farm's clinic, school, bank offices, and receptionist for a number of years until other facilities were built for these purposes. Ruth could make a mean soybean burger (which is pictured). (23) Laurie Sythe making potato soup on the other side of the same kitchen Ruth was pictured in. (35) Poblano chili plants. (60-61) Tempeh sliced to be round to fit on buns, resting on a plate (L) and a tray (R). (64). Uncle Bill (age 82, center, surrounded, from left by: Marilyn Keating, Jeffrey Keating, Ruth Thomas, Patrick Thomas, Uncle Bill, Joel Kachinsky, Roberta Kachinsky, Bruce Moore, Roslyn Moore {holding baby Sam}. All at their home on Schoolhouse

Ridge. The house, named "Kissingtree," was originally built for Stephen and family, but he declared it "too fancy" for him, and he passed it on to this group {women were mostly schoolteachers in our school}). (67) Janice Hunter making stir fry at the Tower Road House kitchen. (68) John Hurgeton drinking a glass of soymilk on a construction site somewhere. (71) Sue Ellen, who worked in The Farm's soy dairy, holding a glass of soymilk and relaxing. (89) Sour soymilk Danish pastry. (106) Jars of canned goods stored at the Farm's canning facility. Thanks to Cynthia Holzapfel for providing photo captions.

Illustrations appear on almost every page: On the front cover is a color illustration of a basket full of vegetables on a quilt. Many of the pages have illustrated borders or unique illustrations (line drawings) (flowers, plants, leaves, a pot of steaming food, psychedelic designs, native American motifs, etc.) where there would otherwise be empty space. Pages: (10) A Farm member eating, with one hand, a tortilla wrap filled with cooked whole soybeans. (20) A young woman in a kitchen facing the stove. (28-29) Illustrations of two Farm members making pizza. (65) Uncle Bill in a kitchen stirring a pot. (81) A pitcher labeled "Soy Milk." (83) An old-fashion, hand-turned ice cream machine for making Ice Bean. (88) Sour soymilk Danish pastry. (95) A happy man and a woman eating bagels. The man's finger, pointing up, serves as a bagel holder. Yum! (100) Overhead view of a round table with ten people eating. (105) A vase full of kitchen utensils. (113) A lady holding a cake–a very favorite recipe on The Farm. (120) A lady rolling out dough on a table.

Note 1. This book played an important role in introducing soyfoods (especially tempeh and soy ice cream), as well as a vegan diet, to America.

Note 2. This is earliest publication seen by The Farm that contains a tempeh recipe.

Note 3. This is the earliest document seen (Oct. 2008) that contains the word "vegies" (one of two documents).

Note 4. This is also the earliest document seen (Oct. 2008) that uses the word "barbeque" or "barbequed" rather than the standard "barbecue."

Note 5. Some sources (OCLC/WorldCat) cite Stephen Gaskin as the author of this book. Others cite Louise Dotzler; her maiden name was Louise Hagler, but she was married to Thomas Dotzler in 1975. Later that decade they separated and Louise reverted to using her maiden name As "Louise Hagler," she was the editor / author of several later revised and expanded editions of *The Farm Vegetarian Cookbook* (1978, 1988) plus several outstanding books about soyfoods published at The Farm. Address: Summertown, Tennessee.

2635. Fukushima, D. 1975. Tônyû no kagaku. Tokushu: Tônyû inryô no kaihatsu [The science of soymilk]. *Shokuhin Kaihatsu* (*Up-to-Date Food Processing*) 10(2):20-26. [34 ref. Jap]
Address: Noda Sangyo Kagaku Kenkyusho.

2636. Kay, Theodore; Ifeacho, C.L.; Onowu, G.; Udenze, V.; Nnamani, G.; Anazonwu-Bello, J.N.; Ifenu, F.; Modebe, V.; Emembolu, M. 1975. Use of soya bean to improve the protein content of the diet in West Africa and thus prevent kwashiorkor. *J. of Tropical Pediatrics and Environmental Child Health* 21(1B):45-48. Feb. Special issue. [Eng]
• ***Summary:*** Contents: Introduction. Nutritional value of soya bean Nigerian foods prepared with soya bean paste: Soya bean paste (soaked, ground soybeans without the "husk" removed), kosei (akara ball), panke (puff-puff). Nigerian foods prepared with soya bean milk: how to make the basic milk, wara (milk curd), and alele (moin-moin, made with soya milk residue [okara]). Note: "The above five recipes have been fully accepted in many parts of Nigeria. The taste and the preparation procedure of these traditional Nigerian foods made from soya beans worked out to be almost the same or very similar to the foods traditionally made from cow peas (white beans) for kosei and alele, wheat flour only for panke, and cow milk for wara."

Nigerian foods made with soya bean flour (pre-cooked): How to make the basic flour, protein enriched pap (with akamu), and protein-enriched fu-fu (with gari or cassava flour). Discussion.

"Soya bean is being successfully established in Nigeria, but it has been very difficult to cook in a traditional West African way so it has never become popular in this country. Most soya bean produced in Nigeria has been exported as cash crop except a little for animal consumption."

Kosai, alele, panke, and awara are traditional foods in Northern Nigeria, while akara ball, moin-moin and puff-puff are traditional foods in Southern Nigeria. Discussion: "Why do we need soya bean in Nigeria?" Five reasons are given. The first two are: "(1) It has higher protein content and net protein utilisation (NPU) than cowpeas, groundnut and other legumes. Moreover, soya bean is much cheaper than other legumes in Nigeria. (2) Soya bean flour and soya bean milk have little taste and can therefore be incorporated into traditional foods such as pap and fu-fu without changing the appearance, taste and texture." Address: 1. Dep. of Chemical Pathology, Faculty of Medicine, Ahmadu Bello Univ., Zaria, Nigeria; 2-5. East Central State Ministry of Health and Social Welfare, Enugu, Nigeria; 6. East Central State Ministry of Education, Enugu, Nigeria; 7-9. Univ. of Nigeria Teaching Hospital, Enugu, Nigeria.

2637. Meals for Millions Foundation. 1975. The question is not whether we will help, but how [Annual report 1974]. Santa Monica, California: MFM Foundation. 6 p. 28 cm.
• ***Summary:*** Mark M. Sterner is Executive Director. Cover is as if this were one issue of the *Meals for Millions Newsletter.* In the upper left corner is MFM's logo (slightly redesigned) of a plant growing out of mounded soil in a bowl which is half of a globe. Below that: "Self-help for a hungry world."

The pages are unnumbered.

Contents: MFM provides the "how" in Korean beverage plant (The plant began regular operation in July 1974, producing Super D soy beverage, bottled and inexpensive enough to compete with soft drinks. Mr. Jong-Yoon Chun is president of Sam Yang Foods). MFM sends seeding machine to Ecuador for planting soybeans. MFM moves into new self-help project in Midwest (Bootheel, Missouri). MFM's International Institute of Protein Food Technology (Patricia Stevens, program director, says "the course will bear the official title of 'Low-Cost, High Protein Foods'"). Tennessee. Uganda. New Mexico. Shipments of MPF to drought victims in countries bordering the rainless Sahara.

How MFM spent its donor dollars in 1973. Income: $486,544 (up 28.9% from last year) of which 3.4% used for general administration, 9.5% for public relations, 17.5% for fund raising, and 69% for programs.

Photos show: (1) Mark Sterner with Mr. Chun in Korea. (2) Korean woman operating bottling equipment. (3) Two Korean boys holding bottle of Super D beverage. Hank Sterner, MFM's Pilot Plant Supervisor, loading agricultural equipment for shipment of Ecuador. (4) Starving African children. Address: 1800 Olympic Boulevard (P.O. Box 1666), Santa Monica, California 90406. Phone: 870-0451.

2638. **Product Name:** [Soja Semp {Infant Formula Based on Soy Protein Isolate} (Concentrated Liquid)].
Foreign Name: Soja Semp (Koncentrerad).
Manufacturer's Name: Semper AB.
Manufacturer's Address: Sektor Industri, Sveavagen 166, Box 231 42, S-104 35 Stockholm, Sweden. Phone: 08-729-9700.
Date of Introduction: 1975. February.
Ingredients: Incl. soy protein isolate.
Wt/Vol., Packaging, Price: 450 ml can with pull top.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88. Form filled out by Anders Eriksson. 1981. Nov. "Soja Semp is similar to Pro-Sobee, an infant formula based on soy protein isolate."

Soyfoods Center Computerized Mailing List. 1982. July 23. Phone: 08 24 77 00. Talk with Swedish food scientist. 1987. Dec. 5. Soy-based infant formulas are not widely used in Sweden, perhaps because of the low incidence of lactose intolerance and the high rate of breast feeding.

The Soybean Magazine (Published by Food Partner AB, 292 00 Karlshamn). 1988. p. 7. Sidebar on Soja Semp with photo of can and Label. Talk with Ted Nordquist of Aros Sojaprodukter. 1988. March 27. He thinks the product was introduced in the mid-1970s. The key man was Leif Christensen, with whom Ted now works.

Talk with Leif Christensen. 1990. July 6. Followed by letter (fax) of July 10. This was Semper's second product made from soybeans. The name is pronounced "SO-ya Semp." It was introduced in Feb. 1975, as a liquid concentrate based on soy isolate, UHT sterilized, and packed under aseptic conditions in 450 ml cans.

2639. Tabuchi, Ichiro. 1975. Nijû seiki no mana: Majikku beenzu no deban; Daizu-nyû no eikyô narabini chiryô kôka ni kansuru hôkoku. II. ["The manna of the 20th century." Magic beans' turn to go on stage: Report on the nutritional and therapeutic effects of soymilk]. *Shokuhin Kaihatsu* (*Up-to-Date Food Processing*) 10(2):27-31. Feb. [3 ref. Jap]
• ***Summary:*** Contents: Introduction. About the soymilk and Soyalac program. (Soyalac is made by San-iku Foods in Japan.) Nutritional and healing effects of formulated soymilk (*chôsei daizunyû*). Summary of clinical experiments with premature infants who were fed soymilk and then had body measurements taken, as reported by Dr. W.B. Omans et al. in the 1963 *Journal of Pediatrics* (62:98). Experiments on raising infants on soymilk at the Shanghai Hospital (*Eisei Byôin*) in China. Report on dairy milk allergies and their cures. Follow-up research on users of Soyalac. Experiments on the effects of soymilk on the growth of elementary and high school students. Conclusion.

Note: This is the earliest Japanese-language document seen (Aug. 2013) that uses the word *daizunyû* ("soybean milk") or the term *chôsei daizunyû* ("formulated soybean milk") to refer to soymilk. Address: San-iku Foods, Japan.

2640. Yamaguchi, Yuzo; Hattori, Renzo; Kikuchi, Mitsuo; Moroe, Tatsuo. 1975. Kôji-kin busei hôshu i yoru tônyû no dasshu to karuboniru kagôbutsu no kangen ni tsuite [Deodorization of soymilk and reduction of carbonyl compounds by the conidiospores of *Aspergillus oryzae*]. *Nippon Nogeikagaku Kaishi* (*J. of the Agricultural Chemical Society of Japan*) 49(2):113-18. Feb. [11 ref. Jap]
Address: Central Research Lab., Takasago Perfumery Co. Ltd., Tokyo, Japan.

2641. Camerman, A. 1975. Soybeans in Rwanda. *INTSOY Series* No. 6. p. 233. D.K. Whigham, ed. Soybean Production, Protection, and Utilization: Proceedings of a Conference for Scientists of Africa, the Middle East, and South Asia (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** "Soybeans were introduced into Rwanda by INEAC [Institut National pour l'Étude Agronomique du Congo Belge] in the 1920s. Farmers started showing interest in soybeans in 1960. In 1969 production amounted to 550 ha and in 1973 there were 1,640 ha. The main reasons for such interest are: 1. Intensive extension work by the nutrition centers scattered around the country. These centers have demonstrated how to cultivate and how to prepare soybeans in the form of milk, cheese, flour. 2. Soybeans are more resistant to diseases than beans (*Phaseolus vulgaris*), which

are a basic staple of Rwandans. 3. Soybeans are ecologically plastic (flexible).

"The most widespread variety is Palmetto from Colombia."

Inoculated soybeans at the Rubana station give yields of 1,800–2,000 kg/ha, and on peasant farms 1,400 kg/ha. ISAR has shown that inoculation is very important, being the equivalent to the application of fertilizer containing 50–100 kg of nitrogen per hectare.

"The government of Rwanda envisages building, by 1976, a polyvalent oil mill based mainly on peanuts and soybeans. As soon as the mill is completed, 5,000 ha could be put under soybeans.

"Starting in 1975, ISAR hopes to cooperate with the International Soybean Program (INTSOY) in order to introduce new high-yielding varieties as soon as possible." Address: Head, Botany Section, Inst. des Sciences Agronomiques du Rwanda (ISAR), Rubana, BP 167, Butare, Rwanda.

Soybean Production, Protection, and Utilization: Proceedings of a Conference for Scientists of Africa, the Middle East, and South Asia (College of Agric., Univ. of Illinois at Urbana-Champaign). [17 ref]

• ***Summary:*** A review of the work at the University of Illinois with drum-dried flakes, home cooked and canned soybeans, soybean beverages and beverage products (incl. soy ice cream, yogurt, custard, and margarine), spreads (incl. a chip dip and a "soybean butter" that resembles peanut butter), snack foods (incl. dry roasted soynuts resembling peanuts and puffed snacks). Soy ogi is also discussed.

"The drum-dried flakes are made by preparing a smooth slurry of the cooked soybeans in water and drum-drying the slurry on a double drum drier. If the final product contains other materials, such as fruit or cereals, these are mixed in the soybean slurry and the combination is drum-dried. The dried flakes may be ground to any fineness desired. These flakes may be used directly, as a weaning food, or they may be mixed into other food such as baked goods to increase the protein content."

Concerning soy beverages and beverage products: A simple process was developed at the University of Illinois which allows the use of blanched soybeans to produce a stable soy beverage with *no* beany flavor. (A patent has been granted in France and Belgium, and is pending in other countries.) The major advantages of this process are an excellent mild flavor, no off-flavor, destruction of antinutritional factors, and increased nutritional value relative to most other soybean beverages. The major disadvantage is the necessity of homogenization in order to produce a stable suspension. The beverage based has been used to replace milk in products such as soy ice cream, soy yogurt, custard, and diet margarine, all of which are prepared by conventional methods. Soy beverage base is presently marketed by G.B. Pant University, Pant Nagar, India. The selling price (which allows some profit) is about one-third that of cow's milk. Address: Asst. Prof., Dep. of Food Science, International Soybean Program (INTSOY), Univ. of Illinois, INTSOY.

Soybean Production, Protection, and Utilization: Proceedings of a Conference for Scientists of Africa, the Middle East, and South Asia (College of Agric., Univ. of Illinois at Urbana-Champaign).

• ***Summary:*** "Soybean was first introduced to Sri Lanka in 1947. Various trials were carried out in the dry zone and hill country but, because soybean was unable to compete with other pulses, little attention was given to it...

"Failure of attempts to grow soybeans in the past has led to a general belief that they cannot be grown in Sri Lanka in sufficient quantities for commercial exploitation. In 1973, however, with the introduction of the first International Soybean Program (INTSOY) kits to Sri Lanka, it has been found that soybean does very well in most locations, and research since then has shown that there is a possibility of intercropping certain plantations with soybean...

"Soybean is mainly consumed in Sri Lanka as a substitute for lentils. There is also an increasing demand for soy flour used in a mixture with rice and wheat flour. Pilot projects for the production of soy milk, soy oil and blending of cowmilk for spray-drying have been initiated. Since there is a severe shortage of animal feed, soybean and its by-products are being increasingly used in the livestock industry.

"The acreage under soybean is increasing annually, from a few acres in 1971 to nearly 5,000 acres in 1974."

Detailed information on soybean production research is given, including yields for many varieties tested, nutritional composition of varieties, nodulation data, effect of spacing on yield, effects of pesticides on nodulation, and effect of storage at various temperatures and times on germination of

different varieties.

A map of Sri Lanka shows the "General agro-climatic zones of Sri Lanka and International Soybean Program (INTSOY) locations for 1974." Colombo and CARI are both in the West Zone in the southwest of the country. Address: Central Agricultural Research Inst., Peradeniya, Sri Lanka.

Soybean Production, Protection, and Utilization: Proceedings of a Conference for Scientists of Africa, the Middle East, and South Asia (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** Table 14 shows "estimated current annual production of various edible soy products in the United States (1,000 metric tons): Soy flour and grits 340-450, soy protein concentrates 30, isolated soy proteins 25, textured soy proteins 90, spun protein fibers 8. Discusses processing techniques, products made from soybeans and their yields, other uses of soy products (pet foods, lecithin, soymilk incl. Vitasoy, cereal-soy blends such as CSM, soy flour products [incl. calf milk replacer]), and factors influenced by soy flour in various products.

It is estimated that 330,000 to 450,000 metric tons of soy meal, grits, flour, and textured soy proteins (flour) are used in U.S. pet foods each year. "On a protein basis, this undoubtedly makes up over 50 percent of the total protein consumed by pets, mainly dogs." In Hong Kong, Vitasoy reportedly outsells carbonated beverages. In 1973 an estimated 150 million bottles of Vitasoy were sold. Address: Food Ingredients, Wheeling, Illinois.

2646. Mmbaga, E.T. 1975. Highlights of soybean production in Tanzania. *INTSOY Series* No. 6. p. 252-53. D.K. Whigham, ed. Soybean Production, Protection, and Utilization: Proceedings of a Conference for Scientists of Africa, the Middle East, and South Asia (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** "Soybean... was first introduced at Amani, Tanga [region of today's Tanzania], in 1907 by the Germans, and during the second World War (1939-1947) the British tried to grow soybean in the West Lake Region but their efforts were in vain. The yields were terribly low due to poor varieties.

"The potential of soybean was realized later and a breeding program was initiated in 1955 and completed successfully in 1963 at Nachingwea, which was a good target for soybean improvement after the failure of a groundnut scheme. Nachingwea varieties proved suitable for low altitudes...

"General Agricultural Products Export Corporation (GAPEX) and National Milling Corporation are the two agents that buy all seed crops. These corporations are extremely dependable and, as a result, the farmers' interest in going into soybean production has been accelerated to some degree...

"Village soybean projects, United Nations Children's Fund, and nutrition extension services are the three main bodies involved in a campaign for better nutrition levels for the whole nation... Soy flour is at present being used in making porridge, at a ratio of one part soy flour to three parts maize flour. Breads of 10 percent soy flour and 90 percent wheat flour are common, especially in the Morogoro region. Porridge and soymilk are generally used extensively in school feeding programs and the acceptability of these products is very high.

"The processing of soybeans to soy flour is accomplished by using the locally existing mills...

"Future prospects for the soybean in Tanzania are absolutely bright." Address: Agricultural Research Inst. Ilonga, Private Bag, Kilosa, Tanzania.

Soybean Production, Protection, and Utilization: Proceedings of a Conference for Scientists of Africa, the Middle East, and South Asia (College of Agric., Univ. of Illinois at Urbana-Champaign). [11 ref]
• ***Summary:*** An excellent history of soybean research and production in Mauritius, drawing on many original sources, from the pioneer P. Boname who grew the country's first soybeans several years prior to 1909.

"In Mauritius soybean meal was never popular as a constituent of animal feed, mainly because of its price and the distance from important centers of production. In the human diet, however, it never fell out of favor with the Mauritians of Chinese origin. In some places in Port Louis, soymilk and soybean curd are prepared in the home, and the curd is sold in the market and is available in meals in Chinese restaurants." Address: Ministry of Agriculture, Reduit, Mauritius.

2648. Panday, M. 1975. Soybeans in Nepal. *INTSOY Series* No. 6. p. 221-22. D.K. Whigham, ed. Soybean Production, Protection, and Utilization: Proceedings of a Conference for Scientists of Africa, the Middle East, and South Asia (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** "Soybean is the centuries-old crop in Nepal. Growing of soybean with maize and millet in intercropping is an old practice in Nepal. Not only soybeans, but almost all kinds of edible summer and winter legumes, are grown in an intercropping pattern...

"Due to lack of marketing facilities, our farmers grow the soybeans only for their self-sufficiency, leaving a very little amount to sell in the market. Our farmers feed the soybean flour to their cattle, especially cows and buffalo, during their lactating period in order to get more milk.

"Local methods of using soybeans in the human diet are:

(a) Roasted soybeans mixed with roasted corn are eaten in the daily tiffin. (b) Roasted soybean cotyledons mixed with garlic, onion pieces, salt, and chili are served as a cocktail. (c) Sprouted soybeans mixed with other sprouted pulses are used in vegetable soup. (d) Green soybean pods are eaten after steaming.

"Nowadays the soybean eating habits have been changed by the people. Some have started preparing milk, yogurt, and the like from soybean. Rice cooked in soya milk with some coconut pieces is becoming popular. People have started using soybean flour in their baby food." Address: Dep. of Agriculture, Education and Research, Khumaltar, Lalipur, Nepal.

2651. Miller, Harry W. 1975. Re: On soymilk, tofu, and their production. Letter to William Shurtleff, c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan, April 30. 2 p. Typed, with signature on aerogram.

• ***Summary:*** "Yesterday Apr. 28 your letter arrived and it was so helpful and interesting. I am answering your enquiries as best I can. The first is the hot and the cold grind. Soybeans are finding their way in so many types of foods these days and I think you will find depending on their place in the foods we will find varying procedures. On account of costs economy must be considered. Our research tells us that grinding with Stone Buhrs and disintegration with blenders equal same water soluble amount of solids. On a large scale Grinders are cheaper than disintegrators but [for] small production blenders are better.

"Also our findings keeping the temperature under 150 degrees Fahr. of the slurry before filtering gives us approximately the same yield as [if] brought to 212 degrees [boiling]. So when we make soy milk the higher temperature to filtering brings out of the fiber more of the bean taste. This is a question debatable, I know.

"When making ToFu we bring the slurry just up to boiling and our directions is wrong on saying the water extract is treated same for tofu as for soy milk. We know that long boiling or high pressure for at least 7 to 8 minutes at 100 Centigrade is needed to rid the bean of trypsin inhibiter or perhaps gas former. But not for the tofu. The figure of adding 556 grams cerelose or corn syrup to 16 lbs or 7½ kilos soy extract for milk is rather high, more than 7%. Though 7% is about the standard for carbohydrate in Mother's Milk. And we are inclined to follow the formula of human milk rather than Cows Milk for mankind. In our regular milk formula we aim to add 6% carbohydrate, as carbohydrates of soybeans are questionable.

"Providing you get the soy flavor out in processing. I agree that soymilk is good with less corn syrup. The sheet I sent you is the first run off and it needs some corrections and the sugar content should be lowered 1¼%. I have tried to calculate what the total solids are in your finished soy milk. Your water dilution may be less than ours. Out of 5 pounds of soybeans we make 50 pounds of soy milk, slightly over 6 gallons. To this has been added 3 pounds cerelose, 3O grams salt, 1 pound of corn oil. The resulting milk tests 13% solids.

"You make reference to our cutting the curd in 2 inch squares. It is general practise in cheese makers in this country to cut the curd by that, as the curd begins to form you run a sharp-edged stick, or in cheese plants a stainless steel long knife passing three the slit area is curd, so that the curd gathers together between the cuttings, and they know when best to separate and place in cheese pressing boxes. This may not be necessary in soy curd but it seems to be a guide to us when to place and or transfer to the cheese pressing box.

"We surely have something to learn [about] how to make so much Tofu out of a pound of soy beans. Your beans may be a little heavier in protein as we find the large beans we get yield more protein, but not that difference. We have reached 3 pounds but that depends on when we stop dewatering the curd, but any curd more than 3 pounds out of 1 pound of soy beans is hard to handle. But on Tofu we have much to learn, however on Soymilk and building up of maximum yield of total water soluble solids as also taste wise, that is getting rid of the beany flavor, we have definitely made progress and I think moved ahead of any that we have heard of. As for mouth feel, possibly more concentrated formula may be acceptable. The ratio of ingredients we take to the human milk formula and not cows milk made to rear a calf, a hairy animal and rapid grower. I did not have time this evening to review you chapter 10 on soy milk, as I am writing this at home and it is filed at my office with Loma Linda Foods.

We have had experience in the above named coagulants, tried them all except sea water and sea salt. We mostly prefer Calcium sulphate and Glucono delta Lactone for convenience.

"I know that the Japanese are very meticulous in making the soy curd, and the people of using same. To translate their methods in writing, you have done very well, but still I can assure you that experience is needed in this field. Soy milk and Tofu the world as for western nations has yet to learn to use. Thanks for your letter and your points well taken and I remain, very sincerely yours, Harry Miller.

"Bill, I have written this letter at the end of a very busy day with many interruptions, so it is so poorly typed I almost decline to mail it but it does explain to you what we are doing. I assure you that soy foods are very hard to put over in U.S.A. but people are learning, they are very sensitive to soy flour and Tofu also soy Milk well made has a field for the future. HWM."

Note: Dr. Miller was age 95 years, 9 months and 28 days when he wrote this letter by himself, using a manual typewriter. He was born on 2 July 1879 in Ohio. Address: M.D., 11384 Norwood Ave., Riverside, California 92505.

2657. *Soybean Digest.* 1975. Mexico develops mechanical cow. May. p. 53.
• ***Summary:*** An engineer in Mexico, Manuel Rojo Castillo, has invented the equipment and manufacturing process for making highly nutritious soy milk directly from whole soybeans. "Plans are being made to build a prototype model in the near future funded by the Mexican government." This "mechanical cow" produces 10 liters of soy milk from each kg of whole dry soybeans. This new process significantly lowers the cost of making soy milk, while improving the flavor. Now "it is possible to obtain a texture equal to that of cow's milk with comparable nutritional value and price less than true milk."

"Although soy milk is high in protein, it has not previously been accepted due to the high price involved since it was made with soy flour; its odor and taste have been incompatible with the traditional taste; the sandlike sensation produced due to the size of the particles in suspension; and the decrease in protein content caused by eliminating the outside covering of the soybean to eliminate odor problems."

"In Mexico there exists a deficit of cow milk of 2.4 million liters daily... While principally designed for human consumption, the new soy milk can also be used in cheese and for feeding calves. As a milk replacer, the enormous volume of animal proteins would be saved which are presently wasted due to the premature slaughter of calves since it is costly to feed them with the cow's milk."

Note: This machine is different from the "Mechanical Cow" developed in Sao Paulo, Brazil, by Dr. Roberto H. Moretti of Vanguarda Mecanica. Development work on this Mechanical Cow began in 1976; it was patented in 1979. By Nov. 1980, according to Dr. Moretti, 80-90 Mechanical Cows were in operation in Brazil.

2658. *Soybean Digest.* 1975. ASA promotes soy for nutrition. May. p. 8-9.
• ***Summary:*** American Soybean Assoc. market development activities from the Mexico City regional office helped production of soy protein products from less than 2 tons daily in 1971 to over 35 tons daily at present. Proteida resulted from the first government effort to introduce texturized soy protein (TSP) into meat products. The factory to produce Proteida was inaugurated by Mexico's

President Echeverria in Sept. 1973. Initially only a few hundred pounds of meatballs and a pre-cooked patty called "Milanesa" were produced. "This patty requires no refrigeration and was developed by the National Nutrition Institute. Now this product is being sold in the government CONASUPO stores at a rate of approximately 110,000 lb/day at a very low price in low income areas. At a 25% TSP level this amounts to 27,500 lbs. of TSP daily." Proteida is produced by the Mexican government packinghouse.

Alborada is beef-flavored TVP which is made by the Miles/Worthington group. Sold in an attractive paperboard box, it "has received very good acceptance by the public and is being sold in all the leading supermarkets. It is also sold in large quantities to institutions such as restaurants, hospitals, meal packaging plants and canned food producers.

"Another TSP product, Protoleg, is the oldest product on the market. Its producer, Industrial de Alimentos, is now the largest manufacturer of soy protein products [in Mexico] and cannot keep up with the demand. It is the leader in Mexico with tasty and economically priced soy products that appeal to Mexican appetites.

"The largest volume of sales is soy flour for baking. The tortilla industry consumes some 60% of the total. The remaining 40% is about evenly divided between TSP and beverage or milklike products. The largest bakery in Mexico, Bimbo, plans to start producing a soy based milk substitute, containing sweet whey powder. The product will consume 5 million pounds of soy flour annually...

"Last December ASA's Mexico City office contracted for the services of an experienced home economist-nutritionist to give lectures, write articles and inform the public in general of the many benefits and advantages of soy protein. Mrs. Ruth S. Orellana has over 25 years experience in Mexico in human nutrition and diets and is doing an excellent job of promoting soy. ASA will soon publish a recipe booklet for soy based traditional dishes for Mexico and all Latin America. Mrs. Orellana will be travelling throughout the entire territory to spread the news about soy nutrition." A photo shows paperboard packages of the following products: Alborada, Protoleg, Rikiroz, Estrella Blanca, Soyacyt.

Note: This is the earliest English-language document seen (Aug. 2013) that uses the term "milklike products" (or "milklike product") in connection with soymilk.

2659. Miller, Harry W. 1975. Re: On soymilk, tofu, and their production. Letter to William Shurtleff, c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan, June 4. 2 p. Typed, with signature on aerogram.

• ***Summary:*** "Your much appreciated letter has been neglected along with considerable other correspondence. Two reasons we have been on a very crowded program of Research and that I have been away for a time. I do thank you for your notes on some of the items that we have written you.

"First point about the Cooking of soy milk. We are agreed on use of blender for home minimizing of soy bean particle size, though we do have a small Mexican mill use to grind soaked corn and works well but is hand driven and time consuming, can use for making peanut butter as well costs around US $15.00, hard to buy in U.S.A. The double boiler works quite well with brine in outer chamber and commercial salt is cheap here, but I also agree that by constant stirring, boiling can be carried on safely. The Chinese have an ideal system of steam jet cooking in which the lower chamber of a welded together double boiler in which steam is generated in the bottom pan and led by a pipe to the bottom of the cooking chamber so that you get no scorching and active boiling by the release of live steam into the milk of the upper pan. Its simple and takes the place of the steam boiler, except its adapted for milk and To fu making.

"Regards the richness of soymilk, we find the Americans like that thin soymilk best. Possibly its because the soy flavor is more diluted. The rule here in formulation is to make a gallon of Soy Milk out of one pound soybeans.

"As Soy milk keeps well for a week under refrigeration (40 degrees Fahr.) so the house wife likes to grind cook and prepare a weeks supply of soymilk for the family. But as yet the home method of making soymilk is just in the beginning and not many do it.

"You refer to the high percentage of cerelose used here in soymilk as compared with acceptance in Japan. Let me explain our position about the formulation of Soy Milk. The ratio of fat, protein and carbohydrate differs greatly as between cows milk, mare milk, pigs milk, water buffalo milk, human Milk and other animals. These proportions are reflected in the rate of growth, the question of a large hair coating as in the cow and sheep, the energy requirement as for energy nature does not choose to use Protein for combustion to work, its function is to repair muscles or care for protein loss in secretions and body regulators such as the ductless glands, Thyroid, adrenals etc., etc. for wach [?] animals growth an analysis should be the guide, for the first year of growth supplied by milk is a good guide. Human milk formula is fat 3.5%, protein 1.7 percent, Carbohydrate 6 to 7%. For an adult after growth 35 to 50 grams seems adequate Protein. Therefore we lean strongly to a standard formula for Soy Milk should be fat 3 to 3.5%, Protein 2 to 2.4%, Carbohydrate 6%. In a one to seven or eight dilution the soybean will yield almost 3% protein, a half the needed fat and so we add 2% fat in the form of liquid vegetable oil and as for carbohydrate edible carbohydrate is rated very low possibly not more than 1% so we add 5% sugar and prefer the cereal sugars with low sweetening effect such as corn syrup.

"Such a milk as I have just described and what we are making and aiming at can be used in cooking, baking as also

for general beverage purposes.

"Now just a final word on Tofu, and we have much to learn to get 8 [?] pounds of marketable Tofu out of one pound of soybeans. Since To fu is exposed to heat after its made as milk is not, thus we pressure cook milk 10 minutes and Tofu just brought to boiling point and then curdled. In Tofu Making here when the curd jells, by raking a paddle a few times thru same seems to hasten the curd preparation to be transferred to the pressing box. It need not be two inches 3 or 4 inches divisions. What you have written on soymilk and Tofu is most interesting. Regret delays. with best wishes, very sincerely, Harry W. Miller.

"We have much to learn and am now working on making a loaf Cheese. We have made some progress and believe that we shall solve the problem in time." Address: M.D., 11384 Norwood Ave., Riverside, California 92505.

2667. Klemsrud, Judy. 1975. World vegetarians meet to talk–and eat. *New York Times*. Aug. 22. p. 37.
• ***Summary:*** About the World Vegetarian Congress, held at the University of Maine in Orono, Maine. Some 1,500 people from 30 countries attended the 12-day meeting. According to Jay Dinshah, president of the North American Vegetarian Society (which is host to the conference) most people are here for 3 reasons: (1) They think meat-eating is harmful to their health; (2) They came for ethical reasons, because they believe it is wrong to slaughter animals for food; and (3) They believe that vegetarianism would help

solve the world food crisis.

According to Mr. Dinshah, about 50% of the worlds nearly four billion people are already vegetarians, many of them for religious reasons or because they have no choice. In the United States about 10 million people are said to be vegetarians.

"Soya milk and cow milk are available at all times as are fruit juices, spring water, and herb tea." Attendees include Dr. Gordon Latto (a retired London naturopath, elected yesterday as president of the International Vegetarian Union), Helen and Scott Nearing (the reigning celebrities; he is age 92 and they own a farm nearby), comedian Dick Gregory, and author Nathaniel Altman.

Photos show: Dr. Gordon Latto, president of the International Vegetarian Union. A woman (Alexandra Lonc of Detroit, Michigan) in a t-shirt that states: "Be kind to animals–Don't eat them." Address: Special to the New York Times.

2668. Nelson, A.I.; Steinberg, M.P.; Wei, L.S. Assignors to University of Illinois Foundation. 1975. Soybean beverage and process. *U.S. Patent* 3,901,978. Aug. 26. 17 p. Application filed 6 July 1973. [10 ref]

• ***Summary:*** This is the earliest known University of Illinois soyfoods or soymilk patent. Based on a pre-blanch of intact soybean cotyledons, grinding, and homogenization of the slurry to yield a soymilk base containing the okara or soy fiber.

Dehulling is optional; its only purpose would be to decrease the fiber content and viscosity of the finished product. The base may be diluted with water to obtain a milk containing 3.6% protein and 1.8% fat. Such a product can maintain its physical and organoleptic stability for over one month at 34 def. F.

At the time of the patent application, Mr. A.S. Alpert, University Patents, Inc. (2777 Summer St., Largo Building, Stamford, Connecticut, 06901) the exclusive licensing agent, issued a 2-page statement titled "Soybean Beverages" which noted: Addition of a small amount of breakfast cocoa results in a tasty chocolate drink. "The base may be diluted with cottage cheese whey, presently an environmental pollutant, to obtain a highly nutritious and good-tasting milk-like beverage. Other products which have been prepared with this soy beverage base include a 'diet margarine' soft spread, frozen ice cream-like product, and a whipped shake product. These products have been taste-tested by numerous persons who have visited the University, and have received enthusiastic responses." Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL.

2669. Dinshah, Freya. 1975. XXIII World Vegetarian Congress cook book. Malaga, New Jersey: North American Vegetarian Society. 40 p. Illust. No index. 27 cm. Spiral bound. Introduction by H. Jay Dinshah.

• ***Summary:*** This is a vegan cookbook. This congress is a milestone of the vegetarian movement both in North America and worldwide. "The International Vegetarian Union, founded in 1908, had held 22 previous Congresses from 1908 to 1973, each in the British Isles, continental Europe, or India." A congress is held every 2 years. The North American Vegetarian Society was created with two goals: (1) To bring about a complete renaissance of the vegetarian movement in the United States and Canada, and (2) To organize the 23rd Congress, which was held 16-28 Aug. 1975 at the University of Maine, Orono, Maine. Daily menus served at the Congress are listed on pages 7-8. Soya milk, and Willow Run Soya Lecithin Spread were available at each breakfast. Willow Run Spread, Soy Mayonnaise, Tamari Soy Sauce, Soya Milk, and Roasted Soya Beans were available at each lunch and dinner. Soy-related recipes include: Soya sprouts (p. 14-15). Soya butter (made with 3/4 cup soya powder, and ½ cup each soy oil and water, p. 16). Soy mayonnaise (with soya powder and Soyagen powder). Soya beans (boiled, then baked, p. 17). Soya peanut savory (with cooked soya beans, p. 20). Soya rounds (with cooked soya beans, baked, p. 20). Several tablespoons to 2/3 cup of Soyagen powder (powdered soymilk) or soya powder are used in many of the dessert recipes (p. 30-36). Soya milk (from soya powder, p. 32). Bread pudding (with soya milk, p. 32). Granola (with soya powder, p. 39). Page 40 lists 34 vegetarian societies affiliated with NAVS in the USA. Address: North American Vegetarian Society, 501 Old Harding Highway, Malaga, New Jersey.

2670. Prakash, C.; Sharma, S.P.; Mulay, C.A. 1975. Utilization of soymilk in flavoured milk preparation. *J. of Food Science and Technology* (*Mysore, India*) 12(4):163-65. July/Aug. [6 ref]

• ***Summary:*** (1) Standardized buffaloes' milk (3% fat, 8.5% solids non-fat) or (2) recombined milk (3% fat, 8.5% solids non-fat) prepared from skim milk spray dried at low heat plus ghee, was mixed with soymilk at 0, 10, 20, 30, and 40% levels, with the addition of 8% sugar. After homogenization and pasteurization, colour and synthetic flavour were added. Body and texture of the milk were improved by mixture of 20% or more of (1) or (2).

Flavored soymilk mixed with 30% or more of (1) or (2) was acceptable to 7 of 8 judges. Address: National Dairy Research Inst., Karnal, India.

2671. Fomon, Samuel J. 1975. What are infants fed in the United States? *Pediatrics* 56(3):350-54. Sept. [35 ref]

• ***Summary:*** About 10-15% of U.S. infants receive lactose-free soy protein isolate formula. Table III (p. 352) shows the estimated market share of the leading milk-based and milk-free [soy-based] infant formulas. It is estimated that four milk-free formulas are used for feeding 92% of all infants receiving commercially prepared milk-free formulas, as follows: Isomil (Ross) 43%. ProSobee (Mead Johnson) 24%.

Neo-Mull-Soy (Syntex) 18%. Soyalac (Loma Linda) 7%. Plus: Nursoy (Wyeth) 3%. All others 5%. The term "beikost" refers to "foods other than milk or formula fed to infants." Address: M.D., Dep. of Pediatrics, Univ. of Iowa, Iowa City, Iowa.

2672. **Product Name:** [Defatted Soy Flour, and Cereal-Soy Blends].
Manufacturer's Name: Productos Nutricionales, S.A. (Pronasa).
Manufacturer's Address: Lago Muritz 84-B, Mexico 17, D.F., Mexico. Phone: 531-31-15.
Date of Introduction: 1975. October.
New Product–Documentation: Talk with Gil Harrison of American Soybean Assoc. 1989. April 21. This company was run by Donald Reese, a graduate of Stanford University. He made defatted soy flour, and cereal-soy blends. General Mills was the first company to make a defatted soy flour in Mexico. They had had their own little cereal-soy mixing plant. Their first experiments were done with a soy beverage (made from defatted soy flour and flavor) served to government dam workers. They probably started in the late 1960s and were definitely there by 1971. When they couldn't make it go, Don Reese purchased all the machinery from General Mills. He wouldn't let Gil Harrison into his plant on Lago Muritz in 1971. He made cereal-soy blends and a soy beverage, both containing sesame. He ended up making all the infant formulas for Mead Johnson and others. The plant finally closed over a labor dispute. He is still is in Mexico but is no longer working with soy.

2673. Singer, Peter. 1975. Animal liberation: A new ethics for our treatment of animals. New York, NY: New York Review. Distributed by Random House. xix + 301 p. Oct. Illust. Index. 18 cm. Paperback edition published Sept. 1977 by Avon Discus. [200* ref]
• ***Summary:*** This book, a milestone in and "bible" of the animal rights movement worldwide, first popularized the concepts of animal rights and speciesism (pronounced SPEE-shees-iz-um, a term first used in 1973) as logical extensions of human rights and racism. It helped to make 1975 a year that saw explosive growth in the animal rights and vegetarian movements. Singer is an Australian academic.

The author, an Australian philosopher, argues for an end to oppression and exploitation of non-human animals, discusses animal experimentation and factory farming, and presents vegetarianism as an opportunity to take a political, economic, and moral stance in our daily lives.

Contents: Preface (It begins: "This book is about the tyranny of human over nonhuman animals. This tyranny has caused and today is still causing an amount of pain and suffering that can only be compared with that which resulted from the centuries of tyranny by white humans over black humans. The struggle against this tyranny is a struggle as important as any of the moral and social issues that have been fought over in recent years"). Acknowledgments. 1. All animals are equal... or why supporters of liberation for blacks and women should support animal liberation too. 2. Tools for research... or what the public doesn't know it is paying for. 3. Down on the factory farm... or what happened to your dinner when it was still an animal. 4. Becoming a vegetarian... or how to reduce animal suffering and human starvation at the same time. 5. Man's dominion... a short history of speciesism. 6. Speciesism today... defenses, rationalizations, and objections to animal liberation. Appendices: Cooking for liberated people (incl. Seventh-day Adventists, bread, peanut butter, tahini, miso, hummus, and Tartex, Chinese recipes, mung bean sprouts and tofu, Indian recipes, Middle Eastern recipes, flat Arabian bread, chickpeas and felafel, Italian recipes, macrobiotic recipes {incl. soy sauce, soybeans}, meat substitutes {incl. TVP, Granburger, Protoveg, Itona, Vitpro, Loma Linda meatless frankfurters, imitation bacon bits}, and milk substitutes–often made from soybeans), further reading, organizations.

Singer's book was not just a philosophical treatise. It was a call to action. Invoking the concept of speciesism, Singer deplored the historic attitude of humans toward non-humans as a "form of prejudice no less objectionable than racism or sexism," and urged that the liberation of animals become the next great cause after civil rights and the women's movement. Singer's popular book produced two important effects. First, it reintroduced to the anti-vivisectionist cause an intellectual basis, a philosophical orientation, and a moral focus. Second, it attracted to the animal rights cause a host of new activists who started many new organizations. The most active and visible of these has been PETA (People for the Ethical Treatment of Animals, in Washington, DC), which by 1988 was thought to have 200,000 dues paying members in the USA.

Singer maintains that: "to treat animals as resources and argue about when use is sustainable, is a classic example of economic rationalism running heedlessly over non-economic values. We should no more hand our wild animals over to the tender mercies of the market than we should hand our children over to the same market forces. Neither children nor wild animals are a 'product' or a 'resource' at all."

Note: This is the earliest document seen (Oct. 2009) that mentions Itona, a British maker of soymilk and meat alternatives. Address: Australia.

In: American Soybean Assoc., ed. 1975. Memorias: Primera Conferencia Latinoamericana Sobre la Proteina de Soya. Mexico City. 232 p. See p. 44-55. [5 ref. Spa]
• ***Summary:*** Provesol is a fine powder with a protein content

of 50%. Bebida Proteinica is a liquid containing 2.7% protein. These are apparently not commercial products. El Instituto de Bienestar Familiar de Colombia studies food and its availability. Address: Instituto de Investigaciones Technologicas de Colombia.

2675. **Product Name:** Jolly Joan Instant Soy Milk Powder.
Manufacturer's Name: Ener-G Cereal Co.
Manufacturer's Address: P.O. Box 24723, Seattle, WA 98124.
Date of Introduction: 1975. November.
Ingredients: Soya bean powder.
Wt/Vol., Packaging, Price: 18 oz.
How Stored: Shelf stable.
New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 39. Ener-G-Foods–Jolly Joan. "Inst. Soy Milk Powd." (18 oz).

In: American Soybean Assoc., ed. 1975. Memorias: Primera Conferencia Latinoamericana Sobre la Proteina de Soya. Mexico City. 232 p. See p. 104-18. [9 ref. Spa]
Address: Instituto Mexicano de Investigaciones Technologicas.

2677. Kothari, S.L. 1975. Soyamilk: An ideal food. Nagpur, India: Soyghurt Food Products & Co. 13 p. Nov.
• ***Summary:*** This is basically a promotional brochure for a bottled soyamilk product made by Soyghurt Food Products & Co. It contains photos of the product (apparently introduced in about 1974), of Dr. S.L. Kothari, and of the company's soyamilk stall at the Kanhan Agricultural Exhibition of 1975. Gives composition and nutritional value of the product, results of a lab test conducted in Aug. 1974 on both plain and flavored products at Nagpur, and numerous testimonials by individuals to the value of the product. Address: Soyghurt Food Products & Co., Wardha Road, Sitabuldi, Nagpur 440012, Maharashtra (MS), India. Phone: 22645.

2678. Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. '75. Ann Arbor, Michigan. [vii] + 93 + 8 p. Index. Illust. 28 cm.
• ***Summary:*** This catalog, largely printed by a computer, contains many ads on unnumbered pages. Contents: Hi! Ordering and service information. Bulk: Whole grains, beans, seeds and nuts, dried fruit, nut butters, etc. Refrigerated and frozen ("Frozen meats {beef}–No DES, steroids, female hormones, antibiotics, or stimulants used in feeding; Chickens–No hormones & antibiotics. Ask for turkeys and hens during Thanksgiving." "Frozen soy products: soy milk and tofu soybean curd"). Books. Packaged (by company and product category). Index by product. Index by manufacturer.

"We are happy to announce that Midwest and Mountain High are now one entity... We go into the fall and winter seasons with a fall and winter catalog, delivery schedule, and computer system." For new developments, watch the monthly newsletter and sale sheets. "Your Friends at Midwest."

Includes the following ads (the number is that of the facing page). Wheat Stalk Soya Burger (Cotati, California, p. 17). Arrowhead Mills (p. 27). Dr. Bronner's Magic Soap (p. 32). Chico-San (p. 35). Erewhon (p. 41, incl. "Trail Mix, Niks"). Fearn Soya Foods (p. 42; shows a package of Fearn Soy/o Buckwheat Pancake Mix). Flavor Tree–Pernut soy beans (p. 42). Hain (p. 49, "Cold pressed safflower oil," mayonnaise, and margarine). Health Main (p. 54; soy is not mentioned–only natural potato chips and yogurt dressing & dip). Infinity Herbal Products Ltd. (p. 56). Malt-O-Meal–Soy Town (dry roasted soy beans, p. 60). NF Factors (Lafayette, Calif., p. 67. A photo shows a can of Protesoy). Pure & Simple (p. 72, 795 West Hedding St., San Jose, California 95126; mainly fruits, fruit juices, fruit butters, vinegars). Sovex (p. 83-84. "The fastest selling natural cereal line on the market... Here's the one that started it all, the original Crunchy Granola"). Viobin (wheat germ oil, p. 85F, 89). Tiger's Milk Products (p. 86).

Companies whose products are listed with ads include: Back to Nature (granola, p. 28). Country Natural (granola, p. 36). El Molino (p. 38-39; incl. Cara Coa Crunch Bar, Carob Fruit & Nut Bar, Carob Mint Candy, Chia Seeds, Flaxseed–Whole, Pumpkin seeds, Soybeans–whole, Soya flour, Soya grits, Carob Coated Soybeans). Ener-G-Foods–Jolly Joan (incl. Instant Soy Milk Powder, Wheat & Soy P&W [Pancake & Waffle] Mix {regular and low salt}, p. 39). Flavor Tree (Pernola cereal, Pernut soy beans–salted, cinnamon, salt free, garlic, Pernut toasted soybeans–salted, salt free, garlic, onion). Wok sets in gift box, Quaker City grain grinder, Corona hand mill (p. 58). Lassen Foods (granola, p. 60, 60F). Mac Knives (p. 60). Orjene (p. 70-71). Parkelp–Ocean Labs (p. 71, incl. Sea Zun).

The Chico-San Inc. ½-page ad (facing p. 35) features four products; a photo of each is given and each is K-Parve: Rice Cake San-Wich (filled with sesame seeds and Yinnies Rice Syrup). Yinnies Rice Syrup (natural sweetener, made from rice and barley). Yinnies (traditional oriental confection, wrapped like individual candies). Rice Cakes in 4 varieties: Salted or Unsalted, Rice Cakes with Millet–Salted. Rice Cakes with Buckwheat–Salted. "Other Chico-San Products: Organically grown brown rice. Lima soy sauce, miso (soybean puree), rice malt vinegar, sesame butter, sesame oil, nigari, barley koji, tekka, sesame salt, sea salt, salt plums, kuzu, organic rice cream, organic rice flour, black

soybeans, azuki beans, sea vegetables, mu tea, lotus root tea, twig tea, toothpowder, seaweed shampoo." Address: Ann Arbor, Michigan 48107. Phone: 313-769-8444 or in Area 313 1-800-552-6297.

2679. **Product Name:** Soy Milk [Plain, Carob], Tofu Soybean Curd.
Manufacturer's Name: Midwest Natural Foods Distributors, Inc.
Manufacturer's Address: Ann Arbor, Michigan. Phone: 313-769-8444 or in Area 313 1-800-552-6297.
Date of Introduction: 1975. November.
Wt/Vol., Packaging, Price: Soymilk: 16 or 32 oz. Tofu: 10 oz.
How Stored: Shelf stable.
New Product–Documentation: Midwest Natural Foods Distributors, Inc. 1975. Catalog #7. Nov. Ann Arbor, Michigan. 108 p. See p. 15. Frozen. "Soy products–soy milk has all amino acids, contains no animal fat, no lactose."

Note: There are several reasons for thinking that these two products were probably made or purchased from Health Valley or Health Maid in California: (1) In the first index, under "Soy Products," those from Health Maid are shown as appearing on pages 14-15. Although the name "Health Maid" does not appear on p. 15, there is good reason to believe that Health Maid was selling tofu by Nov. 1975; Shurtleff and Aoyagi visited their warehouse in Los Angeles in Jan. 1976 and saw their tofu. (2) The main entry for "Health Maid Natural Foods" states: "See also Refrigerated-Frozen." (3) Although located in Ann Arbor, Michigan, the same city as Midwest Natural Foods, The Soy Plant did not start making tofu until Jan. 1977, or soymilk until July 1977. (4) It would only make sense to freeze tofu and soymilk if they had to be shipped from a distant location, such as California. Freezing totally transforms the texture of tofu, and degrades the quality of soymilk. (5) In Midwest's Catalog 13, spring 1979, the same soymilk (frozen) and tofu (now refrigerated) products are shown as coming from "Hvly" (Health Valley).

2680. *Soybean Digest.* 1975. New soy foods–Japanese make switch. Nov. p. 24.
• ***Summary:*** Today "ASA [American Soybean Assoc.] market development is introducing in Japan a new form of soy protein in answer to the increasing westernization of Japanese tastes and to the high prices of meat and fish in Japan. The result is a boom in the new use of soy protein products, which take the form of textured soy protein meat extenders and meat substitutes, soy-fortified bread and macaroni products and soy milk. Only negligible amounts of soy protein materials were used in these types of foods in 1970... New soy protein was first introduced in the form of 'sloppy joes' in the Japanese school lunch program in 1972 by ASA."

2681. Suberbie, F. 1975. Produccion y utilizacion de bebidas a base de soya [Production and utilization of soy-based beverages]. In: American Soybean Assoc., ed. 1975. Memorias: Primera Conferencia Latinoamericana Sobre la Proteina de Soya. Mexico City. 232 p. See p. 88-93. [12 ref. Spa]
• ***Summary:*** Includes a discussion of various commercial products, such as Sustilac, Isolac, Soyamalt, and Soyacit. Address: Director General, Industrial de Alimentos, S.A., Mexico.

2682. Tovar Galvez, Luis Raul. 1975. Productos derivados del frijol soya tecnologias tradicionales en el Lejano Oriente [Traditional technology soy products in the Far East]. In: American Soybean Assoc., ed. 1975. Memorias: Primera Conferencia Latinoamericana Sobre la Proteina de Soya. Mexico City. 232 p. See p. 185-93. [14 ref. Spa]
• ***Summary:*** Descriptions of and flow sheets for the production of the following basic soyfoods are given: Miso, shoyu (*salsa de soya*), natto, tempeh, sufu (fermented tofu), and soy yogurt. A table shows the nutritional composition of each of these foods as well as yuba and kori-tôfu (dried-frozen tofu).

Note 1. This is the earliest Spanish-language document seen (Sept. 2011) that mentions tempeh, which it calls "tempeh."

Note 2. This is the earliest Spanish-language document seen (April 2013) that uses the term "kori-tôfu" to refer to dried-frozen tofu. Address: Faculdad de Quimica, UNAM, Mexico.

2683. Wei, L.S.; Steinberg, M.P.; Nelson, A.I. 1975. A new Illinois soybean beverage: Tasty, smooth, nutritious, and economical. *Illinois Research* 17(4):3-4. Fall.
• ***Summary:*** This is a relatively short description of the new 11-step process designed to inactivate the "lipoxygenase enzyme," which can produce a distinctly "painty" off-flavor in soymilk, whenever the beans are ground and exposed to water ambient temperatures. The fiber in the soybean is not removed, but rather is finely pulverized by grinding and homogenization to produce a stable colloidal system, in which the fiber and protein do not settle and the oil does not rise. "Instability of the colloidal system, causing a grainy mouth feel, can be a severe problem." The product obtained at the end of Step 5, called "Soybean beverage base," can be used to prepare such "dairy analogs" as yogurt and ice cream, as well as milk.

"The University of Illinois Foundation has recently patented this process in the United States and in a number of other countries. Already three U.S. companies and several foreign firms have been licensed to use the process in manufacturing the beverage, yogurt, ice cream, and similar products. We hope that some of these products will appear in your local supermarket before too many months have

passed."

Note 1. This is the earliest English-language document seen (Aug. 2013) that uses the term "dairy analog" (or "dairy analogue") to refer to soymilk.

Note 2. This is the earliest English-language document seen (Aug. 2013) that uses the term "soybean beverage base" to refer to a concentrated form of soymilk from which regular soymilk or soymilk products can be made by adding water, flavors, sweetener, etc. Address: 1. Assoc. Prof. of Food Science; 2. Prof. of Food Engineering; 3. Prof. of Food Processing. All: Univ. of Illinois, Urbana, Illinois.

2684. *SoyaScan Notes.* 1975. Chronology of soybeans, soyfoods and natural foods in the United States 1975 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Feb. Gale Randall starts America's first commercial Caucasian-run tempeh company in Unadilla, Nebraska.

March. Alec Evans starts the first of the new breed of Caucasian-run tofu shops in Corvallis, Oregon, named Welcome Home Bakery and Tofu Shop.

March. "Safe protein-calorie ratios in diets. The relative importance of protein and energy intake as causal factors in malnutrition" by P.R. Payne of the Department of Human Nutrition, London School of Hygiene and Tropical Medicine, published in the *American Journal of Clinical Nutrition.* Payne argues convincingly that food energy (calories) is more of a problem than protein.

April 29. Saigon falls, ending the Vietnam war.

July. Freezing weather in Parana, Brazil, kills many coffee trees, leading to a big expansion of soybean acreage.

Aug. 3-8. The first World Soybean Research Conference held in Champaign, Illinois, with 600 participants from nearly 50 countries. The 1073-page proceedings, edited by L.D. Hill, are published in 1976.

Aug. Japan Vegetable Protein Food Association founded to promote modern soy protein products, primarily soy protein isolates.

Oct. 25. William Shurtleff and Akiko Aoyagi conduct their first Tofu Class at Westbrae Natural Foods, Berkeley, Calif. Eight people attend. Also in 1975 Gordon Bennett becomes president of Westbrae.

Oct. "The Traditional Tofu Craftsman and His Shop," the first of the new wave of soyfoods articles, published in East West Journal. Contains excerpts from the forthcoming *Book of Tofu* by Shurtleff & Aoyagi.

Nov. 9-12. First Latin American Conference on Soy Protein, organized by the American Soybean Assoc., held in Mexico City.

Dec. 12. *The Book of Tofu* by Shurtleff and Aoyagi published by Autumn Press. This book launches the tofu boom and soyfoods movement in America.

Dec. Ganesha, a craftsman in Berkeley, makes America's first tofu boxes, handcrafted of wood.

Dec. 1975 to Jan. 1976 Shurtleff and Aoyagi do a Tofu and Miso California Tour, with 40 public programs in the Los Angeles Area and northern California.

* *The Farm Vegetarian Cookbook* published by The Farm's Book Publishing Co. in Summertown, Tennessee. Expanding on the ideas in *Yay Soybeans!* (1974), it contains many soyfoods recipes, plus the first popular information on tempeh and the first tempeh recipes to be published in any European language.

* Textured soy protein concentrates developed and introduced by three companies, incl. Griffith Laboratories and Central Soya (Response).

* Vitasoy soymilk in Hong Kong is first sold in Tetra Pak cartons.

* Latin American soybean production tops 10 million metric tons, up 10-fold since 1967.

* National Soybean Research Center (CNP-Soja) established at Londrina, Parana, Brazil, within EMBRAPA (The Brazilian Research Organization for Agriculture), to stimulate research and coordinate the efforts of the state programs.

2685. Autumn Press, Inc. 1975. Imagine... (Ad for The Book of Tofu by Shurtleff and Aoyagi). *Macrobiotic* (*The*) (*Chico, California*) No. 111. p. 61. Dec. [1 ref]

• ***Summary:*** "Imagine... How strange it would seem if in the world's greatest wheat-producing country most of the people had never tasted bread. Yet no less unusual is the present situation in America, the world's greatest producer of soybeans, where the majority of people have not yet tasted, seen or even heard of tofu."

The Book of Tofu is 8½ x 11. 336 pages and has over 300 illustrations, $6.95.

"A family of foods developed over thousands of years in China and Japan, tofu is East Asia's way of using soy protein to complement a diet low on the food chain. Now available commercially across America in over 10 different forms, tofu can also be made at home–for pennies! Quick-and-easy to use in almost every conceivable type of Western-style preparation ranging from dips to desserts, these time-tested natural foods open new vistas of creative, healthful menu-planning–while offering a revolutionary approach to meeting the world's critical food requirements.

"*The Book of Tofu* contains: Over 500 recipes culled from East and West. Easy-to-follow instructions for making 7 varieties of tofu (plus soymilk, yuba and tempeh) at home and on a community scale. An illustrated description of the art of making tofu in a traditional Japanese shop. The most detailed glossary of Japanese foods ever compiled in English. And much, much more."

Note: This is the earliest advertisement seen that mentions tofu. Address: P.O. Box 469, Soquel, California 95073.

2688. *Quick Frozen Foods.* 1975. National Frozen Food Convention Grand Award to Rich Products Corp. Dec. p. 46.
• ***Summary:*** "Rich Products Corp. was founded by Robert E. Rich Sr., in 1945, and that year did a gross business of $28,000. Its primary product then was a frozen pure-soy cream for whipping and baking.

"It was intended to be a substitute for dairy whipped cream, and had many advantages. In frozen form, it lasted almost indefinitely, was almost twice as nourishing as heavy cream, and whipped up to triple its bulk in 45 seconds. It was originally packaged in a milk-type, cone-shaped container.

"At first, most of the sales were at the retail level, but as time went by, institutional business and bulk sales became important factors. The success of frozen cream pies was almost entirely due to a coconut oil-based product also manufactured by Rich, which had none of the bacterial problems of dairy whipped cream and was of excellent flavor and texture...

"As Rich moved into the 60's, he began to champion a product called coffee whitener, which was a substitute for cream or milk in coffee. The dairy interests fought him with might and main... Dairy people wanted him to call his product imitation cream, but Rich stoutly maintained that his product was not cream, it was something new, and was satisfied to call it 'coffee whitener.'...

"At the present time, Rich Products does an estimated $100 million a year."

Photos show Robert E. Rich Sr., Robert Rich Jr., and the original ¼ page ad run in the Jan. 1946 issue of *Quick Frozen Foods.*

2689. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]
• ***Summary:*** This pioneering work started the "tofu revolution" in America. Contents: Preface. Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food: Introduction, rich in high quality protein (NPU, biological value, protein score, amino acid content), high protein complementarity (tofu contains an abundance of lysine, an essential amino acid that is deficient in many cereal grains; increase usable protein by combining tofu with wheat, rice, corn, etc.), easy to digest, an ideal diet food, low in saturated fats and free of cholesterol, rich in vitamins and minerals, a health-giving natural food, backbone of the meatless / vegetarian diet, free of chemical toxins, low in cost, easily made at home, quick & easy to use, versatile.

3. Getting started: Introduction, buying and storing tofu, basic ingredients (whole-wheat flour, miso {rice-, barley-, and soybean miso, special Japanese miso, Chinese chiang}, oil, brown rice, salt, shoyu {natural shoyu, shoyu, Chinese soy sauce, synthetic or chemical soy sauce}, sugar, vinegar, monosodium glutamate {MSG}), Japanese kitchen tools (each illustrated), preparatory techniques (salt rubbing, rinsing and pressing leeks and onions, soaking burdock root, reconstituting dried sea vegetables {dried hijiki, wakame, agar}, wheat gluten and kampyo [kanpyo], parboiling, cutting tofu and vegetables, using sesame seeds, toasting nori, preparing a steamer), basic recipes (soup stocks and broths {dashi}, basic shoyu dipping sauces {*tsuke-jiru*}, miso toppings {sweet simmered miso / *nerimiso,* miso sauté / *abura miso,* special miso toppings and dipping sauces, finger lickin' miso, and regular miso}, miso salad dressings, nut and seed butter toppings, spreads and dressings, basic sauces, rice, noodles and other basic preparations).

Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History of soybeans and "soybean foods," cooking with whole dry soybeans, roasted soybeans (*iri-mame*), fresh green soybeans (*edamame,* incl. a recipe for "Sweet emerald bean paste {*Jinda*}),*"* kinako (roasted full-fat soy flour, incl. Japanese health food treats such as *kinako amé, gokabo, kokusen, kankanbo,* and *abekawa mochi*), soybean sprouts (*daizu no moyashi*), natto ("sticky fermented whole soybeans," with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein {TVP}, soy oil products). 5. Gô (a thick white puree of well-soaked uncooked soybeans). 6. Okara or Unohana. 7.

Curds and whey. 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding, homemade tofu (basic, from powdered soymilk, fermentation method related to soymilk yogurt), tofu quick and easy {incl. Chilled tofu–Hiya-yakko}, tofu dressings, spreads, dips and hors d'oeuvre {incl. Creamy tofu dressings and dips, Tofu mayonnaise dressing, Tofu tartare sauce, Tofu cream cheese, Tofu sour cream, Tofu cottage cheese, Tofu guacamole}, tofu in salads {Western style and Japanese style salads incl. Shira-ae}, tofu with sandwiches and toast, tofu in soups {Western style and Japanese style soups, incl. miso soup}, tofu in sauces, tofu in breakfast egg dishes, tofu baked, tofu sautéed, stir-fried or topped with sauces {incl. Mabo-dofu [Ma Po doufu]}, deep-fried tofu, tofu with grains, tofu broiled {incl. Tofu dengaku}, tofu simmered in one-pot cookery and seasoned broths, tofu steamed, tofu desserts {incl. Tofu whipped cream or yogurt, Banana tofu milkshake, Tofu icing, Tofu ice cream, Tofu cheesecake, Tofu-peanut butter cookies}).

9. Deep-fried tofu: Thick agé or nama-agé (incl. *atsu-agé* meaning "thick deep-fried tofu," "three-cornered agé" {*sankaku-agé*} in Kyoto, agé cubes {*kaku-agé*}, "five-color agé" {*gomoku-agé*}), ganmo or ganmodoki (incl. *hiryozu / hirosu,* "Flying Dragon's Heads," "treasure balls," "Ganmo treasure balls"), agé or aburagé (incl. *kiji,* "agé pouches," "crisp agé", *kanso aburagé,* "agé puffs," "fried soybean cakes," "hollow agé cubes," "Smoked tofu," p. 189-91, 197).

Note 1. This is the earliest English-language document seen (April 2013) that contains the following terms related to deep-fried tofu (p. 180-90): "Thick agé," *nama-agé, atsu-agé, Hiryozu,* "Dragon," "Flying Dragon's Heads," "treasure balls," "five-color agé," *gomoku-agé,* "Ganmo treasure balls." "fresh or raw deep-fried tofu," "three-cornered agé," *sankaku-agé,* "agé cubes," *kaku-agé, kiji.* "agé pouches," "crisp agé," *kanso aburagé,* "agé puffs," "fried soybean cakes," or "hollow agé cubes."

10. Soymilk. 11. Kinugoshi ("*Kinu* means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk." It is made from concentrated soymilk). 12. Grilled tofu (incl. sukiyaki). 13. Frozen and dried-frozen tofu. 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu {*wu-hsiang kan*}; see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). One type of Korean soybean miso is called *kotsu jang* [sic, *kochu jang*]. When tofu is served with miso [Korean-style, *Tenjang*] as the dominant seasoning, and with rice, "it becomes the popular *Tenjang Chige Pekpem"* (p. 262). 16. Special tofu.

Note 2. This is the earliest (and only) English-language document seen (March 2009) that uses the word "Tenjang" to refer to Korean-style soybean jang (miso).

Part III–Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way.

Appendices: A. Tofu restaurants in Japan; many are vegetarian: In Tokyo: Sasa-no-yuki / Sasanoyuki, Goemon, Hisago, Sanko-in, Shinoda-zushi, Dengaku (south of Tokyo in Kamakura). In Kyoto: Nakamura-ro, Okutan, Takocho, Izusen, Junsei, Nishiki, Hakuun-an, Rengetsu, Sagano, Sorin-an. Tea ceremony cuisine (*Kaiseki ryori*), Zen temple cookery or Buddhist vegetarian cookery (*Shojin ryori*), Tea ceremony cookery from China (*Fucha ryori*), Wild gathered cookery (*Sansai ryori*). A directory of these and others, with addresses and phone numbers, is given (p. 312).

B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe, and 3-7 in Latin America {Mexico City, Rio de Janeiro and Sao Paolo, Brazil}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for "Mock tuna salad with deep fried tofu."

Note 3. This is the earliest English-language document seen (March 2007) that uses the term "Tofu ice cream" to refer to soy ice cream or that contains a recipe for "Tofu ice cream."

Note 4. This is the earliest English-language document seen (April 2013) that uses the term "Tofu Cheesecake" and the first to give a recipe for a tofu cheesecake.

Note 5. This is the earliest English-language document seen (April 2013) that uses the term "Tofu Sour Cream" (p. 109) or that contains a recipe for "Tofu Sour Cream."

Note 6. This is the earliest English-language document

seen (April 2013) that uses the term "tofu milkshake" or that gives a recipe for a shake made with tofu.

Note 7. This is the earliest English-language document seen (Jan. 2012) that uses the term "sticky fermented" to refer to natto.

Note 8. This is the 2nd earliest English-language document seen (April 2013) that uses the term "dried-frozen tofu."

Note 9. This is the earliest English-language document seen (April 2013) that describes preparatory techniques for tofu (p. 96-98).

Note 10. This is the earliest English-language document seen (April 2013) that contains the term "smoked tofu."

Note 11. This is also the earliest English-language document seen (April 2013) that uses the term "kinugoshi tofu" to refer to silken tofu.

Note 12. As of March 2007, the various English-language editions of this book have sold more than 616,000 copies.

Note 13. This is the earliest English-language document seen (Aug. 2011) that contains the term "Modern Western soybean foods" (see p. 69), a term that Shurtleff would soon (by 1983) replace by the more accurate "Modern soy protein products."

Note 14. This is the earliest published English-language document seen (Jan. 2012) that contains the term "creamy tofu dressings" (or "dressing").

Note 15. This is the earliest English-language document seen (Sept. 2012) that contains the term "Soymilk yogurt."

Note 16. This is the earliest document seen (Oct. 2012) that contains an adequate or detailed description of how to make yuba at home.

Note 17. This is the earliest English-language document seen (June 2013) that contains the term "whole dry soybeans." Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

2690. Shurtleff, William; Aoyagi, Akiko. 1975. Tofu and yuba in China, Taiwan, and Korea (Document part). In: W. Shurtleff and A. Aoyagi. 1975. The Book of Tofu. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 250-64.

• ***Summary:*** Contents: Introduction. Three varieties of tofu. Doufu: Known as *tojo* or *tokua* in the Philippines, or as *tahu* in Indonesia. Pressed tofu (*doufu-kan*)*:* Savory tofu (*wu-hsiang kan*), soy-sauce pressed tofu (*chiang-yu doufu-kan*), pressed tofu sheets (*pai-yeh,* incl. pressed tofu noodles or "beancurd shreds" {*doufu-ssu, kan-ssu*}, pressed tofu loops {*pai-yeh chieh*}, Buddha's Chicken {*su-chi*} or Buddha's Ham {*suhuo-t'ui*}, salted dry tofu {*doufu-kan*}). Chinese soft kinugoshi (*shui-doufu, sui-doufu, nen-doufu, nan-doufu, shin-kao doufu*). Warm soymilk curds: Chinese smooth curds (*doufu-nao, dou-nao;* often served for breakfast by street vendors), curds-in-whey (*doufu-hua*). Deep-fried tofu (*yu-doufu, cha-doufu, doufu-kuo, kuo-lao doufu*). Frozen tofu (*tung-doufu, ping-doufu*).

Note 1. This is the earliest English-language document seen (April 2013) that uses the term *tung-doufu* or the term *ping-doufu* to refer to frozen tofu.

Doufu-ru [fermented tofu]: white fermented tofu (*pai doufuru,* incl. 5 different types such as red pepper, sesame oil and red pepper, five-spice, etc.), red fermented tofu (*hung doufuru, nanru, nanyu,* made by adding Chinese red fermented rice [red rice koji] {*ang-tsao*} to the brining liquor to give it a deep red color, thick consistency, and distinctive flavor and aroma; soy sauce is generally used in place of rice wine; another variety is rose essence fermented tofu), stinky fermented tofu (*tsao-doufu, ch'ou doufu,* incl. green stinky fermented tofu), chiang-doufu (prepared by pickling firm cubes of tofu for several days in either Chinese-style miso {*chiang*} or soy sauce).

Soymilk (*doufu chiang, dou-chiang, dou-nai, dou-ru*)*:* Widely enjoyed as a spicy hot breakfast soup (p. 204) or a warm, sweetened beverage (p. 207). Sometimes sold bottled by street vendors.

Yuba: Yuba is much more popular and much less expensive in China and Taiwan than it is in Japan. There are hundreds of yuba shops throughout Taiwan and probably thousands in China, and yuba plays an important role in the nutritional life of the people in home and restaurant cookery. Called bean curd "skin" or "sheets" in most Chinese cookbooks, yuba is known in Mandarin as *doufu-p'i* ("tofu skin") or *doufu-i* ("tofu robes"). Remarkable Chinese ingenuity and creativity in giving the semblance of meat. In the display case of attractive restaurants or marketplace yuba shops are perfect replicas of plucked hens, roosters, and ducks, light-brown fish (complete with fins, gills, eyes, and mouth), juicy hams, tripe, liver, rolled meats, red sausage links, deep-fried drumsticks, and a life-sized pig's head–all made from yuba. Most of these imitation meat dishes are prepared by pressing fresh yuba into a hinged (wooden or aluminum) mold, clamping the mold closed, then steaming it until the yuba's shape is fixed. *Su-tsai* restaurants specialize in Buddhist vegetarian cookery. Names of prepared dishes: Buddha's Chicken (*suchi*), Buddha's Fish (*suyu, sushi*), Buddha's Duck (*suya*), Vegetarian Tripe (*taoto*) or Liver (*sukan*)*;* Molded Pig's Head (*tutao*), Molded Ham (*suhuo*), Sausage Links (*enchan*), Buddha's Drumsticks (*sutsai tsui*), Deep-fried Duck (*suya*). A full-page illustration (p. 258) shows these products. Fresh yuba. Dried yuba (*kan doufu-p'i,* incl. sweet yuba and Bamboo yuba {*fuchu* [*dried yuba sticks*]}). Tofu and yuba in Chinese cookery: Mandarin cookery, congee (rice porridge), "red broiled" sauces (*hong-sao*), meatless days, vegetarian restaurants.

The Chinese tofu shop: Description of the process for making tofu. Tofu in Korea. Recipes: Fermented tofu dressings, spreads, dips, and hors d'oeuvre. Fermented tofu in sauces, egg dishes, and with grains.

Illustrations show: (102) A woman cutting doufu at the marketplace. (103) Making pressed tofu using a hand-turned screw press. (104) Pressed tofu noodles. Buddha's chicken. (105) Street vendor selling soymilk curds. (106) Pressing tofu in forming boxes using stone weights. (107) Deep-frying agé triangles in a wok. (108) Threaded thick-agé cubes. (109) Net-like thick agé. (110) A soymilk vendor carrying bottled soymilk using a shoulder pole. (111) Yuba mock meats. (112) Yuba steaming pots. (113) Steam-heated drum can cooker in Chinese tofu shop. Doufu-ru [fermented tofu] cubes on plate, in bottle, in can. Woman selling tofu, seated by the street side.

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "doufu" to refer to Chinese-style tofu.

Note 3. This is the earliest English-language document seen (Oct. 2012) that uses the word *fuchu* or the word *suohuo* or the term *suohuo-t'ui* or the term "tofu robes" or the term "tofu skin" to refer to yuba. Address: Lafayette, California.

2691. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind (Illustrations–line drawings). Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• ***Summary:*** Continued: Illustrations (line drawings, both numbered and unnumbered) show: A hearth in a traditional Japanese farmhouse with tofu dengaku roasting around a bed of coals in a sunken open-hearth fireplace. An old Japanese plum tree blossoming in winter. Three pieces of skewered tofu dengaku with a sansho leaf atop each in a special serving box. A sprig of sansho with berries. Stylized top of a soybean plant in a circle. Fig. (4) Tofu products available in the West (tofu, dofu, kinugoshi, thick agé triangles, cubes, and cake, agé and agé puffs, hollow agé cubes, soymilk, tofu pudding, doufu-ru {white and red}, ganmo {patties, small balls, and treasure balls}, grilled tofu, dried-frozen tofu, instant powdered tofu, okara, dried yuba, soymilk curds, pressed tofu, savory tofu). A wooden cutting board and Japanese broad-bladed vegetable knife (nagiri-bôcho) with vegetables and tofu on a woven bamboo tray.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "treasure balls" to refer to Chinese-style tofu mixed with various finely-chopped vegetables, rolled into balls, and deep-fried tofu. (8) A wooden keg of red miso and a plastic bag of barley miso. (9) Shoyu in a metal can, wooden keg, glass bottle, and table-top dispenser. Traditional Japanese kitchen tools: *Miso-koshi* (woven bamboo strainer used in making miso soup). cutting board, Japanese vegetable knife, wooden spatula, bamboo rice paddle (*shamoji*) and spoon, woven bamboo colander or tray (*zaru*), suribachi, Japanese grater (*oroshi-gané*), sudaré (bamboo mat), pressing sack for tofu or soymilk, serrated tofu-slicing knife, tawashi scrub-brush (made of natural palm fiber), wok with draining rack and wooden lid, stir-frying ladle and spatula, long cooking-chopsticks, mesh skimmer, deep-frying thermometer, Chinese bamboo steamer (*seiro*), charcoal brazier (*konro, shichirin*), broiling screen. Covered pot steamer. Small lidded pottery pot. More kitchen tools (p. 50-51). (10) A soybean measuring box (*isshô-bako*). (11) The soybean plant. Two views of a soybean seed with seed coat, hilum, and hypocotyl labeled. A bag full of soybeans. Roasted soybeans in a woven bamboo tray (*zaru*). Edamamé in the pods. Three shapes of kinako treats. Soybean sprouts. Natto on a bamboo mat (*sudare*). Natto wrapped in rice straw as it ferments. A hand holding chopsticks that lift natto up from a bowl of natto–connected by gossamer threads. Tempeh (round and square pieces). Wrapping a small packet of inoculated soybeans to make tempeh. (15) Two Japanese women in traditional clothing using hand-turned grinding stones (quern) to grind soaked soybeans when making tofu. (16) Push-pull grinding stones. (17) Motor-driven grinding stones. (18) Water-powered millstones. (19) Wind-powered millstones. (20) Unohana. (21) A tofu maker sitting on a traditional lever press that presses soymilk from the okara in a pressing sack on a rack. A heavy iron skillet. (22) Folding okara omelet pouches. Okara doughnuts. (23) A bamboo colander. (24) A tofu maker weighting a colander with a brick so that whey will collect in it. (25) Ladling whey from curds; it foams! (27) A horse drinking whey from a wooden vat. Soymilk curds in a bamboo mat. (28) Ladling curds for Awayuki. (29) Fresh tofu in a plastic tub. (30) A tofu maker placing a weight on pressing lids as tofu is pressed in settling boxes (forming boxes). Transferring tofu-filled settling box to sink. Cutting a block of tofu into cakes under water. Eggplant halves in a yin-yang dance. Preparatory techniques used with tofu (slanting press, sliced tofu, squeezing, scrambling, reshaping, crumbling). (32) Utensils for making tofu at home. (33) Three designs for a homemade settling container. (34) Preparing homemade tofu (a-l). (35) Removing tofu from a farmhouse-style settling container (forming box). (36) Chilled tofu. Iceberg chilled tofu. A hot, moist, white towelette (*o-shibori*) is used to wipe the face and hands before (or occasionally after) a meal. Tofu salads in three Japanese pottery dishes. Japanese soups in three types of containers. (37) Chrysanthemum tofu. (38) Tofu poached egg. Tofu-stuffed green peppers. A wok. (39) Filling a wok with oil. (40) testing oil temperature in a wok. (41) Deep-frying tofu tempura–and (42) Serving it in a shallow bamboo basket. (43) Making *Kaki-agé*. (44) Dengaku Hoshi (from *Tofu Hyaku Chin*). (45) Skewered Tofu dengaku. Preparing Tofu dengaku in old Japan (from Hokusai's sketchbooks). (46) A variety of skewers. (47) Chinese firepots. (48) A Simmering Tofu wooden serving container heated by coals from within. (49) Miso oden. (50) Tofu wrapped in rice straw. (51) Nanzenji wrapped tofu. (52) Gisei-dofu. (53) Serving freshly deep-fried agé. (54) The deep-frying area of a traditional tofu shop. (55) Deep-frying

tools. (56) Wooden bamboo tray with raised sides. Chinese cleaver. (57) Nori-wrapped sushi with agé (making and serving; six drawings). Eating noodles from old Japan (from Hokusai's sketchbook). (58) Preparing homemade noodles. (59) The Oden man on a winter's eve. A pottery bowl of Oden. Kombu rolls. (60) Making konnyaku twists. (61) Nishime in a multi-layered lacquerware box. (61) Pressing tofu for thick agé in a tofu shop. (62) Deep-frying tofu for thick agé. (63) A tofu maker with deep-fried thick agé triangles on screen trays.

Note 2. This is the earliest English-language document seen (May 2012) that contains the terms "deep-fried thick agé triangles" (p. 181) or "hollow agé cubes" (p. 23).

(64) Stuffing thick agé. (65) Thick agé stuffed with onions. (66) Pressing tofu for ganmo. (67) Adding seeds and vegetables. (68) Deep-frying ganmo. (69) A farmhouse open-hearth fireplace with nabe kettle. (70) Preparing homemade ganmo. Ganmo balls in a draining tray. Ganmo cheeseburger. (71) Cutting tofu to make agé slices (*kiji*). (72) Deep frying agé. (73) Opening agé into pouches. Agé treasure pouches.

Note 3. This is the earliest English-language document seen (April 2013) that contains the term "treasure pouches" or the term "Agé treasure pouches" They refer to a Kyoto-style delicacy made with deep-fried tofu pouches.

(74) Agé pouches sealed with foodpicks. Inari shrine with Shinto torii. (75) Kampyo-tied pouches [kanpyo]. (76) Making rolled agé hors d'oeuvre. (77) Tofu maker ladling gô (fresh soy puree) into a cauldron. (78) Stirring down the gô. Pressing soymilk from okara with a hand-turned screw press. (79) Serving fresh soymilk in a tofu shop. Six Japanese commercial soymilk products. Little girl at The Farm (Summertown, Tennessee) seated on a small chair drinking a cup of soymilk. Chinese breakfast soymilk soup with deep-fried crullers (*Siento-chiang with yu-chiao tsao pi*). (80) Takigawa-dofu. (81) Tofu maker pouring the soymilk for kinugoshi tofu. (82) Adding solidifier. (83) Trimming kinugoshi from sides of box. (84) Modern lactone kinugoshi (with GDL). (85) Modern kinugoshi factory. (86) Sasa-no-Yuki's Gisei-dofu container. (87) Kinugoshi with ankake sauce. The entrance way to a traditional Japanese restaurant featuring tofu. Traditional metal skewer for making grilled tofu. (88) Traditional tofu maker grilling tofu over a charcoal brazier (*hibachi*). Grilling tofu in a traditional open hearth. (89) An early method of elaborate grilling. Pieces of tofu on different types of skewers. Farmhouse sukiyaki with grilled tofu. (90) Tying frozen tofu with rice straw. (91) Drying farmhouse frozen tofu. (92) Pressing frozen tofu at home. (93) Deep-fried frozen tofu with cheese. (94) Making deep-fried frozen tofu sandwiches (*Hakata-agé*). (95) Frozen tofu wrapped in kombu. (96) Steaming table in a yuba shop. Ten different types / shapes of yuba. (97) Lifting yuba away from soymilk. (98) Yuba sashimi. (99) Yuba envelopes. (100) Deep-fried yuba dengaku. (101) Folding yuba into bundles. Trimming half-dried yuba from a skewer. (102-113) Tofu and yuba in Taiwan, China, and Korea (see separate record). Sesame tofu in pottery bowl. (114) Traditional farmhouse tofu, tied into a package with rice straw rope. (115) Shirakawa-go farmhouses with water-powered rice-dehusker in foreground. (116) Making seawater tofu at Suwanose. Mortar and pestle for pounding mochi. Making community tofu: Western metal hand mill, hand-turned stone mill apparatus, faces of upper and lower stones, colander and cloth, two shapes of cooking pots, Japanese farmhouse earthen cooking stove, cooking pot set on cut-off oil drum, ladle, two wooden paddles, pressing rack, pressing okara, lever press, pressing sack, wooden settling [forming] container with cloths. (117) Making nigari with salt in bamboo colander, a traditional "salt boat" for refining salt of nigari. (119) Country farmhouse tofu (5 illust.). (121) Morning shopping at a tofu shop. (122) Diagram of a tofu-shop floor plan. (123) Modern pressure with hydraulic press. (124) Modern centrifuge with 3 soymilk barrels. Thirty-one unnumbered illustrations showing every step in making and selling tofu in a traditional Japanese shop (p. 299-306). (125) Cutting tofu for Dengaku (from *Tofu Hyaku Chin*). (126) Ladies busy making dengaku (from *Tofu Hyaku Chin*). (127) Hearth at Nakamura-ro. (128) The garden at Okutan. Six types of Japanese sea vegetables: Hijiki, aonori, wakame, agar, nori, kombu. (129) Japanese vegetables (27 illustrations). Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

2692. Shurtleff, William; Aoyagi, Akiko. 1975. The book of tofu: Food for mankind (Tables, graphs, and diagrams). Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. Illust. by Akiko Aoyagi. Index. Dec. 28 cm. Rev. ed. 1977 Autumn Press, Brookline, MA. [53 ref]

• ***Summary:*** Tables, graphs, diagrams (etc.) show: (1) Bar chart of per-acre yields of usable protein from different food sources: Soybeans 356, rice 265, corn 211... milk 82, eggs 78, meat (all types) 45, beef 20. (2) Graph of world meat consumption versus income: People in rich countries (those with high per capita income) tend to eat a lot of meat, while those in poor countries tend to eat little. Table showing percentage of protein by weight in 20 basic Western foods and foodstuffs. (3) Table of 18 tofu products available in the West: For each is given–Name used in this book, other names, description, where sold, how sold. (5) Table showing composition of nutrients in 100 gm of tofu and related products (16 products in all). (6) Graph of protein vs. moisture content in various types of tofu. Table of NPU (net protein utilization) ratings of 13 basic foods. (7) Table of amounts of essential amino acids and their percentages with minimum daily requirements in 100 gm portion of tofu. Table of amount of various foods combinations that provide exactly 50% of the daily adult male requirement of usable protein. Table showing the cost of one day's supply of usable protein from various foods.

(14) Diagram showing Gô as the source of all tofu products. (26) Percentage of original soybean protein contained in by-products of the tofu-making process: 73.5% ends up in the final tofu. (31) Effects of preparatory techniques on 1 cake of tofu: Final weight, percentage protein in final tofu, percent reduction in weight from water loss. Table of nutritional composition of soymilk, dairy milk, and mother's milk (compared on an equal water basis, p. 200). Table showing composition by weight of seawater (p. 282). Table of the composition of the solids in clean seawater: Sodium chloride 77.8%, magnesium chloride 9.5%, magnesium sulfate 6.6%, calcium sulfate 3.4%, potassium chloride 2.1%, magnesium bromide 0.2% (p. 283). Table of the composition of the liquid that drips out of natural / unrefined sea salt when making nigari (p. 284). Table of the composition of the solids in natural nigari (mostly magnesium chloride, p. 284). (120) Graph of soaking time vs. temperature for soybeans. 2693. Shurtleff, William; Aoyagi, Akiko. 1975. Soymilk (Document part). In: W. Shurtleff and A. Aoyagi. 1975. The Book of Tofu. Hayama-shi, Kanagawa-ken, Japan: Autumn Press. 336 p. See p. 199-210. Chap. 10.
• ***Summary:*** Contents: Making soymilk in a Japanese tofu shop as part of the tofu-making process. Comparative analysis of the composition of soymilk, dairy milk, and mother's milk (human), each adjusted to the same percentage of water (88.6%) (with table). "Vegetable milks" prepared from other nuts (almonds, peanuts, walnuts, and coconut) and seeds (sunflower and sesame). Low cost of fresh soymilk, in East Asia and on The Farm (Summertown, Tennessee). Soymilk in Taiwan. History of Vitasoy and K.S. Lo. UNICF / FAO / WHO soymilk plant making Saridele dry soymilk in Indonesia. Smaller plants in Manila, Philippines, and Bangkok, Thailand. History of the work of Dr. Harry W. Miller in China (starting in 1936) and the USA (Soya Lac / Soyalac, 1939). Current status of soymilk sold as a beverage in Japan: Sold in tetrapak cartons or, in condensed form, in cans. Sold "in a variety of flavors (plain, honey, barley-malt, strawberry or chocolate) in virtually all natural and health food stores and at most supermarkets; some types are even dispensed from vending machines or delivered door to door." "Many Japanese tofu makers used to deliver a bottle of soymilk each morning to a large number of their regular customers, but the tradition has gradually declined with the increasing availability of commercial soymilk and the post-was trend toward drinking dairy milk." Address: Lafayette, California.

Koya-dofu no kombu maki (Frozen tofu wrapped in kombu, p. 236). Sanshoku gohan (Three-color brown rice, p. 236). Fukuyose-ni (Frozen tofu simmered in sweetened broth, p. 236). Abekawa-dofu (Frozen tofu rolled in sweetened kinako, p. 237). Yuba (p. 238-42). Nama-yuba (Fresh yuba). Nama-gawaki or han-gawaki yuba (Half-dried yuba). Kanso- or hoshi-yuba (Dried yuba). Hira- or taira-yuba (Flat yuba sheets). Maki-yuba (Fresh yuba rolls). Komaki (Long yuba rolls). Kiri-komaki (Small yuba rolls). Musubi-yuba (Tied yuba). Omaki-, futomaki- or Uzumaki-yuba (Large yuba spirals). Oharagi yuba (Slightly flattened yuba roll tied with a thin piece of kombu). Amayuba (Sweet yuba). Kirehashi (Fresh yuba trimmings). Kuzu-yuba or mimi (Yuba flakes). Toyuba (Trough-shaped yuba, p. 242). Kaori yuba (Sweet miso deep-fried in fresh yuba, p. 244). Yawata-maki (Yuba-burdock root roll, p. 245). Toji yuba (deep-fried yuba with ginkgo nuts and lily bulbs, p. 245). Yuba no kabayaki (Yuba mock broiled eels, p. 245). Maze-gohan or Gomoku-zushi (Five-color sushi rice with agé, p. 169). Suhuo-t'ui (Homemade Buddha's ham). Tamago-toji yuba (Raw eggs cooked over hot yuba, p. 247). Tamago yuba (Deep-fried yuba in ankake sauce, p. 248). Kenchin-maki (Large yuba rolls with tofu and vegetables). Yuba shinjo (Yuba steamed with eggs, p. 249). Address: c/o Aoyagi, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

2695. **Product Name:** [Danpro Soy Protein Concentrates (Danpro A)].
Manufacturer's Name: Aarhus Oliefabrik A/S.
Manufacturer's Address: Bruunsgade 27, P.O. Box 50, 8100 Aarhus C, Denmark.
Date of Introduction: 1975.
New Product–Documentation: Huang et al. 1983. Ying Yang Hsueh Pao (Acta Nutrimenta Sinica) 5(2):187-96. They fed Danpro-A to piglets.

Soya Bluebook. 1984. p. 65.

Aarhus Olie Annual Report 1988. A diagram (p. 40) shows that Aarhus introduced Danpro A (a protein concentrate; A stands for "Animal." It is fed mainly to young calves and piglets) in 1975, Danpro H (H stands for "Human") in 1976, Danprotex in 1976... In 1974-75 Aarhus built the first factory in Europe for the manufacture of soya protein concentrates (p. 41).

2696. **Product Name:** Soft Tofu, Firm Tofu, Baked Tofu, Tofu Pudding, Soymilk.
Manufacturer's Name: American Food Co.
Manufacturer's Address: 800 S. Palm Ave. #5, Alhambra, CA 91803. Phone: 213-570-1620. Later 818-570-1620.
Date of Introduction: 1975.
How Stored: Refrigerated.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address (800 S. Palm St.), and phone number. ("A Chinese-American shop").

Talk with a company representative. 1988. Aug. 24. Jackson Wu, the president, will be back in 2 weeks. The company started making tofu in about 1974 or 1975. They launched all their products from day 1.

Product with Label purchased in Chinatown, Oakland, California. 1992. Oct. 28. 5 by 4.5 inches. Transparent film on water pack tub. Red, orange, black, and white. "AFC finest quality foods. 100% natural. High in protein. High in calcium. No cholesterol. Keep fresh. Change water. Keep refrigerated." Ingredients: Soybean, water, calcium sulfate. 4 pieces (of tofu). 19 oz. UPC indicia.

Talk with Raymond Lee. 1993. Oct. 13. Wy Ky's

foreman for many years was Yep Wing. One day the owner of Wy Ky had a conflict with Mr. Wing, so Mr. Wing left and helped to start American Food Co., taking many company secrets with him.

2697. **Product Name:** Sip a Soy (Soymilk) [Chocolate].
Manufacturer's Name: Beatrice Foods.
Manufacturer's Address: -
Date of Introduction: 1975.
Wt/Vol., Packaging, Price: Quart Pure-Pak carton.
How Stored: Refrigerated.
New Product–Documentation: Color slide (#T-107) of carton at Univ. of Illinois, Dept. of Food Science. This product was based on the process developed at the Univ. of Illinois at Urbana.

2698. Costa, Sebastiao Irineu da. 1975. Obtencao de leite de soja de boa qualidade [Obtaining good quality soymilk from soybeans]. Relatorio Final do Projeto FASEP 72/1468. 49 p. [Por]*
Address: Brazil.

2699. **Product Name:** Vitamite: 2% Fat Non-Dairy Beverage.
Manufacturer's Name: Dairy Specialties International (DSI).
Manufacturer's Address: 10800 Ambassador Blvd., St. Louis, Missouri.
Date of Introduction: 1975.
Ingredients: 1995: Water, corn syrup solids, partially hydrogenated canola oil, potassium caseinate (a milk derivative), isolated soy protein, tricalcium phosphate, dipotassium phosphate, carrageenan, salt, mono- and diglycerides, sodium stearoyl lactylate, guar gum, calcium d-pantothenate, vitamin A palmitate, vitamin D-3, riboflavin, pyridoxine hydrochloride, thiamine mononitrate, annatto (color), vitamin B-12.
Wt/Vol., Packaging, Price: Half gallon gable-top Pure Pak carton.
How Stored: Refrigerated.
New Product–Documentation: Talk with Tom Mekus, Vice President of Sales and Marketing, at DSI toll-free number (1-800-643-3930). 1995. Nov. 6. Vitamite liquid was first sold commercially in about 1975 in a half-gallon gable-top (Pure Pak) carton in liquid form, mostly to supermarkets. The company was headquartered in St. Louis and the first dairy that processed the powder into milk was a Kroger dairy in St. Louis; it has subsequently been sold and goes under a different name. Then Diehl acquired the company in the early 1980s, and because Diehl was a manufacturer of non-dairy products, they changed the name. In 1989 the company moved to Defiance, Ohio. Vitamite liquid in quart size was introduced in about 1991. Vitamite is sold in the dairy section at most supermarkets throughout most of the United States, including most Safeway supermarkets in California. It comes in both liquid and powdered forms. They are the licensee, Diehl Specialties International in Defiance, Ohio. Their factory there makes the powder base and ships it nationwide to dairies that process it into a liquid milk alternative then package it. Ryan Milks processes the powder in the California area. The company makes "2% white" (blue carton) and "2% chocolate." They are developing a non-fat version.

Product with Label purchased in dairy case at Safeway supermarket in Lafayette, California. 1995. Oct. 7.

2701. **Product Name:** [Provesol {Soya Milk}].
Manufacturer's Name: Industria e Comercio de Oleos Vegetais S.A. (OLVEBRA).
Manufacturer's Address: Praca Osvaldo Cruz, 15-16*, P.O. Box 2016, Porto Alegre, RS, 90030, Brazil.
Date of Introduction: 1975.
Wt/Vol., Packaging, Price: Can.
How Stored: Shelf stable.
New Product–Documentation: R.H. Moretti. 1981. *Journal of the American Oil Chemists' Society. March.* p. 521. "Soy milk developments in Latin America." Provesol, a powdered soymilk produced by a modern process, was developed during the 1970s at IIT, Colombia, by Dr. Diaz Delgado. The process was later sold to a Brazilian company, Olvebra, which started producing soya milk in 1975 with the Coca-Cola pilot plant. Presently they are using a mixed process, which combines Coca-Cola and Provesol techniques. The product is sold canned in powder form under two brand names: Novo Milk and Nova Vida (which see). The Provesol composition is 50% protein, 25% fat, 19% carbohydrates, and 19% fiber.

2702. **Product Name:** [Soyacit Soymilk (Chocolate). Also named Soyacyt].
Foreign Name: Soyacit.
Manufacturer's Name: Industrial de Alimentos S.A.
Manufacturer's Address: 146 Poniente 789, Col. Ind. Vallejo, Mexico 17, DF, Mexico.
Date of Introduction: 1975.
Wt/Vol., Packaging, Price: Powdered.
How Stored: Shelf stable.
Nutrition: Per 100 gm: Calories 423, protein 20.0 gm, carbohydrates 60.0 gm, fat 10.5 gm, moisture 4.5 gm, ash 5.0 gm.
New Product–Documentation: *Soybean Digest.* 1975. May. p. 9. "ASA promotes soy for nutrition." A photo shows the paperboard package. On the front is a mother and child.

F. Suberbie. 1975. Produccion y utilizacion de bebidas a

base de soya. In: American Soybean Assoc., ed. Memorias: Primera Conferencia Latinoamericana. p. 91-92. This product can be dissolved in milk or water. It is distributed nationally by the Compania Nacional de Subsistencias Populares (CONASUPO), by the Instituto de Seguridad y Servicios Sociales de los Trabajadores del Estado (ISSSTE; Social Security), and it is also found in many self service shops in Mexico City and many other cities in Mexico.

H.L. Wang, et al. 1979. Soybeans as human food–Unprocessed and simply processed. p. 36. Industrial de Alimentos produces and markets a soy beverage powder called Soyacyt. The product is a direct application of a beverage process developed at NRRC by G.C. Mustakas and associates and introduced to the company in 1971.

Manufacturer's Name: Welcome Home Bakery and Tofu Shop.
Manufacturer's Address: 231 S.W. 2nd St., Corvallis, OR 97330.
Date of Introduction: 1975.
New Product–Documentation: Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies. Alec Evans. Letter from Alec Evans. 1981. Feb. One of his early products was soymilk.

2710. Bragg, Paul; Bragg, Patricia. 1975. Hi-protein meatless health recipes: With history and reasons. Desert Hot Springs, California: Health Science. 184 p. Illust. No index. 21 cm. • ***Summary:*** A vegetarian cookbook. Whereas Paul Bragg used to advocate moderate amounts of meat and fish in the diet, he now advocates a meatless / vegetarian diet. These recipes are free of salt and sugar. On the cover the word "Meatless" appears in large bold letters.

Contents: Total health for the total person. Food for thought (sayings). Introduction, by Patricia Bragg (p. 1-9. Strongly advocates a vegetarian diet. Your health food store can substitute for your meat market. Cured meats may cause cancer. Animal fats can be harmful. Vegetarian gourmet cookery). Abundant protein without meat: An arduous journey without meat (Guatemala), health and vitality in Africa's Atlas Mountains [Berbers in Morocco, Algeria, and Tunisia], Arab vegetarians in the Sahara desert, India produces many strong people on a vegetarian diet (incl. Gandhi, yogis. Paul was Gandhi's friend, and they hiked together over miles of hot, dusty roads in India), 175 years of vegetarianism in England (George Bernard Shaw, Bragg's personal friend, lived into his 90s), great vegetarians of the past, fruitarians–a type of vegetarianism, vegans–another type of vegetarian, lacto-vegetarians–the most popular type, vegetarians excel as athletes, degenerative diseases in an affluent society, animal proteins and fats connected with cancer, our malnourished youth, young people are awakening to the importance of good nutrition, a meatless diet must avoid protein deficiency, human individuality, 300,000 retardants born each year in the U.S., how to solve your nutritional problems, how much protein does the body need, protein-hungry hair, sprouts a tremendous source of vegetable protein (incl. soybean sprouts), you must have all the amino acids, vegetarian foods that are rich in amino acids (incl. peanuts, soy beans), B-12 supplement essential in vegetarian diet (soy beans have traces), raw fresh wheat germ also essential in a vegetarian diet, how I discovered the nutritional value of raw wheat germ, combine good nutrition with exercise, brewer's yeast as a vegetable protein–plus, buckwheat leads all grains in protein, buckwheat also rich in minerals and vitamins, here's how to serve buckwheat, use no salt!–its harmful, herbs and garlic add nutrition plus beautiful flavors, the Chinese Restaurant Syndrome, no nutritional value in MSG, Bragg Liquid Aminos (ad, p. 44; many of the recipes in this book call for Bragg Aminos).

Mushrooms an ancient nutritional delicacy. Mushrooms and mushroom recipes. Sesame seeds and recipes. Tahini and recipes. Hulled millet and recipes. Barley and recipe. Chinese yogurt or tofu (and 4 recipes). Suggestions for using Bragg Liquid Aminos (ad, p. 66).

Note: This is the earliest document seen (Aug. 2011) that contains the term "Bragg Liquid Aminos." Mexico gives us delicious meatless protein dishes. History of corn. Soybeans. Appetizers. Salads and dressings. Soups important in vegetarian diet. Vegetables. Casseroles. Entrees (incl. Soybean loaf). Egg and cheese dishes. Health beverages. Pineapple holds the secret of protein-digesting enzymes (smoothie recipes). Breads and grains. Sandwiches and fillings. Spreads. Health desserts (incl. Zesty protein confection {with 2/3 cup soy powder [protein isolate]}). Hi-protein carob brownies (with ½ cup soybean powder).

The Bragg travel diet (he takes along his own meatless food). Sickness is expensive (between 1950 and 1979, medical costs in the USA increased 1,568%). Very little money spent on preventive medicine. "Getting old"–True

or false? (False, no part of the human body is more than 7 years old, and our blood is replaced every 90 days). When you are healthy–you are happy! Individuals can extend their lives by natural living (examples of Vilcabamba in Ecuador, the Hunza in West Pakistan, and people in the highlands of the Soviet Caucasus; all eat very little meat). Natural diet ad exercise the secret of agelessness. Exercise improves circulation to all parts of the body. Why should man die? Man is not originally carnivorous (physiology and anatomy of the human body). The meatless way of eating is simple. What is a balanced diet? Easy method to balance your nutrition. Modern nutrition confuses even so-called experts (but is basically simple. Paul was "born and reared on a large farm in Virginia." They grew practically all their own foods and had their own gristmill). Health is easiest and safest way. Your body is your closest companion (Be careful about what you eat. The greatest thing in life is energy). Our personal message to you. Protein research data. Protein and calorie counter (a table showing calories, protein, and usable protein for many basic foods). Life's greatest treasure is radiant health. Your health food store: The specialist that is different (list incl. 3 Bragg products). Let your health food store be your meatless butcher shop. Food for thought (p. 182-84; quotations, most have the author given). From the authors ("This book was written for You... We Professional Nutritionists join hands in one common objective... Scientific Nutrition points the way–Nature's Way–the only lasting way to build a body free of degenerative diseases and premature aging..."). My favorite recipes (mostly blank page).

Advertisements: (1) Send for important free health bulletins. (2) Bragg live longer, live stronger self-improvement library (list of 25 books by Bragg, with prices).

From the authors. Brief biography of Patricia Bragg (on unnumbered page at end of book), Ph.D., Nutritionist, beauty and health consultant. Advisor to world leaders, glamorous Hollywood stars, singers, dancers, athletes. Lecturer and author (She says she is the daughter of Paul C. Bragg. An accomplished musician, dancer, tennis player, swimmer, and mountain climber. The youngest woman to ever have been granted a U.S. patent. Graduate of the University of California. Lists her famous clients).

The section on "Chinese yogurt or tofu" (p. 61-65) notes that many years ago, while Bragg was an associate editor of Bernarr MacFadden's famous *Physical Culture* Magazine, he "made one of the greatest nutritional discoveries" of his life. Macfadden asked Bragg to travel to Manchuria, a long and arduous trip, to study these people well known for their tremendous vitality, energy and health. He was well rewarded, for there he "discovered the magic of the soybean, the most potent of vegetable high-protein foods." He found that Manchurians eat low on the food chain, make soy milk and tofu. Tofu is sold in food stores throughout Hawaii, where he lives. Tofu is related [sic, unrelated] to spun soy protein. He gives recipes for: Chop suey with tofu. Vegetable casseroles using tofu. Tofu casserole supreme. Tofu & scrambled eggs.

The section titled "Soybeans" (p. 73-81) has the following contents: Herbs to savor soybeans (21 herbs). Soybeans (introduction). How to make soybean sprouts. Soybean recipes. Green soybeans. How to cook dried soybeans. Method for cooking beans. Soy milk. Soybean cheese (made by allowing soy milk to curdle in a warm place, without using a coagulant). Soybean casserole. Soybean and vegetable stew. Sauteed soybean sprouts and onions. Boston baked soybeans. Stuffed peppers with soybeans. Soybean sprouts en casserole. Soybean-rice loaf. Baked soybean croquettes. Soybean patties with tomato sauce. Soybean loaf (with soybean pulp [ground, cooked soybeans]). Stuffed soybean peppers.

"In 1917 soybeans started to be cultivated in Spain thanks to the efforts of an architect from Tortosa, don Juan Abril Guanyabens, who was sick with diabetes. His physician, Dr. Maneget, director of the resort Caldes de Malavella (Gerona) had recommended this new food to counteract his diabetes. The magazine *Consejos para Vivir* (Advice for Living) stated in its issue no. 106 of March 1971 that the above-mentioned doctor, in 1918, published an article on the spectacular results of this plant and its healthy nutritional effects in the Barcelona periodical *La Veu de Catalunya."*

"In about the 1930s a Spanish farmer grew soybeans and found himself with big difficulties in selling the harvest, even though in other countries it was produced and consumed in huge quantities, due to its high nutritional value, its richness of protein, and its ability to enrich the soil with nitrogen. Nonetheless, there is no doubt that the cultivation of this plant can also provide Spain with substantial economic benefits.

"For this reason in 1934 the Ministry of Agriculture, as indicated by the engineer from Montes, don Juaquín Martín Laplaza, in an interesting work, gave 4 kg of seeds to the Division of Hydrology and Forests (*División Hidrológica Forestal*) to that the latter would conduct the appropriate tests concerning the cultivation of this plant. This was done, and care was taken to vary the locality, type of soil and terrain, climate, and irrigation.

"The locations chosen were: (1) a nursery in the mountains of Prades, between the city of Montblanch and the town of Rojals (province of Tarragona); (2) the city of Seo de Urgell, and (3) in la sierra del Cadí. These test plots were set on the outermost edges of the agricultural pastures and near the forest areas of high altitude, the very areas most likely to be unfavorable for growing soybeans." But despite this, the soybean plants gave good yields of both seeds and forage (p. 6-8). Address: Spain.

2712. Circle, S.J.; Smith, A.K. 1975. Soybeans: processing and products. In: N.W. Pirie, ed. 1975. Food Protein Sources. Cambridge, London, New York, Melbourne: Cambridge University Press. xx + 260 p. See p. 47-64. [88 ref]

• ***Summary:*** Contents: Introduction. Agronomy: Varieties, cultivation, yields. Soybean composition. Protein nutritional value. Traditional processing into nonfermented foods: Soybeans as a table vegetable ("cooked green soybeans. "Certain large-seeded varieties are often referred to as 'garden' or 'vegetable' type soybeans in contrast the better known {smaller seeded} 'field' type"), soy milk, tofu (soybean curd), yuba, kinako, salted soybeans, soybean sprouts. Traditional processing into fermented foods: Miso and shoyu, tempeh. Others (p. 55) include: natto, hamanatto, sufu (soy cheese), tao-tjo, kochu chang, ketjap, ontjom, and yogurt-like products.

Contemporary processing without defatting: 'Debittering' by aqueous treatment, whole bean processing, full-fat flour ("Extrusion cooking to produce full-fat soybean flour has received considerable attention"), soy milk and curd. Contemporary defatting processes: Defatting by aqueous processing, defatting with organic solvents, composite flour ("Substitutes or extenders for wheat flour in baked goods and pasta products are termed 'composite flours,' whether or not they contain some wheat." Many of these include soy protein products), soy flours, protein concentrates, protein isolates and textured soy products (Based on "protein fractionation after hexane defatting of soy meal." Recipes for using soy protein products in foods are available from several publications–which are listed). Address: Anderson Clayton Foods, W.L. Clayton Research Center, 3333 Central Expressway, Richardson, Texas 75080.

2713. Deer. 1975. The cookbook for people really who love animals. God's Religion, Route 2, Box 98E, Brooksville, FL 33512. 31 p. Illust. No index. 18 x 22 cm.

• ***Summary:*** This typewritten vegan cookbook with no price on it, copyrighted in 1975 by Burton Waldbaum, expresses the group's world view. The cover title is hand written below an illustration (line drawing) of a girl kneeling down with a cow, lamb, pig, and chicken. The book contains a good collection of 62 vegan recipes, which are straightforward, appetizing, and nutritious.

Contents: Introduction, by Sun. Thank you page, by Deer. Breakfasts (12 recipes). Main dishes: Sauté (5), Vegetable and grains (10), Potatoes (3), Variety dishes (4). Sauces (6). Soups (6). Salads (4). Dressings (3). Healthful treats (8). Glossary. Abbreviations. Memo section. Essential items for cooking.

This spiritual vegan community, founded by Burton Waldbaum (who is also called "Light"), was later renamed "World of God," and after that "Gentle World."

The Introduction begins: "The Human Race (that is, the race to reach human perfection) has evolved to an exciting point; at least this is true of these who are in the lead. There is a world of truly gentle people on this planet, growing stronger, and surer, and healthier, and happier, and higher every day. And it's time for the rest of the race to have a

good look at them, and to see that it's their gentleness that allows them to run faster and better; so that everyone can eventually reach the goal of evolving; so that everyone can win its rewards.

"In spite of all the pessimism, all the cruelty, all the brain dirtying, all the lies, all the injustice and all the hypocrisy; in spite of all the internal and external pollution that men and women have been heir to, there is a new breed emerging, and it's rising clear and sweet and free. Never before, in the history of the world, have so many people stood up in front of each other and announced, very bravely, 'I don't eat meat anymore.' And that standing up has been as a seed that has been nourished and spread, and that will bear much fruit in the New World–a world in which all creatures are gentle; all creatures are unafraid.

"... which is leading the world to a new, much higher, loving and understanding of GOD. Gentleness is the necessary beginning for a new world, but it is only the beginning..."

Soy-related recipes include: Granola (with "½ cup soy granules, {optional}," p. 5.). Bran muffins (with "1¼ cup soy milk {1 cup water and 4 T [tablespoons] soy flour}, p. 7). Oatmeal chewies (with "2 T soy powder," p. 7). Banana bread (with "2 T soy powder mixed with 2 T water," p. 7). Soy burgers (with soy beans and tamari, p. 10). Chick pea loaf (with soy powder, p. 11). Tahini tamari sauce (p. 19). Tomato soup (with soy powder, p. 21). Carob ice cream (with soy powder, p. 25). Vanilla ice cream (with soy powder, p. 25). Quick buckwheat pancakes (with soy or nut milk, and soy powder, p. 25). Carob cookies (with soy powder, p. 27). Carob cake (with soy or nut milk, and soy powder, p. 27). Frosting for carob cake (with soy powder, p. 28). Soy butter (Mix ¼ cup water, ½ cup soy powder or soy flour, ¼ cup oil, 1 tablespoon of sweetener, 1 tablespoon herba-mare [seasoning salt mixture]. Delicious with muffins, bread, or crackers). The glossary (p. 29) lists two soy products: "Soy powder–made from soy beans. Used instead of milk or eggs. As an egg substitute: 1 egg equals 1 tablespoon soy powder and 1½ tablespoons water. As a milk substitute: 4 tablespoons soy powder to 1 cup water, blend.

"Tamari–made from aged soybeans, A pure soy sauce. A definite must in all vegetarian kitchens. Used in almost everything that you will be cooking." Indeed, tamari is used to season more than half the recipes in this book; most are not specifically mentioned above. Address: Brooksville, Florida.

2714. Friedman, Mendel. ed. 1975. Protein nutritional quality of foods and feeds. Vol. 1, Part 2: Quality factors–plant breeding, composition, processing, and antinutrients. New York, NY: Marcel Dekker. xx + 674 p. Illust. Subject index. Author index. 24 cm.
• ***Summary:*** Soy is mentioned on the following pages: 46 (biological value), 164-82 (soy protein concentrate), 233 and 239 (soybean meal), 280-85 (soybean meal), 424 (soy flour), 442 (whey enrichment of soy), 464 (whey beverage with soy), 494 (tofu, urease), 507 (soy milk, soy proteinases), 527 (soy protein isolates), 528 (soy fiber, soy flour), 540 (soy protein–phytic acid complex), 595 (alkali treatment, tofu). Address: Western Regional Research Lab., ARS, USDA, Berkeley, California.

2715. Goulart, Frances Sheridan. 1975. Bum steers: How and why to make your own delicious high protein mock meats, fake fish & dairyless desserts, and avoid useless calories, cholesterol, sodium nitrate, salmonella, trichinosis & high prices. Old Greenwich, Connecticut: Chatham Press. 205 p. Illust. Recipe index. 21 x 19 cm.
• ***Summary:*** This vegetarian cookbook, interspersed with many well-selected anti-meat quotations, describes how to make meatless meats and non-dairy products at home. Contents: Introduction. On the block: Major mock-meat-making supplies. Vegebutchering: Master mock-meat recipe file. Bogus beef. Pseudo pork. Unreal veal. Sham lamb. Con game. Phony poultry. Fake fish. Un-innards. The vege-deli. Mocking up: General dishes. The mock crock. On the side. Dairyless desserts. Steerage (sources of unfamiliar ingredients).

Chapter 1 begins with an introduction to and nutritional composition of tofu, followed by the soybeans, gluten flour, other legumes, etc. Under "Flavors enhancers" are listed soy lecithin granules or flakes, miso, yeast extract (marmite), soy sauce and tamari, and Worcestershire sauce. Chapter 2 contains recipes for making gluten, tofu, grainola (with soy grits), a stock with miso for non-meat dishes (p. 32), mock milk I (made with soy flour), mock milk II (made with raw cashews or almonds), mock (soy) butter (made with soy flour), and mock cream (with soy flour and soy cream), and mock yogurt (with cashew nuts and soy yogurt culture).

Note: This is the earliest document seen (Sept. 2012) that mentions a non-soy, non-dairy yogurt–in this case one made with cashew nuts. A sampling of the many other soy-related recipes include: Moo-less ragout (with tofu, soy sauce, and soy butter, p. 43). Vegetarian rolladen (with cooked ground soybeans, p. 52). Good red meat (with gluten or tofu, p. 53). Greenbutcher's meatballs (with tofu, p. 57). Mock Mac I (burger with soybeans, p. 64-65). Pineapple pig (with tofu, p. 72). Half-calf (with tofu, p. 79). Surrogate salami (with "bean pulp (residue from making Tofu)" [okara], p. 125). Bumsteads: Two burgers for meat-totalers (with tofu, p. 131). Meatless mincemeat (p. 142). Soybean mustard (with soy sprouts, p. 165). Cow tow: Cowless milk candy (with soy milk powder). Jersey bounce: A moo-juice-less junket (with soy milk, p. 184). Bum bombe: Egg-less, cream free (with soy cream, p. 184). Two 100% vegetarian ice creams: Eggless, milkless (with soy powder, p. 186).

Many recipes also contain wheat gluten: Charisma: Char-broiled bum steers (p. 48). Pig-less pork sausage (p.

70-71). Roast loin of veal (p. 80). Fake steaks: Two sham schnitzels (p. 80-81). Vegetarian cutlets (p. 82). Mocking birds I (p. 83). Fruit stew (p. 86). Sham lamb (p. 89). Sham lamb curry (p. 91). Bum bunny (p. 97). Sweet breads (p. 121).

Aduki beans are used in Moo-less rice pudding (p. 183). Sources of ingredients include: Walnut Acres, Penns Creek, Pennsylvania 17862 (herbs, spices, oils, whole grains, flours, seaweeds, etc.). Erewhon Trading Co., 342 Newbury St., Boston, Massachusetts 02115 (seaweeds and general goods, grains, beans, vegetables, seeds, etc.). Shiloh Farms, Route 59, Box 97, Sulphur Springs, Arkansas 72768. Arrowhead Mills, Box 866, Hereford, Texas 79045. Dynamic Nutritional Products, P.O. Box 528, North Hollywood, California 91603 (Milk-free yogurt culture. Trade names: Soyadophilus and Theradophilus).

Sample quotation: "... traditional American reliance on meat, particularly beef, is perhaps the single largest inefficiency in world dietary patterns..."–*New York Times* Oct. 25, 1974. Address: Wilton, Connecticut.

2716. Hieu, Dinh trong. 1975. A propos de la "Conception vietnamienne de la boisson": les plantes utilisées dans la préparation des boissons au Vietnam [Concerning "The Vietnamese conception of a beverage": The plants utilized in the preparation of beverages in Vietnam]. *Cahiers d'Études Vietnamiennes* No. 2. p. 30-64. See p. 38 (B 4). [Fre]*

• ***Summary:*** The author distinguishes two types of soymilk: (1) A simple drink / candy. (2) A food itself.

However, both are considered as traditional Vietnamese foods, even if their respective role and nutritional importance does not seem equivalent.

2717. INTSOY. 1975. Proposal for soybean processing and development of village-based utilization: Sri Lanka. Urbana, Illinois: International Soybean Program. 32 p. 28 cm. Typewritten.

• ***Summary:*** "Project title: Development and demonstration of soybean foods for village and commercial uses."

"Project No.: This is an ancillary project of contract No. UNDP / SRL / 73 / 007-1 / AGOF covering several levels of product and process technology for the development and use of soybean food products. Funding of this project will cover equipment for a pilot plant, for rural extension processing and for training grants. A total of U.S. $454,000 is requested for this project. This will include all items of equipment for the first phase of operation and support for extension of the technology to the village level. It is proposed that UNICEF will contribute U.S. $227,000 and that CARE will contribute U.S. $227,000."

Contents: Part I–Background. A: Background of the project. The problem. Description of government's efforts to solve the problem and the proposal: Village level processing (weaning foods and meat substitutes, soy beverages, soy dhal), intermediate level technology, commercial type soy foods (full-fat soy flour, soy dhal, soy beverage, infant weaning foods), extension of technology to village, legume inoculant production. Institutional framework. Assistance already received by UNICEF. Justification for assistance.

B: Objectives of the project. Long range. Immediate. Part C: Management of project. Activities and targets. Time schedule. Work plan.

Part II–Commitments of government. Part III–Commitments of UNICEF and other International Agencies. Note: Equipment to be obtained in the U.S. includes much expensive high-tech equipment such as Gaulin Homogenizer $20,000. Proctor-Swartz tray drier pilot plant $20,000. Fitzpatrick Hammermill–Model DAS06 $8,000. Small drum drier and flaker GF model $20,000. Spray drier (pilot size) $50,000. Pin mill–Alpine contraplex 250 CW $30,000. Size classifier for fine powder–Alpine $30,000. Grand total U.S. $277,500.

Appendix I. Government provided building, equipment and supplies. II. Description of government inputs. Address: INTSOY.

2718. Kloss, Jethro. 1975. Back to Eden. Santa Barbara, California: Woodbridge Press. xx + 684 p. Illust. Index. 18 cm.

• ***Summary:*** After the copyright for the original 1939 edition of *Back to Eden* expired in 1967, the Kloss family, because of a complex set of circumstances, neglected to renew it. The book then went into the public domain. Woodbridge Press decided to publish it as a facsimile edition, but with pages xiii–xx of the front matter containing a new chapter titled "Jethro Kloss–the man and the legend" by Promise Kloss Moffett." It was billed on page 1 of that chapter as "An exclusive feature only in this Kloss family edition. An intimate, personal account by his daughter." This chapter contains four photos: (1) "Jethro Kloss in his early years of teaching and healing." (2) "Jethro Kloss with Amy, his second wife, in Minnesota with his daughter, Promise; her daughter, Mabel; and their first child, Lucille." (3) "Jethro Kloss operating men's hydrotherapy treatment room at Home Sanitarium." He is dressed in a sort of white togo; a patient is inside a large cylindrical chamber (resembling but larger than a 55-gallon drum with a horizontal axis) apparently filled with steam. (4) Labeling and packing cereal foods in Kloss' Tennessee manufacturing operation. On the cover of the paperback edition they put the famous Michelangelo scene from the Sistine chapel of God reaching out to touch Adam's extended finger, thus transmitting the gift of life. New text was added to the cover: "The complete text. A public domain edition. Not authorized by the Kloss family. The classic Back to Eden belongs to the public. There is 'provision in Nature for all the ills of man... and a remedy for every disease.' The secrets of Natural Healing made plain by the preeminent leader of the natural health movement. Herbs,

foods, treatments. World's best-known health book!"

On the cover of the hardcover edition was written "The Kloss family heirloom edition. The classic guide to herbal medicine, natural foods, and home remedies. The copyright page stated: "Copyright 1972, 1973, 1974, 1975 by Promise Kloss Moffett, Eden Kloss, and Doris Gardiner.

On the title page was written: "With exclusive features only in this Kloss family edition. American herbs for pleasure and health: natural nutrition with recipes and instructions for living the Edenic life."

For the bitter-sweet story of how this book came to be published, see interview with Doris Kloss Gardiner (Nov. 1990).

2719. Kulvinskas, Viktoras. 1975. Survival into the 21-st century: Planetary healers manual. Omangod Press, P.O. Box 255, Wethersfield, CT 06109. 323 p. Cover illust. by Peter Max. Introduction by Dick Gregory. Index. 28 cm. [259* ref]
• ***Summary:*** This book is about sprouts, sprouting, and a vegetarian live-foods diet. It is a catch-all of New-Age/ dietetic ideas assembled with the uncritical journalistic eye of a supermarket tabloid. Concerning soybeans the author states (p. 71): "The soybean is one of the most versatile foods. It is among the few seeds that have an alkaline ash. It will sour just like milk. Sprouted, it makes a delicious cheese and yogurt. It keeps well and can be bought organically grown for as low as 16 dollars per 100 pounds. Sprout for three days. Refrigerate. The best use of soybean sprouts is in making yogurt." On p. 257 is a recipe for Seed Yogurt (1 cup seeds plus 2 cups Rejuvelac). The preferred seeds are sunflower seeds. "A very bland, delicious yogurt can be made from sunflower alone, or from a mixture of cashew, almond, soy, pumpkin, and/or sesame... If using soybeans, soak them for at least 24 hours, changing water every 4 hours, finally draining. Blend to a creamy consistency using equal parts water and soybeans. The ferment has a delicious, sour taste. It is nutritionally superior to tofu and much less expensive." A recipe for Rejuvelac is given on the same page.

On p. 249 is a recipe for Soy Loaf using 2 cups soy bean sprouts. Copyright 1975 but published until 1979. Photos (on p. 323 and the inside rear cover) show Kulvinskas. He was born in Lithuania, and received his MSc degree in pure mathematics from the University of Connecticut, where he later taught math. For 6 years he was a computer consultant for Harvard Univ., MIT, Smithsonian Astrophysical Observatory, Appolo Project, etc. He retired in 1968 at age 29. He was co-founder with Dr. Ann Wigmore, of the Hippocrates Health Institute in Boston. He is presently director of the Survival Foundation, established in 1977.
Address: Wethersfield, Connecticut.

Address: Brazil.

2721. Noorbergen, Rene. 1975. Programmed to live: A scientific confirmation of health reform. Mountain View, California: Pacific Press Publishing Assoc. 159 p. No index. 18 cm. [158* footnotes]
• ***Summary:*** Contents: 1. Health care–The nation's vital problem. 2. Meat and fat–are they fit for consumption? 3. Sugar and alcohol–The fingers of death. 4. Cancer–Curse of the good life. 5. Nicotine and caffeine–The twin dangers. 6. Don't upset the body clock. 7. Forget the steak! Have an analog. 8. Embrace life–Don't be a statistic.

Quoting extensively from medical research and the writings of Ellen G. White, this book states the case for the Seventh-day Adventist diet and lifestyle, and against the unhealthy products listed above.

In 1904 only 67.7 deaths per 100,000 U.S. population were caused by cancer; today the figure has grown to 166.6–2.46 times as many. In 1904 heart disease caused 359.5 deaths per 100,000 population, but by 1972 it had jumped to 493.9–up 37%. Each hour in America, 144 heart attacks occur, and each year 600,000 people die of heart attacks. Thus more Americans die of heart attacks each year than died in all of World War II (400,000).

Before the Biblical deluge, God told humans to eat plants. But after the Flood, God granted Noah and his family permission to eat the flesh of the clean animals that had been preserved in the ark (Genesis 9:3) since every green thing had been destroyed by the food.

On the copyright page appreciation is expressed to Drs. Mervyn G. Hardinge, U.D. Register, and J.A. Scharffenberg.

2722. Nutrition Search, Inc. 1975. Nutrition almanac. New York, NY: McGraw-Hill. viii + 263 p. Illust. Index. 26 cm. *
• ***Summary:*** Page 71 states: "In addition to providing complete protein, soybeans contain vitamins and minerals in a natural relationship that is similar to the human body's needs."

"Soy milk: In comparison to cow's milk, soy milk is low in fats..."

"Malt is the germinated seeds of various grains, usually barley" (p. 76).

2723. Pontecorvo, A.J. 1975. La Soya y sus aplicaciones alimenticias en favor de las areas rurales de Mexico [The soybean and its applications as food for the rural areas of Mexico]. BSc thesis, National Autonomous University of Mexico (UNAM). [Spa]*

2724. Rombauer, Irma S.; Becker, Marion Rombauer. 1975. Joy of cooking. Indianapolis/New York: Bobbs-Merrill Co. 915 p. Illust. by Ginnie Hofmann and Ikki Matsumoto. Index. 25 cm.

• ***Summary:*** One of the great American cookbooks. A classic and an all-purpose cookbook, this is the last edition revised by Marion Rombauer Becker. Soy-related recipes and descriptions include: Soy or lima bean casserole (p. 255-56). Soy cakes ("patties" of mashed cooked soybeans, rice, vegetables and eggs, rolled in sesame seeds and sauteed, p. 256). About fresh beans–edible soy beans (p. 284-85, with illustration {line drawing}). Green soybeans (cooked, p. 286; "Use the edible vegetable type, not field varieties of beans"). Low-fat tofu dressing (p. 369). About vegetable and nut milks: These are all nutritionally inferior to animal milks, "as their protein is of lower biologic value and their vitamin content is different." Almond and walnut milks have long been known in Europe. Native Americans used hickory and pecan milk. These milks, and coconut milk, with their delicate, fragile flavors "are a great delicacy in sauces and puddings." Gives recipes for almond milk, soybean milk (p. 534-35). Soybean curd or tofu (homemade, p. 535; "For other suggestions, see *The Book of Tofu,* by William Shurtleff and Akiko Aoyagi). Soybean paste or extender (cooked soybeans pressed through a colander, p. 535). Alternate or engineered foods (p. 535-36; textured vegetable proteins, "TVPs," CSM, WSB). Soy flour (p. 549). Soy meal (p. 549-50; coarser than flour). About seeds, grains, beans and peas–Roasted soybeans (p. 564). About commercial sauces–Soy sauce and shoyu (p. 574). Soy whole wheat bread (with soy flour, p. 608).

In the long, excellent section titled "Know your ingredients" (p. 519+), under "The capers and caperlike buds and seeds" (p. 580) we read: "Similar in Use are Chinese fermented black beans, or *toushi,* which are available in cans;..."

Note: This is the earliest English-language document seen (Nov. 2011) that uses the term "Chinese fermented black beans" or the word "toushi" to refer to fermented black soybeans.

As of April 1996 the book has not been revised since 1975. It is now a Scribner book published by Simon & Schuster. Hardcover price: $24.00. Address: Jennifer Becker, 38537 S.E. Hudson Rd., Sandy, Oregon 97055.

2725. Sass, Lorna J. 1975. To the king's taste: Richard II's book of feasts and recipes adapted for modern cooking. New York City, NY: The Metropolitan Museum of Art. 144 p. Illust. Index. 23 cm. [24 ref]

• ***Summary:*** From the fourteenth-century court of Richard II, "the best and royallest viander of all Christian kings," come forty delicious recipes from medieval England, all adapted for modern cooking by the author. Based on a medieval manuscript cookbook commissioned by Richard II in about 1390, the *Fourme of Cury* (Manner of Cookery) is one of the earliest extant recipe collections in Middle English. Many of the 196 recipes reveal the lust for grandeur and exoticism characteristic of the king's court, where 10,000 guests dined daily on delicacies prepared by 300 chefs.

The author, who holds a doctorate in medieval literature from Columbia University, found this work while doing research in the stacks of the Columbia University library. It was in a dark leather book, published by the Early English Text Society, titled *Two Fifteenth Century Cookery Books.*

Each recipe is given in its original Middle English, followed by a modern translation.

On pages 116 is a detailed recipe for "Cold Almond Milk," which comes from a different source–a rare manuscript (about 1467) in the Holkham collection. It is printed in Mrs. Alexander Napier, *A Noble Boke off Cookry ffor a Prynce houssolde* (London, 1882). A separate quotation from *Dyetary* (1542), by Boorde, attributes therapeutic value to almond milk (see p. 116, 128): "Almon mylk doth comforte the brest, and it doth mollyfe the bely, and provoketh uryne." Lorna Sass notes: "One of the most popular ingredients in medieval cookery, almond milk was used as a thickener and flavoring agent in a wide variety of meat and fruit dishes. It was also served hot or cold as a dip for making sops of toasted bread. Almond milk was apparently so commonly known that few cooks bothered to write the recipe down. The above instructions are therefore extremely valuable as the only published source known." She then gives a modern version of the recipe using ½ cup blanched almonds, water, honey, and salt as the only ingredients. The ancient recipe begins: "Cold Mylk of Almondes–To mak cold mylk of almondes put fair water in a pot with sugar or honey clarified so that it be douce. The salt it and set it on the fyere and when it is at boil scom and let it boile awhile. Then tak it from the fyre and let it kele. Then blanche youre almondes and grind them, and temper then with the same water to a good thik mylk, and put it to wyne [add wine] that it may have a good flavour ther of, and serve it..."

Talk with Lorna Sass. 1997. Feb. 15. She is quite sure that almond milk came to Europe from Arabic cookery, perhaps as early as the 8th century. Charles Perry, who lives near Los Angeles, California, is an expert on the history of Arabic cookery, and has written articles about it, as in *PPC* (*Petits Propos Culinaires,* London). Address: Culinary historian, New York City.

2726. Silverstein, Alvin; Silverstein, Virginia B. 1975. Beans: All about them. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 86 p. Illust. by Shirley Chan. Index. 22 cm. Summarized in Soybean Digest, Sept. 1975, p. 43. [7 ref]

• ***Summary:*** This excellent book for children discusses beans in legend and history, how to grow them, and their future as

a low-cost protein supplement. Includes experiments, bean recipes, and games.

Contents: Beans. The story of beans. The history of beans. Beans in legend and lore. The life story of the bean. Kinds of beans. Beans in the garden and the marketplace. Beans for the future. Fun with beans. Beans for good eating.

Page 2: "Kuan Yu, a great war god in Chinese folktales, was a bean curd [tofu] seller in his youth."

Pages 12-13, a brief (and partially accurate) history of the soybean, begin: "Soybeans are native to eastern Asia. The oldest written records of them date back to 2838 B.C. [sic], when Emperor Shen Nung of China wrote a description of the plant." Also mentions: The five sacred grains, soybean "milk," tofu, yuba, [soy] sauces, soybean paste, soybean sprouts, soybean oil, Engelbert Kaempfer, first introduced "to the United States around 1800 when a ship brought some to Philadelphia [Pennsylvania], Commodore Perry (1854), USDA tested about 10,000 different kinds. Now soybeans are the number one U.S. cash crop, accounting for more then 75% of the world's soybean supply. Soybeans are used as foods for humans (in the form of oil, flour, soy sauce, "milk substitutes, and meat substitutes and 'extenders'") and feeds for animals. They are also used in the manufacture of more than 250 industrial products, including paints, soaps, lubricants, adhesives, and fertilizer.

Page 16: "In China, beans were a good luck symbol. A person who wore a string of soybeans hidden around his neck was believed to possess magic powers to do amazing feats. Three dark soybeans soaked in sesame oil for three days were used to foretell the future."

The chapter "The life story of the bean" (p. 18-29) gives (with illustrations) a simple and accurate description of the bean seed and how it grows, discussing the hilum or seed scar, the micropyle or tiny hole at one end of the hilum, the seed coat, the two cotyledons in which food for the young growing plant are stored, the embryo nestled (a plant in miniature) between the cotyledons, with its two tiny leaves (the plumule), a little root (the radicle), and a stemlike part connecting them (the hypocotyl). When the seed is planted, and it germinates or sprouts, the "embryo root pokes its tip out through the micropyle and grows out into the soil. Tiny root hairs form along the growing root. They take in moisture and dissolved minerals from the soil." The hypocotyl grows until it "suddenly pushes up out of the soil–the first part of the seedling to emerge. It is bent over, for the cotyledons are still buried in the soil." The hypocotyl continues to grow. In a day or so the seed coat splits, then the top of the plant pops up out of the soil. "The empty seed coat is left behind, buried beneath the surface." Now the young bean seedling is growing straight up. The two seed leaves at the top unfold and grow quickly. Below them on the stem are the two cotyledons. As sun shines on the growing plant, its leaves, cotyledons, and stem begin to turn green–a turning point in the life of the plant.

For a while, the growing plant takes the food it needs from the reserves stored in the two cotyledons. But as these reserves are used up, they shrivel and finally fall off. Now the young plant must create its own food using chlorophyll and photosynthesis.

Chlorophyll traps energy from the sun. When examined under a magnifying glass, one can see that the surface of a plant leaf contains many tiny openings called stomates, which are usually open during the day and closed at night. "When the stomates are open, gases from the air pass freely in and out." Air is about 80% nitrogen, 20% oxygen, plus smaller amounts of carbon dioxide, water vapors, and others gases. In the leaves, "carbon dioxide and water are combined, using the sunlight energy trapped by chlorophyll, into sugar, starches, and other complicated chemicals. Scientists call this process photosynthesis (photo means light, and synthesis means a putting together)." The by-product, oxygen, passes out into the air through the stomates; it is the gas that humans and other mammals need to breathe.

Describes the underground activities related to plant growth, nodules, bacteria that live symbiotically in the roots and fix ammonia and nitrogen. Also describes the bean flower, its parts, self-pollination, the key role of bees, and how the seeds are formed from the flower.

The chapter "The soybean–Number one" (p. 36-39) describes the current status of the soybean in the USA. The chapter "Beans for the future" discusses modern developments such as CSM, soyfoods such as sufu, tempeh, miso, spun soy protein fibers, soybean meat analogs, textured vegetable protein (TVP).

When a bean seed sprouts, how does it know which way is "up"? "Could you ever get a seedling with its roots pointing up in the air and its shoot poking down into the soil?" Supposing you cut off all sunlight? No, plants have a built-in gravity sense which scientists call "geotropism." A plant hormone called an auxin causes the plant to bend upward–and toward the light (heliotropism). In 1888, the symbiotic partnership between legumes and nitrogen fixing bacteria was first discovered by Hellriegel and Wilfarth. There are short-day plants, long-day plants, and day-neutral plants; flowering will not begin until the length of days and nights is just right (p. 54-59). Bean recipes (p. 70-75). Address: 1. Prof. of Biology, Staten Island Community College, New York City; 2. Translator of Russian scientific materials.

2727. Smith, Ramona G. 1975. Basic soybean cooking for Bangladesh. Dacca: Mennonite Central Committee. xiii + 71 p. Illust. 24 cm. [9 ref]

• ***Summary:*** Contents: Notes. Acknowledgements. 1. An introduction to soybeans. 2. How to prepare soybeans for cooking. 3. Green soybeans. 4. Dry mature soybeans. 5. Soybean paste (mashed whole soybeans). 6. Soyflour. 7. Soymilk. Appendices: A. Comparison of nutrients in

soybean and common dhals. B. Comparison of nutrients in soyflour, whole wheat flour and white flour. C. Comparison of nutrients in soymilk and cow's milk. References. Address: Home Economist, Mennonite Central Committee.

2728. Thio, Goan Loo. 1975. Small-scale and home processing of soya beans with applications and recipes. *Royal Tropical Institute* (*Amsterdam*), *Dept. of Agric. Research. Communication* No. 64. vii + 51 p. Illust. Third ed., revised and enlarged. 1978. No. 64a. 59 p. 24 cm. [26 ref]

• ***Summary:*** Contents: 1. Introduction: History, botany, cultivation, pests and diseases, harvesting, yield and storage. 2. Chemical composition. 3. Nutritive value: Supplementation, trypsin inhibitor, hemagglutinins. 4. Small-scale and home processing methods: Soya milk, yogurt of soya milk, toufu (Soya bean curd), soya-bean sprouts, soya steak (Tempeh). 5. Applications of soya beans and soya-bean products [recipes]: Fried soya beans, cooked, young whole soy beans [green vegetable soybeans], flavoured soya milk, fried toufu, fried soya steak, dried sliced toufu (toufu crisp/crisps), soya flour (including soya-milk-residue flour [ground okara]). 6. Recipes based on soya bean products: soups with soya bean products, flavoured soya milk, soya yogurt with fruits, toufu bread/cake, toufu dishes, modified Zambian recipes, recipes with soya flour, soya shashlick (tofu kebab), and soya [tofu] spring roll. 7. Discussion. References. Note: Toufu = Tofu.

Note 1. This is the earliest English-language document seen (Jan. 2013) that uses the term "soya-bean sprouts" to refer to soy sprouts.

Note 2. This is the earliest document seen (Sept. 2012) that uses the term "soya yogurt" to refer to soy yogurt. Address: Dep. of Agricultural Research, Royal Tropical Inst., Amsterdam.

2729. Wynne-Tyson, Jon. 1975. Food for a future: The ecological priority of a humane diet. London: Davis-Poynter Ltd. 183 p. Index. 23 cm. [48 ref]

• ***Summary:*** One of the most important books on vegetarianism written during the 1970s. *The Times* (*London*) commented on Wynne-Tyson: "Perhaps his most subtle achievement is the slow revelation that the arguments for meat-eating are in fact those that are emotional and irrational."

Contents: 1. A vegetable love. 2. The social obligation. 3. The aberrant ape. 4. To the cradle from the grave. 5. Pathology or hygiene? 6. Values in perspective. 7. The further step. 8. Human or humane? 9. As old as man. Appendices.

Pages 94-95 and 100 discuss the nutritional value of soya beans, dried soya bean powder (soy flour), and Granogen powdered soya milk. Address: Fontwell, Sussex, England.

2730. Yuchi Pines Institute. 1975. "Blessed art thou, o land, when... thy princes eat... for strength, and not for drunkenness." Ecclesiastes 10:17. Seale, Alabama: Yuchi Pines Institute. 222 p. Undated. Illust. Index. 26 cm.

• ***Summary:*** A natural foods and vegetarian cookbook, with considerable nutritional information. On spine: "Eat for strength." Chapter III, titled "Dairy product substitutes" (p. 43-59) contains numerous recipes that use soy as an ingredient. Soy-related recipes include: Soy bread (p. 15, with soy flour). Soy-bran crackers (p. 25, with soy flour, lecithin, whole wheat flour, and bran). Soy crackers (p. 27, with whole soaked soybeans and lecithin). Soy noodles (p. 28, with Soy Base–see p. 46). Soy waffles (p. 41, with whole soaked soybeans). Double strength soy milk for cream (p. 45–Save pulp [okara] to use in Soy Crackers. Use rich soy milk as a base for Mayonnaise or Sour Cream, as Soy milk, or as Soy yogurt). Sour cream (p. 45, made with soy milk). Madison milk (p. 46, with whole dry soybeans). Banana soy milk (p. 46). Soy base and milk with various flavors (p. 46). Soy sour cream (p. 47). Vegetarian cream (p. 47, with double strength soy milk). Sesame spread (p. 48, with soy base). Soy cottage cheese (p. 52, with soy grits). Scrambled tofu–Soy cheese (p. 53). Tofu (homemade, 3 methods, from soy flour or whole soybeans). Soy yogurt (p. 54, from soy milk). Simple soy butter (p. 55, with soy flour or dry soybeans). Food yeast butter (p. 55, with Soyannaise). Soy butter (p. 57, with soy flour, lightly browned). Margarine [non-hydrogenated] (p. 58, with coconut oil, oil, hot water, lecithin, lemon juice, and onion salt). Carrot pie (p. 69, with soy milk and soy flour). Banana cream toast (p. 72, with soy or nut milk). Carob drink (p. 74, with soy or nut milk). Bread pudding (p. 75, with Soy base). Soaked soybeans (p. 85, 210). Soynuts I and II (p. 85-86). Soy patties I and II (p. 86, with mashed soybeans and peanut butter). Soy loaf (p. 87, with soaked soybeans). Soy cheese balls (p. 88, with Soy cottage cheese or chopped Tofu). Soy soufflé (p. 88, with soaked soybeans). "Salmon loaf" (p. 90, with soy flour). Soy corn chowder (p. 105, with Soy milk or Basic Cream Sauce). Cucumber soup (p. 106, with Soy milk or Basic Cream Sauce). Fresh cream of corn soup (p. 107, with Soy or nut milk). Vichyssoise (p. 109, with Soy or nut milk). Corn chowder (p. 110, with Soy or nut milk). Rice and soybean loaf (p. 119, with cooked soybeans). Basic cream sauce (p. 127, with Soy base). Soyonnaise I-IV (p. 133-34, incl. with Soyagen or canned Soyalac).

Recipes containing peanuts or wheat gluten: Nut cheese (p. 54). Emulsified peanut butter (p. 55). Peanut butter balls (p. 65). Peanut butter loaf (p. 86). Peanut butter Creole (p. 89). Chinese pepper steak (p. 93, with gluten). Nuttose (p. 95, with nut butter). Gluten (p. 96). Peanut butter gravy (p. 126). Grandmother's gravy (p. 126, with peanut butter).

A table titled "Irritating substances" (p. 123) lists the name of the substance, the chemical, and the effect.

The substances are: Black pepper, chili peppers, cayenne, horseradish, cloves, cinnamon, mustard seed, ginger, nutmeg, vinegar, baking soda, baking powder, salt (sodium chloride). On the facing page is a list of 25 "Safe herbs."

Note: A later edition of the book was copyrighted in 1979, then revised in 1983. The title was changed to "East for Strength" and the author was listed as Dr. Agatha Thrash. Yuchi Pines Institute (renamed Uchee Pines Inst. in the late 1980s or early 1990s) was founded in 1970 by Drs. Agatha and Calvin Thrash, who are both physicians and Seventh-day Adventists. As of April 1992 both are still living at Uchee Pines.

Talk with Dr. Agatha Thrash. 1999. June 4. This book was first published (with the above title) in 1975. They copyrighted it in 1979. Address: Route 1, Box 273, Seale, Alabama.

2731. Applied Scientific Research Corporation of Thailand (ASRCT). 1975? Chocolate soy beverage (Leaflet). Bangkok, Thailand. Undated.
Address: ASRCT, 196 Phahonyothin Rd., Bank Khen, Bangkok 9, Thailand.

2732. **Product Name:** Health Maid Soymilk [Plain].
Manufacturer's Name: Health Maid Natural Foods (Distributor).
Manufacturer's Address: Los Angeles, California.
Date of Introduction: 1975?
New Product–Documentation: Leaflet. Undated. "Health Maid Natural Foods Soymilk."

Note: Very little is known about this product. 1. Who made it? 2. Where was it made? 3. When was it launched?

2733. Meals for Millions. 1975? Meals for Millions presents: In their own way. A dramatic presentation of MFM's current work in Africa, Egypt, Korea (Leaflet). Santa Monica, California. 3 panels each side. Each panel: 21.5 x 9.5 cm. Undated.
• ***Summary:*** On the cover is a photo of an African woman seated, preparing food. Printed black on light blue.

"This slide show presentation... also focuses on a soy beverage plant in Korea which is making possible a low-cost, high-protein drink for the poor."

"This free 20 minute slide show comes complete with: (1) Narration on reel-to-reel tape and cassette tape. (2) Carousel with color slides. (3) Script with complete directions for handling on any standard projector (4) Literature for audience distribution." One panel is an order form. Address: P.O. Drawer 680, Santa Monica, California 90406. Phone: (213) 829-5337.

2734. Gallagher, James R. 1976. 'China Doctor' Harry Miller dies at 97 (News release). Washington, DC: Seventh-day Adventist Church. 4 p. Jan. 4.

• ***Summary:*** "Washington, D.C.–Harry Willis Miller, M.D., known to generations of Asians and Americans as the 'China Doctor,' died Saturday, January 1, in Riverside, California. He was 97.

"Dr. Miller reportedly suffered a massive heart attack on his way to Seventh-day Adventist morning church services.

"Famous in the Orient for his skill as a thyroid surgeon, Dr. Miller was also a pioneer in the field of nutrition. He developed the process of making soybean milk to feed malnourished Chinese children in areas where cow's milk was unavailable.

"Dr. Miller served as a physician to Chou En-lai, Madame Chiang Kai-shek, and once treated the Republic of China's first leader, Sun Yat-sen. During his first stay in mainland China he cured a Manchurian leader, Marshal Chang Hsueh-liang of the opium habit.

"His later years were devoted to research in vegetarian proteins and fund-raising for the establishment of 20 hospitals throughout the Far East. He returned from his work at the Hong Kong Adventist Hospital, which he helped found, just two years ago.

"Born in Ludlow Falls, Ohio, in 1879, Dr. Miller received his medical degree from American Medical Missionary College in 1902. The following year he was sent by the Seventh-day Adventist Church as one of its first missionaries to Central China. He went first to the small town of Hsintsai in Honan Province.

"Living in the shadow of the Boxer Rebellion, when many foreign missionaries were killed, Dr. Miller and his wife, Ethel, dressed as Chinese and gained the respect of rich and poor alike."

Ill health forced Dr. Miller to return to Washington, DC, where he remained until 1925. "The years 1925 to 1935 again saw Dr. Miller in mission service to China. He built Shanghai Sanitarium and Hospital, the first Adventist medical institution outside the United States, and the Wuhan Sanitarium and Hospital in Central China."

"The years of World War II found Dr. Miller in the United States once again, this time as medical director of the Mount Vernon Hospital in Ohio. While there, he founded the International Nutrition Laboratory, which carried out experiments on vegetarian protein products. The laboratory is now part of Loma Linda Foods, an Adventist-owned company.

"Dr. Miller returned to Shanghai in 1949, only to be evacuated in 1950 as the Communist revolution overflowed China."

During the 1950s Dr. Miller returned to research work in nutrition [related to his soy products] in both Ohio and California. He also worked as a surgeon and administrator in many countries worldwide. Then in 1960, at age 81, Miller was called to establish a hospital in Hong Kong. He remained in Hong Kong until 1974, practicing surgery and seeing patients in a weekly clinic. "By his own estimate,

Dr. Miller performed 6,000 thyroid operations and 'about 30,000' operations during the span of his 70-year career in medicine." In 1997 he returned to Riverside, California where [at Loma Linda Foods] he actively continued his nutrition research until his death.

"Dr. Miller served on the American Relief Administration at the appointment of President Woodrow Wilson. Among his famous American patients were Alexander Graham Bell and William Jennings Bryan, as well as several senators and congressmen.

"A book by Dr. Raymond Moore, *China Doctor* (Harper & Row, 1961), is available on the life and career of Dr. Miller. In a 1974 letter, President Richard Nixon commended him by writing, 'You leave an admirable legacy of compassion and accomplishment.'

"Dr. Miller is survived by his wife, the former Mary Greer, and four children by a previous marriage.

"Funeral services are scheduled in Loma Linda, California, on Wednesday, January 5. Willis H. Hackett, chairman of the Board of Trustees of Loma Linda Food Company, and Charles Taylor, associate director of the Department of Education of the General Conference of Seventh-day Adventists, will represent the world headquarters of the Adventist Church."

2735. Autumn Press, Inc. 1976. Imagine... (Ad for The Book of Tofu by Shurtleff and Aoyagi). *Mother Earth News* No. 37. Jan. p. 153. [1 ref]
• ***Summary:*** This exact same ad first appeared in Dec. 1975 in *Macrobiotic* (The) (Chico, California), No. 111. p. 61. Address: P.O. Box 469, Soquel, California 95073.

2736. **Product Name:** [Soycomil {Soya Protein Concentrate for Young Animals} (K is a fine powder for calf milk replacer, or P is a coarse powder for pelleted piglet feed)].
Foreign Name: Soycomil.
Manufacturer's Name: Unimills B.V. Renamed Loders Croklaan B.V. in 1986. Subsidiary of Unilever.
Manufacturer's Address: Lindtsedijk 8, 3336 LE Zwijndrecht, Netherlands.
Date of Introduction: 1976. January.
Wt/Vol., Packaging, Price: 25 kg valve bags and in bulk.
How Stored: Shelf stable.
New Product–Documentation: Soya Bluebook. 1980. p. 54; 1981. p. 64. This is the earliest listing seen for a soy protein concentrate outside the USA. No brand name is given. Note: This company is owned by Unilever. Soya Bluebook. 1987. p. 72. UniMills B.V., affiliate of Unilever N.V. of Rotterdam, makes Unico and Soycomil Soy Protein Concentrates, at Zwijndrecht. They contain 60.5% protein on a dry basis and come in a variety of particle sizes.

Talk with Carol Velthuis at Michigan State Univ. 1989. Aug. 9. The product, used only as a calf milk replacer, was introduced at least 10 years ago.

Spot in Feed Management (Mt. Morris, Illinois). 1989. Dec. These are two antigen-free soya protein concentrates. "As indigestible carbohydrates present in soybean meal, soya flour, and full fat soya are removed during the process, the digestibility of the protein is considerably improved... Soycomil is an ideal protein for early weaned piglets as diarrhea due to undigested proteins is prevented." The K type is for calves and the P is for piglets; the P is not a textured soy protein concentrate.

SoyaFoods (ASA, Europe). 1990. Spring/Summer. p. 2. Loders Croklaan will expand the capacity of its soy protein concentrate plant by 50% at its sister company, UniMills, in Germany.

Letter (fax) from Aat Visser of Loders Croklaan. 1990. Aug. 6 and Aug. 27. Before Nov. 1971 this company's name was Unimills B.V., based in Wormerveer, Netherlands. In Nov. 1971 Unimills was acquired by Unilever. In 1973 Unimills started to produce soya protein concentrates on a pilot plant scale. In Jan. 1976 Unimills introduced Soycomil K and P, soy protein concentrates for young animals, and Unico. Production was (and still is) at Lindtsedijk 8, 3336 LE Zwijndrecht, Netherlands. In Sept. 1986 the spelling of the name was changed from Unimills to UniMills, and the protein division was transferred to Loders Croklaan, at that time named simply Croklaan. The concentrates and flour are available in various particle sizes and degrees of functionality in 25 kg valve bags and in bulk.

Product brochure sent by Aat Visser. 1990. Aug. "Soycomil–The ideal protein for all young animals." Soycomil is a soya protein concentrate made by a special process and recommended in particular for use in feeds for young animals. Soycomil K is a fine powder, especially suitable for use in calf milk replacer. Soycomil P is a coarse powder, particularly suitable for pelleted piglet feed. Contents: Description. Manufacture. Quality control. Antigens (Loders Croklaan has developed a manufacturing process which effectively eliminates the soya antigens). Main uses. Product characteristics. Amino acid content. Biological analysis. Packaging/keepability. The advantages of Soycomil (11 are listed). Nutritive value of Soycomil: For veal calves, rearing calves, piglets, and mink.

This product is shown in the ADM Annual Report (Sept. 1992, page 11) as now being made by ADM at Europoort in 25 kg paper sacks.

2743. Woodruff, Calvin W. 1976. Milk intolerances. *Nutrition Reviews* 34(2):33-37. Feb. [34 ref]
• ***Summary:*** Contents: Introduction. Protein. Diagnostic criteria. Immunological data. Cow's milk-wheat gluten intolerance. Fresh cow's milk intolerance. Lactose. Incidence. Genetic versus adaptive hypotheses. Implications.

The symptom complex now called lactose intolerance has been recognized in adult animals and humans for nearly 70 years, but only during the last 15 years has enough specific information been accumulated to describe in detail the biology and history of lactose intolerance. J.D. Johnson et al. (1974) have published a detailed review of the subject. Primary lactase deficiency is the normal state in mammals after the nursing period. Certain ethnic groups, those with a long history of cattle raising and milk drinking, maintain intestinal lactase activity into adult life. This phenomenon is genetic rather than adaptive. Address: M.D., School of Medicine, Univ. of Missouri, Columbia, MO.

2748. Mane, Pratap V. 1976. Soyabean: Solving protein problem. *Oils and Oilseeds Journal* (*Bombay*) 28(3):23-25. Jan/March.
• ***Summary:*** "In recent years, India has been importing about one lakh tonnes [1 lakh = 100,000] of soyabean oil for us in the manufacture of hydrogenated oils (vanaspati ghee)." Moreover, soyabean has "suddenly gained importance because of its possible utilisation for production of artificial milk and other milk products.

Tables show: (1) Area, production and yield per hectare of oilseeds in India. In descending order of production (in million metric tons) they are: Groundnut (6.00), rape-mustard (1.90), sesamum (0.52), linseed (0.47), castor (0.14), soyabean (0.07), sunflower (0.35).

• ***Summary:*** The first edition of this book was published on 15 Jan. 1964. The first revised edition (130th printing) was published on 25 Jan. 1969. This is the second revised edition (265th printing), published on 25 March 1976. Also published by Joshi Eiyo Daigaku Shuppan-bu.

For soybeans and soyfoods, see pages 33-35, 69, and 74 (basic nutritional composition), and 111-12 (amino acid composition).

Page 88, No. 812: Amazake. Per 100 gm. Calories 101, moisture 74.0 gm, protein 2.4 gm, fat 0.1 gm, carbohydrates (sugars 22.7 gm, fiber 0.6 gm), ash 0.2 gm, calcium 74 mg, phosphorus 25 mg, iron 0.4 mg, vitamin A 0 mg, vitamin B-1 0.08 mg, vitamin B-2 0.06 mg, nicotinic acid 0.06 mg, vitamin C 0 mg.

A later edition (after 1976), containing at least 298 pages, gives details on the following soy-related foods (p. 76-80): Japanese-grown whole soybeans (dry, or boiled). Whole dry USA-grown soybeans. Whole dry Chinese-grown soybeans. Green immature soybeans (edamame; raw, or boiled). Soybean sprouts (raw, or boiled). Defatted soybeans (whole, or dehulled). Kinako (soybeans roasted and ground). Budô-mame (soybeans boiled with shoyu). Momen tofu (regular). Kinugoshi tofu (silken). Soft tofu. Packed tofu. Okinawa tofu. Yaki-tofu (grilled). Nama-age. Abura-age. Ganmodoki. Kôri-dofu. Tofu-chikuwa (steamed type, or roasted type). Natto (fermented soybeans): Itohiki-natto, Goto natto, or tera-natto.

Miso: Rice-koji miso (sweet type, light yellow type, dark yellow type). Barley-koji miso. Soybean-koji miso. Dried miso. Kinzanji miso. Hishio-miso.

Other: Okara. Soymilk (regular, reconstituted, or soft drinks). Yuba (wet, or dried).

Page 254 gives the amino acid composition of soybeans and various soyfoods. Page 298 gives the protein scores, amino acid values, and chemical scores of selected foods. Page 8 gives the energy conversion factor for tofu, agé, and yuba.

2750. Clayton, Hugh. 1976. Firm tries to get milkmen to sell soya bean rival. *Times* (*London*). April 3. p. 2, cols. 3-4.
• ***Summary:*** Itona Products from Wigan, Lancashire, makes canned soya "milk" from soya flour. Mr. Hampson, sales director, said at the International Health Foods Fair in London that his company's product was meant for "those who object to the exploitation of animals or are allergic to cow's milk or believe that there is or will be an ever-increasing world food shortage."

Itona "has met dairy men in Lancashire to discuss selling it on the daily milk round." Meanwhile the EEC struggles to reduce its huge surplus of dairy products.

2751. Churella, Helen R.; Yao, Benita Co; Thomson, William A.B. 1976. Soybean trypsin inhibitor activity of soy infant formulas and its nutritional significance for the rat. *J. of Agricultural and Food Chemistry* 24(2):393-97. March/April. [22 ref]
• ***Summary:*** The soybean trypsin inhibitor (SBTI) activity of five soy-based infant formulas was determined by a method specifically designed to test their relatively low levels of SBTI. All formulas, except one, contained 15% or less of the SBTI activity of a soy protein isolate source typically used in the manufacture of such formulas. Resterilizing two of these formulas did not significantly reduce residual SBTI activity.

Weanling rats were fed a variety of soy-based formulas ranging in processing from unprocessed to fully processed

commercial products. "No pancreatic hypertrophy or hyperplasia was observed in any of the rats. Our results show that the level of SBTI in the soy infant formulas tested is low and of no nutritional significance for the rat."

The following commercial soy-based infant formulas were tested: Isomil (Ross Laboratories, Columbus, Ohio), ProSobee (Mead Johnson Lab., Evansville, Illinois), Neo-Mull-Soy and Mullsoy (Syntex Lab., Palo Alto, California), and Soyalac (Loma Linda Foods, Riverside, California). Trypsin inhibitor activity is expressed as trypsin units inhibited (TUI), and it was measured in trypsin units inhibited (TUI) per gram of protein. The soy protein isolate used to manufacture Isomil had an activity of 14.4. The activity of the five commercial products, each sold in concentrated form, ranged from 0.7 (for ProSobee) to 2.1 (for Mullsoy and Soyalac). The activity in ready-to-feed forms ranged from 1.6 to 8.1. Address: Ross Laboratories, Div. of Abbott Labs., Dep. of Product Development, Columbus, Ohio.

2752. Hartman, Warren E. 1976. Plant protein foods: From whence they came to where they are going? Paper presented at the American Chemical Society Symposium, "One Hundred Years of Agricultural and Food Chemistry–Challenges of Food Processing and Flavor: Past, Present, and Future." 20 p. April 7. Unpublished manuscript. [21 ref]
• ***Summary:*** Contains a detailed discussion of the work of Dr. John Harvey Kellogg, and other Seventh-day Adventist vegetarians, which greatly influenced Worthington. Their pragmatic approach led to the development of various meat analog products called "nutmeats." "Usually nuts were finely ground into a paste or nut butter and water was then added to produce an emulsion. To this emulsion was added flours, starches, cereals, or other ingredients. This white milk-like oil and water emulsion was then retorted or cooked to set up into a solid mass. This product could be diced or sliced for salads or used as a main entree. The texture of the resulting product depended mainly upon the degree of emulsification and the varying degree of particle sizes incorporated within the product.

Extracted wheat proteins or wheat gluten was also used as one of the basic raw materials for the early vegetarian protein products. The gluten or protein extraction process usually starts with a high protein hard wheat flour which is mixed with water to form a dough in a conventional dough mixer. This dough is repeatedly washed with water to remove the starch. The carbohydrate water is decantered off and the process repeated several times until the gluten reaches the desired protein content, typically around 72% protein on a dry basis. This dough-like elastic mass of gluten is cut into slices or cubes and cooked in boiling water where it expands and the protein simultaneously denatures, giving an expanded cellular chewy texture to the product. This product may be canned in a bouillon-type broth or may be ground through a chopper to simulate minced meat or hamburger. The wheat gluten also provided an elastic matrix for incorporation of nuts, grains, flours, legumes, and other vegetable material into a mass, when mixed vigorously at high speed with considerable shear for an extended length of time would yield a thin, string-like fibrous textured dough mass in which other materials could be incorporated. This product was also canned and cooked to produce a solid textured loaf-type product which served as a vegetarian entree, or was diced or ground for use in home recipes.

"Similar products are being manufactured today and wheat protein or wheat gluten is still an important basic raw material for its contribution to texture. The Worthington division of Miles Laboratories presently has a number of products based almost exclusively on wheat gluten which are peculiar, yet significantly textured protein products. Miles Laboratories also is becoming basic in the production of vital wheat gluten for utilization by industries throughout the world."

"Worthington Soyamel was the first soymilk-type beverage to be based on or formulated primarily from soy protein isolate." Also discusses spun soy protein fibers. Address: Worthington Foods, Worthington, Ohio.

2753. **Product Name:** [Soyalac {Soymilk} (Reduced Sugar, or No Added Sugar)].
Foreign Name: Soiyarakku (Gentô, Mukatô).
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1976. April.
Wt/Vol., Packaging, Price: 425 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Both products tasted by William Shurtleff in Hayama, Japan, at the home of Nahum and Beverly Stiskin while doing final proofreading and editing on *The Book of Miso.* 1976. May 19-23.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Soiyarakku Gentô was introduced in April 1976 and Soiyarakku Mukatô in June 1976. They are both now sold by Saniku Fuuzu in a 425 gm can and distributed nationwide.

2754. Shibasaki, Kazuo. 1976. Tônyû no kagaku [The science of soymilk]. *Shoku no Kagaka* (*Food Science Journal*) No. 29. p. 84-90. April. [Jap]
• ***Summary:*** Includes an early history of soymilk. Address: Tohoku Daigaku Nogakubu, Shokuryo Kagaku-ka, Kyoju [Prof., Dep. of Food Chemistry, Faculty of Agriculture, Tohoku Univ., Sendai, Miyagi-ken, Japan].

2755. Trivaldi, V.D. 1976. The moo the merrier: Push-button milk. *Times of India* (*The*) (*Bombay*). May 9. p. 8.
• ***Summary:*** A silly article that mentions both "soya milk"

and "soyabean milk."

Note: India is the world's largest producer of water buffalo milk, with 56,960,000 tonnes (metric tons) in 2007. The 2nd largest producer, Pakistan, had less than half as much 21.5 million tonnes. Water buffalo milk contains about 40% more protein, a little more than twice as much fat, and 66.7% more calories per 100 gm than cow's milk.

2756. Mital, B.K.; Steinkraus, K.H. 1976. Flavor acceptability of unfermented and lactic-fermented soy milks. *J. of Milk and Food Technology* 39(5):342-44. May. [11 ref]

• ***Summary:*** Soy milk prepared from soybean flour defatted by a Cornell University patented process (U.S. Patent No. 3,721,569) by aqueous extraction and addition of 2.5% refined soy oil and 2% sucrose was rated slightly inferior to fresh cow's milk in flavor. This soy milk was also fermented with 3 different lactic bacteria (*Streptococcus thermophilus, Lactobacillus acidophilus, and L. plantarum*) to produce a yogurt-like product, whose flavor was compared with that of fermented cow's milk. *S. thermophilus* produced the most acid and the soy yogurt that was rated closest to cow's milk yogurt fermented with the same organism. The soy milks fermented with the other two organisms were rated inferior to fermented cow's milk mainly because of their lower acidity. All three soy yogurts had a smooth texture, a satisfactory gelatinous curd and "were virtually devoid of objectionable flavor as only one panelist out of 27 recorded a slightly beany taste. Three panelists described the mouth-feel as chalky and six recorded persistent aftertaste. No panelist judged the fermented soy milks as unacceptable in flavor." However the 27-member taste panel preferred the higher acidity of the fermented cow's milk. Address: Cornell Univ., New York State Agric. Exp. Station, Geneva, NY 14456.

2757. Pontecorvo, Aldo J. 1976. Soybean foods for rural Mexico. *League for International Food Education* (*LIFE*) *Newsletter.* May. p. 1-3. [2 ref]

• ***Summary:*** "In rural Mexico, as in many other parts of the world, the main nutritional problem is the lack of food. As the number of mouths that must be fed increases, so does the need to develop methods and processes for preparing simple food products from local resources. The soybean is rapidly becoming such a resource in many parts of rural Mexico.

"Prior to 1969 soybeans were planted only in the states of Sonora and Sinaloa along the eastern coast of the Gulf of California. Soy is now grown in most of the states across the north of the country and in Jalisco, a west-central state. Production has been increasing over 6% a year with last year's production amounting to 500,000 tons. Varieties which can be grown in the more tropical states are also available, making possible an even greater increase.

"In addition to the locally grown soy, about 200,000 tons per year are being imported to meet Mexico's needs. Almost all of the imported soy is processed by the oil extraction industry with the residual meal being used in poultry and animal feeds.

"Presently soy consumed as human food amounts to only about 30 tons per day:

"Full-fat soy flour–18 tons.

"Soy milk and similar products–6 tons.

"Texturized soy protein [soy flour]–6 tons.

"The projected increase in consumption of these three basic products is 100 tons per day for the current year.

"Soy products are found in supermarkets and self-service stores in urban Mexico under such brand names as Soacit and Soyatole (soymilk products) and Alborada, Protoleg, and Molida (texturized soy protein products). Various soy products are being distributed by government agencies in all states of the country and are being used with good acceptance in employee and school feeding programs.

"However, these products are not often found in rural areas. Although the products themselves are fairly inexpensive to process, the costs of transportation and marketing place them out of reach of the lowest income groups.

"Therefore it is important to develop methods and processes for preparing simple soy products which can be used in the rural areas themselves.

"Starting with the simple process of Mustakas et al for processing crude soybeans, we have used other simple and primitive techniques to prepare soy foods for the rural village of Huautla and three other small villages near it in Oaxaca, one of the southernmost states of Mexico. The basic equipment used consists of a cracker, a winnower, and a grinder. Our modified process, using the same equipment, is as follows:

"(a) Crack the whole soybean without water

"(b) Winnow

"(c) Grind without water to obtain different particle sizes

"(d) Cook in boiling water for 20-25 minutes

"(e) Separate by sedimentation into milk, atole, and paste

"The amount of water used varies between seven and nine liters per kilo of soybeans. The exact amount depends upon (1) the water absorption capacity of the beans (which in turn depends upon the variety of soybean used) and (2) the end products desired.

"Three basic products can be manufactured from which a wide variety of dishes can be made depending on tradition and what other foodstuffs are locally available. Using the larger amounts of water, one obtains 6-7 liters of soybean milk (4% protein) and 2-3 kilos of soybean paste (18% protein). With seven liters of water in place of nine, 2-3 liters of a more concentrated heavy milk called atole, together with about the same amount of paste (8% protein), is obtained.

"The soybean milk, which has a short shelf life (about 8 hours) can be drunk as is, or it can be boiled with natural flavoring materials such as cinnamon, vanilla, or cocoa, to

make it even more acceptable. The soymilk is also used to make cheese [tofu]. Here again it is necessary to devise a simple process utilizing heat and/or acid to precipitate the proteins as a curd. This can be done by boiling the milk with the juice of a locally available citrus fruit (lemon, orange, grapefruit, lime) or with fermented pineapple or apple juice. After precipitation of the proteins, the normal cheese-making steps are followed. To preserve the cheese longer, salt, herbs, chilies, and spices can be added, making an aged cheese similar to cotija. This type of cheese can last for three or more months without decomposition.

"The atole, a thick beverage common to southern Mexico and Guatemala, can be consumed immediately or it can be used as a soup base to which locally available vegetables (potatoes, carrots, onions, etc.) are added.

"The paste is dried in traditional ovens to form cookies which can be eaten directly or ground into a flour and combined with corn or wheat flour for baking. The paste is also used as feed for chickens, rabbits, or pigs, thus supplying some meat to the diet.

"To make bread, two parts of dried ground soybean paste is combined with one part wheat flour and one part soybean milk. Other ingredients are sugar, honey, salt, and sodium bicarbonate (if available), or natural yeast, beer, or pulque (fermented cactus juice). The dough is baked for 30 minutes at 392ºF, a temperature that can be easily reached by the most rudimentary oven. Substituting corn flour for wheat flour gives a cookie-like product. It is significant that in these baked goods there is no need for cows milk, eggs, or any other ingredients which are difficult to obtain in rural areas; they have been replaced by the soybean."

Note: This is the earliest English-language document seen (June 2013) that contains the term "ground soybean paste" or "dried ground soybean paste."

"The equipment and processing we have described is intended to serve a single village or rural community. Depending upon the size of the village, it might be necessary to have more than one unit. The team effort required to set up such a processing system could lead to local employment, greater production, and a substantial increase in income if the products could be marketed or traded for other items not available in the community.

"We have described a simple system which could be used effectively in rural areas to produce a variety of soy-based products, given knowledge of the local needs and resources. But it must be remembered that whatever products are made, they must be consumed daily if they are to have a maximum impact on the problems of malnutrition in rural areas." Address: National Autonomous Univ. of Mexico (UNAM).

2758. Potter, Julia M.; Nestel, P.J. 1976. Greater bile acid excretion with soy bean than with cow milk in infants. *American J. of Clinical Nutrition* 29(5):546-551. May. [22 ref]

• ***Summary:*** Substitution of soymilk for cow milk, which lowers the plasma cholesterol in all infants, leads to an increase in bile acids and probably also in cholesterol excretion in young infants.

Note: *Webster's Dictionary* defines bile acid (a term first used in about 1881) as "any of several steroid acids (as cholic acid) of or derived from bile." Bile acids are related to cholesterol, and their excretion from the human body is considered desirable. This is the earliest document seen that mentions the effect of soya on excretion of bile acids. Address: Dep. of Clinical Science, The John Curtin School of Medical Research, The Australian National Univ., Canberra.

• ***Summary:*** Contents: Summary. Soya as a food. The main forms in which soya is used as a source of protein for human consumption: Defatted soy flour, whole soy flour, soy protein isolate, soy protein concentrate, textured soy protein, protein extract of soya; soy milk (*Extrato protéico da soja; "leite" de soja*), fried or roasted soybeans (*Soja frita ou torrada*), the soybean as a bean (*Soja como feijao*). Economic and nutritional consequences of large scale consumption of soy protein as human food: Introduction and examples, use of soya in meat products, use of soya for the enrichment of flour, use of Vital soymilk. Address: Brazil.

2761. **Product Name:** [Midori Soymilk (Mild, or Pure)].
Foreign Name: Midori Tônyû (Mairudo, Piyuwa).
Manufacturer's Name: Kyushu Nyugyo.
Manufacturer's Address: Kyushu, Japan.
Date of Introduction: 1976. June.
Wt/Vol., Packaging, Price: 200 ml, probably Pure Pak type carton.
How Stored: Refrigerated.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Kyushu Nyugyo (Kyushu Milk Co.) first made commercial soymilk in Japan in 1976.

K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p.

72. Note: Midori means "green" in Japanese.

2762. Mosha, Aleck. 1976. Food product applications in Tanzania. *LEC Report* No. 1. p. 127-29. D.E. Wilson, ed. Low-Cost Extrusion Cookers: International Workshop Proceedings. (Fort Collins, CO: Dep. of Agric. and Chemical Engineering, Colorado State Univ.). [5 ref]
• ***Summary:*** Malnutrition is a big problem in Tanzania, especially among infants, children, and pregnant and lactating women. Tanzania's official policy of food self-sufficiency requires that domestically grown foods must be used in the country's developing weaning food program. In 1972 Tanzania's leading food crops were bananas (1,205,743 tons), maize (880,886), cassava (792,850), sweet potatoes (234,151), sorghum (190,882), and rice (paddy, 170,903). Only 776 tons of soybeans were produced.

In the early 1960s, the enrichment of sembe (60% locally extracted maize flour) as well as the fortification of other local staple foods with high protein sources (such as soy flour and groundnut flour) were advocated and limited attempts were made. "Preliminary trials to feed maize-soy flour mixtures to adults and children in educational institutions showed that 5% soy could be added undetected to uji and ugali (local thin maize gruel, and thick maize flour paste, respectively). Systematic high-protein product development was undertaken by the Ministry of Agriculture" (including soy beans) in the late 1960s. Mixtures of maize and sorghum flour containing up to 25% soy flour were acceptable in child-feeding trials. "A village-level soy processing project (in which the villagers used hand-operated equipment for processing soybeans into full-fat flour, soy milk and curd) was started. The products were incorporated into local cereal staples, which were very well accepted. The project is still in progress, but it has been hampered by difficulties arising from the large labor input required by the hand-operated equipment. The use of power mills for decorticating and grinding the soybeans has been recommended." Address: Tanzania Food and Nutrition Center, Dar es Salaam, Tanzania.

2763. Harrison, Gilford R. 1976. Prospects for consumption of soya products in Latin America. Paper presented at Conference on Brazilian Soybeans: Facts and Outlook. 11 p. Held 5-8 July 1976 at Porto Alegre, Brazil.
• ***Summary:*** A very interesting paper. But with no A-level heads, it is difficult to summarize. Address: American Soybean Assoc., Mexico.

2764. Momcilovic, Berislav; Belonje, B.; Giroux, A.; Shah, B.G. 1976. Bioavailability of zinc in milk and soy protein-based infant formulas. *J. of Nutrition* 106(7):913-17. July. [19 ref]
• ***Summary:*** According to trials on young rats, to "provide equivalent amounts of available zinc, the total zinc content of the soy protein-based formula would need to be at least 20% higher than that of the formula containing milk protein." Address: Nutrition Research, Food Directorate, Dep. of Health and Welfare, Ottawa, Canada.

2765. Mustakas, Gus C. 1976. Trip report on visit to Meals for Millions (MFM) Foundation, 1800 Olympic Boulevard, Santa Monica, California 90406, on June 21-22, 1976. Peoria, Illinois. 3 p. July 16. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** This is a report for the ED [Engineering and Development Laboratory] files. Contents: Personnel contacted: Mark Sterner, Hank Sterner, and Gideon Zeidler. What is MFM? Examples of six projects in various countries: (1) Soy milk project in Korea; (2) Soy beverage project in Cairo, Egypt; (3) Weaning food in Ghana; (4) Leaf protein in India; (5) Food processing project in Jamaica; (6) Soy beverage project in Ecuador. NRRC cooperative program with MFM–Soy beverage in Ecuador. Training institute: International Institute of Protein Technology (IIPFT; offers two 4-week courses in Santa Monica roughly twice each year). Extruder and texturized soy protein research. Patent policy. Future research at MFM. Future research cooperation with NRRC. Address: USDA ARS Northern Regional Research Center, Peoria, Illinois 61604.

2766. Anderson, Sylvia. 1976. Re: Tofu made from soy flour on The Farm in Summertown, Tennessee. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 12. 2 p. Typed.
• ***Summary:*** Before Sylvia went to live on The Farm in Summertown, Tennessee, in June 1971, she had never heard of tofu. She first saw firm, pressed tofu in cakes about a year ago. The tofu they made on The Farm was a staple of her diet and one of her favorite foods. This was made from soy flour, and all the pulp [okara] was left in; it was squeezed to a roundish in cloth as the last step rather than being pressed into cakes. She suggests it be called "Tennessee Farm Tofu" or "Squeezed Tofu." It may be a new invention.

"Here's how it came to be: Stephen and his students gave up dairy (cow) products before or during the Caravan, and in the early days of The Farm folks were into commercial soy products like Soyagen and Soyamel (powdered soymilk, made by Worthington Foods) and Fearn's Soya Powders. The Farm store bought and distributed soy powder (Fearn's, I guess), from which we made cardboard tasting soymilk and chalky squeezed tofu from directions in *Ten Talents* (by Frank and Rosalie Hurd, 1968), which was The Farm's cooking scripture of that era.

"As priorities began to get shuffled around and we started growing our own soybeans, soy flour ground in The Farm mill replaced the old soya powder, and as the soy dairy got together, folks stopped making [soy] milk at home, but they kept on making tofu at home, converting the old soy

powder recipe to soy flour. At first we strained the pulp out of the milk before we solidified it, but that meant double straining, and you never could get all the very fine flour-pulp out anyhow, so somewhere along the way we tried it without straining out the flour and found that it made fine 'tofu'–by our standards, which were certainly far from those of a tofu master. But this kind of tofu has become a staple in the diet of several thousand people in America by now... And I'm teaching folks her in New Jersey how to make it as fast as I can... I've tried your homemade tofu method and its fun but a whole lot more energy-expensive than the method I'm used to, so I feel inclined to use it only for special occasions, and use the Tennessee Farm method for my every-day tofu cooking.

"So what I'm pushing here in New Jersey is this new American folk food... People here are digging it and wanting to know how to make it. I've been giving small demonstrations in people's homes quite a bit lately, and have at least three more scheduled this month. Two of these will be at Mormon church ladies' meetings. I didn't realize until recently, but the Mormons have a dietary teaching that goes: 'Yea, flesh also of beasts and of the fowls of the air, I, the Lord, have ordained for the use of man with thanksgiving; nevertheless they are to be used sparingly; And it is pleasing to me that they should not be used, only in times of winter, or of cold, or famine' (*Doctrine and Covenants,* SEct. 89:12-13). So the Mormon ladies in the area want to know how to feed their families soybeans!

"Here's a recent quote from Stephen: 'We *are* our brother's keeper. And our brother is the population of the planet.'" Address: 109 West Park Ave., Pleasantville, New Jersey 08232.

2767. Bates, Cynthia; Lyon, Alexander; Sorenson, S.; Keller, B.; Jenkins, Suzy. 1976. Beatnik tempeh making. Summertown, Tennessee: The Farm. 20 p. Undated. 28 cm. Mimeograph. [8 ref]

• ***Summary:*** Contents: Abstract. Introduction. Methods of preparing inoculum: Pure culture propagated on rice (California, Kentucky), dry inoculum (Tennessee), inoculum grown on sweet potatoes (Tennessee), serial transfer (Tennessee).

Methods for making tempeh: Making tempeh at home (5 lb.; soaking the beans, splitting the beans, second boiling, cooling the beans, inoculation, incubation), making tempeh for a large family group (about 4 kg [8.8 lb] per day), community scale production (25 kg [55 lb], Tennessee), commercial production in California (10 kg. [22 lb] per day). soy pulp [okara] tempeh. Quality control. A table compares "good tempeh" with "bad tempeh" in terms of texture, color, odor, uniformity, and taste. Tempeh is a great favorite on the Farm and easily digested.

Recipes for tempeh: Indonesian fried tempeh. Tempeh burger. German tempeh sandwich. Albert's tempeh topping. The great potential of tempeh. Expanding our tempeh operation (on the Tennessee Farm). Some facts about tempeh and food. References. Acknowledgement.

"Introduction: The Farm is a non-denominational religious community of 1,100 men, women and children living in southern Tennessee. We also have a dozen smaller communities living in other parts of the U.S., also in Canada, Europe and Guatemala. We are complete vegetarians: we eat no meat, eggs or dairy products because we found out that, on the average in the U.S., it takes eight pounds of feed protein to produce one pound of meat protein. We believe that by being vegetarians we can utilize our planet's resources more efficiently, and this make more food available for our hungry world.

"Over the last five and one-half years that we've been together, we've developed a tasty, nutritious diet of beans and grains that centers around soybeans as a protein source. We have a soy dairy that produces 120 gallons of soy milk fresh each day to supply our community. The Soy Dairy also makes soy yogurt, soy cheese and Ice Bean (soy milk ice cream) from the soy milk. We love the good tasting, versatile, high protein soybean and one of our favorite ways of eating it is the fermented product, tempeh. At present our communities are making tempeh in Tennessee, California [San Rafael], Colorado, Kentucky, New York, and Louisiana [Houma]."

"We plan to increase tempeh production on the Tennessee Farm to 135 kg. daily for the community, and to introduce it to neighboring towns." "Our Colorado Farm makes solar dehydrated tempeh chips for soup mix, and this operation could be expanded or duplicated."

"Acknowledgement: We would like to thank Don Wilson for the information on the California Farm method of making tempeh and inoculum." Thanks also to Diane Darling, "the Farm Tempeh Crew, and friends who've helped: Debra Heavens, Valerie Epstein, Paul Meltzer, Maureen Hale, Deborah Stevenson, Laurie Sythe, David Handel, JoAnn Else, Paula Denton, and Corey Ford.

Later summarized as "Utilization of Tempeh in North America" in K.H. Steinkraus, ed. 1983. *Handbook of Indigenous Fermented Foods.* New York: Marcel Dekker. p. 48-50. Address: The Farm, Summertown, Tennessee.

2768. **Product Name:** Ice Bean (Non-Dairy Frozen Dessert. Honey Sweetened. Named Soy Ice Bean from mid-1979 to early 1982) [Honey Vanilla, Carob, Strawberry, Chocolate, Wildberry, Mocha, Peanut Butter Carob Chip, Toasted Almond Fudge, or Almond Espresso].
Manufacturer's Name: Farm Food Company.
Manufacturer's Address: 820 "B" Street, San Rafael, CA 94901. Phone: 415-454-3797.
Date of Introduction: 1976. August.
Ingredients: Honey-Vanilla: Water, soybeans, honey, soy oil, vanilla, soy lecithin, carob bean, guar. 1979 Orange:

Soymilk, orange conc., honey, soy oil, vanilla, salt, veg. gum, lecithin.
Wt/Vol., Packaging, Price: Pint.
How Stored: Frozen.
New Product–Documentation: This pioneering product was first sold commercially in August 1976. Label. 1979, undated. 3 inch diameter. Rainbow colors surrounding a cone. "Mfg. by Farm Foods, San Francisco, CA 94107. 100% Vegetarian Frozen Dessert." Note 1. Farm Foods was the first genuine soyfoods company in the United States. It traced its origin to The Farm in Summertown, Tennessee. This is the earliest record seen (Feb. 2003) concerning Farm Foods; This was the first soyfoods product launched by Farm Foods. Note 2. *Webster's Dictionary* defines espresso (derived from the Italian *caffé espresso,* literally pressed out coffee), a word first used in 1945, as "coffee brewed by forcing steam through finely ground darkly roasted coffee beans." Note 3. This is the earliest record seen that uses the word "espresso" in connection with soy.

Ad in Whole Foods. 1979. Oct. p. 69. "Farm Foods Soy Ice Bean: The Completely Vegetarian Frozen Dessert." Leaflet, 1979. Spot in Whole Foods. 1981. Dec. p. 47. "Ingredients: Water, soy powder [powdered soymilk], honey, soy oil, vanilla extract, soy lecithin, locust bean gum, guar gum, Irish moss. 3 fl. oz. Summertown, Tennessee." Leaflet. 1982. 8½ by 11 inches. Color. "The Original Soy Ice Bean." Spot in Whole Foods. 1982. July. "New flavors are Pineapple Orange Sunshine, Almond Espresso, and Toasted Almond Fudge." Spot in Whole Foods. 1982. Oct. "Farm Foods Gets Ice Bean Trademark. 3-gallon tub size introduced."

Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 40-41. "In August 1976 members of The Farm opened The Farm Food Company (a natural food story, soyfoods restaurant, and soy dairy) at 820 "B" Street in San Rafael, California. There, using a batch Emery Thompson ice cream freezer and a soft serve machine, they started to make the first commercial Ice Bean. What a name! Was it a joke? No. It was the absolutely honest, unpretentious, tongue-in-cheek vegetarian all-American counterpart to such highfalutin pseudo-European names as Haagen-Dazs. Initially, most Ice Bean was sold in cones over the counter at The Farm Food Co. soda fountain and in pints in their freezer, but a little was distributed locally by Farm Foods van. Soon five flavors were available; strawberry was the favorite." In early 1978 The Farm Food Co. in San Rafael was closed. In July 1978 production started at 144 King St. in San Francisco.

Poster. Farm Foods. 1986. "The Scoop of the Year! Since 1975, Ice Bean has been made with the finest natural wholesome ingredients... Buy all nine honey-sweetened flavors."

2769. Farm Food Company. 1976. August. New soyfoods restaurant or deli. 820 B. St., San Rafael, CA 94901.
• ***Summary:*** Shurtleff & Aoyagi. 1976. Sept. Tofu & Miso America Tour Itinerary. Contact: Kathleen Sandler.

Questionnaire filled out by Robert & Constance Dolgin. 1980. Jan. The Farm Food Co. in San Rafael opened its deli in about Aug. 1976, and the same month started making tempeh, tofu and soymilk. Shurtleff & Aoyagi visited in Sept. 1976. A list is given of dishes containing soyfoods served at the deli during its first year in business: Fried tofu sandwiches, tofu salads [like eggless egg salads], tofu salad dressings, and tofu cheesecake; tempeh burger, deep-fried tempeh cutlet, tempeh with creamy tofu topping, and Indonesian delight (tempeh strips with peanut butter and miso sauce over rice); soymilk ice cream, soymilk shakes, soy yogurt, soymilk mayonnaise, and soy whipped creme; soybean stroganoff and burritos; TVP chili; and Vege-Links (canned Loma Linda meatless hot dogs). Also for sale at the food store were packaged tofu, soymilk, tempeh, soy mayo, and Ice Bean [soy ice cream], all made in the same building.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3.

Laurie Sythe Praskin. 1985. "The Farm soy history: An overview." States (p. 3) that it was named "Farm Foods Cafe."

Note 1. This is America's first "soy deli," offering a host of highly creative and delicious recipes, served at a counter or tables.

Note 2. At this deli was developed and made the world's first "Tofu Salad," which would soon (made by various companies, including Farm Foods in San Francisco) become one of America's first popular tofu products, widely called "Eggless Egg Salad" (1977), "Tofu No-Egg Salad" (1978), and "Missing Egg Salad" (1978). Address: San Rafael, California. Phone: 415-454-3797.

2770. Mittal, Meenu; Quadri, M.A.; Kushawah, H.S.; Datta, I.C. 1976. Studies on preparation, standardization, and organoleptic scoring of soymilk. *J. of Food Science and Technology* (*Mysore, India*) 13(4):201-02. July/Aug. [11 ref] Address: Dep. of Biochemistry, College of Vet. Science & Animal Husbandry, J.N. Krishi Vishwa Vidyalaya, Jabalpur, India 482 001.

2771. **Product Name:** [Semper Tube Feeding Formula {Liquid, Based on Flour and Milk Protein}].
Foreign Name: Sondnäring.
Manufacturer's Name: Semper AB.
Manufacturer's Address: Sektor Industri, Sveavagen 166, Box 231 42, S-104 35 Stockholm, Sweden. Phone: 08-7299700.
Date of Introduction: 1976. August.
Ingredients: Incl. soy flour.
Wt/Vol., Packaging, Price: 450 ml cans.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Talk with Leif Christensen

of Semper. 1990. July 6. Followed by letter (fax) of June 10. He developed this product. It was launched in April 1976 after Soja Semp. Sond is the Swedish word for "tube," and Näring means "nutrition." Semper had been on the tube feeding market for several years when they introduced this product, partly based on soy flour, mainly for technical reasons. It was UHT-sterilized and packed under aseptic conditions in 450 ml cans. From 1980 until the present Semper has introduced 3 varieties of Sondnäring liquid, partly based on soy protein isolate, UHT-sterilized, in cans packed under aseptic conditions.

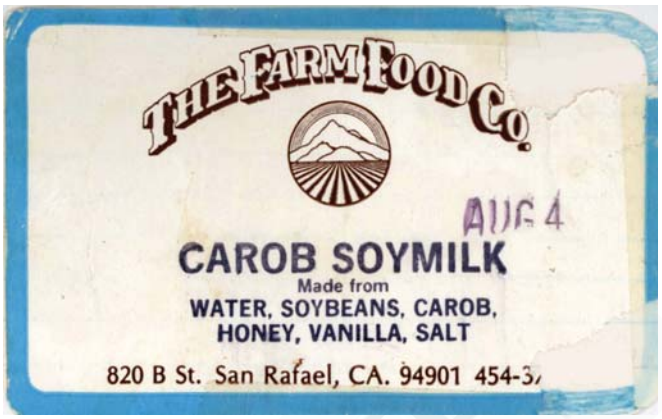
2772. The Wisconsin Farm Report. 1976. Ettrick, Wisconsin. 4 p.
• ***Summary:*** This branch of The Farm in Summertown, Tennessee, consists of 60 people living as voluntary peasants on 160 acres of land they purchased. "Our religious experiences made us want to build a community where love and truth were a daily reality." Discusses (with photos): Spiritual midwifery, farming (last year they grew 90 tons of soybeans), bank statement (they are incorporated in Wisconsin as a no-profit religious organization and have a common treasury), the school, construction, the mill, the ladder company, vegetarian diet and soy (they make their own soymilk). Address: Route 2, Ettrick, Wisconsin 54627.

2773. Nelson, A.I.; Singh, B.P.N.; Singh, S. Assignors to University of Illinois Foundation. 1976. Apparatus for the preparation of a soybean beverage base [low tech soybean dehuller]. *U.S. Patent* 3,981,234. Sept. 21. 2 drawings. [8 ref]
• ***Summary:*** For a favorable evaluation of this dehuller, see Shyeh, Rooda, and Nelson, 1980. It works well for dehulling soybeans when making tempeh or soymilk.

Note 4: In a 2-page letter to Bill Shurtleff dated 16 July 1984, A.I. Nelson says: "The hull separator is not patented and can be used by any interested parties." Address: Univ. of Illinois, Urbana, Illinois.

2774. **Product Name:** Carob Soymilk.
Manufacturer's Name: Farm Food Co.
Manufacturer's Address: 820 B St., San Rafael, CA 94901.
Date of Introduction: 1976. September.
Ingredients: Water, soybeans, carob, honey, vanilla, salt.
New Product–Documentation: Label. 1976. 4 by 2.5 inches. Self adhesive. Brown and blue on white. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

2775. **Product Name:** Soyanaise (Non-Dairy Soymilk Mayonnaise).
Manufacturer's Name: Farm Food Co.
Manufacturer's Address: 820 B St., San Rafael, California.



Date of Introduction: 1976. September.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 60. "America's first known commercial soymilk mayonnaise."

2776. Bourne, M.C.; Clemente, M.G.; Banzon, J. 1976. Survey of suitability of thirty cultivars of soybeans for soymilk manufacture. *J. of Food Science* 41(5):1204-08. Sept/Oct. [29 ref]
Address: 1. Cornell Univ., Geneva, New York; 2-3. Univ. of the Philippines, Laguna, Philippines.

2777. Farnum, C.; Stanley, D.W.; Gray, J.I. 1976. Protein-lipid interactions in soy films. *Canadian Institute of Food Science and Technology Journal* 9(4):201-06. Oct. [17 ref. Eng; fre]
• ***Summary:*** Microscopic studies show that yuba films consist of a protein matrix in which lipid droplets are dispersed. On a dry weight bases, soybeans contain 20.25% lipids, 36.5% proteins, and 4.7% ash. Soymilk contains 17.8% lipids, 41.85% proteins, and 6.8% ash. Yuba contains 18.0% lipids, 46.3% proteins, and 3.9% ash. Comparing the fatty acid composition of the oil in soybeans with the oil in yuba, the percentage of palmitic acid increases by 6%, stearic acid decreases by 69.7%, oleic acid increases by 2%, linoleic acid increases by 6%, and palmitic acid decreases by 19.8%. Address: Dep. of Food Science, Univ. of Guelph, Guelph, Ontario.

2778. Khaleque, A. 1976. Studies on the processing and properties of artificial milk. V. Effect of processing conditions on the stability of proteins in various soymilk preparations. *Bangladesh J. of Scientific and Industrial Research* 11(1-4):70-78. Jan/Oct. [15 ref]
Address: BCISR Laboratories, Dacca, Bangladesh.

2779. Lashley, U. 1976. Re: Soybeans and soybean foods in Trinidad. Letter to H.L. Wang and associates at Northern Regional Research Center, Oct. 2 p. *
• ***Summary:*** Originally it was planned to grow soybeans in Trinidad, and crush them for oil (to replace coconut oil) and

meal (to feed to livestock). In Dec. 1975 Lever Brothers successfully crushed 7,000 kg of soybeans as a test. But then it was realized that the soy protein could be better utilized as a food. "Crop production personnel in the Chaguaramas Agricultural Development Project (CADP) and Home Economists at the John Donaldson Technical Institute have been collaborating to refine, demonstrate, and promote the production and utilization of locally grown soya. To this end, the agronomists have published a booklet on the growing of Soya while the Home Economists have produced several booklets and pamphlets with information on preparing dishes from soybeans. A booklet is about to be published.

"It might be of interest to you to note that Guyana, St. Kitts, and Trinidad and Tobago have embarked upon a program of Corn/Soya production in the hinterland of Guyana as part of the Caribbean Food Plan.

"It is envisaged that soon a programme will be formulated with the Extension Division in the Ministry of Agriculture, Lands and Fisheries to exhibit soya growing at vantage points in rural Trinidad and Tobago with accompanying demonstrations by Home Economists in food preparation. I am currently working in conjunction with the Government Broadcasting and Film Unit to produce a documentary on 'Soya for Food.' I am dealing with basic steps Cleaning, Soaking, and Blanching: I also hope to deal with the preparation of: 1. Soy milk, soy/choc milk; 2. Soy fudge, soy/choc fudge–a candy. 3. Soy/almond paste–marzipan. 4. Soynut butter. 5. Soy nuts. 6. Curried soybeans. 7. Phulouri (an East Indian dish using dhal)." (Cited by H.L. Wang, et al. 1979. Soybeans as human food–Unprocessed and simply processed. p. 33). Address: Home economist, John Donaldson Technical Inst., Ministry of Education, Port of Spain, Trinidad.

2780. Liener, Irvin E. 1976. Nutritional aspects of soy protein products. In: Archer Daniels Midland Co., comp. 1976. Edible Soy Protein Seminar. Decatur, Illinois. 220 p. See p. 13-85. Held in 1976 at Moscow, USSR and Warsaw, Poland. [265 ref]

• ***Summary:*** Contents: Nutritional value of the protein of individual soy products: General considerations, soybeans as a vegetable, soyflour, soybean milk, soybean curd, protein concentrates, protein isolates, fermented products. Blended soy products: Blend with wheat protein, blend with corn protein, blend with rice, vegetable-protein formulations, soy protein as meat extender. Textured meat analogs. Nutritional value of non-protein constituents: Available energy, crude fiber, vitamins (fat-soluble vitamins, water-soluble vitamins), minerals (calcium, phosphorus, zinc, other metals). Antinutritional factors: Heat-labile factors (trypsin inhibitor, hemagglutinins, other heat-labile factors), heat-stable factors (saponins, estrogens, flatulence factors, lysinoalanine). References. Tables.

Concerning lysinoalanine (p. 58-59): "Sternberg et al. (1975) have recently shown lysinoalanine to be widely distributed in cooked foods, commercial food preparations, and food ingredients, many of which had never been subjected to alkaline treatment. Many of these foods had levels of lysinoalanine which were considerably higher than those found in commercial samples of soy protein isolate. The wide distribution of lysinoalanine among commonly cooked foods would tend to indicate that" this is neither a novel protein nor a serious problem, as some humans have long been exposed to proteins containing lysinoalanine with apparent impunity. "Its presence in soy protein can hardly be considered a serious problem for man." Address: Dep. of Biochemistry, Univ. of Minnesota, St. Paul, MN 55108.

• ***Summary:*** The soybeans investigated were whole dry soybeans, soymilk, and tempeh. Address: Dep. of Food Science, Univ. of Illinois, Urbana, Illinois.

2782. Nelson, A.I. 1976. Sri Lanka Soybean Development Program. Report No. 4. University of Illinois, Urbana, Illinois: INTSOY. 13 p. Contract No. UNDP/SRL/73/007-1/ AGOG INTSOY.

• ***Summary:*** Prof. Nelson was in Sri Lanka from Aug. 29, 1976 through Sept. 29, 1976. Contents: Commercial Type Soy Food Products: Full-fat soybean flour; Soybean dhal; Soy beverage; Infant weaning foods. Product Concepts for Village and Home Use. Intermediate Level Technology Products. Extension of Technology to the Village Level. Legume Inoculant Production. Conclusions. Address: Prof. of Food Processing–International Agriculture, INTSOY.

2783. Robertson, Laurel; Flinders, Carol; Godfrey, Bronwen. 1976. Laurel's kitchen: A handbook for vegetarian cookery and nutrition. Nilgiri Press, Box 477, Petaluma, CA 94952. 508 p. Oct. Foreword by George M. Briggs, Prof. of Nutrition, Univ. of California, Berkeley. Illust. Index. 24 x 20 cm. Bantam Books pocketbook ed. Dec. 1978. 641 pages. [45 ref]

• ***Summary:*** One of the best, most original, and most influential books of lacto-ovo vegetarian recipes and nutritional information published during the 1970s. Handsomely illustrated with woodcuts by Laurel, this classic is divided into three parts: Part I, "Giving the Gift of Life (p. 10-62), is by Carol Flinders, a superb writer who majored in creative writing at Stanford University. It begins with her preface and a dedication that reads: "This book is dedicated to the glossy black calf on his way to the slaughterhouse many years ago, whose eyes met those of someone who could understand their appeal and inspire us, and thousands

of others like us, to give the gift of life." The first section describes how one woman, Laurel, made the transition from Sloppy Joes to vegetarian culinary and nutritional mastery. The second section, "The Keeper of the Keys, talks about alternate and traditional roles for women in the home and society.

Part II is recipes and menus (p. 65-297). Pages 66-69 introduce "The Four Food Groups": 1. Grains, legumes, nuts, & seeds. 2. Vegetables. 3. Fruit. 4. Milk & eggs. The "Four Food Groups for the Vegan" (p. 320-24) are grains-nuts-seeds, legumes, vegetables, and fruit.

Part III, "Nutrition for a Meatless Diet" (p. 298-486) is one of the best sources available on vegetarian nutrition. Of special value are the extensive tables on nutrient composition of foods, which include vitamins and minerals; they are up to date and well documented. A 22-page index adds to the books usefulness.

Soybeans and soy products are praised as an excellent source of low-cost high quality protein (p. 69). Pages 82-83 give details on soy flour (full-fat) and soy powder.

Soy-related recipes include: High protein bread (with soy flour, p. 91). Pumpernickel (with soy meal, p. 92). Soy bread (with cooked whole soybeans or soy grits, p. 92-93). Pine nut pinwheels (with Soy Spread, p. 97). Breakfast beans (p. 122). Better-Butter (p. 123, a blend of 1 cup each vegetable oil and butter plus 2 tablespoons each water and dried skim milk, ¼ teaspoon lecithin, and ½ teaspoon salt). Soy milk (basic information and how to make at home using the Cornell method, p. 134-36). Sandwich ideas (incl. Soy burgers, Tofu patty, Soy Pâté, p. 138). Soy spread (p. 140). Tofu-peanut butter spread (p. 141). Minestrone (p. 166). Creamy green soup (p. 170). Stuffed peppers (with soy grits, p. 202). Chinese vegetables & tofu (p. 217). Soybean stock (p. 224). Soy stock gravy (p. 229). Zucchini oat-flake loaf (with soy meal, p. 243). Vegetable bean noodle bake (with soybeans, p. 245). Beans (with "1 cup cooked soy pulp, or coarsely chopped soybeans," p. 257-60). Savory dinner loaf (with soy grits, p. 265). Soy burgers (p. 266). Neat balls (with Soy spread, p. 266). Tofu patties (p. 267).

Pages 299-486 are about nutrition for a meatless diet. Information on soy is given on pages 307, 322-24, 381 ("Soybean protein is a complete protein; its amino acid pattern conforms closely to that of milk."), 460 and 463-64 (tables of nutritional composition).

Note: The authors use the term "soy pulp" to refer to soybeans that have been cooked and ground, and the term "isoluble residue" (p. 136) to refer to okara. Address: California.

2784. Gillingham, Karen. 1976. Blender power: Get a boost from these high-energy blender drinks. *Los Angeles Times.* Nov. 9. p. I-10, I-14.
• ***Summary:*** "Energy drinks as we know them today–most agree–were were unveiled by Adelle Davis in the 1950s" [Tiger's Milk?]. Originally they were enjoyed by "health food scholars and Muscle Beach hopefuls."

Contains 15 recipes, each from a place that makes and retails them fresh. Only one is called a smoothie. Most contain a dairy product (such as milk, ice milk, ice cream, or yogurt), some fruit (bananas are most popular), and some ice. Eight contain 1-3 tablespoons of "protein powder." Two are non-dairy with cashew nut milk or coconut milk replacing the dairy products.

2785. Goodnight, Kenneth C., Jr.; Hartman, Grant H., Jr.; Marquardt, Robert F. Assignors to Mead Johnson & Company (Evansville, Indiana). 1976. Aqueous purified soy protein and beverage. *U.S. Patent* 3,995,071. Nov. 30. 9 p. Application filed 23 June 1975. [4 ref]
• ***Summary:*** Soy protein isolate is used to make a superior beverage. This invention describes a "process for the preparation of an improved soy protein having exceptionally low phytic acid [and phytate] content, improved digestibility, high water solubility, improved functional characteristics, lack of beany flavor with substantially improved palatability, a neutral protein with low ash content, and affords improved protein yield, and high retention of sulfur containing amino acids."

The soy protein "is prepared by aqueous extraction of defatted soy flakes, basification to a pH in excess of 10.1 and removal of insolubles. The clarified extract may be reduced in mineral and carbohydrates content by ultrafiltration. The purified aqueous extract may be advantageously used directly in the preparation of liquid dietary products without drying."

Note: Though Mead Johnson is a manufacturer of soy-based infant formulas, no mention of them is made in this patent. Address: Evansville, Indiana.

2786. Metz, Robert. 1976. Market place: University patent's stock reaction. *New York Times.* Nov. 30. p. 66.
• ***Summary:*** University Patents is a small corporation, whose stock is sold publicly, that was formed in 1964 as part of the University of Illinois. It markets patentable items for new technologies that result from the University's research. Initially a private firm, it later went public and began to work with other universities as well. It now represents six universities.

The company has licensed both Beatrice Foods and Bristol Myers to produce and market soy milk developed at the University of Illinois. It is often years before a patented product produces profits–if ever.

2787. Bhumiratana, Amara. 1976. Small-scale processing of soybeans for food in Thailand. *INTSOY Series* No. 10. p. 143-46. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** Contents: Introduction. Fermented soybeans.

Soymilk. Yuba. Yoghert [Soy yogurt, inoculated with *Lactobacillus bulgaricus* and *L. acidophilus* and incubated at 37ºC for 16-20 hours]. Chinese soya bean dessert (Taow Huey). Tofu (white or yellow). Sufu. Soybean snack (protein crisp; deep-fried sufu). Tempeh. Thai dessert. Kanom ping kaset. Baby food. Kaset noodle. Kaset protein. Note: There is a flowchart and photo of each product.

"The Institute of Food Research and Product Development, Kasetsart University, initiated several soybean utilization pilot projects five or six years ago. Using soybeans alone or combined with other ingredients, we have developed a range of products, such as baby foods, kaset protein, and snacks. Tests indicate that these foods are highly acceptable, being both palatable and nutritious. Some of these products are soon to be manufactured commercially by small-scale industries. This paper is a description of the soy food processing methods developed by the Institute." Address: Inst. of Food Research and Product Development, Kasetsart Univ., Bangkok, Thailand.

• ***Summary:*** Contents: Introduction. Food uses for whole soybeans. Category I: Drum-dried flakes. Category II: Canned soybeans. Category III: Dairy product analogues (incl. mocha flavored ice cream, yogurt, peanut butter analogue). Category IV: Spreads. Category V: Snack foods. Appendix I: Prototype foods made from whole soybeans. Appendix II: Sauce formulations for canned soybean products. Discussion. For the drum-dried flakes: Blend in a "Waring Blendor." Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL.

2790. Herath, E. 1976. Cultivation and uses of soybeans in Sri Lanka. *INTSOY Series* No. 10. p. 250-52. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** Contents: Introduction. Cropping patterns. Cultivation practices. Harvesting and storage. Varietal improvement. Fertilizer and plant nutrition studies. Microbiological investigations. Crop physiology studies. Seed storage, quality, viability, and seedling vigor. Utilisation research: Soybean milk and milk products, soy flour, soybean dhal, cooking time and storage, additional research planned. Extension.

"Plantation agriculture, with crops of tea, rubber, coconut, cocoa, and spices, forms the basis of Sri Lanka's economy. However, these crops, which are grown in the central highlands and in parts of the intermediate zones, comprise only a minor part of the total acreage of 16.2 million acres situated for the most part in the relatively underdeveloped dry zone...

"Soybean is a relatively new crop, having been introduced to farmers only in 1972. At present the acreage under soybeans is negligible and is confined primarily to a few large, privately-owned farms and to many small, scattered plots in the dry and intermediate zones. Production areas should total nearly 8,000 acres for 1976."

The Yala season (dry) is April to September. The Maha season (rainy / rain-fed) is October to February.

"The most significant contribution to soybean cultivation recently has been the introduction of commercial inoculants. Until this breakthrough, soybean yields and performance were erratic... With these inoculants all soybean varieties performed significantly better, giving consistently high yields of up to 3,540 pounds per acre in research plots."

"In the 1973 coordinated varietal trials, yields of 3,000 to 4,000 kg per hectare were recorded from the Asian variety Pb-1 and from the American varieties Hardee, Lee, Bragg, and Improved Pelican." Address: Dep. of Agriculture, Central Agricultural Research Inst., Peradeniya, Sri Lanka.

2791. Kellogg, Earl D.; Williams, Sheldon W. 1976. Viable alternatives for processing soybeans in a variety of situations. *INTSOY Series* No. 10. p. 148-153. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [9 ref]
• ***Summary:*** Contents: Introduction. Viable alternatives for processing soybeans: Home and village processing alternatives (incl. small-scale extrusion cookers that cost $45,000), larger scale processing alternatives. Economic efficiency and choice of technique. Conclusion. Discussion. Address: 1. Multiple Cropping Project, Faculty of Agriculture, Chiang Mai Univ., Chiang Mai, Thailand; 2. Dep. of Agricultural Economics, Univ. of Illinois, Urbana, IL.

2792. Lee, Hong Suk; Park, K.Y.; Chung, B.J.; Park, J.S.; Yohe, J.M. 1976. The status of soybean production and research in Korea. *INTSOY Series* No. 10. p. 239-42. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** Contents: Introduction. Major problems related to increased soybean production: Weather, varietal improvement, planting time, soil fertility and pH, cultural practices (cropping systems, planting patterns, seed treatment and inoculation), soybean pathology and entomology. Present and future research problems.

"Good quality soybeans with large grain size have been cultivated for thousands of years in the middle and northern part of the east coast of Korea. Because soybeans have been grown primarily for subsistence, they have not been regarded as a cash crop by Korean farmers... Soybean cultivation in

1974 and 286,188.4 hectares, thus making soybeans the third major crop of Korea in hectarage...

"Soybean production has gradually increased from 231,994 metric tons in 1970 up to 318,576 metric tons in 1974. Although total soybean production has increased, it has not kept up with demand as indicated by the fact that imports have increased from 36,291 metric tons in 1970 up to 66,370 metric tons in 1974...

"Home consumption is the major area for soybean use, about 122,000 metric tons being consumed in 1974. Soybeans are prepared by mix-boiling with rice or vegetables, or are eaten in the form of curd, sprouts, sauce, paste, milk, and flour. The government uses soybeans primarily for military needs. Soybean oil is used for industrial purposes." Address: 1. College of Agriculture, Seoul National Univ.; 2. Corps Exp. Station, Office of Rural Development; 3-4. Inst. of Agricultural Science, Office of Rural Development; 5. Crop Improvement Research Center, Office of Rural Development. All: Suweon, Korea.

2793. Ohtsuru, Masaru; Kito, M.; Takeuchi, Y.; Ohnishi, S. 1976. Association of phosphatidylcholine with soybean protein. *Agricultural and Biological Chemistry* 40(11):2261-66. Nov. [8 ref]
Address: 1-2. Research Inst. for Food Science, Kyoto Univ., Kyoto 611, Japan; 3-4. Dep. of Biophysics, Kyoto Univ.

2794. Rathod, K.L. 1976. Developing soybean markets in India: Economic aspects. *INTSOY Series* No. 10. p. 154-57. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [3 ref]
• ***Summary:*** Contents: Introduction. Potential supply and demand for soybeans: Supply, demand and market outlets. Constraints on attaining potential market: Quality and high price of seed, competitiveness of soybeans, investment and risks in processing, coordinating production and marketing. Market outlets for soy protein foods: Soy flour, soy beverage, textured soy products. Approaches to be considered.

"Soy flour, both full fat and defatted, is being used in bakery products, such as bread and biscuits. Bread produced by the various units of Modern Bakeries is now enriched with defatted soy flour, as well as with vitamins and minerals. Modern Bakeries is also producing a special bread, containing as much as 12 percent defatted soy flour, for the nutrition programme of the Social Welfare Department. During the period from April to December 1975 190 tons of Balamul, a soy-reinforced weaning food, were produced. During 1973-74 approximately 60 tons of soy flour were used in Balamul and during 1974-75 150 tons. In the Government's Balahar programme 250 tons of soy flour were used in 1974-75 and 1,500 tons in 1975-76.

"A pilot plant processing soymilk at Pantnagar has demonstrated the uses and the potential for such an enterprise in India. At Pantnagar and in the surrounding areas the sale of soymilk beverage indicates favourable consumer response...

"The Soya Products Research Association markets on a commercial scale three soy-based products, viz., TSP (textured soy protein), Protesnac, and Protein-plus. Among these products, TSP preparations constitute the major sales items and have been growing in popularity since they were first introduced. Consumers have responded favourably to TSP chunks and granules but not to TSP powder. The sale of Protesnac, a ready to eat snack made from defatted soy flour and rice, increased from 4 tons in 1972-73 to 19 tons in 1974-75. Protein-plus, a weaning food, has yet to be established on the market. In general, consumer response to textured soy products has been good, with a total of 172 tons of such products sold in 1974-75." Address: Dep. of Agricultural Economics, G.B. Pant Univ. of Agriculture and Technology, Pantnagar, India.

2795. Schmidt, R.H.; Bates, R.P. 1976. Sensory acceptability of fruit flavored oilseed milk formulations. *Proceedings of the Florida State Horticultural Society* 89:217-19. Nov. 2-4. (Published 1 May 1977). [11 ref]
• ***Summary:*** Soymilk, peanut milk, and 25% toned milks prepared from cow's milk extended with commercial peanut flour or soy protein concentrate were prepared. Yogurt-like products were made from these by fermentation with *Lactobacillus bulgaricus* and *Streptococcus thermophilus* in the presence of 2.5% added glucose, to a pH of 4.7. taste panel compared these with similar products made from cow's milk. Oilseed milks were generally judged inferior to cow's milk and peanut milks were judged inferior to soymilks. Commercial yogurt fruit flavorings of strawberry, raspberry, blueberry and orange greatly improved the sensory acceptance of the milk-like beverages and yogurt products. Homogenization significantly improved acceptance of yogurt-like products. Address: 300 Food Science Building, Food Science Dep., Univ. of Florida, IFAS, Gainesville, FL 32611.

2796. Winarno, F.G.; Karyadi, Darwin. 1976. Nutrition and processing of soybeans. *INTSOY Series* No. 10. p. 137-42. R.M. Goodman, ed. Expanding the Use of Soybeans (College of Agric., Univ. of Illinois at Urbana-Champaign). [21 ref]
• ***Summary:*** Contents: Introduction. Nutritional status. Soybeans as source of good-quality protein: Chemical composition, nutritive value, other components. Storage of soybeans. Processing and its effects on nutritive value: Effects of heating on nutritive value, effects of heating on flavor, soybean varieties and processing methods. High protein food mixtures: Saridele, Tempeh-fish-rice, soya-rice baby food, soybean residue-fish-rice (with okara), other food mixtures. Conclusion. Discussion.

"In 1952 the Institute of Nutrition started a study of soybean milk. As a result of the study, a factory was set up in Jogyakarta in 1957 with the assistance of FAO and UNICEF. The product, which was called Saridele, was made from soybeans, peanuts, and sesame seeds, and was fortified with minerals and vitamins. The nutrient composition of Saridele compared with that of cow's milk is shown in Table 6. The production of Saridele was discontinued after 1966 because of the irregular supply of soybeans and marketing problems." Address: 1. Agricultural Engineering and Product Technology, Bogor Agricultural Univ., Fate Meta, Jl. Gu Gede; 2. Nutrition Research and Development Centre. Both: Bogor, Indonesia.

2797. Miller, Harry W. 1976. Re: Your good work in introducing foods from the soya bean. Letter with Christmas card to William Shurtleff at New-Age Foods Study Center, Dec. 21. 1 p. Typed with signature.

• ***Summary:*** "My Dear Mr. Shurtleff–Your name comes to mind very often on account of our close association in the interest of nutrition to the people in America, and I feel you have done a wonderful job in educating the people regarding the value of using foods from Soya Beans. I think now that I have secured three of your Tofu books, but they are all gone, loaned and not returned, so I am ordering another to have sent to my home address on this envelope. I would be glad to mail a check for the exact amount including Postage so if you will send me that by return postage I will send a check for the same at once as I need some data you have given in same.

"Dr. Tojima Yamagata, Minister of Forestry and Agriculture for Japan, paid me a visit about a month ago and has supplied me with some recent pamphlets from his Dept. on Soy Milk. I have wondered if at anytime you are planning a trip to the Los Angeles or Riverside area. The book store here at La Sierra usually handles your book but they are all sold out. Therefore I am hastening to order from you direct, and always glad to hear from you, Yours very sincerely, Harry W. Miller, M.D."

This is a poignant letter and card. On 26 July 1977 Dr. Miller's wife, Mary E. Miller, (now a widow) sends the money Dr. Miller owed for *The Book of Tofu* he ordered and adds: "Please forgive my husband for this long delay, he died on Jan. 1 of this year. He went into the hospital on Nov. 19 of last year and never recovered from a severe heart attack at the age of 97." Address: M.D., 11384 Norwood Ave., Riverside, California 92505.

2798. *SoyaScan Notes.* 1976. Chronology of soybeans, soyfoods and natural foods in the United States 1976 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Feb. KQED-TV in San Francisco airs a 30-minute special titled "Tofu." It is an interview with William Shurtleff and recipe preparation by Akiko Aoyagi.

March. "The Joys of Soy" by Brenda Bortz, published in *Organic Gardening and Farming* magazine is the first major popular article on tempeh in America. In June, *Prevention* magazine runs a cover story on tempeh.

April. Soybeans: Brazil as a Competitive Force by J.M. Schultz and W.P. Mason submitted as a Harvard Business School MBA thesis. One of the best early in-depth analyses.

April. The second of the new wave of commercial Caucasian-run tofu shops is started by Peter and Judy Beane in Portland, Maine. There were at least 7 small commercial Caucasian-run tofu shops in America by the end of 1976.

May-June. *Mother Earth News* publishes the first of five long articles on soyfoods, each excerpted from *The Book of Tofu.*

June 2-5. First International Workshop on Low-Cost Extrusion Cookers held at Colorado State University, with 51 participants. Organized by Judson Harper and Richard Jansen, with funding from USAID through USDA. The 173-page proceedings, edited by Wilson and Stumpf, are published shortly thereafter. Cereal-soy blends are seen as having great promise for production in developing countries.

This year cereal-soy blends are first produced in Third World countries using low-cost extrusion cookers: Thriposha in Sri Lanka and Maisoy in Bolivia.

July 20. What is Tofu? pamphlet by Shurtleff and Aoyagi published by Westbrae Natural Foods in Berkeley.

Aug. 6. New-Age Foods Study Center established by Shurtleff and Aoyagi in Lafayette, California. The name was changed to The Soyfoods Center in Sept. 1980.

Aug. Larry Needleman of The Learning Tree in California introduces America's second tofu kit, which soon becomes the best-seller nationwide.

Aug. Farm Food Company, a branch of The Farm in Tennessee, opens America's first soy deli, in San Rafael, California. They served tofu sandwiches, salads, salad dressings, and cheesecakes; tempeh burgers, deep-fried tempeh cutlets, tempeh with creamy tofu topping, and Indonesian delight (tempeh strips); soymilk ice cream, shakes, yogurt, mayonnaise, and whipped creme; soybean stroganoff and burritos; and TVP chili. They essentially launched the concept of second-generation soyfood products.

Sept. 23. *The Book of Miso,* by Shurtleff and Aoyagi published by Autumn Press.

Sept. 29. Shurtleff and Aoyagi begin "Tofu and Miso America Tour." They do 70 public programs nationwide and travel 15,000 miles in their white Dodge van, continuing until 3 Feb. 1977. In the van they carry hundreds of copies of *The Book of Tofu* and *The Book of Miso* and many of Larry Needleman's tofu kits, plus little bags of natural nigari, all of which they sell at their programs. They usually have meals and spend the night with the people who have sponsored and organized their program. They also visit numerous soyfoods producers and researchers, including The Farm in Tennessee

from Dec. 21 to Jan. 2. After the tour, tofu shops started in most of the areas where they spoke.

Sept. Dr. Kenneth Bader becomes executive director of the American Soybean Association. With the help of increasing funding from checkoff programs, he ushers in an era of growth, and increased activity and strength for ASA.

Oct. 13-15. Seminars on the use of soy protein for foods and meal for feeds are held in Moscow, sponsored jointly by the U.S. Foreign Agricultural Service, the American Soybean Assoc., and the Food Protein Council. More than 200 Soviet officials attended.

Oct. *The Joy of Soy,* by Sylvia E. Anderson self-published in New Jersey.

Nov. Island Spring starts making tofu in Vashon, Washington. Founded by Luke Lukoskie and Sylvia Nogaki.

Dec. The term "soyfoods" (spelled as one word) is coined by Benjamin Hills of Surata Soyfoods in Eugene, Oregon, for use in their company name. It is first used in a book (*Tofu & Soymilk Production*) by Shurtleff and Aoyagi in July 1979, and as a magazine title in July 1980.

Dec. Morinaga Milk Industry Co. in Japan is granted the world's first patent on a method for manufacturing aseptically packaged tofu (in Tetra Brik cartons), U.S. Patent 4,000,326.

* Kibun, in Japan, introduces East Asia's first commercial fermented soymilk products, a line of acidophilus soymilk drinks brand-named Soena.

* Beginning of the rise of the modern soymilk industry in Japan. This is the first year that a significant amount of soymilk was sold.

* Kikkoman soy sauce passes La Choy to become America's best selling brand of soy sauce. The three major soy sauce markets are consumer retail, restaurants and other institutions, and industrial (for food processors). La Choy may still be the leader in consumer retail; Kikkoman leads in restaurants.

* Beef consumption in America peaks at 95.4 pounds per capita. It had risen rapidly from 38.6 lb/person in 1930. After 1976 it falls steadily, hitting 75 lb/person in 1985.

* National Soybean Research Program established in Brazil, building upon the National Soybean Project (1972) and the National Soybean Research Center (1975).

2799. Anderson, Sylvia E. 1976. The joy of soy. Pleasantville, New Jersey: New Life Press. 48 p. Dec. Illust. Index. 23 cm. Spiral bound. Rev. ed. 1977. Spiral bound.
• ***Summary:*** Contents: What is the joy of soy. Whole, dry soybeans ("My favorite way to cook whole, dry soybeans is to pressure cook them"). Soymilk. Tofu. Sweet tofu. TVP. Okara. This vegan cookbook was inspired by The Farm, a large spiritual community in Tennessee, where the author and her children lived for several years. "When I arrived on The Farm, I thought I didn't like soybeans... Now I love soybeans and soymilk–not because my tastebuds have changed and I've acquired a new taste for them, but because I've learned new ways to cook soybeans so that they taste good to those same old tastebuds.

"The recipes in 'The Joy of Soy' have been developed through feedback from members of The New Life Co-op (326 S. Main St., Pleasantville, New Jersey), where products made from them have been selling rapidly for the past nine months."

Note: The author's favorite recipes are: (1) Grandma's chickenless soup with Kreplach (and tofu, p. 19). (2) "Cheezy" soybean d'lishes (p. 6). (4) Garden salad d'lishes (with tofu, p. 21). (5) Pizza d'lishes (with tofu, p. 23). (6) Tofu cookie bars (sweet, p. 26). (7) Tofu cinnamon rolls (sweet, p. 27). (8) Tofu-filled carob cupcakes (sweet, p. 28). (9) Okara soysage (p. 40). (10) Soysage d'lishes (with TVP, p. 37). (11) Okara spice cake (sweet, p. 45). (12) Dairyless macaroni and cheese (with tofu, p. 15). Address: Pleasantville, New Jersey.

2800. Bourne, Malcolm C. 1976. How to make good tasting soy milk in your kitchen (Leaflet). Geneva, New York. 1 p. Dec. Single sided. 28 cm. [12 ref]
• ***Summary:*** Uses the Cornell boiling water grind method. Nine steps, including: "7. Heat th4e soy milk for at least 30 minutes in a saucepan set in a pan of boiling water to prevent scorching. Stir occasionally to prevent formation of a skin if the saucepan is not covered." See original Feb. 1970 edition. Address: Dep. of Food Science and Technology, Cornell Univ., Geneva, New York 14456.

2801. Monckeberg, Fernando; Yanez, E.; Ballester, D.; Merchack, N.; Jarpa, S.; Martner, J.; Alvarez, M.; Alvear, J.; Contreras, I.; et al. 1976. Desarrolo de una formula alimentaria (Fortesan) para-escolares [Development of a food formulation (Fortesan) for pre-school children]. *Archivos Latinoamericanos de Nutricion* 26(4):426-47. Dec. [12 ref. Spa; eng]
• ***Summary:*** Summary: The studies conducted on the development of a protein-rich mixture (Fortesan) intended for pre-school and school children are presented in this paper. This food is composed of 70% extruded wheat-soy blend, 25% non-fat dry milk and 5% cocoa powder. The purpose of this product is to substitute a fraction of the milk that the National Health Service (Chile) distributes freely to children up to 15 years of age. Fortesan contains 23% protein and provides 345 calories per 100 grams.

"The biological value of Fortesan was tested in both rats and children. The protein efficiency ratio (PER) was 2.6 as compared to 2.8 for casein; the net protein utilization (NPU) of Fortesan was 70 and that of casein was 72. Nitrogen balance studies showed a retention of 16.1% for milk and 29% for Fortesan. These results show that the protein of Fortesan has a biological quality comparable to that of milk.

"The long term acceptability of Fortesan was tested in

children attending a Kindergarten and in 440 families. In both cases acceptability was excellent.

"In summary, Fortesan is a food of high protein content, good biological quality and acceptability that can be used as a milk substitute in children. Based on these results the industrial production of Fortesan is highly recommended."

Note: In 1971 Dr. Fernando Monckeberg Barros was Director, Laboratorio de Investigaciones Pediatricas, Escuela de Medicina, Universidade de Chile, Santiago, Chile. Address: 1-13. Instituto de Nutricion y Tecnología de los Alimentos, Universidade de Chile.

2802. **Product Name:** [Danpro Soy Protein Concentrates (Danpro H, Danprotex)].
Manufacturer's Name: Aarhus Oliefabrik A/S.
Manufacturer's Address: Bruunsgade 27, P.O. Box 50, 8100 Aarhus C, Denmark.
Date of Introduction: 1976.
New Product–Documentation: Talk with followed by letter (fax) from Torben Svejgard, Marketing Manager of Aarhus Olie, Protein Div. 1989. July 12-13. The new plant was built in 1975 and Danpro was introduced in 1976. They were the first European company to make a powdered soy protein concentrate, and are still one of the few European companies making it. Danpro A is for animals, used mostly as a calf milk replacer. Danpro H is for humans. Aarhus was founded in 1871. Their main business has always been crushing, refining, and fractionating oilseeds. Danpro was their first soy protein product for food use.

Aarhus Olie Annual Report 1988. A diagram (p. 40) shows that Aarhus introduced Danpro A (a protein concentrate; A stands for "Animal." It is fed mainly to young calves and piglets) in 1975, Danpro H (H stands for "Human") in 1976, Danprotex in 1976... In 1974-75 Aarhus built the first factory in Europe for the manufacture of soya protein concentrates (p. 41).

Letter from Daniel Chajuss, founder and owner of Hayes Ashdod Ltd. 1992. June 23. "In 1973 the undersigned (Daniel Chajuss) sold know how and complete engineering designs to Aarhus Oliefabrik A/S, Aarhus, Denmark, to produce powdered and textured soy protein concentrates for human consumption, pet foods and calves milk replacers."

2803. **Product Name:** Dou-chiang (Soymilk).
Manufacturer's Name: American Food & Candy Co.
Manufacturer's Address: 166 San Lazaro St., Sunnyvale, CA 94086. Phone: 408-773-0612.
Date of Introduction: 1976.
Wt/Vol., Packaging, Price: Bulk retail. $2.00/gallon. Customers bring their own container.
How Stored: Refrigerated.
New Product–Documentation: Talk with Peggy Boyd (415-948-9191), then with English-speaking representative of the company. 1988. March 11. The company is run by Chinese Americans. Most do not speak English. They started about 10 years ago, and make many kinds of tofu plus soymilk.

2804. **Product Name:** [Soy Milk (Dairylike, Coffee, or Strawberry)].
Foreign Name: Asasyoku [Asashoku] Soy Milk, Soi Miruku.
Manufacturer's Name: Asahi Shokuhin.
Manufacturer's Address: Factory: Mochida Azacho-machi 1991, Oaza, Gyoda-shi, Saitama-ken 361, Japan. Phone: 1485-55-2351.
Date of Introduction: 1976.
Wt/Vol., Packaging, Price: 500 ml Pure-Pak cartons.
How Stored: Refrigerated.
New Product–Documentation: See next page. Product with Labels (Pure Pak cartons) purchased in 1976 at a Seiyu department store in Tokyo, Japan. Also in 1976 William Shurtleff visited the plant in Saitama where this soymilk was made. Leaflet. 8½ by 11 inches, color. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

Brochure (8 pages, black and white, in Japanese). 1978? Asashoku Soi Miruku. On the cover is a photo of the carton.

Brochure (8 pages, black and white, in Japanese). 1978? Asahi Sokuhin K.K. On the cover is an aerial photo of the soymilk plant in Saitama Prefecture–surrounded by rice fields.

Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 313. "Asahi Shokuhin, Factory: Mochida Azacho-machi 1991, Oaza, Gyoda-shi, Saitama-ken 361. Tel. 1485-55-2351. Head office: Higashi-kan 3-gai, Yamanote Bldg., Minami Ikebukuro 1-19-12, Toshima-ku, Tokyo 171, Japan. Tel. 03-987-2175. Attn. Mrs. Sato, Eigyo-bu. Maker of what we consider to be Japan's most delicious dairylike soymilk; plain (vanilla), coffee, and strawberry flavors. Sold in 500 cc cartons at Seiyu department stores." Note: This was an outstanding and innovative product, including its packaging in large, low-cost cartons.

Address: Brazil.

2806. **Product Name:** [Saci 200, and Saci 300 {Powdered Soy-and Dairy Beverages} (Chocolate)].
Manufacturer's Name: Coca-Cola Industrias LTDA.
Manufacturer's Address: Brazil.
Date of Introduction: 1976.
Ingredients: Incl. isolated soy protein, nonfat dried milk, white sugar.
Wt/Vol., Packaging, Price: Sold in sacks.
How Stored: Shelf stable.
New Product–Documentation: Darshan S. Bhatia. 1981? "Development and marketing of protein-containing beverages" (Unpublished manuscript). In 1976, when the Brazilian government announced its ambitious program to food school children, pregnant and nursing women, the Cocoa-Cola Co. developed powdered Saci according to specifications set by the government. Since then, the company has supplied beverage powders based on soya and milk proteins, and fortified with vitamins and minerals. Two types of Saci were developed, each obtaining 60% of its protein from soya and 40% from dairy sources. Saci 200 contained 200 calories per bottle, and Saci 300 contained 300 calories. The nutritional composition of each product is given. "Initially, only a chocolate-flavored product was made available to the schools but now mocha, strawberry and coconut flavors have been added to the line."

2809. **Product Name:** Vitasoy Soya Bean Drink (In Aseptic Tetra Pak Cartons) [Plain, or Malt].
Manufacturer's Name: Hong Kong Soya Bean Products Co. Ltd.
Manufacturer's Address: Hong Kong.
Date of Introduction: 1976.
Ingredients: Plain/sweetened: Water, soybean solids, soy oil, cane sugar (5.5%), salt, vitamins A, B-1, B-2, and niacinamide.
Wt/Vol., Packaging, Price: Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
Nutrition: Per 6.25 oz.: Protein 5.9 gm, plus vitamins for 3.2 cents (US) in 1968.
New Product–Documentation: K.S. Lo. 1982. History of Vitasoy; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 99-100, 130-53. Vitasoy was first sold in Tetra Pak (250 ml) from 1976; p. 99-100, 102. In 1978 Nestlé began making and marketing Bonus in Singapore. Exported to Hong Kong in 1978, it gave Vitasoy its first real brand-name competition.

Boi. 1986. Sunday Times (Singapore). Sept. 7. "Soya Bean Milk Packs More Water than Flavor." Vitasoy sells for 35 cents per 250 ml. Comments: Contains artificial flavour, carries consumption deadline, milky taste but not of soya bean, thick, no bean flavour.

2811. INTSOY. 1976. Development of improved varieties of soybeans. Urbana, Illinois: University of Illinois, College of Agriculture International Soybean Program. 140 p. Illust. No index. 28 cm. [84 ref]
• ***Summary:*** Final report on Contract AID/CM/ta-c-73-19. April 1, 1973 to March 31, 1976. Submitted to the U.S. Agency for International Development, Department or State, Washington, DC. The principal investigator and contractor was William N. Thompson. Total AID funding of contract to date: $980,605.

Summary of accomplishments: "An extensive program in soybean variety evaluation was conducted to acquire information on soybean varieties having potential for home and commercial production in the less-developed countries of the tropics and subtropics. By the third year of contract operations, 90 countries had volunteered to participate in the program. Seed from varieties exhibiting promising production characteristics was increased in Puerto Rico and was distributed during the last quarter of the contract for use in preliminary observation trials at selected locations in six countries...

"Research in soybean food use led to development of concepts for rapid preparation of weaning foods and soybean-cereal patties, a procedure for preparation of a soybean beverage for village use and the appropriate technologies for home and village level preparation of the foods and beverage. A study was made on the effects of using corn, rice or wheat flour as ingredients in drum dried soy-cereal weaning foods. Investigations were carried out on water uptake and use of sodium and ammonium bicarbonate and their effect/relationship to tenderness of cooked soybeans. Protein efficiency ratios were determined on many prototype foods made wholly or partly from field varieties of soybeans.

"Dissemination of research results was accelerated through an active publication series, a newsletter, regional workshops, training courses, and country programs. The

soybean development network was expanded through formal linkages between INTSOY and national and international organizations and with a host of individuals and institutions who share INTSOY's interest 'to expand the use of soybeans for human food.'"

Appendix IV (p. 97-134), titled "Soybean Food Use," summarizes accomplishments in more detail. An innovative sock filter and cradle filter for soymilk are illustrated and described. Appendix V, Project Output, is a bibliography of publications resulting from this research in the fields of: Soybean variety development (8 publications), Taxonomic Information Retrieval System (TAXIR; 5), Insect control and entomological studies (36), Soybean pathology (24 publications). Address: INTSOY, Univ. of Illinois.

2812. **Product Name:** [Soymilk].
Manufacturer's Name: Kyushu Milk Co. Ltd.
Manufacturer's Address: Moto-machi 4311, Oita-shi, Oita-ken 870, Japan.
Date of Introduction: 1976.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. "A new era [in soymilk production in Japan] began in 1976 when Kyushu Milk Co., a long-established middle sized dairy milk company, started making soymilk."

2817. **Product Name:** President Soy Bean Drink [Almond, Peanut, Coconut, Egg, Strawberry, Chocolate, Apple, or Orange].
Manufacturer's Name: President Enterprises Corp.
Manufacturer's Address: 2-20 Yan Harng, Tainan (Yungkan) 711, Taiwan. Plant at 1-20 Tahying Vill., Hsinshi, Tainan 744, Taiwan.
Date of Introduction: 1976.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: *Soybean Digest Blue Book.* 1978. p. 31; 1979. p. 98.

American Soybean Assoc. 1982. Checkoff Successfile. Taiwan #302. "Soymilk helps Taiwan bridge the nutrition gap." "The first commercial soymilk production in aseptic packages was started in 1976 by President Enterprises Corp. The corporation, which also operates a dairy plant producing cow's milk, has been extremely successful in the soymilk market. Their sales of flavored soymilk have grown rapidly in recent years, reaching a summer peak of 300,000 packs per day."

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 16, 95-98. In 1977 President became Taiwan's first large-scale soymilk producer. By 1980 they were exporting to Hong Kong, and by 1983 they were making 18.8 million liters/year, tying them for 6th largest in the world. Color photo of 250 ml Tetra Brik carton. Dark green, light green, orange, and yellow on white.

2818. **Product Name:** [Soymilk].
Manufacturer's Name: Soken-sha K.K.
Manufacturer's Address: 724 Katakura-cho, Kanagawa-ku, Yokohama-shi 221, Japan. Phone: 045-491-1441.
Date of Introduction: 1976.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Soken-sha first made commercial soymilk in Japan in 1976.

K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. Sôken-sha introduced Benibana Tônyû (in plain and cocoa flavors) in Aug. 1982 in 200 ml long-life packs and distributed it nationwide.

2828. Ballentine, Martha. comp. 1976. Himalayan mountain cookery: A vegetarian cookbook. Honesdale, Pennsylvania: Himalayan International Institute of Yoga Science and Philosophy. 203 p. Introduction and comments by Rudolph Ballentine. Illust. Index. 22 cm.
• ***Summary:*** The author is the mother of Dr. Rudolph Ballentine; she was born in America [in South Carolina] and is grounded in the cooking tradition of rural South Carolina. "Working directly with Swami Rama and various Indian chefs at the Himalayan Institute, she has engaged in an extensive study of nutrition and food preparation. Soy-related recipes include: Soy/Mustard (cooked soybean and mustard greens, p. 60-61). Vegetables with soy powder sauce (with dry soymilk, p. 62-63). Nine jewels (Nauratni or Sarso aloo pullao, with cooked soybeans, p. 84-85). Soybean dahl (p. 109). Sweet and soy mung with soy [powder] (p. 116-17). Wheat-soy bread (p. 133). Hindu loaf (with soy flour, p. 140-41). Loaf (with soy flour, p. 142). Tofu (soy cheese, homemade with nigari, p. 157). Tofu cheese cake (p. 158-59). Scrambled tofu (p. 160). Soy milk kheer (a sweet dish, p. 184-85).

In the chapter on "Dairy" products, the author states (p. 147): "While soybeans are mentioned in the ancient

writings, their use has been rather limited until recent years, except in the mountains. However, the making of soy milk is not uncommon now even in the plains of India. Its cheese, *tofu,* can be used in much the same way as *paneer...* In the Himalayas, tofu was made by curdling the milk with sour yogurt or very tart fruit juices... Bean "dairy" products, like tofu, have many of the advantages of milk, plus many that milk does not possess. They are lighter and less likely to create mucus in the body. Moreover, they are cheaper and practical, since a container of soy beans can provide milk for weeks without requiring room for a cow, pasture, and all of the other difficulties that make it so problematic to supply people with enough dairy milk." Pages 150-51 give recipes for paneer and paneer cheese cake.

Talk with Martha Ballentine in South Carolina. 1993. May 3. She says that her son, Dr. Rudolph Ballentine, wrote the section stating that "soybeans are mentioned in the ancient writings" of India. Address: South Carolina.

2829. Batt, Eva. 1976. What's cooking? A guide to good eating. Revised ed. Enfield, Middlesex, England: The Vegan Society. xxxii + 100 p. Introductions by Gordon Latto, and by Muriel Dowding. Portrait. Index. 21 cm.
• ***Summary:*** A vegan cookbook, the first edition of which was published in 1973. The author has been a vegan for the past 16 years. She was the secretary of the Vegan Society for 5 years and has been the vice-president for the past 7 years.

The acknowledgements contains a poem which ends with the verse: "Old Mother Hubbard's sweet smelling cupboard, Has no meat for the doggie to chew; But he's happy to eat Vegetarian eat, Now she puts TVP in the stew." Page v. recommends Delice (non-dairy frozen dessert). Page x features a half-page section titled "Soya" focuses on soya flour and recommends the Soyolk brand, which has been heat treated. The section titled "Milk" (p. xv) notes that "The fortified vegetable milks such as Plamil, Granogen and Granolac are useful sources of all of these nutrients [found in cows milk] and a daily glass of one of these is a very good habit. Page xvi discusses Textured Vegetable Protein (TVP) and notes that the brands Vitpro and Protoveg also contain added vitamin B-12 in the unflavoured types. Soyanutta is a vegetable oil product that is praised for being "entirely free of any hydrogenated oils or fats."

On pages xxix to xxxii is 4-page advertorial titled "Why Plamil?" by Leslie J. Cross [Secretary, The Plantmilk Society, Uxbridge, England]; it talks about the suffering that dairy milk consumption by humans causes to calves and cows, gives a history of the Plantmilk Society (founded in June 1956 in London as a registered charity), the company named Plantmilk Ltd. (founded in 1961), and the production of its first non-dairy milk in 1965 at Langley, Bucks. (It as initially sold under the name Plantmilk, but later for legal reasons the brand was changed to Plamil). In 1972 the plantmilk factory at Langley was closed and moved to Folkestone, Kent–the very town where the idea of making such a milk first crystallized. Plamil, sold in 2 sizes of cans, is now extracted from the soya bean and contains added vitamins, including B-12. "In addition to plantmilk, the company also makes a non-animal replacement for dairy cream: this is sold in cans under the brand name of Plamil Delice. There is also a chocolate bar–Plamil Chocolate.

Soy-related recipes include: Junket (made with Plamil, p. 62). Frozen fruit nog (made with Granogen). Banana ice cream (with Plamil). Plamil ice cream (p. 63). Vegetable cream cheese (made with Plamil, Granogen, or Velactin, p. 82). Soya cheese (Cheddar style, made with Soyolk soy flour and margarine, p. 82). Soya compote (with Plamil and soya flakes, p. 82). Onion soup (with soya flour, p. 83).

Page 101 is about The Vegan Society, founded in 1944, and located at 47 Highlands Road, Leatherhead, Surrey, England. Mrs. K. Jannaway is Secretary. Address: England.

2830. Duquette, Susan. 1976. Sunburst Farm family cookbook. Santa Barbara, California: Woodbridge Press Publishing Co. 303 p. Illust. by Donna Wright. Photographs by Mehosh Dziadzio. From the Brotherhood of the Sun. Recipe index. 23 cm.
• ***Summary:*** "The Brotherhood of the Sun is a family of more than 300 people, who have dedicated themselves to living in harmony with all people and all things. Our desire is to follow the simple laws of God and nature. In order to create an environment in which this is possible, we have established four communities upon thousands of acres of farm and ranch land in the coastal mountains around Santa Barbara, California... In order to help support ourselves and to share with other people our way of life, we have established a large organic foods complex in Santa Barbara called Sunburst Organic Foods.

"This organization includes a large wholesale warehouse that ships food to stores across the country, six large retail markets (with future markets projected along the coast), a community store, a restaurant called 'The Farmer and the Fisherman,' a whole-grain bakery and a fresh juice-bottling plant that distributes along the west coast."

Although this natural foods cookbook is not entirely vegetarian (it includes a chapter titled "Fish," p. 100-123, and many fish and shellfish recipes), the rest of the book is vegetarian and one long chapter (p. 64-99) is titled "Vegetarian Main Dishes." The illustrations are beautiful.

Soy-related recipes include: Tofu-vegie soup (p. 17). Miso-onion soup (p. 17). Many recipes topped with "Baco-bits." Bean salad (with soy beans, p. 35). Sprouts (incl. soy sprouts, p. 38-39). Tamari-onion gravy (p. 63). Enchiladas (filled with tofu or soy beans, p. 85). Corn pudding with Baco-Bits (p. 168). Soy flour cakes (pancakes, p. 268).

The chapter titled "Beans and pasta" (p. 124-39) has a section on Soybeans subtitled "Or: How to get protein without really trying." Recipes and descriptions include:

How to cook whole soybeans (with or without pressure). Soybean loaf. Soyburgers. Soy milk. Tofu (curded with lemon juice or vinegar). Tamari and miso. Cheese-soybean soup. Soy nuts. Soy grits. Soy flakes. Soybean cheese spread.

The Glossary (p. 295-97) contains descriptions of gluten, lecithin (from the soybean), miso, protein powder, tamari, seaweeds, tofu. Address: Santa Barbara, California.

2831. Henisch, Bridget Ann. 1976. Fast and feast: Food in medieval society. University Park, Pennsylvania: Pennsylvania State University Press. 279 p. Illust. Index. 24 cm. [930* endnotes]

• ***Summary:*** This wonderful, scholarly book, true to its title, is based mainly on English sources of the 13th, 14th, and 15th centuries. Supplementary material has been drawn from other countries and other periods. The book is of special interest because of its many references to early non-dairy milks and creams–made from almonds and served during Lent.

Contents: 1. Introduction. 2. Mealtimes. 3. Fast and feast. 4. Cook and kitchen. 5. Methods and menus. 6. Laying the table. 7. Manners maketh man. 8. Entertainment: Surprise and sotelty [subtlety]. Notes. Suggestions for further reading.

The two longest and most important fasts were Advent and Lent, which preceded the two greatest feasts of the year, Christmas and Easter. Lent is the season most widely associated with fasting. Its length, six weeks, was chosen to recall Jesus' 40-day fast in the wilderness. The tone is sober, a penance to be endured, a sacrifice. Farmers had to offer a tenth of their harvest to their lord or the parish priest. On Fridays, the amount eaten need not be decreased, but meat could not be eaten, and was usually replaced by fish.

But Lent came with many more hardships. Only one meal was officially allowed, and in the early years it could not be eaten until the early evening, after the hour of vespers. In a decree of 817 a collation, a very light snack, no more than a drink and a morsel of bread, could be eaten just before bedtime. During Lent, no meat of any kind could be eaten–but fish could be substituted–especially red herring, often dried or salted. This prohibition was often expanded to cover other animal products–butter, cheese, milk, and eggs. Eggs were usually not consumed after Shrove Tuesday; they reappeared hardboiled on Easter Sunday. Though dairy products were greatly liked by the people, and they must have been in greatest abundance during the late spring and early summer, the period right after the six weeks of Lent, their consumption was forbidden in strict practice. Milk and cream could be replaced by their counterparts made of almonds. Liquor was widely consumed during Lent, and used in cooking. The last day before Lent, Shrove Tuesday, was a day of feasting, devouring all meat and eggs. Carnival was the days before and up to Shrove Tuesday. Lent began on Ash Wednesday.

"Provided it was too tiny to be deemed a meal, the most luxurious tidbit could be sucked and nibbled [such as] a morsel of almond butter, made from ground almonds pounded together and bound with sugar and rosewater,..." But these were expensive (p. 42).

Medieval recipe books indicate that, during Lent, cooks should use their skills to "find satisfactory substitutions for forbidden ingredients in familiar dishes." Because no meat, eggs, or butter could be used, major changes had to be made. Cooks "relied heavily on the almond," which added nourishment and good flavor to a meatless diet. Blanched, ground and steeped in water it yielded "milk of almonds." *Latte di mandorla* is still a favorite drink in southern Italy. This almond "milk" was used as the basis for soups and stews, and as a binder for pastry. A 15th century cookbook* offers two recipes, side by side, for little pastry turnovers; on fish days, milk of almonds takes the place of eggs (p. 44) (* Napier Mrs. A., ed. 1882. *A Noble Boke off Cookry* London: Elliot Stock. p. 47).

Almonds could be steeped two or three times to yield several batches of milk. "A liquid thickened with ground almonds became something more substantial, a moist purée, and was known as 'cream of almonds.' On a fish day, this cream might be used in place of eggs or beef marrow to thicken a sauce. In a 15th century cookbook, at the end of a recipe for Custard lumbarde, we read: "Anf if hit be in lenton, take creme of Almondes, And leve [leave out] the egges And the Mary [marrow]" (Austin, T., ed. 1888. *Two Fifteenth Century Cookery Books,* EETS {Early English Text Society} OS [Original Series] 91, 1888, p. 74).

The *Household Accounts of Richard de Swinfield* (1855, vol. 59, p. 68) describe how, in the year 1289/90, Bishop Swinfield's staff, unlocked their spice cupboards on Palm Sunday (the Sunday before Easter) "and transformed the obligatory fish dinner with almonds, sugar, ginger, and mustard" (p. 50).

Fried almonds were served around the edge of each bowl containing a white chicken stew to add color and a change of texture (p. 105) (See: Power, E., trans. 1928. *The Goodman of Paris* New York: Harcourt Brace, p. 264).

In the late 1200s, a draper in London, calculated the amount of money he had spent while courting a wealthy widow "on diverse deyntees as ffiges & reisins, almonds, prunes... pomegranats and orangs [figs, raisins, pomegranates, and oranges] (p. 113) (See: Thrupp, S. 1962. *The Merchant Class of Medieval London.* Ann Arbor, Michigan: University Press. p. 106-07).

Nuts were widely used in medieval recipes for their oil, nutritional value, and taste, and to add contrasts of brown or white color and firm, crisp texture (p. 121). "They yielded an oil in which other foods could be fried, and they decorated the finished masterpiece. A mock-hedgehog... made its appearance on the table bristling with fried almonds" (*Two Fifteenth Century Cookery Books* p. 38).

Fried almonds could also be scattered over a white rice

pudding to add their glistening brown color, but blanched almonds were called for with a pale purée of ground chicken and ground nuts (*Noble Boke* p. 109; *Two Fifteenth Century Cookery Books* p. 84).

To make pork pudding, ground pork, ground blanched almonds, and rice flour were simmered together. After chopped fried almonds were stirred in, the mixture was spooned onto a dish and decorated with more nuts and powdered ginger (*Two Fifteenth Century Cookery Books,* p. 28).

Page 122 gives details on almond cream and almond milk, how they were prepared and their role in medieval society. Almonds formed the base of two items mentioned repeatedly in recipe books, "almond cream and almond milk." To make the cream, simply blanch almonds [drop into boiling water, shock in cold water, rub and pick off the skins], grind them, and mix with water. Some instructions say that the mixture should be "akurd thick"–like solid milk curds. Put mixture in a pot over a fire, stir as it comes to a boil and until nicely thickened. Empty contents of pot onto a cloth stretched above a bowl. Stroke the underside of the cloth with a ladle to draw off most of the excess liquid. Gather corners of cloth to form an improvised bag, and hang for an hour or two over the bowl until the last drops drain away. Remove the white fibrous almond pulp from the bag, sprinkle with sugar, decorate with red anise and green borage leaves, then serve like a pale, soft, plump sausage (*Noble Boke,* p. 42-43; *Two Fifteenth Century Cookery Books* p. 91-92).

Almond milk was thinner than almond cream. Ground almonds were steeped in any liquid (water, wine, ale, or a broth of meat or fish) to make a "milk" whose consistency varied from "thryfty," or thin, to "good and styffe," depending on the ration of almonds to liquid. This could also be served as a soup by adding spice or sugar plus crisp, twice-toasted bread (*Two Fifteenth Century Cookery Books* p. 91, 16; *Noble Boke,* p. 75-76).

But almond milk was more frequently used as one of any ingredients in a recipe. For a savory pudding, combine ground capon, boiled rice, and almond milk, or spiced meatballs set in a sauce of almond milk thickened with rice. For a sweet spiced pudding, simmer rice in almond milk then divide into three parts: leave one white, make the second yellow with saffron, and the third green with parsley. Arrange spoonfuls of each elegantly on the serving plate (*Two Fifteenth Century Cookery Books* p. 85, 34, 20). Almond milk "was a godsend during Lent," for it provided nutrients which were in short supply.

In the year 1405 Lawrence Chateres, the kitchen officer of Croyland Abbey, was mentioned with special approval in the abbey's chronicle because he "gave 40 pounds to supply almond milk to refresh the convent on fish days" (H.T. Riley, trans. 1854. *Ingulph's Chronicle of the Abbey of Croyland.* London: Bohn. p. 359).

Note: Bridget was born in the United Kingdom. As of May 1999, she and her husband are retired and living in State College, Pennsylvania. Address: Independent researcher, State College, Pennsylvania.

2832. Hermana, -. 1976. Saving the protein waste from processing of legumes in Indonesia. In: M.A. Rifai, ed. 1976. ASEAN Grain Legumes. Bogor, Indonesia: Central Research Institute of Agriculture. 225 p. See p. 195-200. [11 ref]
• ***Summary:*** Contents: Introduction. The protein waste: Peanut soybean, mungbean. Utilization of the waste.

Tables show: (1) Food legumes available in Indonesia. The three columns are: Latin name, English name, and Indonesian name. Shows 22 food legumes available in Indonesia, from Ochse (1931) and Aykroyd (1969).

(2) Food legumes usually processed. Discusses hunkwe, made by extracting the starch from the mung bean or kacang ijo (*Vigna radiata,* now *Phaseolus aureus*) with water.

(3) Indonesian fermented foods made from waste products. Include dage (made from oncom), oncom (made from peanut presscake or okara), tempe bongkrek (made from coconut presscake), tempe gembus (okara tempeh), tempe mata kedele (made from the hypocotyl of the soybean).

(4) Nutritive composition of kecap (per cent): Both peanut kecap and soybean kecap. Address: Nutrition Research Inst., Bogor, Indonesia.

2833. Inprint Caribbean Ltd. 1976. Soybean cookbook: A guide to more nutritional cooking. Port of Spain, Trinidad: Inprint Caribbean Ltd. 48 p.
• ***Summary:*** After discussing the nutritional value of soybeans, this cookbook gives recipes, mostly for using whole soybeans, but also for making and/or using full fatted soyflour, soymilk, okara, and soynuts. Early in 1976 the publisher was "approached by representatives of the Chaguaramas Agricultural Development Project to edit and publish a soybean cookbook for distribution in Trinidad and Tobago. The German partners in the project at Chaguaramas were about to hand over the project to the Trinidad and Tobago Government, after six years of a cooperative effort, and it was felt that such a publication would make the project, and soya, more widely known to the people of Trinidad and Tobago." The cookbook was the idea and dream of Dr. H. Seidel, one of the German agricultural experts on the project. Publication costs were supported by local companies who advertised in the book and some of whose food products were listed by name in various recipes. Soy-related advertisers include Worthington Foods (via Trinidad Health Foods; p. 31) and Bontrae (via Quesnel & Fernandez; p. 32).

"Over the past four years in Trinidad and Tobago, through efforts at the Chaguaramas Agricultural Development Project (a cooperative venture between the

Government of Trinidad and Tobago and West Germany), considerable success has been achieved in the production of this rich bean" (p. 6-7). Address: Trinidad.

2834. Johnson, Dale W. 1976. Marketing and economic production–Summing up. In: L.D. Hill, ed. 1976. World Soybean Research [Conference I: Proceedings]. Danville, Illinois: Interstate Printers and Publishers, Inc. xvii + 1073 p. See p. 1014-17.
• ***Summary:*** Table 1 shows estimated production of edible soy protein products in 1974 and projections for 1985 in millions of pounds (1974/1985): Soy flour and grits 900/2000, soy protein concentrates 70/600. Isolated soy proteins 60/450, textured soy proteins (100/450). Soy milk-type products -/200.

"It will be noted from the table that what is referred to as soy milk-type products is currently almost non-existent, but will come into wider use in the next 10 years. It is felt that these soy milk-type products will find a place in the dairy industry as a partial replacement for whole milk and non-fat milk for partial or complete substitution in what would have to be referred to as 'imitation' dairy products. It is likely that these products will come to the forefront as better flavored soy products are developed." Address: Food Ingredients Inc., 1150 Willis Ave., Wheeling, Illinois 60090.

2835. Landman-Bogues, Jacqueline. 1976. Rastafarian food habits. *Cajanus: The Caribbean Food and Nutrition Institute Bi-Monthly* (*Trinidad*) 9(4):228-34. [9 ref]
• ***Summary:*** Rastafarians (including "lockmen"), a Jamaican religio-political cult, exclude meat and meat products from their diet. They do eat freshly caught fish and freshly harvested vegetables. Coconut milk is substituted for cow's milk. Many "rely on the 'organic' produce of their own kitchen gardens or plots;... brown sugar and honey replace granulated [white] sugar; processed or canned foods are avoided."

"Among the members of the cult, who are largely vegetarians, there are strict vegans as well as lacto-ovo vegetarians. Vegans exclude all animal foods from their diets, also processed, mass-produced foods–including "soya-based infant formulae." This can create "problems because incorrectly prepared soya will retain many anti-nutrients such as goitrogenicity, antitrypsin activity, phytates, and anti-vitamin activity." Soya 'milk' is not a traditional part of the Jamaican diet.

Ganga tea is made with marijuana leaves. There is a trend toward asceticism. Rastas "who have been in touch with the Essene cult are most likely to be vegans and to eat raw foods. Secular influences are also likely, such as contact with the Zen Macrobiotic cult and organic food enthusiasts in the Western world." Address: Recently Asst. Lecturer at the Tropical Metabolism Research Unit, Univ. of the West Indies.

• ***Summary:*** This general overview discusses soybeans (*Kacang kedelai*), tempeh, soy milk, "tahu or soycurd" [tofu], kecap, taoco [Indonesian-style miso], soy milk, residue of soy milk or tahu [okara] which may be fermented and sold as oncom. The average nutritional composition of the first 6 products is given. Address: Nutrition Research Inst., Jakarta, Indonesia.

2837. Lin, Florence. 1976. Florence Lin's Chinese vegetarian cookbook. New York, NY: Hawthorn Books. xix + 236 p. Illust. by Nai Gi. 24 cm.
• ***Summary:*** Contains a great deal of information on and recipes using soyfoods. Chinese food expert Barbara Tropp says this book has the best glossary available, and has very creative and interesting but drab recipes.

Hoisin sauce is a ground bean sauce to which sugar, garlic, and other flavorings have been added. It is the most popular commercially prepared flavored bean sauce.

Civilized Chinese patterns of eating were established by Confucius. The second great influence was Taoism, which advocated a simple diet, natural foods, and the basic belief that proper eating leads to good health. The third great influence was Buddhism, which was opposed to killing, so advocated a vegetarian diet. The art of vegetarian cookery was initially developed mainly in Buddhist monasteries; later it spread to private homes and restaurants.

To make good meatless broths use soybeans, soy sprouts, tough or wilted vegetables, mushrooms, and / or bamboo shoots. To make soy sprouts, it is best to use new-crop soybeans, which have the highest germination rate. This book contains many recipes that call for sea vegetables. Soy sauce is widely used in Chinese vegetarian recipes.

Chapter 3, titled "Soybeans, soybean products, and other legumes" contains much useful information and recipes. A diagram titled "Chart of soybean products" (p. 53) shows the complex relationships, includes Chinese characters for each product, and shows a few soy products that are not in the Glossary: Fermented soybean curd (*Fu ju*), comes in white (*pai*), red (*hung*) and spiced (*la*). The many interesting recipes, each with a Chinese name (with Chinese characters) and an English name include: *Su huo t'ui and su chi* (Mock ham), *Su ya* (mock pressed duck), and *Wu hsiang tou fu kan* (Seasoned pressed bean curd).

Glossary (soybeans, soybean products, and legumes, p. 208-13; Chinese characters are given): "Fresh young soybeans–*Mao tou:"* Delicious. They are in season in the early fall. "They come in dark fuzzy pods and are sold by

weight. Young soybeans are like corn and should be eaten as soon as they are picked from the plant. They may be cooked with or without the pods."

"Dried soybeans–*Huang tou:"* Yellow soybeans.

"Soybean sprouts–*Huang tou ya:"* Sold by weight. Best when made in cooler weather. "When bought fresh, they will keep in the refrigerator for 2-3 days, or longer if kept in a brown paper bag inside a plastic bag."

"Soybean milk–*Tou chiang:...* usually served hot as a beverage with breakfast."

"Soybean milk skin–Called by many names [*Fu yi, fu p'i;* see p. 53]. Each region has a different name for it, as does each food processor, and the thickness shape and wrapping may be different." Four kinds are readily available in Chinese food stores" (1) *Erh chu* is "cut into rectangles 1½ x 4 inches and 1/8 inch thick. The pieces some stacked and wrapped in paper, in half- or one-pound packages." (2) *Yüan chu* comes in sticks [dried yuba sticks]. When reconstituted, its thickness is about the same as *erh chu.* (3) *San pien fu chu* is half-moon shaped. When still soft, it is folded into 6 x 10-inch rectangles then dried. It is thinner than *erh chu.* (4) *Fu yi* "is the thinnest of the bean milk skins. It is paper thin and almost transparent. When dried it is very brittle, and must be handled very gently. It is used mainly to wrap fillings. It comes in stacks of 8-10 sheets..."

"Soybean milk residue–*Tou fu cha;"* [okara]. Can be a delicious ingredient in cooking. "What is not used for food is made into a feed for animals or put into the ground as fertilizer."

"Curdled soybean milk–*Tou fu hua:" Hua* means "flowers." These very tender curds are "eaten hot with soy sauce or cold with syrup as a snack." It is "sold only in bean curd factories by the pint."

"Bean curd coagulant–*Shou shih kao"* [calcium sulfate]: A "white substance which comes in powdered form. It is use to coagulate soybean milk to make *tou fu* (bean curd)."

"Tender soybean curd–*Nen tou fu:* When some water is removed from the curdled bean milk, it is known as fresh tender bean curd. It is cut into squares 4 x 4 by 1½ inches.

"Firm soybean curd–*Lao tou fu:* When a coagulant is added to the boiled bean milk of a different concentration and some of the water is removed, the milk becomes firm bean curd. It is firmer than the tender bean curd and is cut into 3 x 3 x 3/4-inch squares.

"Pressed bean curd sheet–*Pai yeh:* Fresh bean curd sheet looks almost like a sheet of unbleached muslin. When it is frozen, the color turns darker, to a light brown. It is made into square sheets of various sizes. It is used to wrap fillings and it is also sometimes cut into short strips and cooked in dishes along with seasoning vegetables. Pressed bean curd sheet is best eaten fresh..."

"Pressed soybean curd–*Tou fu kan*–plain: When even more water is pressed out of firm bean curd, it becomes pressed bean curd... it is almost like a firm cheese." It may be bought either plain (*Pai tou fu kan*) or seasoned (*Wu hsiang tou fu kan*). "The seasoned curd is cooked in soy sauce and star anise [*pa chiao*], giving it a brown color." "The white pressed bean curd should be soaked in salt water (made of 1 tablespoon salt to 4 cups water) in a covered container. The seasoned pressed bean curd should be soaked in salt water and soy sauce. If stored in the coldest part of the refrigerator, they will keep for several weeks."

"Fried soybean curd–*Yu tou fu:...* The bean curd is cut into 1½ inch cubes and deep fried in oil until a golden crust forms outside, which the inside... remains soft." It "is sold by weight, usually in half- or one-pound bags."

"Wheat gluten–*Mien ching:"* (p. 217). "Deep-fried gluten–*Yu mien ching:"* "Fresh or dried wheat gluten–*K'ao fu:"*

Glossary (condiments and seasonings, p. 219-23): "Soy sauce–*Chiang yu:"* The "most important seasoning liquid in Chinese cooking. Comes in light or dark, thick or thin. Dark or thick is *Lao ch'ou.* Light or thin is *Sheng ch'ou.* Soy sauce also comes in different "flavors, such as mushroom soy sauce and, for nonvegetarians, shrimp roe soy sauce. Flavored soy sauces are used mainly for dips and for special flavors in salads, noodles, and as a final touch to a dish."

Note: This is the earliest document seen (April 2012) that uses the term "mushroom soy" or the term "mushroom soy sauce" to refer to a type of dark soy sauce flavored with mushrooms, or that uses the term "Lao ch'ou" to refer to dark or thick Chinese soy sauce.

"Salted black beans–*Tou shih:"* These beans [fermented black soybeans] are "used to flavor bland foods, such as eggplant or bean curd." They are never eaten alone.

"Brown bean sauce–*Yüan shai shih:"* Made from "fermented soybeans and wheat flour mixed with salt and water. The beans in the sauce may be either ground (to make ground brown bean sauce–*Mo yüen shih*), or left whole. To this basic beans sauce, spice and other seasonings are added [in different proportions], creating many varieties" in "different regions of China. In Szechuan, large amounts of hot peppers and crush Szechuan peppercorns are added; in the northern provinces, garlic and scallions are used;..."

"Hoisin sauce–*Hai hsien chiang:"* A "ground bean sauce to which sugar, garlic, and other flavorings have been added. It is the most popular commercially prepared flavored bean sauce. It is used for cooking, or very often as a dip for deep-fried batter-dipped vegetables."

"Sesame paste–*Chih ma chiang:"* "Sesame oil–*Ma yu:"*

2838. Luttrell, William Reed. 1976. Development and evaluation of commercially sterile whole soybean beverage. PhD thesis, Dep. of Food Science, University of Illinois. 246 p. Page 4967 in volume 37/10-B of Dissertation Abstracts International.

• ***Summary:*** Contents: Introduction. Literature review: Proteins: Requirements and sources, soybeans, soymilk,

sterile, shelf-stable soybean beverages, effect of heat on protein. Materials and methods: Soybean beverage preparation, heat penetration measurement and minimum process time calculation, objective analysis, organoleptic analysis, statistical analyses, microbial analyses–spore counts, microscopic studies. Results and discussion: Heat penetration measurements and minimum process time calculations, still retort studies, agitort studies, comparison of still retort and agitort processing, future work. Summary and conclusions. References. Appendix. Vita. Address: Dep. of Food Science, Univ. of Illinois.

2839. Mallard, Gwen. 1976. Soy bean magic: Delicious recipes with soy beans, flour & grits. Saanichton, British Columbia, and Seattle, Washington: Hancock House Publishers. 80 p. Index. 18 cm.
• ***Summary:*** Contents: 1. Commercially bought soy products: Soy flour, soy grits, soybean milk, soy flakes (fine, or coarse), soybean oil, soybean lecithin, soy lecithin spread (butter substitute), soy noodles, macaroni and spaghetti, soy sauce, soy coffee, roasted soy nuts, baked and green soybeans (canned). 2. Homemade soy products: Soy milk from dry beans, quick soy milk (from soy flour), soy cream (from soy flour), "soy base" (from soy flour), soy cheese from soy flour [tofu] (curded with lemon juice), oven-roasted soybeans, toasted soy flakes (coarse), toasted soy flour, sprouted soybeans. 3. Soybean recipes: Breads 'n breakfasts, soups 'n salads 'n salad dressings, soy suppers, desserts and delights.

To make soy base (p. 14): Slowly add 2 cups cold water to sifted soy flour to make a smooth paste. Stir in 1 teaspoon salt. Place in a double boiler and "cook for 30 minutes over rapidly boiling water. This mixture will be thick when it is cooked. Soy base is ideal for enriching gravies, stews, puddings, and soups. It will also make an excellent sandwich spread."

Note: This is the earliest English-language document seen (Aug. 2013) that uses the term "soy base" as a noun in this way; within 10 years the term had acquired a different meaning.

On the rear cover is a biography of Gwen Mallard by Derrick Mallard, her husband. She was born in 1917 in Fernie, British Columbia; she lived with her parents and three brothers in a log cabin in the beautiful Elk Valley among Canada's majestic Rocky Mountains. In 1971 she helped launch a campaign against plans for shipping oil in Alaskan tankers along the coast of British Columbia with the inherent dangers of disastrous oil spills (Note: On 24 March 1989 the tanker Exxon Valdez ran aground and spilled 11 million gallons of heavy crude oil in Alaska's pristine Prince William Sound–the world's worst oil spill in history). Gwen runs a small health food store and restaurant 14 miles north of Victoria, British Columbia. Address: British Columbia, Canada.

2842. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Loma Linda Foods. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 797-98.
• ***Summary:*** "A nonprofit corporation manufacturing and distributing health foods in the United States and Canada. It is owned and operated by the General Conference of Seventh-day Adventists for the purposes of (a) furthering by all proper means a better knowledge of the laws of healthful living, (b) manufacturing and selling healthful foods and related products, and (c) encouraging and supporting benevolent, educational, and religious enterprises of the SDA Church. The main office, factory, and headquarters are at 11503 Pierce Street, Riverside, California; the second factory (featuring the production of soy milk in liquid and powdered form) is on Wooster Road, Mount Vernon, Ohio.

"Products include vegetarian protein foods (canned and frozen), soy milk, cereal coffee, gravy mixes, and canned soy beans.

"History. Forerunner of Loma Linda Foods was the Loma Linda Sanitarium bakery, which began operation in 1905. It was called The Sanitarium Food Company and its plant was situated on Anderson Street in Loma Linda. At first it manufactured a variety of breads and wafers, but it soon added other health food items. On Feb. 6, 1933, the name 'Loma Linda Food Company' was adopted, and on July 1, 1935, the first articles of incorporation were filed for a perpetual, nonprofit organization with a 12-member board of directors... On Nov. 14, 1937, groundbreaking ceremonies for a factory building were held on a nine-acre site donated by the Southern California Junior College (now La Sierra College) at Arlington (Riverside). The new factory began operations on July 16, 1938, the main product being Ruskets, a flaked whole-wheat biscuit cereal, but later more than 30

other products were added, the main emphasis being upon the development and perfection of high-protein foods of vegetable origin. The company also distributed related food items processed and packaged by others under the Loma Linda Foods label.

"On Jan. 1, 1951, Loma Linda Foods took over the business of the International Nutrition Laboratories, Inc., Mount Vernon, Ohio, purchased from Harry Willis Miller, M.D. Charles Percy Miles was named manager. The Canadian Division of Loma Linda Foods was established at Oshawa, Ontario, in 1962, on a site donated by Oshawa Missionary College (now Kingsway College). Frank L. Wessely was appointed its manager. It was closed in 1965.

"Loma Linda Foods has afforded financial support to the Seventh-day Adventist Dietetic Association and has provided fellowships to selected postgraduates of the School of Dietetics of Loma Linda University. By Jan. 1, 1965, it had also contributed to the denominational mission program more than $300,000, through the Loma Linda Foods label-saving plan for Sabbath school Investment.

"General Managers: G.T. Chapman, 1938-1962; C.P. Miles, 1963-1973; M.E. Dake, 1973." Address: Washington, DC.

2843. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: DE-VAU-GE Gesundkostwerk GmbH (German Health Food Factory, Ltd.). Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 389-90.
• ***Summary:*** "A firm in Hamburg, Germany, owned by the Euro-Africa Division, which makes a wide variety of products ranging from bread and cereal flakes to nut creams, vegetable spreads, meat analogs from soybeans, and diabetic food. The products are distributed through several channels, but mainly through health-food stores. The factory was founded in 1899 at Friedensau, near Magdeburg, and began operation in an old mill under the management of Augusto Pages. But since the factory was too small and too far from markets and sources of imported raw materials, such as fruits and nuts, to operate economically, a new plant was built at Hamburg shortly before World War I.

"In 1940 the political conditions in Germany forced the denomination to transfer the factory to four SDA trustees–Willie Luhr, the former manager, A. Vollmer, O. Schildhauer, and H. Niemann–who continued to operate it as a private company until the building was almost completely destroyed in an air raid on July 28, 1943. Some 12 months later the factory resumed production, but on a diminished scale.

"After World War II, in 1947, a new organization, formed by the former Central European Division, took over operation of the food factory from the remaining trustees. In 1966 a new building was constructed in north Hamburg, at Brodermannsweg 17. New soy products were developed, and a new sales force was organized. The rapid growth of sales, both in and outside Germany, made it necessary to lay plans for more space and greatly expanded facilities. Early in 1974 a new property was purchased in Lueneburg, an attractive industrial area of Germany. The yearly turnover exceeds $5 million."

Note: DE-VAU-GE is an abbreviation for "Deutscher Verein für Gesundheitspflege" (German Society for Health Care). Address: Washington, DC.

2844. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Sanitarium Health Food Company. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 1285-86.
• ***Summary:*** "A chain of health food factories, wholesale branches, and retail shops in Australia and New Zealand, operated by the Health Food Department of the Australasian Division... Headquarters for the firm are at 148 Fox Valley Road, Wahroonga, New South Wales, Australia.

"Products include Weet-Bix, a flaked-wheat breakfast-food biscuit; cornflakes, and other cereal foods; Marmite, a yeast-extract flavoring; peanut butter; vegetarian meats and textured vegetable protein; and soybean milk

"In 1973 the company was operating 12 factories in Australia and New Zealand and 8 large wholesale branches. There were 68 shops and 4 cafes scattered in the main cities of the two countries; 11 of these retail branches were in company-owned buildings. Total net worth was approximately $24.2 million. Approximately 1,700 workers were employed, and the company's products were stocked throughout the grocery trade in Australia and New Zealand. A growing export trade was also being developed, principal markets being the Southern Pacific and nearby Asian countries.

"The gross annual revenue sales were $46 million. In 1973 the company realized a profit of $2.7 million, of which $1.362 million went directly to the treasury of the Australasian Division for mission use. In addition, nearly half of the general administrative expenses of the division are met by the company as operational costs.

"History. The motivating influence leading to the establishment of health food work in Australasia is found in addresses given by Mrs. E.G. White at the Brighton, Victoria, camp meeting in 1893 and in Melbourne, Victoria, in 1895. She spoke of different aspects of the work, and urged the leaders to move forward along medical lines, including manufacturing of health foods and establishing of vegetarian restaurants. In response the Australasian Union Conference on Oct. 31, 1895–Resolved that the Executive Committee be urged to take steps to commence such work in the various large cities of these Colonies by the establishment of both houses and depots for the supply of Health Foods, Sanitary Clothing, etc. as the way may open (Minutes, p. 30).

"In 1897 a consignment of wheat biscuits, granola, gluten, and caramel cereal [grain coffee] arrived from Battle Creek, Michigan. A small factory was rented in North

Fitzroy, Melbourne, where the production of granola and caramel cereal was begun. The firm, registered April 27, 1898, was first known as the Sanitas Supply Company and then as the Sanitarium Health Food Agency. Processing was done under the direction of E.C. Halsey, from Battle Creek.

"The results of the Melbourne enterprise were not satisfactory, and Mrs. White counseled that the factory be moved to Cooranbong to be operated in conjunction with the Avondale School for Christian Workers (now Avondale College), to which the managing committee agreed... At this time the firm's present name was adopted. Operations at Cooranbong began in 1899.

"In all these early moves Mrs. White, who was residing in Australia at the time, gave important counsel for the health food work and shared in many of the major decisions relative to the development of the business. At first all sales of health foods were made through conference tract societies, but a retail shop was opened in Sydney in 1902 in association with the first vegetarian restaurant. However, the business was not financially successful, and by 1904, when the whole health food enterprise was heavily in debt, many of the denominational leaders favored closing it... Success was achieved, and in 1906 the first donation by the food company for island mission work was made.

"Between 1907 and 1913 shops and cafes were opened in Melbourne, Brisbane, and Adelaide, followed later by branches in Hobart and Perth. The manufacturing and wholesale sections of the business expanded rapidly in the period 1920-1935... In 1927 the company began to sell directly to retail grocery stores, bypassing the wholesale merchants.

"Two competing businesses were acquired in 1928 and 1929, respectively–Grain Products, manufacturers of Weet-Bix, and the Cerix Company, manufacturers of puffed cereals. These acquisitions widened and strengthened the company's activities.

"The development of the health food work in New Zealand paralleled that in Australia. Manufacturing began at Christchurch in 1900 in a small plant operated by E.C. Halsey, who had been transferred from Australia. Shops and cafes were opened in the main cities, and in 1921 a new factory was built in Christchurch under the management of A.J. Dyason. This was the beginning of an era of rapid growth, which has since continued. The Auckland and Christchurch factories of Grain Products, Ltd., were acquired in 1930. A third factory, in Palmerston North, began operation in 1952." Address: Washington, DC.

2847. Ranill, June. 1976. The El Molino cookbook: Natural wholegrain foods from El Molino & CaraCoa. El Molino Mills, A division of ACG Co., Box 2250, City of Industry, CA 91476. 144 p. Illust. Index. 22 cm. Spiral bound.
• ***Summary:*** Contents: Part I: Description of grains, seeds, legumes & carob (1-2 pages about each with an illustration; barley, buckwheat, corn, millet, oats, brown rice, rye, triticale, wheat, alfalfa seed, chia seed, flaxseed, pumpkin seed, sesame seed, sunflower seed, lentils, mung beans, split peas, soybeans {p. 22-23}, carob, El Molino and CaraCoa products).

Part II: How to use and enjoy whole grains, seeds, legumes. Part III: Recipes (by Alice Walter).

This year El Molino Mills celebrates its 50th anniversary; thus it was founded in 1926. Soya powder is like soya flour, but it is more finely ground for use in beverages. "Soy flour is made from the raw bean, while soya flour is made from soybeans that have been lightly toasted. This 'toasting,' actually a moist heat treatment, enhances the flavor." El Molino soya flour is full-fat flour.

El Molino products (p. 26) include Soybeans (whole cooks best), and Carob coated soynuts. No soy flour or powder is mentioned.

Soybeans, soya flour, grits, and powder are used extensively throughout his book. White bread (with soy flour, p. 46). Honey oatmeal bread (p. 48). Cornell bread (p. 50). Soya bread (p. 51; 4.5 cups wheat flour and 1.5 cups soya flour, so 25% soya flour). Improved quickbreads (p. 68). Crunchy muffins (with soya grits, p. 70). Homemade muffin mix. Soya muffins (p. 72). Gluten sesame thins (p. 74). Homemade Granola (with 1 cup El Molino soya flour, p. 75). Soy nuts. Garlic soy nuts. Roasted soybeans (p. 85). Carob breakfast drink (with 1 tablespoon El Molino soya powder, p. 88). Bean salad (featuring soybeans, p. 92). Meatloaf (with soya grits, p. 97). Soybean loaf. Baked soybeans. Soybean chili (p. 101).

The section titled "Meatless dishes" (p. 102-112) features many soy and many gluten recipes: Soybean medley. Cooked soybeans (Basic). Soy cakes. Soybean paste (ground cooked soybeans). Stuffed peppers. Stuffed tomatoes (both with soybean paste). Baked soybean croquettes. Softened soya grits. Stuffed zucchini (with softened soya grits). Tofu (from soybeans curded with lemon juice). Soy cheese (made from soya powder). Cooked gluten (homemade, p. 110). Gluten cutlets. Gluten patties. Gluten roast. Eggs and soya

grits.

Soya milk (from soya powder, p. 115). Pineapple soya cocktail (with soya powder, p. 116). Soya applesauce cake (with soya flour or powder, p. 119). Improved cakes (p. 122). Peanut butter cookies (with soya flour, p. 125). Improved cookies (p. 128). Cookies for your puppy dog (p. 130). Sesame carob balls. Carob nut log (p. 137).

Sesame seed: On page 17 is a full page about sesame seeds and their uses, with an illustration of the sesame plant and its seeds. The Index contains more than 45 entries for "Sesame" including: Sesame butter (p. 17, 87). Sesame granola bars (p. 84). Sesame halvah (p. 17). Sesame milk (p. 17, 115). Sesame in muesli (p. 76). Sesame tahini dressing (p. 93). Address: City of Industry, California.

2848. Sarett, Herbert P. 1976. Soy-based infant formulas. In: L.D. Hill, ed. 1976. World Soybean Research [Conference I: Proceedings]. Danville, Illinois: Interstate Printers and Publishers, Inc. xvii + 1073 p. See p. 840-49. [24 ref]

• ***Summary:*** Contents: Introduction. Development of soy-based infant formulas. Protein quality of early soy formulas. Soy protein isolates for soy-based infant formulas. Conclusions. References.

"Development of soy-based infant formulas: 'Allergy' to cow's milk stimulated the first development of soy-based infant formula. For many years, infants who were unable to tolerate cows' milk formulas were all considered to be 'allergic' to milk proteins. Today, we realize that lactose, the carbohydrate in cows' milk, may have been the cause of the problem in some of the infants, especially those who had been ill, since gastrointestinal diseases and diarrhea often result in temporary deficiency of the enzyme lactase. In any event, soy flour was used to produce hypoallergenic infant formulas as milk-substitutes for feeding 'allergic' infants.

"In 1929, the powdered formula product Sobee, made from full-fat soy flour, was introduced by Mead Johnson... This early formula was dark tan in color, had a beany taste and contained complex carbohydrates and other factors from soybeans which led to flatus and poor smelling stools. It would probably not be aesthetically acceptable today, but in 1929, it was a godsend for infants allergic to milk.

"In 1937, liquid Mull-Soy [was] developed by the Borden Company... A powdered version of this product became available in the late 1940's." Liquid Sobee was introduced in 1954. ProSobee, based on soy protein isolates, was launched in 1965. "From technological and physiological standpoints, soy isolate has important advantages over soy flour in making an infant formula. The lower viscosity decreases heat requirements in sterilization, thereby resulting in better protein quality and a whiter formula; in addition, the absence of raffinose stachyose, and hemicelluloses decreases flatulence and stool problems." Address: V.P., Nutritional Science Resources, Mead Johnson Research Center, Evansville, Indiana.

2849. Schultz, John M.; Mason, William P. 1976. Soybeans: Brazil as a competitive force. MBA thesis, Harvard Business School. vii+ 151 leaves. 28 cm. [49 ref]

• ***Summary:*** This is the best report seen to date on the soybean industry in Brazil. Contents: Preface. Indexes of tables and figures. Introduction. 1. World food demand. 2. Fats, oil & meals. 3. Brazilian production. 4. Comparative cost of production. 5. Development of agricultural inputs and infrastructure. 6. Brazilian commercialization of soybeans and its products. 7. Government's role in the Brazilian soybean system. 8. Brazilian soybean supply-demand model. Summary & Conclusions. Appendices: Conversion rates, Glossary of Brazilian organizations. Bibliography.

Tables: (1) Change in world population growth. (2) World population, 2000: Less developed regions, developed regions, total–for high, medium, and low projections. (3) Where population is growing fastest (percentage growth from 1950 to 1970): Latin America 75% (doubling time 22 years), Africa 59%, Asia 52% (DT 24 years), Oceania 46%, North America 37%, Russia 35%, Europe 18%. (4) Percent of world population by regions: In 1973 developing world has 75% of total, developed world has 25%. In 2000 those figures are expected to change to 80% and 20%. (5) Per capita demand for related commodity groups by areas worldwide (kg per year): (6) Net demand for fats and oils by region: 1970, 1985, 2000. (7) Index of world net food demand by commodity: 1970, 1985, and 2000. (8) Index numbers of total and per caput food production. (9) Joint product derivation for 8 oilseeds (average percentage weight of oil and meal; soybean is 80 to 18). (10) World production of fats & oils, market shares for edible vegetable oil, palm oils, industrial oils, animal fats, marine oils (1965, 1970, 1975). (11) Gross fats & oil exports, for 13 oils and fats, annually from 1971/72 to 1974/75, with projections to 1980/81 at which time–#1 Palm oil 3.1 million metric tons (mmt). #2. Soybean oil 1.02 mmt. Sunflower oil 1.00 mmt. Butter 0.75 mmt. (12) World production of fats & oils, for 14 oils and fats. (13) Exports of fats & oils (vegetable & animal), Malaysia and Brazil. (14) U.S.A. food oils and fats domestic use, 1960, 1974, & 1985 projections. In 1960 the diet was 58% vegetable fats and 42% animal fats. In 1985 the projected diet was 90% vegetable fats and 10% animal fats. (15) Soybean yields for selected regions (1971-75): World average, USA, Brazil, China. (16) World cropland area by commodity, 1970. All cereals have 73.5% of the total, vs. 10.8% for oilseeds and 6.3% for pulses and nuts. (17) World soybean production (1970/71 to 1975/76): USA, Brazil, China, Others. "The U.S. embargo in 1973 gave Brazilian exports a boost as importing countries placed greater emphasis on double sourcing." (18) Cottonseed oil production and export for U.S. and world, 1970-1975. (19) Sunflower seed oil production, 1970-1975. (20) Palm oil: Production and exports in major producer-exporter countries

and the world annual 1965-75 with projections for 1976, 1980 and 1985. Countries are West Malaysia, Sabah (a Malaysian state located on the northeast tip of the island of Borneo), Indonesia, Ivory Coast, Zaire. (21) Value of four oil crops per hectare for selected countries. Crops: Oil palms, soybeans, sunflower, peanuts. Countries: West Malaysia, USA, USSR, Nigeria. Oil palms have by far the greatest oil yield and value per hectare. (22) Palm oil: Production in specified countries (Western hemisphere 3.5%, Africa 39.1%, Asia 57.4%): Forecast for 1975 and percentages. (23) Palm oil–local consumption vs. exports (1974): For West Malaysia (exports 96% of production), East Malaysia (92%), Indonesia (92%), Ivory Coast (60%), Zaire, Western Hemisphere. (24) Palm kernel oil–production and exports 1971-75. (25) Coconut oil: Production & export. (26) Lard production & export: Selected years. (27) Lard rendered per hog: USA. Yield of lard per hog in USA decreased from 13 kg in 1963 to 6.7 kg in 1974–as demand for lard decreased. (28) World meal production and gross exports by commodity: Selected years 1955, 1967, 1974. Soybean meal is always the leader by far, with cottonseed meal 2nd. (29) Present and projected world consumption of animal products: Poultry, pork, and beef. Poultry and hogs are the main consumers of soybean meal. Cattle consume mostly pasture and grass–as nature designed. (30) Protein meal: World production exports, share of market by commodity, 1955, 1970/71, 1974/75. Soybean meal is by far the leader, followed by cottonseed meal. A U.S. moratorium on soybean exports in 1973 and 1975 enabled Brazil to enter major markets as a source of dependable supply. (31) Soybean meal and seed, production and exports (U.S., Brazil, and world) (meal equivalents). (32) Peruvian fishmeal, production and exports. (33) Peruvian fishmeal exports, soybean equivalents. (34) Brazilian production by states. (35) Changes in acreage planted. (36) Land area of Rio Grande do Sul. (37) Parana production by regions. (38) Cultivated land in Sao Paulo. (39) Land area of central-west states. (40) Weighted average comparison of costs of production. (41) Comparison of fertilizer and lime costs (Brazil and the U.S.). (42) Comparison of machinery cost. (43) Brazilian labor rates. (44) Comparison of regional costs of production. (45) Seed soybean variety usage by state. (46) Fertilizer demand. (47) National fertilizer program. (48) Chemical demand. (49) Land costs by state. (50) 1974 storage capacity by states. (51) Comparison of transportation systems. (52) Capacities at main ports. (53) Comparison of average export profits. (54) 1975 crushing capacity by state. (55) Major crushing firms. (56) Exports. (57) Major importers of Brazilian soybeans and soybean products. (58) Exporter percentages of soybeans. (59) Brazilian ICM tax rates, Jan. 1, 1976. (60) Historical supply-demand relationships. (61) Projection of supply-demand relationships.

Figures: (1) World population growth (in millions) 1900-2000. (2) Soybeans and their products. (3) Relationship between beans and end products. (4) European Community: Apparent consumption of fats and oils, 1965-1975. (5) Oilseeds. (6) Price comparison, coconut, palm, and soybean oil, average monthly cash prices. (7) Per capita consumption of poultry meat. (8) Peruvian anchovy catch, 1960-1975. (9) Map of Brazil. (10) Comparison of average prices for wheat and soybeans at the farm level. (11) Comparison of wheat-soybean acreage. (12) Index changes of soybean production, acreage, and yields. (13) Map of Rio Grande do Sul. (14) Map of Parana. (15) Map of Sao Paulo. (16) Map of Santa Catarina. (17) Map of Central-west states. (18) Comparison of rainfall during growing season. (19) Industry structure. (20) Map of climatic conditions. (21) Map of soil conditions. (22) Brazilian railroad systems. (23) Export corridors program. (24) Comparison of Brazilians–U.S. prices at he farm. (25) Map of crushing facilities. (26) Per capita Brazilian vegetable oil demand. (27) Per capita Brazilian meat consumption. (28) Brazil's major agricultural exports. (29) Comparison of market share in exports of soybeans. (30) Schematic supply-demand relationships. (31) 1976 planting estimates (Based on wheat & soybean prices). Address: Harvard Business School, Cambridge, Massachusetts.

2850. Smartt, J. 1976. Tropical pulses. London: Longman. 348 p. Index. [275* ref]
• ***Summary:*** In the chapter on "Pulses in human nutrition," soya beans are mentioned (p. 92-95) under: Germinated seed. Fermented products: Soy sauce, soya bean paste, tempé, natto and Hamanatto. Extracted pulse proteins: Soya bean curd ('tofu'), soya bean 'milk.' Address: PhD, Senior lecturer in Biology, Univ. of Southampton.

2851. Tannenbaum, Steven R. 1976. Production and use of protein concentrates. In: N.S. Scrimshaw and M. Behar, eds. 1976. Nutrition and Agricultural Development: Significance and Potential for the Tropics. New York and London: Plenum Press. xxiv + 500 p. See p. 473-86. Chap. 40. With comments by A.D. Odell. Proceedings of the 14th International Biological Symposium, held 2-6 Dec. 1974 at Guatemala City, Guatemala. [12 ref]
• ***Summary:*** Contents: Introduction. Oilseeds: Soybeans, other oilseeds. Marine protein concentrates. Single-cell protein. Use of protein concentrates in food products. Conclusions. References. Comment by Arthur D. Odell of Industrial Grain Products, Montreal, Canada: Vegetable proteins. Marine protein concentrates. Single-cell proteins. Address: Dep. of Nutrition & Food Science, MIT, Cambridge, Massachusetts.

2852. Wang, H.L.; Mustakas, G.C.; Wolf, W.J.; Wang, L.C.; Hesseltine, C.W.; Bagley, E.B. 1976. An inventory of

information on the utilization of unprocessed and simply processed soybeans as human food. Peoria, Illinois: USDA Northern Regional Research Center, Interdepartmental Report. AID AG/TAB-225-12-76. 197 p. AID contract report. Undated. No index. 27 cm. Spiral bound. [65 ref]

• ***Summary:*** Contents: Introduction. Home and village traditional soybean foods by country. 1. Soybean food uses and production in Asia. Soaking dry soybeans. In China: Tou chiang (soybean milk; preparation, ways of serving), tou fu (soybean curd; yen-lu is the Chinese name for nigari), tou fu nao (soft curd), tou fu kan (dry / firm bean curd), chien chang (pressed tofu sheets), yu tou fu (fried tou fu), tung tou fu (frozen tou fu), tou fu pi (protein-lipid film; yuba), huang tou ya (yellow bean sprout or soybean sprout), mao tou (hairy bean, green soybean, or immature soybean), dry soybeans (roasting and frying, stewing and boiling), roasted soybean flour. Fermented soybean foods. Production and consumption of soybeans (China and Taiwan).

Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products (aburage or age, nama-age and ganmo), kori tofu (dried-frozen tofu), yaki tofu (grill tofu), yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), edamame (green vegetable soybeans), whole soybeans, kinako. Fermented soybean foods: Production and consumption.

Korea: Tubu (soybean curd), soybean sprouts, whole soybeans (green soybeans, parched or roasted soybeans, boiled soybeans), soybean flour ("Soybeans are first roasted and then ground to a flour. The flour is extensively used as an ingredient in various food preparations." Note: This is the earliest document seen (Nov. 2012) that mentions roasted whole soy flour in Korea–however no Korean name of this roasted soybean flour is given), soysauce, bean paste [Korean soybean miso], natto (no Korean name is given), production and consumption of soybeans.

Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap or soysauce, tauco or bean paste [miso]), food mixtures (Saridele, Tempe-fish-rice or TFR, Soy-rice baby food, soybean residue [okara]-fish-rice), production and consumption of soybeans.

To make bubuk kedele (p. 58): "Soybeans of the white variety are roasted until no beany flavor can be detected. They are ground into a powder and mixed with such spices as garlic and chili. Bubuk kedele is kept in a jar and served on special occasions with a rice product, longtong (rice wrapped in banana leaves and boiled for 3 to 4 hours). Bubuk kedele is always homemade and is eaten by everyone" (Source: I. Gandjar 1976, personal communication).

Note 1. This is the earliest English-language document seen (Nov. 2012) that uses the word *bubuk* or the term *bubuk kedele* to refer to Indonesian roasted soy flour.

Thailand. Philippines: Soybean sprouts, soybean coffee, soybean cake (made from equal amounts of soybean flour and wheat flour), soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. West Asia [Middle East; Iran and Turkey]. References–Soybean food uses in Asia.

2. Soybean food uses and production in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References–Soybean food uses in Africa.

3. Soybean food uses and production in Europe [both Eastern and Western]. 4. Soybean food uses and production in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela (fried arepas with textured soy). Mexico: New village process, commercial developments of soy-based food products, Gilford Harrison, Ruth Orellana, Seguras Social. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References–Soybean food uses in Latin America.

5. Soybean food uses and production in North America. United States: Oriental populations, vegetarian communes, The Farm in Tennessee. Canada. References–Soybean food uses in North America. 6. Soybean food uses in Oceania. Australia. New Zealand. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprouts, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soysauce, fermented soybean paste, fermented whole soybeans [Toushih, hamanatto], natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Recent simple soybean processes, other than traditional. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. Foods from whole soybeans developed at the University of Illinois (drum dried flakes, canned and homecooked soybeans, soy beverages and beverage products, spreads, snacks).

Ways of cooking and serving soybeans in the American diet. 9. Industrial processes. Industrial production and selling prices of edible soybean protein products. 10. Barriers to acceptability and utilization of soybeans in food and research recommendations: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Research recommendations [concerning each of the above barriers].

Concerning Morocco: Cereal-soy blends have been

used extensively in Morocco; in fiscal year 1974 some 14.7 million lb were shipped to Morocco. Mmbaga (1975) reported that soy flour is being used in making porridge, with 1 part soy flour to 3 parts maize / corn flour.

Tables show: (1) Soybean production and imports in Taiwan, 1962-1975 (tonnes = metric tons, p. 33). Production rose from a 53,000 tonnes in 1962 to a peak of 75,200 tonnes in 1967, then fell to 61,900 tonnes in 1975. Imports skyrocketed from 62,400 tonnes in 1962 to a record 827,300 tonnes in 1975. (2) Consumption of soybean foods in Taiwan, 1964-1974 (kg/capita/year, p. 34). Total soybean foods not including tofu rose from 1.08 kg in 1964 to a peak of 2.61 kg in 1972 then fell to 1.99 kg in 1974. Consumption of tofu (80% water) rose from 18.75 kg in 1964 to a peak of 33.89 kg in 1972, then fell to 32.04 kg in 1974. (3) Supply and disposition of soybeans in Japan, 1971-1974 (p. 49). Total supply is beginning stocks, plus domestic production, and imports. Total disposition is crushing, plus traditional foods and feed. In 1974 imports accounted for 87.5% of the supply, and crushing accounted for 71.0% of the disposition. (4) Whole soybeans used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 50). Tofu and others rose from 508,000 in 1970 to 539,000 in 1974. Miso rose from 177,000 in 1970 to 192,000 in 1974. Shoyu rose from 13,000 in 1970 to 14,000 in 1974. (5) Defatted soybean meal used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 51). Shoyu rose from 163,000 in 1970 to 176,000 in 1974. Tofu and others was constant at 130,000 from 1971 to 1973. Miso decreased from 4,000 in 1970 to 2,000 in 1974. (6) Production of traditional soybean foods in Japan, 1970-74 (tonnes / metric tons, p. 52). Tofu and others rose from 1,867,800 in 1970 to 2,264,900 in 1973. Shoyu rose from 1,334,1000 in 1970 to 1,455,800 in 1974. Miso rose from 552,200 in 1970 to 587,200 in 1974. (7) Production and food use of beans [various types] and consumption of some soybean products in Korea, 1964-1967 (p. 56-57). In 1967 consumption (in tonnes / metric tons) was: Bean curd 290,000. Bean sprouts 270,000. Bean sauce 69,700. Bean paste 27,700. Total: 11.6 kg per capita per year. (8) Soybean production in Indonesia, 1960-1974 (p. 65). It rose from 442,862 tons in 1960 to 550,000 tons in 1974. (9) Consumption of soybeans in various parts of Indonesia in 1970 (p. 66). (10) Production of soybean foods in the province of Central Java, 1968-1972 (tons, p. 67). Kecap rose from 914,695 in 1968 to 1,524,000 in 1972. Tahu decreased from 18,570 in 1978 to 17,000 in 1972. Tempe rose from 506 in 1968 to 39,000 in 1972. (11) Area planted to soybeans and total soybean production in Thailand, 1964-1974 (p. 70). Area rose from 213,000 rais (6.25 rais = 1 ha) in 1964 to 1,016,000 rais in 1974. Production (in metric tons) rose from 31,300 in 1964 to 252,400 in 1974. (12) Utilization of soybeans by soybean-consuming countries, 1964-66 (based on FAO 1971 Food Balance Sheets, 1964-66 average, p. 150). The countries leading in per capita consumption (kg/person/year) are: China (PRC) 6.7. Japan 5.1. Korea(s) 5.0. Singapore 4.3. Indonesia 2.8. Malaysia 2.6. Taiwan (ROC) 1.1. (13) Amounts of cereal-soy blends distributed under Title II, Public Law 480 in fiscal year 1974 (p. 152-155). (14) U.S. exports of full-fat soy flour, 1974-75 (p. 156). Address: Northern Regional Research Center, Agricultural Research Service, Department of Agriculture, Peoria, Illinois 61604.

2853. Wei, L.S. 1976. Soybean food utilization research at University of Illinois. Paper presented to Chinese Modern Engineering and Technology Seminar, Taiwan. 20 p. 28 cm.
• ***Summary:*** Contents: Introduction. Development of canned soybean foods and fresh cooked foods. Weaning foods. Gruel. Beverages. Soft spreads (analog to peanut butter and analog to diet margarine). Frozen desserts. Snack foods ("oil roasted soy nuts and a puffed snack"). Effect of inactivation of lipoxygenase in the whole soybean on the extracted oil and meal quality. Flow sheets (p. 12-20). Address: Univ. of Illinois.

2854. Wei, L.S.; Nelson, A.I.; Steinberg, M.P. 1976. Dairy analogs from Illinois soybean beverage base. In: L.D. Hill, ed. 1976. World Soybean Research [Conference I: Proceedings]. Danville, Illinois: Interstate Printers and Publishers, Inc. xvii + 1073 p. See p. 850-60. [5 ref]
• ***Summary:*** Includes a section titled "Ice Cream Analog Preparation (Frozen Desserts)," with one formula. Contents: Introduction. Soybean beverage base preparation. Milk analog preparation. Yogurt analog preparation (fermented). Ice cream analog preparation (frozen desserts). Diet margarine analog preparation. Flavored dip preparation. Soy-whey beverage. References.

To make the yogurt analog: Make soybean beverage base with dehulled soybeans. Mix 3 parts Base with 1 part water. Neutralize to pH 7.0 with 6 N HCl (hydrochloric acid). Add sugars for fermentation: 1.25% lactose, 2.0% sucrose, and 2.0% dextrose hydrate. Heat to 180ºF. Homogenize at 3,500 psi (first stage) and 500 psi (second stage). Cool to 104ºF. Add 3% inoculum (mixed culture of *Lactobacillus bulgaricus* and *Streptococcus thermophilus*) as used by dairies. Incubate at 104ºF until pH drops to 4.3-4.4 (about 4.5 hours). Cool to about 60ºF in ice water bath and store at 34ºF overnight. Flavor with 25% by weight of yogurt fruit preserves. Package and store at 34ºF.

Note 1. This is the earliest English-language document seen (Aug. 2013) that uses the term "milk analog" to refer to soymilk.

Note 2. This is the earliest English-language document seen (Sept. 2012) that uses the term "Yogurt analog" (or "yogurt analogue") to refer to soy yogurt. Address: Dep. of Food Science, Univ. of Illinois, Urbana-Champaign.

2855. Winarno, F.G.; Hardjo, S.; Rumawas, F. 1976. The present status of soybean in Indonesia. Bogor, Indonesia:

FATEMETA, Bogor Agriculture University. xxiii + 128 p. 29 cm. [7 ref]

• ***Summary:*** The best and most comprehensive survey up to this time on the subject, it was done as part of the 1974 Industrial Census of the Central Bureau of Statistics. Full of valuable statistics and tables. Contents. Preface. Summary. List of tables. List of figures. I. Introduction. II. Objectives and survey methods: A. Objectives. B. Survey methods. III. Cultivation, product handling and protection: A. Botany of the soybean. B. Varieties. C. Growth requirements. D. Agronomy of soybean. E. Crop Management. F. Harvesting and product handling.

IV. Production: A. Harvested acreage, production and average soybean yield in Indonesia. B. Center production areas. C. Harvested acreage of soybean versus other food crops. D. Factors affecting soybean production. V. Farm management and soybean marketing in Indonesia: A. Farm management. B. Marketing of soybean.

VI. Soybean utilization (p. 52): A. Soybean products: Introduction, yuba, sere (from Bali: cooked whole soybeans, mixed with onions, hot pepper, turmeric, salt, and coconut presscake; molded into patties, sun dried, then deep fried), soybean milk, tofu (coagulated with *biang* or *sioko* {calcium sulphate}), soybean sprouts (*tauge*), soybean powder (soybeans that have been cooked, dried, dehulled, and pounded), soybean mixtures, kecap (Indonesian soy sauce), oncom (fermented soybean product, red or black), tauco (Indonesian-style miso), tempe. B. Soybean utilization: Utilization by farmer (in each of 6 provinces and total), utilization by processor (tempe, tofu, kecap, miscellaneous), census conducted by Central Bureau of Statistics, conversion factor for soybean products. C. Consumption of soybean and its processed products (by province). D. Other components. Appendixes.

Tables in body of text: (1) Brief description of recommended soybean varieties. (2-3). Insecticides used against Agromyza and *Phaedonia inclusa.* (4) Soybean harvest seasons in Indonesia (major harvest months, by province). (5-8) Harvested acreage, production, and average soybean yield during 1950-73, 1960-74, and in Java-Madura (1967-71, 1972, 1973, and 1974). (9) Soybean acreage in Java-Madura. (10) Major production areas in Java-Madura, and average 5-year yield, 1965-69. (11) Harvested acreage of soybeans vs. other crops in Java-Madura, 1971-72. (12) Production cost and value per hectare of soybeans. (13) Major trading and harvest months. (14-15) Percentage of farmer's share and marketing cost of the trade price in various provinces. (16) Percentage of farmer's share of the trade price. (17) Soybean utilization by farmers, 1975-76. (18-21) Production/consumption of tempeh, tofu, kecap, tauco, tauge, yuba, and sere.

(22-29) Raw material utilized by small-scale processors and by soybean home industries in Java and Jakarta. (30-31) Value of raw material and end products of small-scale industries over 3- and 12-month periods. (32) Conversion factor of soybean products to raw material. (33-36) Average daily consumption per capita of soybean and its processed products at villages in Lampung, Yogyakarta, East and West Java, and in 4 other provinces.

Concerning sprouts (*tauge*) in Indonesia (p. 67, 69): Tauge can be prepared from either soybean or mungbean. The average amount of soybean processed into tauge is about 8 qt [=quintal; 1 quintal = 100 kg = 220.46 lb] per year per processor. The average number of employees is 1 per processor with 30 workdays per month. The entire product is for sale.

Table 33 (p. 84), "Average daily consumption per capita of soybean and its processed products at several villages in Lampung (a province of Indonesia located on the southern tip of the island of Sumatra) is: Tempe 18.33 gm. Soy sprouts 6.51 gm. Tofu 3.36 gm. Oncom 2.34 gm. Soybean 0.29 gm. Okara tempeh 0.25 gm. Okara 0.03 gm.

Table 34 (p. 85), "Average daily consumption per capita of soybean and its processed products at several villages in Yogyakarta and East Java is: Tempe 20.08 / 4.63 gm. Soy sprouts 1.57 / 3.05 gm. Tofu 1.83 / 4.24 gm. Okara tempe 0.53 / NL gm. Soybean 0.35 / 1.07 gm. Okara tempeh 0.25 gm. Okara 0.03 gm.

Table 36 (p. 87), "Average daily consumption per capita of soybean and its processed products of sample family farmers in 4 provinces.

Tempe consumption is highest in Yogyakarta (20.08 gm) followed by Lampung (18.33), Tulungagung (4.63) and West Java (4.42).

Tofu consumption is highest in Tulungagung (4.42 gm) followed by Lampung (3.36), Yogyakarta (1.83) and West Java (0.78).

Soybean sprout consumption is highest in Lampung (6.51 gm) followed by Tulungagung (3.05) and Yogyakarta (1.57); no value is given for West Java.

Oncom [ontjom] consumption is highest in Lampung (2.34 gm) followed by West Java (0.69). Address: FATEMETA, Bogor Agricultural Univ., Indonesia.

2856. Yee, Vivien Chee-Nan Yeo. 1976. New products from soybeans. Meat extender, alcoholic beverage and protein rich flour. PhD thesis, Cornell University, Ithaca, New York. 92 p. Page 5596 in volume 37/11-B of Dissertation Abstracts International. [50+ ref]*

• ***Summary:*** The new products include two types of soy wines; one was made from soymilk and one from the whey left over after making tofu. Some 25% (w/v, weight-to-volume) of sucrose was added to the soymilk or tofu whey and the liquid was fermented anaerobically with a wine yeast, until the alcohol concentration reached 12% v/v or higher. With soymilk, the proteins precipitated out and had to be removed. Otherwise clarification and aging were the same as for any wine; the finished products were similar to sake.

Address: Cornell Univ., Ithaca, New York.

2857. Dugan, George. 1977. Dr. Harry W. Miller, 'China Doctor,' dies: Surgeon, 97, served as physician to Chou [En-lai] and Madame Chiang [Kai-shek]–a pioneer in nutrition. *New York Times.* Jan. 9. p. 36.
• ***Summary:*** Dr. Miller died on 1 Jan. 1977 in Riverside, California, at age 97 of a heart attack. A Seventh-day Adventist, he "developed a process for making soybean milk to feed poorly nourished Chinese children in areas where cows milk was unavailable."

In an interview 3 years ago at his clinic in Hong Kong, he "predicted that the world could become a vegetarian society by the end of this century." By then, he hoped people would realize that raising beef cattle requires the use of too much land and fodder. In recent years his main interests have been raising money for Adventist hospitals in Hong Kong and other parts of Asia, and helping people to switch from eating meat to a vegetarian diet.

He is survived by his wife, the former Mary Greer, and 4 children by a previous marriage. A portrait photo shows Dr. Harry Willis Miller.

2858. **Product Name:** [Soyafiltrate (Soymilk)].
Foreign Name: Sojatrank, Sojadrank, Filtraat van Soja, Filtrat de Soya, Filtrat von Soja.
Manufacturer's Name: Jonathan.
Manufacturer's Address: Holleweg 89, 2070 Ekeren (near Antwerp), Belgium. Phone: 03-664 58 48.
Date of Introduction: 1977. January.
Ingredients: Water, soya*. * = Organically grown.
Wt/Vol., Packaging, Price: 0.5 liter glass bottle.
Nutrition: Proteins 3.6 gm, fats 2.5 gm, carbohydrates 2.0 gm, minerals 0.3 gm, 45 calories (Kcal) per 100 gm.
New Product–Documentation: Soya Bluebook. 1986. p. 102. Label. Received 1988. 8.5 by 2.75 inches. Glossy paper. Orange and black on a pastoral background with sea gull and duckling. "Pure vegetable."

Form filled out by Jos van de Ponseele. 1989. Jan. 11. This product was introduced in Jan. 1977.

Note: This is the earliest known commercial soy product made by Jonathan in Belgium.

2859. Kagawa, Ryo. 1977. Shokuhin seibunhyô [Food composition tables for Japan]. Tokyo: Joshi Eiyo Daigaku Shuppan-bu. 145 p. Jan. 15 x 22 cm. [Jap]
• ***Summary:*** For tables of information on soybeans and soyfoods, see p. 21-22. Includes Kinako, soymilk, regular tofu, kinugoshi tofu, fukuro-iri tofu, yaki-dofu, abura-age, namaage, ganmodoki, kori-dofu, yuba, okara, natto, hamanatto, miso, red miso, light yellow salty miso, red salty miso, soybean miso, powdered miso. Address: Japan.

2860. **Product Name:** Laughing Grasshopper Tofu, and Soymilk.
Manufacturer's Name: Laughing Grasshopper Tofu Shop.
Manufacturer's Address: 3 Main St., Millers Falls, MA 01349.
Date of Introduction: 1977. January.
New Product–Documentation: Shurtleff & Aoyagi. 1976. Nov. 4. Visited on Tofu & Miso America Tour. Just prior to opening. Leviton, Leviton, and Timmins. 1977. Laughing Grasshopper Tofu Shop. Describes production of the tofu and soymilk. Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies. The first batch of tofu was produced on 12 Jan. 1977. The company was founded by Richard and Kathy Leviton. Tom Timmins joined the partnership in Feb. 1977, and Michael Cohen joined as the fourth partner later that year. But Michael soon left to start his own tempeh manufacturing company, The Tempeh Works.

Poster. 14 by 18 inches. Reprinted in Soyfoods Marketing: Lafayette, CA: Soyfoods Center. "Laughing Grasshopper Tofu. Hand Made–in the Traditional manner from Organically Grown Soybeans and Nigari."

2861. Organically-grown soybeans start to be used by many companies in the United States and Europe to make commercial soyfoods (Important event). 1977. Jan.
• ***Summary:*** Here is a list of the pioneers, their companies

and their products–all introduced during 1977.

Jan. Southwest Tofu Co., Santa Fe, New Mexico (Tofu, Kathryn O. Bennett).

Jan. Jonathan, Ekren (near Antwerp) Belgium (Soymilk, Jos van de Ponseele).

Jan. The Soy Plant, Ann Arbor, Michigan (Tofu, Steve Fiering; July, Soymilk).

March. Surata Soyfoods, Eugene, Oregon (Nigari Tofu, Benjamin Hills).

June. Bhaga Tofu (renamed Lecanto Tofu Shop), Lecanto, Florida (Tofu, Marvel Huffman).

Sept. Quong Hop & Co., South San Francisco, California. (Tofu Dressing, Jim Miller & Stanley Lee).

Sept. White Wave, Boulder, Colorado. (Tofu, Steve Demos).

Nov. Redwood Natural Foods, Santa Rosa, California (Organic Tofu, Greg Hartman).

Sometime in 1977. Swan Foods, Miami, Florida. (Tofu Chip Dip, Tofu Baked with Tamari, Tofu (Marinated), Mary's Roasted Cashew Tofu Cheesecake, Mary's Tofu Rice Salad, Soy Melk, Tofu: Organic (Soybean Curd), Mary's Rice Pudding, Robert Pung & Mary Brooks).

2862. *Canadian Adventist Messenger.* 1977. Ten Talents cookbook not recommended. Feb. 1. p. 4.

• ***Summary:*** "The cookbook *A Good Cook, Ten Talents* has been placed on the not recommended book list by the General Conference Health Department. A review by dietitians, pharmacists and physicians has found the nutritional and medical information contained in the book to be generally unsound and in several instances actually dangerous.

"Persons using this cookbook are advised to view with caution any nutritional statements or medical advice which it contains. Especially dangerous are the recommendations regarding formulas and foods for infants and small children, certain herbal remedies (some of which are poisonous), the listing of several plant foods as 'valuable' sources of Vitamin B-12 or Vitamin D, and the recommendation that apricot kernels be added to soy milk to improve the flavor (apricot kernels are poisonous).

"For further information, please contact: Ella Mae Stoneburner, R.N., M.S., Associate Director, Dept. of Health, General Conf. of Seventh-Day Adventists, 6840 Eastern Ave., N.W., Washington, DC 20012."

2863. *SoyaScan Notes.* 1977. The origin and early history of Bean Machines (California) and Takai Tofu & Soymilk Equipment Co. (Japan) (Overview). Feb. 9. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1977 Feb. 3–William Shurtleff and Akiko Aoyagi return home to 790 Los Palos Dr., Lafayette, California. Their four-month, 15,000-mile Tofu & Miso America USA tour ends. This was a huge, exciting, exhausting odyssey, that bore abundant fruit in the founding of new tofu shops almost everywhere they spoke.

Feb. 9–Meeting at 790 Los Palos Dr. in Lafayette with The Farm folks and Larry Needleman leads to establishment of Bean Machines Inc. (BMI), with Larry Needleman as owner and president. The Farm (Robert Dolgin and David Sandler, Farm Foods, 820 "B" St., San Rafael, California 94901) place a firm order for a Japanese (Takai) tofu system.

Feb. 12–Shurtleff and Aoyagi leave the USA and fly to Japan, arriving at Haneda Airport on Feb. 13. Shurtleff's main focus is to find a Japanese manufacturer of tofu and soymilk equipment that would like to develop an English-language illustrated catalog and establish a program for selling its equipment (plus other traditional small-scale equipment, made by other companies, that new American tofu makers may wish to order). From the American Soybean Association in Tokyo, Shurtleff learns about Takai Seisakusho, a tofu equipment manufacturer with long history (founded in 1917) and good reputation, located in Kanazawa, Japan.

March 28–Using a plain, typed form, Farm Foods (Dolgin and Sandler) order 16 pieces of tofu and soymilk equipment at a cost of $4,168. On the form is typed: "Please mail all orders prepaid to: Bean Machines, Inc., P.O. Box 829, Corte Madera, CA 94925."

March 30–Mary Pung, co-owner of Swan Foods, 8850 S.W. 116th St., Miami, Florida 33176 orders 8 pieces of tofu equipment for $4,973. Needleman forwards these two orders to Shurtleff in Japan.

1977 March 31. Larry Needleman applies for a Fictitious Name Statement for Bean Machines Inc. with the County of Marin. Larry and Bill Shurtleff are given as the owners

April 5–During two days of discussions and negotiations with Wataru Takai, son of the owner and young Director of the Overseas Department, who speaks good English, Shurtleff and Mr. Takai establish Takai Tofu & Soymilk Equipment Company and draft a long-term contract. Shurtleff stays two nights at the home of Wataru Takai and his wife.

June 5–The contract drafted on April 5 is finally signed by both Shurtleff and Takai. At the top of the document is Takai's new logo, designed by Akiko. It shows a lever, with a soybean as the fulcrum, moving the world.

June–Akiko soon gets more involved in designing Takai's first English-language catalog and letterhead, and Shurtleff works with Takai in giving accurate descriptions of each piece of equipment and each whole system.

July 19–Shurtleff and Aoyagi leave Japan (from Haneda) and fly to America (California).

1977 Aug. 16–The first English-language Takai Catalog arrives at our Center. This catalog was printed with green and black ink on glossy white paper.

1977 Oct. 14–Shurtleff signs Bean Machines, Inc. (BMI)

contract with Larry Needleman. He comes for dinner with a friend.

Oct. 19–Mr. Takai writes William Shurtleff a typewritten letter on the new Takai letterhead about 5-6 issues that he would like to see resolved as soon as possible. He wants to learn more about Underwriters Laboratories and their safety standards in the USA.

Oct. 30–Larry Needleman sends out the first BMI packets to existing tofu makers and potential customers.

Dec. 21–Mr. Takai writes Larry Needleman (at Bean Machines Inc., P.O. Box 881, San Rafael, CA 94901) a typewritten letter on the new Takai letterhead about equipment prices landed in San Francisco or Boston without BMI commissions.

1978 March 31–Mr. Takai sends Larry Needleman a 4-page typed letter which includes a new price list including 3% insurance.

April 4–Mr. Takai writes Larry Needleman (P.O. Box 76, Bodega, CA 94922): "Thank you for your orders. We shall send you Pro-Forma Invoice. Please open your L/C [Letter of Credit]. Shipment within one month after receipt of L/C."

1978 May 1–Bean Machines issues its typewritten (on yellow letterhead) Price List #2 covering 44 different pieces of equipment. "Whole system prices are not yet complete." The rear is devoted to "Ordering information and terms of sale." At about the same time, BMI sends out its first "Order form"–on white letterhead.

1978 May–Shurtleff and Aoyagi visit Wataru Takai's home in Kanazawa, Japan, to work on his tofu & soymilk equipment catalog.

1978 July 16–Wataru Takai arrives in the USA in preparation for the 1st Soycrafter's Conference in Ann Arbor, Michigan and to supervise the installation of a Takai system at Tokyo Food Co. in San Mateo.

July 26–The first Takai catalog of small and medium scale tofu equipment (printed with dark brown ink on glossy white paper) arrives in the USA.

At the historic Soycrafter's Conference. Larry Needleman is elected executive director. After the conference, Mr. Takai, with Needleman and Shurtleff, travel (July 30-Aug. 9), around the eastern United States visiting tofu companies.

1978 Nov. 7–Larry Needleman sends Wataru Takai a 4-page "Takai / BMI Contract" for his consideration and eventual signature.

1979 Feb. 14. Takai catalog of large scale tofu and soymilk equipment arrives. Printed with dark green ink on glossy white paper.

1979 May–BMI issues its Price List #5 for Takai Catalog of Small and Medium-sized Equipment.

1979 Sept. 16–Larry Needleman sends Wataru Takai a 2-page, typed, single spaced "Chronological list of Takai problems." The first of the 14 problems was "Nov. 1978–L/C expired because Takai didn't ship quickly enough. BMI extended the L/C but it expired again because of delay in Takai shipping."

1980 Jan. 19–New Takai small scale equipment catalog; 1,500 to USA, 500 to Japan.

1980 Feb. 27–Larry Needleman writes Shurtleff that he owes Shurtleff a total of $496.98 in 1979 commissions. "As far as payment of these commissions and repayment of the principal of your $3,500 loan to BMI, it is our intention to pay NAFSC both of these as quickly as possible."

1980 July 23–Larry Needleman says BMI will stop being Takai's agent.

1980 Aug. 22–Shurtleff writes Takai and encloses a letter from Bean Machines Inc. in which Larry Needleman explains that he is no longer an agent for Takai. "He has found it almost impossible to communicate with you and has finally decided to give up trying."

1980 Sept 18–Takai sells a tofu production plant to Heilongjiang Province Foreign Trade Import Company, Harbin, China. Takai will send 2-3 engineers for installation.

1981 May 17–Mr. Takai writes Richard Leviton that he would definitely like to display his Sub-System S30C at the Soyfoods Conference at Fort Collins, Colorado. He encloses $100 for the balance of the payment.

1981 June–Larry Needleman announces that he has developed and is now selling the Bean Machines BMI Model 100 Disintegrator–The "Mini Mite," a stainless steel soybean grinder which can grind 100 pounds of dry soybeans per hour and sells for $1,485.00. Detailed specifications are given along with 3 photos (one full page).

1981 Dec. 19–Mr. Takai writes Shurtleff a handwritten letter from Jakarta, Indonesia on Sari Pacific Jakarta Hotel. He is now getting orders for equipment from KOPTI Indonesia; he has met with Mr. A.R. Noor of Kopti, who plans to travel to the USA in Jan. 1982 and would like to visit and talk with Shurtleff. Takai plans to go to Bangkok and Hong Kong after Jakarta. "We will do good business in South East Asia."

1986 April 27–Larry Needleman sells Bean Machines Inc. (BMI) to Wally Rogers, plus Steve Fiering and Larry Needleman. As part of the deal, Shurtleff sells his interest in the company for about $4,900, plus $1,340 of overdue back commissions.

2864. *Review and Herald.* 1977. Deaths: Harry W. Miller. Feb. 24. p. 23.

• ***Summary:*** This obituary states that Dr. Miller was born on 2 July 1879 in Ludlow Falls, Ohio. He died on 1 Jan. 1977 in Riverside, California. As well as being a famous physician in Asia and the USA, "Dr. Miller was also a pioneer in the field of nutrition. He developed the process of making soybean milk to feed malnourished Chinese children in areas where cow's milk was unavailable."

He graduated from the American Medical Missionary

College [at Battle Creek, Michigan] in 1902. Shortly thereafter he married Maude Thompson and they went together to China, where he was one of the first medical missionaries. Two years after their arrival his new wife died, and in 1907 he returned to the United States. In 1908 he married Marie Iverson; they remained in Washington, DC until 1925. Then they returned to China.

During World War II Dr. Miller was once again in the United States, where he served as medical director of the Mount Vernon Hospital in Ohio. While there he founded the International Nutrition Laboratory, which [produced soymilk and a line of soy-based vegetarian food products and] carried out experiments in vegetarian protein products (now part of the Loma Linda Foods Company). He returned to Shanghai in 1949, but had to be evacuated in 1950 because of the political revolution. His second wife died in late 1950 in Washington, DC. In 1954 [at age 76] he married Mary Greer.

Survivors include his wife, Mary; three children by his second wife, Marie: Maude Anderson, Harry Miller, Jr., and Clarence Miller; and a sister, Alice (Mrs. Harry Morse). A small photo shows Dr. Miller. Address: Field Secretary, Far Eastern Div.

2865. Kay, Theodore; Ogunsola, V.A.; Eka, O.U. 1977. The prevention of beany taste development and the elimination of beany taste in preparing soya bean food in the rural community of Nigeria. *Samaru Agricultural Newsletter* 19(1):11-12. Feb. [2 ref]

• ***Summary:*** These two simple methods are applicable to rural Nigerians. Method 1, for a smaller quantity of soybeans: Soak soybeans in water overnight in water for about 12 hours. Boil plenty of water in a pot. Put the soaked beans in a small basket or sifter. The quantity of beans should not be more than 1/10 of the boiling water. Dip the basket containing the soaked beans into the boiling water, shaking constantly for 15 seconds. Do not dip for more than 30 seconds lest enzymes other than lipoxygenase be inactivated.

Method 2, for a larger quantity. Have ready a thermometer. Put the overnight soaked beans in the cooking pot (about half full) and cover them with fresh water. Heat the water, stirring constantly, to 90ºC. Remove from the fire and drain off the water.

"In Nigeria, since 1973, soya bean has been cooked into traditional foods which used to be prepared from cowpea and cow milk with very similar cooking processes, texture and taste." Address: Inst. for Agricultural Research, Samaru, Ahmadu Bello Univ., PMB 1044, Zaria, Nigeria.

2866. MacNaughton, Nancy; Castro, Roberto. 1977. Procesamiento de soya en Honduras [Soybean processing in Honduras]. Tegucigalpa, Honduras: Secretaria de Recursos Naturales, Dirección de Planificación Sectorial, Departamento de Proyectos. iii + 69 leaves. Feb. Illust. 28 cm. [37 ref. Spa]

• ***Summary:*** Contents: Summary and conclusions. 1. Introduction. 2. Antecedents: Work conducted (in the rest of the world {USA, Dr. Harry Miller in Shanghai}, China, Philippines, Rhodesia, Sierra Leone, Mauritania, Ethiopia, Ruanda, Nigeria, Nepal, Sri Lanka, Brazil, Bolivia & Maisoy, Paraguay, Chile, Ecuador {Meals for Millions}), in Mexico and Central America ({INCAP in Panama, Dr. Steven Youngberg, Guatemala, Belize, Costa Rica, Nicaragua}, in Honduras), the role of soya in human nutrition. 3. The project: Objectives, goals, development of the study (processing of soymilk {in the home, at the level of an organized group, at the semi-industrial level}, processing of other derivatives of soya / soyfoods {Queso de soya / tofu, harina de soya / soy flour, Brady Crop Cooker}, investments required {in the home, at the level of an organized group, at the semi-industrial level}). 4. Conclusions and recommendations: Conclusions. Recommendations. Bibliographic references (leaves 63-65). Appendix: Nutritional aspects of soya.

Figures show: (1) Flow diagram, with equipment, for the production of Vital soymilk. (2-3) Flow chart for the processing of full-fat soy flour by a simple village process. (4) Flow chart for the processing of full-fat soy flour to make soymilk. (5) Flow chart: Traditional process for the production of soymilk. (6) Flow chart: Process for the production of soymilk on the level of organized groups of farmers; INTSOY process. (7) Construction of a sock filter (INTSOY). (8) Flow chart: Process for the production of soymilk using the Unidad Portatil miller. (9) Flow chart: Process for the production of soymilk [with coco] used in the soymilk factory of Stephen Youngberg, in Peña Blanca, Honduras. Note: Dr. Youngberg is a Seventh-day Adventist. (10) Three flow diagrams: Process for the production of whole soy flour in the home–simple, toasted, and blanched. (11) Koehring Brady 206 Crop Cooker; 2-page brochure insert. (12) Koehring Brady Extruder Cooker; 2-page brochure insert.

Tables show: (1) Equipment needed for processing defatted soy flour; capacity 136 kg (300 lbs.) of soy flour in 8 hours of operation. (2) Characteristics and nutritional composition of soy beverage after filtration. (3) Initial investment in equipment used in making soymilk at the factory of Dr. Stephen Youngberg, in Peña Blanca, Honduras. (4) Cost estimates for the production of soymilk as made at the factory of Dr. Stephen Youngberg, in Peña Blanca, Honduras (in Lps. = lempiras). (5) Equipment and costs of the proposed Maisoy project in Honduras.

Page 20: Work with soy in Africa is relatively recent if compared with early recorded work with soy in Asia. Many of the developing African nations recognize the nutritional needs of their population and have started to experiment with the soybean and soy products. Soybean variety trials have been conducted in the Ivory Coast, Rhodesia, Sierra

Leone, and Mauritania. Ethiopia has incorporated soy flour and soybeans into traditional dishes. Ruanda and Nigeria have introduced soybean cultivation technology and local consumption, on account of the severe malnutrition that exists in those countries. Nigeria is producing soybeans for export."

Note: Looking at endnote 5 in this bibliography, which cites the source of this information about soy in Africa, it seems quite clear that the word "Mauritania" was accidentally and incorrectly substituted for the word "Mauritius" in the "Country Reports" (see p. 218 of these Reports).

Page 20: In Honduras. The Ministry of Natural Resources, in cooperation with other organizations, has conducted soybean cultivation / production trials in selected areas in Honduras. In Comayagua, the company named Compañía Mejores Alimentos [Best Foods Company] initiated commercial soybean production within the last few years. Small projects of soybean production and consumption are prospering in communities in the following areas: Sonaguera, Colón; Tela, Atlántida; Buena Fé, Santa Bárbara; Las Animas, El Paraíso; Olanchito, Yoro y Barrancho, Choluteca.

The goal of these projects is to introduce soya as a nutritional supplement in the local diet. These projects are carried out within homemaker's clubs, schools, child dining halls, and various communities, with the support of CARE, CARITAS, The National Board of Social Comfort, like our communities and local agronomics. The largest area for cultivating soybeans is five blocks and the smallest is a quarter block. The majority of these projects can be found in the first stages of experimentation but the participants foresee good results. These small-scale projects are important to note because they consist of cooperative efforts and are self-sufficient. On the other hand, the participants will manage their time and labor, and will be twice as motivated to incorporate soy into their daily menus. Address: Honduras.

2867. Plantmilk Foods. 1977. Which is the substitute? (Ad). *New Vegetarian* (*England*). Feb. p. 21.
• ***Summary:*** A 1/8 page ad. "(1) Cow milk? (meant only for the calf) or (2) Plamil soya plantmilk? (formulated for human nutrition).

"Plamil products available from progressive Health Stores.

"Literature (sae [self addressed envelope] please) from: Plantmilk Foods,..." Address: Plamil House, Bowles Well Gardens, Folkestone, Kent [UK].

2868. Shurtleff, William; Aoyagi, Akiko. 1977. Excerpts from *The Book of Tofu:* Soymilk. *Mother Earth News* No. 43. Jan/Feb. p. 40-42. [1 ref]
• ***Summary:*** Describes how to make soymilk and soymilk yogurt at home, and compares the nutritional value of soymilk with that of cow's milk and mother's milk, each adjusted to contain 88.6% water/moisture. Address: 790 Los Palos Dr., Lafayette, California 94549.

2869. *Soybean Digest.* 1977. Harry Miller dies. Feb. p. 41.
• ***Summary:*** "Harry W. Miller, M.D., died New Year's Day in California. Dr. Miller was renowned for his contributions to the use of soy products in human diets. He became interested in soy nutrition 74 years ago while visiting in China. His studies later led to the establishment of a soy milk dairy in Shanghai in 1937. Later plants were built in Hong Kong, Manila [Philippines], Bangkok [Thailand] and Malaysia.

"Dr. Miller will be missed by his many friends in ASA. He was 97 last July."

2870. Vyhmeister, Irma B.; Register, U.D.; Sonnenberg, Lydia M. 1977. Safe vegetarian diets for children. *Pediatric Clinics of North America* 24(1):203-10. Feb. [24 ref]
• ***Summary:*** A guide for management of vegetarian diets for infants and children. The three main categories of vegetarianism are lacto-vegetarian, lacto-ovo-vegetarian, and "total or strict vegetarian (vegan)." The latter diet, excluding all foods of animal origin, consists only of plant foods. Gives charts of food groups with sources, and sample menus for children of different age groups. "A variety of foods as unprocessed as practical is important when no animal foods are used in a vegetarian diet." Fortified soymilk and soya meat products are mentioned as providing necessary nutrients. Address: 1. Assoc. Prof. of Nutrition; 2. Prof.; 3. Assoc. Prof., All: Dep. of Nutrition, School of Health, Loma Linda Univ., Loma Linda, California.

2871. Brody, Jane E. 1977. Personal health. *New York Times.* March 2. p. 55.
• ***Summary:*** Discusses the basics of a balanced vegetarian diet, including food combinations that increase protein quality using "complimentary plant proteins"–where one supplies the amino acids deficient in the other, and vice versa. Examples include a peanut butter sandwich, and soybeans with sesame seeds. Even on a "strict vegetarian diet," adults rarely have difficulty getting enough protein to maintain good health.

The National Academy of Sciences recommends that vegetarians consume 2 servings a day of "high-protein meat alternatives," such as legumes, nuts, peanut butter, dairy products, eggs, or "meat analogs." A wide variety of such analogs, or "pretend" meats, made from vegetable protein, are now commercially available. Vegetarians who consume no animal products risk a vitamin B-12 deficiency; they can drink "fortified soy milk or take a B-12 supplement to prevent anemia and neurological damage."

• ***Summary:*** The story of how Dr. Miller, San-iku Gakuin, and San-iku Foods pioneered soymilk in Japan. Contains 3 photos of Dr. Miller. Address: Nihon San-iku Gakuin Kôtô Gakkô, Fuku-Kôchô, Japan.

2875. Iso, James. 1977. Southeast Asia–emerging growth market for soybeans. *Foreign Agriculture.* April 11. p. 2-4.
• ***Summary:*** With rising incomes and changing eating habits whetting their appetite for meat and quality protein foods, four nations of Southeast Asia–the Philippines, Thailand, Malaysia, and Singapore–are turning to the world market for more livestock feed ingredients. Brazil–by gearing up its export program–has recently gained a substantial foothold in these markets. And soybeans and soybean products also have come from Asian suppliers like the People's Republic of China (PRC), Indonesia, and even Japan, the latter exporting soybean meal crushed from U.S. soybeans. Philippine imports of soybean meal in recent years have varied between 50,000 and 70,000 tons a year. The Philippines also is a viable market for soy proteins for food, thanks to the presence there of three major U.S. meatpackers. Some 50% of the processed meat produced by these firms has contained soy protein since the product's introduction into the Philippines in 1969. Ground red meat containing 20% soy protein enjoys good consumer acceptance. Owing to the large Chinese population in the Philippines, food soybean consumption already is significant. Although domestic soybeans make up the major supply for traditional foods, such as bean curds [tofu] and soy sauce, some 500-600 tons of these beans must be imported each month.

Thai soybean production has yet to make much headway. Thailand's climatic and soil conditions apparently have not been conducive to expansion, despite attempts by local growers and some Japanese interests to establish a large-scale industry in the highlands. In 1976, the country produced about 155,000 tons of soybeans, of which 20,000 tons were exported and the rest either used domestically for food or crushed. This year, if the Government approves, a multimillion-dollar soy protein plant will be constructed with the possibility of producing 10,000 tons of a soy infant food annually and 2,000 tons of meat analogue. The Institute of Feed Research and Product Development–a private Government-backed research organization affiliated with Kasetsart University–has spearheaded textured soy protein (TSP) and soy flour research. Malaysia is mainly noted for its huge and rapidly growing production of palm oil.

Although its population of 2.25 million is dwarfed by that of the rest of Southeast Asia, Singapore plays a disproportionately large role in the region's trade. This is because it is a major transshipment port for the region–and for Malaysia in particular. Most of the imported soybeans are crushed, although significant volumes of beans also are used in producing traditional soy foods for the large Chinese population. The only major soybean crusher outside of the Philippines is located in Singapore, an operation which the management anticipates will crush 100,000 tons of soybeans in calendar 1977. One firm is using soy proteins in canned foods, soy sauce, soft drinks, combined milk, and other products. Address: Foreign Market Development, Oilseeds and Products, Foreign Agricultural Service.

2876. Loetterle, Fred. 1977. Ton yu to tofu [Soymilk and tofu]. *California Living.* April 17. p. 40, 42, 44.
• ***Summary:*** About making tofu and soymilk at Azumaya. "With the precision of a great orchestra, 35 tofu makers dance through six dawns a week to coax the pre-soaked golden soybean into that meal of magic, that all-in-one soup-to-nuts food–tofu the humble, tofu the magnificent, tofu the quintessential actor/actress among all cuisine. Tofu! Tofu? Doufu? Dowfu? What is it, anyway? Is it some bloodless meat fashioned from the cooled and crushed essence of the soybean? Is it a cheese, formed as it is from the soymilk squeezed from the steamed beans and solidified by seawater or a related refinement such as calcium chloride? Is it a chewy bean cake, a jelly-like steak, ambrosia? Is it the world's longest running recipe...?

There are three tofu makers in San Francisco: "Azumaya Inc. of 95 Boutwell Street, the Wo Chong Co. of 1001 16th Street, and the Wo Hop Co. of 759 Clay Street. Also, there is one in South San Francisco (Quong Hop's, at 161 Beacon Street, a tradition in or near San Francisco since 1906), another one in Oakland and two in San Jose." Azumaya, at 95 Boutwell St., is run by four brothers (George, Jack, John, and Bill). It was founded on 17 January 1937 in a basement at 1636 Post Street, between Bush and Laguna streets. The Mizono's parents were Saichi and Matsuyo Mizono. "Their father was strengthened by a daily dish of the tofu he loved so well, usually enjoyed as boiled yudofu..." Tofu was made in old copper kettles using a stone grinder. "'We used to hand-crank everything,' recalls Bill. Brother John adds: 'Tofu has really snowballed in the last few years. Everybody here is getting into it as a new food. I think there is no limit

to its popularity, because it's so good for your diet.'" The company also produces kinugoshi tofu, and (in a converted doughnut machine) agé. The regular tofu now sells locally for $0.50/lb. Today they use 1,600 to 2,400 lb of Arkansas soybeans a day. Annual gross sales are now $1 million compared to $600,000 in 1969, when they moved into their fourth and present headquarters.

Includes a detailed description of the tofu-making process, and several semi-recipes. Tofu is referred to twice in the article as "soybean cake." Photos show: (1) "Pulling cheesecloth in preparation of removal of tofu from tray." Two men are working by hydraulic presses that press the cloth-wrapped curds into tofu in shallow, perforated stainless-steel forming boxes. (2) "Compressing the coagulated tofu." One man is pulling down on a metal, ratcheting lever press. (3) "Packaging tofu." Three men are placing the curds in shallow plastic tubs. The author closes with a strong recommendation for *The Book of Tofu* by Shurtleff and Aoyagi.

Note 1. This is the earliest English-language document seen (Aug 2013) that uses the term "ton yu" (only in the title) to refer to soymilk; the Japanese word for soymilk is *tônyû.*

Note 2. This is the earliest English-language document seen (April 2013) that uses the word "dowfu" to refer to Chinese-style tofu.

2877. Wang, Li Chuan. 1977. Extraction of proteins from vegetable seed compositions. *U.S. Patent* 4,018,755. April 19. 4 p. Application filed 12 May 1975. [7 ref]
• ***Summary:*** "Vegetable seed flakes, meal and the like prepared for extraction in the usual manner were treated with ultrasonic waves solubilizing the protein which was then recovered from solution. This sonifier gives effective sonic extraction."

2878. Banco Central de Nicaragua, Departamento de Investgaciones Tecnológicas, División Agricola. 1977. Guia para el cultivo de la soya en Nicaragua [Guide for the cultivation of soya in Nicaragua]. Managua, Nicaragua: Banco Central de Nicaragua. 22 p. April. 22 cm. [Spa]
• ***Summary:*** Contents: Introduction. Overview. Botanical description. Varieties. Ecological requirements: Soils, climate. Cultural practices: Preparation of the land, time of planting, distance between plants, density of planting, inoculation of the seed, planting depth, fertilization / fertilizers. Control of weeds: mechanical, chemical control. Pests and their control. Diseases. Harvest. Storage. Costs of production per manzana. Some recipes for preparing foods based on soya: Corn and soya bread. Whole soya flour. Fresh soymilk. Soy biscuits or crackers. Maizena with soymilk. Tofu (*Queso de leche de soya,* coagulated with lemon juice). Tortillas with corn and soya. Cooking whole soybeans. Address: Managua, Nicaragua.

• ***Summary:*** Discusses each of the following foods briefly and gives sources of further information: Kinako (roasted soy flour), soymilk, yuba, tofu, kori tofu (dried-frozen tofu), aburaage, namaage, kinugoshi tofu, sufu, soy cheese (Western style), soy yogurt, ganmodoki, natto, Hamanatto, koji, tempeh, miso, tao-tjo [Indonesian-style miso], kochu-jang, shoyu, and ketjap.

Note 1 This is the earliest German-language document seen (Oct. 2011) that uses the word "sufu" to refer to fermented tofu.

Note. This is the earliest German-language document seen (April 2013) that mentions silken tofu, which it calls *kinugoshi.* Address: Institut fuer Lebensmitteltechnologie, Frucht- und Gemuesetechnologie, Technische Universitaet Berlin, Koenigin-Luise-Strasse 27, D-1000 Berlin 33, West Germany.

2881. **Product Name:** Loma Linda Soyagen (Milk Free Soy Beverage Powder Containing No Cane or Beet Sugar).
Manufacturer's Name: Loma Linda Food Co.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92505. Phone: 714-687-7800 (3/88).
Date of Introduction: 1977. April.
Ingredients: Soy solids, corn syrup, soy oil, soy lecithin, salt, di-calcium phosphate, tri-calcium citrate, calcium carbonate, di-potassium phosphate, artificial flavors, vitamins (ascorbic acid, DL-alpha tocopheryl acetate, vitamin A palmitate, cholecalciferol, riboflavin, phytonadione, cyanocobalamin), ferrous sulfate, tri-potassium citrate.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
Nutrition: Per 1 oz powder (approximately ¼ cup): Calories 130, protein 6 gm, carbohydrate 14 gm, fat 6 gm, cholesterol 0 mg, sodium 210 mg, potassium 210 mg.

New Product–Documentation: Label sent by Loma Linda Foods. 1988. Oct. 5. This product was introduced in 1977. A less sophisticated version with the same name appeared in 1948.

2882. Whitington, Peter F.; Gibson, Richard. 1977. Soy protein intolerance: Four patients with concomitant cow's milk intolerance. *Pediatrics* 59(5):730-32. May. [8 ref] Address: Dep. of Pediatrics, Univ. of Tennessee Center for the Health Sciences, Memphis, TN.

2883. Eka, O.U.; Kay, T. 1977. Chemical evaluation of the nutrient status of soya bean meals prepared using traditional methods. *Samaru Agricultural Newsletter* 19(2):76-81. June. [9 ref]
• ***Summary:*** Full-fat soy flour was used in place of the more popular cowpea flour to make popular Nigerian dishes such as bean cake (akara or kosei), puff-puff, moin-moin or alele (made with okara), and soya bean milk. The soybean products were generally richer in protein than their cowpea counterparts. The soya bean samples were supplied by the Institute for Agricultural Research, Ahmadu Bello University, Zaria. Address: Ahmadu Bello Univ., Zaria, Nigeria.

2884. Gaskin, Stephen. 1977. The plowboy papers: Stephen Gaskin and The Farm. *Mother Earth News* No. 45. May/June. p. 8, 10, 12, 14, 16, 18, 20, 22.
• ***Summary:*** This tells the story of The Farm, but it is not an interview. It seems more like excerpts from Hey Beatnik. "It all started in the fall of 1966 when someone decided to start an experimental college in San Francisco... and away over in the corner of the registration room a guy named Stephen Gaskin, a maverick English professor from San Francisco State Univ., put up a little sign which said he'd be teaching something called 'Monday Night Class.'" In late 1971 Stephen and his followers bought a 1,014 acre farm in Tennessee for $70/acre. It has since been expanded to 1,700 acres.

"Babies love soymilk. They can be weaned directly onto it and most of ours have been. It's especially good for babies who are allergic to cow's milk or who can't tolerate lactose. (Commercial non-allergenic baby formulas are made from soybeans.)

"We fortify our milk with vitamin B-12. In the winter, when we don't have fresh greens and there's less sunshine, we also add vitamins A and D." A recipe is given for making soymilk at home.

"When we work in the soy dairy we tie our hair back, wash our hands, and put on clean aprons. We believe that being spiritual means having a well-trained, efficient crew of folks who have fun working together... and that everyone should be able to go home after work 100% confident that we've made wholesome, sanitary, nutritious food." Address: 156 Drakes Lane, Summertown, Tennessee 38383.

2885. McFadden, Cyra. 1977. Serial: A year in the life of Marin County. New York, NY: Alfred A. Knopf. 111 p. See Chap. 8, p. 22. Illust. by Tom Cervenak. 28 cm.
• ***Summary:*** This work of "historical fiction" is set in California's trendy Marin County (just north of San Francisco and a center of "the revolution") during the

free-wheeling 1970s. Harvey had gotten to know Marlene, age 18 and a part-time student at the College of Marin, as she checked out his groceries at the supermarket. She expressed "horror at 'the garbage' he put into 'his one and only body.'" She explained that white flour could kill his enzymes. Marlene was seriously into nutrition–and into sex, and "since her interest in his one and only body turned out to be virtually limitless, Harvey ate his kelp and drank his soya milk without complaint. If the meals Marlene served him were rare and strange, so were the things she did to him afterward on the waterbed." He was beginning to feel like he'd gotten "in touch with the universe." Address: Marin County.

2886. Parihar, Asha S.; Mittal, M.; Datta, I.C.; Quadri, M.A.; Kushwah, H.S. 1977. Organoleptic evaluation and nutritive value of recipes of soymilk and soyresidue. *J. of Food Science and Technology* (*Mysore, India*) 14(3):130-32. May/June. [6 ref]
• ***Summary:*** Soyresidue [okara], the solid material remaining after soymilk preparation, can be used effectively for improving the nutritional value of traditional snacks like *Samosa.* Soyresidue snacks are 25-33% less expensive than the standard preparations.

"Soymilk ice cream was rated good and standard ice cream excellent. Soymilk custard was adjudged very good, and standard custard excellent.

Note 1. This is the earliest published English-language document seen (March 2007) that uses the term "soymilk ice cream" to refer to soy ice cream.

Note 2. This is the earliest English-language document seen (June 2013) that uses the word "soyresidue" to refer to okara. Address: Dep. of Biochemistry, College of Veterinary Science, Jabalpur, India.

2887. **Product Name:** Plamil Rice Soya Plantmilk Pudding With Sultanas (Later renamed Plamil Soya Milk Rice Pudding with Sultanas) [Sweetened with Sugar].
Manufacturer's Name: Plamil Foods Ltd.
Manufacturer's Address: Plamil House, Bowles Well Gardens, Folkestone, Kent, CT19 6PQ, England.
Date of Introduction: 1977. June.
Ingredients: Water, unpolished rice, soya protein isolate, sunflower oil, raw sugar, sultanas, natural vanilla essence, sea salt, emulsifier: soya lecithin, stabiliser: carrageen extract [carrageenan].
Wt/Vol., Packaging, Price: 439 gm (15.5 oz) can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Ad in *Alive* magazine (UK). 1979. Jan/Feb. p. 19. Label for a can. 1980, undated. 4 by 9.5 inches. Yellow and white on brown. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. "Suitable for those allergic to cows milk." Brochure. 1990. Gives name as Plamil Soya Milk Rice Pudding.

Letter and Label sent by Arthur Ling, Managing Director of Plamil Foods. 1990. July 24. "The sweetened version of our soya milk Rice Pudding was introduced in June 1977." Label. 9.5 by 4.25 inches. Blue, yellow, white, green on brown. Color photo of a blue bowl containing the pudding and sultanas (raisins). "Organically grown unpolished rice. Gluten free. Suitable for those allergic to dairy milk. Contains no animal fats or other animal ingredient. Protein is from soya protein isolate which has far higher protein content pro rata than soya flour."

2888. Pomeranz, Y.; Shogren, M.D.; Finney, K.F. 1977. Flour from germinated soybeans in high-protein bread. *J. of Food Science* 42(3):824-27, 842. May/June. [21 ref]
• ***Summary:*** Fascinating scanning electron micrographs (photos) show: (1) Soy milk. (2) Germinated soy flour. (3) High temperature soy flour. (4) Ardex 550 (soy flour from ADM). Address: U.S. Grain Marketing Research Center, USDA ARS, Manhattan, Kansas 66502.

2889. Howes, Charles D. 1977. Re: The influence of Dr. John Harvey Kellogg on substitute foods and their developers in the USA. Letter to Mr. Stephen H. McNamara, Associate Chief Counsel for Food, U.S. Food and Drug Administration, Washington, DC., July 15. 2 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "Your paper in *Food Engineering,* June 1977 was read with interest. I do not intend to dispute any of the points made in it here, but would like to share with you a historical perspective of the development of substitute foods, A brighter future may be assured if we remind ourselves of the progress of the past.

"John Harvey Kellogg, M. D. promoted a simple vegetarian diet at the Battle Creek Sanitarium in Michigan which he headed during most of his 67 years at the medical institution (beginning in 1875/76). During this period he developed a unique program of diet, hydrotherapy and expert surgery which attracted people from around the country and the world. Patients included a number of leading people such as William Howard Taft, William Jennings Bryan, Roald Amundsen, Lowell Thomas, Alfred DuPont, John D. Rockefeller, Jr., J.C. Penney, Montgomery Ward, S.S. Kresge, etc., etc.

"As might be guessed, Kellogg's views on diet and health were widely spread throughout America and the world. In order to provide a satisfactory vegetarian breakfast Kellogg developed the breakfast cereal and Battle Creek became the prepared-cereal capital of the world. The breakfast cereal was a substitute for ham & eggs and other high meat breakfasts.

"Kellogg also invented vegetable protein foods which he served as substitutes for meat. This was the beginning of the meat analogue industry.

"Henry Ford II [sic, Henry Ford] was a patient of Dr.

Kellogg and Kellogg was a man who liked to share his ideas with anyone who would listen intelligently. Exactly what was shared we do not know, but back in Detroit Ford established a soy research team. The soy research team invented soy plastic (which was used in Ford automobile steering wheels for several years), soy fabric, and soy fiber [spun soy protein fiber]. When the research team was broken up the leading members joined the food industry and with additional developments produced vegetable fiber suitable for food products. This was the beginning of textured vegetable protein fiber.

"In order to promote his ideas more fully and leave a more lasting impression on the health of the world, Kellogg founded a medical school in connection With the Battle Creek Sanitarium. The American Medical Missionary College was granted a charter in 1895 and had two campuses–Battle Creek & Chicago. Much of the support for the medical school came from the food business. The school gave an excellent education and was soon fully accredited. Into this situation came Harry W. Miller, a medical student from Ohio. Harry Miller started working as a guide in the cereal factory to help support himself as a medical student. He became interested in the food business and became such an expert guide that Kellogg developed an interest in him. Miller was instructed by Kellogg in the area of food processing and read into food development as well as studied medicine. He became well-versed in both areas.

"When Miller graduated he married and soon sailed for China as a medical missionary. He noted malnutrition among infants and a high death rate among them. He also noted that soymilk was made by the people, but only the old people (no doubt those without teeth) drank it. In time Miller applied his knowledge of food processing methods to taking soymilk production out of the kitchen and making it on a large scale in a formulation suitable for infants. In the late 1930's China was invaded by the Japanese and the soymilk plant was bombed. After several adventures he was able to return to the U.S. and founded the first American soymilk plant.

"Thus a "Whole Picture" of substitute foods may be outlined in perspective thus:" A diagram shows John Harvey Kellogg, M.D. on the top line. Arrows point downward from him to those he influenced on the 2nd line: (1) Henry Ford II and the Soy Research Group. (2) Vegetable Protein Foods. (3) Breakfast Cereal. (4) Harry W. Miller, M.D. Arrows point downward to the 3rd row showing that: (1) Ford and the Soy Research Group developed Vegetable Protein Fiber. (2) Dr. Miller developed Soymilk & Soycheese. Arrows point downward to the 4th row showing that both Vegetable Protein Fiber and Vegetable Protein Foods led to the [commercial] development of Textured Vegetable Protein foods.

"I hope this background material will be helpful to you as you deal with the nutritional problems of engineered foods.

"Sincerely,..." Address: PhD, Technical Director, Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

2890. **Product Name:** [Midori Soymilk (Mild, or Pure)].
Foreign Name: Midori Tônyû (Mairudo, Piyuwa).
Manufacturer's Name: Kyushu Nyugyo.
Manufacturer's Address: Kyushu, Japan.
Date of Introduction: 1977. July.
Wt/Vol., Packaging, Price: 500 ml, probably Pure Pak type carton.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Note: Midori means "green" in Japanese. This is a larger size version of their first soymilk launched in Aug. 1976.

2891. **Product Name:** Soymilk [Honey & Vanilla, or Plain].
Manufacturer's Name: Soy Plant (The).
Manufacturer's Address: c/o Wildflour Community Bakery (a co-op), 4th Ave., Ann Arbor, MI 48104. In Jan. 1978 moved to 211 East Ann St. Phone: 313-663-0500.
Date of Introduction: 1977. July.
Ingredients: Water, organic soybeans.
Wt/Vol., Packaging, Price: ½ gallon plastic jug, or from a cooler.
How Stored: Refrigerated.
New Product–Documentation: Label in The Soy Plant scrapbook on p. 4. 3 by 4 inches. Black on white. Pressure sensitive. "Keep refrigerated. Made from water and organic soybeans by The Soy Plant, a people's business, Ann Arbor, Michigan, 48104. (313) 663-0500. Flavored. Just add a little honey and vanilla." An illustration shows soybean vines growing to left and right out of a rayed planet.

Steve Fiering. 1979. Whole Foods. Jan. p. 38, 40. "A Midwestern Interest in Tofu." This is included in a list of products presently produced by the company. Talk with Steve Fiering. 1988. June 10. This was the company's second commercial product. Production probably started when they were still at Wildflour, before they went to Eden's. No new products were introduced while at Edens. At Ann St. it was also sold in a plastic cooler (a Norris Milk Machine), stirred by a motorized paddle.

Talk with Steve Fiering, a founder of The Soy Plant in Ann Arbor. 2000. Dec. 3. The Soy Plant probably used organic soybeans from day one. They probably got them directly from the The People's Food Co-op, a retail store located next door. The plain soymilk was purchased mostly by Asian-Americans; they sweetened it with sugar–which they preferred to honey.

2892. **Product Name:** Fresh Joy o' Soy Soymilk (Natural Unflavored).
Manufacturer's Name: Tofu Shop (The).

Manufacturer's Address: 116 N. Oak St., Telluride, CO 81435.
Date of Introduction: 1977. July.
How Stored: Refrigerated.
New Product–Documentation: Letter from Matthew Schmit. 1988. July. This product was launched in July 1977 in Colorado. Talk with Matthew Schmit, founder and owner of Tofu Shop Specialty Foods, Inc. 2002. Sept. 19. They sold this soymilk in Telluride at the local Co-op–outside of their deli. It was probably sold in glass Mason jars with taped on labels.

2893. Nelson, A.I.; Steinberg, M.P.; Wei, L.S. Assignors to University of Illinois Foundation. 1977. Soybean beverage and process. *U.S. Patent* 4,041,187. Aug. 9. 13 p. Application filed 23 June 1975. [4 ref]
• ***Summary:*** Also describes soy yogurt. Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL.

2894. Schutte, Leonard. 1977. Unilever's production of soy protein concentrate (Interview). *SoyaScan Notes.* Aug. 11. Conducted by Walter J. Wolf of NRRC, Peoria, Illinois.
• ***Summary:*** Unilever makes about 60 million lb/year of alcohol-extracted soy protein concentrate which is used largely in calf milk replacers. Their concentrate contains about 100 parts per mission (ppm) of iron. To get this level they must was the soybeans to remove soil. Concentrates with 150 ppm of iron are unacceptable for veal calves because the meat becomes red rather than remaining white. Concentrates with 120-130 ppm are borderline. They believe the alcohol process of making soy concentrates is the best because the combination of heat and alcohol inactivate an allergen to which calves are sensitive. The alcohol process is also better for off-flavor removal and uses less energy.

Unilever is also texturizing soy protein concentrate on a pilot scale but the food uses of this product are still small, so they have not yet built a commercial plant. Address: Unimills B.V., Lindtsedijk 8, Zwijndrecht, Holland.

2895. Leviton, Richard. 1977. Re: History of and current developments at Laughing Grasshopper Tofu Shop. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 23– in reply to inquiry. 7 p. Typed, with signature.
• ***Summary:*** An excellent letter, full of useful details! "Laughing Grasshopper has grown rapidly and predictably since its inception last January." The company now produces 700 to 800 lb/day of tofu, 6 days a week, with 3 men working 8-10 hours each and a janitor working 6 hours. Altogether seven people are employed: four partners, two full-time employees, and one part timer. They earn $2.75 an hour and have an insurance program paid for by the business Summer sales have averaged $8,000/month. They are moving their shop of some 1,000 square feet to a new location of 7,000 square feet for only double the rent. They are looking for $30,000 in investments to finance their new venture. They are importing equipment from Japan. "This winter we intend to commence soymilk production; next spring: tempeh, soy mayonnaise, soy ice cream, and agé. We have potentially a very exciting and massive business on our hands."

"That's the bright side of the picture. While the sales have been soaring and visions of financial glory mounting, certain hard facts have made themselves known. Running a business is difficult. Last winter I came down with mononucleosis and was out for seven weeks. We have had very bad relations with our landlord who has burned us on an illegal plumbing job he did for us, shut our water off twice, in the middle of production, and has threatened to take us to court suing us $12,000 for damages done to his personal property. We have thrown out hundreds of pounds to terrible tofu, due to bad beans or bad nigari technique. We have run out of soybeans and been closed for days while we drove around finding some. We have been shut down by the town health department and given a month's time to move by the state hoard. We have experienced much indecision and emotional turmoil and the new corporate structure will probably have Tom Timmins and me as the two principal owners with the stockholders. We have been on educational television; a five minute spot featuring our shop and some dialogue and shown in Springfield, Massachusetts. A lot of equipment has broken down, or become unfit to use and we are ruining the floor (made of oak beams) even though we have 3 large floor drains.

"Most people only see the good tofu coming out of our shop; the vicissitudes of business are mercifully spared their consideration. But it's all a matter of attitude. We feel confident now about our prospects and feel we will somehow muddle through the mess and confusion we have created for ourselves."

Leviton then answers in detail the following questions asked by Shurtleff: How did you obtain equipment and ingredients? How did you learn to set up a shop? What type of equipment did you buy and how much did it cost? What about health inspectors and codes? How did you determine your prices and what are they? How did you choose the best variety of soybean to use? How and from whom do you buy your soybeans? Your nigari?

"Here are some replies to questions in your letter of May 5. We sell 8-ounce pieces of tofu for 21 cents each, 50 to a pail for $10.50 delivered, with a $2.10 deposit on the 5 gallon pail which we ask to get back. Retail sales (which are insignificant) are 25 cents a piece."

"We have tried 20 different soybean varieties and only a few make good, reliable tofu, i.e., firm, holds together, tastes good. In particular Wells, Rampage, and Prize have given excellent tofu... The oil content of the bean is important... You want as much protein and as little oil in the bean. If there is much oil, then the bags are clogged, the tofu is slimy,

the yields drop by 25%. We have found many brokers don't even know what kind of bean they are wholesaling. A good bean is a joy to work with, a bad bean is a nightmare. We are buying a truckload of beans from Agricultural Exports Co., Hudson, Iowa, for 24 cents a pound delivered." Address: LGTS, 3 Main St., Millers Falls, Massachusetts 01349.

2896. Aminlari, Mahmood; Ferrier, L.K.; Nelson, A.I. 1977. Protein dispersibility of spray-dried whole soybean milk base: Effect of processing variables. *J. of Food Science* 42(4):985-88. July/Aug. [26 ref]
Address: Dep. of Food Science, Univ. of Illinois.

2897. Shurtleff, William; Aoyagi, Akiko. 1977. Tofu & soymilk production: The Book of Tofu, volume II. Lafayette, California: New-Age Foods Study Center. 128 p. Aug. 1. Illust. by Akiko Aoyagi Shurtleff. No index. 28 cm.
• ***Summary:*** A rough photocopied manuscript with a yellow cover, created in response to a letters from many people requesting information on how to start a tofu shop. This book was published in finished form in 1979 under the same title, Tofu and Soymilk Production (336 p.).

Contents: 1. So you want to start a tofu shop or soy dairy? 2. Setting up shop; The community shop, the traditional shop, the steam-cooker shop, the pressure cooker shop, the soy dairy, the modern factory. 3. Ingredients. 4. Scientific data concerning the tofu-making process. 5. Tofu. 6. Firm tofu. 7. Using okara and whey. 8. Deep-fried tofu: Cutlets, burgers, and pouches. 9. Soymilk. 10. Soymilk ice cream, yogurt, kefir, mayonnaise, and cheese. 11. Silken tofu & soft tofu (Silken tofu is made from concentrated soymilk). 12. Lactone silken tofu. 13. Grilled tofu. 14. Wine-fermented tofu. 15. Dried-frozen tofu. 16. Yuba.

Appendix A: People and institutions connected with tofu & soymilk production. B: Sketches of tofu and yuba shops in Japan. C: So you want to study tofu in Japan? D: Table of equivalents.

Note 1. This is the earliest English-language document seen (April 2013) that uses the term "silken tofu" to refer to Japanese *kinugoshi* tofu.

Note 2. This is the earliest English-language document seen (Oct. 2011) that uses the term "wine-fermented tofu."
Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549; 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan.

2898. Takai Tofu & Soymilk Equipment Company. 1977. Takai catalog of small and medium-sized equipment. 307 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 3 panels each side. Each panel: 28 x 21.5 cm.
• ***Summary:*** This is Takai's first English-language catalog, conceived of and developed for Takai by William Shurtleff. Many early tofu makers in the USA and Europe ordered their equipment via this catalog.

The banner heading across the top of the first page is white letters on a green background. The body of the catalog is black letters on white glossy paper. Photos (printed in black on a light green screen) show the company's many pieces of equipment and systems for manufacturing tofu and soymilk. The logo, in the upper right corner, shows a lever on top of a bean moving the world. The catalog is divided into 2 sections: Basic Equipment and Whole Systems.

The text on page 1 reads: "Takai, Japan's largest and best known manufacturer of equipment for making tofu (bean curd) and soymilk, was founded in 1917 and now has about 60 percent of the total Japanese market production. Unlike other companies, we produce a full line of equipment ranging from inexpensive tools suited for traditional small-scale production to Japan's largest and most modern machinery capable of producing over 200,000 cakes of tofu daily. In this latter area, we have about 90% of the total Japanese market. Our equipment is designed for the preparation of all the seven basic types of Japanese tofu as well as soymilk on the scale of your choice to meet your budget.

"Over the past several decades we have had a great deal of experience exporting our equipment to Japanese and Chinese run shops and factories in America, Europe, and Southeast Asia. Now with the growing interest in soy products in the West, we have worked closely together with William Shurtleff, author of *The Book of Tofu,* to develop our first English-language catalog. Export routes are well established that make it possible for you to order directly from us, the manufacturer, to get your equipment at the lowest possible prices and with minimum delay. To give you the widest possible choice of Japan's best equipment, we are also including in our catalog a number of items widely used in Japan, produced by other well-known makers."

Letter (fax) from Wataru Takai. 1996. Aug. 2. Takai's records show that their first catalog, which is green, was printed by Dai Nippon Printing Co. in August 1977. Address: Ishikawa-ken, Japan. Phone: (0762) 48-1355.

2899. Rasmussen, Carol. 1977. Vegetarians straight off the farm: Soy is source of successful diet. *Chicago Tribune.* Sept. 8. p. E3, or p. W_A3, or p. N_83.
• ***Summary:*** This article is about The Farm, from Summertown, Tennessee, and their creative but strict vegetarian diet–that uses no meat, eggs, or dairy products." Margaret Nofziger explains that Farm members are not food faddists; they eat cocoa, sugar, and white flour.

Most of their nutrients comes from soybeans. They grow 250 acres of soybeans a year and turn a significant portion of these into an incredible array of foods such as soy flour and soy milk. The soy milk is made into soy yogurt, mayonnaise, a cheese, tofu, soy ice cream, and tempeh (which is a fermented soy product from Indonesia). The pulp [okara] that remains after making soy milk is used to make a meatless

sausage; it also add to cakes, cookies, and other baked goods. Also on The Farm, soybeans are roasted to make nuts, and ground to make coffee. They have published recipe booklet titled "Yay soybeans."

The Farm has a great deal of experience in cooking whole soybeans. The best way is to use a pressure cooker for 1 hour at 15 pounds pressure. Or you can cook them for at least 10 hours at atmospheric pressure.

A typical breakfast at The Farm might consist of toast, fried tofu, tea and sugar. Or perhaps fried potatoes and cheese [made from nutritional yeast] and hot soy milk and tea.

A cartoon has this caption: "Soybeans are the base for cheese, ice cream, sausage, and burgers." Address: Food Guide editor.

2900. *Times of India* (*The*) (*Bombay*). 1977. Kisans take keen interest in new strains, methods. Sept. 28. p. 4.
• ***Summary:*** Pantnagar (Uttar Pradesh)–Note: Kisan is probably the Indian word for a farmer or peasant.

At G.B. Pant agricultural university the soyabean is considered to be of immense importance to the agricultural economy of India. According to the university's vice-chancellor, Dr. K.G. Gollakota, the soyabean has found tremendous acceptance among the terai farmers, who are unable to keep up with the demand. A Rs. 1-crore (10 million rupees) plant has been constructed at Bareilly to process soyabean into oil and meal, and the farmers were expanding their cultivation to keep up with the plant's demand.

Soybean meal has been added to the ingredients for making "Mysore pauk" (based on chickpea powder or besan) and idlis (based on urad) without changing the flavour.

The boys and girls and the university's home science department have switched to drinking soyabean milk from Coca-Cola. The university, which developed a special variety of soyabean that gave a high yield of soyamilk, sold the franchise to two entrepreneurs in Delhi and Madhya Pradesh to produce something like 30,000 litres of soyamilk a day.

Note: It is unclear whether or not this soyamilk plant was every constructed.

2901. Archer Daniels Midland Co. 1977. Annual report. Decatur, Illinois. 33 p. 27 cm.
• ***Summary:*** Net sales in 1977 were $2,114 million, up from $1,647 million in 1976. Net earnings in 1977 were $61.4 million, down from $65.2 million in 1976. ADM's protein specialty division successfully introduced Ardex 700, a new soy protein concentrate, and Nutrisoy Fiber. A new light colored TVP was developed for extending fish. The company's TVP brand of textured vegetable proteins remains the largest selling textured product, both in the USA and worldwide (p. 5).

Textured soy protein concentrate products are called TVP/2. A new class of products designated as a soy beverage base are now being evaluated in dairy-type applications, such as milk replacers, cheese, and dessert bases (p. 11).

British Arkady Co.: Sales of TVP, now in its second full year of manufacture in Manchester, England, were up. Im memoriam: Thomas L. Daniels, died 23 May 1977. He was the son of John W. Daniels who founded Daniels Linseed Co. in 1902. Address: P.O. Box 1470, Decatur, Illinois 62525.

2902. Escueta, E.E.; Banzon, Julian. 1977. Preextraction boiling of soybeans as a pretreatment in soymilk preparation. *Philippine Agriculturist* 61(3&4):104-14. Aug/Sept. [27 ref]
Address: 1. Instructor; 2. Emeritus Prof. Both: Dep. of Food Science & Technology, College of Agriculture, Univ. of the Philippines at Los Baños, College, Laguna, Philippines.

2903. Halpin, Thomas C.; Byrne, W.J.; Ament, M.E. 1977. Colitis, persistent diarrhea, and soy protein intolerance. *J. of Pediatrics* 91(3):404-07. Sept. [8 ref]
• ***Summary:*** The authors describe soy protein-induced acute colitis with persistent diarrhea in four infants; they were intolerant to soy formula but not to cow's milk. Address: Dep. of Pediatrics, School of Medicine, Univ. of California, Los Angeles, CA 90024.

2904. Roy, J.H.B.; Stobo, I.J.F.; Shotton, Susan M.; Ganderton, P.; Gillies, Catherine M. 1977. The nutritive value of non-milk proteins for the preruminant calf. Address: National Inst. for Research in Dairying, Shinfield, Reading RG2 9AT, England.

2905. Tofu Shop (The). (Renamed Far Pavilions in late 1979). 1977. October. New soyfoods restaurant or deli. 116 N. Oak Street (Box 69), Telluride, CO 81435.
• ***Summary:*** Menu and promotional brochure for The Tofu Shop. 1978, Sept. 6 panels. On the front panel is a stunning circular photo of Rocky Mountains rising out of a misty valley. Around it is written: "The Tofu Shop" (above). "Juice bar–Dining–Catering–Wholesale kitchens" (below). Below that on the front panel: "116 North Oak Street. Next to the opera house. Telluride, Colorado. Call ahead for take-out: 728-9940."

Entrees (Served with soup or salad–$0.65 extra): Stir-fried tofu, rice & vegetables. Burgers: Soy burger, Tofu burger, Okara burger. Stuffed pitas: Grilled tofu & vegetables, Guacamole and tofu. Burritos: Spicy tofu and rice filling with guacamole. Smoothies: Carob, honey, soymilk with banana. Carrot sunny shake. Other refreshments: Miso broth, soymilk, whey from making tofu. Salads: Full plate tofu & guacamole salad, Tofu and vegetable salad, Okara salad. Fresh tofu. Grilled tofu. On the back panel is a lively, writhing dragon plus: "Uncompahgre

Natural Foods. Producers and suppliers of specialty foods for Colorado's western slope." Talk with Matthew Schmit, founder and owner of The Tofu Shop. 2002. Sept. 19. Matthew estimates that this undated menu was first printed in about Sept. 1978.

Menu for Far Pavilions. 1979, undated. 8 panels. Green on tan paper. "International vegetarian cuisine. Welcome hospitality. Located below the opera house. For details, see separate Menu entry for Far Pavilions.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started in Oct. 1977 by Matthew Schmit. Later run by Catherine Peterson.

Note: This is America's second "soy deli," offering a host of highly creative and delicious recipes. Address: Telluride, Colorado. Phone: 728-4441.

2906. Jung, A.L.; Carr, S.L. 1977. A soy protein formula and a milk-based formula. *Clinical Pediatrics* 16(11):982-85. Nov. [12 ref]
Address: 1. Assoc. Prof. of Pediatrics, Univ. of Utah Medical Center, Salt Lake City, UT 84132.

2907. Schmidt, R.H.; Mathews, R.F.; Davidson, S.M. 1977. Sensory acceptance of tomato salad-type yogurt systems from oilseed/dairy combinations. *Proceedings of the Florida State Horticultural Society* 90:201-04. Nov. [9 ref]
• ***Summary:*** Yogurt systems were prepared from whole milk fortified with oilseed protein (soy protein isolate or peanut flour) and from oilseed protein/dried skim-milk blends. Four yogurt systems were compared by a taste panel: Unflavored; tomato and spice; tomato, spice and vegetable; and fruit flavored. Tomato flavored was preferred to unflavored, and the addition of nonfat dry milk further improved the flavor. Heat processing at 70ºC for 10 min. and homogenization further improved sensory acceptance. Soy protein fortified yogurt systems had higher objective texture values than did other yogurt systems evaluated. Address: Dep. of Food Science & Human Nutrition, Univ. of Florida, IFAS, Gainesville, FL 32611.

2908. *Telluride Times* (*Colorado*). 1977. Tofu prepared daily in Telluride shop. Dec. 8. p. 11.
• ***Summary:*** "The Tofu Shop–a tofu factory and take-out health food store located in the Spectrum Shops–has been doing health since mid-September."

Business partners Matthew Schmit and Timothy Mecke started the Tofu Shop, which makes fresh tofu each morning in Telluride. Schmit was involved in setting up the Winterstash Food Co-op, and Mecke brought the art of making tofu to the enterprise. Both men are vegetarians.

Schmit, who starts making tofu at 6 a.m. each morning says anyone "is welcome to come down to observe and learn. 'It's a beautiful process, somewhat like meditation,' he says."

"The Tofu Shop distributes their products through Winterstash Food Co-op and Rose's market in Telluride, and through natural Food Stores in Durango... The Tofu Shop also offers a variety of take-out foods including salads, soups, soyburgers, sandwiches, sprouts, and soymilk." A photo shows Matthew Schmit, Susie Imbarrato, and Tim Mecke, all holding a tray of sprouts. Susie "runs the fresh juice bar and prepares the baked goods."

Note: This is the earliest article or published document seen (April 2013) concerning The Tofu Shop in Telluride, Colorado.

2909. *SoyaScan Notes.* 1977. Chronology of soybeans, soyfoods and natural foods in the United States 1977 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 12. Laughing Grasshopper tofu shop starts making tofu in Millers Falls, Massachusetts. Founded by Richard and Kathy Leviton, Tom Timmins, and Michael Cohen in April 1976, it soon becomes the largest of the new breed of Caucasian-run U.S. tofu manufacturers. It was renamed The New England Soy Dairy in Nov. 1977, Tomsun Foods, Inc. in 1984, and Tomsun Foods International in 1986.

Jan. The Soy Plant starts making tofu inside Wildflower Community Bakery at Ann Arbor, Michigan. Steve Fiering is one of the organizers of America's first soyfoods co-op.

Jan. 20. Jimmy Carter inaugurated as president of the United States. Bob Bergland is Secretary of Agriculture.

March. Surata Soyfoods starts making tofu in Eugene, Oregon. America's second worker-owned soyfoods cooperative, organized by Benjamin Hills.

April 5. Takai Tofu & Soymilk Equipment Co. in Japan works with consultant William Shurtleff to acquire an English name, develop a unified equipment catalog, and establish international operations.

May. Flying Cloud Tofu (soon renamed The Tofu Shop, then Northern Soy) starts tofu production in Rochester, New York. Founders are Greg Weaver, Greg Mello, and Andy Schecter.

May 10-June 7. Shurtleff and Aoyagi travel to Indonesia to do field research on tempeh in preparation for a book on the subject.

Aug. 16. *Miso Production* by Shurtleff and Aoyagi published by New-Age Foods Study Center, the Center's first publication.

Sept. Article in *Mother Earth News* announces that tempeh starter and split whole soybeans are available from newly founded Farm Foods at The Farm in Tennessee. Orders start to pour in. Farm Foods continues The Farm's tradition, with a great deal of creative and influential work with soyfoods.

Sept. Swan Foods starts operation in Miami Florida, run by Robert Brooks and Mary Pung. They produce America's first commercial soymilk yogurt. After doing extremely

innovative pioneering work with second generation tofu products and advertising them nationwide, they go out of business in Dec. 1978 from trying to grow too fast.

Sept. White Wave starts making tofu in a bathtub in Boulder, Colorado. Founded by Steve Demos.

Oct. The Tofu Shop, America's second soy deli, opens in Telluride, Colorado. Founded by Matthew Schmit, it was later renamed Far Pavilions.

Oct. 14. Bean Machines Inc., America's first supplier of tofu and soymilk equipment, begins operations in California under the direction of Larry Needleman. Most of their equipment is imported from Takai in Japan.

Oct. *Soycraft,* a newsletter and America's first periodical focusing on soyfoods, begins publication. Initiated by David and Danette Briscoe of Lawrence, Kansas.

Nov. Redwood Natural Foods, Inc. in Santa Rosa, California, launches the world's first vacuum packed tofu. Redwood developed the packing process using tofu made by Quong Hop & Co.

Nov. Paul Duchesne starts selling Fried Rice & Tofu Sandwiches in Fairfax, California. His operation later becomes Wildwood Natural Foods.

* *The Heartsong Tofu Cookbook,* by Bob and Toni Heartsong self-published in Florida.

* Passage of the 200 mile offshore fishing limit law has a major impact on Japan's protein supplies, increasing interest in and use of soy protein products.

* By the end of 1977 there are at least 13 commercial Caucasian-run tofu shops in America.

* The Food and Agriculture Organization of the United Nations (FAO) establishes a European Cooperative Network on Soybean in which 14 countries participate, exchanging information on soybean production.

* Genentech becomes the first company founded specifically to apply recombinant DNA techniques for commercial purposes.

* In China, under new post-Maoist economic policies, soybean acreage starts to increase after almost 20 years of decline based on grain-first policies. Soybean production began a slow increase in the mid-1960s, despite declining acreage.

2910. Filisetti, T.M.C.C.; Mancini Filho, J.; Marquez, U.M.L.; Lajolo, F.M. 1977. Factores anti-nutricionais em produtos comerciais de soja [Antinutritional factors in some commercial soy products]. *Revista de Farmacia e Bioquimica da Universidade de Sao Paulo* 15(1-2):93-108. Jan/Dec. [42 ref. Por; eng]

• ***Summary:*** Using an NaCl extraction process, trypsin inhibitors were found in commercial soy products in the following concentrations (in units/mg of protein): Soy protein isolates (*isolado protéico*) 177.4, soy protein concentrates (*concentrado protéico*) 66.6, uncooked soybeans (*soja natural*) 48.1. toasted soy flour (*farina de soja tostada*) 9.8, soybean milk–type A (*leite de soja*) 5.8, soybean milk–type B (*leite de soja*) 3.4, and textured soy protein (*proteina texturizada*) 2.6.

Hemagglutinins in soybean products, which were shown to be more resistant to thermal processing, were found in all of the above products, in concentrations equal to 25% that of the original soybean content. Goitrogens–factors capable of decreasing by 30% iodine-131 capture by the rat thyroid gland–were found in soybean milk, toasted soybean flour, and soy protein isolates. Address: 1. Student, Post-Graduate Course in Food Science (*Ciencia dos Alimentos*); 2. Asst. Prof., Dep. of Food and Experimental Nutrition (Departamento de Alimentos e Nutricao Experimental). All: Faculdade de Ciencias Farmaceuticas, Universidade de Sao Paulo, Sao Paulo, Brazil.

2911. Goulart, Frances Sheridan. 1977. Soybeans. *Vegetarian Times* No. 22. Nov/Dec. p. 50-51.

• ***Summary:*** A superficial overview. Discusses "boiled whole beans, toasted whole beans, soybean butter, soymilk, notes on soyflour, soysauce, soy oil, tofu, soy yogurt, mock mocha java (soy coffee)."

2912. Swan Food Corp. 1977-1978. Introducing the Soybeanery–Natural food deli & bakery: Now open. Miami, Florida. 3 p. Undated. 28 cm. Catalog and price list.

• ***Summary:*** This retail catalog lists the company's soy products, iced herbal beverages, and baked goods & pastries–with prices. Serving take out orders–Soy products include: Sandwiches (made with wholewheat pita–pocket bread; all sandwiches served with fresh organic salad vegetables): Tofu–baked, regular, marinated, or caraway: $1.40. Eggless egg salad: $1.40. Tofu cream cheese: $1.05. Salads: House salad with sprouts plus tofu–baked, regular, marinated, or caraway: $1.35. Eggless egg salad: $1.35. Hot food: Soyburger sandwich: $1.30. Desserts (per slice): Mary's tofu cheese cake: $0.75. Mary's marble swirl cake: $0.75. Mary's devil's food cream cake: $0.75. Mary's carob cream cake: $0.75. Rice pudding [made with organic brown rice, soy melk, raisins, maple syrup, sea salt]: $1.10. Carob pudding: $1.10. Vanilla pudding: $1.10. Soyogurt: Strawberry, peach, plain (more flavours to come): $0.45. Granola: With soyogurt: $0.45. With soymelk & banana: $0.75. Drinks: Soy shake (carob, vanilla, strawberry). Soymelk. Non-soy: Herb teas. Coconut juice. Pinacolada. Smoothie (apple-banana). Sweet rice cookie. Oatmeal cookie. Hummus sandwich.

A page titled "Retail price list" lists many of the products shown above but at slightly higher prices. In addition: Tofu–regular: $1.00. Tofu–baked: $1.95. Tofu–marinated: $1.60. Tofu–caraway: $1.60. Soymilk [plain]: Quart: $1.00. Pint: $0.45. Soymilk (sweetened): Quart: $1.25. Pint: $0.45. Tofu cakes and pies (all 7-inch rounds): Tofu pie–cashew: $4.50 Mary's devil food cream cake: $4.50. Tofu chip dip: $1.25. Whole grain soyburgers: $1.15.

RETAIL PRICE LIST

TOFU -	Regular	$1.00
	Baked	$1.95
	Marinated	$1.60
	Caraway	$1.60
SOYMELK	Quart	$1.00
	Pint	.45
SOYMELK (sweetened) -	Quart	$1.25
	Pint	.45
ICED HERB TEA (sweetened) 5 blends, 4 straight teas		.50
ICED HERB TEA (unsweetened) Bancha, Mu		.50
CAROB MARBLE SWIRL CAKE (all caked & pies 7 inch rounds)		$4.50
TOFU PIE - CASHEW		$4.50
MARY'S CAROB CREAM CAKE		$4.50
MARY'S DEVILS FOOD CREAM CAKE		$4.50
TOFU CHIP DIP		$1.25
WHOLE GRAIN SOYBURGERS		$1.15
TOFU VEGETABLE STEW		$1.15
SOYOGURT (plain or with fruit)		.45
MARY'S OATMEAL COOKIES		.35
BARLEY MALT SYRUP		$1.15
SOY SHAKES -	Carob	.85
	Vanilla	.95
	Strawberry	$1.05
MARY'S EGGLESS EGG SALAD		$1.40
NORI ROLL		$1.50
NECTAREL		.70
NECTAREL GINSENG		.75

Tofu vegetable stew: $1.15. Soyogurt–plain or with fruit: $0.45. Soy shakes–Carob: $0.85. Vanilla: $0.95. Strawberry: $1.05. Mary's eggless egg salad: $1.40. Also–Nori roll. Nectarel ginseng.

Note 1. This is the earliest English-language document seen (Dec. 2003) that contains the term "soy shake."

Note 2. This is the earliest English-language document seen (May 2003) that uses the word "Hummus" (or "Hummous"), which is a paste of pureed chickpeas usually mixed with sesame tahini and/or sesame oil (plus seasonings or spices) and eaten as a dip or sandwich spread.

Note 3. This is the earliest English-language document seen (Sept. 2012) that uses the word "Soyogurt" to refer to soy yogurt.

Note 4. This is the earliest English-language document seen (Feb. 2013) that contains the term "Eggless egg salad" or the term "Mary's eggless egg salad."

Talk with Danny Paolucci. 1997. Dec. 1. Danny worked for Swan Foods from 1977 to 1978. He knew Robert Brooks and Mary Pung very well. He last saw Mary about 8 years ago. The foods described above were sold in a little (10 by 12 foot) storefront retail store and deli that was located in the same building as the tofu factory but faced the sidewalk on Bird Road. A young lady named Penny, from England, ran the store. It was take-out only–no tables, chairs, or sit-down space. There was one large glass deli case, from which they sold a great many of Mary's delicious tofu pies. Danny used to have all the recipes for those pies, but he loaned them to his yoga teacher. They also sold lots of herb teas in Pure-Pak quarts, plus many Wah Guru Chew bars–made by another company that was probably also run by disciples of Guru Maraji. Address: The Soybeanery, 5758½ Bird Rd., Miami, Florida, 33155. Phone: 305-667-7141.

2913. Soy Plant (The). 1977-1987. Scrapbook. Ann Arbor, Michigan. 54 p. 45 x 40 cm (18 x 16 inches). [49 ref]
• ***Summary:*** This large (18 by 15 inches) 34-ring binder has flexible brown covers and holds large black sheets with acetate sheet protectors. On each sheet are taped, in approximately chronological order, articles, photographs (both black-and-white and color), labels, menus, letterheads, etc. documenting the story of this company. An excellent scrapbook! Many of the documents will be cited separately. Some of the highlights (the numbers of the unnumbered pages appear in parentheses): (1) A letter of 12 Dec. 1977 to "Members of the Michigan Federation of Food Co-ops" announcing that The Soy Plant which produces tofu (at 330 Maynard), and The Grain Burger Collective which produces Grain Burger Mix (at 335 Catherine), both in Ann Arbor, Michigan, are organized as collectives. Both their products are available from the People's Warehouse. Two large black-and-white photos (each 5 by 7 inches) show: Jerry MacKinnon, with long hair and mustache, cutting a large block of tofu into cakes, and Steve Fiering pouring soaked soybeans into the hopper of a grinder. (4) Black-and-white labels for tofu and for soymilk. A one-page leaflet titled "Getting to know your tofu" from "The Soyplant." (7) Long article titled "One of the few U.S. tofu manufacturers right here in Ann Arbor."

On the last two pages of the scrapbook are two undated and unsigned, handwritten pages torn from a spiral-bound, lined notebook, that begin: "Important! We are under attack! A vicious beast unknown to us has snatched from life many a new Soy worker. This pernicious creature... has brutishly eaten, devoured and consumed no less than three new workers without the decency to let them call us before being eaten... This vile unknown entity must be stopped." "This vile beast... bears a striking resemblance to our much loved packing machine. Have we given birth to a monster?" "As Ché Guevara said North Americans live in the belly of a monster, although resembling a machine the monster is none other than the capitalist system... Rx: Revolution and Revolutionaries."

Location: As of Dec. 2000 this binder is owned by Bruce Rose, president of Rosewood Products, Inc., Ann Arbor, Michigan. Soyfoods Center has a photocopy of the contents of this entire scrapbook. Address: 330 Maynard, Ann Arbor, Michigan 48104. Phone: 313-663-0500.

2914. **Product Name:** Soymilk.
Manufacturer's Name: Adventist Health Education Foundation (Egypt Food Factory).
Manufacturer's Address: P.O. Box 12, Heliopolis, Cairo, Egypt.
Date of Introduction: 1977.
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Habib Banna. Seventh-day Adventist soy dairy.

Note: This is the earliest known commercial soy product made in Egypt.

Address: Panjab Univ., Chandigarh, India.

2916. **Product Name:** Fearn's Pure Soya Powder (for Making Soy Milk).
Manufacturer's Name: Fearn Soya Foods.
Manufacturer's Address: 4520 James Place, Melrose Park, IL 60160.
Date of Introduction: 1977.
New Product–Documentation: *Soybean Digest Blue Book.*

1977. p. 33.

2917. Ferreira, V.L.P.; et al. 1977. O comportamento do leite de soja "Vital" natural quanto aos aspectos físico-quimico organolépticos [The behavior of Vital brand soymilk with respect to its physical, chemical, and organoleptic aspects]. *Boletim do Instituto de Tecnologia de Alimentos* (*Campinas, Sao Paulo, Brazil*) No. 53. p. 53-68. [Por]*
Address: Brazil.

2918. **Product Name:** Granolac Infant Soya Milk (Powdered).
Manufacturer's Name: Granose Health Foods Ltd. (Marketer). Made in the USA by Loma Linda Foods.
Manufacturer's Address: Stanborough Park, Watford, Herts., WD2 6JR, England.
Date of Introduction: 1977.
Ingredients: Soya bean solids, corn syrup, soya oil, sugar, salt, lecithin, vitamins.
New Product–Documentation: *The British Vegetarian.* 1961. March/April. p. 93. "Soya milk for household use." Granose Foods will soon be in a position to supply two varieties of spray-dried soya milk, Soyalac and Soyagen, made by one of their associated companies, Loma Linda Food Company in Arlington, California. Soyalac is specially prepared for infants, whereas Soyagen is for general use. A table compares the nutritional composition of the two products.

Listing in International Vegetarian Health Food Handbook (UK). 1977-78. p. 189. "Granolac Infant Soya Milk by Granose Health Foods Ltd." Manufacturer's catalog. 1980. April. "Infant formula soya milk. As near to the taste, texture and nutritional value of mother's milk as is possible. Basic ingredients similar to Granogen, with modifications. Full analysis available."

Dorothy E.M. Francis. 1984. "Alternatives to Cow's Milk: Comparisons." p. 147-48. In: David L.J. Freed, ed. Health Hazards of Milk. London, Philadelphia, Toronto, etc.: Ballière Tindall. Granolac Infant, from Granose, is for infants older than 3 months.

Form filled out by Granose Foods Ltd. 1990. June 13. States that the product was introduced in 1980. It is no longer on the market, and no label is available.

2919. **Product Name:** [Vital and Gestal {Soymilks}].
Foreign Name: Vital, and Gestal (Bebida a Base de Soja).
Manufacturer's Name: Instituto de Technologiade Alimentos (ITAL).
Manufacturer's Address: Campinas, Sao Paulo, Brazil.
Date of Introduction: 1977.
Wt/Vol., Packaging, Price: 200 ml.
New Product–Documentation: Costa & Arkcoll. 1975. INTSOY Series No. 6. P. 174-77; Costa et al. 1976. Suplemento de Ciencia e Cultura, Resumos 28(7):868. Pereira & Campos. 1981. *Journal of the American Oil Chemists' Society* 58(3):355-62. By 1977 VITAL was sold pasteurized in polyethylene bags and in powdered form.

R.H. Moretti. 1981. Journal of the American Oil Chemists' Society. March. p. 521. "Soy milk developments in Latin America." In 1975-76 two new projects were started in Brazil. ITAL, the Institute of Food Technology, developed a soya milk brand-named Vital. "It was first processed by dehulling soybeans, and later by hot grinding and extraction. The centrifuged and formulated soya milk was sterilized by UHT and aseptically packed in Tetra Pak cartons. Several flavors were developed and tested by school children and industry workers. It was well accepted but was limited by the high cost. Later, in 1977, Vital was also packed in polyethylene bags, but at that time only in pasteurized form. Vital can be kept refrigerated for 2-3 days. The same soya milk was also developed in powder form."

Photocopy of Label sent by Anders Lindner. 1989. On front panel are cartoon sketches of 6 boys and girls with arms held upward in the shape of a "V." "Produto a base de extrato de soja. Amostra experimental. Coloque na geladeira depois de aberto."

2920. **Product Name:** [Soena {Soymilk} (Lactic [Acidophilus], Celery, Carrot, Plain)].
Foreign Name: Soiina.
Manufacturer's Name: Kibun Health Foods K.K.
Manufacturer's Address: 1-11-8, Shin-Sayama, Sayama-shi, Saitama-ken, 350-13, Japan.
Date of Introduction: 1977.
Wt/Vol., Packaging, Price: Wide-mouth cup with foil lid.
How Stored: Refrigerated.
New Product–Documentation: Only the lactic (acidophilus) one of these soymilk products is cultured/fermented. Color photo from a Kibun brochure shows the product (Celery Cocktail) in the package (a cup) with a straw in the top.

Fukushima. 1978. In: American Soybean Assoc. ed. International Soya Protein Conference, Proceedings. Hudson,

Iowa: ASA. p. 40. "Recently, a new fermented drink using soybeans appeared on the market. This product is a drink which is made by the fermentation of soy milk by lactic acid bacteria."

Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 313. "Kibon Foods, Odakyu Kashiwagi Biru 8-gai, Nishi Shinjuku 7-7-30, Shinjuku-ku, Tokyo 160, Japan. Tel. 03-365-5011. Attn. Mr. Mizumachi. Maker of Soena lactic soymilk drinks, and dairylike soymilk in Tetra Brik cartons."

Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Kibun first made commercial soymilk in Japan in 1977.

Brian Fitzpatrick. 1982. Soya Milk in Asia. States that Kibun first launched soymilk in Japan in 1976.

2922. Oku, E.O.; Eka, O.U. 1977. Chemical evaluation of nutritive value of soya pap and soya porridge: The Nigerian weaning foods (Unpublished data). Published in and cited by Ahmadu Bello University, Extension Bulletin No. 21. (Reprinted Nov. 1985). See p. 10, 74. Unpublished manuscript.
• ***Summary:*** Page 10 gives the average chemical composition of various Nigerian paps and porridges, including: Millet pap supplemented with soyabean flour. Millet pap supplemented with soyabean milk. Millet porridge supplemented with soyabean flour. Millet porridge supplemented with soyabean milk. In each case, the soy-fortified food was much richer in protein than the basic cereal food. Address: Nigeria.

2923. **Product Name:** Soy Melk [Pasteurized: Sweetened, or Carob].
Manufacturer's Name: Swan Food Corp.
Manufacturer's Address: 5758½ Bird Rd., Miami, FL 33155.
Date of Introduction: 1977.
Ingredients: Carob: Organic soybeans, pure water, carob powder, pure maple syrup, pure vanilla extract.
Wt/Vol., Packaging, Price: Pure-Pak carton: ½ pint wholesales for $0.35 or $0.38½; quart wholesales for $0.80 or $0.90 (April 1978).
How Stored: Refrigerated.
New Product–Documentation: See next page**.** Label. 1977. 2.75 by 3.5 inches by 2.75 wide. Pure-Pak gable-top carton (like a milk carton). Blue, green and red on vanilla. "Keep refrigerated. Contains no cholesterol. A little heaven on earth. The kingdom of heaven is within you. Hope you enjoy our nutritious soy melk. It's a delicious natural food product that can be substituted in any recipe calling for milk. Sweetened soy melk is ideal for desserts. It's great straight from the carton, too. Using whole, organic soybeans, our soy melk is high in protein and other valuable nutrients, and is an excellent food source. Please try our other fine products: Soy shakes, iced herb teas, tofu and other tofu products." On three of the four panels is a 1-inch diameter circular logo featuring a stylized swan, with two large wings symmetrical about a vertical axis and an arched neck on the left side. The other half of the arch is drawn in to form a heart, inside of which is written "Because we love you." Across the inside top are the large words "Swan Foods." A full-color rainbow arches below them and over the swan. At the top center, between the words "Swan Foods," are the smaller words "Nature's Finest" written one below the other; between them is an infinity sign.

"Swan Food Corp." order form and price list for distributors. 1978. April.

2924. **Product Name:** Soy Shakes [Carob, Vanilla, or Strawberry].
Manufacturer's Name: Swan Foods Corporation.
Manufacturer's Address: 5758½ Bird Rd., Miami, FL 33155.
Date of Introduction: 1977.
Ingredients: Incl. soymilk.
Wt/Vol., Packaging, Price: 1 pint plastic bottle. Retails for $0.50-$0.60 (April 1978).
How Stored: Refrigerated.
New Product–Documentation: Label. 1977. 3 by 3.5 inches. 3-color. "Swan Food Corp." order form and price list for distributors. 1978. April.

Ad (full page, black-and-white) in *Alternatives* magazine (Miami, Florida). 1978. July/Aug. p. 49. "Remember the name!" "Soy Shakes (Carob, Vanilla & Strawberry)." Processing described by Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 254. Note: These are America's earliest known commercial soymilk shakes.

2925. **Product Name:** Mary's Rice Pudding.
Manufacturer's Name: Swan Foods Corporation.
Manufacturer's Address: The Soybeanery, 5758½ Bird Rd., Miami, FL 33155.
Date of Introduction: 1977.
Ingredients: Organic brown rice, soy melk, raisins, maple syrup, sea salt.
Wt/Vol., Packaging, Price: 8 oz.
How Stored: Refrigerated.
New Product–Documentation: Label. 1977. 2 by 1¼ inches. Self adhesive. Black on white.

2926. Albright, Nancy. 1977. Rodale's naturally great foods cookbook: the best foods to use and how to use them in over 400 original recipes. Emmaus, Pennsylvania: Rodale Press. [vi] + 408 p. Illust. 24 cm. Reprinted in 1983 as
• ***Summary:*** This book is based on natural foods but makes widespread use of meat, poultry, fish, and dairy products. Raw, unstrained clover honey is used as a sweetener instead of white sugar which "is dangerous to health..."

"Natural foods restaurants are 'in'" (p. 2). "... the joys of natural foods" (p. 3). "... consumers are making a firm commitment to natural food cooking."

Soy related recipes: Rice and soy crepes (with ½ cup soy flour, p. 53). Whole soybean casserole (p. 74). Bulgur soybean loaf (with 3/4 cup soybeans, p. 81).

The section titled "The soybean" (p. 275-85) begins: "The queen of the legumes is the soybean. And its status is growing. From a relatively unknown commodity... it has finally come into its own in this country as an important food. The soybean is the vegetable that most nearly provides the complete protein necessary for good health." Discusses varieties suited to the family garden. Recipes: Green soybean and corn succotash (with green vegetable soybeans). Soy flour for added values: Soy pancakes. Soy cheeseburgers (with soy grits). Tofu (soybean curd): Mentions the Learning Tree tofu kit and The Book of Tofu, by Shurtleff and Aoyagi (1975, Autumn Press; no tofu recipes are given). Soy sauce (shoyu): Herbed soybean salad (with 1 cup soybeans). Fresh

vegetable and fruit stew with soybeans. Soybean-cabbage casserole. Soybean coffee. Soybean custard pie. Soy milk (homemade). Carrot soy loaf. Liver pate (with 1 cup soy pulp [okara] remaining from making soy milk). Mock pumpkin pie (with soy pulp). Scroggin (backpacker's food, with 3 cups soybeans, boiled). Soy potato dumplings (with ½ cup soy flour). Soy salad dressing (with 3/4 cup soy flour or powder).

A photo (facing copyright page) shows Nancy Albright cutting vegetables in Rodale's Fitness House kitchen. Address: Author of *The Rodale Cookbook*.

2927. Anderson, Eugene N., Jr.; Anderson, Marja L. 1977. [Food in] Modern China: South. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 317-382.

• ***Summary:*** Page 326 states: Soybeans–the fifth of the classic Five Staples (or Five Grains)–are usually the most important, although other legumes make a surprisingly good showing in south China, no doubt because soybeans grow better in the north. The soybean "produces more protein per acre and per pound than any other common humanly edible crop, plant, or animal. This has caused them to become more important than any animal food as a protein provider in China. The Chinese have long recognized their similarity to animal products and, indeed, have built up a huge cluster of imitation-meat foods (probably developed originally by, and certainly now associated with, vegetarian Buddhists). The Chinese lack of interest in dairy products is almost certainly, in part, a result of the fact that the soybean provides the same sorts of nutrition more economically–though a desire to differentiate themselves from the border nomads and to be independent of them in food economy must also be taken seriously as an explanation. (It is the classic Chinese explanation of the phenomenon but has been dismissed by those moderns who believe that all traditional explanations must necessarily be wrong.)

"Further discourse on the soybean belongs properly in the following section on food processing, for the soybean is used neither in its raw state nor, usually, in a simple boiled or roasted form. There are good reasons for this. The soybean, being so nutritious and succulent, has been faced with intense natural selection pressure by seed-eating insects and other animals; surviving soybean strains contain whole galleries of poisons and other unfortunate chemicals, which protect the seeds against destruction but make them dangerous food in the uncooked and unprotected state (Committee on Food Protection 1973). Simply prepared soybeans are not very digestible, since heat bonds some of the nutrients into hard-to-digest form in the intact bean. Thus almost all soybeans consumed in China are fermented, ground into flour, and then processed, sprouted, or otherwise milled."

"The soybean is so famous that one is surprised to discover from Buck that the broad bean outranks it in some parts of south China." However in genetically susceptible individuals, *Vicia faba* produces favism, a condition characterized by acute anemia and other unpleasant symptoms. Other important sources of protein are black soybeans (a variety of soybean mentioned by Buck) and sprouts from mung beans and soybeans (*tou ya*). Bean sprouts bridge the gap between grains and vegetables (*ts'ai*) (p. 326-27).

"A huge bowl of rice, a good mass of bean curd, and a dish of cabbages–fresh in season, otherwise pickled–is the classic fare of the everyday south Chinese world."

"The New World vegetables stand out as a special class because of their common and recent origin in China and their extreme importance. The white and sweet potatoes have become staples, as has corn. In addition to these, the peanut (*Arachis hypogaea*) has become the most important oilseed through much of south China, as well as a much used food" (p. 328). The peanut came from South America. Today, peanuts have become more important in areas where they are grown than rapeseed. Peanut and rapeseed oils are polyunsaturated and contain plenty of linoleic acid, a dietary requirement (p. 333, 343, 348). Mushrooms and their relatives are widely used in vegetarian dishes (p. 332).

The section on food processing (p. 337-41) notes that tragic practice of polishing rice, which removes most of the nutrients including fiber. There are many questions about the origins of pasta. Egg noodles probably originated in China. Italian spaghetti is similar to Chinese *mien* and ravioli to *chiao-tzu,* but they may have existed elsewhere before Marco Polo brought them to Italy from China. The technology of soybean process is too complex to discuss except briefly in this chapter. Most important is the production of bean curd or *tou-fu* (Cantonese *tau-fu,* Hokkien *tau-hu*). Hokkien cooks prefer a drier, firmer bean curd. Bean curd is often sold fried. The skin resulting from boiling soymilk [yuba] is skimmed off, dried, and widely used. "Other closely related processes produce the range of imitation meats developed by vegetarians, specifically Mahayana Buddhists. Credible imitations... are made for chicken, abalone, and other white meats, and even beef and pork. The West has picked up the idea and developed it much further, climaxing in the production of textured vegetable protein (TVP), but has–characteristically!–ignored the problem of making the result taste good. The ideal in the West seems to be to make it tasteless" (p. 339).

Concerning fish farming (p. 334-35): "Some fish, however, a pond-reared. Those that have been effectively domesticated are carps. These have several advantages: they produce vast amounts of protein per acre; they do not have to be specially fed since they eat algae and weedy grass and small animals of the ponds and pond fringes; they can live in foul water, and thus in stagnant ponds and market fish barrels; they are efficient converters, putting a large

percentage of their feed into growth; and relative to other fish, they are easy to breed in captivity. The first fish farmed in the world were probably the Chinese carps." However, no mention is made of soybeans being fed to the fish. Address: 1. Assoc. Prof. of Anthropology, Univ. of California at Riverside; 2. Riverside, California.

2928. Archer-Daniels-Midland. 1977. What's new: A 75 year report from Archer Daniels Midland Company. Decatur, Illinois. 12 p.
• ***Summary:*** "Our forerunner started in 1902 with a single mill and soon became a leading crusher of flaxseed... 75 years ago, ADM was strictly in the business of crushing flax for its oil, which was used primarily as a drying oil in paint... Today ADM is the bridge between two giant industries, agriculture and food... Total commitment to the baking industry has led us to add vital wheat gluten to our line of specialties recently. Gluten is the non-soluble protein in wheat. It is the part of wheat flour that makes it possible to make an elastic, cohesive dough from wheat flour. Adding vital wheat gluten enables bakers to use less expensive flours, it improves bread features such as loaf volume, flavor, softness. It's a necessary ingredient in the popular new variety breads."

In "1965 ADM introduced TVP brand textured vegetable protein. Ten years later we introduced a second generation of TVP containing 70% protein, along with a new soy protein concentrate. Today you'll find ADM's soy proteins in more than 600 brands of prepared foods on the grocer's shelves. Soups, chili, frozen dinners, pizza, gravies. You'll find other forms of soy protein in everything from beverages and baked goods to pet foods." Some of the most recent developments include: New soy variety breads, sweets that are good for kids (cookies based on the new Ardex soy protein concentrates), a new soy beverage based on new technology that tastes great and has the quality of nutrition needed by growing children, and Nutrisoy fiber (a soy bran). "Who needs high priced foods? Not the British. Cadbury's Soya Choice fills the bill. Based on TVP, these products are a raging success. It as the good flavor and nutrition of meat. At half the price." A color photo shows two cans of Cadbury's Soya Choice (Casserole Chunks, and Mince). A full-page black-and white photo on the facing page shows a person (perhaps William Atkinson) running a large extrusion cooker.

The last page is titled: "ADM Today: Where the people who feed the world buy their groceries." ADM Refined Oils makes Yelkin lecithins, margarine and shortening oils, and cooking oils. ADM Milling makes wheat gluten. ADM Protein Specialties makes: TVP textured vegetable protein (flavored and unflavored), TVP/2 textured vegetable protein concentrate (flavored and unflavored), Ardex 700 soy protein concentrate, Nutrisoy low and full fat soy flours, and Nutrisoy defatted soy flours and grits. Address: Archer Daniels Midland Company, Box 1470, Decatur, Illinois 62525.

• ***Summary:*** Over the past four years Trinidad and Tobago has achieved considerable success in the production of this rich bean at the Chaguaramas Agricultural Development Project. Address: [Chief Technical Officer, Ministry of Agriculture].

2932. Farm, The. 1977. Vegetarian prenatal nutrition and high protein recipes. Summertown, Tennessee: The Book Publishing Co. 14 p. 22 cm.
• ***Summary:*** Printed with green ink on white paper. On the cover is a photo showing a field of soybeans, in neat rows free of weeds.

Contents: Introduction ("The Farm is a large longhair spiritual community of 1100 people in Tennessee... We are all complete vegetarians [vegans]. Ours is a soy-based vegetarian diet). Taking care of your self while you're pregnant (by Margaret, Nutritionist for the Farm, incl. iron, calcium, table of nutritional value of soybeans). Recipes: Basic cooked soybeans. Soybeans and tortillas. Soyburgers. Soybean stroganoff. Soy mayonnaise. Soy fritters. Soy yogurt. Soy milk (homemade using soybeans or soy flour) Tofu (Bean curd, homemade using whole soybeans and nigari or epsom salts). Soy cheese. Soy flour basic salad and sandwich spread. Seasoned sandwich spread. Hi-protein soy bread (incl. soy milk and soy flour). Soy souffle (incl. soy flour and nutritional yeast). Soy "nuts" (dry roasted or deep fried). T.V.P. Textured vegetable protein. T.V.P. tortilla

filling. Spaghetti sauce with T.V.P. Sloppy joes. Good tasting nutritional yeast (A good source of B vitamins. Distributed by The Good Tasting Yeast Company, c/o The Farm). Melty nutritional yeast "cheese." A word about B12 [vitamin B-12] ("If you are a complete vegetarian, eating only plant foods, you will need to supplement vitamin B12").

People at The Farm eat "soy ice cream" which is mentioned in the introduction, but no recipe is given. Address: The Farm, Summertown, Tennessee.

2933. Farm, The. 1977. Volume one: Sunday morning services on The Farm. Summertown, Tennessee: The Book Publishing Co. 159 p. Illust. No index. 21 cm.
• ***Summary:*** The Farm is a spiritual community in Tennessee. Stephen is the teacher. This book is excerpts of talks given by Stephen from Aug. 1975 to March 1977. Soyfoods and vegetarianism are mentioned occasionally. A few teachings: "Do not be distracted by any doctrines or dogmas... We are the energy amphibians; we live in the physical world and we live in the energy world... No Bodhisattva who is a real Bodhisattva cherishes any idea of a separated individuality whatsoever... Every time you have a glass of soy milk, or a piece of soy cheese or tofu, it is a loving gift from someone who was not paid, and did it out of their heart... Adversity is not to be avoided... The sober consciousness of waking bliss."

Photos show: Stephen Gaskin speaking (cover, facing table of contents, p. 18). Farm members meditating (many pages). Aerial views of The Farm (p. 94, 99). Young soybean plants about 3 inches high, probably growing on The Farm (p. 109). "Basically it comes down to really knowing that we are all One and knowing that God is real." Address: Summertown, Tennessee.

2934. Farthing, Bill. 1977. Odiyan country cookbook. Emeryville, California: Dharma. xii + 211 p. Illust. by Denise Anderson. Photos by Peter Ogilvie. Index. 20 cm.
• ***Summary:*** This lacto-ovo vegetarian cookbook is dedicated to Tarthang Tulku, Rimpoche, a Tibetan Buddhist teacher who is head of the Nyingma Institute, founded in 1969 in Berkeley, California, and of Odiyan, the Institute's country retreat center being built on a redwood forested mountain above the Pacific Ocean in northwestern Sonoma County, California. Odiyan is a transliteration of the Sanskrit name for the birthplace of Padmasambhava the great teacher who brought Buddhism to Tibet.

The Foreword notes: "Although our chickens produce many eggs, we are essentially on a correct balance of grains and beans or soy-dairy products to provide protein." A chapter titled "Home-Made Proteins" (p. 112-19) includes various soy-related recipes: Homemade soymilk. Homemade tofu. Kinugoshi. Tofu-nut butter (with ground walnuts, peanuts, almonds, or sesame seeds). Tofu and stir-fried vegetables. Sprouted soybean puree. A large photo shows community scale tofu-making equipment plus the observation: "If you enjoyed making your own bread, then you may find the soy-dairy a very rewarding aspect of cooking to explore."

Other soy-related recipes include: Soy-bean patties (p. 95). Miso and tahini spread (p. 130). Soymilk dressing (p. 131). Soy carob milk (p. 196). Soymilk lassi (p. 197). Nutmilk (made with 2 cups soymilk plus ½ cup almonds, walnuts, or cashews). Address: California.

2935. Hansra, R.K. (Miss). 1977. Evaluation of soy-whey weaning and supplementary food in terms of protein efficiency ratio, true digestibility and effect of its supplementation on the nutritional status of pre-school children. M.Sc. thesis, Punjab Aricultural University, Ludhiana. *
Address: India.

2936. Heide, Manfred. 1977. Vegetarische Ernaehrung: 193 Rezeptvorschlaege und Speiseplaene fuer ein Vierteljahr [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag. 133 p. Illust. (some color). Index. 24 cm. [13 ref. Ger]
• ***Summary:*** Chapter V, titled "Soya, and important food," discusses the nutritional value of soya and various soyfoods including soy oil, soy lecithin, soymilk, soy flour (and its use in diabetic diets), whole soybeans, textured soy protein (*Soja-Pflanzenfleisch*), soy sprouts, "We have every reason to incorporate soya into our diets!" Soya is so versatile. The introduction of soya into our kitchens can serve our health and keep our fitness for work. Soy-related recipes include: How to cook whole soybeans. How to make soy flour at home. How to sprout soybeans. Soy sprout salad. Soy sprouts with soy noodles and vegetables.

In other parts of the book, textured soy flour (*Sojafleisch*) is served with rice. Soy flour can be added to soups and sauces.

One half-page ad titled "No meal without protein" is run by Henselwerk GmbH, 7031 Magstadt bei Stuttgart. It states that Henselwerk in Magstadt is the pioneer company in processing soybeans. The company's products include: Hensel Vollsoja [Hensel whole soy flour], Hensel Soja fettarm [low-fat soy flour], Hensel Soja-Kost nach Hackfleischart [textured soy protein granules], Hensel Soja-Fleisch in Trockenwuerfeln [textured soy protein cubes], Hensel Soja-Flocken (whole soy flakes), Hensel Kleine gruene Sojabohnen zum Keimen (small green soybeans for sprouting).

A full-page ad titled "For your healthy day" is run by granoVita Soja-Kost. The 8 soy products shown are sold in Reform Houses. All but the first is sold in a can. Soja-Vita (*Fertig gewuerzte Bratlings-Mischung*). Pasta chuta Bolognese. Koletts (Cutlets). Soja-Goulasch (Soy Goulash

in Tomato Sauce). Soja-Curry (Soya Meat in Curry Sauce). Sojamilch (Soymilk). Soja-zart. Soja Wuerstchen (Soy Sausages). The author was born in 1934. Address: Germany.

2937. Hsu, Vera Y.N.; Hsu, Francis L.K. 1977. [Food in] Modern China: North. In: K.C. Chang, ed. 1977. Food in Chinese Culture. New Haven, CT, and London: Yale Univ. Press. 429 p. See p. 295-316. [2 ref]
• ***Summary:*** "Soybean grows easily as a companion crop with kaoliang or corn. It is consumed all over China" in various forms; as bean curd [toufu], soybean milk, *tou fu nao* ("bean brain"–slightly coagulated soymilk, softer than tofu), *tou cha* [okara] ("the finer remains of the soybean from which the bean milk has been extracted is usually fed to pigs, but can be the poor mans ta'si [side] dish").

Young soybeans in pods, freshly picked from the field, are boiled in water or baked on the fire and consumed as snacks. They are served with soy sauce and sesame oil and eaten by using the teeth to scrape the beans into one's mouth.

Other soybean products consumed in north China include: soybean sprouts (eaten after submersion in boiling water for 1-2 minutes), "fermented bean curd (*fu ju*), molded bean curd (*ch'ou tou fu*), dried bean curd [pressed bean curd] (*tou fu kan*) (p. 301).

Note: This is the earliest English-language document seen (Oct. 2011) that uses the term *ch'ou tou fu* or the term "molded bean curd." Address: 1. Evanston, Illinois; 2. Prof. of Anthropology, Northwestern Univ.

• ***Summary:*** This is an update of the 1972 Tropical Products Institute study. A table lists products by continent and country, and categorizes them as exploratory stage, production terminated, production irregular/position not known, and in regular production, each with its year of introduction. Soy products terminated include Saci (1968) in Brazil and Saridele (1957) in Indonesia.

Soy products with production irregular or position not known include Soya Products in Mexico (introduced by Conasupo in the early 1960s) and Solein (1963) in Brazil.

Soy products in regular production include Puma (1969) in Guyana, Pronutro (1962) in South Africa, Soya Products (1968) in Uganda, Vitasoy (1940) in Hong Kong, Vitabean

(1952) in Malaysia and Singapore, and Soya Products (1963) in Thailand. Other soy products discussed include Superchil and Fortesan in Chile, Bienestarina in Colombia, Incaparina in Guatemala, Maisoy in Bolivia, Leche Avena in Ecuador, Nutri Nugget, Protesnac, Protein Plus, Shaktiahar, and Paushtikahar (all from Soya Production and Research Assoc., Bareilly) in India, and Thriposha in Sri Lanka.

Note: This is the earliest document seen (Nov. 2010) that mentions Thriposha. Address: Head, Marketing and Industrial Economics Dep., Tropical Products Inst., London.

2948. Rahman, Lutfur; Rubbi, S.F.; Shamsul Haque, M.; Zahidul Haque, M. eds. 1977. Annual report. *Bangladesh Co-ordinated Soybean Research Project, Annual Report* No. 2. 193 p. For 1976-77. (Bangladesh Agricultural Research Council, Dacca).
• ***Summary:*** This report covers the period from July 1976 to June 1977. The following organizations are involved in the program: Bangladesh Agricultural University at Mymensingh (BAU), Bangladesh Agricultural Research Institute (BARI), Bangladesh Rice Research Institute (BRRI), Bangladesh Council for Scientific & Industrial Research, Dacca (BCSIR), Institute of Nuclear Agriculture (INA), Sugarcane Research Institute (SRI), Rajshahi University (RU), Mennonite Central Committee (MCC; does not receive program funds), United Nations International Children Emergency Fund (UNICEF; does not receive program funds).

Information about the research conducted on soybean foods is given on pages 14-20 (soy biscuits, soy-flour, soymilk), and pages 172-83. The latter describes 3 experiments: 1. Preparation of different soy-recipes and studies on the nutritive value of the prepared products (soybean paste made from cooked whole soybeans). 2. Studies of soybean oil and the utilization of the oil and oil cakes. 3. Studies on the isolation, recovery and utilization of soy proteins for preparation of various food products (soymilk). Address: BARC, 130-C, Dhanmondi Residential Area, Road No. 1, Dacca–5, Bangladesh.

2949. Roquib, M.A. 1977. Soybean for health. Bidhan Chandra Krishi Vishwa Vidyalaya, Kalyani, West Bengal, India *
Address: Faculty of Agriculture, Bidhan Chandra Krishi Viswa Vidyalaya, West Bengal, India.

2950. Scott, Gavin. 1977. Hot pursuit. New York, NY: St. Martin's Press. 193 p. See Chap. 3, p. 26. 22 cm.
• ***Summary:*** Arriving by airplane in Singapore, which was like stepping into an oven and onto another planet, he walked "down street after street, drinking glass after glass of coconut milk, freshly-squeezed orange juice, mango juice, soya bean milk bought from little carts at every corner." Address: London, England.

2951. Takai Seisakusho. 1977. Takai Seisasakusho no kikai [Takai tofu production equipment leaflets (Portfolio)]. Takai Manufacturing Co., 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan: Takai Seisakusho. 25 inserts. [Jap]
• ***Summary:*** William Shurtleff contacted Takai Seisakusho, the largest and oldest manufacturer of tofu equipment in Japan, and asked if he could place an order for Farm Foods in San Rafael. Wataru Takai said that all the information about his equipment was on single-sheet color leaflets printed on both sides in Japanese. They agreed that Takai needed an English-language catalog of tofu equipment, the first such catalog ever to be created. The following glossy color leaflets (most numbered, all undated; each 25.5 x 18 cm, and printed with black and one color of ink on glossy white paper) were given to Shurtleff to use as the basis for his work: 1. Grinders. 2. To-100 system. 3. TM-100 system. 4. Boilers. 5. Mini-Star and other complete systems. 9. Hydraulic press. 10. Jack press, forming box table, and modern forming box. 11. Pressure cookers. 12. Tandem pressure cookers, and whole modern system. 13. Automated yaki-dofu broiler. 15. Three metal sinks, metal curding vat, tofu cutter, tofu forming box, silken tofu box and cutter. 16. Deep mixing plate, simple lever press. 17. Ganmodoki

mixing machine. Draining racks. 18. Mechanized deep fryers. 20. Two-chamber manual deep-fryer. 24. Rotary feeder–to move soybeans. 28. Pump. 30. Mechanized tofu press. 32. Case washer. 33. Continuous roller extractors (4 models). 35. Mechanized soymilk maker. 36. Mechanized soybean soaker and washer. 37. Mechanized tofu cooling tank. 38. Automated TGS-2 whole system. 39. Automated whole system. 40. Automated TGS whole systems (Nos. 1-4 and 10). 134. Automated tofu factory TGS 7-9.

Unnumbered leaflets: TM-100 whole system and other equipment (blue). Micro mini-plant TGS-4 (green). Order form. Address: Ishikawa-ken, Japan.

2952. Takai Seisakusho. 1977. Takai no tôfu kikai [Takai tofu production equipment (Brochure)]. Takai Manufacturing Co., 1-1 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan: Takai Seisakusho. 6 p. [Jap]
• ***Summary:*** On the cover are two square arrays of dots, one green and one blue, offset slightly to give the impression of three dimensionality. In the lower right is the address and phone number of Takai headquarters and five branches.

When the brochure is opened, the two left panels contain six large black-and-white photos: (1) Outside of factory No. 2. (2) Inside factory No. 2 with finished equipment standing on the floor. (3) An aerial view of the long bay of factory No. 1 showing many machines under construction. (4) Eight draftsmen at work in the design room. (5) Three women office workers in a modern office. (6) The exterior of factory No. 1. In the upper left of the far left panel is basic information about the company, which was founded in 1917. The inner right panel shows photos of five Takai tofu and soymilk systems, with a description of each. On one back panel are photos of four more larger systems. On the other back panel is a chronology of the company. Address: Ishikawa-ken, Japan.

2953. **Product Name:** [GranoVita Soymilk–Instant].
Foreign Name: GranoVita Sojamilch–Instant.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany. Phone: 04 13 11 89 41.
Date of Introduction: 1977?
Ingredients: Soybeans.
How Stored: Shelf stable.
New Product–Documentation: Full-page ad for 8 granoVita soy products in the book by Manfred Heide. 1977. *Vegetarische Ernährung: 193 Rezeptvorschläge und Speisepläne für ein Vierteljahr* [Vegetarian nutrition and food: 193 recipe suggestions and meal plans for a quarter of a year]. Stuttgart, West Germany: Paracelsus Verlag. This product is named "GranoVita Sojamilch–Instant. Rein pflanzliche Sojamilch-Nahrung."

2954. Huang, Carol Ann. 1977? Re: Work at the soy dairy on The Farm in Wisconsin. Letter to William Shurtleff. 1 p. Undated. Handwritten with signature on letterhead.
• ***Summary:*** Carol Ann thanks Bill for his bag [probably for making soymilk or tofu] and information on tempeh and miso. While Bonnie and John are in La Paz, Mexico, Carol is "doing the Soy Dairy." She wrote to Mitoku in Japan for some koji or koji starter, but they suggested she write Westbrae. "I'd love to get it together to make several big crocks of miso in the fall." Address: Route 2, Ettrick, Wisconsin 54627.

2955. Marine Colloids. 1977? Non-dairy imitation milk stabilized with carrageenan (Brochure). Springfield, New Jersey. Technical Bulletin No. 256. 3 p. Undated.

2956. Wells, Patricia. 1978. How to increase nonanimal protein in the daily diet. *New York Times.* Jan. 25. p. C6.
• ***Summary:*** It is no accident that Mexicans eat corn with their beans, that Italians combine pasta with their beans, or that Japanese sprinkle soy sauce on their rice. These are all simple ways of "combining incomplete vegetable proteins to create a balanced protein." The idea of "complimentary protein" is not new, but it has been popularized by the book Diet for a Small Planet, by Frances Moore Lappe.

When baking, experiment with soy products. In recipes calling for 2 cups wheat flour, for example, use ¼ cup soy flour and 1 3/4 cups wheat flour.

Gives 4 recipes, including: Leafy Chinese tofu (with sesame seeds, soy sauce, and brown rice). Vegetable rice curry (with soy grits and peanuts). Garbanzo spread.

2957. Ang, H.G.; Kwik, W.L.; Tan, S.F.; Theng, C.Y. 1978. Development of traditional and new soy products using defatted meal. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 53-58.
• ***Summary:*** Contents: Abstracts. Introduction: Non-fermented products (soymilk, soybean curd, yuba), fermented products (soy sauce, soy cheese, tempeh), others (soybean sprouts, whole bean), soymilk and soymilk powder from defatted soymeal. Results and discussions: Preparation of soymilk powder. Conclusion. Address: Dep. of Scientific Services, Singapore.

2958. Aoki, Hiroshi. 1978. New soy protein food market and products in Japan. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 66-69.
• ***Summary:*** Contents: Introduction. General survey of the new soy protein food products in Japan. Influence of the establishment of 200-mile economic zones. Utilization of new soy protein products for traditional soybean foods.

Concluding remarks.

Chronology of new soy protein food development:

1955–Undenatured, solvent-extracted, defatted soybean flakes start to be produced for use in tofu production. These flakes became the bases if the new soy protein products in Japan.

1960–Defatted soy flour for bread and confections.

1961–Soy protein concentrates for fish products.

1962–Soy protein extracts for dairy and meat products.

1965–Soy protein isolates.

1970–Spun soy protein fiber, and textured and structured protein.

Soymilk, which has not been a real traditional food in Japan (unlike China) can be viewed as a new protein product. Though no commercial trials have yet succeeded, very recent test market trials made by several manufacturers of soymilk made from whole soybeans and also from soy protein isolates, seem to suggest some possibilities of success. Address: Otsuma Women's Univ., Tokyo, Japan.

2959. Bhumiratana, Amara. 1978. Infant food supplement: A soya bean based product. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 77-92. [5 ref]

• ***Summary:*** Contents: Abstract: Nutritional requirement for infant, development of food supplements (kaset soy milk, kaset infant food). Appendix I: Thai baby food standards. Appendix II: Joint FAO/WHO codex alimentarius commission draft standard for infant formula.

A table gives a detailed comparison of human milk and cow's milk. Though both contain about the same number of grams of solids per 100 gm (12.9 gm and 12.7 gm respectively), the human milk contains only one-third as much protein (1.1 gm vs. 3.3 gm) and 27% as much calcium (340 mg vs. 1250 mg). Address: Inst. of Food Research and Product Development, Kasetart Univ., Bangkok, Thailaland.

2960. Bressani, Ricardo. 1978. The quality of soybean protein as tested in children. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 30-34. [17 ref]

• ***Summary:*** Contents: Introduction. Studies with soybean as the sole source of protein: As a milk substitute in infants and malnourished children, protein quality in children aged 8-12 years. As a protein supplement. Conclusions. Address: INCAP, Guatemala.

2961. Shurtleff, William. 1978. Household preparation of winged bean tempeh, tofu, milk, and sprouts. In: 1978. The Winged Bean. Los Banos, Laguna, Philippines: Philippine Council for Agriculture and Resources Research (PCARR). xvii + 448 p. See p. 335-39. Jan.

• ***Summary:*** This book consists of papers presented at the 1st International Symposium on Developing the Potentials of the Winged Bean. Held Jan. 1978, at Manila, Philippines. Contents: Introduction. Homemade winged bean tempeh: Recipe, directions, polyethylene (plastic) bags, baking pans or pie tins, good tempeh, immature tempeh, inedible tempeh, troubleshooting (tempeh is too wet, mold is sparse and does not bind beans tightly, tempeh contains black spots or patches, tempeh smells strongly of ammonia, mold grew abundantly in some places but sparsely in others). Homemade winged bean tofu: Recipe, directions, troubleshooting (low yield, small curds or crumbly tofu texture, coagulant was insufficient). Homemade winged bean milk: Recipe, directions, honey-vanilla, rich and creamy, carob-honey, malt, mocha, or coffee. Homemade red winged bean miso. Homemade winged bean sprouts.

Note: This is the earliest document seen (Jan. 2011) that describes how to make tofu from winged beans (Kantha 1983). Address: New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

2962. Stein, Ellin. 1978. Making money making tofu. *Whole Foods* (*Berkeley, California*). Jan. p. 32-38.

• ***Summary:*** This multi-part article describes commercial operations at Farm Foods (San Rafael, California–"Down on the Farm"), Redwood Natural Foods (Santa Rosa, California), The Tofu Shop (Rochester, New York–"Hope in Rochester"), Surata Soyfoods (Eugene, Oregon–"Tofu Recipe Doubles in Oregon"), and The Soy Plant (Ann Arbor, Michigan–"Midwest Soy Plant Expects to Grow").

Note: This is the earliest document seen (Sept. 2011) that mentions "Surata Soyfoods," the first company with the word "Soyfoods" in the company name.

Part of the main article ("A Busy Grasshopper Waits for Profits") and a full-page sidebar titled "Making Tofu on Main Street" tells the story of Laughing Grasshopper Tofu Shop in Millers Falls, Massachusetts. "With *The Book of Tofu* as their guide, Ira and Kathleen Leviton founded the first occidental tofu shop in the northeastern USA in this sleepy papermill town in Aug. 1976. At the time the Levitons owned and operated Corn Creek Bakery in Greenfield, eight miles away, and they ran the two businesses until August 1977, when they closed Corn Creek due to a continuing labor dispute. Having formed a partnership with two men, Tom Timmins in August 1976 and Michael Cohen in February 1977, the Levitons found their 100 bread accounts quite eager to stock tofu. They are now producing over 800 pounds of tofu per day to service their 100 accounts... Grasshopper makes tofu with Prize variety soybean shipped from Iowa in trailer loads and stored in the plant...

"Fully believing that the tofu market can be doubled within the first quarter of 1978, Grasshopper is moving this month to a 3200-sq.-ft. plant in Greenfield that already

offers a well-drained concrete floor... Tofu production will be upgraded with the installation of $5,000 worth of Japanese tofu machinery... Cohen estimates daily tofu capacity will increase to 1,600 pounds. 'As soon as we can,' says Cohen, 'we'll have not only tofu, but deep-fried age, soymilk–flavored and unflavored, tempeh, and soy "ice cream." We feel the market is at our fingertips. We've never taken the step into a serious sales campaign, but I think we will. So far, we make the soft tofu, we give the soft sell.'"

Note 1. This is the first issue of *Whole Foods* magazine. This is also the earliest article on soy seen (Aug. 2002) in *Whole Foods* magazine.

2963. Swan Food Corp. 1978. Swan Foods: Remember the name! (Ad). *Alternatives* (*Miami, Florida*). 2(1):1. Jan.
• ***Summary:*** This full-page black-and-white ad (see next page) lists the company's soy products, iced herbal beverages, and baked goods & pastries. Soy products include: Baked tofu, Marinated tofu, Caraway tofu, Tofu chip dip, Soy melk (sweetened & carob), Soy shakes (carob, vanilla & strawberry), Soyogurt (a cultured soy product), Wholegrain soy burgers. Baked goods include: Tofu cheesecakes, Carob maple swirl, Mary's cream cake, Mary's devil's food cream cake–"and more to come."

On the top half of the ad is a large circular logo featuring a stylized swan, with two large wings symmetrical about a vertical axis and an arched neck on the left side. The other half of the arch is drawn in to form a heart, inside of which is written "Because we love you." Across the inside top are the large words "Swan Foods." A full-color rainbow arches below them and over the swan. At the top center, between the words "Swan Foods," are the smaller words "Nature's Finest" written one below the other; between them is an infinity sign.

Across the bottom of the ad is written: "Every Swan Soybean Product contains all 8 essential amino acids (which are necessary for a balanced diet) and have no cholesterol. Available in health and natural food stores. Retailers: Swan Quality Products are distributed by your local Natural Foods Distributor, or contact Swan Food Corp., 5758½ Bird Rd., Miami, FL 33155. In Miami enjoy all Swan Products at Swan's Retail Deli & Bakery, The Soybeanery, 5758½ Bird Rd."

Note 1. This is the earliest ad seen for soyfoods in a U.S. magazine or periodical by one of the new generation of soyfoods manufacturers.

Note 2. In 1978 Alternatives (a small-circulation counter-culture magazine) was located at P.O. Box 330139, Miami, Florida 33133. Phone: 305-856-6975. Ad inquiries: 305-856-2473. Editor & publisher: Chik Shank. West coast contact: Steven M. Haines: 415-841-9217.

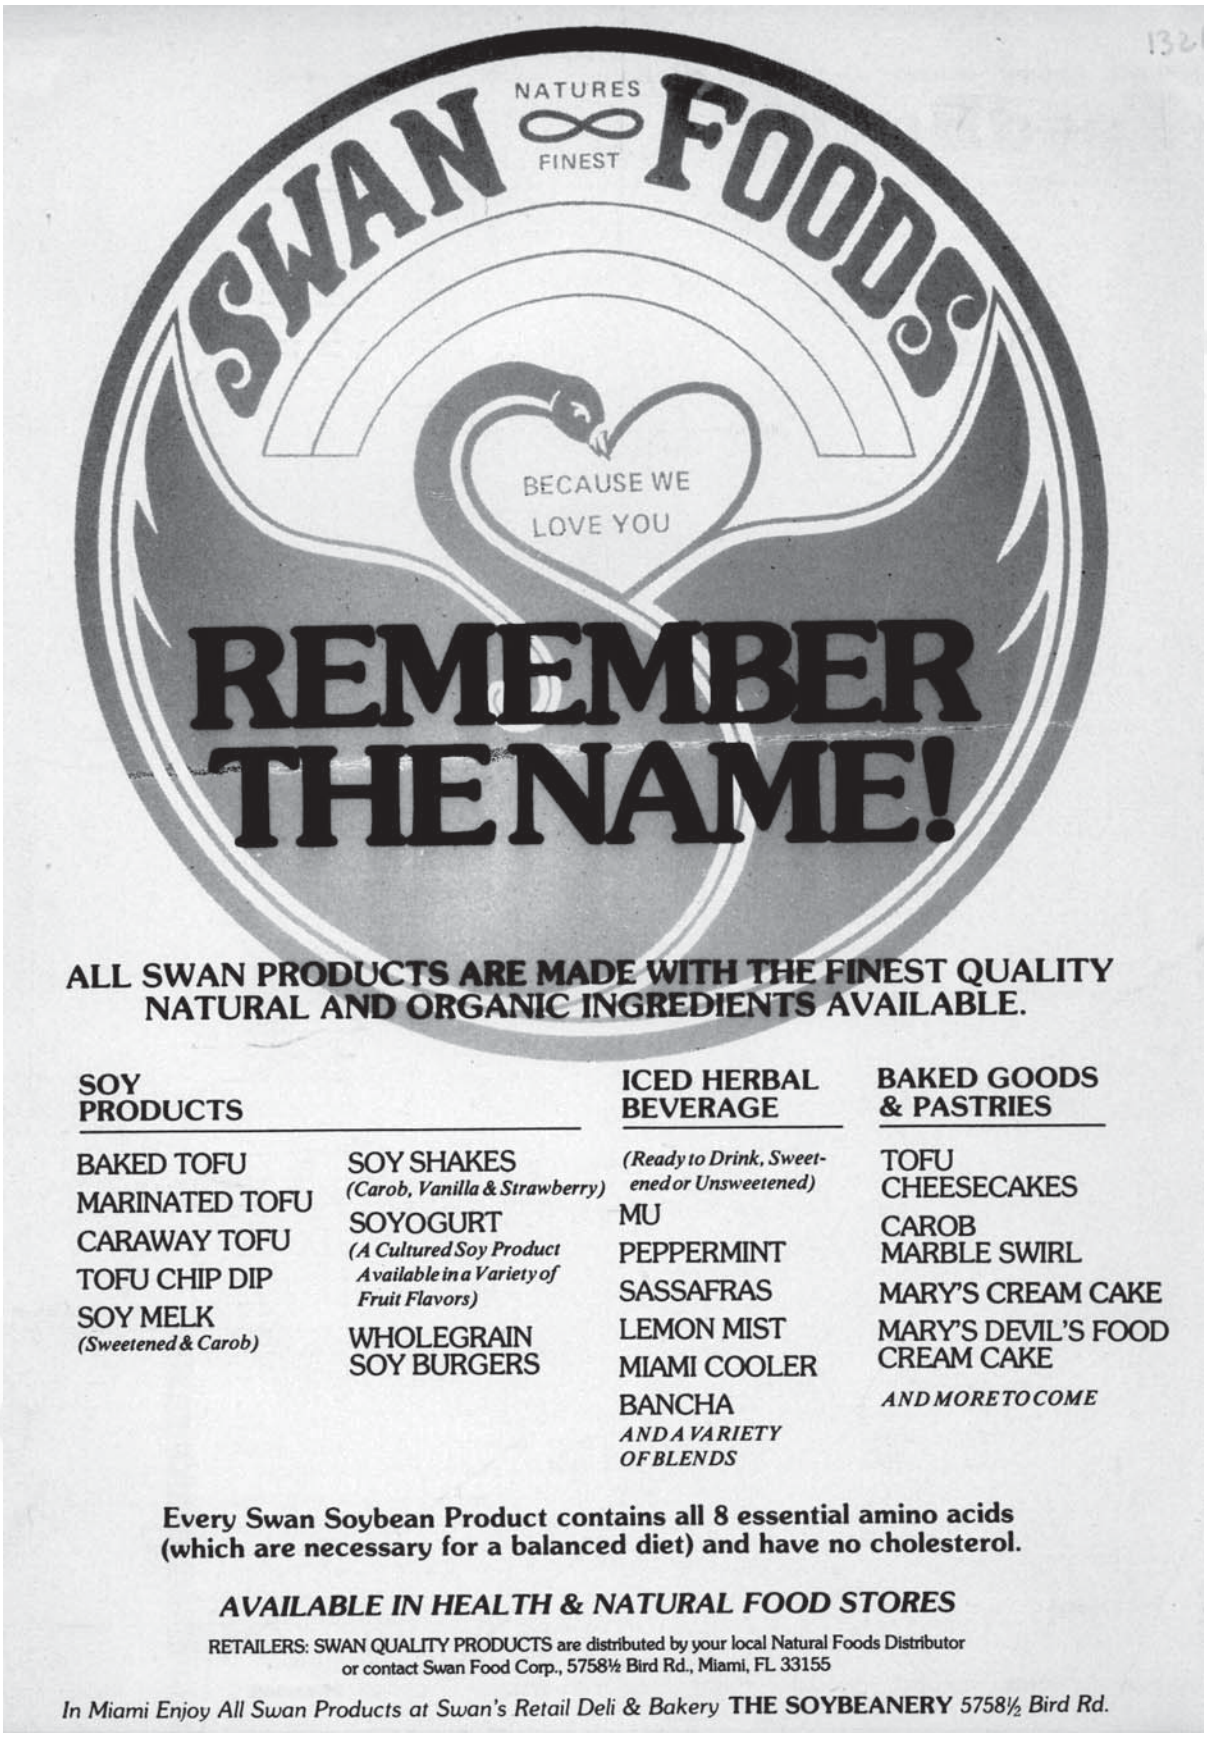
Note 3. This is the earliest known Swan Foods' ad published in *Alternatives* magazine–which began publication in August 1976. In May 1998 Jeanne Janson of Coral Gables (near Miami) checked every issue!

This full-page ad also appeared in the July/Aug. 1978 issue (p. 49) of this magazine. A half-page version of this ad appeared in the March, April (p. 45), May (p. 45, 49), June, September (p. 51), October (p. 51), November (p. 53), and December (p. 53) 1978 issues of this magazine. Thus Swan Foods has an ad (at least half-page in size) in every issue of *Alternatives* during 1978; then the ads disappear. Address: The Soybeanery, 5758½ Bird Rd., Miami, Florida, 33155.

2964. Tung, Ta-Cheng; Huang, P-C.; Chen, Y-T. 1978. Feeding of infants with a soybean milk-egg formula. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 104-08. [4 ref]
Address: National Taiwan Univ., Taipei, Taiwan.

2965. Wang, Jun Ryun; Lee, Yang Hee. 1978. Traditional soybean foods in Korea. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 43-47. [13 ref]
• ***Summary:*** "The origin of soy sauce and paste in Korean literature dates back to 683 A.D. (Shinmu King 3rd year of the United Silla period). Since an old Japanese literature [document], *Hwameyruitsuroku* [*Wamyô Ruijusho;* Collections of Japanese Names, by Subject], of Heyan [Heian] records that 'Maljang (Meju) is a Korean soy sauce and paste' and a record on Maljang was also observed in the ruins of Nara, it is evident that soy sauce and paste were introduced from Korea to Japan during the Nara period (645-793 A.D.). Therefore, it is believed that the beginning of their consumption in Korea should be in the third century of Kokuryo period."

"Soybean has been a major protein source in the Korean diet." In 1976 some 442,803 tonnes (metric tons) of soybeans were used in Korea as follows: oil and defatted meal 28.5%, curd (*tubu,* or tofu) 24.5%, paste (*doenjang*) 18.3%, soy sauce (*kanjang*) 10.6%, soy sprouts (*kongnamul*) 9.0%, hot soy paste (*kochujang,* made from meju, hot pepper flour, and cooked glutinous rice) 6.6%, soymilk (*kongkuk*) 0.14%, and other 2.4%. Other includes roasted soy flour (*konggomul,* used for coating rice cakes [mochi]), fried tofu (*yubu*), salted natto paste (*jeonkukjang / cheonkukjang*). *Doebiji* is fresh soybean puree, made by grinding soaked soybeans. When used as a food, it is usually cooked with vegetables, kimchi, and meat. Meju is balls of soybean koji like Japan's miso-dama. All fermented Korean soybean foods except Joenkukjang are prepared from meju. Its characteristic flavor results from *Aspergillus, Penicillium,* and *Mucor* species of molds on the surface of the balls and *Bacillus subtilis* on the inside. Damsuejang is a quick fermented soy paste made by crushing meju to a powder, adding a warm brine solution, then allowing it to ferment and ripen.



Note: This is the earliest English-language document seen (March 2009) that uses the word "Damsuejang" to refer to Korean-style soybean paste (miso).

The above usage is the equivalent of 12 kg per capita per year. The daily per capita consumption of soy sauce (kanjang) is 20 ml, of soybean paste (doenjang) is 15 gm, and of hot soybean paste is 10 gm. Most of the soy sauce (64%), doenjang (82%), and kochujang (76%) and all of the salted natto paste (joenkukjang) and quick fermented soy paste (damsuejang) are produced at a household level and consumed directly.

Both soybean production and imports have grown in recent years. In 1970 production was 231,994 tonnes, and imports were 36,291 tonnes for a total of 268,285 tonnes. In 1976 production was 294,949 tonnes (up 27% over 1970), and imports were 147,854 tonnes (4 times as much as in 1970) for a total of 442,803 tonnes (up 65% over 1970). Address: Korea Food Development Centre, Seoul, South Korea.

2966. Yu, Swee Yean; Ch'ng, Guan Choo. 1978. Soy bean foods in Malaysia. In: American Soybean Assoc., ed. 1978. International Soya Protein Food Conference, Proceedings. Hudson, Iowa: ASA. 136 p. See p. 48-52. [16 ref]
• ***Summary:*** Contents: Introduction. Fermented soya bean products: Soya sauce (manufacture of 'thin' (dilute) soya sauce, manufacture of 'thick' (viscous) soya sauce, microbiology of Malaysian soya sauce, stability of the product), tempeh, tau cheo (thick paste-like sauce), tao si (fermented black soybeans). Non-fermented soya bean products: Soya bean sprouts, tofu (semi-firm curd), tofu fah (soft curd), tow kwa (firm curd), tin chok (dried, flat sheets [yuba]), fu chok (dried, rope-like [dried yuba sticks]), tofu pok (deep-fried curd [tofu cubes]), chak tie (vegetarian [yuba] sausage), soya bean milk (tau cheong), meat analogues (soya flour is shaped into desired forms by hand). Nutritional data. Conclusion. Address: Universiti Pertanian Malaysia, Serdang.

2967. New England Soy Dairy Inc. 1978. Re: Announcing opening of New England Soy Dairy, Inc. Letter to customers and friends of the business, Feb. 17. 2 p. Typed, with signature on orange letterhead. [1 ref]
• ***Summary:*** "Dear friends. We are pleased to announce the opening of the New England Soy Dairy, Inc... As soon as we can hook up our deep fryer and practice making agé and agé pouches, we'll add them to our list of products... We have ordered a packaging machine that is scheduled to arrive in a few weeks." The company will then start making packaged tofu (now it is all sold in bulk), and may begin producing hard tofu (doufu), tofu pudding, and bottled soymilk. "The possibilities for freshly made soybean products seem almost endless. We are experimenting with a soy ice creme, and with miso. We'd really like to start producing tempeh this autumn... Our tofu price will remain at $0.44/lb to retailers." The company plans to pick up its first two distributors: Homestead Trading Co. and nearby Llama.

Shurtleff and Aoyagi, and their *Book of Tofu* and *Book of Tempeh* are mentioned in the letter. At the end: "Soy to the world, (Thanks to Akiko Aoyagi for the drawings)." A handwritten note at the end reads: "Bill & Akiko, We sent this around to our customers. We're still reading the B.ofT. [Book of Tofu]. Tom Timmins. P.S. Come visit us next time you're East."

Note: This is the earliest English-language document seen (March 2013) that contains the phrase "Soy to the world." Inspired by the new phrase, Akiko Aoyagi designed a wreath to send out with Bill and Akiko's Christmas cards later that year. Address: 305 Wells St., Greenfield, Massachusetts 01301. Phone: (413) 772-0746.

2968. Oberg, Elmer B. Assignor to Paul Taylor Company (Pasadena, California). 1978. Process for preparing stable full fat oilseed extract. *U.S. Patent* 4,075,361. Feb. 21. 8 p. Application filed 26 Nov. 1976. [6 ref]
• ***Summary:*** A full fat, stable food material derived from oilseeds is prepared by comminuting oilseeds in the presence of a hot (at least 180ºF, ideally near boiling) alkaline extract solution (preferably sodium hydroxide, with pH about 8), and then allowing the comminuted seeds to soak in the solution for about 3-7 minutes. After neutralizing the solution with preferably hydrochloric acid, the extract is clarified (centrifuged; the fiber is discarded) and heated to destroy anti-nutritional factors, concentrated, and spray dried. An illustration shows the required equipment. Address: Camarillo, California.

2969. Ramachandra, A. 1978. Customs procedures (Letter to the editor). *Times of India* (*The*) (*Bombay*). Feb. 23. p. 8.
• ***Summary:*** The writer is an Indian doctor who has been working in the USA for the past six years. He recently returned home with his family to visit relatives.

"I came to India with my son aged six months whose normal feed is soyabean milk." Not wanting to change the boy's diet during the one-month stay, he brought the required quantity. To his dismay, he was required by a customs official to pay duty on the item. He had to go to the supervisor to get the duty waived.

He urges that the vague customs rules be made more specific to take into account cases such as his. Address: M.D., New Delhi.

2970. Atherton, D.J.; Soothill, J.F.; Sewell, M.; Wells, R.S.; Chilvers, C.E.D. 1978. A double-blind controlled crossover trial of an antigen-avoidance diet in atopic eczema. *Lancet* i(8061):401-03. Feb. 25. [4 ref]
• ***Summary:*** Note: *Vegetarian Times* (March 1995, p. 85) defines a double blind study as one in which "Neither the

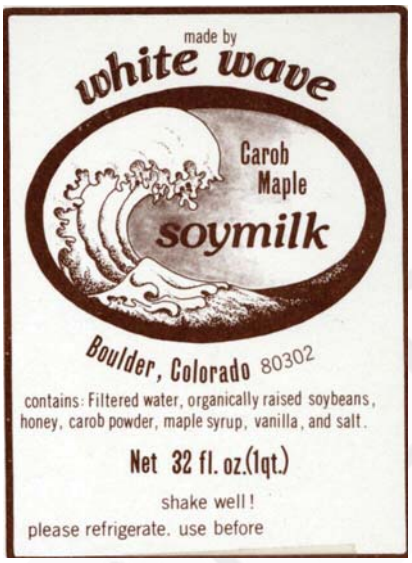
subjects nor the researchers are aware of the treatment being used. Provides the greatest precision because it removes any possibility of experimental bias."

A crossover design is defined as follows: "At different periods during the experiment, all subjects receive all possible treatments. For example, during a 10-week study of the effectiveness of a diet pill, researchers give half the subjects the pill and the other half a placebo. At week six, the treatments are switched. This design often gives more reliable data because the effects of the treatment and placebo are recorded for every subject." Address: 1-4. Hospital for Sick Children, Great Ormond St., and Inst. of Child Health, Guilford St.; 5. Dep. of Medical Statistics and Epidemiology, London School of Hygiene and Tropical Medicine, Keppel St. All: London WC1, England.

2971. **Product Name:** [Thick Soymilk].
Foreign Name: Tônyû Pururu.
Manufacturer's Name: Furuta Shokuhin Kogyo (Furata Foods Co.).
Manufacturer's Address: Japan.
Date of Introduction: 1978. February.
Wt/Vol., Packaging, Price: 60 gm poly cup.
How Stored: Refrigerated.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 73. This product was introduced in Feb. 1978 in a 60 gm poly cup, and distributed nationwide. Name of company with diacritics is: Furuta Shokuhin Kogyo.

2972. **Product Name:** Tofu Pudding (daufu-fa), and Soymilk.
Manufacturer's Name: Victor Food Products, Ltd.
Manufacturer's Address: 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
Date of Introduction: 1978. February.
New Product–Documentation: Talk with Stephen Yu. 1990. March 5. He started making soyfoods in Feb. 1978. His first three products were tofu, tofu pudding (daufu-fa), and soymilk.

2973. **Product Name:** Soymilk [Plain, Honey-Sweetened, or Carob Maple].
Manufacturer's Name: White Wave.
Manufacturer's Address: 1738 Pearl St., Boulder, CO 80302.
Date of Introduction: 1978. February.
Ingredients: Filtered water, organically raised soybeans, honey, vanilla, salt.
Wt/Vol., Packaging, Price: 1 quart plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Labels. 1980. 2.5 by 3 inches. Self adhesive. Blue on white. Carob Maple: Brown on white. Reprinted in Tofu & Soymilk Production. 1979.



p. 234, and Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Article in Soyfoods. 1981. Winter. p. 17. "Honey-sweetened." Interview with Steve Demos. 1987. Sept. Started in early 1978.

2974. *Town Crier* (*Greenfield, Massachusetts*). 1978. Tofu manufacturing plant opens. 12(3):1-2. March 22.
• ***Summary:*** "The New England Soy Dairy, 305 Wells Street, in Greenfield, has opened the doors on its new manufacturing plant... The firm has recently completed a long-projected expansion into more spacious and efficient facilities where it utilizes special tofu-making equipment imported from Japan enabling the company to produce nearly 10,000 pounds of tofu every week. The Soy Dairy ships this out all across New England, New York City, and Pennsylvania." The tofu, which retails for about $0.75/lb is "made from organically grown soybeans, water, and nigari, a coagulant extracted from seawater...

"The company uses the term 'dairy' to indicate its intention to provide a full range of alternative dairy-like products all derived from soybeans, including ice cream, yogurt, cream cheese, mayonnaise, whipped cream, tartar sauce, plain and flavored soymilk. In addition, other less familiar items will be introduced, such as miso soy bean paste, deep-fried tofu, and a fermented product, called tempeh. The Dairy operates at a medium level of technology, fusing traditional hand craftsmanship with modern labor saving equipment."

"The company is open Monday through Saturday, 8 a.m. to 6 p.m. and visitors are welcome." A photo shows Kathy Whelan Leviton cutting a large sheet of tofu into cakes.

Note: This is the earliest English-language document seen (Aug. 2013) that contains the word "dairy-like" (hyphenated) in connection with soyfoods.

2975. Gupta, Y.P.; Kapoor, A.C. 1978. Potential of soybean

for human consumption. *Indian Farming* 27(12):10-11, 13, 27. March. Series 2.
• ***Summary:*** "The work on soybean was originally initiated in 1882 but experimental trials were properly conducted in 1917 for its better selection. In 1932, Mahatma Gandhi made a strong plea to popularize the cultivation of soybean in India. However, it was not successful since the prevailing varieties were not suitable in crop rotation at that time, and the farmers were not able to market their produce economically...

"In India, interest in soybean research was revived in 1965-66 especially at the U.P. Agricultural University (Pantnagar) and at the J.N. Krishi Vishwa Vidyalaya (Jabalpur). Encouraged by the results at these Universities, and the growing interest of scientists in soybean research and the desire to meet the protein and oil shortages in this country, the Indian Council of Agricultural Research initiated an inter-disciplinary approach on soybean research in 1967 under the All-India Coordinated Project at different centres in various parts of the country. At present, the area under soybean cultivation in this country is 125,000 hectares with a total production of approximately 87,500 tons having an average yield of 700 kg/hectare." In India, high protein baby foods and pre-school children foods containing soy flour, such as Bal-Ahar and Bal Amul have been developed. Discusses the great untapped potential of the soybean for food uses in India. Address: Div. of Biochemistry, Indian Agricultural Research Inst., New Delhi.

2976. Kapoor, C.M.; Gupta, S.K. 1978. Dairy product analogs: A weaning food from soybean and whey. *Indian Dairyman* 30(3):179-81. March. [2 ref]
• ***Summary:*** "A child's life is determined, to a great extent, by the quality of food provided in its first five years. Serious dietary deficiencies in this period would damage health, inhibit growth, drain physical strength and possibly rob it of a chance to attain full mental development as has been clearly shown in several medical studies."

Milk protein is of superior quality. However milk and milk-based foods are out of the reach of many need children from low-income families. "Soybean protein ranks high in quality among the vegetable proteins besides being cheaper than most of the animal proteins... Soymilk or soybased formulae have been of considerable interest to nutritionists as a possible substitute for or supplement to cow or human milk particularly in the feeding of infants who are allergic to animal milk or have no access to it."

Tables show: (1) Essential amino acid requirements of infants compared with intake of protein from soymilk, cow milk, or human milk. The five columns show: (1) Amino acid. (2) Minimum requirement in mg per kg of body weight per day. (3-5) Amino acid provided by protein fed at a level of 2 gm of protein per kg of body weight per day. Note that soymilk is most deficient in the total sulphur amino acids (methionine + cystine), followed by tryptophane. (2) Physical properties of the soy-whey feeding food (SWFF). Nineteen properties (average values) are discussed. The whey was Cheddar cheese whey from buffalo milk–a waste product.

A flow diagram shows all basic steps in making of the weaning food. Experiments with albino rats show the weaning food had a PER of 3.24, which was higher than that of casein (2.50). The true digestibility was 86.0% vs. 94.9% for skim milk powder. "Child feeding trials with the product gave very encouraging results with respect to acceptability and value as a supplement" for feeding pre-school children. Address: Dairy Technology Div., National Dairy Research Inst., Karnal (Haryana), India.

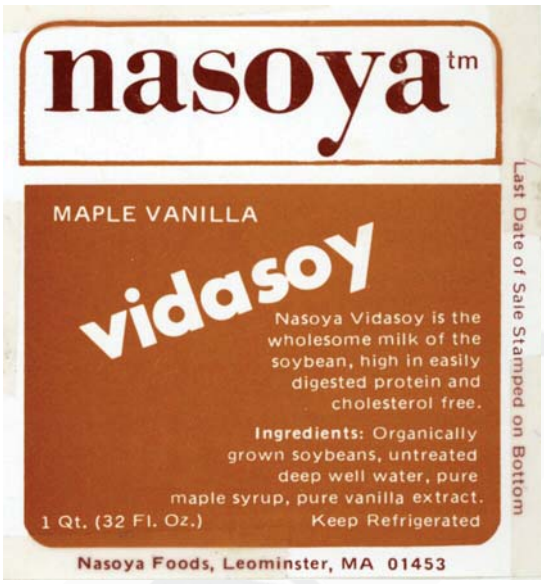
2984. **Product Name:** Vidasoy (Maple-Vanilla Soymilk).
Manufacturer's Name: Nasoya Foods.
Manufacturer's Address: Mechanic St. Ext. (P.O. Box 841), Leominster, MA 01453.
Date of Introduction: 1978. April.
Ingredients: Organically grown soybeans, untreated deep well water, pure maple syrup, pure vanilla extract.
Wt/Vol., Packaging, Price: 16 oz plastic jug.
How Stored: Refrigerated.
New Product–Documentation: Letter from John Paino of Nasoya. 1979. Jan. 16. Nasoya discontinued its sweetened soymilk in Aug. 1978. There were spoilage problems after 3-5 days with the screw-cap plastic bottle and distribution system they used, although it would last 2-3 weeks in the walk-in at 34-38ºF. They could get 3-5 weeks if they bottled the soymilk at 180ºF or hotter, but this put quite a strain on their refrigeration system and the polyethylene bottles were very easily crushed due to softening while hot. Tetra Pak was considered ideal but too expensive. The best solution in retrospect was thought to be hot packing in Pure Pak cartons. "We feel that there is an excellent market potential for soymilk, but we were glad to be able to gracefully get out of making it. The most popular types of soymilk were the sweetened kinds, and we feel strongly that sweetened soymilk is not a good quality food for most people to take on a regular food basis. We arrived at this conviction after producing a maple-vanilla soymilk for over 2 months, while



watching the effects it produced on ourselves, friends and co-workers. It made us scattered, confused, and accident prone, and also created chronic intestinal problems, although it was cooked for over 30 minutes. Thus we did not wish to take responsibility for making sweetened soymilk available commercially."

Leviton. 1979. Soyfoods. Summer (July). p. 29. John Paino notes: "'We stopped making sweetened soymilk because we felt it made everyone too yin, it spaced people out. If you drink sweetened soymilk every day, you will loose touch with reality.' Bob Bergwall says that when Nasoya first introduced their soymilk last year, the market was wide open and they could have sold enormous quantities. 'But we didn't want to put out a product we couldn't believe in. We might produce a plain soymilk sometime.'"

Letter from John Paino. 1981. Jan. "We were the first to manufacture fresh soymilk for non-frozen distribution on the East Coast." Label. 1981. 3 inches square. Self adhesive. Red brown and tan on white. "Nasoya Vidasoy is the wholesome milk of the soybean, high in easily digested protein and cholesterol free." Reprinted in Tofu & Soymilk Production. 1979. p. 234, and Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

Letter from John Paino of Nasoya. 1982. April. Vidasoy soymilk was introduced in April 1978 and discontinued in Aug. 1978.

Letter from John Paino of Nasoya. 1990. Sept. 25. Vidasoy was introduced in April 1978, the same month Nasoya introduced its first tofu product. It was packaged in 16 oz plastic jugs from Bercon Plastics, Gardner, Massachusetts. "It was discontinued because of: 1. Coagulation into curds and whey, or 'yogurt' in the container; 2. Insufficient funds to expand walk-in and repair ice water tank. I should have stuck with it! But alas, we were too inexperienced to realize that selling soymilk was a

lot more profitable than selling tofu, which was made very slowly and with much labor. Live an learn!"

2985. Omosaiye, O.; Cheryan, M.; Matthews, M.E. 1978. Removal of oligosaccharides from soybean water extracts by ultrafiltration. *J. of Food Science* 43(2):354-60. March/April. [50 ref]
• ***Summary:*** Omosaiye is a Nigerian graduate student. The group found that up to 96% of the oligosaccharides in soymilk could be removed by a two-stage ultrafiltration process. The final soymilk, on a dry basis, was found to contain 60% protein, 35% fat, and 0.6% oligosaccharides. Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL 61801.

2986. Swan Food Corp. 1978. Order form and price list for distributors. April, 1978. Miami, Florida. 1 p. 36 cm.
• ***Summary:*** This wholesale catalog lists the company's soy bean products and natural foods. For each is given: Product description, case weights, wholesale unit prices (sizes A and B), units per case, total. Minimum order: $300.00. Prices–F.O.B. Soy products include: Regular tofu. Baked tofu. Marinated tofu. Caraway tofu. Soymelk (pints or quarts, unsweetened). Soymelk (pints or quarts, sweetened). Soymelk (pints or quarts, carob). Carob swirl cake (all cakes and pies are 7-inch rounds [= 7 inches in diameter]). Tofu pie–cashew. Mary's carob cream cake. Mary's devil's food cream cake. Tofu chip dip. Whole grain soy burgers. Tofu vegetable stew. Soyogurt (plain, strawberry, or peach; 8 oz.). Soy shakes (carob, vanilla, or strawberry; pint). Organic yellow certified soybeans (50 lb or 1 lb bags). Mary's eggless egg salad.

Non-soy products: Iced herb tea (sweetened, unsweetened Bancha, unsweetened Mu). Barley malt syrup. Fresh frozen organic orange juice (two sizes). Organic oranges. Address: 5758½ Bird Rd., Miami, Florida, 33155. Phone: 305-667-7141.

2987. Swan Food Corp. 1978. Order form and price list for retail stores. April, 1978. Miami, Florida. 1 p. 36 cm.
• ***Summary:*** This retail catalog lists the company's soy bean products and natural foods. The products are identical to those on the wholesale price list for distributors, but the prices are about 21% higher, the column showing "Units/case" does not appear on this retail form. Address: 5758½ Bird Rd., Miami, Florida, 33155. Phone: 305-667-7141.

2988. Timmins, Thomas. 1978. New products: Soymilk and agé. Capital investment program and project income summary. New England Soy Dairy, Inc., 305 Wells St., Greenfield, MA 01301. 4 p. Unpublished manuscript.
• ***Summary:*** They plan to sell soymilk in plain, honey, and carob flavors. Projected income for each flavor in dollars/week is $1,500, $850, and $550 respectively. The equipment is expected to cost $13,000. Address: Greenfield, Massachusetts.

2989. Bennett, Jean. 1978. Soybean curd: Ancient staple of the Oriental diet. *Los Angeles Times.* May 4. p. J25.
• ***Summary:*** An introduction to tofu, based on a talk with Dr. Genevieve Ho, home adviser, UC Extension Service; she was born in China and educated in the USA.

The use of bean curd in China was recorded in about 160 BC during the Han dynasty. With this long history of development and refinement, and with continuous regional and local innovation, it is easy to understand why bean curd has become so tremendously popular in China and in nearby countries, and why so many varieties exist today.

Ho adds that "fermented bean curd has sufficient vitamin B-12 to prevent pernicious anemia."

In East Asia, "Buddhists do not eat anything that contains blood. Nor do they eat milk, eggs, or shellfish." In this vegan diet, tofu is a very valuable food. "Strict vegetarian restaurants serve dinners and banquets made of food from only plant sources." Main dishes include mock chicken, mock fish, and mock sausage.

In our world, with increasing population and decreasing food supply, the soybean is "invaluable in helping us to return to original foods as opposed to converted foods." When a food is converted from a plant to an animal food, it requires 7-11 units of plant protein to obtain 1 unit of animal protein. "'No wonder I am always trying so hard to get people to eat more bean curd.' See also The Book of Tofu by Shurtleff and Aoyagi (Autumn Press, Box 469, Soquel, California 95073; $6.95). Includes 4 recipes for bean curd supplied by Dr. Ho. One of these, Hot spicy bean curd, includes "1½ teaspoons hot fermented bean paste" and "1 pound fresh bean curd, cut into ½-inch cubes" as ingredients.

A photo shows Dr. Ho at a market in Chinatown.

A comparative nutritional evaluation chart gives the nutritional composition of soybean curd, pressed soybean curd, milk (cow's, whole fluid), and soybean milk. Address: Times staff writer.

2990. Guhardja, Edi. 1978. Re: Names and descriptions of lesser-known Indonesian soyfoods. Letter to William Shurtleff at New-Age Foods Study Center, May 16–in reply to inquiry. 1 p. Typed, with signature.
• ***Summary:*** Dry roasted soybeans (Javanese: *Dele Sangan;* Sundanese: *Kedele Sangrai*). Raw soybeans, with or without their seed coats, are soaked in cold water for ½-1 day. Sometimes salt is added. The swollen beans are dried, roasted, then eaten with yellow rice (rice cooked in coconut milk with turmeric), or as a snack.

Tofu chips (Indonesian: *Krupuk Tahu*). Salted tofu is sliced into long, this pieces, which are dried in the sun, then broiled until crisp. They are eaten with Gado-Gado (cooked vegetables with peanut sauce) or as a snack.

"Fresh green soybeans in the pods" or "fresh vegetable (green) soybeans (Indonesian: *Kedelai Rebus*). Soybeans at the mature green stage are harvested by cutting the stems with the pods attached. The leaves are picked off the stems and the pods, still attached to the stems, are boiled until the seeds are soft. They are sold in bunches, with the stems tied together, and eaten as a snack.

Roasted soybean grits (Indonesian: *Bubuk Kedelai*). Roasted soybeans are pounded into grits, usually with a wooden mortar and pestle. The grits are spread over glutinous rice and grated coconut meat, then coconut sugar syrup is poured over the top. They are eaten as a snack. Address: Dr., Dep. of Botany, Bogor Agricultural Univ. (IPB) Bogor, West Java.

2991. Clayton, Hugh. 1978. Soya takes over from the cow. *Times* (*London*). May 23. p. 3, cols. 6-8.
• ***Summary:*** The article, written in a negative tone, begins: "Soya technology, which has already brought us beefless steak pudding and meatless mince, has taken another step forward." The International Health Foods Exhibition in London opens today. Itona Products, of Wigan, Lankashire, has a stand where they are sampling: Milkless rice pudding, "made from brown rice, unrefined sugar, and a milklike liquid made from soya-beans." It retails for about 28*p.* for a 10 oz. tin, or about twice as much as its dairy milk counterpart. Sold in health food shops instead of supermarkets, it "conjures up instant memories of bleak school meals." Mr. Jeff Hampson, managing director of Itona, was present at the company's stand "amid soya biscuits, soya milk 'that has never even seen a cow' and packets of soya that can be used to make something that looks and tastes like a fishcake." It is called "C Food." Itona "also introduced a small packet of roasted and salted soyabeans for sale as a casual snack," as well as a coffee substitute.

Itona now produces about "2,000 gallons a week of 'milk' made from soya flour," a tiny amount compared with the millions of gallons of real milk from Britain's cows. "Yet the health business remains one of the most buoyant in the food industry because of the new interest in unprocessed food..."

2992. Modipon Limited. 1978. Classified ad: Require for their soybean processing plant. *Times of India* (*The*) (*Bombay*). May 25. p. 13.
• ***Summary:*** "A new project estimated to cost about Rs. 10 crores [100 million rupees] for crushing soybeans and for the manufacture of defatted soy flour, soy textured food products, soy protein isolates & concentrates, the following personnel:" General manager, plant manager, marketing manager, superintendent (soybean extraction plant), superintendent (soy flour milling plant), superintendent (food products plant), food research scientists (for development of new foods for human consumption–including "soybean milk like products"; for development of new foods for poultry, cattle and other live stocks), soybean extension officer.

Concerning the food research scientists: "Candidates should be qualified graduates in food technology or post-graduates in food chemistry having minimum 6-8 years experience in the development of processed foods for human consumption / live stock feed. Persons having foreign qualifications and actual preparation of nutritious foods such as 'Balahar' and having done sufficient and solid development work on cooked, semi-cooked and other snack foods etc. will be preferred.

The soybean extension officer will encourage farmers in the area to grow more soyabeans (to keep the new plant well supplied), show them how to get optimum yields, and help them to solve whatever problems arise with their soyabean crop. Address: Modinagar–201 204, District Ghaziabad, Uttar Pradesh.

2993. Abou El-Ella, W.M.; Farahat, S.M.; Ghandour, M.A. 1978. Studies of some properties of milk/soymilk mixture. *Milchwissenschaft* 33(5):295-97. May. [10 ref]
• ***Summary:*** Mixtures of soymilk (10, 20, or 30%) and water buffaloes milk were used to make Egyptian style cheeses, coagulated with rennet. The effect on coagulation and curd firmness of different levels of soymilk added, sodium chloride, rennet, and renneting temperature were studied. The coagulation time was decreased by increasing the amount of rennet and the renneting temperature. Coagulation time increased as the amount of soymilk and salt added were increased. Curd firmness was increased by increasing the amount of rennet and raising renneting temperature, and decreased by increasing the soymilk added and the sodium chloride per cent. Address: Depts. of Food Science, Ain Shams and Zagazig Universities Cairo, Egypt. Phone: Eng; ger.

2994. **Product Name:** [Mamy {Soymilk} (Orange, or Pineapple)].
Manufacturer's Name: Agro-Nippo Produtos Alimenticios Ltda.
Manufacturer's Address: Av. José Alves de Mira 185, Piribuba, Sao Paulo, Brazil.
Date of Introduction: 1978. May.
Wt/Vol., Packaging, Price: 200 ml plastic bags, ready to drink.
New Product–Documentation: Letter from Jane Cadwell Pautz. 1982. May 29.

Letter (e-mail) from Jaime Nakamura of Brazil. 2012. Oct. 9. "I am attaching a form from Public Division of Food (Sao Paulo State's Health Secretary), dated 3 May 1978, when samples of Mamy were collected in order to develop product tests. Mamy was the first soymilk produced in Brazil and, we believe, the first in the world to combine soymilk +

fruit juice. Mamy was launched before 1978 initially in its pure format as usual soymilk produced in Japanese market (without any mix).

When Mamy was launched, it was impossible to be registered, since there were not laws to embrace that 'different milk.' The Brazilian President showed some kind of rejection regarding the taste of this new product–bad words in media. After all the investments, the Agro-Nippo team decided to find a solution to face these difficulties. After some tries, they decided to mix the juice of local fruits to minimize the strong taste of soymilk. And it worked! This is just a summary regarding the history of this company / brands.

The docs I'm sending to you are in Portuguese–anyway, I have the originals in my hand. There're more similar documents.

I hope to keep in touch with you in order to collaborate to enrich this kind of data and information.

• ***Summary:*** Prof. Nelson arrived in Sri Lanka on 2 Feb. 1978 and departed on 25 April 1978. This is a report on his fifth visit. Discusses development and demonstration of soybean foods for village and commercial uses. Address: Food Processing Specialist, INTSOY.

3005. Polzin, H.W. 1978. Soy protein concentrate in milk replacers. In: 1978. Proceedings, 38th annual meeting, Nutrition Council of the American Feed Manufacturers Assoc. 23 p. See p. 16-18. [13 ref]
• ***Summary:*** A good review of the literature. "Soy protein is the most commonly used of the non-milk protein sources available for use in milk replacer formulations. Properly processed soy protein has a high nutritive value and is readily available as a by-product of the oil industry."
Address: 1701 N. Ft. Myer Drive, Arlington, Virginia 22209; By Jan. 1992: 1501 Wilson Blvd., Arlington, Virginia 22209. Phone: 703-524-0810.

3006. Zabel, Nancy L.; Harland, J.; Gormican, A.T.; Ganther, H.E. 1978. Selenium content of commercial formula diets. *American J. of Clinical Nutrition* 31(5):850-58. May. [39 ref]
• ***Summary:*** Analyses were conducted of the selenium content of infant formulas, formulas for tube feeding, food supplements, chemically defined diets, and total parenteral nutrition solutions. The following soy-based infant formulas were tested: Isomil (Ross Labs), Neomulsoy and Mullsoy (concentrated) (Syntex Labs). Nursoy (concentrated) (Wyeth Labs). Prosobee (concentrated) (Mead Johnson). They ranged from 0.006-0.025 micrograms of selenium (Se) per gm. These formulas would provide 6.3 to 13.3 micrograms Se to infants consuming 700 kcal/day. These levels would be inadequate to provide the safe and adequate range of selenium intake recommended by the FNB/NRC (1980) for infants 6 months to 1 year old (20-60 micrograms Se/day) or children aged 1-3 (20-80 micrograms Se/day). Address: Dep. of Nutritional Sciences, 1300 Linden Dr., Univ. of Wisconsin, Madison, WI 53706.

3007. Fussell, B.H. 1978. A tiny hamlet is vegetarians' hub. *New York Times.* June 11. Section 11. p. 16-17. Sunday. [2 ref]
• ***Summary:*** A profile of Jay and Freya Dinshah, founders of the North American Vegetarian Society and the American Vegan Society in Malaga, New Jersey. They also launched the North American affiliate of the International Vegetarian Union. "Everyone knows that vegetarianism in the United States is on the rise." There are now 60 to 70 vegetarian societies in America; the largest are in Washington, DC, Seattle, San Francisco, Los Angeles, and New York City.

"Mr. Dinshah and his wife, Freya, who is from Epsom, England, are both 'life vegetarians' (they were born into vegetarian families and have never tasted meat). Mr. Dinshah's father, Dinshah Ghadiali, was a prominent vegetarian teacher in the 1920's and 1930's, along with people like Bernard McFadden.

"Known also for inventions, including the 'Dinshah engine-tester,' which was used by American fighter planes in World War I, Dinshah Ghadiali came to the United States from Bombay [India] in 1905 and eventually settled in Malaga to raise his eight children."

A photo shows Jay and Freya. Recipes are given for Carobanana Ice Cream (with ½ cup soy powder) and Miami

Coconut Pie.

3008. *New York Times.* 1978. Pirate's paste and coconut milk. June 21. p. C6.
• ***Summary:*** Recipes are given for the dishes that comprise one type of "rijsttafel (A small Indonesian dinner for summer)." One of these is "Ketjap manis (Sweet soy sauce ketjap)" which has the following ingredients: 2½ cups sugar, 1 bottle (22 ounces) dark soy sauce, 2 cloves, peeled and crushed, 1 teaspoon star anise (see box), 2 slices laos (see box), and ½ cup water. The directions are giving, starting with caramelizing the sugar. Yields about 3 cups. It will keep for months if properly refrigerated.

3009. *Times of India* (*The*) (*Bombay*). 1978. Bihar plan to dig 50,000 wells before June. June 31. p. 4.
• ***Summary:*** Lucknow (the capital city of Uttar Pradesh)– Those farmers who grow soyabeans on the terai here have decided to establish a co-operative soyabean processing [crushing] plant here at a cost of Rs. 50 lakhs [5 million rupees].

New strains: The development of new soyabean strains is one of most important achievements of Govind Ballabh Pant Agriculture University in the Naini Tal [Nainital] district. Its researchers have also patented a processing for making soya milk, a beverage that has proved very popular.

Contrary to popular belief, the soyabean crop is now widely cultivated by the terai farmers and even the 1-crore (10 million rupees) soybean processing [crushing] plant that has been constructed at "nearby Bareilly is now unable to cope with the increasing output." Last year the farmers produced a record 150,000 quintals [1 quintal = 100 kg, so 15 million kg] because of the rising return [price] of Rs. 300 per quintal.

The farmers from around Lucknow met at the university when they decided to establish the co-operative plant to absorb their increasing soyabean production. Among those present at the meeting was the Union minister of state for agriculture, Mr. Bhanu Pratap Singh.

• ***Summary:*** This booklet was reprinted from the May 1978 issue of *Quadernos de Natura* magazine, p. 51-66. Blanca was born on 8 Nov. 1919. Address: Circulo Yoga de Tapasthana, A.C. Tepoztlan, Morelos, Mexico.

3011. Jacobs, Leonard. 1978. Menage: Vitamin B-12 in macrobiotic or strictly vegetarian diets. *East West Journal.* June. p. 10-11. [2 ref]
• ***Summary:*** A reader asks: "Many critics of a macrobiotic or strictly vegetarian diet point out the lack of a source of vitamin B-12. Can this essential vitamin actually be synthesized (or transmuted) by the body if one's diet is composed entirely of whole grains?"

Jacobs discusses vegetarian sources of vitamin B-12 (sea vegetables, microalgae {*Spirulina maxima*}, and fermented soy products including soy sauce and miso), and the results of a B-12 deficiency–pernicious anemia. Dr. Wolfgang Tilling, who administered a diet of only soymilk to undernourished children in Germany, is said to have "discovered the synthesis of vitamin B-12 in the intestines of these children." Address: Publisher, East West Journal.

3012. MacKinnon, Jerry; Fiering, Steve. 1978. An invitation. *Soycraft* (*Lawrence, Kansas*) 1(3):1. June.
• ***Summary:*** "The workers of the Soy Plant Soy Dairy would like to invite you to a national conference which is to be held in Ann Arbor, Michigan" on July 28-30, 1978. "We expect to have technical workshops on tofu, tempeh, soymilk and miso production as a base to begin from."

Note: The Soycrafters Association of North America (SANA) was founded at this meeting. Address: The Soy Plant, 211 East Ann St., Ann Arbor, Michigan 48104. Phone: (313) 663-0500.

3013. Plantmilk Ltd. 1978. Alternative infant feeding: A survey of Plantmilk case histories. *Alive* (*England*). June. p. 14-15.
• ***Summary:*** Contains a table prepared by Plantmilk Ltd. summarizing the health records of 31 children introduced to Plamil soymilk at ages ranging from a few days to 2 years. Information on each child is: name, reason for introduction to Plamil, Condition at time of introduction to Plamil, Weight, Age, Present Condition, Weight, Age. Concludes that Plamil can be used successfully in infant feeding. Arthur Ling is the managing director of Plantmilk Ltd.

3014. Shurtleff, Bill. 1978. News from New-Age Foods Study Center. *Soycraft* (*Lawrence, Kansas*) 1(3):3-5. June.
• ***Summary:*** This open letter begins: "Dear Soycrafters of North America: There has recently been growing interest in North America in starting a Soycrafters Union or Cooperative, perhaps along the lines of Japanese National Tofu, Miso, Shoyu, Natto, etc. Unions [Associations]. Such a development would seem to represent a great leap forward, of benefit to many in the expansion of consciousness and production of quality soyfoods in the Western world."

The author then summarizes five major functions of Japanese national trade associations related to soy products, and suggests how each of these be adapted to present American conditions and consciousness which are very different from those in Japan: Purchasing soybeans, maintaining a list of member shops, doing "soyfood publicity," publishing a newsletter, and establishing and running a nationwide center, information clearing house, and school for teaching production of low-technology "soyfoods"

to people from both developed and developing countries.

"How might this basic model be adapted to the United States? First, since soyfoods are still quite new in the USA, we might want to form one united front cooperative or union for all soycrafters or producers of soyfoods, rather than trying to form individual unions for tofu & soymilk, miso, tempeh, shoyu, etc. Given such a joint union, it would seem that all of the functions performed by the Japanese unions would be of great potential value to producers in North America. The key point, however, is that for the Union to work it must be financially viable and sound. Thus it must be created and supported by individual members who understand clearly that its functions are in their best interest, both in the short and long run."

"Second, we must remember that the number of shops presently producing soyfoods here is still very small. We have the names of 95 tofu shops and/or soy dairies in the United States plus 6 more in Canada, 9 tempeh shops, 8 miso shops, and one shoyu factory (Kikkoman). Of these, about 41 of the tofu shops and soy dairies, 5 of the tempeh shops, and 2 of the miso shops are 'new-age' types, newly started by Caucasian Americans. This latter group would probably form the initial nucleus of the Soycrafters Union, however after the benefits of membership could be clearly demonstrated, the more conservative Japanese producers might be eventually interested in joining."

"At the proposed First North American Soycrafters Convention to be held in Ann Arbor [Michigan] July 28-30 the above suggestions might be discussed one by one..."

At the end of the article is a form which new or existing tofu or soymilk manufacturers in the U.S. are invited to fill out and return to Shurtleff so that he can list them in the next edition of *The Book of Tofu.* Its asks for the name, address, and phone number of the company, the person(s) in charge, the date tofu or soymilk production started, the approximate cost of getting started, the average quantity of soybeans used per week, the soyfoods produced (in order of importance), the main pieces of equipment purchased, and equipment the company plans to purchase in the near future.

Note the early use of the terms "soyfoods" and "soyfood" in this article. The term "soyfoods" was coined by Surata Soyfoods of Eugene, Oregon, in Dec. 1976.

Note 2. This is the earliest document seen (Feb. 2013) that contains the term "low technology" (or "low tech"). Shurtleff coined this term to refer to soyfoods that could be made, and had long been made, using simple, traditional technologies, appropriate to Third World countries or relatively poor areas. Address: Director, New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

3015. **Product Name:** Missing Egg Salad.
Manufacturer's Name: Soy Plant (The).
Manufacturer's Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.
Date of Introduction: 1978. June.
Ingredients: Tofu, tahini, soyamaze [soy mayonnaise] (soymilk, safflower oil, cider vinegar, honey, salt), tamari, celery, onion, nutritional yeast, spices.
Wt/Vol., Packaging, Price: 12 oz. plastic tub.
How Stored: Refrigerated.
New Product–Documentation: Steve Fiering. 1979. Whole Foods. Jan. p. 38, 40. "A Midwestern Interest in Tofu." This is included in a list of products presently produced by the company. It contains eggless soy mayo and turmeric. Talk with Steve Fiering. 1988. June 10. The word "tofu" was not in the title. It was introduced before the Conference, and one of their first two deli items. It was later sold occasionally wholesale outside the deli. The eggless soy mayo was first introduced as a separate product in the deli about a year later.

Rectangular Label in Soy Plant scrapbook from 1979. 3 by 2 inches. Green on orange. 12 oz.

Square Label in Soy Plant scrapbook from about 1980. 3 by 3 inches. Black on white. 12 oz. Ingredients: Tofu, soynaise (soymilk, oil, vinegar, salt, honey), celery, parsley, onion, spices. 12 oz. Zip: 48104.

3016. **Product Name:** Ann Arbor Steamed Brown Bread.
Manufacturer's Name: Soy Plant (The).
Manufacturer's Address: 211 East Ann St., Ann Arbor, MI 48104. Phone: 313-663-0500.
Date of Introduction: 1978. June.
Ingredients: Okara (high fiber soy product), rye flour, soy milk, molasses, whole wheat flour, corn meal, safflower oil, raisins, walnuts, orange oil, vanilla.
How Stored: Shelf stable.
New Product–Documentation: Label in Soy Plant Scrapbook, next to article dated 4 Oct. 1978. 3 inches square. Black on white. An illustration shows a flower growing on a vine.

Talk with Steve Fiering, a founder of The Soy Plant in Ann Arbor. 2000. Dec. 3. This may have been the first way The Soy Plant discovered to use its okara as a food. Ann Elder developed the recipe. It was steamed in the Soy Plant kettle or commercial steamer (which they got for free from a salvage operation) because they didn't have an oven. Steve welded the 4-inch-diameter cylindrical stainless steel forms in which the bread was steamed. When done, they pushed the bread out one end. Steve thinks they started making this before the SANA conference in Ann Arbor in July 1978.

3017. Tofu Shop (The). 1978. Pricelist. Telluride, Colorado. 1 p. Undated.
• ***Summary:*** The Tofu Shop now sells 12 products: Tofu, 14 oz. Tofu, bulk (10 lb. minimum). Sprouts, alfalfa (8 oz or 1 lb). Sprouts, mixed (radish, lentil, alfalfa; 8 oz or 1 lb). Soymilk, quart, unflavored. Soymilk, quart, carob-honey. Soyburgers, frozen 5-pac. Fudge (super carob, cashew

coconut, or date coconut). Address: 116 N. Oak St., P.O. Box 69, Telluride, Colorado 81435.

3018. The foundation meeting of the Soycrafters Association of North America in Ann Arbor, Michigan. Photographs taken at that meeting. 1978. Ann Arbor, Michigan.
• ***Summary:*** This first meeting took place on 28-30 at the University of Michigan–Ann Arbor. Approximately 70 people attended. The goals of the meeting are outlined in the correspondence leading up to the meeting.

The soyfoods movement in America was interested in low-tech, traditional soyfoods, especially tofu, miso, tempeh, and soymilk, gradually expanding into soynuts, edamame, and dairy alternatives. However it also had numerous other objectives which many or most of the members advocated. A vegetarian diet / meatless diet, an end to the feedlot system and slaughterhouse system, working to address the root causes of world hunger, right livelihood, starting small businesses, etc.

The movement had only lukewarm interest in modern high-tech soyfoods such as soy protein isolates, concentrates, and textured soy flour–because: (1) These products were highly refined. (2) Many were a by-product of the feedlot system, which raised animals for slaughter. (3) None of the early members produced (or ate) these products.

At this meeting, a new organization was created on July 30, the Soycrafters Association of North America. Larry Needleman (Bean Machines, California) was elected director. Six people were elected to the steering committee: 1. Tom Timmins, New England Soy Dairy, Greenfield, Massachusetts. 2. Lester Karplus, Vegetarian, Inc., Champaign, Illinois. 3. Steve Fiering, The Soy Plant, Ann Arbor, Michigan. 4. Steve Demos, White Wave Tofu, Boulder, Colorado. 5. Kathryn Bennett-Clarke, Southwest Tofu, Santa Fe, New Mexico. 6. Bill Shurtleff, New-age Foods Study Center, Lafayette, California.

Twelve black-and-white photographs (each 3½ by 5 inches) were taken on 28-30 July 1978 at this meeting by William Shurtleff; they and their negatives are now located in the Soyfoods Center archives. Those identified in the photos include Tom Timmins (New England Soy Dairy), Steve Demos (White Wave), Larry Needleman (The Learning Tree), Greg Weaver (The Tofu Shop), Benjamin Hills (Surata Soyfoods), and Kathryn O. Bennett (Southwest Tofu Co., Santa Fe, New Mexico).

The first four photos were taken on the evening of Friday, July 28 at the opening meeting which was held upstairs in a large room at the University of Michigan (Ann Arbor) student union. Most attendees are dressed informally and seated in folding chairs, but some are sitting cross-legged on the floor. In two photos, Larry Needleman is standing and speaking to the group; Tom Timmins is seated to the right of center on the floor. The remaining eight photos were taken on July 29 in a room next door to The Soy Plant (Ann Arbor, Michigan) where the Association was established. The walls are covered with labeled gallon jars of herbs and foods. The attendees are seated in folding chairs. In the two photos shown here, Steve Demos is in the center, speaking.

Note: The last five frames on this reel of film are photos of people making tofu at the New England Soy Dairy in Greenfield, Massachusetts.

3019. Barr, G.W.; Martin, S.R.; Kakade, M.L.; Ryan, R.J.; Crane, F.M. 1978. Influence of modified protein in milk replacers on calf performance and health (Abstract). *J. of Dairy Science* 61:169. (Abst. #854). July.
• ***Summary:*** No significant differences in daily weight gain, milk replacer consumption, or inverse feed conversion were observed when modified soy protein was substituted for milk protein in seven 4-week trials of calf milk replacer. Address: Land O'Lakes, Inc., Minneapolis, Minnesota.

3020. Bellicchi, Kathy. 1978. New England Soy Dairy. *East West Journal.* July. p. 42-44.
• ***Summary:*** A good history of and introduction to the company. "New England Soy Dairy began a year and a half ago with four partners, Tom Timmins, Kathy and Ira Leviton, and Michael Cohen. Before they got together, Tom was working for a natural foods distributor [Llama, Toucan & Crow], Kathy and Ira were running a natural foods bakery, and Michael was living in Virginia in a satellite community of The Farm (an experience which provided him with a sound working knowledge of soybeans)... They went into business as the Laughing Grasshopper Tofu Shop..." Later the company moved to a much larger facility on the outskirts of Greenfield, Massachusetts. Today they make 1,600 lb of tofu per 8 hour day.

The company presently produces only tofu. However they are in the "process of perfecting a variety of other soy products, including soy milk, soy mayonnaise, dips for crackers and spreads for sandwiches, tempeh (split, hulled soybeans that are fermented), age (deep-fried tofu), and, eventually, ice cream."

Photos show: A barrel of soy milk being curded with nigari. Arthur Braverman standing by the tofu-making equipment at the center of the plant. Tofu being pressed in forming boxes. Ira Leviton carrying a tray of tofu ready for packaging.

3021. Eka, O.U. 1978. Chemical evaluation of nutritive value of soya paps and porridges, the Nigerian weaning foods. *Food Chemistry* 3(3):199-206. July. [30 ref]
• ***Summary:*** Paps and porridges fortified with soya bean milk or soy flour can serve as high-quality, low-cost weaning foods for children. Nutritionally they are comparable to "Soy Ogi" and other commercial foods such as Cerelac and Lactogen. Millet porridge fortified with soya bean milk had

the highest content of protein and essential amino acids. Address: Dep. of Biochemistry, Ahmadu Bello Univ., Zaria, Nigeria.

3022. Shurtleff, William. 1978. Report on trip to first meeting of Soycrafters Association of North America (Ann Arbor, Michigan, July 28-30), and subsequent trip around USA with Mr. Wataru Takai visiting tofu companies (July 30 to Aug. 9). P.O. Box 234, Lafayette, CA 94549. 2 p. Aug. Unpublished manuscript.

• ***Summary:*** July 16-23–Mr. Takai (Director of the Overseas Department for Takai Tofu & Soymilk Equipment Co. in Ishikawa-ken, Japan) flies into San Francisco, California, from Japan. He stays in San Francisco, and is present at the installation of a Takai tofu system at Tokyo Foods (Tokyo Food Co.; Mr. Horinouchi) in San Mateo, south of San Francisco. Shurtleff drives Mr. Takai to visit various tofu makers in the San Francisco Bay Area: Traditional Tofu in Oakland (meet with Ray Nagai and Gary Sato, who are having lots of problems), Azumaya in San Francisco (Bill Mizono), Quong Hop in South San Francisco (Stanley Lee), and Wo Chong in South San Francisco (Walter Louie).

July 24–Shurtleff and Aoyagi drive Mr. Takai to Lake Tahoe, where they all stay for two days and one night at the Shurtleff family cabin near Meeks Bay. July 26–The first Takai catalog of small and medium scale tofu equipment (printed with dark brown ink on glossy white paper) arrives in the USA.

July 27–Takai and Shurtleff fly together from San Francisco to Ann Arbor, Michigan, on an afternoon flight.

July 28-30–Meeting in Ann Arbor of about 70 soycrafters (mostly tofu makers) from around the United States. The conference opens on the evening of Friday, July 28. The first meeting is held upstairs in a large room at the University of Michigan student union–slide shows and discussions. Attendees stay in the university dormitory–which is largely empty since it was summer. On Saturday there are meetings and practical workshops throughout the day at The Soy Plant, 211 E. Ann St., several blocks from the university. Mr. Takai notes: "New tofu makers are young vegetarian. Almost all Caucasian with long hair and beards. They eat tofu instead of meat." On Sunday, July 30, the Soycrafters Association of North America is founded. Steve Fiering, Jerry MacKinnon, Sue Kalen, and co-workers at The Soy Plant (211 East Ann St.), in Ann Arbor, Michigan, organized and hosted the meeting–which was a great success. We elected an executive director (Larry Needleman of Bean Machines, California) and a Steering Committee [board of directors] of six: Tom Timmins, New England Soy Dairy, Massachusetts. Lester Karplus, Vegetarian, Inc., Illinois. Steve Fiering, The Soy Plant, Michigan. Steve Demos, White Wave Tofu, Colorado. Kathryn Bennett-Clarke, Southwest Tofu, New Mexico. Bill Shurtleff, New-age Foods Study Center, California.

After the meeting, Shurtleff and Takai travel around the United States, by airplane and rented cars, visiting existing tofu companies.

July 31, Monday–Fly from Ann Arbor to Boston, Massachusetts. From Boston we drive (using a rented car) to the New England Soy Dairy (Tom Timmins and Richard Leviton) and Nasoya (John Paino and Bob Bergwall); both are quite new companies. Mr. Takai notes: "New England was very woody and beautiful. First saw soy mayonnaise at the New England Soy Dairy; it was served in a dip at dinner. Nasoya extracted soymilk with a big hydraulic press." Mr. Takai noted that Japanese eat tofu itself, whereas Americans generally use it as an ingredient in recipes.

Aug. 1–Spend the afternoon in Boston's Chinatown visiting two or three old and well-established tofu makers. While walking through a fancy building in the area, Shurtleff first sees someone (a secretary) using a word processor.

Aug. 2, Wed.–Fly from Boston to New York City. Visit Hashizume (Mr. Yokoyama) and Tanaka-ya (Mr. Murakami), both well established tofu makers run by Japanese Americans. We then take the run-down, graffiti-scrawled subway to visit Tokyo Food Processing Corp. (c/o Japan Food Corp.) at 40 Varick Ave., Brooklyn (Terry Terahira and Mr. Shimazaki); this is also an established Japanese-American company that makes tofu and other Asian foods in a bombed out-looking, scary part of the city. Mr. Shimazaki notes that tofu is starting to become popular in America, and their tofu is selling well. One afternoon Shurtleff is invited to be on the Gary Null Show (radio) to talk about tofu. While in New York City, Shurtleff stays with Larry Needleman at the home of his parents (Hy & Sylvia, in New Hyde Park, just outside New York City), while Mr. Takai stays at a hotel in the city. One night Needleman and Shurtleff have dinner with Mr. Takai, as his guest, at the Rainbow Restaurant in Manhattan, near the top of some skyscraper. Mr. Takai had a black-and-white photo taken of the three seated at a dinner table; it appeared in the Japanese newspaper *Hokuriku Chunichi Shinbun* on 14 Sept. 1978, and Mr. Takai kept the original. Soyfoods Center also has a copy (8 by 10 inches, filed at Soyfoods Center). Our last morning in New York City (Saturday, Aug. 5), we three travel by subway to the southern tip of Manhattan and take a ride on the Staten Island Ferry.

Aug. 6, Sunday–Shurtleff and Takai fly to Miami, Florida, to visit Swan Foods, founded by Robert Brooks and Mary Pung; a new and extremely innovative company making tofu and soymilk (with organic soybeans), plus a line of soy yogurt, tofu cheesecakes, etc. and full-page nationwide ads. Mr. Takai recalls that Mr. Brooks wanted to start a chain of tofu businesses across the United States. Shurtleff conducts (and tapes) a long interview with Robert Brooks and Pung, and visits their home and tofu plant.

Aug. 8–Fly from Miami to Summertown, Tennessee, to visit The Farm Tofu Shop (Alan Praskin). Mr. Takai recalls

visiting Light Foods in St. Louis, Missouri, to deal with problems in their FM50 roller extractor.

Aug. 10–Fly from Tennessee to Denver, Colorado, to visit Denver Tofu (Mr. & Mrs. Haruhisa Yamamoto; an old, well-established Japanese-American company, which now filters all water used to make tofu). Shurtleff travels to nearby Boulder, Colorado, to visit White Wave on Pearl Street (Steve Demos, very new and small tofu maker).

Aug. 11–Fly from Denver to Los Angeles. Visit Hinode-ya (Mr. Yamauchi; an old, well-established Japanese-American company, perhaps the largest in America).

Aug. 12–Fly from Los Angeles to San Francisco.

Note: Mr. Takai's notes of his itinerary, which he wrote for himself in Japanese before and after the trip, indicate that he arrived in San Francisco on Aug. 12. But Shurtleff's notes indicate that he arrived in San Francisco and Lafayette on Aug. 9 (Wednesday). Shurtleff has clear memories of visiting Denver Tofu and White Wave, but no memories of visiting Tennessee or Los Angeles on this trip. Mr. Takai does not recall visiting Lake Tahoe. Address: New-age Foods Study Center, Lafayette, California.

3023. Sosulski, F.W.; Chakraborty, P.; Humbert, E.S. 1978. Legume-based imitation and blended milk products. *Canadian Institute of Food Science and Technology Journal* 11(3):117-23. July. [15 ref. Eng; fre]

• ***Summary:*** Protein isolates from ten legume species were evaluated as the protein component in imitation milks. While similar in protein content, the isolates exhibited a wide range in solubility, fat homogenization, viscosity, and conductivity. The legumes were ranked in the following descending order of preference for imitation milk production: lima bean (*Phaseolus lunatus,* 5.9), mung bean (*Vigna radiata,* 5.9), pea bean (*Phaseolus vulgaris,* 5.7), Great Northern bean (*Phaseolus vulgaris,* 5.6), lupine (*Lupinus angustifolius,* 5.4), field pea (*Pisum sativum arvense,* 5.2), lentil (*Lens culinaris,* 5.1), chickpea (*Cicer arietinum,* 5.1), soybean (*Glycine max,* 4.8), faba bean (*Vicia faba minor,* 4.1). Note the low ranking of soybeans. The lima bean had the best color ranking. Mung bean (4.1) had the best taste, followed by chickpea (4.0), lupine (3.6) and northern bean (3.6), all far ahead of soybean (2.8). Lupine (5.3) had the best odor, followed by mung bean (5.0), lentil (4.7), and lima bean (4.5), with soybean quite low at 3.3.

Note 1. It is not clear whether or not the soybeans used in this study were grown in Saskatchewan.

Note 2. This is the earliest English-language document seen (Jan. 2005) that uses the term "faba bean" (or "faba beans") to refer to *Vicia faba.* Address: Depts. of Crop Science and Dairy and Food Science, Univ. of Saskatchewan, Saskatoon, Sask, S7N 0W0, Canada.

3024. Takai Tofu & Soymilk Equipment Company. 1978. Takai catalog of small and medium-sized equipment. 307 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 6 p. 30 cm.

• ***Summary:*** This catalog, printed with dark brown ink on glossy white paper, was conceived of and developed for Takai by William Shurtleff. 42 photos in small, vertical rectangular frames show many individual pieces of equipment, and 5 photos show Takai's five systems for manufacturing tofu and soymilk. The catalog is divided into five sections: (1) Front page and introduction; (2) Basic equipment; (3) Whole systems; (4) Publications and information; (5) Ingredients. For more information, contact Wataru Takai.

Letter (fax) from Wataru Takai. 1996. Aug. 2. Takai's records show that their brown catalog of small-scale equipment was printed in July 1978. Address: Ishikawa-ken, Japan. Phone: (0762) 48-1355-59.

3025. **Product Name:** Vegetarian Soysage (Meatless Okara-based Sausage).
Manufacturer's Name: White Wave.
Manufacturer's Address: 3869 Walnut St., Boulder, CO 80301.
Date of Introduction: 1978. July.
Ingredients: 1978: Okara (soy fiber), nutritional yeast, wheat germ, whole wheat flour, soymilk, safflower oil, shoyu (soy sauce), herbs, and spices.
Wt/Vol., Packaging, Price: 8 oz disks in plastic wrap.
How Stored: Refrigerated.
New Product–Documentation: Label. 1979. 3.75 inches square (8 oz.). Paper. Brown on tan. Drawing of a happy pig with a wreath of flowers around its neck.

Label. 1981. 3 inch diameter (16 oz.). Paper. Brown on tan. Ingredients on labels are: Okara (soy fiber), nutritional yeast, wheat germ, whole wheat flour, safflower oil, shoyu (soy sauce), herbs and spices. Label and recipe given by Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 169. Product Price List. 1979, winter. "Spicy vegetarian 'sausage type' soy patty. Slice thin or fry and use on pizza. 8 or 16 oz."

Interview with Steve Demos. 1987. In early 1978 they introduced soymilk. At about the same time they started to use the okara from their tofu to make one of America's earliest brands of soysage–if not *the* earliest! In late July 1978, at the first Soycrafters' Conference in Ann Arbor, Michigan, White Wave gave instructions for tube-processing of soysage.

3026. Fussell, B.H. 1978. Vegetarians find their faith bearing fruit. *New York Times.* Aug. 2. p. C7.

• ***Summary:*** In Selinsgrove, Pennsylvania, more than 300 people of all ages gathered last week for the fourth annual congress of the North American Vegetarian Society, whose president is H. Jay Dinshah. Meals at the meeting offered a variety of foods and drinks, including tahini, peanut and cashew butters, soy spreads, Soyagen cream, soy milk, and

Pero, a coffee-like beverage made of barley, chicory, rye and molasses. The message on one T-shirt read: "Animals should be seen but not hurt." All agreed that the message of vegetarianism is spreading. New York City now supports 35 vegetarian restaurants. World Vegetarian Day will be celebrated on Oct. 1 in Washington, DC.

While young people become vegetarians for moral reasons, their parents may do so for reasons of health.

3027. *Northern Union Outlook* (*Seventh-day Adventist; Minneapolis, Minnesota*). 1978. Hurds hold nutrition class at MJA. Aug. 7. p. 7.
• ***Summary:*** "May 1 through 4, Frank and Rosalie Hurd presented a Natural Nutrition class at the Minneapolis Junior Academy. Two-thirds of those participating were non-Adventists, with attendance averaging 50 per evening." The co-authors of the widely circulated *Ten Talents* cookbook taught about natural foods, meatless main dishes, and even how to make a delicious ice cream with cashew milk and honey.

3028. Fomon, Samuel J.; Strauss, Ronald G. 1978. Nutrient deficiencies in breast-fed infants. *New England J. of Medicine* 299(7):355-57. Aug. 17. [23 ref]
• ***Summary:*** "Although human milk is commonly believed to be a complete and perfect food for infants, deficiencies of vitamin K, vitamin D and iron may develop in normal, full-term infants breast-fed by apparently healthy women consuming conventional diets... Women with nutrient deficiencies [such as vitamin B-12] may produce milk with an unusually low content of a particular nutrient... Routine supplementation of the infant's diet with vitamin D and iron is desirable." What the fascinating case described by Higginbottom and her colleagues "makes clear once again is that strict vegetarians who do not supplement their diets are deficient in vitamin B-12, and children born of such mothers are apt to suffer serious consequences unless appropriate steps are taken." Address: Univ. of Iowa, Iowa City, IA 52242.

3029. Shurtleff, William. 1978. Re: Proposal to add new categories and information about soyfoods to *Soybean Digest Blue Book.* Letter to Mr. Lynn Munyer, editor, *Soybean Digest Blue Book,* P.O. Box 158, Hudson, Iowa 50643, Aug. 21. 2 p. Typed, with signature on letterhead.
• ***Summary:*** Contents: Introduction to publications and work of New-age Foods Study Center. Statistics on consumption of traditional soyfoods in East Asia. Tofu. Soymilk. Miso. Shoyu. Tempeh. Natto. Conclusion.

"Worldwide and increasingly in the United States the traditional soyfoods discussed in our books account for an extremely large proportion of world soybean consumption for human diets.

"Therefore we feel it is in the interest of the ASA [American Soybean Association] and American Soybean farmers to do more to introduce these traditional soyfoods to people around the world via your publications." Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

3030. Beuchat, Larry R.; Nail, B.J. 1978. Fermentation of peanut milk with *Lactobacillus bulgaricus* and *L. acidophilus. J. of Food Science* 43(4):1109-12. July/Aug. [15 ref]
• ***Summary:*** Preparation of the peanut milk: Soak 1 kg of peanuts in 2 liters of a 1.0% solution of sodium bicarbonate for 16-18 hours at 22ºC. Drain and discard liquid. Rinse well with tap water. Add 5 liters of tap water and grind, then allow this slurry to soak at 22ºC for 4-5 hours. Filter and discard solids to give peanut milk. Heat at 121ºC for 10 minutes to pasteurize; cool quickly. Add 2% (w/v) of lactose. Inoculate with two cultures: *Lactobacillus bulgaricus* NRRL B-1909 and *Lactobacillus acidophilus* NRRL B-1910 (1% w/v). Incubate at 37ºC for 3 days. A flow diagram shows the process.

The shortage of animal proteins in some parts of the world has created a need for developing processes by which plant proteins can be economically into diets. The acceptability of this fermented peanut milk competed favorably with that of buttermilk. Address: Dep. of Food Science, Univ. of Georgia Agric. Exp. Station, Experiment, GA 30212.

3031. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Full of Beans Wholefoods.
Manufacturer's Address: 97 High St., Lewes, East Sussex, BN7 1XH, England. Phone: 079-16-2627.
Date of Introduction: 1978. August.
New Product–Documentation: Form filled out by John and Sarah Gosling. ca. 1982. They started in Aug. 1978. Now make regular and firm pressed tofu. Soyfoods Center Computerized Mailing List. 1982. July 23. Owners: John & Sara Gosling.

Shurtleff & Aoyagi. 1982. Soyfoods Industry: Directory & Databook. p. 3. Soya Bluebook. 1986. p. 107. Address is now 96-97 High St.

3032. **Product Name:** Soymilk.
Manufacturer's Name: Indonesian Tempeh Co.
Manufacturer's Address: Route 1, Palmyra, NE 68418.
Date of Introduction: 1978. August.
New Product–Documentation: Letter from Gale Randall. 1978. Aug. 28. Shurtleff & Aoyagi. 1979. July. New Tofu Shops & Soy Dairies in the West.

3035. White Wave. 1978. White Wave through The Cow of China, offers food from the kingdom of plants. We make it all here in Boulder! 100% dairyless! (Poster). 1738 Pearl St., Boulder, CO 80302. 1 p. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.
• ***Summary:*** "Organic nigari tofu, Soymilk, Soysage, Missing egg salad, Tofu mayo, Baked savory tofu cutlets, Sweet bean tofu pie, Tofu cinnamon rolls, soy-sesame bars, Energy chews, Almond butter, Cashew butter, Peanut butter, Tahini, Figgies, Date coconut bars, Tofu 'meatball' sandwiches, 'Macro' pizza, Tofu turnovers, 'Sloppy joe' sandwiches, Tempeh." Address: Boulder, Colorado.

3036. Strayer, George M. 1978. Re: Vegetable-type and field-type soybeans suited for making tofu and soymilk. Letter to William Shurtleff at New-Age Foods Study Center, Sept. 8. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Mr. Strayer's company sells 3 varieties of vegetable-type soybeans. Prize (FOB price $9.00 per 60 lb sack) is the best suited for making tofu and has the highest protein content. Kanrich ($9.00) is the next best suited and has the second highest protein content, but is gradually going out of production. Kim ($9.50) has a green seed coat and is the lowest of the three in protein content.

Of the 7 field-type soybean varieties sold by the company (all for $8.00 per 60 lb FOB), Corsoy is the best suited for tofu production, followed by Amsoy and Hawkeye. Chief is no longer in commercial production. Address: President, Agricultural Exports, Inc., P.O. Box 266, Hudson, Iowa 50643.

3037. Kennedy, Donald. 1978. Substitutes for milk, cream, and cheese: Standards of identity. *Federal Register* 43(182):42118-26. Sept. 19.
• ***Summary:*** This proposal by the FDA would establish standards of identity for substitutes for milk, cream and cheese–in response to petitions from the cheese industry. Contents: Summary. For further information. Supplementary information. Milk and cream substitutes. Cheese substitutes. Standards of identity versus common or usual name regulations. Other requirements. Nomenclature. Milk and cream substitutes: Description, nutritional equivalency, methods of analysis, nomenclature, label declaration. Cheese substitutes: Description, nutritional equivalency, methods of analysis, nomenclature, label declaration.

The Filled Milk Act of 1923 as declared unconstitutional in 1972 by the U.S. District Court for the Southern District of Illinois in *Milnot Co. v. Richardson.* The Filled Cheese Act of 6 June 1896 was repealed on 6 Oct. 1974 by the 93rd Congress. "The repeal of both these acts was recommended by the White House Conference on Food, Nutrition, and Health in December 1969. Consumers had expressed the desire for modified milk and cheese foods made with vegetable fats, but the development of such foods was inhibited by the restrictive nature of these acts."

"The Commissioner has observed the market and notes that many new dairy food substitutes are being sold with potentially misleading labeling. Many of these substitutes bear fanciful names while others have adopted 'imitation' dairy food labeling."

The National Cheese Institutes (NCI, 110 North Franklin St., Chicago, Illinois 60606) submitted a petition in 1975 proposing the establishment of a standard of identity for cheese analogs under the name 'Golana' (which is "analog" spelled backward). Thus one could market a "Golana Mozzarella cheese analog." "Imitation" suggests that a food has nutritional inferiority, while "substitute" or "alternate" suggests one food is intended to serve in place of another. Anderson Clayton Foods Co. of Dallas, Texas, submitted a petition dated 13 Aug. 1975 proposing the establishment of a common or usual name regulation for cheese substitutes under the name "Cheesana Cheese Substitutes." Address: Commissioner of Food and Drugs.

3038. **Product Name:** Soymayo. Eggless Imitation Mayonnaise (Soymilk Based).
Manufacturer's Name: New England Soy Dairy Inc.
Manufacturer's Address: 305 Wells St., Greenfield, MA 01301. Phone: 413-772-0746.
Date of Introduction: 1978. September.
Ingredients: Vegetable oil, water, organic soybeans, apple cider vinegar, sea salt, spices, guar gum.
Wt/Vol., Packaging, Price: 15 oz, 32 oz, or 1 gallon jars.
How Stored: Refrigerated.
New Product–Documentation: Interview with Richard Leviton. 1978. Sept. Label. 1978, undated. 4 by 3 inches. Paper. Blue on white. "Eggless. Imitation. No preservatives." Reprinted in Tofu & Soymilk Production. 1979. p. 254, and in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. New England Soy Dairy Product and Price List. 1978. Oct. 12. Ad in Soyfoods. 1980. Summer. p. 11.

3039. Shurtleff, William. 1978. New food from old ways. *Agenda* (*US-AID, Washington, DC*) 1(8):18-20. Sept.
• ***Summary:*** This periodical is published by the U.S. Agency for International Development. Discusses: Soybeans and world hunger, the inefficient ways that soybeans are used in industrialized countries by feeding them to animals, and alternative ways of using them in foods such as tofu, soymilk, tempeh, and miso. Address: New-Age Foods Study

We've got an alternative

Soy Dairy

Center, P.O. Box 234, Lafayette, California 94549.

3040. *Soyanews* (*Sri Lanka*). 1978. Soya now at take-off stage. 1(1):1. Sept.
• ***Summary:*** "The Sri Lankan Soyabean Development Program is now at the take-off stage. The project, which officially began on March 1, 1975, is to be conducted over a seven to ten year period. The UNDP [United Nations Development Programme], which is helping to finance the soyabean development program proposed by the Sri Lankan Government, has contributed US$457,600. The counterpart distribution from the Sri Lankan Government has been Rs. [rupees] 4,840,880.

"Field trials conducted by the Department of Agriculture the last few years have shown that soyabean, originally a temperate climate plant, can adapt itself to tropical conditions. Field trials have been very encouraging with a record six tons per hectare in one instance. Under farm conditions yields have also been encouraging... ranging from 1,000 to 1,500 pounds per acre."

"In the first phase of this project the varieties well suited for Sri Lanka have been determined. The Department of Agriculture has also carried out extensive work on the agronomic practices such as weed, pest and disease control. And many Soya farmers are already applying this information for their benefit and the country's.

"The second and third phases of the Soyabean Development Program will cover utilisation and marketing. Already a pilot Soyabean Foods Research Centre has been built and equipped at the Central Agricultural Research Institute at Gannoruwa which will demonstrate the processing of soya based foods. The machinery already installed for this purpose is worth US$220,000 and has been contributed by CARE / UNICEF. Food processing demonstrations will begin before this year is out.

"Several commercial entrepreneurs have already visited the pilot Research Centre, now in its finishing stages, to inquire about the commercial prospects for processing soya foods. The Manager of the pilot plant, Mr. Wilmot Wijeratne said that the inquiries were about the processing of Soya based foods" (such as soyamilk and soya dhal) for popular consumption.

"At the pilot plant there will be demonstrations of food processing at the home, village and commercial levels." The program "will try to reach as many villages as possible."

A large photo shows: The National Milk Board's Soya Milk Bar at the Kandy Esala Agricultural Exhibition; it "turned out to be quite a success. 30,000 cups of soya milk were sold during the ten days of the exhibition."

3041. *Soyanews* (*Sri Lanka*). 1978. The seed that meets a million needs. 1(1):3. Sept.
• ***Summary:*** Gives a brief history of the soyabean worldwide (except in Sri Lanka) and its many uses are described briefly in the following categories: Mature beans: Whole, sprouts, flour, curds, roasted, milk, feeds. Oil. Lecithin: Food and non-food. Meal: Food products, feeds, industrial protein. Plants (incl. forage as silage, hay, and soilage). Immature beans (canned, dehydrated, fresh, quick-frozen, pickled, succotash).

Above each of the following words or terms is a photo: Infant foods. Cereal foods. Pharmaceuticals. Building materials. Adhesive. Feed (shows cows).

3042. Swan Food Corp. 1978. Swan Foods: Remember the name! (Ad). *Whole Foods or East West Journal* Inside rear cover.
• ***Summary:*** This full-page ad is almost identical to one which appeared in Alternatives magazine (Miami, Florida) in July/Aug. 1978 (p. 49) but with the following three small differences: (1) This full-page ad was published in a more expensive and prominent location–on the inside rear cover. (2) There is additional information about Soyogurt (A cultured soy product available in a variety of fruit flavors). (3) Of the iced herbal beverages, Sassafras has been added and Red Quencher removed. At the end of the beverage column is now written: "and a variety of blends."

Note: This ad was published in about August or September 1978 in an unknown counter-culture magazine in America. It was published on the inside rear cover. On the rear cover is an ad for Natural Nectar ice cream. Because of the latter ice cream ad, it seems most likely that this ad appeared in *Whole Foods*, which began publication in Jan. 1978. Alan Richman of Whole Foods (Jan. 1998) says the current publisher is now missing half of the 1978 issues and is missing 2 issues from 1979. While looking at a copy of this ad, he looked through all issues for these two years and could not find the ad. Address: The Soybeanery, 5758½ Bird Rd., Miami, Florida, 33155.

3043. Pollack, Susan R. 1978. Food for thought: Activist turns to the lowly soybean as tool to promote global change. *Detroit News*. Oct. 4. p. A-1, col. 5.
• ***Summary:*** The activist is Jerry MacKinnon, age 29. Five years ago he was shivering on the streets of Washington, DC, with thousands of angry anti-war activists protesting President Nixon's second inauguration. He's still struggling for social change, but now he's making tofu with six other vegetarians at The Soy Plant in Ann Arbor, Michigan. He has focused his political energy on two less dramatic movements: (1) Promoting the inexpensive, protein-rich soybean as an answer to world hunger; (2) Expanding America's network of "new wave" cooperatives. Still part of the Revolution, now he talks less and works more.

Tim Huang, is an emergency medical instructor who owns Yellow Bean Trucking Company, which distributes The Soy Plant's products. He also believes that soybeans are a revolutionary food–"right off the top of the food chain."

China's 800 million people use them to survive in place of meat. America, the world's leading producer of soybeans, feeds them to cows instead of to people.

The Soy Plant, at 211 East Ann St. in Ann Arbor, makes tofu, and soymilk (plain and flavored with honey-vanilla). The products are distributed to co-ops and natural food restaurants throughout Michigan and neighboring states by the Michigan Federation of Co-ops, Midwest Natural Foods of Ann Arbor, and Huang's trucking company.

The nonprofit Soy Plant has become a thriving wholesale-retail operation in less than a year. The work is shared and decisions are made jointly. The investment of almost $7,000 for equipment and supplies has come mostly from community residents, who receive as interest for each $100 loan a pound of tofu a week for the rest of their lives.

The plant is operating at near capacity, making 2,000 lb/week of tofu. But it's hard work and members have to be self-motivated.

Recently [in July] The Soy Plant hosted, in Arbor, the first national convention of tofu makers.

Sue Kalen, age 22, likes to experiment with tofu. She has made such delicacies as tofu pies, filled with raisins, banana, coconut, and carob; tofu tahini spread, and spiced tofu with poppy seeds, mustard, cayenne, garlic, and sunflower seeds.

According to Dr. Zane Helsel, an agronomist at Michigan State University, the soybean has become Michigan's fastest growing crop in recent years. Among grains, it is second only to corn as a cash producer. About 720,000 acres/year are grown in the state's southern five tiers of counties.

A photo shows Jerry MacKinnon pouring soaked soybeans into the hopper of a grinder and Steve Fiering pouring soybeans into a soaking tank. Address: News staff writer.

3044. Howes, Charles D. 1978. Re: Soymilk at Loma Linda Foods. Letter to William Shurtleff at New-age Foods Study Center, Oct. 12–in reply to inquiry. 2 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** The soymilk output of this plant run about 2 million gallons per year. The input of soybeans is about 630 tons. Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

3045. Curtis, Jan B. 1978. Re: Soymilk beverages produced and marketed by the Coca-Cola Company. Letter to William Shurtleff at New-Age Foods Study Center, Oct. 20–in reply to inquiry. 2 p. Typed, with signature on letterhead. Address: P.O. Drawer 1734, Atlanta, Georgia 30301. Phone: 404-897-2121.

3046. Shurtleff, William. 1978. Re: The Farm Vegetarian Cookbook. Letter to Margaret Gaskin, Laurie Praskin, Cynthia Bates, and Louise Hagler, The Farm, Summertown, Tennessee, Oct. 25. 1 p. Typed, with signature on letterhead (photocopy).
• ***Summary:*** "This morning I bought a copy of your new edition of *The Farm Vegetarian Cookbook* at Shambala in Berkeley and spent all day reading it. Akiko too. We both think it is a really outstanding job, one that will benefit people around the country and the world, and one that we look forward to learning a lot of new things from. The book has all the touches, so artistically and sensitively presented. We laughed over the illustration on page 95 of milking the cow-sized soybean or soybean sized cow, at the parfait [Vanilla pudding] on p. 102-03 that expands the more you open the book, etc. We look forward to trying out many of your soy recipes. With a book like that out, we feel we can retire from our work of trying to turn the world on to soy. You've done it, or at least provided a good start.

"We have a number of new books on soyfoods coming out soon, and you can be sure that we will make very favorable mention of your book in all of them. We will even try to get it into the Ballantine Books edition of the pocketbook mass-market *Book of Tofu* (175,000 copies first printing, out this January) but it may be too late. There will be numerous references in our *Book of Tempeh, Tempeh Production,* and *Tofu & Soymilk Production.* In the latter would you mind if we used a few of your recipes (e.g., Ice Bean) with credits, of course?" Address: New-Age Foods Study Center: U.S.A.–P.O. Box 234, Lafayette, CA 94549. Phone: 415-283-2991.

3047. Eastham, Edmund J.; Lichauco, T.; Grady, M.I.; Walker, W.A. 1978. Antigenicity of infant formulas: Role of immature intestine on protein permeability. *J. of Pediatrics* 93(4):561-64. Oct. [17 ref]
• ***Summary:*** It was demonstrated in a prospective feeding trial that soy protein is at least as antigenic as cow's milk protein. Address: Dep. of Pediatrics, Harvard Medical School; Pediatric Gastrointestinal Unit, Massachusetts General Hospital; and Pediatric Dep., Cambridge City Hospital, Boston, MA.

3048. Howes, Charles D. 1978. Re: Seventh-day Adventist soymilk plants. Letter to William Shurtleff at Soyfoods Center, Oct. 1 p. Typed. [1 ref]
• ***Summary:*** Lists the soymilk plants in Central & North America (4, in Mt. Vernon, Ohio; Sonora, Mexico; Montemorelos, Nueva Leon, Mexico; San Pedro Sula, Honduras), Asia (2, in Chiba-ken, Japan, and in Poona, India), and the Middle East (1, in Cairo, Egypt). Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

3049. Jacobs, Leonard. 1978. Menage: My family has

been making soymilk and tofu practically every day, but we cannot figure out what to do with the leftover soybean pulp (okara). M. Weintraub, Gabriola, California. *East West Journal.* Oct. p. 12.
• ***Summary:*** Answer: One of the best uses for okara is in making tempeh. You can also steam okara with vegetables and compost the rest. Address: Publisher, East West Journal.

3050. Jagannath Rao, K.V. 1978. Studies on the effect of replacement of cow's milk by soymilk in the preparation of dairy product. MSc thesis, Dairy Technology, University of Agricultural Sciences, Hebbal, Bangalore. 90 p. Oct. [126 ref. Eng]
• ***Summary:*** The production of milk in India is estimated to be 23.5 million metric tons per annum. The per capita availability of milk in India is about 113 gm/day as against the recommended level of 280 gm/day. Milk contributes only about 10% of the protein to the average Indian diet. A recent Economic survey showed that 20 to 40% of the people in India were below the "poverty line." "Attempts have been made in using soy milk in milk extender at Jawaharlal Nehru Krishi Vishva Vidyalaya, Jabbalpur. G.B. Pant University of Agriculture and Technology, Pantnagar have developed equipment and facilities for manufacturing soymilk on a large scale. Soymilk is also commercially manufactured at Nagpur and Poona under different trade names. Dairy Project of the University of Agricultural Sciences, Hebbal, Bangalore is regularly manufacturing the flavoured soymilk which is being marketed to the staff and students of the University."

The author prepared soymilk using a modified version of the Illinois Method. Some was used as is and some was mixed in varying proportions with cow's milk to make "modified milk." Some combinations were flavored. Using modified milk, the author also prepared paneer (coagulated with citric acid), Kalakand, ice cream. Pasteurized flavored modified milk containing 40% soymilk was well accepted. Raspberry-flavored modified milk was liked best, followed by rose, cardamom, vanilla, and pineapple. Pasteurized flavored modified milk containing 50-70% soymilk was also well accepted. Paneer, kalkand, or ice cream containing 20-40% soymilk were well accepted. Address: Bangalore, India.

3051. **Product Name:** [Delicious Maisoy (Corn-Soya Beverage Mix)].
Foreign Name: Maisoy.
Manufacturer's Name: Maisoy, Inc.
Manufacturer's Address: Santa Cruz, Bolivia.
Date of Introduction: 1978. October.
Ingredients: Dehulled corn, whole soybeans (70:30), sugar, vitamin mix.
Wt/Vol., Packaging, Price: 150 gm cellophane-polyethylene bags.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Calories 407, proteins 17-20 gm, oil 6.55 gm, vitamins and minerals 344 mg, fiber 2.64 gm.
New Product–Documentation: P. Bleyer. 1979. LEC Report No. 7. p. 29-31. "The progress of Maisoy in Bolivia... In October 1978 we introduced new lines into the market to reach the low-income market." Delicious Maisoy will help solve their nutrition problem in an economic way. The product can be served in a baby's bottle, as a super breakfast drink, as refreshment, a snack, or a pudding.

Label (box) brought to Soyfoods Center, 1984. Oct. 17.

3052. New England Soy Dairy, Inc. 1978. Product and price list. October 12, 1978. 305 Wells St., Greenfield, MA 01301. 2 p.
• ***Summary:*** Includes tofu (bulk and packaged), Soymayo Eggless Imitation Mayonnaise, tofu recipes and posters. Coming soon: soymilk. On the mailing panel in bold blue caps: "Soy to the World." Address: Greenfield, Massachusetts.

3053. Powell, Geraldine K. 1978. Milk- and soy-induced enterocolitis of infancy: Clinical features and standardization of challenge. *J. of Pediatrics* 93(4):553-60. Oct. [46 ref]
• ***Summary:*** Soya intolerance may occur when fed immediately after milk protein-induced gastrointestinal damage has occurred. This casts doubt on its value in treating this condition. Address: Dep. of Pediatrics, Div. of Gastroenterology, Univ. of Texas Medical Branch, Galveston, TX 77550.

3054. Shurtleff, William. 1978. Protein source for the future. *PHP* (*Japan*). Oct. p. 8-18, 79-82. Illust. 18 cm.
• ***Summary:*** Contents: Introduction. Ten reasons why soybeans will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost source of protein in almost every country of the world. 3. High nutritional value. 4. Time tested for over 2,000 years. 5. Remarkably versatile. 6. Appropriate technology ("Traditional soyfoods can be produced in cottage industries"). 7. New dairylike products. 8. Soybeans are hardy and adaptive. 9. Free nitrogen fertilizer from nodules on soybean plants. 10. Great productivity potential.

Discusses new patterns of soy protein utilization, with specific reference and descriptions of tofu, soymilk, tempeh ("Indonesia's most popular soyfood"), miso, shoyu, whole dry soybeans, roasted soybeans, fresh green soybeans, soy flour, kinako, soy sprouts, and textured soy protein (TVP), yuba, and natto. Concludes with a discussion of new developments in the Western world.

Note: This is the earliest English-language document seen (Aug. 2013) that contains the word "dairylike" (written as one word) in connection with soyfoods. Address: New-Age Foods Study Center, P.O. Box 234 (951½ Mountain View Dr.), Lafayette, California 94549. Phone: 415-283-

2991.

3055. Shurtleff, William. 1978. Tofu shops and soy dairies in the West. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 2 p. Undated. Unpublished typescript.
• ***Summary:*** Lists the name, address, phone number and owner of all known tofu shops and soy dairies in the USA (alphabetically by state, and within each state alphabetically by city), Canada, Latin America, Europe, and Australia. There are 122 tofu shops and soy dairies in the USA and Canada, and 138 on the entire list.

This list appeared in the first Ballantine Books edition of *The Book of Tofu,* which was available on 22 Dec. 1978, although the date on the copyright page is Jan. 1979. We checked the last dummies on 23 Oct. 1978–which is the latest date we could have submitted this list. Address: Lafayette, California. Phone: 415-283-2991.

3056. *Soyanews* (*Sri Lanka*). 1978. Soya milk for curries report out. 1(2):1. Oct.
• ***Summary:*** The Soyabean Foods Research Centre has prepared a feasibility study of the processing of soya milk as a beverage and for use in curries."

"The report prepared for the National Milk Board gives a detailed breakdown of the equipment required and the costs of the processing of soya milk. The total outlay for the equipment is 650,000 US dollars. The report points out that a soya milk project, if implemented, can come to the relief of the coconut industry and reduce the demand for cow's milk.

3057. *Soyanews* (*Sri Lanka*). 1978. Free training for soya cooks. 1(2):1, 6. Oct.
• ***Summary:*** Starting at "the beginning of this month, the cafeteria run by the Central Agricultural Research Institute (CARI) and used by members of the Soyabean Foods Research Centre will serve soya based foods.

"The cafeteria's cook and manager were trained for a week (September 18-22) in methods of soya preparation as demonstrated by the Soyabean Foods Research Centre's specialist in home and village technology, Miss. S. Kanthamani. This training will be extended to personnel in other cafeterias, hotels and guest houses or any other institution interested in producing low cost nutritious meals.

"Already some organizations like the Lanka Mahila Samithi, Sarvodaya, Buddhist Associations and the Housewives' Association have expressed a desire to send their representatives for two week training sessions."

"For free soya milk recipe write Soyanews, P.O. Box 1024, Colombo."

• ***Summary:*** Soy-related recipes include: Soy coffee (p. 101). Soya souffle (with whole soybeans, p. 204). Chapter 14, titled "A cow in your kitchen" (p. 207-27), contains extensive information on soymilk, soymilk products, and problems with cow's milk. It's contents: Introduction. What is soya? The proteins of the soybean (*la fève soja*). The carbohydrates of the soybean. The vitamins and minerals of the soybean. The oils of the soybean. Soymilk: The cow of China. Reasons for replacing animal milk in your diet with soymilk: Many people are allergic to animal milk. Animal milk is a cause of anemia. Animal milk can be a cause of infection of the urinary tract, particularly in infants. Animal milk is polluted. Comparison of the composition of soymilk and cow's milk (100 gm each). How to make soymilk at home. Soymilk whipped cream. Soy mayonnaise without eggs. Soy yogurt (fermented). Tofu: The meat without bones. Nutritive value of tofu. How to make tofu at home. Tofu filets. Tofu steaks. Breaded tofu slices. Tofu pâté à tartiner. Grilled tofu. Okara (*La pulpe de soja*). Okara pâté (*Pâté à la pulpede soja*). Soya butter (*Buerre de soja;* made from 1 cup lightly grilled soy flour, 2 cups water, a little salt, and about ½ cup oil). Address: Ottawa, Canada.

3059. Aldridge, Tom; Schulbach, Herb. 1978. Water requirements for food production. *Soil and Water* No. 38. p. 13-17. (University of California Cooperative Extension). *
• ***Summary:*** In California, the number of gallons of water required to produce 1 edible pound of various crops is as follows, in descending order of amount required: Beef 5,214. Pork 1,630. Chicken 815. Egg 544. Milk 130. Grapes 70. Oranges 65. Apples 49. Carrots 33. Wheat 25. Potatoes 24. Lettuce 23. Tomatoes 23.

3060. Andres, Cal. 1978. Fermented / enzyme-treated food products. *Food Processing* (*Chicago*) 39(12):67-69. Nov.
• ***Summary:*** Peanut milk was added to cow's milk to make a yogurt-like product. The cow's milk was necessary to achieve a product with the desired viscosity. Address: Senior Associate Editor.

3061. Chen, Philip S.; Chung, Helen D. 1978. Soybeans for health and longer life. New Canaan, Connecticut: Keats Publishing, Inc. xii + 178 p. Index. 18 cm. (A Pivot Health Book).
• ***Summary:*** A revised and condensed pocketbook version of Chen and Chen 1956. Contents: Preface. Foreword. Introduction. Part I: Nutritive value of the soybean. 1. Protein. 2. Fat. 3. Carbohydrates and caloric value. 4. Minerals. 5. Vitamins. 6. Soybeans and world population. 7. Soybeans and disease.

Part II: Soy products. 8. Soybean oil: Phosphatides, margarine. 9. Soybean oil meal: Gelsoy, Multi-Purpose Food. 10. Soy flour. 11. Concentrated soy protein products:

Soy protein concentrates (Griffith Laboratories makes Isopro and GL-301), soy protein isolates, and textured or spun soy proteins. 12. Soy milk. 13. Soy cheese (tofu). 14. Soy sauce. 15. Soybean sprouts.

Part III: Soybean culture and preservation. 16. Soybean culture. 17. Preservation of soybeans (preserving green soybeans by canning, freezing, and dehydration).

Part IV: Recipes. 18. Soybeans and soybean pulp. 19. Soy flour: Breads, cakes, cookies, pies, soups, other recipes. 20. Soy grits and soy flakes. 21. Soy milk. 22. Soy cheese. 23. Soybean sprouts. Appendix: Soybean utilization (chart). References. Address: 1. PhD; 2. M.S. Both: USA.

3062. Swan Food Corp. 1978. Swan Foods: Remember the name! (Ad). *Alternatives* (*Miami, Florida*). 2(11):53. Nov.
• ***Summary:*** This half-page ad lists the company's soy products, iced herbal beverages, and baked goods & pastries. Soy products include: Baked tofu, Marinated tofu, Caraway tofu, Tofu chip dip, Tofu salad dressing, Soy melk (sweetened, or carob soy milk), Soyogurt (a cultured soy product), Wholegrain soy burgers. Baked goods include: Tofu cheesecakes, Carob maple swirl, "and more to come."

On the top half of the ad is a large circular logo featuring a stylized swan, with two large wings symmetrical about a vertical axis and an arched neck on the left side. The other half of the arch is drawn in to form a heart, inside of which is written "Because we love you." Across the inside top are the large words "Swan Foods." A rainbow arches below them and over the swan. At the top center, between the words "Swan Foods," are the smaller words "Nature's Finest" written one below the other; between them is an infinity sign.

Across the bottom of the ad is written: "Every Swan Soybean Product contains all 8 essential amino acids (which are necessary for a balanced diet) and have no cholesterol. Available in health & natural food stores. Retailers: Swan Quality Products are distributed by Tree of Life, Inc., or contact Swan Food Corp., 5758½ Bird Rd., Miami, Florida 33155. In Miami enjoy all Swan Products at Swan's Retail Deli & Bakery, The Soybeanery, 5758½ Bird Rd."

Note: A full-page Swan Foods ad that is very similar to his half-page ad was published in the July/August issue of this magazine. There are four differences between the two ads: (1) This November ad is smaller; Swan Foods went out of business one month later, in December 1978; (2) A Tofu Salad Dressing and Red Zinger tea appear in this ad but not in the earlier ad; (3) This ad states that Swan Foods' products are distributed by Tree of Life, Inc., a major distributor, whereas in July/August they had been "distributed by your local Natural Foods Distributor"–less impressive. (4) The following products appear in the earlier (July/August) ad but do not appear in this one: Soy Shakes (Carob, Vanilla & Strawberry), three iced herbal beverages (Lemon Mist, Miami Cooler, Red Quencher), and two baked goods & pastries (Mary's Cream Cake, and Mary's Devil's Food Cream Cake). Address: The Soybeanery, 5758½ Bird Rd., Miami, Florida, 33155.

3063. *SoyaScan Notes.* 1978. Chronology of soybeans, soyfoods and natural foods in the United States 1978 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 25-27. International Soya Protein Food Conference held in Singapore, sponsored by the American Soybean Association. 400 people from 24 countries participated.

Jan. *Whole Foods* magazine starts publication in Berkeley, California, founded by Steven & Henrietta Haines, and Jim Schreiber. The first issue features an article titled "Making Money Making Tofu," about five tofu companies. Westbrae has a full-page color ad titled "Someday all of this will be as familiar as apple pie," showing five types of miso plus sea vegetables.

Feb. 17. Laughing Grasshopper tofu shop changes its name to New England Soy Dairy, Inc., the first company to use the term "soy dairy" in its name. Also in 1978 White Wave in Boulder, Colorado, publishes a charming poster announcing, "We've got an alternative. White Wave Soy Dairy." An illustration shows a man leading his cow, standing under a beanstalk, looking in wonder at the seeds, soybeans.

March. The Cow of China, America's third soy deli, run by White Wave, opens in Boulder, Colorado. It is later renamed Good Belly Deli.

April. Nasoya Foods Inc. starts making tofu and soymilk in Leominster, Massachusetts, inside a former dairy. Founded by John Paino and Robert Bergwall. May. 3. "What is this Thing Called Tofu" by Patricia Wells published in *The New York Times.*

May 22-25. Keystone Conference on Soy Protein and Human Nutrition held in Keystone, Colorado, organized by Ralston Purina. 105 registrants. The world's top researchers on the subject present 34 papers demonstrating a new scientific understanding of the quality of soy proteins for human nutrition. The influential 406-page proceedings, titled *Soy Protein & Human Nutrition,* are published in 1979, edited by Wilcke, Hopkins, and Waggle.

May. The Soy Deli opens at The Soy Plant in Ann Arbor, Michigan. America's fourth soy deli.

June. Brightsong Tofu, founded by Joel Brightbill and Bob Heartsong, starts making tofu in Redwood Valley, California. Sharon and Richard Rose bought the company in June, 1980 and in Nov. 1980 started The Real Food Tofu Cafe, a soy deli, adjacent to it.

June 26. First Takai catalog of tofu and soymilk equipment published, written by William Shurtleff. The first publication of its type in English, it helps start many new soyfoods companies.

July 28-31. First Soycrafters Conference held at The Soy

Plant in Ann Arbor, Michigan. Conceived and organized by Steve Fiering. 75 people attend. The Soycrafters Association of North America (SANA) is founded, with Larry Needleman as the first president and a board of directors.

Sept. First issue of *Soyanews* published in Sri Lanka.

Oct. *The Farm Vegetarian Cookbook* (revised ed.) by Louise Hagler published by The Farm's Book Publishing Co. in Tennessee.

Oct. Morinaga Milk Co. in Japan starts to export their tofu in aseptic Tetra Brik cartons worldwide. They issue a color recipe booklet to accompany their tofu.

Oct. Kendall Food Co. starts to make America's earliest known commercial amazake in Brookline Village, Massachusetts. Amazake is made from koji, as are miso and shoyu. Not even in Hawaii was commercial amazake made before this.

Oct. 29-Nov. 3. World Conference on Vegetable Food Proteins held in Amsterdam, The Netherlands. More than 1,000 participants. Sponsored by the American Soybean Assoc. and others.

Nov. The Tofu Shop, America's fifth soy deli-restaurant, opened in Rochester, New York, by Greg Weaver. Large and very creative menu. Later called The Tofu Gardens, and The Lotus Cafe.

Dec. American Soybean Association moves its headquarters from rural Hudson, Iowa, to St. Louis, Missouri, into greatly enlarged, modern offices.

Dec. *The Book of Tofu* (extensively revised, Americanized edition), by Shurtleff and Aoyagi published by Ballantine Books in a mass-market paperback edition. By 1987 the two editions have sold over 450,000 copies.

Dec. *Tofu Goes West,* by Gary Landgrebe published by Fresh Press.

Dec. *How to Cook with Miso,* by Aveline Kushi published by Japan Publications.

Dec. *Tofu Madness,* by Olszewski published by Island Spring tofu company in Washington.

Dec. Growing use of the term "shoyu" and less misuse of the term "tamari" in publications, indicating awareness of the difference between these two types of soy sauce.

* *Peaking Out on Tofu,* by Matthew Schmit self-published in Colorado.

* Soymilk Piima, resembling the traditional Finnish cultured dairy product, first made (on a home scale) by Pat Connolly in southern California.

* Soy oil: The King with no crown. A series of studies initiated by the American Soybean Assoc. in 1978 showed, surprisingly, that although soy oil is by far America's widely used oil (accounting for 84% of all vegetable oils and 58.3% of all edible oils and fats), most consumers are simply not aware that they are using soy oil. When 1,200 female heads of households were asked "What oils can you think of?" only 17% mentioned soy oil (52% mentioned corn oil, 36% peanut oil, and 23% safflower oil), and only 7% reported having purchased soy oil in the past 6 months. The ASA Market Development Foundation promptly began a campaign to increase product recognition and loyalty, improve product image, and to encourage manufacturers worldwide to identify soy oil on product labels. The slogan used is shown at the start of this paragraph.

3064. **Product Name:** [Soymilk, Soy Yogurt].
Manufacturer's Name: Alternatur.
Manufacturer's Address: Korte Spekstraat, Hallaar, Belgium.
Date of Introduction: 1978. December.
How Stored: Refrigerated.
New Product–Documentation: Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 400. Owner: Unknown.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name and address. No phone number or owner. "Makes soymilk and yogurt."

3065. *East West Journal.* 1978. Soy boom. Dec. p. 18.
• ***Summary:*** "Over seventy people involved in the production of soy foods met in Ann Arbor, Michigan, this summer and established the Soycrafters Association of North America (SANA). The nonprofit organization will facilitate communication among the 140 businesses producing tofu, miso, soymilk, or tempeh. SANA reports soy foods have been received enthusiastically across the United States and Canada. Seventy new tofu shops and soy dairies have been established in thirty-one states in the last two years. For further information write SANA, Box 76, Bodega, California 94922."

3066. Hittle, Carl N. 1978. Soybean potential in Nepal: A report. Mimeographed, spiral-bound manuscript. 30 p. 28 cm. [26 ref]
• ***Summary:*** Dr. Hittle served as a soybean consultant in Nepal from Sept. 23 to Oct. 11, 1978. Contents: 1. Introduction. 2. Terms of reference for soybean consultant. 3. Background information: Soybean production, production research, evaluation of germplasm, local varieties and selections, preservation of soybean germplasm, rhizobial microbiology, economics of soybeans, soybean statistics, present uses of soybeans in Nepal, Food Research Services of the Ministry of Food, the dairy industry in Nepal, solvent extraction, CARE, UNICEF. 4. Observations at the research stations: Kakani Hill Station, Pakhribas Agricultural Centre, Lumle Agricultural Centre, Central Research Station–Khumaltar, Bhairawa Agricultural Farm, Rampur Agricultural Experiment Station, National Rice Station–Parwanipur.

Note 1. The first 3 stations are located in the hills,

Khumaltar is in the Kathmandu Valley, and the last 3 are located in the plains (Tarai [Terai]).

5. Comments and suggestions: Priority of soybeans, operational work plan, assignment of national staff, assignment of international staff, training, linkages, a national soybean research center. Appendixes. I. Itinerary of C. N. Hittle. II. Persons met by soybean consultant. III. List of background information. IV. Sarbottam Pitho (Super Flour made from 50% soybeans). Uses of soybeans.

The soybean is an ancient crop in Nepal. Generally its culture has been restricted to terraces and valleys ranging from 500 to 1,500 meters (1,642 to 4,925 feet) in altitude. Soybeans are usually grown at lower altitudes in single rows on the bunds of rice paddy fields, or at higher altitudes as an intercrop with maize or millet. Hectarage is difficult to estimate; estimates made from 1976 to 1978 range from 10,000 to 70,000 hectares. Yields are low, ranging from 300 to 500 kg/ha. This is because of the two ways soybeans are traditionally grown, because they rarely have been grown in the Tarai [Terai] (Plains area) where higher yields can be expected, and because little emphasis has been given to developing superior varieties and cultural practices.

Soybeans are used mainly for human food in Nepal by "roasting the dried seeds (parching) or as green vegetables (boiling or frying the green pods followed by shelling of the seeds and eating the green soybeans). Parched soybeans are frequently mixed with popped maize (corn) and eaten daily as tiffin. Green soybeans are frequently mixed with other vegetables to make curry. A snack food is prepared by removing the seed coat of parched soybeans, splitting the cotyledons and mixing with garlic, salt, and chilli powder. Sprouted soybeans are mixed with other sprouted pulses and used as vegetable soup. Fermented soya products include soya sauce and kirima [kinema]."

Soybeans are one of the main sources of protein for the majority of the people in the Hill regions. Only small quantities of soybeans reach the market.

Note 2. This is the earliest document seen (Jan. 2012) that uses the alternative spelling "kirima" to refer to kinema, a fermented soyfood from Nepal and a close relative of Nepalese kinema and Japanese natto. Address: Soybean consultant in Nepal.

3067. Robertson, Laurel; Flinders, Carol; Godfrey, Bronwen. 1978. Laurel's kitchen: A handbook for vegetarian cookery and nutrition. New York, NY: Bantam Books. xxi + 643 p. Dec. Foreword by George M. Briggs, Prof. of Nutrition, Univ. of California, Berkeley. Illust. Index. 18 cm. [45 ref]
• ***Summary:*** This is the unrevised pocketbook edition of the original classic, first published by Nilgiri Press in Oct. 1976. Address: California.

3068. Swan Food Corp. 1978. Collected papers (Archival collection). Miami, Florida. 5 file folders, 1½ linear inches.
• ***Summary:*** Swan Foods was the first soyfoods company in the United States to make a wide variety of innovative soyfoods products–and to make them from organically grown soybeans. The company's papers are located at Soyfoods Center in Lafayette, California. In December 1978, when the company declared bankruptcy after about two intense years in business, Danny Paolucci cleaned out the office, keeping all documents that he believed might be of future importance. He kept them for 19 years, then sent them to Bill Shurtleff at Soyfoods Center at Shurtleff's request. Most of the papers relate to recipes. There are no commercial papers (invoices, ledgers, etc.).

Folder 1: Bulk soyfoods recipes, typed. Each recipe is typed on a sheet of 8½ by 11 inch lined paper. Recipes made in a Hobart mixer are marked with an asterisk (*) after the recipe name. The recipes (listed alphabetically) are: Baked tofu (with tamari sauce for marinade, bake at 350ºF for 30-35 minutes). Caraway tofu (add 5 ingredients to curding tofu; stir and let curds form). Carob cream cake* with topping (incl. 2 gallons soymelk). Cashew carob swirl cake* (incl. 3 gallons soymelk). Devils food cream cake* (incl. 2 gallons soymelk and tofu topping). Eggless egg salad* (incl. 10 lb boiled and cooled Swan Tofu). Marinade for tofu (incl. 1 gallon tamari; mix all ingredients in a 5 gallon bucket, add sliced tofu, and seal). Soy burgers* (incl. 2 gallons each cooked rice and fresh okara, and 2½ cups tamari). Tofu chip dip* (large and small; the small incl. 6 lb tofu boiled and cooled, ¼ cup tamari, and ¼ cup umeboshi plum paste; the large incl. 42 lb tofu).

Folder 2: Lists of ingredients for various soyfoods products typed on Swan Foods' blue-on-white letterhead: The products (listed alphabetically) are: Carob swirl marble cake (non-dairy) (incl. soy milk). Okara granola. Roasted cashew tofu pie (incl. tofu and organic soy milk). Soyogurt (non-dairy): Note: These ingredients are handwritten below a sample label design on the back of the bottom half of a Swan Foods order form.

Folder 3: Legal-sized yellow lined note pad with 17 pages of notes written in blue ink–probably by Mary Pung. Subjects: *Nutrition Almanac* (soybeans and soy milk, p. 71; malt, p. 76). One page of 6 bibliographic references for publications related to soy, with a large note: "Sell *Book of Tofu*, etc. in shop." *The Health Food Dictionary* & recipes (mu tea, p. 102; soybean, p. 159; tofu, p. 174). *Diet for a Small Planet* (Lappé, 1975 ed.) (protein table III–Legumes; notes on tofu, p. 102, soy yogurt vs. milk yogurt, p. 128-29; tofu, p. 132). *Recipes for a Small Planet* (Ewald, 1973) (table showing no. of calories you have to consume in order to get one gram of usable protein, p. 16; notes on Net Protein Utilization). *Soybean Diet* (Herman Aihara, 1974) (table of nutrients in various foods; cow's milk, p. 44; soybeans can help with environmental problems, p. 4; soybeans vs. meat, p. 6, 8-9; tofu preparation, p. 115; nigari, p. 116; nutrient value of tofu, p. 125). *The Book of Tofu* (Shurtleff & Aoyagi,

1975) (moral and emotional appeal, health, religion, ecology, economic, p. 19; complementary proteins, p. 24, 26; easy to digest and diet food, p. 26; low in saturated fats and cholesterol, linoleic acid, rich in minerals and vitamins, p. 27; nigari, free of chemical toxins, p. 28; quick and easy to use, p. 29; ecological, nitrogen from the air, p. 55; okara, p. 77-78; uses of agé, deep-fried tofu, p. 154-55; soymilk, p. 200). Six interesting teas.

Folder 4: Handwritten recipes (some very rough) and notes, in pen and pencil, mostly on individual sheets of paper. Soy-related recipe names (listed alphabetically): Basic tofu cheesecake. Basic tofu pie. Carob marble cake. Carob on blonde with tofu topping (also called Blonde on carob; baked, with soy milk). Carob tofu pie. Dips in tofu containers: Chive tofu dip, pimento tofu dip, sea tofu dip, Italian herb tofu dip, pimento olive dip (ideas only). Dressings: Miso, avocado, green goddess, creamy garlic, red Russian, spinach Russian (ideas only). Eggless egg salad. Eggless tofu salad. Frozen tofu cutlets. Mary's deluxe pizza (with tofu, from "Swan Food Corp."). Milk shake. Nori rolls. Okara products: burgers, burritos, felafels (ideas only). Pumpkin pie. Quiche with tofu. Sweetened carob shake. Tofu lemon pie. Tofu mayonnaise. Tofu pie filling. Tofu pudding, vanilla. Tofu quiche lorraine [Note: According to the *Joy of Cooking* (1975, p. 254-55), early recipes for quiche called for bacon and cream, but later cheese was added. When sautéed onions were included, the dish was called Quiche Alsacienne. Quiche Lorraine now typically contains egg white, bacon, milk or cream, and Swiss cheese]. Tofu rice salad. Tofu tarts. Tofu turkey (Barbara's, with stuffing). Yogurt dressing. The names of some people are included: Diane Kellar. Sherry (nori rolls).

Folder 5: Other. Tear-off recipes published by Natural Recipes, 94 Bourne St., Boston, Massachusetts 02130. Carob brownies (copyright 1974). Carob cake (copyright 1975). Note: Neither of these recipes contains any soy. Address: 5758½ Bird Road, Miami, Florida 33155. Phone: (305) 667-7141.

3069. Calkins, P.H. 1978. Vegetable consumption patterns in five cities of Taiwan. *AVRDC Technical Bulletin* No. 5 (78-94). 25 p. (Shanhua, Taiwan). [5 ref]
Address: AVRDC.

3070. **Product Name:** [New Saci Enriched Milk Shake Powder {Powdered Soymilk}].
Manufacturer's Name: Coca-Cola Industrias LTDA.
Manufacturer's Address: Brazil.
Date of Introduction: 1978.
Ingredients: Incl. isolated soy protein, nonfat dried milk, white sugar, colloidal thickener.
Wt/Vol., Packaging, Price: Sold in sacks.
How Stored: Shelf stable.
Nutrition: 4.5% protein. 120 calories per 200 ml serving.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Coca Cola Industries, Ave. Suburbana No. 5, Rio de Janeiro, Brazil. Phone: 20.751. Contact: Mr. Vera de Caravalho (A maker of soymilk).

Pereira & Campos. 1981. *Journal of the American Oil Chemists' Society* March. p. 357. Gives ingredients. Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 125-26. Sold in sacks to the Brazilian government for distribution to institutions, primarily the School Feeding Program.

3071. Costa, Sebastiao Irineu da. 1978. A soja na producao de alimentos [Soybean in the production of foodstuffs]. In: EMBRAPA–Centro Nacional de Pesquisa de Soja, ed. 1978. Anaias do I Seminario Nacional de Pesquisa de Soja [National Seminar on Soybean Research]. Vol. 2. Londrina (PR), Brazil: EMBRAPA–CNPS. See p. 235-243. [12 ref. Por]
• ***Summary:*** "Soybean is the best source of low cost and high nutritional value protein for human and animal consumption. Its high lecithin content gives it the emulsifying characteristics necessary to the production of liquid or instant foodstuffs. This paper shows the existence of special technology for the production of some of these foods, such as pasteurized or sterilized soybean milk, soybean flakes and micropowdered soybean flour, as well as discusses their nutritional characteristics and uses." Address: Instituto de Technologia de Alimentos (ITAL), Cx. Postal 139, 13.100–Campinas, SP, Brazil.

• ***Summary:*** Describes production of nutritious, low-cost foods made at two plants. The products are extruded full-fat soy flour for enrichment of foods such as tortillas, soy milk (natural or chocolate flavor), soy ice cream, and soy sweets. Address: Chihuahua Center for Research and Technical Assistance, Calle 15 No. 305, Chihuahua, Mexico.

3073. **Product Name:** Farm Style Full Fat Soy Flour: Coarse Grind.
Manufacturer's Name: Farm Foods.
Manufacturer's Address: 156 Drakes Lane, Summertown, TN 38483.
Date of Introduction: 1978.
Ingredients: Soybeans.
Wt/Vol., Packaging, Price: 2.5 lb (1.14 kg). Poly bag inside a paper bag.
How Stored: Refrigerated.
New Product–Documentation: Label. 1978, dated. 4 by 9 inches. Brown, green, yellow and orange on beige. "Make soymilk and tofu at home. Recipes included." Farm Foods

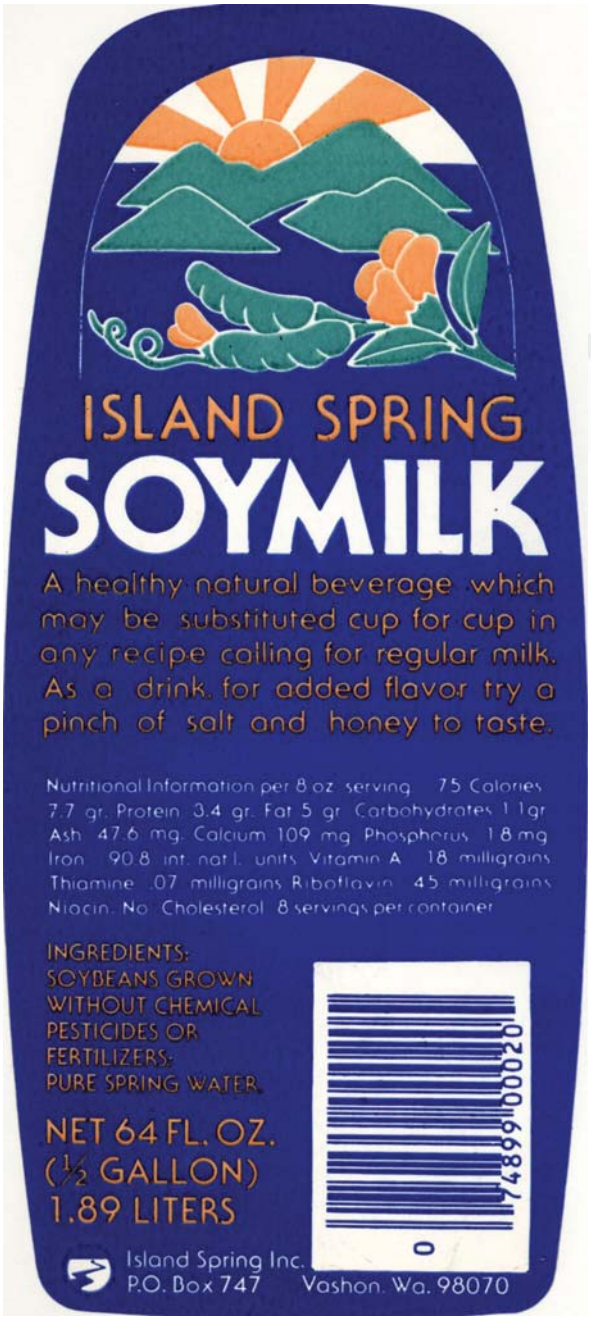
Products Catalog. 1978. p. 1.

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods.* p. 189. A photo shows the label. "Soyflour: This full-fat, farm style coarse ground flour is especially good for making soymilk and tofu at home. Farm Foods soy flour is ground fresh in Tennessee, and should be refrigerated. No preservatives have been added. Available in 2½ lb. display package and in bulk. Recipe flyer included."

3074. **Product Name:** Hinode Soymilk.
Manufacturer's Name: Hinode Tofu Company.
Manufacturer's Address: 526 Stanford Ave., Los Angeles, CA 90013.
Date of Introduction: 1978.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 32.

3075. **Product Name:** Island Spring Soymilk [Plain].
Manufacturer's Name: Island Spring, Inc.
Manufacturer's Address: P.O. Box 747, Vashon, WA 98070.
Date of Introduction: 1978.
Ingredients: Soybeans, water.
Wt/Vol., Packaging, Price: 64 fluid oz (½ gallon) 1.89 liters.
How Stored: Refrigerated.
Nutrition: Per 8 oz.: Calories 75, protein 7.7 gm, carbohydrate 5 gm, fat 3.4 gm.
New Product–Documentation: Leviton. 1981. Soyfoods. Winter. p. 17. Label. 1982. 2.75 by 7 inches. Self adhesive. Green, yellow/gold, white on blue. Illustration of sun or moon behind island mountains. "A healthy natural beverage which may be substituted cup for cup in any recipe calling for regular milk. As a drink, for added flavor try a pinch of salt and honey to taste."

3076. **Product Name:** Golden Archer Concentrated Soya Plantmilk: Soya "Beanmilk." (Soymilk).
Manufacturer's Name: Itona Products Ltd.
Manufacturer's Address: Leyland Mill Lane, Wigan, Lancashire, WN1 2SB, England.
Date of Introduction: 1978.
Ingredients: Soya flour, vegetable oil, unrefined sugar, lecithin, sodium phosphate.
Wt/Vol., Packaging, Price: 15 fluid oz 426 cc. can. Retails for 48 pence.
How Stored: Shelf stable.
New Product–Documentation: Label for a can (see next page). 1978, undated. 9.5 by 4 inches. Blue, yellow and black on white. "Itona Health Food. Soya 'Beanmilk.' Made from 100% non-animal sources. For use instead of milk custard by vegans, vegetarians, as a health food and by people who are opposed to cruelty to animals. Uses: As a



protein/energy drink straight or flavoured. In tea or coffee. In custards and milk puddings, etc. It can be used to replace milk in most recipes."

Ad in *Alive* magazine. 1979. May/June 1979 and July/Aug. p. 2. Itona Products Ltd. price list. 1980-81. Listed as "Soya Beanmilk, 15 oz of this product retails for £0.57." Manufacturer's catalog. 1980. "Itona Health Foods take the biscuit." A black-and-white photo shows the label. "Milk that's never seen a cow! It's 100% vegetable, made with soya and packed with protein and goodness... A wonderful food and its made without any exploitation of animals." Soya Bluebook. 1986. p. 103.

3077. **Product Name:** [Jonnapu Soymilk (Coffee)].
Foreign Name: Jonnapu Koohii.
Manufacturer's Name: Kenbi-sha K.K.
Manufacturer's Address: 4-22-40, Takadono, Asahi-ku, Osaka 535, Japan.
Date of Introduction: 1978.
Wt/Vol., Packaging, Price: 300 ml poly container.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Jonnapu Koohii was introduced in a 300 ml poly container in 1978 and distributed nationwide.

3084. Abehsera, Michel. 1978. Cooking with care & purpose: menus for strength and peace of mind. Brooklyn, New York: Swan House Publishing Co. [x] + 271 p. Index. 21 cm.
• ***Summary:*** A macrobiotic cookbook. From the front cover: "Toward the prevention and elimination of disease." "Amazing cures from the kitchen."

The chapter on "Legumes" (p. 39-45) includes: Cooking beans in a pressure cooker (chickpeas, lentils, aduki beans). Sweet beans casserole (with aduki beans). Soft adukis. Chickpea stew. Soja jardinire (with "1 cup cooked soya beans" and "2 tablespoons soy bean paste (miso)"). Bean sprouts (mung beans or lentils). Vegetarian cheese [tofu] (made with 2 cups soybeans, ½ cup lemon juice, salt, and cold water). Soya milk from soybeans. Soya milk from soya flour. Vegetarian cheese from soya flour [tofu].

Miso: The chapter on "Soups" begins with a long quotation by Dr. Tatsuichiro Akizuki, M.D. (no source is cited) about the use of miso to changes one's constitution and prevent radiation sickness (p. 49-52). Miso soup (p. 52). Miso sauce (p. 137). Miso spread (with tahini, p. 145). Miso pate (with aduki beans, p. 147).

A common seasoning in this book is "soya sauce." There are also many recipes for "seaweed" (p. 91-95).

Michel Abehsera arrived in the USA (New York City) from North Africa in 1964, and "was startled to find an entire generation of rootless youth." In the late 1960s he left the East Village [a largely residential neighborhood to the east of Greenwich Village on the west side of lower Manhattan in New York City] for Binghampton, New York, intending to slow the pace at which he had been living and to write a few books. His first book was *Cooking for Life* (1970, Swan House). Address: Brooklyn, New York.

3085. Brewster, Letitia; Jacobson, Michael F. 1978. The changing American diet. Center for Science in the Public Interest, 1755 S Street N.W., Washington, DC 20009. 80 p. No index. 22 cm. Update 1982 compares figures for 1976 and 1980, and gives percentage changes.
• ***Summary:*** A classic. Uses graphs to show changes in per capita "disappearance" of all basic foods (eggs, meat, milk and cheese, poultry, fruit, soft drinks, alcoholic beverages, fats and oils [broken down into vegetable oils, butter and margarine, and cooking fats]) and major nutrients (calories, fat, carbohydrate, protein, plus individual vitamins and minerals) from 1910 to 1976. Also shows the sources of our major nutrients.

Concerning alcohol (in terms of absolute alcohol): Per capita consumption peaked in the period 1810-1830 at a little over 7 gallons/person/year (mostly beer and cider), then fell sharply primarily as a result of the Temperance Movement. During the prohibition years of 1920-1933 no statistics were kept. When prohibition ended, consumption was just under 1 gallon/person/year but since then it has grown steadily to 2.69 gallons in 1975.

Concerning dry beans and peanuts: Consumption of dry beans was 6.5 pounds per person in 1910. It rose to 9.5

pounds in 1930 and has fallen ever since–to 6.5 pounds in 1975.

Consumption of peanuts rose dramatically from 2.5 pounds per person in 1910 to 6.5 pounds in 1945. It then fell back to 4 pounds in 1955, after which it has increased steadily to about 6 pounds in 1975. "In 1975, 46% of peanuts were ground into peanut butter; 22% were salted for snacks; and 17% were made into peanut candy."

Concerning fat consumption: "The most alarming change in our diet is our growing fat intake. In 1976, we consumed 27% more dietary fat (159 gm/person/day) than in 1909-13 (125 gm/person/day)... Most of our increased fat intake has come in the form of 'separated fats' and oils (margarine, vegetable oil, shortening, etc.)." Consumption of 'separated' fats and oils has jumped from 45 gm in 1921 to 70 gm in 1976. Consumption of animal fats has declined, while consumption of vegetable fats has skyrocketed from about 10 gm/person/day in 1920 to 58 gm/person/day in 1975.

Total red meat (beef, veal, pork, lamb, mutton, edible offals) consumption was 135 lb/person/year in 1910. It fell to 105 lb in 1935, then has risen steadily ever since to 162.5 lb in 1976.

Egg consumption was 305 per person per year in 1910. It rose to a peak of 403 in 1945, then has fallen ever since, reaching a low of 276 in 1976.

Total fluid milk consumption was 37 gallons/person/year in 1910. It rose to a peak of about 47 gallons in 1940, and has been falling ever since, to about 32 gallons in 1976. Soft drinks have lured Americans away from milk (p. 37-40).

Fig. 4 (p. 19) shows coffee, tea, and cocoa consumption. Coffee consumption (by far the largest of the three) peaked in 1945 at 16.5 pounds per person of raw green coffee beans. By 1976 it had dropped to about 11 pounds per person. The downward trend in consumption is said to be due to the rapid rise in coffee prices after 1945.

Fig. 7 (p. 22-23) shows butter and margarine consumption. In 1957 Americans first used more margarine than butter in their kitchens–8.6 lb/person of margarine and 8.3 lb of butter for a total of 16.9 lb/person. In 1910 the total of the two was about 20 lb/person, so the trend for consumption of the two has been downward–especially since 1935. Address: Washington, DC.

3086. Calella, John R. 1978. Cooking naturally: An evolutionary gourmet cuisine of natural foods. Berkeley, California: And/Or Press. ix + 112 + 5 p. Illust. by Pedro J. Gonzalez. Index. [81 ref]

• ***Summary:*** The author of this vegetarian cookbook, of Italian ancestry, is popularly known as "Organic John." He likes to use fresh foods, and he has a call-in radio show in San Francisco. In chapter 4, Ingredients (p. 16-), he discusses soya butter [margarine], miso, tamari, instant protein powder (incl. Shaklee's Instant Protein), lecithin granules, Soyamel powder (powdered soymilk made by Worthington Foods), Balanced protein seasoning (powdered HVP made from soybeans).

Chapter 10 (p. 79-83) contains a long section on soya beans, with recipes: Homemade soya bean curd (tofu). Things you can do with tofu. Soya patties (with dry soya beans). Soya bean loaf. Green soya bean mix (with dry green soya beans). Soya beans in a beet stew. Soya bean spread.

In the section on Fruit Sherbets, many of the recipes contain 2 tablespoons Soyamel (powdered soymilk) and lecithin granules. Address: Berkeley, California.

3088. Dahlinger, John Côté; Leighton, Frances Spatz. 1978. The secret life of Henry Ford. Indianapolis/New York: Bobbs-Merrill Company Inc. 243 p. See p. 170-77. Index. 24 cm.

• ***Summary:*** The author was born on 9 April 1923 at Henry Ford Hospital. His mother was Evangeline C. Dahlinger, who was married at the time to Raymond C. Dahlinger, one of Henry Ford's most trusted employees and later Manager of the Ford Farms. The author makes the case convincingly that Henry Ford was his father, making him Henry Ford's illegitimate son.

Chapter 12, titled "Quadrapeds are out" (p. 170-77) contains extensive information about Ford's work with soybeans and soyfoods. Ford believed that the world of the future would be a world without quadrupeds. "We don't need horses. We've got the tractor. We've got the automobile. We don't need cows–we can make synthetic milk. We can make meat substitutes out of soybean and coconuts–you can hardly tell the difference. We don't need sheep. We will be able to make wool out of synthetic things–it will be better than wool... Ford had good reason to distrust horses. He told me that when he was a young boy, his foot caught in the stirrup when a horse bolted. He was dragged around and could have been killed. I don't recall ever seeing him ride a horse... Ford considered the horse a very inefficient instrument. He called it a thousand-pound hay-burning motor with one-horse power.

"As Henry Ford worked toward his great vision of a world that had no need of quadrupeds, I was his guinea pig. And I wasn't the only one. Everyone had to eat the strange concoctions he was putting together and calling milk, meat, and vegetables, depending on their color. Soybean milk was his triumph. I had to drink it while he asked me eagerly, 'Can you tell the difference? Isn't that a fine glass of milk?'

"I loved milk, but his soybean milk almost cured me. It tasted like chalk. I was perfectly satisfied with the job a cow did, and his version was simply terrible. For a time, Ford was eating so much ersatz foods he was concocting that Mrs. Ford worried about his health.

"Ford would eat soybean pie and drink the soybean milk that made even milk of magnesia taste good. Ford was working on a soybean body for an automobile. They used to say that if it didn't run, Ford could eat it.

Ford had a "car body built from the soil" with wheat straw, flax, and hemp [*Cannabis*] that proved to be so strong it was promoted in photo sessions by whacking it with an ax.

"Ford's ultimate triumph along the soybean line was the soybean dinner he himself dreamed up and had served at the time of the Ford exhibit at the Chicago Century of Progress Fair in August 1934." A list of the 16 items served is given; soy ice cream is not mentioned.

"I was about eleven [i.e. in about 1934] when Ford was at the peak of his excitement about soybeans. You had only to talk to him for five minutes and soybeans would enter the conversation. He kept bottles of soybean milk in our refrigerator in case he got thirsty and in case I weakened a little to drink a little too. I only drank it, however, under the greatest duress.

"I still have the recipe he gave to mother for making soybean milk. The formula was developed by his chemical engineers... Soak one-half pound soybeans overnight and grind to a fine powder. Add two quarts of water and heat in a double boiler for one-half hour. Strain liquid through a fine cloth and season with a dash of salt. Add one or two tablespoons of syrup to sweeten. A dash of banana oil can also be added to make it resemble cow's milk more closely. Ford was always shifting the formula around a trifle to see which sweetening syrup was best–maple or sorghum or honey–and whether a little more or less salt would improve the taste.

"Ford was evangelical about soybeans. He talked of how cooked soybeans tasted much better than lima beans did, and how soybean spread was much better for children than peanut butter. He advised me to try it in a soybean and jelly sandwich.

"Ford urged Mother to tell our cook to use a lot of soybeans in cooking and to overcome the strong flavor of the beans by adding plenty of onions. In his own household the cooks were ordered to sneak a few soybeans into every food on the table–into soup, salad, the peas or other vegetable of the day.

"Ford would now and then flash a letter around from some doctor or other who was grateful for Ford's experiments with soybean milk because babies who were allergic to cow's milk were able to use inexpensive, life-saving soybean milk. And also those adults who were allergic to milk were able to enjoy puddings and things that they had never been able to enjoy before.

"Incidentally, Ford's son was named after the man who was in charge of food research at Ford, Doctor Edsel Ruddiman. Ruddiman worked in the engineering lab and was one of Ford's favorite people. Ford, of course, worked closely with Dr. Ruddiman in maximizing the uses of soybeans." Ford also fancied soybean cottage cheese.

"If I recall correctly, Ford at one time had twenty thousand acres of soybeans under cultivation under Dad's direction, and it was said he was spending over a million dollars a year experimenting with the plant in various ways–as food, as plastic, as animal food, as a high-protein, low-calorie diet food, and as a source of industrial oils. Ford would brag about how there was nothing in the soybean plant that was wasted; even the stalk could be made into fiber.

"As Ford saw the world of the future–and I'm sorry it didn't come to pass–every farmer would become wealthy by running his own little factory, or 'cottage industry,' as Ford called it. He would produce soybeans in his field and make at least one soybean product for sale to factories or grocery stores.

"As Ford foresaw the world, farmers wouldn't need barns. 'With no animals, there need be no buildings on a farm except the granaries,' he said. Except, of course, the little farm factories..." (p. 176).

Henry Ford grew marijuana [hemp] for experimental reasons. It was "enclosed by a large cyclone fence. The Ford people thought it had all been destroyed after Ford died, but some years ago they found it growing wild again" (p. 177).

"His campaign against the quadruped never quite ceased. He was forever sounding off against four-footed animals, especially those that provided meat. As early as 1919 or '20 he had said that the world would be better off without meat... And he further insulted the cow by calling it 'the crudest machine in the world'" (p. 177).

Ford was as trim and lean as a split rail fence. He did not smoke or drink alcohol. He was a "health nut" and for a time he preached that sugar was dangerous (p. 78). At the top of things he disliked most were Franklin Roosevelt, "monied" Jews and Judaism, Catholics and Catholicism (p. 216).

3089. Delire, M.; Cambiaso, C.L.; Masson, P.L. 1978. Circulating immune complexes in infants fed on cow's milk. *J. of the American Medical Association* 254:1337-41. *

3090. Farm, The. 1978. Yay soybeans! How you can eat better for less and help feed the world. Second revised edition. Summertown, Tennessee: The Book Publishing Co. 14 p. Illust. 22 cm. 2nd rev. ed. 1978, 14 p.
• ***Summary:*** The first edition of this creative little booklet, published in 1974, was printed with blue ink on white paper; this 1978 edition uses brown ink on white paper. Contents: Living on soybeans. Some of our favorite ways to eat soybeans. Basic cooked soybeans: Soybeans and tortillas, Soybean stroganoff, Soy fritters, Cheezy soybeans

(Good Tasting Nutritional Yeast gives the cheezy flavor), Soyburgers, Soy nuts (dry roasted), Soy coffee. Soymilk: Using soybeans or using soy flour, Soy mayonnaise (made with soymilk), Soy yogurt.

Tofu: How to make at home (6 step process using nigari, epsom [sic, Epsom] salts, vinegar, or lemon juice as a coagulant), Tofu salad dressing, Tofu salad [like an eggless egg salad], Scrambled tofu, Pan fried tofu, Tofu cheesecake. Soy pulp: Introduction, Scalloped tomatoes and pulp, Soy pulp burgers, Soy pulp cookies. Soy flour: Basic salad and sandwich spread, Seasoned sandwich spread. TVP–Textured Vegetable Protein: Introduction, TVP tortilla and taco filling, Taco filling sauce, TVP spaghetti sauce, Sloppy Joes. Good Tasting Nutritional Yeast: Introduction, Melty cheese, Cheese crackers, Golden gravy, Yeast 'omelette.' Eggless cookery: Introduction, Pancakes (with soymilk), Chocolate cake (with sour soymilk), Cookie crust for cheesecake. A word about vitamin B-12. Some facts about people and food. Plenty. Address: Tennessee.

3091. Faryna, Paulette J. 1978. Soyabeans in the Nigerian diet. *Ahmadu Bello University, Extension Bulletin.* No. 21. 74 p. Home Economics Series No. 1. Reprinted in Nov. 1985. [64 ref]

• ***Summary:*** Contents: Acknowledgements (especially Mrs. V. Ogunsola of Home Economics Section, Samaru College of Agriculture, and Mr. T. Kay, Dept. of Chemical Pathology, Ahmadu Bello Univ., Zaria). Foreword. The history of soyabeans. The role of soyabeans in the diet. Soyabeans in Nigerian weaning foods. Protein deficiencies. The preparation of soyabeans. Soyabeans enriched paps and porridges. Soyabean soups. Soyabeans as a meal on their own. Soyabean patties. Soyabean sweet snack foods. Soyabean breads. Fermented soyabean products: Soyabean Daddawa, Soyabean Sprouts. Soyabean oriental delicacies: Tofu (curded with lemon juice, vinegar, kuka [the fruit of the baobab tree], calcium sulphate, or epsom salts), Basic Fried Tofu, Soyabean Cheese (with okara), Soy Yogurt. Appendix: Measurements. Home made ovens. Soyabean feeding trials with infants. References.

Note: This is the earliest English-language document seen (April 2013) that uses the term "soyabean cheese" to refer to tofu.

Includes 67 Nigerian-style recipes. Soybeans are used mostly in the form of "soybean paste" (fresh soy puree or gô) and homemade whole soy flour. To make the paste: Soak soybeans overnight, dehull by hand and float off hulls, grind cotyledons with a small amount of water, use in a cooked preparation. To make flour: Boil beans for 30 minutes, wash, soak in two times the volume of water for 12-24 hours, change water every 4-6 hours, sun-dry, grind.

Soyabeans were introduced to Nigeria in 1908, and most of the early research was carried out at the Moor Plantation in Ibadan. Germination of the imported seeds was a major problem, leading to the failure of early attempts to grow soybeans in Southern Nigeria. However subsequent trials in the Guinea Savannah belt proved successful. In 1928 soyabeans were successfully grown at the Samaru Experimental Station. This success encouraged the development of a programme which eventually resulted in the distribution of seed to subsistent farmers in order to establish soyabeans as a cash crop. A world shortage of oil seeds immediately after World War II accelerated the drive for increased soybean production in Nigeria.

A map (Fig. 1, p. 2) shows the main soybean growing area in Nigeria, which is in the Southern Guinea Zone; here a rainy season of 5 months or more discourages the cultivation of groundnuts and cowpeas. Benue state is the main soybean growing area, followed by the Abuja area in Niger State and the southern divisions in Kaduna State. The crop is planted in small holdings of 1 to 2 hectares per farmer. The most common variety planted is the Malayan variety.

Table I shows Nigerian soybean production and market value from 1957-58 to 1972-73. The peak production year was 1962-63 (26,450 long tons); only 234 tons were produced in 1972-73. Address: Extension Home Economist, Ahmadu Bello Univ., Agricultural Extension and Research Liaison Services, P.M.B. 1044, Samaru-Zaria, North Nigeria.

3092. Ford, Barbara. 1978. Future food: Alternate protein for the year 2000. New York, NY: William Morrow and Company, Inc. 300 p. Index. 22 cm. [40+ ref]

• ***Summary:*** The author concludes that soybeans are most likely to be the protein source of the future. Chapter 2, "The Cinderella Bean" (p. 32-53) and Chapter 3, "Soybeans, Oriental Style" (p. 54-71) both discuss the benefits of soybeans. Pages 37-38 note that soybeans were once called "haybeans" and their hay was called "haybean hay."

Note: This is the earliest English-language document seen (Oct. 2011) that which uses the term "haybean" or "haybeans."

The work of the USDA Northern Regional Research Lab. (NRRL) with soyfoods is described at length. While at the NRRL she first encountered "sufu." In "Chinese markets, sufu is not called sufu but 'bean curd' or 'bean cake.' As soon as I saw sufu I realized it has an image problem–not as unappetizing as natto, but distinctly unpleasant. Picture grayish chunks of some odd-looking material floating in a murky liquid, like biology specimens in a bottle, and you have a typical bottle of sufu.

"Sufu looks so bad that my husband, who has faithfully eaten a number of odd-looking sources of protein that I have purchased over the years, refused it. It took a little courage for me to tackle one of the grayish lumps myself but I finally ate one. To my surprise, it was good, rather like a tangy dairy cheese but with a distinctive, nonbeany flavor of its own" (p. 60-61).

Chapter 6, "It Ain't (Just) Hay," is about alfalfa leaf

protein and leaf protein concentrate. Research on leaf protein "really started during World War II, when British scientist N.W. Pirie suggested the use of leaves to augment dwindling meat supplies... Pirie's proposal never got underway during the war because of the costs involved, but after the war he was given a laboratory where he carried out most of the pioneering work on leaf protein."

Chapter 9, "SCP: Promises, Promises," is about single-cell proteins such as the bacteria *Cellulomonas* and *Pseudomonas* (the champion, which can double its weight in 9 minutes). A probable culprit in SCPs is "nucleic acids, which have been shown to cause elevated uric acids in humans if used over an extended period of time. Raised uric acid levels lead to gout, kidney stones, and gallstones. Some bacteria contain from 15 to 16 percent nucleic acids, a fairly high level. Yeasts and fungi contain from 6 to 11 percent, still a high level. Algae have less." It is recommended that humans not consume more than 2 grams (0.7 ounces) of nucleic acids per day. Address: USA.

3093. Gaskin, Ina May. 1978. Spiritual midwifery. Revised ed. Summertown, Tennessee: The Book Publishing Co. 473 p. Illust. Index. 23 cm. [10+* ref]
• ***Summary:*** The original 1975 edition of this pioneering book, by "Ina May and The Farm midwives" (380 p.) did not mention soyfoods. However in this edition, the section titled "Taking Care of Yourself While You're Pregnant: Nutrition" (p. 227-31) states: "You will need to increase your protein intake by about 30%. On the Farm, we are complete vegetarians, and our main source of protein is soybeans and soy products such as soymilk; soy yogurt; tofu (soybean curd); hard, pressed tofu (more concentrated); soymilk ice cream; and TVP–texturized vegetable protein. Soybeans and soy products are very high in protein of a quality comparable to eggs and mother's milk (the international standards for complete protein).

"You can get plenty of protein for pregnancy by eating daily one cup of soybeans plus 12 ounces of soymilk or yogurt, or ½ lb. tofu and a pint of soymilk, or one cup hydrated TVP and a cup of soymilk or soy yogurt, or one quart of soymilk or soy yogurt and ½ cup of soybeans. We highly recommend a vegetarian diet for a healthy pregnancy and life."

Note: This is the second earliest published English-language document seen (March 2007) that uses the term "soymilk ice cream." Address: The Farm, Summertown, Tennessee.

3094. Haedrich, Ken. 1978. Good food, good folks: A collection of vegetarian recipes from across America. Plainfield, New Jersey: American Impressions. 46 p. Illust. by Diane Haedrich. 21 cm.
• ***Summary:*** This booklet, printed with brown ink on beige paper, was published by the author. Some of the recipes are from other books, with proper acknowledgment. Contents: Dedication (to World Hunger Year, P.O. Box 1975, Garden City, New York 11530). Introduction (He owns a print shop. The book idea was conceived while listening to singer / songwriter Harry Chapin talking about world hunger on the radio). Recipes–Breads & butter. Soups. Main courses & salads. Desserts. Many of the recipes call for "milk or soymilk," and for "tamari or soy sauce."

Soy-related recipes: Tofu sandwich spread (p. 20). A tofu primer (incl. Tofu "mayonnaise" and praise for *The Book of Tofu,* by Shurtleff and Aoyagi). Soyburgers (p. 23). Sweet & sour soybeans (p. 26). The rear cover states that half the proceeds from sale of this book will be "donated to World Hunger Year–an educational, resource organization focusing on food and hunger issues of local and global impact." Address: Plainfield, New Jersey.

3095. Hagler, Louise. ed. 1978. The Farm vegetarian cookbook. Revised ed. Summertown, Tennessee: The Book Publishing Co. 223 p. Illust. Index. 22 cm.
• ***Summary:*** An expanded and extensively revised version of its pioneering and very creative and influential predecessor. There are excellent expanded sections on gluten (p. 76-81), tempeh and tempeh starter (p. 82-93), miso (p. 93), soymilk (p. 95-101), Ice Bean (soy ice cream, including recipes for 5 flavors), Frogurt (soymilk frozen yogurt, p. 107), soy yogurt (p. 108-13 including a non-fermented cheese made by draining soy yogurt curds in a cotton bag; from this "yogurt cheese" are made soy-based cottage cheese, sour cream, cream cheese, and cheesecake), tofu (p. 114-41), yuba (142-43), soy coffee, soy nuts, granola, and Soysage (p. 144-47), soy flour (p, 148-53), sprouts (incl. alfalfa, mung beans, and soybeans, p. 154-57). Address: Summertown, Tennessee.

3096. Hobson, Phyllis. 1978. The soybean book. Growing and using nature's miracle protein. Charlotte, Vermont: Garden Way Publishing. iv + 172 p. Illust. by Andrea Gray. Index. 23 cm.
• ***Summary:*** Contents: Why soybeans? How to grow, harvest, and store soybeans: Selecting seed (edible varieties and time to maturity for fresh soybeans and dried beans), sources of seed, how much seed, planting the seed, inoculation, germination, the developing plant, the harvest, storing beans. Saving seed. How to process soybeans: Fresh soybeans (in the pods), dried soybeans, soy grits, soy pulp (cooked, mashed dehulled soybeans), soy flour, soy milk (from whole soybeans or from soy flour; the remaining "pulp" may be added to meat loaves or casseroles), soy curd (tofu), soy sprouts. Recipes–Soybean "meats." Roasted soybeans. Fermented soybean cakes (tempeh). Soy beverages. Soy breads. Soy cereals. Soy desserts. Soybeans with eggs. Soy salads. Soy spreads. Soy snacks. Candy and cookies. Soy soups. Soymeat dishes. Soybeans with meat. Soybean vegetable dishes. Supper dishes. Growing soybeans

for animal feeds. Homemade dog and cat food. Using soybeans for soil improvement.

Note: The chapter on how to grow soybeans (p. 6-20) is especially useful. Address: USA.

3097. Holmes, Charlotte Van Gundy. 1978. Cooking for living. The art of healing. Sulfur Springs, Arkansas: Philadelphia Institute, Inc. 102 p. No index. 20 cm. [11* ref]
• ***Summary:*** The section titled "Soy beans" (p. 31-33) has the following contents: Introduction and list of different food products made from soy beans. Drying, freezing, canning, and tenderizing whole dry soybeans. How to make soybean milk: From beans, from soy flour, how to use the residue [okara] left from making soy milk. Soy cheese (also called "vegetable cheese" or "tofu"): How to make soy cheese from soy milk, how to make soy cream, how to make soy mayonnaise.

Also discusses: Homemade soy butter [soynut butter] (p. 57-58). Entrees (p. 58-60): Soy bean loaf, Soy cheese patties, Soy loaf, Soy grits loaf, Peanut butter patties. Soy sauce and Sovex (p. 83).

Note 1. The author's father, Theodore Van Gundy, was a soyfoods pioneer in southern California. The first printing of this book was in 1967, the second in 1970, and the third in 1973. Note 2. On the cover is written (as if it were the title): *Keys to Cooking for Living: Recipes and Menus.* Address: M.D., P.O. Box 308, Sulphur Springs, Arkansas 71768.

3098. Jelliffe, Derrick B.; Jelliffe, E.F. Patrice. 1978. Human milk in the modern world: Psychosocial, nutritional, and economic significance. Oxford and New York: Oxford University Press. 500 p. [1860* ref]
• ***Summary:*** An excellent, in-depth discussion of the role of breast feeding in both developed and developing countries. This book does not mention soy or lactose intolerance. Concerning *Lactobacillus bifidus:* It predominates in the intestinal flora of breast-fed infants. "The bifidus factor in human milk (combined with the low pH of the intestinal contents) facilitates the growth of *Lactobacillus bifidus* (Bifidobacteria), which appears to have an 'intestinal guardian' function, in particular checking the growth of undesirable, possibly harmful organisms, such as pathogenic *Escherichia coli.* Colonization of the alimentary canal differs in infants fed on cow's milk or human milk. The bacterial population is predominantly *L. bifidus* in the breast-fed (acquired during birth from the mother's vagina (Haenel 1970)), whereas the intestinal flora of babies fed on cow's milk is principally made of gram-negative bacteria, especially coliforms and bacterioides." See also Gothefors (1975).

Page 301 shows a graph of the rapid rise of La Leche League from 1960 on, especially after 1964. The author attributes this to a trend in the western world called "naturalism." Address: 1. Prof. of Public Health and Pediatrics, and Head, Div. of Population, Family and International Health, Univ. of Californi at Los Angeles (UCLA School of Public Health). Formerly Director, Caribbean Food and Nutrition Inst., Jamaica; 2. Lecturer at same place.

3099. Johnson, Lawrence Alan. 1978. Processing aqueous extracts of soybeans by rapid-hydration hydrothermal cooking. PhD thesis, Kansas State University. 195 p. Page 4797 in volume 39/10-B of Dissertation Abstracts International. *

• ***Summary:*** "As a result of the high rate of ingestion of cow's milk (CM) in modern society, milk allergy has become an important problem in pediatric practice. In some children, pulmonary disease is a manifestation of milk allergy..."
Address: Div. of Immunology and Allergy and Allergy, Dep. of Pediatrics, Harbor General Hospital Campus, Univ. of California at Los Angeles;.

3101. Milner, Max; Scrimshaw, N.S.; Wang, D.I.C. eds. 1978. Protein resources and technology: Status and research needs. Westport, Connecticut: AVI Publishing Co. xxi + 629 p. Illust. Index. 26 cm. [400+ ref]
• ***Summary:*** Contents: Contributors. Preface. Acknowledgments. Section I: Summary and research recommendations. 1. Objectives and research recommendations. 2. Factors affecting protein supply and demand. 3. Common issues in the development and utilization of protein resources. 4. Status and potential of specific resources. Section II: Common issues and problems in protein resource development. 5. United States and world protein production and consumption. 6. Energy constraints in protein production. 7. Legal and regulatory barriers to the introduction of novel protein foods. 8. The politics of new protein: Obstacles and opportunities facing research and development. 9. The marketing factor for nonconventional-protein products. 10. Nutritional evaluation of proteins and protein requirements. 11. Toxicological aspects of protein production and processing. 12. Basic food science and technology problems affecting the properties and processing of protein resources. 13. The constraints on improving protein quality in plants by genetic means. 14. Research on nitrogen and carbon input to increase domestic crop protein production. Section III: A review of specific protein resources. 15. Grain crops. 16. Cereal proteins from grain processing. 17. Oilseed proteins. 18. Food legumes as a protein source. 19. Livestock animal production. 20. Proteins from dairy products. 21. Animal protein from meat, poultry and eggs. 22. Aquatic proteins. 23. Potatoes. 24.

Nonphotosynthetic single-cell protein. 25. Photosynthetic single-cell protein. 26. Leaf protein in relation to forage crop production and utilization. 27. Chemical synthesis of nutrients. Address: MIT, Cambridge, Massachusetts 02139.

3102. Mitsubishi Kasei. 1978. Tônyû no eiyô kôka [Nutritional effect of soymilk]. Tokyo: MK. 38 p. [27 ref. Jap]

3103. Orthoefer, Frank T. 1978. Processing and utilization [of soybeans]. In: A.G. Norman, ed. 1978. Soybean Physiology, Agronomy, and Utilization. New York: Academic Press. xii + 249 p. See p. 219-46. Chap. 7. [11 ref]
• ***Summary:*** Contents. 1. Introduction. 2. Composition of the seed: Proximate composition, protein composition, enzymes, lipid composition, carbohydrate composition, biologically active constituents. 3. Processing: Oil extraction, oil processing, processing of the meal. 4. Utilization: Soybean oil, protein products, textured proteins, modified soy proteins, specialty uses of soybean protein. 5. Future projections.

"The direct consumption of soybean protein in human foods accounts for only 26.5 million bushels of the 1,260 million bushel crop (Table XI, [2.1%]). The utilization of soybean proteins as food ingredients is expected to increase three to four times by 1985. By 1980 simulated meats and meat extenders are projected to reach a sales volume of nearly $2 billion. But even by 1985, the expected direct food usage of soybeans will only account for approximately 5% of the crop." Address: A.E. Staley Manufacturing Co., Decatur, Illinois 62525.

3104. Schmit, Matthew. 1978. Peaking out on tofu. Telluride, Colorado: Published by the author. [16] p. No index. 22 cm.
• ***Summary:*** This booklet (brown ink on tan paper) shows a horizon of snow-capped peaks on the cover and contains handwritten 20 recipes (brown ink on tan paper) using tofu or soymilk (2 recipes): Sesame cookies (with soymilk). Refried tofu burrito. Tofu burgers. Soy mayo. Hot n' spicy tofu. Sesame tofu paté. Tofu turkey basting sauce. Vegetable sukiyaki. Tofu loaf. Cabbage noodle bake (with tofu). Eggplant bulgar casserole with tofu sauce. Scrambled tofu 'n veges. Tofu zucchini quiche. Tofu Rubin. Cheeseless cheese sauce (with yeast). Tofu high protein sandwich spread. Tofu sandwich spread. Carob milk (using soymilk). The rear cover states: "these original recipes sprouted in the kitchen of the tofu shop and are prepared with care by the telluride tofool family using our own homemade soy products. Special thanks to: Catherine Peterson, Kathy Greene, Barton Coffman, Becca Smith, and Sharyn." Address: The Tofu Shop, 116 N. Oak St., Telluride, Colorado.

3105. Silterra, Reba G. 1978. Effect of soybean components on the viscosity of Illinois Soy Beverage. MSc thesis, Dep. of Food Science, University of Illinois. 64 p.
• ***Summary:*** The author received his BSc degree from Cornell Univ. in 1975. Contents: Introduction. Literature review: History, nutritional value of soy protein, soy beverage processes, composition of soybeans and Illinois soy beverage, viscosity of fluids, rheology of soy protein dispersion, soy polysaccharides and their rheology in aqueous dispersions, soy polysaccharides and their influence on viscosity. Materials and methods: Preparation of model systems, preparation of the Illinois soy beverage, pH adjustment, apparent viscosity by Brookfield, flow characteristics by Haake rotoviscometer, solids content, statistics. Results and discussion: Introduction, total soy solids concentration, formulation variables, homogenization pressure, characterization of model system viscosity. Summary and conclusions. List of references. Address: Dep. of Food Science, Univ. of Illinois.

3106. Smith, Allan K.; Circle, S.J. eds. 1978. Soybeans: Chemistry and technology. Vol. 1. Proteins. Revised. Westport, Connecticut: AVI Publishing Co. xiii + 470 p. Illust. Index. 24 cm. [500+ ref]
• ***Summary:*** This revised edition contains relatively few, unimportant changes from the original, classic 1972 edition. The following changes have been made: Addition of a 7-line preface to the "revised second printing" dated 4 Oct. 1977, updating of a graph of U.S. soybean production (p. 1). Updating (to 1976) of a table on U.S. and world production of important oilseeds (soybeans, cottonseeds, peanuts, sunflower, rape, sesame) (p. 2). Minor textual changes on pages 18-19. Addition of a table showing distribution of the 3 leading soybean varieties in 14 major states and the percentage of acreage harvested for each variety in 1976 (e.g., in Illinois, Williams accounted for 25.1% of harvested acreage, Amsoy 17.3%, and Wayne 12.8%). And updating of a table on U.S. soybean production by state showing acreage harvested, yield per acre, and production for 1974, 1975, and 1976 (p. 32).

The foreword, chapter titles, and index have not been changed at all. Note: Vol. 2 was never published. Address: 1. Oilseeds protein consultant, Hot Springs, Arkansas; 2. Oilseed protein consultant, Protein Technology, Richardson, Texas.

3107. Steinkraus, K.H. 1978. Imitation milks. In: M.S. Peterson and A.H. Johnson, eds. 1978. Encyclopedia of Food Science. Westport, CT: AVI Publishing Co. xviii + 1005 p. See p. 405-08. [21 ref]
• ***Summary:*** Synonyms and related terms: Simulated milks, milk substitutes, synthetic or artificial milks, milk analogues, vegetable protein milks, protein concentrate milks, soy milks.

Contents: Processing soybeans to soy milks. Defatted soy processes. Infant formulas. Indian peanut protein toned

milk (Miltone; Whole buffalo milk extended or "toned" with peanut protein isolate). Soft drink approach (Vitasoy, Yeo Hiap Seng, Green Spot). Flavor problems. Nutritional problems. Commercial prospects for the future. Address: Cornell Univ.

3108. Sussman, Vic S. 1978. The vegetarian alternative: A guide to a healthful and humane diet. Emmaus, Pennsylvania: Rodale Press. xvii + 286 p. Index. 22 cm. [39 ref]

• ***Summary:*** Explains the fundamentals of a vegetarian diet. Covers nutrition, protein requirements, health, world food crisis, recipes, and kitchen techniques. Paul Obis, editor of *Vegetarian Times,* has called this "the most complete, concise, and nondogmatic book we have come across." Keith Akers says that this is one of his four favorite books on vegetarianism.

This book contains extensive information on soyfoods (p. 248-50) including soymilk, tofu, tempeh, miso, and soy flour. The author's greatest praise is for tofu. Of *The Book of Tofu,* by Shurtleff and Aoyagi, he says (p. 274): "The most important book on food ever published for vegetarians–if not all the world. Clear prose and beautiful illustrations... Five hundred recipes for preparing this versatile and nutritious food. Buy this book..." Address: Travilah, Maryland.

3109. Wu, Jingrong. 1978. A Chinese-English dictionary. Beijing, China: Shang wu yin shu guan. 976 p. 27 cm. [Eng; Chi]

• ***Summary:*** This comprehensive dictionary uses pinyin romanization / transliteration, with accents; Chinese characters are given and definitions are in English. It contains over 6,000 single-character entries, including characters with variant tones. There are over 50,000 compound-character entries and over 70,000 compound words, set phrases and examples. The Chinese title is *Han Ying ci dan.* Soy-related terms include:

Page 92: chi, douchi; see Douchi below.

Page 125: Dadou (soybean, soya bean).

Page 164: Doubanjiang (thick broad-bean sauce). Doubing (defatted soya bean cake; bean cake). Douchi (fermented soya beans, salted or otherwise [fermented black soybeans]). Doufu (bean curd [tofu]). Doufufang (bean-curd plant [tofu shop]). Doufugan (dried bean curd [pressed tofu]). Doufunaor (jellied bean curd). Doufuru (fermented bean curd). Doufupi (skin of soya bean milk [yuba]; thin sheets of bean curd). Doujiang (soya-bean milk). Douqi (bean stalk). Dousha (sweetened bean paste). Douyou (soya-bean oil). Douzha (residue from beans after making soya-bean milk; bean dregs [okara]). Douzhipin (bean products [soyfoods]).

Pages 210-11: Fu (rotten, putrid). Furu (fermented bean curd). Fuzhu (dried bean milk cream in tight rolls [dried yuba sticks]).

Note: This is the earliest English-language document seen (Oct. 2012) that contains the term "dried bean milk cream" or the term "dried bean milk cream in tight rolls." Both probably refer to dried yuba sticks.

Page 294: Huangdou (soya bean, soybean [yellow soybean]).

Page 324: Jia (pod). Jiaguo (pod, legume).

Pages 336-37: Jiang (1. A thick sauce made from soya beans, flour, etc. 2. Cooked or picked in soy sauce, such as pork or braised pork; tomato sauce, ketchup). Jiangcai (vegetables pickled in soy sauce, pickles). Jiangyou (soy sauce, soy). Jiangyuan (a shop making and selling sauce, pickles; sauce and pickle shop).

Page 459: Maodou (young soya bean [edamame, green vegetable soybean]).

Pages 470-71: Mianjin (gluten [wheat gluten]). Miao (young plant, seedling).

Page 487: Nai (breasts, milk, suckle, breast-feed [dounai = soymilk]).

Page 553: Qi (beanstalk). Page 561: Qu (leaven, yeast, Aspergillus [koji]).

Page 661: Taijiquan (a kind of traditional Chinese shadow boxing [taichi]).

Page 957-59. Pinyin–Wade-Giles conversion tables.

Page 972: A brief Chinese chronology [of dynasties]. Address: Peking, China.

3110. Zurbel, Runa; Zurbel, Victor. 1978. The vegetarian family: With recipes for a healthier life. Englewood Cliffs, New Jersey: Prentice-Hall, Inc. 185 p. Edited by Lester Alexander. Illust. Index. 23 cm. [44 ref]

• ***Summary:*** The section on soybeans (p. 62-67) discusses soybeans and soyfoods, then gives recipes for: Basic soybeans. Mediterranean soybean casserole Soybean casserole. Soybean salad. Soy milk. Sesame soy milk. Roasted soybeans (baked). Other soy-related recipes include: Soyburgers (p. 80). Ginger tamari sauce (p. 118). Miso yogurt dip (p. 127).

The section titled "Basic Macrobiotic Cooking" discusses shoyu tamari, and miso, and gives recipes for: Miso soup. Miso spread. Nerimiso (Sweet simmered miso).

Chapter 7 (p. 88-101) is titled "Tofu: The food of the future–Discovered over two thousand years ago." A full-page photo opposite the title page shows a wooden forming box, with cakes of tofu and soybeans nearby. *The Book of Tofu,* by Shurtleff and Aoyagi, is praised and credited as the source of much of the information on tofu in this book. Recipes include: Quick tofu. Homemade traditional tofu. Tofu sandwich. Tofu salad. Tofu and peas. Tofu and snow peas. Tofu and Chinese vegetables. Tofu and [mung] bean sprouts. Tofu and sesame. Kinugoshi and how to make custard style kinugoshi. The chapter ends with 2 pages on tempeh, but no recipes.

3111. **Product Name:** [Soymilk].
Manufacturer's Name: Alimentos Integronaturales.
Manufacturer's Address: Apartado 16, Montemorelos, NL, Mexico.
Date of Introduction: 1978?
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Shurtleff. 1981. Overseas Adventist Food Companies. p. 8. Letter from Robert Folkenberg. 1983. Feb. 15. The company is presently producing about 3,000 liters/week of soymilk.

3112. Asahi Shokuhin K.K. 1978? Asashoku soimiruku [Asahi Foods Company's soymilk (Leaflets)]. Saitama-ken, Japan. 7 p. Undated. [Jap]
• ***Summary:*** These two leaflets discuss the company's product in detail.

3113. Asahi Shokuhin. 1978? Asashoku soi miruku [Asahi Shokuhin soymilk]. Saitama-ken, Japan. 8 p. Undated. [Jap]

3114. Loma Linda Foods. 1978? Soyalac. Helpful information to those allergic to milk. Riverside, California. 34 p. Undated. Illust. 18 cm.
• ***Summary:*** On the cover is a mother (with long brown hair) holding a child in a blue blanket against an orange-red background.

Contents: Presented to. What is allergy? Asthma, eczema and colic. Soyalac: For infants, children and adults–milk free recipes for your pleasure. Four types of Soyalac are available (hypoallergenic, fiber free): i-Soyalac Concentrated, Soyalac Concentrated, Soyalac Ready-to-Serve, and Soyalac Powder. Suggestions on infant feeding: Ready to serve, concentrated liquid. Baby's birth record. Baby's immunization record [against 10 diseases + Schick test]. Baby's appointments for check-up. Growth record for. Beverages (each recipe in the recipes section calls for Soyalac). Hot breads. Main dishes. Soups, sauces and mayonnaise. Cookies. Desserts. Allergic foods checklist. Address: Riverside, California.

3115. **Product Name:** [Soymilk].
Manufacturer's Name: Pan American Health Service.
Manufacturer's Address: Box 191, Peña Blanca, San Pedro Sula, Honduras.
Date of Introduction: 1978?
New Product–Documentation: Letter from Charles D. Howes. 1978. Oct. List of Seventh-day Adventist soymilk plants.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). "Pan American Health Service, Box 191, San Pedro Sula, Honduras. Owner: Dr. Steven Youngberg. Seventh-day Adventist soy dairy."

Letter from Eric C. Fehlberg, Director, International Health Food Assoc. 1990. May 24. This organization no longer exists. Talk with Don Meinders of Pan American Health Service. 1992. Feb. 4. Dr. Steven Youngberg was the son of missionaries in India. When the family returned to the USA, he got his medical degree at Loma Linda University in the mid-1950s. His first medical practice was in the Texas border area, where he worked with poor Mexican laborers. He had a little medical van, and was very active with tuberculosis work. Then he went to Tabasco, the state in Mexico, and started a tuberculin hospital there. Then he went to Honduras in about 1961, bought land, and started the Pan American Health Service (PAHS) in the jungle. In about 1972 he started a soymilk plant and a bakery on the PAHS grounds. PAHS still exists and is very active, with a medical clinic, an orphanage for malnourished children, and a farm. The bakery produces the only whole-wheat bread in Honduras. But the soymilk plant is not presently in operation. About 6-8 years ago the soymilk equipment was disassembled by an administrator who wanted to sell it. Dr. Youngberg was in the USA at the time undergoing heart surgery. When he returned to Honduras, he immediately stopped any ideas of selling the soymilk plant. The parts are now in boxes. This soymilk was never sold commercially. It was only served at the clinic. Don was at the PAHS recently; he has been there for about 1 year and plans to stay down there. Dr. Youngberg is now about age 74-75, living in Texas, and well enough to talk. PAHS is a private foundation, privately funded with about half the funds coming from Seventh-day Adventists. A Mennonite group run by a woman doctor from the East Coast of the USA in San Pedro is producing a protein-rich "Soy Bar," like a granola bar.

Note: This may be the earliest known commercial soy product made in Honduras. However it is unclear whether or not this product, or any other soy product made by the PAHS was ever sold commercially. On the PAHS website (panamhealth.org), retrieved 3 Feb. 2009, the soymilk is mentioned but there is no indication that it was ever sold commercially. In 2001 Dr. Stephen Youngberg died in Ft. Worth, Texas; his body was buried in Peña Blanca, Honduras. We do not know enough about the "Soy Bar" to give it a "Commercial Soy Product" record.

3116. **Product Name:** Soymilk.
Manufacturer's Name: Rama Food Product Co., Ltd.
Manufacturer's Address: Bangkok, Thailand.
Date of Introduction: 1978?
New Product–Documentation: Soya Bluebook. 1981. p. 61. Bangkok. Soy beverage. Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 105-06.

3117. Fiering, Steve. 1979. A Midwestern interest in tofu [The Soy Plant in Ann Arbor, Michigan]. *Whole Foods* (*Berkeley, California*) 2(1):38, 40. Jan.
• ***Summary:*** This is basically a history of The Soy Plant and

some of its creative financing schemes. The Soy Plant began operation in August 1977. New products include soymilk, tempeh, spiced tofu, two spreads (one with eggless soy mayo and turmeric; one with tofu, sweet miso and tahini), ice bean [soy ice cream], tofu pies, okara peanut butter balls, and soy sausage. Address: The Soy Plant, Ann Arbor, Michigan.

3118. *Food Engineering.* 1979. Dairy products with soy protein. 51(1):ef-10, 11. Jan. [1 ref]
• ***Summary:*** Contents: Introduction: Coffee creamers and whip toppings. Soy isolate in yogurt. Soy-based infant formulas. Soy-whey drink mix. Soy in ice cream. Room for new technologies.

A table lists 15 soy-based infant formulas, showing the product name, form (powdered, ready to feed, or concentrated liquid), and manufacturer. The product names are Bon Lact, Espelin, Isomil, Lactopriv, Mull-Soy, Multilac, Neo-Mull-Soy, Nursoy, Nutri-Soja, Prosobee, Sobee, Soja Semp, Soyalac, i-Soyalac, Vegebaby.

3119. Industrial Services Centre. 1979. Soyabean processing industry in Nepal. Kathmandu, Nepal: Industrial Services Centre. ii + 39 p. + 15 p. Appendix. Jan. Prepared for NIDC. 39 cm. [1+ ref]
• ***Summary:*** Contents: Introduction. Background. Market: Uses and introduction of soybean products (soybean oil, flour and grits, milk, sauce, curd, lecithin, neutral spray dried soybean protein, soybean protein and flour in ice cream), possible uses of soybean products in Nepal, basic idea of consumption of soybean in Nepal, possibilities of export of soybean oil in India, general conclusion. Raw material. Technical. Financial. Conclusion.

"The purpose of this study is to examine the feasibility of setting up a soybean processing industry in Nepal and the report is prepared by the Centre at the request of the Nepal Industrial Development Corporation (NIDC), Kathmandu."

"Out of the various crops under cultivation in Nepal, soybean is one of them but a very little attention is given to the cultivation of this product. It is usually cultivated during the Monsoon time and harvested during November-December. The Department of Agriculture is carrying out varietal trials in the different stations with a view to introduce high yielding varieties and promote the cultivation of it in the different parts of the country. Although at present, it is cultivated mainly in the hilly regions at different altitudes ranging from 6000 to 4000 feet, the observations made at the plain region reveal that there is a possibility of extending its cultivation in the terai region too."

"Soybean oil: In India, soybean oil is being widely used in the manufacture of vegetable ghee and constitutes the major part of consumption in the Vanaspati industry. The little production of soybean oil in Nepal is being used as a cooking oil."

"Possible uses of soybean products in Nepal. A few of the soybean products that are in use in Nepal are soybean oil for cooking, soy curd and soy sauce in the restaurants and full-fat soy flour product by simple grinding in the different houses. If soybean oil could be made available, it may find its wide use in the future in the Vegetable Ghee Factory the installation and erection of which is nearly complete at Hetuuda, Soap factory, and in Paint Varnish industry to act as a film forming material. The soy sauce requirement of to-day in Nepal is met by the imports... Soy milk would be another product which might come into wide use in the future." Address: Balaju, Kathmandu, Nepal.

3120. Monroe, Linda. 1979. The many faces of tofu. *Alch Mist of Ann Arbor* (*Michigan*). Jan.
• ***Summary:*** The Soy Plant, located at 211 East Ann St., is a tofu shop–but they also make soysage, missing egg salad, tempeh, spiced tofu (various spices are added when curdling the soy milk), soy milk (regular or flavored with honey and vanilla), missing egg salad, tofu-tahini spread, tofu tarts (a tasty dessert). Coming soon: Soy Scream (soy milk ice cream), and Boston brown bread (steamed). Tofu is made four days a week. "Soy products can be and indeed are the staple of many vegetarian diets."

"The Soy Plant sells one pound cubes of tofu for 70 cents (if you bring your own container), 72 cents with their plastic bag, or 85 cents in their container [plastic tub]. They encourage people to bring their own containers so as to cut down the use of plastic." "The collective has been very creative with the versatile little soy bean. Their ideas seem to be endless. They have developed many tasty foods by experimenting with different combinations of ingredients."

"The Soy Plant is a cheerful, pleasant place to visit. You'll usually find samples of their different spreads and beverages. Any questions about soy products are gladly answered either by collective members or by just looking in any of the various books available there on tofu, miso and other soy products. You can be sure the collective will always be coming up with new items to surprise and satisfy your taste buds.

"The Soy Plant is open Mondays–Fridays, 10-6, and Saturday, 9-5."

In the middle of the article is The Soy Plant Logo, two soybean plants growing (to left and right) out of Planet Earth. Around the bottom is written "The Soy Plant."

Talk with Steve Fiering, a founder of The Soy Plant in Ann Arbor. 2000. Dec. 3. The title of this periodical derives from the word "Alchemist." The logo was Steve's idea, developed by Marge Bruchac, Susanna Middaugh, and Dan Ecclestone.

3121. Pelaez, R.; Walker, D.M. 1979. Milk replacers for preruminant lambs: Limiting amino acids in two soybean protein isolates determined with a change-over design. *Australian J. of Agricultural Research* 30(1):125-34. Jan. [15

ref]
• ***Summary:*** Methionine was the first limiting amino acid; Lysine and threonine were second limiting. The mean digestibility coefficient of nitrogen in isolated soy protein B (ISP-B) was 0.842, and the diets containing it were readily accepted by lambs. Address: 1. Departamento de Alimentacion, Facultad de Veterinaria de Leon, Leon, Spain; 2. Dep. of Animal Husbandry, Univ. of Sydney, NSW 2006, Australia.

3122. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tofu: Food for mankind. Condensed and revised. New York, NY: Ballantine Books. A division of Random House, Inc. xii + 433 p. Jan. Illust. by Akiko Aoyagi Shurtleff. Index. 18 cm. [60 ref]
• ***Summary:*** This book has been extensively revised and updated. Many names of Japanese tofu have been Americanized. Contents: Preface. Acknowledgements. 1. Protein East and West. 2. Tofu as a food. 3. Getting started: Favorite tofu recipes. 4. Soybeans. 5. Fresh soy puree. 6. Okara (Soy pulp). 7. Curds and whey. 8. Tofu & firm tofu. 9. Deep-fried tofu: Deep-fried tofu cutlets, deep-fried tofu burgers & treasure balls (tofu treasure balls, p. 269), and deep-fried tofu pouches. 10. Soymilk. 11. Silken tofu. 12. Grilled tofu. 13. Frozen & dried-frozen tofu. 14. Fermented tofu. 15. Yuba. Appendices: A. Tofu restaurants in Japan. B. Tofu shops and soy dairies in the West. C. Varieties of tofu in East Asia. D. Table of equivalents. Bibliography. Glossary. Contains 250 recipes and 100 illustrations. Price: $2.95.

This new edition features: (1) New recipes: Over fifty new American-style tofu recipes including Creamy Tofu Dressings, Tofu Teriyaki, Tofu Burgers, Tofu Eggless Egg Salad, and the like. The key to the book is an updated list of favorite tofu recipes plus suggestions for incorporating them into a weekly menu (p. 56). (2) New sections: An extensive new introduction to Soy Protein Foods (p. 66), dairylike products made from tofu (p. 150), dairylike products made from soymilk (p. 302) including soymilk yogurt (fermented), ice cream, kefir, mayonnaise, whipped cream, popsicles, buttermilk, and soy shakes. (3) New chapters: Fermented Tofu and Varieties of Tofu in East Asia. (4) New basic methodologies: The key recipes for homemade tofu and homemade soymilk have been simplified and improved. (5) Updates: A complete listing of the 120 tofu shops and soy dairies now operating in the West; over 60 Caucasian-run shops have opened in the past two years. (6) New Americanized tofu names: Including deep-fried tofu burgers, deep-fried tofu cutlets, deep-fried tofu pouches, deep-fried tofu puffs, silken tofu, wine fermented tofu, and fresh soy puree. A major goal of this book is to coin English names for tofu products that will catch on and come to be used in labeling commercial products, in cookbooks, etc. (7) No sugar.

Note 1. This is the earliest English-language document seen (April 2013) that contains the following terms related to deep-fried tofu: "fried tofu cutlets" or "deep-fried tofu cutlets" (p. v, to refer to *nama-agé*), "fried tofu burgers" or "deep-fried tofu burgers (to refer to *ganmodoki*), "tofu treasure balls" or "deep-fried tofu treasure balls" (p. v, 269, to refer to *Hiryozu*), "fried tofu pouches" or "deep-fried tofu pouches" (p. v, to refer to *aburagé*).

Page 110: "In Japan, tofu is also called *momen-goshi* ('cotton-filtered') to distinguish it from its popular counterpart *kinu-goshi* ('silken tofu')." Note 4. This is the earliest English-language document seen (April 2013) that uses the term "silken tofu."

Note 5. This is the 2nd earliest English-language document seen (Oct. 2011) that contains the term "Wine-fermented tofu" (p. 361).

In Jan. 1988 a new printing (but not a new edition) of this book (the 13th), slightly revised, appeared. It had a new cover and many new small illustrations. The subtitle was "Protein Source of the Future–Now!" The heading: "The World's Bestselling Book on Tofu." Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

3123. Shurtleff, William. 1979. Protein source for the future. *Cosmos* (*NSW, Australia*) 6(6):1, 4-5. Jan.
• ***Summary:*** Gives ten reasons why soybeans will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost protein. 3. High nutritional value. 4. Time tested. 5. Remarkably versatile. 6. Appropriate technology. 7. New dairylike products. 8. Hardy and adaptive. 9. Free nitrogen fertilizer. 10. Energy and resource efficient. "All of these ten factors work together synergistically, reinforcing one another, to give added weight to the prediction that soybeans will be a key protein source for the future on plant earth."

Note: This information was published in July 1979 in *The Book of Tempeh* (p. 21-24). Address: Lafayette, California.

3124. Singh, B.B.; Saxena, M.C. 1979. Soybean production in India. *Indian Farming* 28(10):7-9. Jan. Series 2.
• ***Summary:*** The soybean has been traditionally grown in the northern hills and several other scattered areas of India for many centuries, although there is no available record as to when it was introduced to the country. It has become an essential part of the daily diet in those regions and has been known by various names such as Bhat, Bhatman, Bhatmas, Ramkulthi, Bhut, Kalitur, Teliakulth and Garryakalay. Since the varieties grown in these areas were apparently poor yielding types, with small black seeds and twiny growth habit, they did not become popular in India. Although several attempts have been made to popularize soybeans, these attempts have failed, probably due to lack of sustained efforts and systematic trials.

"A fresh interest in soybean became evident with the

preliminary studies conducted at Pantnagar and Jabalpur during the years 1963 to 1966 using improved varieties from the U.S.A. Some of the U.S. varieties yielded between 30 and 36 quintals per hectare (ha) which was almost 3 times as compared to the traditional kharif pulses. [Note: 1 quintal = 100 kg.] Encouraged by these results, the Indian Council of Agricultural Research initiated an All India Co-ordinated Research Project on Soybean in 1967 with 3 main centres (Pantnagar, Jabalpur and Delhi) and several sub-centres covering different agro-climatic regions. The main emphasis of the project has been to develop high-yielding varieties and package of cultural practices for soybean cultivation in various agro-climatic zones of India."

The acreage under soybean has been increasing every year, although not as fast as targeted, from the modest beginning of about 300 ha of soybean in kharif 1968. The total area under soybean in kharif 1975 was about 160,000 ha of which about 82,000 ha were in U.P. and about 40,000 ha in M.P. The fastest expansion in soybean cultivation has been in the low hills and foot-hills (Bharbar) of U.P. where the average yield of soybean has ranged from 20 to 36 quintals per ha giving the highest net return per acre as compared to any other crop. Soybean is also becoming popular in Madhya Pradesh on current fallows.

The main problem in expanding the area under soybean is the limited market for soybean and uncertainty of price.

"Most of the indigenous soybean varieties like 'Kalitur,' 'Bhat' and 'T-1" are black seeded and, therefore, many people feel that black color is better than yellow. This is not true... The main reason for growing these varieties in India is not the black seed color but the small seed size. It has been experimentally demonstrated that small seeded varieties do not lose viability during the storage and as such there is no germination problem."

Extensive research has been done in India on food uses of soybeans. Wheat flour fortified with soybean flour makes more nutritious and good quality chapati. Detailed processes have been established for preparing soy-milk, soy-cheese, soy-curd, soy-sweets, soy-nuts and soy-baby foods both at home level and at commercial scale. G.P. Pant University of Agriculture and Technology, Pantnagar has been running a pilot plant producing about 1,000 liters of soybean milk per day. Similar attempts are also being made at Nagpur.

"Industrial processing of soybean to produce protein-rich food has been initiated in the country, but only on a small scale. The defatted soy-flour available from some solvent extraction plants is being used by bakeries for making bread, chocolates and biscuits. The Soya Production and Research Association, Bareilly in collaboration with G.B. Pant University of Agriculture and Technology, Pantnagar have been manufacturing a series of products using an extruder cooker. Products like, 'Nutri Nugget' with 50% protein and 'Proteinsnack' with 15% protein have become extremely popular." Address: G.B. Pant Univ. of Agriculture & Technology, Pantnagar.

3125. *Soyanews* (*Sri Lanka*). 1979. Soya to the rescue of coconut. 1(5):1. Jan.
• ***Summary:*** "The destruction of over 2 million coconut trees in last November's cyclone has alerted the Government to the imminent shortage of coconuts for cooking, particularly in the Eastern Province.

"Mr. Ranjan Wijeratna, Secretary, Agricultural Development and Research summoned a ten-member committee appointed recently to co-ordinate the work of the Sri Lanka Soyabean Development program, to consider whether supplies of soya milk could overcome the threatened shortage of coconut milk.

Mr. Wijeratne told the committee that the Government was keen on setting up a soya milk manufacturing plant close to the area of cyclone destruction."

"The Soyabean Foods Research Centre as already been conducting in-service training courses and has trained about 30 field workers in the preparation of soya foods."

The names and affiliations of the ten members are given. They include: Mr. E. Herath, Department of Agriculture (Chairman). Dr. C.N. Hittle (INTSOY Consultant), Dr. H.E. Fernando and Mr. L.R. Senaratne (Dep. of Agriculture).

A photo shows a Sarvodaya worker learning the secrets of soya cooking at the home kitchen of the Soyabean Foods Research Centre, Gannoruwa. Training in soya cooking is free.

3126. *Soyanews* (*Sri Lanka*). 1979. Warming up with soya: Recipe. 1(5):1. Jan.
• ***Summary:*** "Mrs. Ellen Jayawardene, who works at the Home and Village Level Section of the Soyabean Foods Research Centre at Gannoruwa, says that shorter and easier ways of cooking soya, using soya flour and broken beans, have been discovered.

Three illustrations show: (1) Dehulling soyabeans using a traditional Sri Lankan *kurakkan gala* (hand turned stone mill, or quern). (2) Winnowing in a woven bamboo winnow to separate hulls. (3) Pouring dehulled and broken soya beans directly into a pot of boiling water on a wood stove.

A recipe for Soya cutlets is given.

3127. **Product Name:** Vitasoy (Soymilk).
Manufacturer's Name: Vitasoy (USA) Inc. (Importer). Made in Hong Kong by Hong Kong Soya Bean Products Co. Ltd.
Manufacturer's Address: San Francisco, California.
Date of Introduction: 1979. January.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Spot in Soyfoods. 1982. Winter. p. 56. "Vitasoy in America." Shurtleff & Aoyagi.

1984. Soymilk Industry & Market. p. 32-33, 43-44, 130-53. "In January 1979 Yvonne and Irene Lo incorporated The Soya Bean Products Co., N.A. (SBPC) as a marketing company for HKSBP's products in North America. They opened headquarters that month on Bush Street in San Francisco and began immediately to market and distribute plain and malted Vitasoy in Canada in 250 ml Tetra Brik Cartons. In February 1981 they introduced the same products to the USA, immediately after the U.S. Food and Drug Administration lifted its ban on aseptic Tetra Pak type cartons (because of a disproven concern over hydrogen peroxide residues from sterilization). Thereafter, many major Asian soymilk manufacturers also began to import soymilk to America."

3128. Wang, H.L.; Mustakas, G.C.; Wolf, W.J.; Wang, L.C.; Hesseltine, C.W.; Bagley, E.B. 1979. Soybeans as human food: Unprocessed and simply processed. *USDA Utilization Research Report* No. 5. iv + 54 p. Jan. Slightly revised, July 1979. Jan. No index. 28 cm. Compiled for USAID. [50+ ref]
• ***Summary:*** Contents: Introduction. 1. Soybean food uses in Asia. China: Soaking dry soybeans, tou chiang (soybean milk), tou fu (soybean curd), processed tou fu products, tou fu pi (protein-lipid films), huang tou ya (soybean sprouts), whole soybeans, fermented soybean foods, production and consumption.

Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products, yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), whole soybeans (edamame {fresh green soybeans}, whole dry soybeans, kinako), fermented soybean foods: Production and consumption.

Korea: Tubu (soybean curd), processed tubu product, soybean sprouts, whole soybeans (green soybeans, parched or roasted soybeans, boiled soybeans), soybean flour ("Soybeans are first roasted and then ground into flour. The flour is used extensively as an ingredient in food preparations." Note: The name of the roasted soy flour is not given), fermented soybean foods (Soy sauce and [soy] bean paste are commonly used in Korea as flavoring agents. Natto is also enjoyed). production and consumption [of soybeans in Korea].

Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder. "Soybeans of the white variety are roasted until no beany flavor can be detected. They are ground into a powder and mixed with such spices as garlic and chili"), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap {soy sauce}, tauco {soybean paste}), food mixtures, production and consumption.

Thailand: Tofu (*tauhu*), soy sauce, green soybeans in the pods (*tourae*).

Philippines: Soybean sprouts, soybean coffee, soybean cake, soybean milk, tou fu and processed tou fu products, production and consumption.

Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. Middle East. References–Soybean food uses in Asia.

2. Soybean food uses in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References–Soybean food uses in Africa.

3. Soybean food uses in Europe and U.S.S.R.

4. Soybean food uses in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela. Mexico: New village process, commercial developments. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References–Soybean food uses in Latin America.

5. Soybean food uses in North America. United States. Canada. References–Soybean food uses in North America.

6. Soybean food uses in Australia. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprouts, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soy sauce, fermented soybean paste, fermented whole soybeans, natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. 9. Industrial production and selling prices of edible soybean protein products.

10. Barriers to accepting and using soybeans in food: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer.

Tables: (1) Soybean production, imports, and total supply in Taiwan, 1962-1975. (2) Consumption of soybean foods in Taiwan, 1964-1974 (incl. tofu, which increased from 18.75 kg per person per year in 1964 to 32.04 kg per person per year in 1974). (3) Supply and disposition of soybeans in Japan, 1971-1974. (4) Metric tons of whole soybeans used in the production of traditional foods (miso, shoyu, tofu and others) in Japan, 1970-1974, etc. Address: NRRC, Peoria, Illinois.

3129. *Whole Foods* (*Berkeley, California*). 1979. The beaning of Motown. 2(1):41. Jan.
• ***Summary:*** In January 1978, Carol Ann and Timothy Huang, founders of the Yellow Bean Trading Co. in Detroit, Michigan, started to distribute tofu, soymilk, and tempeh

made at The Soy Plant in Ann Arbor, Michigan. Yellow Bean takes the products to health and natural food stores, restaurants, fruit markets, and Oriental grocery stores in Detroit. In the beginning they distributed 100 lb/week of tofu; that figure has now risen to 400 lb/week. They also carry nutritional yeast, sprouts, textured vegetable protein, soybeans, soy flour, and *The Farm Vegetarian Cookbook,* which contains excellent soyfoods recipes.

Timothy and Carol Ann made soyfoods a major part of their diet while living on The Farm in Tennessee. They were married on a branch of The Farm in Wisconsin, where their son was born. Carol and Tim now also give demonstrations on how to cook with tofu and other soyfoods.

"As the wholesale business grows, the Huang family is now setting up a store and restaurant, Yellow Bean Vegetarian Foods. At first, the restaurant is planned as a carry-out, including a deli case." Later they hope to expand to a larger location, open a sit-down restaurant, and begin making their own tofu and soymilk.

The Huangs feel "really glad to be part of this 'revolution,' and offer what we've learned."

3130. *Whole Foods* (*Berkeley, California*). 1979. The food of the future. 2(1):22-24. Jan.

• ***Summary:*** The article begins: "Why devote an entire issue of *Whole Foods* to the subject of soyfoods? Soyfoods are a rapidly growing part of the natural foods industry..."

"The bringing of the 'Soyfoods Revolution' to the natural foods industry is the work of individuals, toying and playing with new recipes in their own kitchens and shops. No person deserves more credit for this revolution than William Shurtleff who, along with Akiko Aoyagi, wrote *The Book of Tofu,* and told us all how to do it. (An updated pocket-size version of *The Book of Tofu* is just off the presses of Ballantine Press.) Shurtleff travels the globe, sharing his expertise on soyfoods, covering topics as specific as chip-dip recipes and as broad as the role of soybean production in future patterns of world protein hunger.

"Other individuals, most of them with small soyfoods shops of their own, met recently to form the Soycrafters Association of North America (SANA), which is likely to serve as the backbone of the Soyfoods Revolution in the natural foods industry. [Note: This historic first meeting was held on 28-30 July 1978 at The Soy Plant in Ann Arbor, Michigan.] SANA selected Larry Needleman as its first president. Needleman, whose Bean Machines, Inc. imports the prime line of Takai tofu and soymilk equipment from Japan, has been a major source of information about soyfoods equipment for our industry.

"Needleman wrote about the spirit of the new organization at its first gathering in Ann Arbor.

"'Imagine a group of seventy people representing enthusiastic dedication (almost to the point of craziness) to the production and distribution of tofu and other soyfoods, gathered in an informal setting in a university town in the Midwest, with meetings scheduled from nine in the morning till eleven at night–and you've got a good idea of what went on... 'Sharing began immediately. Groups of people gathered here and there and began asking each other about their shop or organization. Those passing by would hear a familiar word such as 'yield' of [sic, or] 'pressure-cooker' and just stopped to join the conversation. It was apparent that here was a gathering destined to be stimulating and mutually beneficial...

"'The first evening, Bill Shurtleff set up a slide show about tofu and miso production in Japan. The presentation ran the gamut from small, traditional shops built over their own well, to large, fully-automated factories turning out tens of thousand of pounds per day. Bill answered questions and added a personal touch to the showing because he had shot the photos himself over a period of years, and was familiar with the language, traditions and production of the Japanese...

"'On Saturday morning, The Soy Plant showed us their method of producing tofu and soymilk. Those with less experience absorbed information and asked questions, and those with more experience volunteered information, clarified points and offered suggestions. Then Wataru Takai, the overseas manager for Takai Tofu and Soymilk Equipment Co., Japan's largest manufacturer of this equipment, explained principles behind each step of production, and the uses of the equipment...

"'At a later session, it was remarked that many soyfoods producers are operating on an inefficient and labor-intensive basis. Some felt this was a good way to begin, first becoming intimate with the steps of production and developing a market 'track record,' and then using that base to upgrade production by purchasing more sophisticated equipment. Others felt that the time and energy involved in putting together a makeshift shop which was outgrown in about six months would be better spent in the capital to start at higher technological level...

"'In one of the most popular and exciting discussions of the conference, the consensus of the group was that tofu and soymilk were the foods that Americans have been waiting for. A list of related products that have been marketed with incredible success included tofu burgers, no-egg salad, honey soymilk ice cream, tofu chip-dips and dressings, flavored soymilk, tofu 'mayonnaise,' and pressed, marinated tofu. There was unanimous agreement that it was these new soyfoods that would capture the interest and palate of middle America, people who had turned up their noses at that tasteless white cake of tofu floating in water...

"'Later we discussed the problems of proper storage and display of our products. In US food markets, tofu has usually been sold with Oriental foods in the vegetable section. Getting it moved to a cooler, more appropriate cheese display case, where it will stay fresh longer and compete favorably

with dairy products, has met with resistance...

"'In the evening, another slide show by Bill Shurtleff showed us how tempeh, a key protein source for millions of people in Indonesia, is quickly and simply produced as a cottage industry in their homes. Having sampled this unusual food at lunch, we were eager to learn about it because it was delectable. Somewhere between a deep-fried fish cake and Kentucky fried chicken in flavor and texture, it lent itself to use in a seemingly endless variety of ways...'

"Toward the end of the conference, discussion turned to marketing and finance. It was found that some firms lacked capital for growth, while others had enough capital but needed greater management skills to keep up with the growing demand for soyfoods. That demand is not uniform nationwide. Different regions show various levels of consumer awareness, interest in, and acceptance of soyfoods. Printed hand-out sheets and cooking classes were suggested as promotional efforts were an important part of the creation of a desirable image for soyfoods.

"Before leaving Ann Arbor, the participants formed the Soycrafters Association of North America as a trade association to promote soyfoods and exchange information among the members. With the founding of SANA, the Soyfoods Revolution took its longest recent stride. Soycrafters were no longer isolated persons, groups and shops, but had become a nationwide network devoted to the same purposes, sharing their experiences for mutual benefit and the ultimate benefit of the American consumer."

Note: The word "soyfoods" is used throughout this article.

3131. Howes, Charles D. 1979. Re: More about soymilk at Loma Linda Foods. Letter to William Shurtleff at New-age Foods Study Center, Feb. 12–in reply to inquiry. 2 p. Typed, with signature on letterhead. [3 ref]

• ***Summary:*** "We only use an isolate [soy protein isolate] in the infant formula i-Soyalac, all of our other products are made starting with the whole bean. i-Soyalac was developed several years ago in response to market demands. The main reason for the demand, I rather suppose, was due to the reduced flatulence associated with an isolate product. It is much more simple to make a product starting with the isolate so that if only one line were to be built it might be a little less expensive to formulate starting with the isolate due to reduced capital investment. However, even when all the necessary equipment is in, there is still some trade-off in making the isolate product vs. the whole bean product. Some of these are (a) reduced time for production when starting with an isolate, (b) reduced clean-up and sanitation because less equipment is used, (c) reduced need for storage space for bulk beans since the isolate comes in bags (d) no soy fines [okara].

"The advantages of starting with the bean over the isolate include (a) a better flavor (at least to some people), (b) better stability, (c) some oil from the bean is utilized, (d) the cost [of ingredients] is a little less than starting with isolate, but as mentioned above there is a trade-off and more equipment, steam, time, etc. are required and the problem of dealing with the soy fines must be handled.

"Trypsin inhibitor inactivation is approached realistically in our process. The paper by Baker & Mustakas (1973) is enclosed and might be helpful to you in your discussion of this problem. Infant formulas such as Soyalac contain only residual amounts of trypsin inhibitor since about 95-97% is destroyed during processing (see *J. Agric. Food Chem.* 24: 393-397 for exact levels).

"Dr. Harry W. Miller's International Nutrition Laboratory started making soymilk in the United States in the autumn of 1939. Production ended in the Shanghai plant on 13 August 1937 due to the war. The plant was destroyed by fire and bombing at the beginning of World War II. A copy of the rare booklet "The Story of Milk from the Soya Bean" published by Dr. Miller in 1944 is enclosed and will give some interesting details.

"The first American to work with soymilk (I believe) was John Harvey Kellogg under whom Dr. Miller worked and studied while in medical school. Dr. Kellogg was not only Harry Miller's supervisor at the food plant, but also the president of his medical school, and his professor in several classes. Enclosed are a couple of pages from Schwarz's biography of Kellogg that might be helpful in your study. Miller took a good idea and developed it into a manufactured product. Miller did a lot of research and development as well as engineering to make his idea a reality. The plant became part of Loma Linda Foods in 1950.

"Sincerely,... 3 enclosures." Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

3132. Howes, Charles D. 1979. Re: Details about soymilk at Loma Linda Foods. Letter to William Shurtleff at New-age Foods Study Center, Feb. 27–in reply to inquiry. 1 p. Typed, with signature on letterhead. [1 ref]

• ***Summary:*** Discusses: His views on the boiling water grind. The researchers at Cornell University (Ithaca, New York) deserve full credit for the important work they did. Loma Linda was issued patent No. 3,288,614 in 1966 on the process they were using during the 1960s. Describes the steps in that patent issued to C.P. Miles. Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

3133. Klein, Barbara P. 1979. Re: Comments on tofu and soymilk production manuscript. Trypsin inhibitors. Letter to William Shurtleff at New-Age Foods Study Center, Lafayette, Feb. 28. 1 p. Typed, with signature on letterhead.

• ***Summary:*** It is still unclear whether trypsin inhibitors are important in human nutrition, and if the 80% inactivation

which undoubtedly occurs during production of tofu and soymilk is adequate. She and co-workers have been doing some studies of trypsin inhibitor destruction in home cooked soybeans. The main objective is to determine if partially cooked ground soybeans can be satisfactorily incorporated into food products such as bread and meatloaves. Address: Asst. Prof., Foods and Nutrition, 274 Bevier Hall, College of Agriculture, Univ. of Illinois, Urbana, IL 61801. Phone: 217-333-3790.

3134. Sheridan, Margaret. 1979. Mighty bean zaps food bills, packs in protein. *Detroit News.* Feb. 28. p. E-1, E-9.
• ***Summary:*** A weak history of the soybean followed by recipes from the book *Barbara Farr's Super Soy* (Keats Publishing). The article begins: "Fed up with the soaring cost of meat? Dine like the cows. Eat soybeans. These homely beige beans have been nourishing livestock, peasants and dynasties for 5,000 years."

A great half-page illustration (cartoon), by John R. Clarey, shows Super Versatile Soy, a character like Superman with a bean-like body, a cape, and two thunderbolts in one hand. Address: News staff writer.

3135. Dominguez de Diez Gutiérrez, Blanca. 1979. Alimentacion integral para una vida plena: Los mil usos de la soya [Whole foods for a full life: The thousand uses of soya]. San Angel, Mexico: Editorial Posada. 232 p. Feb. Dedicated to Swami Pranavananda Saraswati. Illust. 21 cm. Series: Biblioteca Natura. [13 ref. Spa]
• ***Summary:*** Contents: Introduction. Satvic (pure) cookery and its contents. Part I: Food for the body. I. Transcendence. II. Satvic cookery (pure). 1. Balanced diet. III. What ingredients are necessary? Discusses whole grains, starting with a lengthy section on soya, plus 6 pages of nutritional tables. IV. How to start? (p. 71-140). Each of the following sections contains basic recipes and draws on *The Book of Tofu* by Shurtleff and Aoyagi. 1. Go (Fresh soy puree, *Masa de frijol de soya*). 2. Soymilk (*leche de soya*). 3. Tofu (*Cuajada de soya*). 4. Okara (*Sobrante* [*residue*] *de la masa de soya*). 5. Kinako (*Harina tostada de soya*), including soy coffee (*Soyafé–Cafe de soya*), soy nuts (*Soya–Nuez*), and whole dry soybeans (*Frijol de soya natural*). 6. Other soy products: Soy flour (*harina de soya*), soy chocolate (*choco soya*), soy oil (*aceite de soya*) are illustrated, but with no text.

V. What can be done with seeds? (p. 141-92) 1. Cereal grains, legumes, and oilseeds. Recipes–Pickles (Curtidos or encurtidos) and sauces in the style of the Hindu culinary art, to accompany dishes composed of cereals. 2. Sprouts (*Germinados,* p. 179-86, including *germinados de soya* = soy sprouts). 3. Coconuts. VI. Useful advice.

Part II: Food for the mind and spirit. Discusses the teachings of Swami Pranavananda Saraswati and yoga. A brief introduction to Swami Pranavananda and his world yoga mission.

Letter from Blanca. Though copyrighted in 1978, this book was not published (6,000 copies) until 1979. A second edition of 5,000 copies was published in Nov. 1979. Address: Mexico.

• ***Summary:*** An 1/8 page ad. A cherub holds a heavenly scroll that announces: "Soya Plantmilk, Delice (cream replacement), Savree, Rice Pudding with Sultanas."

"Send for literature (sae [self addressed envelope]) please." Address: Plamil House, Bowles Well Gardens, Folkestone, Kent [UK].

3137. Takai Tofu & Soymilk Equipment Company. 1979. Takai catalog of large-scale equipment. 307 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan. 6 p. Feb. 30 cm.
• ***Summary:*** This catalog is printed with green ink on glossy white paper. 29 photos in horizontal rectangular frames show the company's many pieces of equipment and systems for manufacturing tofu and soymilk. The catalog is divided into five sections: (1) Front page and introduction; (2) Basic tofu & soymilk equipment; (3) Deep-frying equipment and systems; (4) Whole systems; (5) Ingredients & literature. For more information, contact Wataru Takai.

Letter (fax) from Wataru Takai. 1996. Aug. 2. Takai's records show that their green catalog of large-scale equipment was printed in Feb. 1979. Address: Ishikawa-ken, Japan. Phone: (0762) 48-1355-59.

3138. Zmora, Ehud; Gorodischer, R.; Bar-Ziv, J. 1979. Multiple nutritional deficiencies in infants from a strict vegetarian community. *American J. of Diseases of Children* 133(2):141-44. Feb. [16 ref]
• ***Summary:*** Four children, ages 5-13 months, from a religious vegan commune, the Black Hebrews in Israel, were studied. They began to arrive in Israel from the USA in 1967. Their number is estimated today as 1,000 and their social structure is that of a commune. Their diet is totally vegetarian. They showed severe protein/calorie and vitamin B-12 deficiencies. Deficiencies resulted from diets that were extremely low in both calories and protein. After starting to wean their children, starting at age 3 months, they fed them a variety of "totally vegetarian" foods including "almond milk" and "soya milk" which they prepared themselves. Address: Sokora Univ. Hospital, and Faculty of Health Sciences, Ben-Gurion Univ. of the Negev, Beer-Sheba, Israel.

3139. Turner, R.W.D. 1979. Vegan diet and health. *British Medical Journal* i(6163):613. March 3. [8 ref]
• ***Summary:*** This letter, by a non-vegetarian physician, recounts numerous health, ethical, and economic advantages

of a vegan diet. "It seems that plant (soya) milk is satisfactory for the infants of the few mothers who do not breast-feed their infants for nine months, as it is for adults. It has potential advantages over cows' milk, and further research is being undertaken in London. Meanwhile it is being used by hospitals for babies who are intolerant to cows' milk." Address: Dep. of Medicine, Univ. of Edinburgh, Edinburgh, Scotland.

3140. Davis, Melissa. 1979. The soy of cooking: Out of the field, into the kitchen. *Washington Post.* March 15. p. E1, E14, E20.
• ***Summary:*** Starts by discussing Henry Ford's interest in and work with soybeans. He wanted to find a way to "grow automobiles out of the soil. In 1940 he discovered that soybeans were his bumper crop."

Last week a milestone in soybean history was made on Capitol Hill [Washington, DC]. "About 500 people including senators, representatives, ambassadors, diplomats and freeloaders turned up at the International Soybean Fair.

While Chai Zemin (of the People's Republic of China) and Bob Bergland (U.S. Secretary of Agriculture) stood shaking hands, people pushed and shoved to get to the bar and to hors d'oeuvres made from every soybean product imaginable–soy flour, bean curd, textured vegetable protein (TVP), soy milk, soy sauce, etc. Also mentions tempeh and miso.

The event was largely sponsored by the Food Protein Council and its member companies. "There were a few interesting hors d'oeuvres including soy nuts and garlic smothered bean curd." Contains recipes.

3141. McGarrahan, Eugene T. 1979. Re: FDA regulations that would bear on the term "soymilk" and other soy products. Letter to William Shurtleff at New-Age Foods Study Center, March 22. 2 p. Typed, with signature on letterhead.
Address: Chief, Dairy and Lipid Products Branch (HFF-415), Div. of Food Technology, Food and Drug Administration, Public Health Service, Dep. of Health, Education, and Welfare, Washington, DC 20204.

3142. Andrews, W.H.; Wilson, C.R.; Poelma, P.L.; Romero, A.; Mislevic, P.B. 1979. Bacteriological survey of sixty health foods. *Applied and Environmental Microbiology* 37(3):559-66. March. [16 ref]
• ***Summary:*** "A bacteriological survey was performed on 1,960 food samples encompassing 60 types of health foods in the Baltimore-Washington, DC, metropolitan area. No consistent bacteriological distinction (aerobic plate counts, total coliform, and fecal coliform most probable numbers) was observed between foods labeled as organic (raised on soil with compost or nonchemical fertilizer and without applications of pesticides, fungicides, and herbicides) and their counterpart food types bearing no such label. Types and numbers of samples containing *Salmonella* were: sunflower seeds 4, soy flour 3, soy protein powder 2, soy milk powder 1... The occurrence of this pathogen in three types of soybean products should warrant further investigation of soybean derivatives as potentially significant sources of *Salmonella.*"

Though these organisms were isolated from these dry soy protein products, the products were not considered to be potentially hazardous. Their low water activity value prevents "rapid and progressive growth."

"Interestingly, soybeans themselves were one of the maximally sampled food types, yet *Salmonella* was not detected in any of the 60 soybean samples examined." It is conjectured that trypsin inhibitors, typically removed during processing the soybeans into food, may inhibit *Salmonella.* Address: Div. of Microbiology, Food and Drug Administration, Washington, DC 20204.

3143. *Ann Arbor Observer* (*Michigan*). 1979. One of the few U.S. tofu manufacturers is right here in Ann Arbor: At the Soy Plant on Ann Street a collectively-run business combines political and nutritional interests to produce over 2000 pounds of soybean curd weekly. March. p. 29. [1 ref]
• ***Summary:*** This February morning Steve Fierling [sic, Fiering] arrives at The Soy Plant at 5 a.m. to start the day's work in the back room of the former pizza carryout at 211 East Ann St. in Ann Arbor. He turns on the lights and the boiler, then starts cooking soy milk for the first batch of tofu. Fiering is part of a nine-member collective; this week he's the cooker. The first batch of tofu should be ready by 7 a.m. Making tofu is a demanding discipline. Fiering, Sue Kalen, Chris Coon, and Al Dynak were the original founders of The Soy Plant one and a half years ago. Steve originally came from Camden, New Jersey, to the University of Michigan, where he majored in geology and, as he puts it, "minored in extracurricular political activism." Politics led to a job as coordinator of the People's Food Co-op, and that led to helping to start The Soy Plant. The Soy Plant is one of the few places in America where people can buy fresh tofu daily. A low-cost vegetable source of protein, retails for $0.70/lb in the consumer's tub or $0.85 in a plastic tub.

Henry Ford was deeply interested in soybeans. He believed that "mechanized soybean production would help free the farmer from the drudgery of dealing with animals by eliminating the need for most meat... In fact his large demonstration soybean farm was near Macon, south of Saline, in Lenawee County." Tofu can become an economical vegetarian alternative to ground beef.

The company began as the Tofu Collective, a Sundays only operation at Wildflour Community Bakery around the corner on North Fourth Avenue. A few months later, in the summer of 1977, the name was changed to The Soy Plant, and the collective moved into the basement of Eden Foods, where it attempted to produce tofu to sell wholesale. Fiering

recalls that the early days were *really* hard. They used to work 14-16 hours a day. But the hard work paid off. By last spring The Soy Plant had the track record and credibility to be able to raise $10,000 in loans to purchase more efficient equipment and move into larger quarters at its present location on Ann Street near Fourth.

For each $100 loan, supporters were compensated with an unusual but sensible kind of interest: a pound of tofu each week, which yields a 35% annual return. Backers included both typical co-op supporters and quite a few native Asians eager to find a local source of fresh tofu.

Members of the collective now earn $3.25 an hour–a big increase over the $50 a week that they were paid in the beginning. But that cheap labor was the capital that got the business started. Current members of the collective are Fiering, Sue Kalen, Dan Ecclestone, Anne Elder, Kurt Getman, George Hanley, Mike Mazzie, Jerry McKenna [sic, MacKinnon], and Ann Wilson.

The Soy Plant makes its tofu in 50-pound batches. Of the more than 2,000 lb of tofu it makes each week, about 350 lb are sold at The Soy Plant retail store, where soy milk, soy byproducts, and prepared soy foods like sandwich spreads, missing egg salad, soysage, and pies are also sold. Another 1,700 lb/week of tofu goes to local restaurants, retail stores (incl. Meijer's Thrifty Acres, Asian-, and natural food stores), and to Midwest Natural Foods, which distributes the tofu to as far away as Pennsylvania and West Virginia.

Soy Plant workers have strong political motivations. They believe that soy products can help to solve world food problems. Fiering, a decentralist, talks about his personal beliefs. An excellent introduction to tofu is the 15-cent pamphlet titled "What is tofu?" available at The Soy Plant. It contains ten popular recipes plus basic information. "For the truly committed, there's the encyclopaedic *Book of Tofu: Food for Mankind* by William Shurtleff and Akiko Aoyagi." Shurtleff "has been the tofu guru for America in the 1970s, and this book has inspired and instructed most of the country's approximately fifty tofu shops operated by non-Asians."

A sidebar titled "Take-out tofu treats" mentions the following made and sold at The Soy Plant: Tofu-tahini spread. Tempeh–which resembles Brie cheese in texture and flavor. Tofu tarts in several flavors: pecan cream, pumpkin cream, yam, mocha, and lemon.

Photos by Peter Yates show: (1) Anne Elder adding soy puree to boiling water in the cooking kettle to make a foamy brew that is eventually curded to become tofu. (2) Steve Fiering filling one-pound tofu retail packages (in a bathtub) with water from a hose before shipping. Address: Ann Arbor, Michigan.

3144. **Product Name:** [Multilac {Soy Isolate-Based Infant Formula} (Powder)].
Foreign Name: Multilac.
Manufacturer's Name: Farmitalia Carlo Erbe S.p.A.
Manufacturer's Address: Via Imbonati 24, Milano 20159, Italy. Phone: 269-951.
Date of Introduction: 1979. March.
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88. Soyfoods Center Computerized Mailing List. 1982. July 23.

3145. Kolar, C.W.; Cho, I.C.; Waltrous, W.L. 1979. Vegetable protein application in yogurt, coffee creamers and whip toppings. *J. of the American Oil Chemists' Society* 56(3):389-91. March.
• ***Summary:*** Contents: Abstract. Coffee creamers. Whip toppings. Yogurt.

"Soy proteins and, in particular, isolated soy proteins are being used in coffee creamers and whip toppings. With the increasing cost of traditional protein sources, more food manufacturers are investigating and utilizing soy proteins in other dairy type products. Isolated soy protein added as a replacement for the nonfat dry milk in the production of yogurt increased the viscosity and gel strength to a greater amount than nonfat dry milk and sodium caseinate added on an equivalent protein basis.

"Coffee creamers are generally grouped into 3 categories: liquid, frozen and dry.

"Whip toppings: Isolated soy proteins are being used in the manufacture of 4 types of whip toppings: (1) aerosol, (2) liquid, (3) frozen, and (4) frozen, prewhipped toppings.

"Yogurt: Two styles of yogurt are popular in the U.S. These are Swiss and sundae styles. The Swiss style is a stirred yogurt incubated in bulk. Fruit and flavorings are commonly combined with the yogurt before packaging. The sundae style is produced by the addition of fruit and flavoring to the retail cup followed by the addition of an inoculated milk to the container."

"Research has been conducted to investigate the potential use of isolated soy proteins as replacement of some of the stabilizer products such as plant hydrocolloids and sodium caseinate. The addition of isolated soy protein contributes to increased viscosity and gel strength and will contribute to the protein content while many of the stabilizer products do not... Isolated soy protein may be used to replace the nonfat dry milk or sodium caseinate that is added to milk to improve viscosity and texture of yogurt. In addition, the isolate is effective in reducing syneresis or whey separation from the gel structure of the yogurt." A photo shows Kolar.

Note: This is the earliest published document seen with the term "coffee creamers" (or "coffee creamer") in the title. Address: Ralston Purina Co., St. Louis, Missouri.

3146. **Product Name:** [Vegebaby {Non-Dairy Soy Isolate Infant Formula} (Ready to Feed)].
Foreign Name: Vegebaby.
Manufacturer's Name: Laboratoire Sopharga.

Manufacturer's Address: 5 Rue Bellini, 92806 Puteeux, France. Phone: 177-644-55.
Date of Introduction: 1979. March.
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88. Soyfoods Center Computerized Mailing List. 1982. July 23.

3147. **Product Name:** Espelin (Soy-Based Infant Formula) [Powder].
Manufacturer's Name: Med-Nim (Pty) Ltd.
Manufacturer's Address: South Africa.
Date of Introduction: 1979. March.
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88.

3148. **Product Name:** [Mapron Soymilk (Plain, with Orange Juice, Coffee Mix, or Fruit Sour {Apple & Prune})].
Foreign Name: Mapuron Tônyû (Sutoreeto, Orenji Kajû-iri, Koohi Mikksu, Fruutsu Sawaa).
Manufacturer's Name: Mitsubishi Chemical Foods Co., Ltd. (Mitsubishi Kasei Shokuhin).
Manufacturer's Address: Ginza 5-13-12, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1979. March.
Wt/Vol., Packaging, Price: 200 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 313. "Mitsubishi Chemical Industries Ltd., Marunouchi 2-5-2, Chiyoda-ku, Tokyo 100, Japan. Tel. 03-283-6659. Mr. Hideyuki Fukuzawa, manager, foods and food additives dept., New Enterprise division. Maker of isolate soymilk and soymilk kefir."

Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Mitsubishi Kasei Shokuhin first made commercial soymilk in Japan in 1979.

K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. In March 1979 Mitsubishi Kasei Shokuhin launched Tonyu Mapuron (in Sutoreeto, Orenji Kajû-iri, Koohi Mikksu, and Fruutsu Sawaa flavors) in 200 ml aseptic cartons.

Labels. 1983. Tetra Brik carton, 200 ml. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-68. By 1982 Mitsubishi was Japan's third largest manufacturer of soymilk. Soya Bluebook. 1987. p. 90. Mitsubishi Chemical Industries, Ltd., Food Division, Marunouchi 2-5-2, Chiyoda-ku, Tokyo 100, Japan. Plant at Kurashiki-shi.

• ***Summary:*** Contents: Abstract. Introduction. The need for improved soy protein isolates. Properties of milk proteins. Properties of soy proteins. Production of simulated dairy food systems. A photo shows Morr. Address: Dep. of Food Science, Clemson Univ., Clemson, South Carolina.

3150. *Plenty News* (*Summertown, Tennessee*). 1979. Soybean project in Guatemala highlands. 1(2):1-3. March.
• ***Summary:*** Plenty was incorporated on 4 Oct. 1974 in the State of Tennessee as a non-profit relief and development corporation. In Solola, Guatemala, Plenty will "be setting up a village-scale soy dairy to produce 100 pounds of tofu and 40 gallons of soy ice bean (ice cream made from soymilk) three times a week. The dairy will supply free ice bean for

local school lunch programs. It is intended that the dairy will produce low-cost, high-protein foods and become a local cottage industry, run by indigenous people of Solola. This project is co-sponsored by the NGO Division of the Canadian International Development Agency [CIDA] as phase one of an Integrated Development Project..." Some 1,500 pounds of soybeans have been donated by UNICEF. Suzy Jenkins is one of the soyfood teachers.

"In cooperation with UNICEF and the International Soybean Program (INTSOY), Plenty has screened 20 varieties of soybeans, determining which ones would grow at 6,000 feet in the Guatemalan highlands... The beans were successful, yielding up to 40 bushels per acre. Approximately 100 farmers from San Andreas Itzapa and neighboring towns will be planting trial patches of soybeans in their own fields this coming spring. Plenty will supply them with the seed of the best-performing varieties."

Contains many purple photos of soybeans and soyfoods in Guatemala, including: Suzy Jenkins carrying water in a pot on her head for a soymilk demonstration. A Guatemalan man standing waist-deep in a field of soybeans with a bearded Farm member looking on, smiling. Guatemalan women crushing soybeans in a metate, filtering out soymilk using a cloth sack, then drinking the soymilk. A little girl drinking soymilk from a big cup. Planting soybeans. Amaranth plants.

Note 1. This is the earliest document seen (April 2004) that mentions Solola, Guatemala, in connection with soy.

Note: This is the earliest document seen (Jan. 2003) concerning Plenty Canada. Address: 156 Drakes Lane, Summertown, Tennessee.

• ***Summary:*** Contents: Introduction: Historical background, current soybean production, soybean–an efficient crop. Soybean for human consumption: Nutritional advantage, soybean utilization, special characteristics of soybean. Easy-to-prepare soybean foods for villagers: Admixing soybean in staple food, foods prepared with full-fat soya flour, other soybean foods (soybean milk, soybean sprout, other preparations). Programs encouraging soybean consumption: Encouraging soybean production, village food processing center, strengthening training and education.

Annexes: 1. Soybean acreage, yield, and production worldwide and by continent, 1961-1977. 2. Efficiency in energy, protein, and fat output of selected crops in different regions of the world. 3. Preparation of full-fat soya flour at village level. 4. Some popular household soybean preparations: Baked soybean in tomato sauce, pig's feet stewed with soybean, soybean cooked with small dry fish. Address: Resource Systems Inst., East-West Center, Honolulu, Hawaii.

3158. **Product Name:** Soy Coffee with Chicory, Soya Meat, Soya Soft Drink.
Manufacturer's Name: Spicer College Products & Services (dba Spicer's Food Specialties).
Manufacturer's Address: Aundh Road, Poona, 411 007, India.
Date of Introduction: 1979. April.
New Product–Documentation: Label and color photo. 1986. Shows package (box). Red, yellow, white, and brown with coffee in cup on front panel. "Delicious Drink. Caffeine Free." Net Wt. 200 gm.

Full-page ad in *The Times of India.* 1979. April 23. p. 11. "From the seed of the soya an idea is born." Spicer's Food Specialties now offers four unusual products for your health: Soya Meat, Soya Coffee (with the full, rich flavour of chicory), soya "milk substitute" (Soyalac–formulated to provide the full nutritive value of buffalo's milk), Soya soft drink–Plus! Wholesome Granola breakfast.

3159. Spicer's Food Specialties. 1979. Display ad: From the seed of the Soya an idea is born. *Times of India* (*The*) (*Bombay*). April 23. p. 11.
• ***Summary:*** A very interesting full-page ad, with lots of white space. In the very center is a large photo of a soyabean. Below it is the caption: "The world's richest source of protein."

In the left column: "4 unusual products for your health. 1. Soya Meat: Now you can eat meat yet stay vegetarian. The secret? Delicious protein-packed soya meat. It comes frozen fresh–just like regular meat. And you can mince it, fry it or roast it–to make korma, keema mutter, seekh kababs and more.

"2. Soya coffee: Now you can drink coffee to your health. Because we've taken out the coffee beans (and the caffeine) from your favourite beverage. Instead we've put in the goodness of soya beans and the full, rich flavour of chicory.

"3. Soya "milk substitute": Soyalac [canned soymilk]. Formulated to provide the full nutritive value of buffalo's milk. It's easy to digest–recommended by doctors around the world for children allergic to regular milk. It's easy to preserve–needs no refrigeration.

"4. Soya soft drink. When you're hot and thirsty, reach for the drink with a difference. A drink that nourishes as it refreshes. Low in fat, high in protein, its perfect for growing children as well as hardworking adults. Fill up the fridge at home. Introduce it to your workers in the company canteen. (Limited distribution).

"Plus! Delicious egg noodles. Wholesome Granola breakfast cereals. Spicy peanut bread."

In the right column: "From a very unusual company. At the age of 23, a young man gave up a promising medical career in America to come to Asia and serve the poor and the sick. In Japan and China he 'discovered' the soya bean and its extraordinarily high protein content.

"That man was Dr. Harry Miller, the inspiration behind Spicer's Food Specialties division. The institute, located near Poona, has its own farms and manufacturing facilities.

"Dr. Miller personally invented several soya products and initiated a continuing programme of developing and manufacturing soya and other health foods around the globe. Spicer's Food Specialties division is part of this world-wide programme.

"Its your assurance of up to date know-how, world class standards of hygiene and uncompromising quality control behind every product from Spicer's.

"Good taste and good sense. Spicer's Food Specialties. Exclusively marketed by Argosy Foods Division, 1st Floor, Dhiraj Chambers, Waudby Road, Bombay 400 001.

"Free! Mini information ad recipe booklet "Food for Thought" at your dealer–or write to Argosy Foods Division.

"Distributed by:" The names, addresses and phone number of four local distributors are given. "Available at better stores and supermarkets everywhere!"

Note: The first soy dairy in India was opened by Seventh-day Adventists in at Spicer Memorial College in Poona. In 1973 they began making soymilk (Soyalac) and

related products. As of Sept. 2010 Spicer Memorial College (which was established in 1915) is active and doing well at their original location, Aundh Road, Ganeshkind. Pune–411 007, India.

Note: An article in this newspaper on 17 Aug. 1973 titled "Ten, plus two, plus three: Time and the educator, by V.V. John, states: "Spicer Memorial College in Poona does the four-year degree syllabus of Poona university in less than half the time, and devotes the rest of the time to vocational and enrichment courses." One of the vocational courses may well have been working in the school's food factory and making soyamilk.

A subsequent article in the same newspaper on 19 Nov. 1974, titled "Career education," also by V.V. John, stated: "In fact, the work of this college qualifies it to be acclaimed a pace-setter." Address: [Poona / Pune, Maharashtra state], India.

3160. Shurtleff, William. 1979. Re: Request for clarification and additional information on making tempeh at Northern Soy. Letter to Andy Schecter at Northern Soy in Rochester, New York, April 29. 1 p. Typed, without signature (carbon copy). [1 ref]

• ***Summary:*** Shurtleff thanks Andy for his letter of March 31, asks him to check Shurtleff's rewritten description for the book *Tempeh Production,* then asks 7 questions with space after each for a response. Andy's handwritten responses are included.

Shurtleff's typewritten P.S. adds: *"Tofu & Soymilk Production* went to the printers last week. We hope to have it ready by the SANA conference. 320 pages." Andy's handwritten note at the end: "Keep up the good work, Bill! We're real interested in *The Book of Tempeh* [not yet published]–especially a pocket size edition will help us to get sales going." Address: New-age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

3161. Banzon, Julian A.; Escueta, Elias E. 1979. Progress in the technology of soymilk production. In: Hideo Chiba, et al., eds. 1979. Proceedings of the Fifth International Congress of Food Science and Technology (1978-Kyoto). Tokyo: Kodansha Ltd.; Amsterdam and New York: Elsevier Scientific Publishing Co. xi + 436 p. See Chapter 2.2, p. 74-78. Illust. Author index. Subject index. 26 cm. Series: Developments in Food Science, Vol. 2. [12 ref]

• ***Summary:*** Contents: Introduction. Progress in processing. Progress in increasing acceptability. Nutritional improvement. Soybean varieties. Customer presentation. Philippine experience in soymilk production (3-year history). Simplified soymilk production. Calculation methods.

"CDCP, a construction group involved in a variety of ventures, entered into a contract with the Food Science/ Technology Department of U.P. Los Banos, to produce PHILSOY, using the latter's 600 bottle/day pilot plant. PHILSOY was well received and production reached 3500 bottles/day. The retail price was kept below a competing skim milk chocolate-flavored beverage, and at about the same price as the better soft drinks. After about 3 years of operation, the venture stopped due to breakdown of the processing equipment which had been made to run at 3500 bottles/day even though it was designed for only 600 bottles/ day. Acquisition of additional equipment was imperative but the contracting parties failed to make a decision. The CDCP experience proved that soymilk production can be profitable in the Philippines. The need for a nutritious beverage is in the hinterlands where transporting a bottled product from a distant processor is expensive. The buying power is low, so that the unit price must also be low. The most expensive step is in-bottle sterilization. A cheaper system lies in serving soymilk "on draught", and prepared locally as a "home brew", a system not uncommon in the villages. Unsold soymilk can be converted to tofu, and the soy press-cake [okara] can be used as an ingredient of the locally made rice cakes (puto)."

Tables show: (1) Nutrient recoveries from different soybean varieties and processing methods (incl. Clark, Bragg, Hsi-Hsi. Protein recovery ranged from 95% to 71.8%. Solids recovery ranged from 89% to 42.2%). (2) Composition of seven soymilks. Address: Dep. of Food Science and Technology, Univ. of the Philippines, Los Baños College, Laguna, The Philippines.

3162. Borhan, M.; Snyder, H.E. 1979. Lipoxygenase destruction in whole soybeans by combinations of heating and soaking in ethanol. *J. of Food Science* 44(2):586-90. March/April. [17 ref]
Address: Dep. of Food Technology, Iowa State Univ., Ames.

3163. Duienga, Suzanne; Duienga, William. 1979. The Soy Plant. *Beansprout Flyer and Pocket Reader: Grand Rapids Food Co-op Newsletter* 2(3): April.

• ***Summary:*** "A current personal interest in soybeans combined with a concern about the high price of tofu at the coop led us to visit the Soy Plant in Ann Arbor. What we found was not a 'plant' or a factory at all, but a downhome group of people with a genuine interest in their work.

"Steve Fiering, the man who first envisioned the Soy Plant, stopped his work to show us around the shop and talk with us about his experiences and his soybean philosophy.

"When asked why Soy Plant tofu costs so much, Steve gave us some pretty impressive reasons. First of all the soybeans that the Plant uses are organic. Secondly, Steve values the people with whom he works and so wages ($4.00 per hour) reflect this. Lastly and most importantly, the Soy Plant is the first of its kind in this area. As with all first, 'We make mistakes and they cost money.'" Steve made much of the machinery in the shop himself.

"The Soy Plant already has a large line of delicious soy

products (all personally sampled and 'wholestomachally' approved of), including soysage, tempeh, soymilk, brown bread, sweet white miso, spiced tofu, spreads, tofu pies, and okara peanut butter balls. Free samples of the delectable spreads are available on the counter.

"During the visit our basic curiosity evolved into true inspiration. The Plant is a living, breathing, organically growing example of how a cooperative group of people can come together and make something happen. The place truly is a center of learning, staffed by people eager to share their newly found knowledge about the creating of this very old food.

"Do you often wonder what to make with this nutritious but strange stuff called tofu? Here are some delightful recipes:" The recipes, from *The Book of Tofu* by Shurtleff and Aoyagi, are for Tofu-nut butter spread or topping, and Banana-tofu milkshake. Address: Michigan.

3164. Forster, Lynn L.; Ferrier, L.K. 1979. Viscometric characteristics of whole soybean milk. *J. of Food Science* 44(2):583-85, 590. March/April. [19 ref]
Address: Dep. of Food Science, Univ. of Illinois. Forster presently with Quaker Oats Co, Barrington, IL; Ferrier with General Foods Corp., Tarrytown, New York 10591.

3165. Gilat, T. 1979. Lactase deficiency: The world pattern today. *Israel J. of Medical Sciences* 15(4):369-73. April. [39 ref]
• ***Summary:*** "When first described some 15 years ago, primary adult lactase deficiency appeared to be a rare condition of uncertain etiology. Numerous subsequent studies radically changed this impression." As many as 90% of Asians or blacks have an inability to digest lactose, or milk sugar. People with lactose intolerance learn to avoid most milk products because they often develop diarrhea, stomach cramps, and intestinal gas from milk sugar. Address: Dep. of Gastroenterology, Ichilov Municipal-Government Hospital and Sackler School of Medicine, Tel Aviv Univ., Tel Aviv, Israel.

3166. Itona Products Ltd. 1979. Milk that's never seen a cow (Ad). *Alive* (*England*). March/April. p. 2.
• ***Summary:*** "Golden Archer" Soya Plantmilk. The milk that's 100% non-animal.

The right 1/3 of this ad, titled "New lines from Itona, lists many Itona vegetarian products: Granny Ann High Fibre Biscuits made with Soya Fibre. Golden Archer Soya Plantmilk (100% vegetable; "Milk that's never seen a cow"). Tona "C" Food–Fish Cake Style. Ito–Instead of coffee. Golden Archer Brown Rice Pudding with Soya Plantmilk. Noots–Roasted Salted Soya Beans. Basic TVPs–Flavoured and natural (in 4 oz packs; all flavors are given).

A photo shows a smiling woman pouring soymilk from a can into a cup in her left hand. Address: Leyland Mill Lane, Wigan [Lancashire, England].

3167. **Product Name:** [Meiji Sunglow Soymilk (Plain)].
Foreign Name: Meiji San-guroo Tônyû (Pureen).
Manufacturer's Name: Meiji Milk Products Co. Ltd. (Meiji Nyugyo) (Marketer). Made in Japan by Marusan.
Manufacturer's Address: Kyobashi 2-3-6, Chuo-ku, Tokyo 104, Japan.
Date of Introduction: 1979. April.
New Product–Documentation: Toyo Shinpo. 1982. July 21. "The soymilk industry and market in Japan." States that Meiji Nyugyo first made commercial soymilk in Japan in 1980.

K. Tsuchiya. 1982. Dec. Tonyu [Soymilk. 2nd ed.]. p. 72. Meiji Nyugyo launched Meiji San-guroo Tonyu (Pureen) in a 200 ml long-life (aseptic) carton in March 1981.

Soya Bluebook. 1984. p. 62. "Sungrow Soy Beverage." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64. Tremendous momentum was added to the new soymilk boom "in April 1979, when Meiji Milk Co., Japan's second largest dairy milk company (sales of $1,400 million in 1982), started to sell Sunglow soymilk (made by Marusan but with the Meiji brand). Meiji first began to make their own soymilk in their own plant in March 1981."

3168. Newcomer, Albert D. 1979. Lactase deficiency. *Contemporary Nutrition* (*General Mills, Minneapolis, Minnesota*) 4(4):1-2. April. [6 ref]
• ***Summary:*** Contents: Introduction. Developmental pattern. Geographical distribution. Classification. Cause of symptoms. Diagnosis. Significance. Treatment. Summary. "Although intolerance to milk has been recognized for centuries, only during the last 20 years has it been established that the most common cause is deficiency of intestinal lactase activity. Interest in this topic has resulted in a remarkable melding of geographers, anthropologists, enzymologists and clinicians." Address: Rochester, Minnesota.

3169. Omosaiye, O.; Cheryan, M. 1979. Low-phytate, full-fat soy protein product by ultrafiltration of aqueous extracts of whole soybeans. *Cereal Chemistry* 56(2):58-62. March/April. [20 ref]
• ***Summary:*** The feasibility of using ultrafiltration (UF) to eliminate phytic acid from soymilk was studied. UF to a volume concentration of 5 resulted in 65, 43, and 27% elimination of phytic acid at pH 6.7, 8, and 10, respectively. Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL 61801.

3170. Tofu Shop (The). 1979. Workshops in tofu-making on the community level (Portfolio). Telluride, Colorado. Eight inserts. 28 cm.
• ***Summary:*** Rather than being a typical portfolio, with many

inserts, that all arrive at one time, this is a collection of eight documents all related to a common theme.

(1) "Workshops in community level tofu-making: Beginning in April 1977, the Tofu Shop of Telluride, Colorado, is making available to interested groups and communities training workshops in tofu-making on the community level. Topics to be covered in these workshops will include: The process of tofu-making. Setting up shop. Other soy products. Marketing. Financing and fundraising. Bookkeeping and record keeping. Restaurants and delis, Nutritional info. Community education. The community food chain. The personal benefits. Inner-shop organization. Contacts and resources.

"Workshops are led by members of the Telluride Tofu Shop and may include an experience in tofu-making... Apprenticeships–The Telluride Tofu Shop also has a limited number of openings for workers / owners in its restaurant and wholesale business. A one year time commitment is required."

(2) "Dear ___: The Telluride Tofu Shop was born in October, 1977, when we moved into our small, unfurnished shop with a meager one-thousand dollars capital and began making tofu. Now in April, 1979, twelve of us operate a growing restaurant and wholesale food business with annual sales approaching fifty-thousand dollars annually. What happened during this period is something we want to share with other communities and groups of interested people." So we are offering a workshop in "How to Start a Community Tofu Shop." (3) "The community level tofu shop and the local food chain." A complex circular diagram shows many complex relationships.

(4) "Supplies and information for community level tofu-making." Lists five key organizations: (a) Soycrafters Association of North America (SANA; Greenfield, Massachusetts, Richard Leviton). (b) New-Age Foods Study Center (Lafayette, California; Books, brochures, tofu-making materials, slides, tapes, general info.). (c) Bean Machines Inc. (Bodega, California; Larry Needleman. Tofu-making equipment from Japan). (d) Farm Foods (Summertown, Tennessee. Attn. soydairy; tempeh starters, tvp, cookbook, general info.). (e) Westbrae Natural Foods (Emeryville, California; Nigari).

(5) A tofu recipe: For making approximately 15 pounds of tofu. Gives equipment, ingredients (soybeans and nigari), and recipe [process].

(6) A settling box press. Two views showing how to make one yourself.

(7) Soymilk: Nutritional information and recipes courtesy of The Spinning Kitchen, Boulder, Colorado.

(8) Our favorite tofu recipes.

Letter (e-mail) from Matthew Schmit. 2009. March 30. "Our motivation for doing tofu workshops was primarily to spread the word. But also hoping to make a little money.

"We (Christie Mather and myself) conducted three workshops in early 1979. There were approximately 12-15 participants per workshop. These workshops were far from Telluride, so there was no concern about competition.

"The first was in Arcata, CA, (little did I know I would be moving there soon), to a group known as the Arc Community which was trying to form an intentional community to purchase land. My sister and brother-in-law were members, hence our invitation. After we left, they began making tofu weekly in home kitchens and selling it informally in the community. When I moved to Arcata, I joined the group as they began planning to rent a production space. As it turned out, it was too big of a leap for them. Their effort dwindled. I went ahead and opened the Arcata shop. The Arc Community eventually disbanded.

"The second workshop was held in Ashland, Oregon, in the home of friends from Telluride. They were very involved in the Ashland Food Co-op. Later when the Co-op expanded and installed a commercial kitchen, co-op members began making tofu in-house. I visited them once during production after moving out to Arcata. Eventually, Ashland Soyworks started up and Co-op production stopped.

"The third workshop was held in The Dalles, Oregon, also in the home of ex-Telluridians. As far as I know, nothing every grew out of that." Address: 116 N. Oak St., P.O. Box 69, Telluride, Colorado 81435.

3171. Rhodes, Elizabeth. 1979. A tofu-tempeh tycoon on Vashon Island? *Seattle Times Magazine.* May 6. [1 ref]
• ***Summary:*** William Luke Lukoskie was born 24 November 1946 in Duluth, Minnesota. His Catholic family moved to Edmonds, Washington, in 1956 and he attended parochial schools. After earning a BA in philosophy (math minor) from Carroll College in Helena, Montana, he returned to Seattle. He enrolled in graduate business school at the University of Washington in 1968, then switched to working on a doctorate in educational psychology, then dropped out. In 1976 he founded Island Spring tofu factory. Today Island Spring produces tofu, tempeh, soymilk, Soyfreeze soy ice cream, and Delicious Steamed Tofu. Future products may include soy mayonnaise, soy yogurt, frozen tofu lasagna, and cheesecake. A photo shows Lukoskie smiling and holding a block of his tofu with a six-petaled flower pressed into the surface. Address: Seattle.

3172. Singh, Surjan. 1979. Re: Soymilk production at M/S Pantnagar Soya Milk Products Pvt. Ltd. Letter to William Shurtleff at New-Age Foods Study Center, May 12–in reply to inquiry of April 21. 2 p. Typed, with signature on letterhead.
• ***Summary:*** "M/S Pantnagar Soya Milk Products Pvt. Ltd. 167, Cycle Market, Jhandewalan Extn., New Delhi have started the manufacture of a soy beverage recently. The installed capacity of the plant is 50,000 bottles of 200 ml capacity per day. The product is marketed with the brand

name of SIPSO." Address: Prof. and Head, Dep. of Food Science & Technology. Govind Ballabh Pant, Univ. of Agriculture & Technology, Pantnagar, Dist. Nainital (India).

3173. *Times of India* (*The*) (*Bombay*). 1979. Classified ad: Wanted–Soya-Milk distributors. May 19. p. 15.
• ***Summary:*** A fairly small ad with a bold title and border: "A company manufacturing Soyabased products for the first time in India wishes to appoint Distributors in Bombay for Soyamilk–a 'Milk Substitute' for people allergic to regular milk and also for children with hyperallergenic conditions.

"Only parties with good financial standing and preferably experienced in distributing over-the-counter products need apply to Box W 809-S Times of India, Bombay 1."

Note: This ad was probably run by Spicer Memorial College, for several reasons: (1) They are located in Pune, southeast of Bombay. (2) On April 23 of this year (a little less than a month ago), their Spicer's Food Specialties ran a full page ad in this same newspaper advertising "Soya 'Milk Substitute.' Soyalac."

3174. Summers, J.L. 1979. Re: Information governing imitation and substitute foods. Letter to William Shurtleff at New-Age Foods Study Center, May 21–in reply to inquiry of April 10. 2 p. Typed, without signature on letterhead. Address: Asst. to the Director, Div. of Regulatory Guidance, Bureau of Foods, Food and Drug Administration, Public Health Service, Dep. of Health, Education, and Welfare, Washington, DC 20204.

3175. Smith, Robert A. 1979. Delsoy Products (1943-1963) (Document part, I) (Interview). In: 1979. The Ford Experimental Laboratory and the "Square House." Conducted by Donald V. Baut of Dearborn Historical Museum, May 31. 72 p. transcript. See p. 44-72.
• ***Summary:*** By the 1940s, many U.S. states had a fill [filled] milk law, which prevents the blending of vegetable fats (which cost about half as much as butterfat) with dairy products to make any product which simulates a milk product–such as ice cream or whipped cream. During World War II, a restriction stated that cream could not contain more than 18% butter fat, in order to conserve butter fat which was in short supply. To circumvent this law, two partners in Chicago, Illinois, Eric Russell Swanson (the production man, who owned the Swanson Dairy in Chicago) and Herbert Marshall Taylor (the promoter and salesman) formed the Russell Taylor Company and developed a whipping cream product made by adding 17% vegetable fat to cream containing 17% butterfat. It was a very successful product in the Chicago area and was eventually bought out by the Bowman Dairy Co. So they decided to come to Michigan, which didn't have a filled milk law, and develop a similar product–which they named Devonshire Topping. It, too, was very successful, so the Michigan dairies had the state legislature pass a law to prohibit it.

Taylor had read about Henry Ford's soybean milk through the publicity it was getting. He visited Bob Smith at the Carver Laboratory and asked if Smith could make whipping cream from soybeans. Smith had never tried this before but in a few days work at the Laboratory (using a soymilk process first developed at Moir House Lab) he had samples that Taylor was very pleased with. Taylor said he wanted to start producing the product commercially in Michigan using the Ford soybean base. Henry Ford said that he did not want to get into the business of producing soybean milk for sale, but he gave Smith permission to give Taylor small amounts to experiment with and to work with Taylor to design a plant to produce the soy base product in Dearborn. Ford wisely warned Smith to be very careful with Taylor (who looked like a promoter) and not to get involved in any stock deals.

Starting in the spring of 1943, Smith worked in his spare time, designed all the equipment (based on the design of the equipment in the Carver Laboratory but on a larger scale), and built a plant in the old Livonia Dairy at 2001 S. Telegraph Road (at Harvard) in Dearborn. Several other people also worked on the job. The plant's initial capacity was about 1,000 gallons per day (one shift). The equipment in Ford's Carver Lab was designed to produce 150 gallons of soymilk per day in a small non-stop stream. The funds needed to equip and establish the plant in Dearborn came from profits made by selling Devonshire Topping in Detroit. "In the latter part of 1943 we began production [of soy-based whip topping] in the [Livonia] dairy. We had lots of problems getting the equipment because of the war and the scarcity of materials. Eventually we got the thing going. We started experimentally, selling across state lines to test the law. We advised the Agricultural Department what we were doing. We shipped to Toledo and we sold in Detroit. The product sold very well. Of course, there was no whipping cream. We just couldn't make enough of the product to supply the demand."

To make Delsoy they started by making soymilk from low-fat soybean meal, then added vegetable oil and liquid sugar (a blend of a small amount of corn sugar and a larger amount of sucrose from either sugar cane or sugar beets) to make about 3,000 gallons a day of the base for the topping. The protein produces the foam that makes the whipping possible. The fat produces the stabilizing that keeps it whipped. The sugar is added to give a sweet flavor.

The name Delsoy was Herbert Marshall Taylor's idea. The filled milk product that his company had been selling previously in Detroit was named Devonshire Topping. But that name was contested by the people at Devonshire-Melba Co. and they prevailed. Taylor was going to have to change the name of his product, and at the same time he was changing it from a dairy-based product to a soy product–so

he thought of "delicious soy" or "Delsoy." In addition, the first letter was the same as the D in Devonshire, which would help in advertising the new product to former customers. The Russell Taylor Co. manufactured Delsoy for the first year or so, until the company name was changed to Delsoy Products. The company name was composed of Eric Russell Swanson's middle name and Herbert Marshall Taylor's last name.

Herbert Marshall Taylor "was the only son of a superintendent of the Canadian Pacific Railway. He had been raised in kind of a royal fashion. He rode around in private railroad cars and lived pretty well. He was very expert at spending money at a high rate of speed, which was one of our big problems after the company was formed. He spent money like it was going out of style and we always had trouble."

"Harvey Whitehouse was a dairyman in Detroit and he was hired to operate the Russell Taylor plant. It was in the Grand Trunk Terminal warehouse in Detroit [Russell-Taylor Inc., 1951 East Ferry Ave. at 3rd Ave, Detroit 11]. He didn't join us until after our plant was completed in Dearborn. When our Dearborn plant was completed, they shut down the warehouse plant in Detroit and he came out and operated the Dearborn plant. At that time I was working at Fords [the Ford Motor Co.] and I was just spending part of my time at the Delsoy product... it was somewhere in the fall of 1943 I believe... Harvey Whitehouse was hired because he was qualified to operate both refrigeration and steam equipment... He was hired from the Rosebud Dairy in Detroit to operate the equipment at the Russell Taylor warehouse on Third Avenue in Detroit. Russell Taylor had... rented an existing plant there, used it on a part-time basis, and paid for the use of the equipment on a per-gallon basis.

"Now when we started Delsoy Products, we had our refrigeration and we had hired our own people to deliver it... We never sold Delsoy out of that warehouse [on Ferry Ave. in Detroit]. All the Delsoy we sold out in the Dearborn plant. That was the Devonshire Topping that we sold out of the Ferry Avenue warehouse."

H.M. Taylor closed down Devonshire Topping because "he got in trouble with the War Food Board for using too much milk solids in his product. He used about four times his allocated amount of milk solids and was sued by the government and was found guilty. He and Swanson and the rest of the company were fined. They had to stop the operation on account of that." That was when they shut the warehouse in Detroit. At about the same time the filled milk law went into effect and they couldn't produce it any more. Delsoy had been in production for about a year before the lawsuit was settled with the government. Taylor got the larger of the two fines because he was the instigator and leader of the idea. "We were definitely anxious to get Taylor out of the company because he was definitely running us into the ground with his wild spending." Bob Smith put up the money for Taylor to keep him out of jail and in exchange took over Taylor's stock in the company–which gave Smith control of two-thirds of the company. But he decided it would be best to split the ownership among himself, Swanson, and Whitehouse. Address: Smith: 26351 Hollywood Ave., Roseville, Michigan 48066; Baut: Dearborn Historical Museum, 915 Brady St., Dearborn, Michigan 48124. Phone: Smith: 313-777-5394. Baut: 313-565-3000.

3176. Smith, Robert A. 1979. Henry Ford, George Washington Carver, and the Carver Laboratory. The plastic car and Edsel Ruddiman (Document part) (Interview). In: 1979. The Ford Experimental Laboratory and the "Square House." Conducted by Donald V. Baut of Dearborn Historical Museum, May 31. 72 p. transcript. See p. 15-43. • ***Summary:*** The Carver Laboratory developed because Mr. Carver had told Mr. Ford that he knew how to get rubber from domestic plants. World War II was on and Ford's main rubber supply had been cut off by the Japanese. "Mr. Ford was interested in finding out what Carver's plants were and what the process was. He decided to entertain Carver and get him to reveal the source of his rubber." He came to Smith one day and said he would like Smith to convert the waterworks (the plant that had once been the waterworks for the city of Dearborn) into a laboratory and to have it done in one week. "George Washington Carver was coming to Dearborn for a visit and this laboratory was going to be named in his honor. We were supposed to find out through this how to make rubber out of domestic plants." With all top Ford executives, Charles Lindbergh, the newsreel, newspaper, and wire service people plus photographers in attendance, "we had the big opening and dedicated the laboratory for work on soybeans." In July 1942, with Mr. Smith in charge, they spent the next 2 weeks with Carver and never did find out how to make rubber from domestic plants. They were convinced he did not know how, but said he did just for publicity.

After the big dedication. Smith moved all his equipment from Moir House to the Carver Lab, where he had a lot more room and equipment. But Bob, with his wife and two daughters, continued to live at the Square House in Dearborn until 1952, when he moved the house to Garden City. Eventually there were 25 employees at the Carver Lab, including 3 chemists. "One of the reasons for moving to the Carver Lab was to have more room to build a [soy] milk plant. He [Mr. Ford] wanted us to build a plant that would produce 150 gallons of milk a day." Prior to that time they had produced 1-2 quarts a day, all by hand work in the lab. After about 2 months they had the soymilk plant in operation. For the next few years they produced soymilk to supply the Henry Ford Hospital in Detroit and the Ford cafeterias. "The milk wasn't as good as cow's milk as far as flavor was concerned but it made good ice cream and we made a lot of ice cream from it." When asked if they used the

word "ice cream," Smith answered: "Well, it turned out there is a law against making anything that looks like ice cream if it's not made out of milk. The patent attorney said that we could probably fight it but it would be bad publicity for the company so we eventually discontinued it."

At the Carver Lab extensive research was also conducted on chlorophyll, since it is a very unique substance: (1) its chemical structure is almost identical to that of hemoglobin in the blood; and (2) it is responsible for transforming solar energy into the various nutrients that can be used by humans and animals. Mr. Ford found these facts fascinating. The Carver Lab became one of Henry Ford's favorite projects. Bob Smith worked at the Carver Lab from about July 1942 until August 1945; the main job at that time was production of soybean milk. Starting in about Sept. 1942 they made 150 gallons a day by a continuous process that worked around the clock. There were three shifts. The soymilk was made from purified [isolated] soy protein, hydrogenated soy oil, and corn sugar. Then they got involved in making ice cream for the cafeterias, the Ford Veterans and Ford Hospital. They also began testing the value of soybean milk in rats. "We found we could raise six generations of rats with nothing but soybean milk, which was, the doctors thought, pretty unusual. There are very few foods that you can eat exclusively and survive on for very long." In Aug. 1945 he left to work full time with the Russell Taylor Company making Delsoy [a soy-based non-dairy whip topping]. Clem Glotzhober took over the Lab after Smith left. Mr. Ford got sick in January 1945 when he was in Georgia and he never recovered.

Development of the plastic car was started at the chemical plant, where a solvent extractor produced soybean oil and meal. The defatted meal, when reacted with phenol formaldehyde, produced a good plastic, and many small molded plastic parts went into Ford cars. The story of the development of the plastic car is told. Hud McCarroll was supposed to be the engineer on the project. Lowell Overly designed the first plastic car. "That car was probably 40 or 50 years ahead of its time, like a lot of things Ford did." The first step was to build a plastic rear deck for Mercury. It was pulled off the molds in about 1938 and cost $3,500,000. Ford liked to slam this rear door with an axe that he carried in the trunk of his car. After the plastic car was demonstrated in 1941, it ended up in the basement of the Engineering Lab, covered with a piece of white cloth.

Smith (p. 25) then tells the story of how Mrs. Edsel Ruddiman wanted her husband, who was almost 80 years old, to retire. "So she spoke to Mr. Ford about getting him to retire. Instead of Ford saying, 'Edsel, I think you've worked long enough. You'd better retire,' or something like that, he just took his work away from him. He went into his laboratory one day and he said, 'I want everything cleaned out of here in the next couple of hours.' So dump trucks backed up to the door and threw everything out. Then they let Ruddiman sit there for a couple of months with nothing to do–in about 1941... He was very bitter about the way the boss was treating him." At times he cried. After a short time he quit. The Twin Lakes lab was also closed in 1941. Address: Smith: 26351 Hollywood Ave., Roseville, Michigan 48066; Baut: Dearborn Historical Museum, 915 Brady St., Dearborn, Michigan 48124. Phone: Smith: 313-777-5394. Baut: 313-565-3000.

3177. Smith, Robert A. 1979. Delsoy Products (1943-1963) (Document part, II) (Interview). In: 1979. The Ford Experimental Laboratory and the "Square House." Conducted by Donald V. Baut of Dearborn Historical Museum, May 31. 72 p. transcript. See p. 44-72.
• ***Summary:*** Bob Smith left the Ford Motor Co. in Aug. 1945 to work full time with Delsoy Products. Taylor and Smith each owned 1/3 of the stock, Swanson owned 1/6, and various other people owned the remaining 1/6. Swanson and Taylor put in the money and Smith contributed the know-how. Delsoy Topping sold very well because no dairy whipping cream was available. They shipped to Toledo, Ohio, and sold in Detroit, Michigan.

Taylor and Swanson were fined by the federal War Food Board for using too much milk solids in their original dairy-based whipping cream. Smith offered to pay off Taylor's $6,000 fine to get Taylor out of the company. Taylor was a lavish spender and the source of much conflict. At one point he tried to grab a majority of the stock for himself. Taylor's interest in the company was to develop a product and then sell the stock to make money on the stock rather than on the sale of the product. Smith, Swanson, and Whitehouse ending up owning Delsoy Products.

Originally Delsoy Topping was sold in paper containers purchased from the Sutherland Paper Co. in Kalamazoo, Michigan. Delsoy bought the containers by the carload, 300,000 at a time. When Sutherland went out of business, Delsoy switched to buying containers from the Crown Cork and Seal Co. in Philadelphia. During World War II Crown Cork and Seal had developed a pressurized metal can to use for insecticide sprays by the military. Delsoy was the first to realize that the can's unique valve (produced by the Super Whip Co. in Chicago and used with nitrous oxide gas) made it suitable for whipping cream. So the company modified its formula for Delsoy Topping, put it in this pressurized can, and in 1946 or 1947 named it Presto Whip. They were the first company to ever put a topping in a pressure can and sell it. It immediately became a huge success, was widely advertised, and was soon sold by every chain store in the area. Soon Delsoy Products was working 3 shifts, making 25,000 cans a day–sold mostly in the Detroit area. Soon they were selling the products over a range of 350 miles in lower Michigan, Ohio, and parts of Indiana, Pennsylvania, and New York. By 1963 they had 23 distributors. One of their first big customers was Awrey Bakery, a prestige

account, that bought 300 gallons/day, 5 days a week. They mixed equal parts of Delsoy and dairy whipped cream to get a superior product for use in cream puffs. Initially they refrigerated all products. Later they would freeze everything immediately and keep it frozen until it was distributed to the stores.

The process for making Delsoy Topping was a very technical and difficult one–even for people with much experience in making it. There was a patent application made under the name of Henry Ford and R.A. Smith but it was probably never completed or issued. Initially the soybeans were grown by Ford but after Delsoy Products began, "low temperature soybean meal" with high protein solubility and most of the fat removed was purchased from Central Soya. Being a vegetable product, it was subject to less bacterial deterioration than cream products. To further extend the shelf life, Smith adapted a machine that was developed for the sterilization of orange juice then used it to heat the product to 300 degrees for 1.5 seconds, followed by rapid cooling to produce a sterile product. Delsoy competed very favorably with similar dairy products. It was less expensive and each can contained 40% more product (10 oz vs. 6-7 oz), and it had superior whipping qualities with much higher whipped volume. Initially the can and valve cost about $0.11 and the product (Presto Whip) cost $0.06. It retailed for $0.29. At one point a chocolate flavor was introduced, but it was soon discontinued. They sold Delsoy Topping to institutions, in quarts to smaller bakeries, 5 gallon cans to larger bakeries, and 10-gallon cans to Awreys.

Zazu Pitts, a famous actress, "health addict," and close friend of Gloria Swanson got interested in the product, visited the Carver Lab to try the soybean milk, and for a while considered buying a franchise.

After Presto Whip was launched, Delsoy Products began a new company named Delsoy Distributors. The first big product they distributed was Hawaiian Punch. Later they started the Smith, Swanson, Whitehouse Brokerage Co. and distributed Good Luck Margarine, Red Star Yeast, Hawaiian Punch, etc.

In 1963 Bob Smith left the company; Harvey Whitehouse and his son David bought Bob's stock. Today Delsoy Products is named Whitehouse Products. Note: Bob Smith was born on 1 April 1913, so he was age 66 at the time of this interview.

Update: Talk with Richard B. Folsom of Canton, Michigan. 1992. Jan. 31. According to Don Baut, a curator at the Dearborn Historical Museum, Whitehouse Products was purchased in 1983 by C.J. Christoff & Sons of Lowell, Michigan.

Talk with Bob Ely at Chadalee Farms Inc. 1992. Feb. 4. The company is now called Chadalee Farms, Inc. and Christoff Gourmet Foods is one division. The only non-dairy product they still make that they acquired from Whitehouse Products is Chadalee Farms is imitation sour cream. They also private label it under other brands, such as Nuggett, Pocahontas, etc. Within the past few months they have discontinued the whipped toppings and the aerosol toppings. When they bought the products from Whitehouse they changed the brand name from Whitehouse to Chadalee Farms. Whitehouse and Chadalee also packed the products under many national brands. For more details, he suggests contacting Dave Whitehouse in Dearborn, Michigan, at 313-562-0242. Dave now works for Chadalee as a salesman. Address: Smith: 26351 Hollywood Ave., Roseville, Michigan 48066; Baut: Dearborn Historical Museum, 915 Brady St., Dearborn, Michigan 48124. Phone: Smith: 313-777-5394. Baut: 313-565-3000.

3178. Sullivan, Don; Smith, Robert A. 1979. The Ford Experimental Laboratory and the "Square House" (Interview). Conducted by Donald V. Baut of Dearborn Historical Museum, May 31. 72 p. transcript. See p. 1-15, 24-25. Acc. No. 79-48 & 79-48.1 in the Dearborn Historical Museum, and Acc. No. 1583 in the Henry Ford Museum. 28 cm.

• ***Summary:*** A very valuable document. The information about Ford's work with soybeans is supplied by Bob Smith. Smith joined the Ford Motor Co. on 13 Dec. 1926 when he started at the Ford Trade school at age 13. He took a 4-year course there and graduated in 1930 with the last class from Highland Park. After summer vacation in 1930 he began part-time work at the Rouge Plant and worked part-time in school. As a result of that he began to do experimental work at Greenfield Village, working in the experimental greenhouse, in connection with the chemical plant, which was established by Mr. Ford to find industrial uses for farm crops. "At that time we were in the depth of a very serious depression and Mr. Ford was very interested in finding employment for farm people... The farmer was one of the Ford Motor Company's best customers and Ford was interested in finding uses for the products they produced."

"Finally after a year or so, the way I heard it, Mr. Ford came into the laboratory one night all by himself and found a book we had there on the soybean; he apparently decided that was the thing to work on. The next day he came into the greenhouse and told me to clean everything out. He said, 'I'll be back in a few hours and I want everything out of here,' which was kind of a hard thing for us to do. We had been working on these tests for months and it seemed almost sacrilegious to destroy them at that point. But he was the boss so that is what we did... He said, 'From now on I don't want you to talk or think about working on anything but soybeans. That's the thing of the future.' I guess he was right because he made it a very important part of our agriculture and industry. I think now its the second or third largest crop in the country. At that time soybeans were almost unknown."

Initially the soybeans came from Ford Farms. "I think there were at least ten thousand acres of land within the

city limits of Dearborn that was the Ford farms. Later they also got soybeans from other farms. The first soybean plant was in Greenfield Village; it processed 6 tons of soybeans a day. Then they built a 24 ton-day-day plant at the Rouge, and 12 ton-a-day plants at Milan and Saline." The group was interested primarily in developing uses for soybean oil because the first product they developed (about 1 year was after starting research) was a very good paint based on soybean oil; it is still used on Ford cars and other companies are now using it too besides Ford. This paint had an advantage over lacquer, since when the latter dries it leaves little pits, which fill up with moisture and dirt and eventually cause the deterioration of the paint finish. "But with the soybean paint it dries like oxidation and finishes hard like a plate and has a more durable surface."

Ford was also a pioneer in developing equipment for extraction the oil from soybeans using a solvent (gasoline). Bob Boyer was in charge of soybean research for Ford. "Mr. Ford was always very actively interested in the work that was going on at the chemical plant and was there almost every day. Quite often he would come into the greenhouse where we were running experiments and would chin himself."

Edsel Ruddiman had his own laboratory up on one of the Twin Lakes. It was a beautiful little lab in an ideal, tranquil setting. Dr. Ruddiman was Ford's seat mate at Scotch Settlement School and also his brother-in-law because Ruddiman married Ford's sister. The lab had been his home before it was converted; he had several assistants there. Their primary job was to develop a milk to replace cow's milk. They worked with wheat, soybeans, and carrots. "He spent quite a few years trying to produce milk from various products... but it never got to a product that was satisfactory (p. 25). He was also in charge of the canning plant over on Southfield Road.

One day Henry Ford invited Bob Smith to go for a ride together in Ford's private car. "He asked me what we could do to get rid of the cow. We discussed milk and meat including manure" and composting.

From 30 July 1937 until 1952 Bob Smith lived in the Square House at the invitation of Henry Ford, who had built it himself in 1888. After about a year Ford asked him to set up a laboratory in the Moir House, which is about 1,500 feet north of the Square House. "He told me he wanted me to start a laboratory to get rid of the cow. He said, 'We got rid of the horse. Now we're going to get rid of the cow. I'd like you to work on soybeans and milk back here." Smith worked at the Moir House lab from about 1938 until the Carver Lab was opened in 1942. The only electricity in the lab was produced by a windmill. "That was probably the reason we were so successful so quickly." Ruddiman and other Ford researchers used their 110 volt current and modern conveniences such as electrical grinders to grind the soybeans. Smith was forced to take a different approach. He tried to dissolve the protein out of soybean meal instead of grinding it. Within 3-4 months he had a milk that Ford liked quite a bit. It looked and tasked quite a bit like milk. "He was so pleased he came in one day and asked for a sample of milk and we [Bob and his co-workers] gave it to him. He sat there drinking his milk and asked for some bread. Of course we baked bread there every day... So he sat there drinking his soybean milk and eating his rye bread. I was watching and I thought, 'Boy, here's the world's richest man eating plain bread with no butter and drinking this soybean milk and he thinks it's really good.' He said it was the best milk he ever tasted. In fact he wrote in this little black notebook that he carried all the time, "First good milk. No cow." After he had written it, he showed it to me." Later Mr. Ford asked Smith to try drum-drying and spray-drying the milk. Smith took the soymilk to a co-op spray drying plant in Adrian, Michigan, and had it spray dried. It turned out "pretty good." So at Ford's request Smith built a very small-scale (half-gallon) hand-powered spray drier at Moir House. It would dry about 1 ounce of soymilk a day.

At first Bob Smith worked at Moir House alone. Eventually he was joined by Clem Glotzhober, Don Jones and Ed Lang. Then Mr. Ford brought over Paul Foster, his Fair Lane cook. Whenever Ford travelled by train, Foster went with him as cook. When Ford wasn't out of town, Foster was at the Moir House, and later at the Carver Lab. "We baked bread for Mr. Ford every day, soybean bread naturally. He gave us orders to have food there all the time in case he wanted to eat."

They also made so-called soybean sandwiches (also called "grass sandwiches") for him there in April and May. They were a mixture of soybeans and various edible weeds such as dandelion, curly dock, etc. that they collected. "We would make a blend of them and grind them up together and make sandwiches out of soybean bread; Mr. Ford would often pick them up... We made two different kinds of sandwiches, one for Mrs. Ford and one for Mr. Ford." Address: Baut: Curator of Research, Dearborn Historical Museum, 915 Brady St., Dearborn, Michigan 48124. Phone: 313-565-3000.

3179. **Product Name:** Soy Moo Non-Dairy Soy Milk [Plain, or Carob].
Manufacturer's Name: Health Valley Natural Foods.
Manufacturer's Address: 700 Union St., Montebello, CA 90640.
Date of Introduction: 1979. May.
Ingredients: Pure filtered water, organic soybeans, soya oil, wild honey.
Wt/Vol., Packaging, Price: 15 fluid oz plastic bottles or 30 fluid oz Pure-Pak cartons.
How Stored: Frozen.
Nutrition: Per cup: 129 calories, 9 gm protein, 4 gm fat.
New Product–Documentation: Midwest Natural Foods

Distributors, Inc. 1979. Catalog 13. Spring, 1979. Ann Arbor, Michigan. iv + 290 p. See p. 248. Soy products. Refrigerated. "Health Valley Soy Milk." Plain or carob. Pints or quarts. "Soy milk has all amino acids. Contains no animal fats; no lactose."

Ad in Tom Riker and Richard Roberts. 1979. *The Directory of Natural & Health Foods.* p. 56. "The importance of Health Valley natural baby food soups." "Soy Moo: This is a very special milk substitute from Health Valley since it contains all naturally present vitamins and minerals found in the Soybean. It is a non-dairy product that contains all the essential and non-essential amino acids, twice as much protein as meat or fish, eight times more iron than cow's milk. Most important of all for babies intolerant of milk and dairy products, Soy Moo contains No Lactose." Address is 700 Union St., Montebello, California 90640.

Leviton. 1981. Soyfoods. Winter. p. 17. Soyfoods 1982. Summer. p. 33. Spot in Soyfoods. 1984. Summer. p. 45. Formerly sold frozen in Pure Paks, the product has been reformulated and repackaged in 16.9 oz. Tetra Brik cartons. STS. 1985. Cartons for Soymilk. Shows color photo of 15 fl. oz. Pure Pack carton. Dark blue, light blue, yellow, and white. "Cholesterol Free. No Sugar Added. From Organically Grown Soybeans."

3180. Midwest Natural Foods Distributors, Inc. 1979. Catalog 13. Spring, 1979. Ann Arbor, Michigan. iv + 290 p. Index by product category. Index of manufacturers. Index of advertisers. Illust. 28 cm.

• ***Summary:*** On the cover are two kites (colored orange and red) flying in the sky. This catalog, largely printed by a computer, contains many ads on numbered pages. Contents: Policies and terms. Catalog information. Packaged. Books. Refrigerated and frozen. Bulk. Literature and flyers. Indexes (3).

"One stop shopping... We are now a Full Line distributor." List of new lines. List of new products within existing lines. Symbols and abbreviations.

Suppliers are listed alphabetically: Arrowhead Mills, Balanced Brand [Balanced Foods, New Jersey], Bragg's (Liquid Aminos), Dr. Bronner's (with full page ad showing the doctor), Carmé (lecithin), Cedar Lakes, Cellu (Soy bean flour), Chico-San, A.A. Debole (Spaghetti sauce–soy conc), Dragon's Milk (Arica), Elam's (soy flour), El Molino, Ener-G–Jolly Joan, Erewhon (with "Erewhon West" full-page ad), Family Orchards (Tamari mixes, Trail mix), Fantastic Foods, Fantastic Falafel [Felafel], Fearn Soya Foods, Flavor Tree, Hain Pure Foods ("Cold pressed" vegetable oils, mayonnaise, nut butters), Hansen's juices, Health Valley (incl. Vegetarian Chili), Hi-Energy Foods (food bars), Hoffman's (protein powders, snack bars), Lact-Aid (p. 109, ad p. 118), Jack La Lanne, Lange's, R.G. Lecithin, Lifestream (p. 113, 251, ads p. 249-50), Malt-O-Meal, Maya Grainburgers (p. 119, ad p. 126–mix with tofu), Midland Lecithin, Miso Cup, Modern Products (Gayelord Hauser), Mus-L-On (MLO), NF Factors, Niblack ("Tamari toasted sunflower seeds," Tamari pumpkin seeds," raw or toasted wheat germ, unprocessed miller's bran), Old Stone Mill (soy), Orjene, Parkelp, Plus Produces (incl. Tiger's Milk), Richter Bros., Soken, Sovex, Viobin, Waring (blender, juicer), Westbrae.

Books, Talking Foods, Meats (nitrate and nitrite free), Poultry (no hormones or antibiotics), Soy Products (Health Valley soy milk, tofu), Soy Plant Tofu (nigari, and tofu sausage, p. 259-60), Tumaro's, Willow Run (Soybean spread [margarine]). Bulk–Beans, dry roasted soybeans, fruit & nut mixes (trail mix), nut butters, condiments, vegetable oils, pasta (with nomenclature), granola, teas & herbs. Literature & flyers. Indexes. Note: Many companies have a large selection of herbs. Address: 170 Aprill Dr., Ann Arbor, Michigan 48103. Phone: 313-769-8444 or in Area 313 1-800-552-6297.

3181. *Soyanews* (*Sri Lanka*). 1979. Historic event at Gannoruwa. 1(8):1, 8. April/May.

• ***Summary:*** Describes the grand opening of the Soyabean Foods Research Centre at the Central Agricultural Research Institute, Gannoruwa, on March 24. A photo (p. 1) shows Mr. E.L. Senanayake, Minister of Agricultural Development and Research, as he formally opens the Centre.

Three more photos (p. 8) show (see next page) the Minister doing different things at the plant. In one, he enjoys a glass of refreshing soya milk with his wife.

3182. *Soyanews* (*Sri Lanka*). 1979. Soya foods centre opens. 1(8):5. April/May.

• ***Summary:*** "The opening of the Soyabean Foods Research Centre was quite an event for the people of Gannoruwa. From early afternoon they waited patiently till the Minister of Agricultural Development and Research, Mr. E.L. Senanayake, had formally opened the Centre, for them to look at the production process inside the building, which was once a warehouse."

Photos show: (1) The front of the Centre, with people waiting. The name of the Centre appears to be written in three languages: Tamil, Sinhala, and English. (2) Trainees gathered in front of the "Soya Milk Bar."

(3) "Mr. E.L. Senanayake turns a hand operated grinding stone used to dehull soya at the home level training kitchen while Mr. Wilmot Wijeratne, Director of the Soya Foods Research Centre, and Mr. E.L. Senanayake look on."

3183. *Soyanews* (*Sri Lanka*). 1979. Pioneers in soya growing–the Maturata farmers: In the hilly terrain of Maturata, they have been growing soyabeans for years. 1(8):10-11. April/May.

• ***Summary:*** "They also know how to eat it, and, as a result, every paddy field around the Maturata region, in the Nuwara

Eliya district, is now fringed with soya to be harvested along with the paddy.

"The soyabeans grown in Maturata are considered an indigenous soyabean and agronomists call it the 'Nuwara Eliya Local.' It first came to the attention of Agricultural Officer, Mr. M.B. Medagama, when he was studying the pulse market in Kandy a few years back."

"Soyabean breeder S. Shanmugasundaram of the AVRDC thinks soyabeans were introduced to Sri Lanka [Ceylon] in the 17th century. That was the time of the Dutch occupation when many cultural practices were introduced from Indonesia." It is possible that the soyabean came along with batik and rambuttans.

Maturata, cool and hilly, is 3,600 feet above sea level. Yet the soyabean gives the farmer no trouble. "It does not ask for fertiliser nor does it cry to be sprayed."

The soyabeans are most often used for food in a dhal curry, they are served at teatime "in the form of *aggala,* a favorite Sinhala sweetmeat. Again it is the warmed and broken up beans that form the chief ingredient.

"Asked whether they made milk from soyabeans, they said they did. But the method is different. They first roast the beans until they give a sheen. Then they pound and sift the flour. The flour is then mixed with hot water which then turns into milk [of coffee]. The children find the roasted bean even more appetizing than the milk."

Many "housewives use the tender leaf of the soya plant to make *melluns."*

The practice of growing soyabeans around the paddy fields is spreading to surrounding areas.

Photos show: (1) "Paddy fields carved out from Maturata hillsides. Soya is grown on the ridges." (2) "A group of peasants from the village of Ketiyaathana." (3) "Soya growing alongside paddy."

3184. Lui, Henry. 1979. Re: Request for information about manufacture of soy bean milk. Letter to Dr. Walter Wolf, Leader, Meal Products Research, Oilseed Crops Laboratory, Northern Regional Research Center, Peoria, Illinois 61604, June 7. 1 p. Handwritten, with signature on letterhead.
• ***Summary:*** Mr. Lui is contemplating the manufacture of soy bean milk and requests some literature on this product.

The soybean Hawkeye and Harosoy are known for their high protein content, but they are not available in the New York area. Are there some other varieties that are as good or even better for making soymilk? Do you have information on the nutritional composition of various soybean varieties? In the New York area is difficult to find suppliers of these kinds of soybeans. He looked in the Blue Book of the Soybean Digest, but didn't find any suppliers.

In reply (June 20), Dr. Wolf sends two reprints of articles on soy beverages by his colleague, Mr. G.C. Mustakas–who is absent due to illness. In regard to Hawkeye or Harosoy variety soybeans, they are no longer grown commercially in significant amounts; Beeson is one variety that has replaced them for food uses.

Two firms that supply Beeson are: (1) Farmer City Grain Co., 201 West North Street, Farmer City, Illinois 61842. (2) Mico Incorporated, Box 1508, Bloomington, Illinois 61701. Address: Oriental Food Products Co., 53-82 57th Drive, Maspeth, Long Island, New York 11378. Phone: 894-3325 or 996-5021.

3185. Naudé, S.P.E.; Prinsloo, J.G.; Haupt, C.E. 1979. Comparison between a humanized cow's milk and a soy product for premature infants. *South African Medical Journal* 55(24):982-86. June 9. [11 ref]
• ***Summary:*** "A soy-based infant feed was compared with a humanized cow's milk product in [40] newborn preterm babies... The trial lasted 35 days for each patient... With formula intakes of 200 ml/kg/day,... the body weights and serum albumin levels of the babies receiving the soy product were significantly lower than those of babies on the cow's milk formula at the end of the trial. Until more work has been done, we suggest that soy formulas should be employed with caution in the feeding of small preterm infants." Address: Dep. of Paediatrics, Univ. of Pretoria and Kalafong Hospital, Pretoria, South Africa.

3186. Sprague, Terry. 1979. Non-Orientals turn out tofu for Brattleboro buyers: New England Soy Dairy Co. *Reformer* (*Brattleboro, Vermont*). June 23. p. 7-8. Saturday.
• ***Summary:*** The New England Soy Dairy is in Greenfield, Massachusetts. "The Americanization of tofu is a major goal of the Soy Dairy Co. Stephen Hassel [sic, Hassell], the company's product development manager, foresees a time when the bean curd is served in school lunch programs, fast food stores and in place of the ever increasingly expensive meat and cheese. He likens the future of tofu to what is happening now with yogurt."

New England Soy Dairy has committed itself to testing soybeans on 30 acres of land in western Massachusetts. The company will buy the seed. In the meantime, the company imports organically grown soybeans from the Midwest and makes them into tofu. "Soy Dairy Co. is owned by two major investors. Eventually they hope to have it owned by those who work there. But it won't be a cooperative... The firm now produces 20,000 pounds of tofu a week, an increase of 12,000 pounds a week since last June. And a new system has been purchased that should produce three times that amount. The company currently is working 24 hours a day with one shift just for clean up.

"A number of new products are currently being test marketed, including soy milk, an 'eggless egg salad, and a soft syrup product which will be similar to soft ice creams. 'We'd like to make a fresh baby formula substitute also,' Hassel said." Four photos show tofu being made at the Soy Dairy.

3187. Bringe, A.N.; Barr, G.W. 1979. Effect of protein source of milk replacer on performance of dairy calves in cold housing. *J. of Dairy Science* 62(Supplement 1):100-01. (Abst. # P53). June.
• ***Summary:*** Forty Holstein calves were randomly assigned at birth to two 10% fat milk replacer treatments containing either all milk protein or 70% modified soy protein and 30% milk protein. The protein sources of the two milk replacers tested did not significantly affect average daily gain or health of the calves raised in hutches from December to May. Address: 1. Univ. of Wisconsin, Madison; 2. Land O'Lakes, Inc., Minneapolis, Minnesota.

3188. *New Roots* (*Greenfield, Massachusetts*). 1979. Beans, beans... The magical plant. No. 6. p. 16. May/June.
• ***Summary:*** Part 1: The New England Soy Dairy (305 Wells St., Greenfield, Massachusetts), has prepared a 50-page information packet about growing soybeans in New England. An illustration shows the storefront of a soy dairy with large signs for "soy milk" and "tofu" in the window.

Part 2: Bill Boyd (RD2, RT318, Phelps, NY 14532) writes that "A group of farmers in central New York State have been meeting for the past year to investigate whether a soybean processing [crushing] plant would do well in central New York State. They have noted the paradox that while New York and bordering states make up one of the largest soybean consuming areas in the world, over 3/4 of the beans grown in New York are exported for processing in the Midwest. Hmmm."

3189. Shurtleff, William. 1979. The tofu and soymilk industry in the United States (News release). Lafayette, California: New-Age Foods Study Center. 1 p. June.
• ***Summary:*** The first statistics compiled on the U.S. soyfoods industry. "There are presently 150 tofu shops and soy dairies in the U.S. Ninety of these, mostly run by Caucasian Americans, have opened within the past 3 years since publication of *The Book of Tofu;* they now have about 35% of the industry sales. The remaining 60 are Japanese and Chinese run; they have an estimated 65% of the market. The industry has a brisk sales growth rate of 25% per year.

"The largest tofu factory in the U.S. is the Matsuda-Hinode company in Los Angeles; they produce about 16,000 pounds of tofu a day under fourteen different labels. The largest of the new breed of Caucasian-run plants is the New England Soy Dairy in Greenfield, Massachusetts. Founded in 1977, it now produces some 4,500 pounds of tofu a day and expects revenues of $750,000 in 1979. In its April 12 front page story on the tofu industry, *The Wall Street Journal* focused on The New England Soy Dairy.

"The U.S. tofu and soymilk industry presently uses approximately 7000 tons of dry soybeans per year.

"In July of 1978, tofu and soymilk producers founded the Soycrafters Association of North America (SANA), an educational and trade association. Its quarterly publication *Soycraft* is the primary source of information on soy protein foods in the Western World. For details contact:

"Ira Leviton, president

"Soycrafters Association of North America

"305 Wells St.

"Greenfield, MA 01301

"Worldwide, the tofu and soymilk industry is rapidly expanding. There are presently a total of 211,000 producers, including 38,000 in Japan, 158,000 in mainland China, 11,000 in Indonesia, 2500 in Taiwan, and 1470 in Korea. The largest tofu factories, located in Japan, produce over 100,000 pounds of tofu a day (15,000 tons a year) and the largest soy dairy [Vitasoy], located in Hong Kong, produces 500,000 bottles of soymilk a day (150 million bottles a year).

"Most of the new tofu shops and soy dairies in the U.S. have gotten into production using the technical manual *Tofu & Soymilk Production* by William Shurtleff & Akiko Aoyagi (who also wrote *The Book of Tofu,* which now has over a quarter million copies in print). This technical manual is available for $17.50 from:

"New-Age Foods Study Center

"P.O. Box 234

"Lafayette, CA 94549. Tel: 415-283-2991." Address: 790 Los Palos Manor, Lafayette, California 94549.

3190. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tempeh: A super soyfood from Indonesia. New York, NY: Harper & Row. 160 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [24 ref]

• ***Summary:*** Contents: Acknowledgments. What is tempeh? Preface. 1. Soybeans–Protein source of the future: Introduction, the causes of hunger and starvation–two analyses (*The Twenty-Ninth Day,* by Lester Brown–population, affluence; *Food First: Beyond the Myth of Scarcity,* by Lappé and Collins–population, narrow focus on increasing food productivity, international food exploitation, land monopolization and misuse, cash crop system of export agriculture). Ten reasons soy will be the protein source of the future: 1. Optimum land utilization. 2. Lowest cost protein. 3. High nutritional value. 4. Time tested. 5. Remarkably versatile. 6. Appropriate technology. 7. New dairylike products. 8. Hardy and adaptive. 9. Free nitrogen fertilizer. 10. Energy and resource efficient. "All of these ten factors work together synergistically, reinforcing one another, to give added weight to the prediction that soybeans will be a key protein source for the future on plant earth." Present patterns of soy protein utilization. New developments. An idea whose time has come.

2. Tempeh as a food. 3. Getting started (incl. basic preparatory techniques and 18 recipes, incl. a recipe for sweet Indonesian soy sauce {*kechap manis*}). Favorite tempeh recipes (13 Western favorites, 6 non-fried favorites, and 12 Indonesian favorites; also Suggestions for serving tempeh throughout the day). 4. Western-style and Oriental tempeh recipes (68 recipes). 5. Indonesian tempeh recipes (70 recipes). 6. Making tempeh at home or in a community. 7. Making tempeh starter. 8. The Indonesian tempeh shop. Map of Southeast Asia, including Indonesia. Map of Java, Madura, and Bali (p. 144). Appendix A: A brief history of tempeh East and West. Appendix B: Tempeh shops in the West. Weights, Measures, and Equivalents. Glossary. Bibliography. About the authors. About the New-Age Foods Study Center.

This book contains the first sizeable collection of American-style and Indonesian tempeh recipes (130 in all), the first illustrated descriptions of making tempeh, tempeh starter, and onchom on various scales in Indonesian tempeh shops, the first history of tempeh, detailed discussion of tempeh in Indonesian culture and of the many varieties of Indonesian tempeh, and the first recommendations for commercial names for the more than 30 types of tempeh that could easily be made in the West. It also contains chapters and reviews of the literature on tempeh nutrition and the microbiology and biochemistry of tempeh fermentation, plus the largest bibliography on tempeh to date (including many new Indonesian references), an annotated listing of 61 people and organizations around the world connected with tempeh, and the first list of tempeh companies in the West.

Page 26 states: "Modern soy-protein products, such as textured soy proteins, are increasingly available at supermarkets, often in forms that simulate the fibrous, chewy texture of meat."

Note 1. This is the earliest known book in any language worldwide devoted entirely to tempeh. Note 2. This is the earliest English-language document seen (Aug. 2011) that contains the term "modern soy protein products;" Shurtleff would soon start to use it to refer to defatted soy flour or grits, soy protein concentrates, soy protein isolates, and textured soy protein products.

Illustrations (line drawings; unnumbered, not including "spots"). Indonesian dancer in sarong and crown. Balinese lion mask dancer. Two Indonesian women dancing. Cuts of fresh tempeh on a woven bamboo tray. Woman in a traditional Indonesian kitchen cooking tempeh. Terraced

3191. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tempeh: A super soyfood from Indonesia. Professional hardcover edition. New York, NY: Harper & Row. 248 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [190 ref]

• ***Summary:*** A special cloth-bound professional edition of *The Book of Tempeh* prepared for libraries, commercial tempeh producers, microbiologists, students of Indonesian foods, and those who love fine books. In addition to the full contents of the paperback edition, it contains the following lengthy appendixes: B: Tempeh in Indonesia (an overview of the tempeh industry and market, including the number of shops by province, per capita consumption, etc.). C: The Varieties of Tempeh. D: Soybean Production and Traditional Soyfoods in Indonesia. E: The Microbiology & Chemistry of Tempeh Fermentation. H. Onchom or Ontjom. A Glossary of Indonesian Foods (the most extensive one available in English). Bibliography on Tempeh containing over 190 entries: Works on the world food crisis, works on tempeh cookery or Indonesian cuisine, scientific journal articles on tempeh, early Dutch- and German-language works on tempeh, Indonesian-language works about tempeh, key English-language works on microbiology, film and color slides on tempeh. Illustration of an Indonesian dancer. Expanded Index. A great deal of original research is contained in the extra 88 pages and 54 illustrations.

Appendix C, "The varieties of tempeh, states: "The many varieties of tempeh may be grouped into five basic types, according to the primary ingredient used: legumes, grains & soy, grains, presscake residues, and nonlegume seeds. Legume tempehs: Soy tempeh (*témpé kedelé or kedelai,* made from the seeds of *Glycine max*). Velvet-bean tempeh (*tempe benguk or tempe koro benguk,* made from the seeds of *Mucuna pruriens,* which are called *kara benguk* in Indonesian). Winged-bean tempeh (*tempe kecipir,* made from the seeds of *Psophocarpus tetragonolobus*). Leucaena tempeh (*tempe lamtoro or tempe mlandingan,* made from the seeds of *Leucena leucocephala*). Mung bean tempeh (*tempe kacang hijau,* made from the seeds of *Vigna radiata,* which are called *kachang hijau* in Indonesian). Broad-bean or fava-bean tempeh (*tempe kacang babi,* made from the seeds of *Vicia faba,* also called horse beans). Sesban-bean tempeh (*tempe turi,* made from the seeds of *Sesbania grandiflora*). Pigeon-pea tempeh (*tempe kacang iris,* made from the seeds of *Cajanus cajan*). Green-bean tempeh (*tempe kacang merah,* made from the seeds of *Phaseolus vulgaris,* which are called *kacang buncis* in Indonesian). Lima-bean tempeh (*tempe kara or tempe kara kratok,* made from the seeds of *Phaseolus lunatus*). Lablab-bean tempeh (*tempe kara-kara or tempe koro wedus,* made from the seeds of *Lablab purpureus,* which is called hyacinth bean in the USA). Jack-bean tempeh (*tempe kara bedong or tempe kara pedang,* made from the seeds of some strains of *Canavalia ensiformis*). Lupin tempeh (developed in Australia, made from the seeds of the narrow-leafed sweet lupin (*Lupinus angustifolius*) or the Andean lupin (*Lupinus mutabilis*)). Cowpea or black-eyed pea tempeh (developed in West Africa and Thailand, made from the seeds of *Vigna unguiculata*). Note: Chickpeas (garbanzo beans), baby limas, and great northern beans have also been used to make tempeh.

Grain & soy tempehs: Wheat & soy tempeh, barley & soy tempeh, rice & soy tempeh, bulgur & soy tempeh. Grain tempehs: Barley, rice, wheat, oats, and rye have been used with good results.

Presscake tempehs: Okara tempeh (called *tempe gembus* in Central and East Java where it is most popular, and called *oncom hitam* in West Java where it is not widely used). Peanut presscake tempeh (called black onchom (*oncom hitam*) in the Bogor region of West Java where it is most widely consumed, or white onchom (*oncom putih*) in the Tasikmalaya region, or "tempeh from peanut presscake" (*tempe bungkil kacang*) in East Java). Coconut presscake tempeh (*tempe bongkrek, tempe bungkil kelapa, or tempe kapuk*) comes in several varieties and can be can be poisonous if the pathogenic aerobic bacterium *Pseudomonas cocovenenans* grows on it and produces either yellow-colored toxoflavin or the more toxic colorless bongkrek acid. Peanut- & coconut-presscake tempeh (*tempe menjes*). Mung-bean-presscake tempeh (*oncom hitam or oncom ampas kacang hijau*). Soy- & peanut-presscake tempeh. Defatted soy-meal tempeh.

Seed tempehs (nonleguminous): Rubberseed tempeh (*tempe kaloko*) is made from the seeds of the rubber tree (*Hevea brasiliemsis*). Okra tempeh. Sesame & soy tempeh. Tempeh extenders and adulterants: Okara, cassava, mung-bean presscake, soybean hulls, sweet potato, coconut- or peanut presscake, papaya. The stages of tempeh fermentation (underripe to overripe): Premature tempeh (*tempe koro*), mature tempeh, slightly overripe tempeh (*tempe semangit or tempe lanas*), overripe tempeh (*tempe busuk or tempe bosok*), rotten tempeh. Tempeh wrappers.

Appendix D: "Soybean production and traditional soyfoods in Indonesia" discusses: Soybean production in Indonesia, traditional Indonesian soyfoods: Kechap (*kecap / ketjap, incl. kecap manis*), taucho (*tauco or taoco*), okara onchom, sereh (*sere*), taokoan or takoa, tofu (*tahu*). Other nonfermented soyfoods: Soy sprouts (*taugé kedele*), yuba (*bungah tahu*), soymilk, roasted soybeans (*dele sangan, kedele sangrai*), roasted soy grits or full-fat flour (*bubuk kedele*), fresh green soybeans (*kedelai rebus*).

Note: This is the earliest English-language document seen (March. 2009) uses the word "taucho" (spelled in that way) to refer to Indonesian-style miso.

Appendix E: "The microbiology and chemistry of tempeh fermentation" discusses: What are fungi?, general

characteristics of *Rhizopus* molds, *Rhizopus* species used to make tempeh, pure cultures versus mixed cultures, preparing soybeans for fermentation, requirements for mold growth, general changes during tempeh fermentation, changes in nutrients and digestibility, the finished tempeh, the advantages and disadvantages of tempeh fermentation, suggestions for further research.

Appendix H: "Onchom or ontjom" discusses: Introduction. The varieties of onchom (*onchom merah* or *onchom beureum*)*:* Peanut-presscake onchom, okara onchom, soy onchom, coconut-presscake onchom. Making peanut-presscake onchom in a commercial shop. Making okara onchom in a commercial shop. The microbiology of onchom. Laboratory studies of onchom. Aflatoxins. Works on onchom and Neurospora. People connected with onchom and Neurospora. Continued. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

3192. Finer, Steven. 1979. Oriental tofu factory arrives in New England. *Christian Science Monitor.* July 5. Food section. p. 17. New England edition.
• ***Summary:*** About the New England Soy Dairy. Describes how tofu is made there using soy milk coagulated with nigari–in much the same way rennet works with cheese. The whey, a by-product, is discarded and the curds are pressed in large stainless steel boxes.

By the end of 1979 the Soy Dairy expects to be using more than 25,000 pounds of soybeans a week, according to founder Tom Timmins. Later this year he hopes to introduce four flavors of soy milk, soy mayonnaise, and a variety of soy cutlets.

Also discusses *The Book of Tofu* by Shurtleff and Aoyagi. Gives recipes for Tofu Guacamole and Marion's Saucy Tofu.

3193. Sheridan, Margaret. 1979. Soybeans sprout on Detroit's east side [Yellow Bean Trading Co.]. *Detroit News.* July 11. p. 1E, 6E.
• ***Summary:*** Tim and Carol Ann Huang, both vegetarians, learned about soyfoods while living on The Farm in Tennessee. Both had experience cooking. The Yellow Bean Trading Company, which they opened recently [March 1979] on Mack Ave. in Detroit, is a natural foods store and deli. "Yellow Bean is really an information center on soybeans," says Carol Ann. The deli offers: Whole wheat sandwiches with sprouts and crunchy vegetable spreads; blocks of tofu (soybean cheese); pies with whole-wheat crusts and creamy fillings like peanut butter, carob, or cocoa; egg rolls and nori rolls. All the products contain soy–often tofu. For their two children, Eva and Ethan, the Huangs use soy flour in pancakes and soy pulp [okara] in baked goods. They concoct milkshakes using soymilk and use Ice Bean instead of ice cream. A large photo shows Carol Ann slicing tofu on a plate surrounded by many dishes containing tofu. Address: News Staff Writer.

3194. Gupta, A.K. 1979. Re: Work with soybean utilization in India. Letter to William Shurtleff at New-Age Foods Study Center, July 28. 1 p. Typed, with signature.
• ***Summary:*** He and his group have done considerable work in the field of soybean utilization. Their main interest has been to study the biochemical, nutritional, technological, and sensory aspects of soy flour, soy-milk, soy-milk powder, soy-wheat blend, vegetable soybeans, black soybeans and parched soybeans with a view to popularize them for human consumption. They have published a series of research papers and reports.

He requests copies of books by Shurtleff on tofu, soy-milk and miso at the earliest convenience and hopes these will be supplied free of charge. Address: PhD, Food Scientist, I/c Crop Quality & Food Science Section, Dep. of Plant Breeding & Genetics, J.N. Krishi Vishwa Vidyalaya, Jabalpur-48204, Madhya Pradesh, India.

3195. Bean Machines, Inc. 1979. North America's most complete source of tofu and soymilk equipment (Ad). *Soycraft* (*Greenfield, Massachusetts*) 1(1):25. Summer.
• ***Summary:*** "Agents for Takai Tofu & Soymilk Equipment. Okita Enterprises Inc., Berkel VCM. Rietz disintegrators. Founded in 1977 to bring the best of the world's tofu and soymilk equipment to the rapidly growing American soyfoods industry.

"Catalogues available upon request." Address: P.O. Box 76, Bodega, California.

3196. **Product Name:** [Soymilk, based on full fat soy flour (Plain, or Malted)].
Manufacturer's Name: CIATECH.
Manufacturer's Address: Bolivar 806, Delicias, Chihuahua, Mexico.
Date of Introduction: 1979. July.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Armando Camacho Griensen. Soymilk from full fat soy flour.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 128. "Widely used commercially as an egg replacer, in baked goods, and in a frozen ice-cream-like product. Some 5,000 liters a day were being made by 1981."

3197. Harper, Judson; Valle, Francisco R. del. 1979. Mexican soy plant. *Food Engineering International* (*Chilton's*) 4(7):22-23. July.
• ***Summary:*** This plant, built at a cost of $150,000, began producing full-fat soy flour in 1978 at Delicias, Chihuahua, Mexico. The project has been supervised by CIATECH (Chihuahua Center for Research and Technical Assistance).

The plant is based on low-cost Brady extruder. A list of 10 potential applications is given: Egg substitute, soy drinks, pasta products, ice cream, cookies/cakes, candies and sweets, sausages, snacks, blended flours, breads. Address: 1. Dep. of Agricultural and Chemical Engineering, Colorado State Univ., Fort Collins, Colorado; 2. CIATECH, Chihuahua, Chihuahua, Mexico.

3198. J.F. [Janice Fillip]. 1979. In times of Plenty. *Whole Foods* (*Berkeley, California*). July. p. 9-10.
• ***Summary:*** Discusses the work of Plenty (run by The Farm in Tennessee) in Guatemala and Tennessee. In Guatemala: "When an earthquake devastated Guatemala in 1976, some members of the Plenty team went there to assess the damage... Drawing on eight years of experience in soybean cultivation and soyfood production on The Farm, Plenty volunteers introduced the high-protein soybean to local farmers in hops of enhancing the Guatemalan diet. Experiments in adapting soybeans to tropical highland growing conditions captured the interest of local farmers who began planting soybeans from seeds donated by UNICEF. Plenty started teaching local women how to make soymilk and tofu with native utensils. Note: This earthquake, which struck Guatemala on 4 Feb. 1976, magnitude 7.5, killed 22,778 people.

"Funded by UNICEF, Plenty is now involved in construction of a soy dairy in Solola, the Cakchiquel capital, near Lake Atitlan. The dairy is expected to produce 100 pounds of tofu and 40 gallons of soy ice bean (soymilk ice cream) three times a week and to supply free ice bean to school lunch programs. The solar-powered soy dairy is designed to become a cottage industry for local people to produce low-cost, high-protein foods.

"At Plenty-On-The-Farm, a Village Technology training program provides instruction for Third World trainees in nutrition and soy production, agriculture, mechanics, village construction, radio communications and electronics, solar and water systems, primary health care and midwifery. Trainees are given free room and board at The Farm while they study. The program has already trained 27 people from Guatemala, Mozambique, West Germany, Portugal, South Africa, Brazil and India, and there is currently a backlog of people applying to study in the program."

3199. Kjellman, N.-I. M.; Johansson, S.G.O. 1979. Soy versus cow's milk in infants with a biparental history of atopic disease: development of atopic disease and immunoglobulins from birth to 4 years of age. *Clinical Allergy* 9(4):347-58. July. [32 ref]
• ***Summary:*** Forty-eight children with a bi-parental history of atopic disease (allergy) were followed from birth to 4 years of age. The study was unable to detect a beneficial effect from soy feeding.

Note: *Webster's Dictionary* defines immunoglobulin (a term first used in 1953) as "any of the vertebrate serum proteins that are made up of light chains and heavy chains usually linked by disulfide bonds and include all antibodies." Address: Dep. of Pediatrics, University Hospital, Linköping; and Blood Centre, University Hospital, Uppsala, Sweden.

3200. Leviton, Richard. 1979. The soy delicatessen. *Soycraft* (*Greenfield, Massachusetts*) 1(1):12-18. Summer.
• ***Summary:*** Describes The Tofu Shop (Rochester, New York), The Soy Plant (Ann Arbor, Michigan), The Cow of China (Boulder, Colorado), and The Tofu Shop (Telluride, Colorado).

Photos taken at The Tofu Shop in Rochester show: Greg Weaver at the counter serving a woman (cover photo). The inside of the restaurant, including two women seated at a wooden table and the large menu on the wall in the back. A woman employee cutting vegetables in the kitchen. Another woman working in the kitchen. A close-up of the wooden menu on the back wall (with prices; * = organically grown), which offers: Deli: Tofu*, tempeh*, soy mayo, soysage, soy milk*. Salads: Deviled tofu, tempeh, tossed. Dips (with tofu): Onion, dill. Hot sandwiches: Tofu burger, tofelafel, sloppy joe tempeh, tempeh Reuben, temptation! Cold sandwiches: Deviled tofu, tempeh salad. Casseroles: Tofu-spinach pie, tofu Italiano. Soups: Miso, soup of the day. Sampler plate. Special of the week: Ginger garlic sauce over tofu, rice and sauteed vegetables. Desserts: Lemon cream pie, tofu carob-mint pie, chocolate-mint pie, gingerbread, peanut butter cookies. Drinks: Soymilk, herb tea*, vegetable juice*, apple cider, Bambu (a roasted grain coffee), Banilla shake (with frozen bananas and soymilk), carobanana. The deli case at White Wave. The outside of The Cow of China.

Note 1. This is the earliest document seen (Feb. 2007) that mentions the use of frozen bananas to add thickness to a smoothie–a breakthrough idea.

"Matthew Schmit–proprietor of The Tofu Shop, in Telluride, Colorado, Juice Bar, Dining, Catering, Wholesale Kitchens, 'producers and suppliers of specialty foods for the western slope–operates a soy-based restaurant that seats about thirty people and has waiters and waitresses. The Restaurant, which opened in October 1977, and had gross sales last year of twenty thousand dollars, is open six days a week from 11:00 A.M. to 9:30 P.M. Matthew astonished me with the figure of one thousand dollars as the initial capital investment for this business, which now produces 250 pounds of tofu for weekly wholesale distribution in addition to the flourishing restaurant.

"The menu, which features a stunning photograph of Rocky Mountains rising out of a misty valley, and which they use as a promotional brochure, delineates the fare: Entrees (Stir-fried tofu, Rice & vegetables; Soy burgers, Tofu burgers, Okara burgers, Grilled tofu & vegetables in pita bread, Guacamole & tofu, Spicy tofu & rice filling with guacamole for burritos); Smoothies (Carob-honey soymilk

with banana, Carrot sunny shake); Beverages (Miso broth, soymilk, [soy] whey); and Salads (Tofu & guacamole salad, okara salad, tofu & vegetable salad).” Matthew explains the okara salad and whey.

“Matthew and his associates regard the tofu and soyfoods as an entrance into an expanded food processing line for their local market, a move that will lessen their dependence on only one or two products. Believing that every community should have its own fresh tofu, Matthew adds that ‘everyone develops their own business according to the nature of their community.’” During the holiday season, Matthew’s community created an exotic recipe for “tofu turkey.” “Chunks of tofu are seasoned and basted, often carved in the shape of turkeys, and baked for an entire day”–after which “they taste exactly like turkey.”

Note 2. This is the English-language document seen (Jan. 2007) that contains the term “Okara burgers” (or “Okara burger”). Address: Sunrise Farm, 100 Heath Rd., Colrain, Massachusetts 01340.

3201. Leviton, Richard. 1979. Nasoya: Soyfoods for the everyday American consumer. *Soycraft* (*Greenfield, Massachusetts*) 1(1):26-29. Summer.

• ***Summary:*** This is the earliest known in-depth story published on Nasoya Foods. The company was conceived on 5 March 1977 by “John Paino and Bob Bergwall (Nasoya’s two owners), who have known each other since college some 10 years ago. At the time Bob was making tofu boxes in Boston and working as a laboratory technician for the state; John was a manufacturer’s representative for a welding company in Concord. Before this, both John and Bob were sailors, skippering yachts from Cape Cod to the West Indies.”

That March they scoured the counties west of Boston looking for an old dairy. Finally they purchased Harper’s Dairy, in Leominster near Route Two, primarily for its superb well and well water. Nasoya produced its first batch of tofu in late April 1978. Their system was designed to produce 2,000 lb/day of tofu. “After only one year’s operation, they have already achieved their envisioned goal of 10,000 lb/week and are concerned that their shop–which is 1,200 square feet, with a 10 by 12 foot walk-in cooler, and three 35-foot trailers–is nearing its capacity. John expects they will have to move and set up an even larger facility in the next year. ‘After one year of tofu-making,’ Bob remarks, ‘we feel we are beginning to learn how to make tofu properly...’” These days John and Bob, burned out from too much hands-on tofu making, spend their time managing the business. John’s wife, Sarah, keeps the books. There follows a detailed description of the plant’s equipment and tofu-making process. The finished tofu is placed in individual plastic tubs and sealed with a manual “monkey-packer” heat sealer. The company’s main competitor, New England Soy Dairy (located 60 miles to the west) had a firm hold on the natural foods market, causing Nasoya to look at other markets, such as institutions. But finding little interest there, they were forced to compete for the natural foods market.

John Paino notes: “’We stopped making sweetened soymilk because we felt it made everyone too yin, it spaced people out. If you drink sweetened soymilk every day, you will loose touch with reality.’ Bob Bergwall says that when Nasoya first introduced their soymilk last year, the market was wide open and they could have sold enormous quantities. ‘But we didn’t want to put out a product we couldn’t believe in. We might produce a plain soymilk sometime.’”

“This summer Nasoya will release a new line of tofu products, including soy mayonnaise, ‘eggless’ egg salad, and an onion, a dill, and a zesty Italian dip.” Address: Colrain, Massachusetts.

3202. **Product Name:** [Soyavén (Soy-Oats Infant Formula, Soy-Corn Blend)].
Foreign Name: Soyavén (Fórmula alimenticia para lactantes, a base de soya y avéna).
Manufacturer’s Name: PADSA: Productos Alimenticios Delicias S.A.
Manufacturer’s Address: Apartado Postal 376, Zona Industrial, 33000 Ciudad Delicias, Chihuahua, Mexico. Phone: (147) 2-30-93.
Date of Introduction: 1979. July.
Ingredients: Sucrose [white sugar] 34.1%, dehulled soybeans 32.1%, pearled oats 25.6%, vegetable oil 5.8%, tricalcium phosphate 1.2%, salt (NaCl, 0.5%), vitamins and minerals 0.4%, DL-methionine 0.2%, milk flavor 0.1%.
Wt/Vol., Packaging, Price: 454 gm (1 lb) can with plastic lid.
How Stored: Shelf stable.
Nutrition: Per 100 gm.: Calories 398, protein 17.0 gm, carbohydrate 61.7 gm, fat 14.5 gm, cholesterol 0 mg.
New Product–Documentation: *Soybean Digest.* 1982. Jan. p. 64. “Mexico adds soy product. Mexican President Jose Lopez Portillo recently announced Soya-vena, a soy/oatmeal blend, has been added to the Mexican government’s list of basic food basket items. The soy-enriched product will be used in future price indices, will be promoted nationally and be recognized as a sound nutritious product, says ASA [American Soybean Assoc.] Latin America Director Gil Harrison.”

N.H. Marmelstein. 1983. Food Technology. Aug. p. 64-72. “Soy-oats infant formula helps fight malnutrition in Mexico.” Commercial production began in July 1979. In November 1981, Soyavén was presented the National Bank of Mexico’s 1980 Science and Technology Award for its value in fighting malnutrition in Mexico. In June 1983 this product won the IFT (Institute of Food Technologists) Food Technology Industrial Achievement Award.

Alimentos. 1984. Nov. p. 451. Photo of can. Soya Bluebook. 1984. p. 63, 68. Label transcription from Nicole Black. 1988. Jan. Found in a store in Guanajuato.

3203. Shurtleff, William; Aoyagi, Akiko. 1979. Tofu & soymilk production: A craft and technical manual. Lafayette, California: New-Age Foods Study Center (Renamed Soyfoods Center in Sept. 1980). 336 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. First published in Aug. 1977 as a rough photocopied manuscript with a yellow cover. [223 ref]

• ***Summary:*** Contents: Preface. 1. How to start a tofu shop or soy dairy. 2. Setting up shop; The community or village shop; The traditional caldron shop; The steam cooker plant; The pressure cooker plant; The soy dairy; The automatic steam cooker plant; The modern factory. 3. Ingredients. 4. Sanitation and safety. 5. Principles of tofu & soymilk production. 6. Tofu. 7. Firm tofu, pressed tofu & smoked tofu. 8. Foods made from tofu: Introduction, creamy tofu dressing, tofu chip dip, tofu mayonnaise, tofu cream cheese, cottage cheese, sour cream, tartare sauce, tofu eggless egg spread or missing egg salad, tofunafish spread or salad, tofu rice salad, tofu cheesecake (Sprucetree Baking Co. and White Wave), tofu pies, tofu creamies or tofu-coconut cream bars, tofu tarts, tofu turnovers, tofu puddings, fruit whips, custards and parfaits, tofu cinnamon rolls, tofu whipped cream, tofu icing and cream cakes, marinated tofu (fried or baked, p. 166), tofu jerkey [sic, jerky] (p. 166), teriyaki tofu, tofu teriyaki, savory baked tofu, savory pressed tofu (with five spice powder, *wu-hsiang toufu-kan*), nori rolls with brown rice & tofu, tofu & brown rice burgers, tofu baby foods, tofu in ready-made sandwiches. 9. Using okara, whey, curds & hulls. Deep-fried tofu (cutlets, cubes, burgers, treasure balls, burger balls, pouches, puffs). 11. Soymilk. 12. Dairylike products made from soymilk: Frozen soymilk desserts (soymilk ice cream, frozen soymilk yogurt, soymilk sherbets, soysicles, frozen soymilk custard, ice soymilk), fermented or cultured soymilks (soymilk yogurt, acidophilus soymilk, soymilk kefir, soymilk piima, soymilk buttermilk and other fermented milks), soymilk cheeses (unripened fresh, unripened soft {quark, queso blanco, panir, etc.}, ripened soymilk cheeses), soymilk mayonnaise, soy shakes and energy drinks, soymilk eggnog (soy nog), soymilk whipped cream, chip dips, puddings, custards. 13. Silken tofu & pressed silken tofu (Silken tofu is made from concentrated soymilk). 14. Lactone silken tofu (GDL). 15 Grilled tofu. 16. Fermented tofu. 17. Dried-frozen tofu. 18. Yuba. Appendix A: Resources. People & institutions connected with tofu & soymilk production. B: Weights, measures & equivalents. Bibliography. About the New-Age Foods Study Center.

See ¼-page ads in *East West Journal.* 1979. Dec. p. 4. 1980. Jan. p. 19.

Note 1. This is the earliest English-language book seen with the term "soymilk," spelled as one word, in the title.

Note 2. This is the earliest document seen (Feb. 2002) that mentions tofu jerky or any kind of soy jerky.

Note 3. This is also the earliest English-language document seen (April 2013) that uses the word "quark," or "queso blanco" in connection with soy cheese or tofu.

Note 4. This is the earliest English-language document seen (Sept. 2012) that contains the term "cultured soymilks" (or "cultured soymilk").

Note 5. This is the earliest English-language document seen (Sept. 2012) that contains the term "ripened soymilk cheeses" (or "ripened soymilk cheese").

Note 6. This is the 2nd earliest English-language document seen (April 2013) that uses the term "smoked tofu," but the first that uses it in its modern sense.

Note 7. This book contains the most detailed and complete descriptions seen to date (Oct. 2012) of how to make tofu, soymilk, and yuba on a commercial scale.

Note 8. This book was first printed on 1 Aug. 1977 in a photocopied and rough-typed edition with a yellow and black cover.

Note 8. Reviews of this book appeared in many publications: (1) Richard Leviton. 1980. *Soycraft* (Massachusetts). 2(1):63-64. Winter. "An indispensable operating manual for soyfoods entrepreneurs... The illustrations alone make the book a valuable reference tool... a sustained inspiration. The only book of its kind in English." (2) *Food Chain* (Intermediate Technology, England). 1997. No. 20. March. p. 6. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

3204. Shurtleff, William; Aoyagi, Akiko. 1979. The book of tempeh: A super soyfood from Indonesia. Professional hardcover edition (Continued). New York, NY: Harper & Row. 248 p. Illust. by Akiko Aoyagi Shurtleff. Index. July. 28 cm. [190 ref]

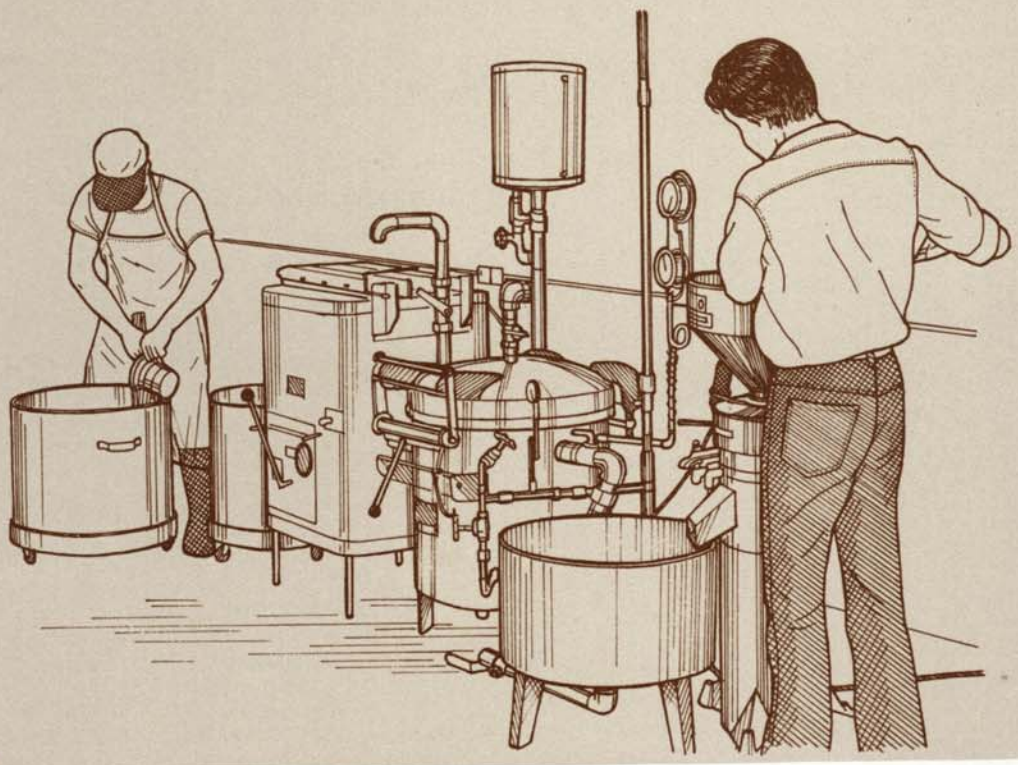
• ***Summary:*** Continued: Numbered figures (line drawings unless otherwise stated. The capital letter before the decimal refers to the appendix number). B.1 Table: Tempeh shops in Indonesia by province: Home-industry scale. B.2 Table: Relative frequency of tempeh consumption in Indonesia (by province). B.3 Carrying tempeh to market in Java using a shoulder pole and trays stacked on two baskets. B.4 Cost of one day's supply of protein in Indonesia.

C.1 Table: Edible grain legumes. C.2 Map: Distribution of legumes in southeast Asia. C.3 Winged bean, showing leaves, pods, flowers and beans. C.4 Leucaena leaves and pods (*peté china*). C.5 Reduction in bongkrek toxicity from bongkrek acid during fermentation (Ko 1977). Okra. Packets of tempeh, ready to sell, wrapped in leaves and tied. A large soybean, with hilum showing.

D.1 Table: Soybean production in Indonesia (1950-1976). D.2 Table: Major Indonesian food crops, D.3 Table: Indonesian soybean production and yields (by province). D.4 Map: Major soybean producing districts in Java (1976;

TOFU & SOYMILK PRODUCTION

THE BOOK OF TOFU , VOLUME II



WILLIAM SHURTLEFF & AKIKO AOYAGI

most are in East Java, led by Jemper and Pasuruan). Table: Daily per capita consumption of tempeh (by province, led by Central Java, then West Nusa Tenggara, Yogyakarta, and East Java). Table: Percent of dietary protein supplied by major food categories (led by cereal grains, then fish, nonlegume vegetables, and soy products). Table: Percentage of dietary protein supplied by soy products (by province, led by Central Java, then East Java, Yogyakarta, and West Java). D.5 Table: Statistics on production and consumption of basic Indonesian soyfoods (led by tempeh, then tofu, kechap, taucho). D.6 Star anise. Grinding soybeans for tofu using traditional push-pull stone mills. Pouring soy curds into cloth-lined forming box. Javanese shadow puppet (*wayang kulit*).

Note. This is the earliest English-language document seen (April 2013) that uses the term "soy curds in connection with tofu. The curds, when pressed in the box, will become tofu.

Table: Classification of *Rhizopus oligosporus.* E.1 Two stages in the germination of a spore (after 1½ and 10 hours). E.2 Two successive views of hyphal tip growth at half-hour intervals.

E.3 Rhizopus oligosporus (Frazier 1957, showing sporangium, columella, apophysis, sporangiophores, stolon, sporangiospores, node, rhizoid). E.4 *Rhizopus stolonifer.* A. Columella and attached spores. B. Collapsed (invaginated) columella (Webster 1970).

E.5 Life cycle of *Rhizopus* (Raven and Everet 1976). E.6 Graph: Changes in tempeh oil and moisture content during fermentation (Sudarmadji 1977). E.7 Graph: Three phases of tempeh fermentation (rapid, transition, and deterioration; Sudarmadji 1977). E.8 Graph: Changes occurring during tempeh fermentation (temperature, soluble solids, pH, soluble nitrogen, and reducing solids; Steinkraus et al. 1960). E.9 Graph: Yields of tempeh and of solids and different stages of the fermentation process (100 gm of whole dry soybeans yield 173 gm of tempeh on average; Steinkraus 1960; Murata 1967). E.10 Table: Loss of solids and protein during tempeh fermentation. E.11 Table: Percentage changes in composition of key essential amino acids during tempeh fermentation. E.12 Table: PER (protein efficiency ratio, a measure of protein quality for humans) changes during tempeh fermentation. E.13 Graph: Changes in concentration of three carbohydrates during tempeh fermentation (sucrose, stachyose, and raffinose, all decrease; Shallenberger et al. 1976). E.14 Table: Amount of B-complex vitamins in 100 gm of tempeh vs. 100 gm unfermented soybeans (all increase in tempeh except thiamine {vitamin B-1}). Changes in peroxide value and TBA value tempeh and soy flour during storage at 37ºC (98.6ºF; both rise rapidly in soybeans, but stay near zero and stable for tempeh; Watanabe et al. 1971).

H.1 Table: Foods known in Indonesia as "onchom" (made from peanuts or soybeans). H.2 Selling onchom in a Javanese market. H.3 Graph: Changes in soy onchom during fermentation (temperature, soluble solids, pH, soluble nitrogen, and reducing solids; Steinkraus et al. 1965). H.4 Flowchart for preparation of peanut presscake onchom. Unnumbered illustrations show 12 steps in the process of making onchom in a commercial shop in Indonesia. Neurospora: Budding conidia, conidiophore. H.5 Graph: Reduction in onchom aflatoxin during fermentation with *Neurospora* (Ko 1974). A thermometer, showing both Fahrenheit and Centigrade.

Glossary of Indonesian foods, spices, etc. Agar. Amaranth, Indonesian. Apem. Arak. Aren sugar. Aromatic ginger. Asam. Bananas (pisang). Basil. Bawang merah. Bawang putih. Bayam. Bean sprouts. Box 234, Lafayette, California 94549.

3205. *Soycraft* (*Greenfield, Massachusetts*). 1979. Soymilk ice cream in Guatemala. 1(1):50-51. Summer.
• ***Summary:*** This spring Plenty commenced installation of a small scale soy dairy, which will manufacture soymilk ice cream and tofu, in the Indigenous Municipal Building in Solola, Guatemala. Plenty received a $30,000 grant from CIDA (the Canadian International Development Agency) for the project.

3206. *Soycraft* (*Greenfield, Massachusetts*). 1979. New England Soy Dairy plans expansion. 1(1):10. Summer.
• ***Summary:*** "Equipment being used to produce 25,000 pounds of tofu weekly is designed to make only 10,000 pounds weekly. The company plans to triple its soymilk

capacity and double its tofu production. It will introduce plain and flavored soymilk beverages, tofu salad, soy mayonnaise, deep-fried tofu cutlets, and soymilk ice cream, sometime this summer."

3207. Takai. 1979. Takai Tofu & Soymilk Equipment Co. (Ad). *Soycraft* (*Greenfield, Massachusetts*) 1(1):39. Summer.
• ***Summary:*** This full-page ad: (1) Gives an introduction to the company. (2) Explains that they have worked closely with William Shurtleff, author of *The Book of Tofu* to develop their first English-language catalog. (3) States that they are working with Bean Machines, Inc., a California-based company to get Takai equipment to customers at the lowest possible prices with the minimum delay. (4) Shows illustrations of 11 pieces of Takai equipment, ranging from traditional to modern. (5) Gives the address, phone number, and logo of both Bean Machines and Takai. Address: 307 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan.

3208. **Product Name:** Tofu Creamies (or Tofu-Coconut Cream Bars).
Manufacturer's Name: White Wave.
Manufacturer's Address: 3869 Walnut St., Boulder, CO 80301.
Date of Introduction: 1979. July.
Ingredients: Crust: Whole wheat flour, cut oats, oil, shredded coconut, sea salt. Filling: Tofu, bananas, honey, oil, vanilla, arrowroot, sea salt, shredded coconut.
How Stored: Refrigerated.
New Product–Documentation: Recipe given by Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 165.

3209. **Product Name:** Tofu Cinnamon Rolls.
Manufacturer's Name: White Wave.
Manufacturer's Address: 3869 Walnut St., Boulder, CO 80301.
Date of Introduction: 1979. July.
Ingredients: Glaze: Margarine, honey, walnuts, raisins. Filling: Tofu, walnuts, honey, vanilla, cinnamon, salt. Dough: Whole wheat flour, soymilk, raisins, honey, oil, baking powder, salt.
Wt/Vol., Packaging, Price: Retails for $0.66 each.
How Stored: Refrigerated.
New Product–Documentation: Recipe given by Shurtleff & Aoyagi. 1979. Tofu & Soymilk Production. p. 166.

3210. Howes, Charles D. 1979. Re: Soymilk processes developed by Seventh-day Adventists. Letter to William Shurtleff at Soyfoods Center, Aug. 15–in reply to inquiry. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "The microwave process of making soymilk was developed by Paul Allred who has had some past experience in soymilk production. For example, he established a soymilk plant in Mexico while he was an Adventist missionary and educator there. He has also been a moving force behind the plant in Egypt. The initial patent for the process (#3,941,890) is enclosed. This outlines the microwave process in some detail. Mr. Allred is located at the Loma Linda Foods plant in Riverside so if you would like to visit with him and perhaps see his cooker you might give him a call and arrange for a visit."

"I do not think that we will be using this process in the U.S. in the immediate future due to relatively low throughput and capital investment problems. However, as higher powered equipment becomes available this may well change." Address: Loma Linda Foods, 13246 Wooster Rd., P.O. Box 388, Mount Vernon, Ohio 43050. Phone: (614) 397-7077.

3211. New-age Foods Study Center. 1979. Catalog of publications & materials by William Shurtleff & Akiko Aoyagi [mail order]. P.O. Box 234, Lafayette, CA 94549. 1 p. Front and back. 36 x 22 cm. Aug. 24.
• ***Summary:*** This single page leaflet, 8½ by 14 inches, is printed on both sides with brown and teal blue ink on white Classic Laid paper. The Japanese-style logo is waves and a moon in a circle. The following items are available: The Book of Tofu (Ballantine $2.95). Tofu & Soymilk Production ($17.95). The Book of Tofu: Food for Mankind (Autumn Press $7.95). The Book of Tempeh (paperback and professional hardcover editions). Tempeh Production ($13.95). The Book of Miso (Autumn Press). Miso Production. Pamphlets (5). Tofu kit. Color slide sets. Soycraft magazine (and information about Soycrafters Assoc.). Catalogs of tofu & soymilk equipment (Bean Machines). Natural nigari. Tempeh starter (contact Farm Foods). Koji & koji starter. Pressing sacks & straining bags. The Book of Kudzu. A large sidebar is titled "New-Age Foods Study Center." Address: Lafayette, California. Phone: 415-283-3161.

3212. Omosaiye, O.; Cheryan, M. 1979. Ultrafiltration of soybean water extracts: Processing characteristics and yields. *J. of Food Science* 44(4):1027-31. July/Aug. [14 ref] Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL 61807.

3213. **Product Name:** Plamil Carob-ean (Carob Soymilk).
Manufacturer's Name: Plamil Foods.
Manufacturer's Address: Bowles Well Garden, Folkestone, England.
Date of Introduction: 1979. August.
Ingredients: Incl. soymilk, carob powder.
New Product–Documentation: Ad in Alive magazine. 1979. July/Aug. p. 5.

Letter from Arthur Ling, Managing Director of Plamil Foods. 1990. July 24. The Carob-ean has been discontinued for lack of sales.

3214. *Plenty News* (*Summertown, Tennessee*). 1979. Guatemala. 1(3):2-3. Aug.
• ***Summary:*** After the 1976 earthquake that devastated Guatemala, "Plenty became involved with the construction of hundreds of homes, schools, and clinics... Foundation and walls have been completed on a 22- by 44-foot solar dairy being constructed in the village of San Bartolo. Work is continuing with the building of roof trusses, final solar design, and delivery of the tons of equipment. The first step in the solar aspect of the project is a water pre-heater."

In a sidebar, Laurie Praskin, soy technician with Plenty Guatemala, writes: "...our soy demonstrations are going good... you keep seeing kids you want to bring home and feed for awhile. It feels great to be teaching their mothers how to make soymilk and tofu, and giving them nutritional information... it's good to see these malnourished kids stuff their faces with tofu and soy milk... protein... they all love it...

"As a result of holding one class last year in San Martin, 45 ladies were inspired to plant soybeans this year... This is really the heart of the project, to introduce The Noble Bean so they can be recognized and used at the village level, in the homes, so they can become a regular part of the life and diet..."

Photos show: (1) Villagers constructing a gravity-fed water system. (2) Plenty volunteer Jane Graf with a little Guatemalan girl (looking healthy and happy): "She's been fed a soy-based diet, loved a lot..." (3) Members of Plenty's Agricultural Project preparing for variety trials in Solola (altitude 7,200 feet) with soybeans, amaranth, quinoa, and winged beans–all high protein crops that grow in the tropical highlands. Address: 156 Drakes Lane, Summertown, Tennessee 38483.

3215. Simonds, Nina. 1979. Chinese cuisine: Soybeans. *Gourmet* 39:28-29, 74-77. Aug.
• ***Summary:*** After a brief history of soya in China, gives recipes for: Fried soybeans [soynuts]. Sweet soybean milk. Stir-fried soybean sprouts red-in-snow (incl. how to sprout soybeans). Braised soybeans and meatballs. Spareribs and soybean sprout soup. Stuffed wheat gluten balls with soybean sprouts (*Mien Chin Jou Yüan*). Braised bean sticks [*fu tsu;* dried yuba sticks] with black mushrooms. Buddha's delight (*Lo Han Su Ts'ai*). Stuffed bean curd rolls. Sweet-and-sour fish in bean milk skin [yuba]. Bean milk skin (*fu p'i*) and eggplant rolls.

3216. Kanthamani, S. 1979. Re: Introducing soyfoods to India. Letter to William Shurtleff at New-Age Foods Study Center, Sept. 3. 2 p. Handwritten on aerogram.
• ***Summary:*** She thanks Shurtleff for the copy of *The Book of Tofu.* She resigned her job in Sri Lanka in July 1979; the situation was unsatisfactory and there was too much discrimination. She has had a few offers in India but she is still debating whether to accept a job or start her own business.

She is revising her book *Tasty Recipes from Soyabean.* She is looking for a publisher. When she succeeds in getting the revised edition published, she will send a copy to Shurtleff.

She would not recommend use of a nylon sock for soya milk preparation because of sanitation problems, however a thin white cloth works well. Her level of preparing soyamilk at the home level has become very popular as there has been a scarcity of coconuts. Sinhala people [in Sri Lanka] usually use coconut milk for preparing all types of curries. "Now they have replaced coconut milk with soyamilk." She provides here new address [see above]. Address: 559-A 10th A Main Rd., V Block, Jayanagar, Bangalore 560041, India.

3217. Tripp, J.H.; Francis, D.E.M.; Knight, J.A.; Harries, J.T. 1979. Infant feeding practices: a cause for concern. *British Medical Journal.* ii(6191):707-09. Sept. 22. [24 ref] Address: 1-2. Senior Registrar and Group Chief Dietitian (respectively), Hospital for Sick Children, Great Ormond Street; 3. Veterinary Officer, Zoological Society of London, Regent's Park; 4. Inst. of Child Health and Hospital for Sick Children. All: London, England.

3218. Esko, Wendy. 1979. Introducing macrobiotic cooking. Tokyo: Japan Publications. 144 p. Foreword by Aveline Kushi. Preface by Edward Esko (both written June 1978). Illust. by Bonnie Harris. Index. 26 cm. Reprinted in 2006 by Square One Publishers (Long Island, NY, 240 p.).
• ***Summary:*** The author was introduced to macrobiotics in upstate New York in about 1971. This is her first book on macrobiotics. It was originally published under the title of *An Introduction to Macrobiotic Cooking* by the East West Foundation, 17 Station Street, Brookline, Massachusetts 02146. Though copyrighted in 1978, the first edition appeared in Sept. 1979. The fourth printing was May 1981.

The chapter titled "Beans including tofu and natto" gives descriptions of and recipes for making: Japanese black beans (black soybeans, p. 54; "These beans are therapeutic for the sexual organs and will relieve an overly yang condition caused by too much animal food or fish.") Soybeans (p. 54. "These beans are the most yin of the bean family... It is recommended that soybeans be eaten only occasionally as a separate side dish. Because they are very yin, they should be cooked with yang vegetables such as lotus root or burdock, for balance. The best way to eat soybeans is in the form of *tofu, okara, natto, tempeh,* and, of course, miso and tamari.") Tofu, and Homemade tofu (curded with nigari, p. 54-55). Okara (p. 55-56). Tofu and corn. Tofu, onions and water cress. Dried tofu (dried-frozen, p. 57). Yuba (dried soy milk; how to make at home). Vegetables and dried soy milk (p. 57). Ganmodoki (Tofu and jinenjo patties, p. 57-58). Natto

(description and how to make at home, p. 58-59).

Other soy-related recipes include: Tofu soup (p. 68). Miso soup (p. 69-70, basic, or quick). Watercress miso soup (p. 71). Daikon and sweet rice dumpling soup (with miso). Chinese cabbage and tofu miso soup (p. 71). Aveline Kushi's miso stuffed lotus root (p. 86). Tofu dressing (p. 91). Miso-tahini spread (p. 92). Miso-sesame spread (p. 92). Miso-lemon sauce (p. 93). Tofu dip (p. 93). Miso with scallions (p. 95). Tamari (description, p. 95). Tekka (made with Hatcho miso, p. 96). Miso pickles (p. 100-01). Tamari pickles (p. 101). Tofu plaster (p. 130). Ume-Sho-Kuzu drink (with umeboshi, tamari and kuzu, p. 131). Ume-sho-bancha (with tamari, p. 131). Use of tamari, miso, and tekka (p. 132).

Also includes instructions for making amasake at home (p. 116; it is a natural sweetener made from fermented sweet rice), and a recipe for Amasake bread (p. 107), instructions for making seitan at home (p. 46-47, using 3½ lb of hard spring or hard winter whole wheat flour; spring wheat flour produces a much softer texture of seitan than the winter variety), and recipes for seitan stew, seitan-barley soup, sauteed vegetables and seitan, stuffed cabbage with seitan, and seitan croquettes (p. 47-49), plus recipes for leftover seitan (p. 125). Address: East West Foundation, near Boston/ Cambridge, Massachusetts.

3219. Forbes, Richard M.; Weingartner, K.E.; Parker, H.M.; Bell, R.M.; Erdman, J.W., Jr. 1979. Bioavailability to rats of zinc, magnesium, and calcium in casein-, egg- and soy protein-containing diets. *J. of Nutrition* 109(9):1652-60. Sept. [23 ref]

• ***Summary:*** The bioavailability of zinc and magnesium differ for general categories of soy protein products, including full fat soy flour (SF), freeze-dried soy beverage (SB), and soy concentrate (SC), when fed to weanling rats. Zinc was poorly available from these soy products, especially SC. Magnesium was highly available from SF and SB. Calcium added to all soy products was highly available. Address: Dep. of Animal Science, and Dep. of Food Science, Univ. of Illinois, Urbana, Illinois 61801.

3220. Carlin, Margaret. 1979. Soy to the world! Tofu is cheap, nutritious and low in calories. *Albuquerque Tribune* (*New Mexico*). Oct. 23. p. B-1. [1 ref]

• ***Summary:*** About Southwest Soy Foods. "Tofu has fed Orientals for thousands of years, and now Americans are learning to appreciate the bland white nutritious stuff.

"Tofu is bean curd, a custard-like cake made from curdled soybean milk. It is cheap, high in protein, low in calories and saturated fats and it has no cholesterol. Anybody trying to lose weight can enjoy tofu with a clear conscience.

"Tofu is practically tasteless so it blends well with other flavors. It is delicious fried, baked in souffles and casseroles, broiled, scrambled and made into burgers, tacos, enchiladas, tamales, lasagna and almost anyway you like." Tofu mayonnaise is good tasting but low in calories.

"Tofu is showing up on vegetarian restaurant menus, health food store shelves and in Oriental shops and supermarkets as well." Stephen and Kathryn Bennett Clarke own Southwest Soy Foods in Santa Fe, New Mexico. It started only 18 months ago but now makes more than 2,400 pounds/week of tofu. Their tofu is also sold in Albuquerque. "Mrs. Clarke wandered into the world of tofu because her daughter, Madena, 9, was allergic to milk." She learned about soy milk and before long she was making her own tofu.

"She and her husband also were inspired by 'The Book of Tofu,' by William Shurtleff and Akiko Aoyagi ($6.95), a book widely regarded as definitive. When it was published a few years ago, the book created an explosion of interest in tofu, and resulted in the opening of many tofu shops throughout the country, including the Clarke venture in Santa Fe." "Tofu costs from $1.09 to about $1.20 a pound."

Of course, if you make your own tofu at home it costs much less. "An Albuquerque engineer, Al Geduld, has designed a wooden tofu maker [tofu kit] which sells for $20."

Recipes from Kathryn Clarke include: Tofu mayonnaise. Missing egg salad. Ruthie's tofu / seafood stir fry. Tofu protein pops. Photos show: (1) Overhead view of Stephen Clarke stirring soy milk before adding the curdling agent. (2) Stephen Clarke, Kathryn Clarke, and Thalia Plantian, standing behind a sink in which their tofu is cooling. Address: Tribune Accent Editor.

3221. Farm Foods. 1979. Soy Ice Bean: The completely vegetarian frozen dessert (Ad). *Whole Foods* (*Berkeley, California*). Oct. p. 69.

• ***Summary:*** "Made from fresh soymilk. Tastes great. Comes in vanilla, carob, strawberry, orange, banana, and chocolate. Allergic to cow's milk? Try this, its cool. Has no animal products in it. No cholesterol. Natural? Sure is. (No additives or preservatives). Soybeans are a complete protein. It's good for you." Address: 144 King St., San Francisco, California 94107.

3222. *Food Product Development.* 1979. Improved soy flour-oil blend answers beverage base needs. 13(10):52. Oct.

• ***Summary:*** Nutrisoy 101, an improved soy flour-soy oil blend (2:1) produced by ADM Foods, imparts a highly acceptable flavor, texture, and mouthfeel to beverages, thus expanding soy flour's previously limited potential as a beverage base. It readily disperses in cold water with agitation, and remains in suspension for 3 days, or if carrageenan is added, for 1 week. It can be used as an economic replacement for milk solids, as in milk shakes or flavored milks. It can be fermented with lactic acid to yield a soy yogurt or cultured sour cream dressing. It can also serve as a low-cost replacement for milk-protein counterparts in

dips, sauces, and salad dressings. Sample formulations for vanilla and chocolate soy beverages are given.

3223. Ohta, Teruo; Takano, Kenji; Nikkuni, Ikumi; Hashizume, K.; Saio, K. 1979. Shokuhin-yô daizu no chôki hokan-chû no hinshitsu henka [Soybean quality change and its influence on food processing]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 35. p. 56-70. Oct. [6 ref. Jap; eng]
• ***Summary:*** As soybeans were stored for 1 year, the changes in their quality were measured and the effects of these changes on natto, tofu, and aburage were investigated under different temperatures (15, 25, and 35ºC) and humidity (RH = Relative Humidity 60, 70, and 80%). New crop (recently harvested) soybeans grown in the USA and China were used in this experiment.

Soybean quality deteriorated with time, and there were definite measurable changes in the ability to germinate / sprout, acid values, titratable acidity, Nitrogen Solubility Index (NSI), solids extracted in soakwater, and extraction rates of protein and solids into soybean milk.

The passage of time in storage led to harder cooked beans for natto, lower yield of soybean milk and tofu, lower coagulation rate in tofu, and less ability to expand during deep frying in aburage.

Increased temperatures and relative humidity increased the rate of soybean quality deterioration as measured above, and increased RH caused more deterioration than the increased temperature. Therefore, soybeans awaiting processing into natto, tofu, or aburage should be stored in a cool, dry place. Address: National Food Research Inst. (Shokuhin Sogo Kenkyujo), Kannon-dai 2-1-2, Yatabe-machi, Tsukuba-gun, Ibaraki-ken 305, Japan.

3224. Taira, Harue; Taira, Hirokadzu; Mori, Y.; Ushirogi, T.; Fujimori, I. 1979. Daizu shushi no kansô shori hôhô to sono hinshitsu ni tsuite. IV. [Influence of dry treatment after harvest on quality of soybean seeds. IV. Suitability for food processing of stored seeds]. *Shokuhin Sogo Kenkyujo Kenkyu Hokoku* (*Report of the National Food Research Institute*) No. 35. p. 160-71. Oct. [11 ref. Jap; eng]
• ***Summary:*** The effects of dry treatment (drying) after harvest on the physical properties, chemical composition, and suitability for food processing of soybean seeds were investigated. The heat treatments were natural drying and air drying using heated and non-heated air at 20, 30, and 40ºC.

The seeds were then stored at 15ºC with RH (Relative Humidity) of 65% and 75%, at 30ºC with RH of 65% and 75%, and at room temperature and humidity in a paper bag for 30, 60, 120, 180, 270, and 360 days, respectively. These various storage conditions were further investigated for their effects on suitability for food processing.

At a given RH, the seed moisture rose as the temperature rose; many figures are given. Seed quality degenerated as storage time increased. The following decreased: absorbability of water in seeds, rate of germination, extractability of protein from soaked seeds by hot water, pH of soybean milk, and ratio of weight of steamed seeds to raw seeds. And the following increased: soluble matter and protein in soak water, moisture content, hardness and darkness of color of steamed seeds.

Conclusion: Soybeans should be stored in a cool, dry place, ideally at a temperature of 15ºC (50ºF) or below and an RN of 75% or below. Remarkable deterioration was observed at 30ºC with RH of 75%. Seeds heat dried at 40ºC showed a significant decrease in suitability for making miso, natto, or cooked soybeans. Tofu making was less affected by drying the seeds with heated air.

3225. Ohlund, Tim. 1979. Re: Ted Nordquist and Aros Soymilk Products in Sweden. Letter to William Shurtleff at New-Age Foods Study Center, P.O. Box 234, Lafayette, California, Nov. 26. 1 p. Handwritten.
• ***Summary:*** "Ted [Nordquist], a business man named Gunnar, a Korean–Professor Kim, and myself are now deeply involved in setting up the Aros Soymilk Products company. We've found a suitable factory location in Örsundsbro (my village) at a reasonable price. Now the architect is busy working out the floor plan [500 square meters] which will have to be approved by the health authorities. An estimate of the factory remodeling plus all other prospected costs will be the basis for a loan from the State development agency. We hope to get a loan for the whole shebang. The interest rate and other conditions will be very favorable. If all goes well we hope to start production of tofu, soymilk, salad dressing and later a few other products next fall. We'll let you know more later as it develops. Love–Tim, Annalena & Finn."

Note: The date of this letter is not clear. It was probably 26 Nov. 1979 but could be 20 April 1979, with a follow-up card from Tim on 5 Dec. 1979 (or 12 May 1979). The books were finally sent on 10 Dec. 1979. Address: Box 559A, 19063 Örsundsbro, Sweden.

3226. Shurtleff, William. 1979. Rapid growth of tofu shops and soy dairies in North America (News release). Lafayette, California: New-Age Foods Study Center. 1 p. Nov.
• ***Summary:*** "There are presently 164 tofu shops and soy dairies in North America and, as shown in the accompanying graph, the increase in numbers is rapidly accelerating. Ninety-six of these run by Caucasian Americans have opened

in the past 3 years since publication of *The Book of Tofu,* by Shurtleff & Aoyagi, which has sold over a quarter of a million copies. The industry has a brisk sales growth rate of 25 to 30% a year, and uses an estimated 35% of the industry sales; the 68 Oriental shops have 65%.

"The largest tofu factory in the U.S. is the Matsuda-Hinode company in Los Angeles; they produce about 16,000 pounds of tofu a day under 14 different labels. The largest of the new breed of Caucasian-run plants is the New England Soy Dairy in Greenfield, Massachusetts. Founded in 1977, it now produces some 4,500 pounds of tofu a day and expects revenues of $750,000 in 1979. In its April 12 front page story on the tofu industry, *The Wall Street Journal* focused on The New England Soy Dairy...

"Worldwide, the tofu and soymilk industry is rapidly expanding. There are presently a total of 211,000 producers, including 38,000 in Japan, 158,000 in mainland China, 11,000 in Indonesia, 2,500 in Taiwan, and 1,470 in Korea. The largest tofu factories, located in Japan, produce over 100,000 pounds of tofu a day (15,000 tons a year) and the largest soy dairy, located in Hong Kong, produces 500,000 bottles of soymilk a day (150 million bottles a year).

"Most of the new tofu shops and soy dairies in the U.S. have gotten into production using the technical manual *Tofu & Soymilk Production* by William Shurtleff & Akiko Aoyagi, which has just been published in both paperback and hardback editions." Address: P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

3227. *SoyaScan Notes.* 1979. Chronology of soybeans, soyfoods and natural foods in the United States 1979 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. Yvonne and Irene Lo incorporate The Soya Bean Products Co., N.A. in San Francisco as a marketing company and immediately begin to import and distribute Vitasoy, the world's most popular soymilk, to Canada from their parent company in Hong Kong. It is not yet sold in America due to an FDA ban on aseptic Tetra Pak cartons.

Jan. Soycrafters Association of North America headquarters moves to Colrain, Massachusetts. Richard Leviton takes over as Director. Decides to edit and publish *Soycraft* magazine.

Jan. "The Soyfoods Revolution" published as a cover story by *Whole Foods* magazine.

Jan. 15-18. Second International Workshop on Low-Cost Extrusion Cookers held in Dar es Salaam, Tanzania, with 43 participants.

Feb. Takai catalog of large scale equipment published.

Feb. 9. Judith Rubenstein, institutional consultant for the New England Soy dairy, initiates a correspondence with Carol Tucker Foreman, Director of Child Nutrition programs at USDA, on the subjects of tofu standards and acceptance of tofu in USDA Child Nutrition Programs, including the school lunch program. Four letters are exchanged between Feb. and Aug. 1979. This is the start of work of tofu standards and tofu in school lunch programs.

Feb. *Natural Foods Merchandiser* magazine starts publication, founded by Doug and Karen Greene.

March 11. KOPTI is founded in Indonesia. It soon functions as an active, effective trade association for Indonesian tempeh and tofu manufacturers. By June 1986 it has more than 12,000 members from 40 cooperatives, and is promoting mechanization of production.

March. Soycrafters Assoc. and Quong Hop & Co. have adjoining booths at the New Earth Expo in San Francisco. 6,000 people sample free tofu burgers, tofu chip dips. Farm Foods sells Ice Bean (soymilk ice cream) and tofu cheesecakes. Gilman Street Gourmet sells tofu burgers.

March. Oak Feed Miso Company founded by Sandy Pukel, John Belleme, and Barry Evans. Joe Carpenter, Michio Kushi, and James Kenny are also involved. It is soon renamed American Miso Co.

March 26-29. World Soybean Research Conference II held at North Carolina State University. The 897-page proceedings, edited by F.T. Corbin, are published in 1980.

March. Food Protein Council holds International Soybean Fair in Washington, D.C. Many Congressmen, consular officials, etc. attend and sample soy protein products and tofu dips.

March. The Ohio Miso Company, founded by Thom Leonard and Richard Kluding, begins production in Ohio. America's first Caucasian-run miso company.

March. Richard Leviton takes a 3-week soyfoods research trip to the Midwest. Establishes many important contacts.

April. *New England Soy Dairy Product and Merchandising Guide* published.

April 12. "Good Old Bean Curd Is Suddenly Popular, But You Call It Tofu" by W.M. Bulkeley published as a front page article in *The Wall Street Journal.*

May 24. "The Americanization of Bean Curd," an expansion of Bulkeley's April article, published in the *Washington Post.*

May. Quong Hop & Co. in San Francisco introduces vacuum packed firm tofu, tofu cutlets, tofu burgers, and teriyaki tofu. Each of the latter three products is the earliest known product of its type in America.

June. *The Tofu Cookbook* by Kathy Bauer and Juel Andersen published by Rodale Press.

June 29. An internal FDA memorandum is prepared by FDA headquarters personnel to set forth the agency's views on the attributes of tofu. Publication of a "pull date" on tofu packages is encouraged.

July. Farm Foods starts national advertising of tempeh starter and tempeh kits.

July. David Mintz, owner of Mintz's Buffet, a kosher Jewish deli in New York City, first learns of tofu from

Pesach Lazaroff, a young Jewish vegetarian. That summer Lazaroff spends many hours working with Mintz as a paid consultant, developing tofu recipes. Mintz later becomes rich and famous for developing Tofutti, a soy ice cream. Over the years Mintz pushed the date that he supposedly learned about tofu further and further back, from 1979 to 1976, to 1974, then finally to 1972.

July. *The Book of Tempeh,* by Shurtleff and Aoyagi published by Harper & Row in both large-format paperback and professional hardcover editions. The world's first book about tempeh.

July. *Tofu & Soymilk Production,* by Shurtleff and Aoyagi published by The Soyfoods Center. This is the first book to use the term "soyfoods" in English.

July 17. "Tofu–The Oriental Way to High-Protein, Low-Calorie Meals" published by *Family Circle.*

July 23. Judith Rubenstein (see Feb. above) writes the Commissioner of the FDA requesting that the agency establish a standard of identity for tofu. She notes that the Director of Nutrition and Technical Services for USDA suggested that FDA give top priority to this issue. Issues of imitation tofu products and bacterial contamination are raised.

July 26-29. Second Soycrafters of North America Conference: "Producing and Marketing Soyfoods," held at Hampshire College, Amherst, Massachusetts, organized by Richard Leviton and financed on a shoestring. A major milestone for the U.S. soyfoods industry. 230 people attend and the content is a great success, but Leviton loses $1,000 on the venture. The first issue of Soycraft magazine, written and published (1,900 copies) by Leviton, is distributed at the conference. In the keynote address, Shurtleff notes that the biggest challenges facing the industry are to build a strong trade association with adequate funding, and to develop soyfoods standards.

July. *Alimentacion Integral Para Una Vida Plena: Los Mil Usos de la Soya* (*Integral Nutrition for a Full Life: The Thousand Uses of Soya*), by Blanca Dominguez published by Editorial Posada in Mexico. The country's first book on soyfoods.

Aug. Robert Rodale and Rodale Press gives strong support to *Soycraft* magazine, with ads and a nice mention in an article, which brings in 135 subscriptions in November.

Sept. The Soycrafters Apprenticeship Program is started by Luke Lukoskie at Island Spring, Vashon, Washington. Here people can spend about 3 weeks getting hands-on experience in making tofu, soymilk, and tempeh.

Sept. Tempeh Works, America's first Caucasian-run commercial tempeh shop in a commercial building and making only tempeh, starts production in Greenfield, Massachusetts. Founded and run by Michael Cohen.

Sept. Many articles about the Amherst Soyfoods Conference published in national magazines, such as *New Age.*

Sept. New England Soy Dairy opens America's first in-house tofu & soymilk sanitation laboratory.

Sept. "Chinese Cuisine: Bean Curd" by Nina Simonds published in Gourmet magazine.

Nov. 26. A fire destroys Eden Foods warehouse and $800,000 inventory. The company, struggling for life, moves to rural Clinton, Michigan.

Oct. The Great American Tofu Cookbook by Patricia McGruter published by Autumn Press.

Dec. Rodale Press contacts Richard Leviton to announce plans to do a Soybean Newsletter, with Leviton as editor. The idea later falls through.

Dec. *Frijol Soja* (Soybeans) published in Peru by INTSOY.

Dec. *The Soysage Cookbook,* by Cloud and Burdett self-published in Vermont.

* San-J tamari starts to be imported to America from Japan.

* California and Maine become the second and third states to enact organic labeling laws. California's becomes a model and a standard for many other similar laws, and it is cited on many soyfood product labels. By 1988 there are 12 states with organic laws, and 5 more planned.

* Tofu production in Japan tops 1.1 million metric tons for the first time.

* Soybean research in America begins to shift from emphasis on production to emphasis on utilization.

* Syntex corporation of Palo Alto, California, recalls its soymilk Neo Mull Soy after it is found to be missing a key nutrient, chloride. Many children who used this product were mentally damaged.

* Lauhoff Grain Corp. acquired by Bunge.

* 1979-82. Years of the "salt craze." Growing concern with the level sodium in American food products begins to hurt sales of miso and shoyu. Continued.

3228. *SoyaScan Notes.* 1979. Chronology of soybeans, soyfoods and natural foods in the United States 1970s (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Overview of the 1970s:

The Soyfoods Movement Begins. This industry focused on traditional, low-tech soyfoods such as tofu, soymilk, tempeh, and miso. Many of the pioneer Caucasian-American (non-Asian) soyfoods companies started during this decade, often for philosophical and ideological reasons. The founding of the Soycrafters Association of North America in July 1978 marks the beginning of this movement.

By Dec. 1979 there are 159 tofu manufacturers in the United States. Ninety of these are run by Caucasian Americans and are less than 3 years old. There are also 18 tempeh companies and 3 commercial miso companies (not including those in Hawaii).

Natural Foods and Vegetarian Movements Grow. The

basic philosophy of natural foods and vegetarianism became more widely accepted, and this greatly helped the soyfoods movement.

Unprecedented Interest in Nutrition, Health, and Fitness. During this decade, the interest in nutrition grew dramatically, both among consumers and professionals. Consumers, seeking ways of protecting themselves from the ravages of heart disease and cancer, try more healthful diets. Exercise and looking healthy are now "in." For example, the New York Marathon, which had 55 finishers (no women) in 1970, boasted 10,477 finishers (including 1,621 women) in 1979. Preventive medicine is becoming a new profession.

Steady Increase in Population of Asian-Americans. The number of Asian- and Pacific-Americans living in the USA increased from about 800,000 in 1960 to 1,369,000 in 1970 to 3,500,000 in 1980, at which time they comprised 1.5% of the total U.S. population. Their burgeoning numbers were a major factor in steadily growth of the soyfoods industry, since many Asians use soyfoods in their daily diets.

U.S. Soy Sauce and Miso Consumption Grows. Soy sauce consumption grew from about 9,000 kiloliters in 1970 to about 38,000 kl in 1979, a 4.2-fold increase during the decade. In 1974 domestic production passed imports.

U.S. miso consumption grew from about 750 metric tons (tonnes) in 1970 to about 1,800 tonnes in 1979, a 2.4 fold increase.

Shipments of Soy-Fortified Foods in the Food For Peace (P.L. 480) Program Jumps. Shipments of two products in 1970 totaled 131,000 tonnes. In 1979 a record 664,000 tonnes of ten products were shipped to needy countries, a 5-fold increase during the decade. In 1979, the main products whipped were SFB (soy-fortified bulgur), CSM (corn-soy-milk), and WSB (wheat-soy blend).

The Ongoing Protein-Versus-Calories Debate. As Nevin Scrimshaw concluded prophetically in his insightful 1977 lecture "Through a Glass Darkly: Discerning the Practical Implications of Human Dietary Protein-Energy Interrelationships": "To the extent that the pendulum swung too far in emphasizing protein in the 1960s, and too far in emphasizing calories in the 1970s, it must come to a more appropriate position for the 1980s and beyond." He noted that two big protein issues concerned (1) human requirements for protein at different ages and physiological states, and (2) the evaluation of the protein quality of foods as related to human requirements.

Reappraisal of the Value of Plant and Animal Proteins. During the late 1960s and early 1970s, animal proteins probably reached their historical peak of popularity in the U.S. A diet rich in animal protein was considered a "better diet." However during the 1970s a growing body of nutritional and ecological evidence, and changing attitudes toward world hunger and animal rights, led to a new appreciation of the quality, now more broadly defined, of plant (and soy) proteins. They were more healthful, less expensive, more efficient in utilizing farmland, energy and water, less polluting, and obviated animal slaughter.

Switch from Animal to Vegetable Fats. In the early 1950s Americans were consuming approximately equal amounts of animal and vegetable fats. By 1978 the ratio of vegetable to animal fat was 84 to 16. The same shift occurred worldwide, where the 1978 ratio was 71 to 29.

There were at least three basic reasons for this shift: (1) The growing concern, especially after 1960, with the health dangers associated with consumption of saturated fats and cholesterol, most of which came from animal fats such as butter and lard; (2) Hydrogenation, which allowed vegetable oils to be used in making substitutes for butter and lard (i.e., margarine and shortening); and (3) the lower price of vegetable oils, shortening, and margarine.

Production of soy oil grew dramatically during the postwar period, filling most of the increased demand for vegetable oil.

Boom Years for U.S. Agriculture. The 1970s was a decade of rapid growth for U.S. farmers. With high inflation and low interest rates, American farm products dominated world trade. The boom ended with the second "Oil Shock" of 1979-80, which set off the most serious recession of the post-war era, and marked the start of the Latin American debt crisis that later had a major negative effect on U.S. soybean farmers. 1979 was the last year of roughly 50 years of essentially non-stop, rapid soybean growth. During the next decade, U.S. soybean production zigzagged sideways and declined slightly.

Rapid Increases in Soybean Production in New Third World Countries. Prior to the 1970s, soybeans had never been widely grown in the tropics or semi-tropics (except perhaps in Indonesia). But during this decade a host of countries in such areas started to grow soybeans on a large scale for the first time. Major causes for this were the U.S. soybean boycott of 1973, the pioneering work done by INTSOY in Illinois, IITA in Nigeria, and AVRDC in Taiwan, and the development of day-neutral soybean cultivars that gave high yields at low latitudes. The major areas of rapid new production growth were...

Latin America. Total production increased from 1,746,000 tonnes in 1970 to 15,384,000 tonnes in 1979, an 8.8 fold increase during the decade. Latin America's three leading soybean producers in 1979 were Brazil, Argentina, and Mexico. Brazil's production rose 7.8 fold between 1970 and 1979, but Argentina's jumped 137-fold!

In 1979 soybean production in Latin American passed that in all of Asia, the birthplace of this ancient crop, and became second only to that of North America (61,722,000 tonnes in 1979/80).

In 1974, Brazil passed China to become the world's second largest soybean producing nation after the USA. The ranking in 1979 by tonnage was USA, Brazil, China, Argentina, Mexico, Indonesia, Paraguay, USSR, Romania,

India, and North Korea.

Africa. Total production increased from 67,000 tonnes in 1970 to 300,000 tonnes in 1979, an 4.5 fold increase during the decade. By 1979 Egypt had become the largest producing country, followed by Zimbabwe, Nigeria, and South Africa. This promising growth was doubly important because it came at a time of steadily falling per capita food production in Africa as a whole, down 20% from 1970 to 1987.

India. Total production increased from a mere 18,000 tonnes in 1971 (production was negligible in 1970) to 450,000 tonnes in 1980, an astonishing 25-fold increase in ten years, and a growth rate greater than that of Latin America. Meanwhile, in Asia as a whole soybean production was slowly declining.

3229. **Product Name:** [Drinho Soya Bean Drink].
Foreign Name: Drinho Minuman Kacang Soya.
Manufacturer's Name: Ace Canning Corporation Sdn. Bhd. Imported to Singapore by Lam Soon Oil & Soap.
Manufacturer's Address: Jalan 205, P.O. Box 8, Petaling Jaya, Selangor, Malaysia.
Date of Introduction: 1979. December.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Brian Fitzpatrick. 1982. Soya Milk in Asia. States that Ace Canning launched the product in 1980. Tetra Pak Co. 1983. Brochure. Packaged in Tetra Brik Aseptic 250 ml. Shurtleff & Aoyagi. Soya Bluebook. 1983. p. 63. 1984. Soymilk Industry & Market. p. 121. Color photo. Package is orange, white, yellow and tan, with yellow soybeans. Boi. 1986. Sunday Times (Singapore). Sept. 7. "Soya Bean Milk Packs More Water than Flavor." Drinho sells for 35 cents per 250 ml. Comments: Too sweet, thick, artificial taste, no soya bean flavor, not tasty.

3230. Escueta, E.E.; Banzon, J. 1979. Comparative acceptability of soymilks produced by different processing methods. *Philippine Agriculturist* 62(4):248-54. Oct/Dec. [19 ref]
• ***Summary:*** Soymilks were prepared by 5 different methods: 1. Boiling-water grind technique; 2. Cold grind process followed by 30 minute boiling in a steam jacketed kettle; 3. Cold grind process followed by 30 minutes boiling by direct steam injection; 4. Soymilk from soaked soybeans plus 3 minute immersion boiling; and 5. Soymilk from unsoaked beans plus 5 minute immersion boiling.

"Soymilks produced by the 5 methods were acceptable to the Filipino tasters with previous experience with soymilk. Process 4 was more acceptable (though not significant) than the other soymilks. Addition of 1% chocolate powder further increased the acceptability of the soymilks.

"The study shows that some factors other than the lipoxygenase enzyme action on the fats of the soybeans affect the acceptability of the soymilks." Address: Asst. Prof. and Emeritus Prof. respectively, Dep. of Food Science & Technology, Univ. of Philippines at Los Baños, College, Laguna, Philippines.

3231. Fomon, Samuel J.; Ziegler, E.E.; Filer, L.J., Jr.; Nelson, S.E.; Edwards, B.B. 1979. Methionine fortification of a soy protein formula fed to infants. *American J. of Clinical Nutrition* 32(12):2460-71. Dec. [19 ref]
• ***Summary:*** Normal infants fed a formula providing 2.25 gm/100 kcal of a soy protein isolate not fortified with methionine performed less well during the first 6 weeks of life than did breast-fed infants and infants fed milk-based formulas or other soy isolate-based formulas fortified with methionine. The limiting nutrient appears to have been methionine. Address: Dep. of Pediatrics, College of Medicine, Univ. of Iowa, Iowa City, IA 52242.

3232. Instituto de Investigaciones Agro-Industriales (IIA); INTSOY. 1979. Recetario frijol soya [Soybean recipes]. Lima, Peru: IIA. 96 p. 20 cm. [Spa]
• ***Summary:*** These recipes were developed by Carmen Echeandia de Calderon of IIA. The Integral Project for Soya Development (Proyecto Integral de Desarollo de la Soya–PIDES) in Peru is the result of an agreement signed between USAID and Peru's Instituto de Investigaciones Agro-Industriales (IIA). The recipes are divided as follows: Drinks (incl. soymilk). Entrees. Souffles, fritters, and pastry. Creams and soups. Stews and others. Desserts and sweets. Address: Lima, Peru.

3233. New-Age Foods. 1979. Start your own tofu shop or soy dairy–Here's the book that shows you how: *Tofu & Soymilk Production,* by William Shurtleff and Akiko Aoyagi (Ad). *East West Journal.* Dec. p. 4.
• ***Summary:*** This ¼-page black-and-white ad includes a photo of the book's cover. The authors also wrote *The Book of Tofu,* with over a quarter million copies in print. The book "is a guidebook to a new vocation and a new way of life, that has been used to start over 100 tofu shops in America in the past two years... Free with each book: Illustrated catalog of tofu & soymilk equipment, list of tofu shops in the West, and applications for Soycrafters Apprenticeship Program, Soycrafters Association of North America, and *Soycraft* Magazine. Order now! Paperback $17.95. Hardback $22.95. Postage free. Available only from the publisher. Send prepaid orders to:"

Note: This ad also appeared in the Jan. 1980 issue (p. 19) of this magazine. Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

3234. Obis, Clare Barrett. 1979. Vegetarian nutrition for pregnant and breast-feeding women. *Vegetarian Times* No. 34. Nov/Dec. p. 42, 44-46.

• ***Summary:*** Describes how to meet the special nutritional needs of pregnancy with a well-balanced vegetarian diet using vegetarian and vegan sources of nutrients. Contents: Introduction. Protein. Iron. Vitamin D. Vitamin A. Vitamin C. Vitamin B-6 (riboflavin). Vitamin B-12. Calcium. Supplements. Final words. Resources.

3235. Soy Plant (The). 1979. Tofu gratuity (Leaflet). Ann Arbor, Michigan. 1 p. Undated. 11 x 9 cm.
• ***Summary:*** This tiny, hand-lettered "take one" reads: "Gift certificates may be purchased at a 10% discount through January 31st 1981. Visit our retail store, 211 E. Ann, Ann Arbor, Michigan. 663-0500." An illustration shows a wheel with spokes; on each spoke is written: Tempeh, soysage, tofu, soymilk, miso. Across the diameter: "Soy foods for body & planet." In large letters across the bottom: "The Soy Plant." Address: 211 East Ann St., Ann Arbor, Michigan. Phone: (313) 663-0500.

3236. *Soyanews* (*Sri Lanka*). 1979. Five thousand children each had a cup of soyamilk... (Photo caption). 2(5/6):1. Nov/Dec.
• ***Summary:*** "... on Sunday, 18 November, when the YMCA ad YWCA organised a Fun and Food occasion for children at the Sugathadasa Indoor Stadium. The day started with a cup of soyamilk, which is an excellent way for everyone to start every day."

Two photos show children with paper cups of soyamilk.

3237. *Vegetarian Times.* 1979. The New England Soy Dairy. No. 34. Nov/Dec. p. 52, 54-56.
• ***Summary:*** "In January, 1977 Richard and Kathleen Leviton started a 'cottage' business, which they felt would enable them to make enough money working two or three days a week, to allow them to have the rest of their time off for other pursuits." Laughing Grasshopper's sales of tofu hit $70,000 the first year. "In February, 1978 the Levitons convinced some of their friends and a few private investors to ante up $50,000 for an expansion program. They changed their name to 'The New England Soy Dairy,' incorporated, sold stock (to raise the money), imported large-capacity tofu equipment from Japan, and moved to a new, larger location in Greenfield." Today the Soy Dairy produces on average 22,000 lb/week of tofu. Sales have been increasing by about 300% a year notes President and Sales Manager Tom Timmins. Annual sales are estimated at more than $500,000, which makes the Soy Dairy the largest Caucasian-owned tofu manufacturer in the USA. The company sells about 30 cases a week of soy mayonnaise. A soy milk is scheduled to be introduced at the end of this year and a soy-based ice cream next spring. Photos show: Tofu being packaged into plastic water-filled tubs. A man cutting tofu into one-pound cakes.

3238. **Product Name:** [Danprofiber].
Manufacturer's Name: Aarhus Oliefabrik A/S.
Manufacturer's Address: Bruunsgade 27, P.O. Box 50, 8100 Aarhus C, Denmark.
Date of Introduction: 1979.
New Product–Documentation: Aarhus Olie Annual Report 1988. A diagram (p. 40) shows that Aarhus introduced Danprofiber in 1979. It was made in their protein factory.

3239. **Product Name:** Soymilk.
Manufacturer's Name: Bean Mountain Soy Dairy.
Manufacturer's Address: 121 W. Howard St., Boone, NC 28607.
Date of Introduction: 1979.
New Product–Documentation: Mashburn. 1980. The Sentinel. Feb. 15. p. 7.

3240. Chen, W.L.; Li, C.F.; Wu, S.; Li, C.H.; Feng, L.H. 1979. [Study on the manufacture of instant soy milk powder for infants]. *Food Industry Research and Development Institute* (*Taiwan*), *Research Report* No. 140. [Chi]* Address: Hsinchu, Taiwan.

3241. **Product Name:** [Green Milk (Soy Milk Beverage), and Hae Pyo Doo Yoo Soymilk].
Foreign Name: Green Milk, Hae Pyo Doo Yoo.
Manufacturer's Name: Green Milk Co., Subsidiary of Dong Bang Oil and Flour Mills Co., Ltd.
Manufacturer's Address: No. 2 Yangpyung-dong 4-ka, Yungdungpo-ku, Seoul, South Korea. Plant at Jin Hae, Kyung Nam.
Date of Introduction: 1979.
New Product–Documentation: Soya Bluebook. 1981. p. 60.

Letter from Kyung Lee, ASA country director, Korea, to William Shurtleff at Soyfoods Center. 1983. Nov. 23. Gives history and production statistics.

Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 16, 81-83. Dong Bang, Korea's biggest oilseed crusher, established a subsidiary, Green Milk Co., in 1979 in Seoul to make Green Milk brand soymilk. In 1981 they made an estimated 3,000 tons in four flavors, packaged in cartons, increasing to 5,253 tons in 1983.

3242. Han, B.-H.; Kim, K.-S.; Chom, D.-J. 1979. Processing of soybean powder with soybean and krill. *Bulletin of the Korean Fisheries Society* 12(3):137-41. [Eng]*
• ***Summary:*** Soy curd [tofu] was made using the traditional process. The use of 3% glucono-delta-lactone (GDL) at 90ºC gave the highest bulk yield in relation to the crude protein of the tofu. Soy curd powder was prepared by spray drying soybean milk. It was then suspended in water and coagulated by adding GDL at 90ºC. When krill autolysate was dried with the soymilk then made into tofu, coagulated under the

same conditions, it produced a softer tofu. Another powder, made by spray drying the mixture of soybean milk, krill autolysate, and GDL could be coagulated by suspending in water, bringing to a boil, then letting it stand at room temperature for 2 minutes.

Note: Krill (*Euphasia superba*) are planktonic crustaceans and larvae that constitute the main food of baleen whales. Address: Dep. of Food Science & Technology, National Fisheries Univ., Busan, Korea.

3243. **Product Name:** Soymilk.
Manufacturer's Name: Institute of Buddhist Dialectics.
Manufacturer's Address: Macleod Ganj, Dharmasala, Dist. Kangra, Himchal Pradesh (HP) 176219, India.
Date of Introduction: 1979.
New Product–Documentation: Letter from Institute. 1987. Person is charge: Kalsang. The Buddhist monks from Tibet use 6.5 kg/week of dry soybeans. Note: This is the earliest commercial product seen made by Tibetans (one of two documents), although not in Tibet.

3244. **Product Name:** [Plus Soymilk (Dairylike, Lactic Fermented, Fruit [Mikan Orange, Apple & Pineapple Mix], or Coffee/Barley Malt Syrup)].
Foreign Name: Purasu Tônyû.
Manufacturer's Name: Kibun Health Foods Co.
Manufacturer's Address: 1-11-8, Shin Sayama, Sayama-shi, Saitama-ken 350-13, Japan.
Date of Introduction: 1979.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 63-64, 68-70. States that Kibun began making soymilk in 1977. By 1982 Kibun was the largest soymilk manufacturer in Japan and in the world.

3245. Lajolo, F.M.; Filisetti, T.M.C.C. 1979. Thyroid active factor from processed soybean products (Abstract). Paper presented at meeting of Institute of Food Technologists, St. Louis, Missouri. See Abstract 21.
• ***Summary:*** A crude extract was obtained from hexane-defatted soybean flour by water extraction and acetone fractionation. It was active in depressing the uptake of iodine-131 by the thyroid glands of live rats 24 hours after administration by stomach tubing. "The depressing activity was present only when the extract or the flour had been previously autoclaved." It was also found in commercial products such as soybean milk, soy protein concentrate, and toasted soy flour. "Tested in semi-chronic experiments with rats, the extract was able to induce changes in thyroid thyrosines and thyroxine. No influence on growth of the autoclave extract was found. The formation of an active factor during processing is proposed and its biological significance is discussed." Address: Depto. de Alimentos e Nutricao Experimental, Faculdade de Ciencias Farmaceuticas-USP, Caixa Postal 30.786, Sao Paulo, SP, Brazil.

3246. **Product Name:** [Soya Bean Drink].
Manufacturer's Name: Lam Soon.
Manufacturer's Address: Petaling Jaya, Selangor, Malaysia.
Date of Introduction: 1979.
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Letter from Monica Kjellker Gimre of Alfa-Laval. 1990. May 30. Alfa-Laval sold a complete soymilk plant to Lam Soon in Malaysia. It had a capacity of 5,000 liters/hour and began operation in 1979.

Letter from Consulate General of Malaysia. (Los Angeles, California). 1982. Aug. 3. One of the three soymilk manufacturers in Malaysia is: Lam Soon Oil & Soap Mfg. Sdn. Bhd., Jalan 205, P.O. Box 8, Petaling Jaya, Selangor, Malaysia. Phone: 03-572755.

3247. **Product Name:** Loma Linda i-Soyalac (Non-Dairy Infant Formula Based on Isolated Soy Protein) [Concentrated Liquid].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1979.
New Product–Documentation: See next two pages. Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88; Leaflet. 8½ by 11 inches, color. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center. Leaflet. 1983. i-Soyalac. Second best [to breast milk].

3248. **Product Name:** Loma Linda Soyalac (Non-Dairy Infant Formula) [Ready to Serve, Concentrated Liquid, Powdered].
Manufacturer's Name: Loma Linda Foods.
Manufacturer's Address: 11503 Pierce St., Riverside, CA 92515.
Date of Introduction: 1979.
Ingredients: Ready to serve: Water, soybean solids, corn syrup, sugar, soy oil, calcium carbonate, soy lecithin, sodium citrate, dicalcium phosphate, calcium citrate, dipotassium phosphate, potassium chloride, salt, calcium carrageenan, ascorbic acid,...
Wt/Vol., Packaging, Price: Canned. 32 fl oz. (1 qt).
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Three labels sent by Loma Linda Foods. 1980.

3249. **Product Name:** Bean Beverage (Soymilk). Later renamed Soymilk.
Manufacturer's Name: Madison Tofu Co-op. Renamed Bountiful Bean Plant Soyfood Cooperative in 1979.

Manufacturer's Address: 903 Williamson St., Madison, WI 53703. Phone: 608-251-0595.
Date of Introduction: 1979.
Ingredients: Vanilla: Water, organic soybeans, honey, vanilla ext. [extract].
Wt/Vol., Packaging, Price: 1 quart glass jar.
How Stored: Refrigerated.
New Product–Documentation: Interview with Deborah Bachmann. 1987. Dec. 29. James Lubbe. 1988. March. Abbreviated History of the Bountiful Bean. In 1984 vanilla and maple soymilk were introduced, and in 1985 malt soymilk. Prior to July 1984 the company bottled their soymilk in glass jars (Mrs. Clark's mayo jars), since they could be recycled and were thus ecologically sound. The company paid $0.25 per jar and washed them by hand. Few were recycled back to the company and cash outlays were huge. Thereafter they sold the soymilk in plastic jugs, and in re-usable 2-gallon pails. Label. 1985. Vanilla. 2.5 by 4 inches. Blue on white. Plain is black on white, and Malt is brown on white.

Labels for plain and vanilla soymilk sent by Elizabeth Hanson of Bountiful Bean. 1991. Nov. 12. Same labels as above, but company is now located in Ridgeway, Wisconsin 53582.

Leaflet sent by Paul Olson, new owner of Bountiful Bean Soyfoods. 1993. Nov. 19. The company still makes soymilk.

3250. **Product Name:** Nestlé Bonus Soya Bean Milk [Plain, or Almond].
Manufacturer's Name: Nestlé Products (M) Ltd.
Manufacturer's Address: Singapore.
Date of Introduction: 1979.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 99-100, 102. In 1979 Nestlé began making and marketing Bonus in Singapore. Exported to Hong Kong, it gave Vitasoy its first real brand-name competition. Color slide in Soyfoods Center Slide Library. Color photo. Pea green, dark green, and orange yellow on white. "Flavoured Soya Bean Milk. Vitamin Enriched."

3251. **Product Name:** Mamalak (Infant Formula), Manna (Food Supplement), and Complete (Complete Meal).
Manufacturer's Name: Nutrition Dynamics International (NDI).
Manufacturer's Address: Damghan (Also spelled Damkan or Damgham), Iran.
Date of Introduction: 1979.
How Stored: Shelf stable.
New Product–Documentation: Resume: Erwin David Rabhan. 1999. Letter from Jim Douglas to James Abourezk. 1999. July 6. Interview with David Rabhan. 1999. Aug. 25. Gives more details on this project.

Note: This is the earliest known commercial soyfood product made in Iran.

3252. **Product Name:** Soy Fortified Rice, and Whey Soy Drink Mix (WSD).
Manufacturer's Name: P.L. 480 Food for Peace Program.
Manufacturer's Address: USDA, Washington, DC.
Date of Introduction: 1979.
How Stored: Shelf stable.
New Product–Documentation: These 2 products were discontinued after 1 year.

3253. **Product Name:** Bonsoy (Soymilk).
Manufacturer's Name: Spiral Foods (Importer). Made in Japan by Marusan. Imported via Muso Shokuhin.
Manufacturer's Address: Melbourne, Australia.
Date of Introduction: 1979.

Second best.

We formulated i-soyalac to provide your baby a nutritionally balanced food that is

complete with the vitamins, minerals and essential amino acids all infants need. At least 100% of the U.S. RDA.

Also i-soyalac is entirely free from both cow's milk and corn derivatives and very low in soy carbohydrates.

In addition, our two-piece 14-ounce cans contain no soldered seams, thereby reducing the possibility of contamination from environmental exposure to lead.

We also make Soyalac, the only soy-based infant formula made from an extract of the whole soybean. That means Soyalac retains the natural goodness of the soybean for complete nutrition, yet it is still a completely milk-free product.

Loma Linda infant formulas are available in concentrate, ready-to-serve or powder form.

So as you can see, both i-soyalac and Soyalac have been formulated to provide complete nutrition for all babies. In fact, because it simulates it nutritionally, i-soyalac is the next best thing to mother's milk.

Loma Linda®

For further information, write Loma Linda Foods, 11503 Pierce Street, Riverside, CA 92515, or ask your pediatrician.

Ingredients: Water, soybeans, pearl barley, kombu (sea vegetable), barley malt.
New Product–Documentation: Australian Dairy Foods. 1986. Feb. p. 84. A photo shows Barley Malt Bonsoy in a Tetra Brik carton. It is imported from Japan. Shurtleff & Aoyagi. 1986. Soymilk Industry and Market, Update. Australian Dairy Foods. 1986. Feb. p. 84.

Sojarei (Austria) price list. 1989. Jan. The company markets this product in plain and cocoa flavors, in 500 ml and 1 liter sizes.

Talk with Ron Roller of Eden Foods. 1992. Feb. 26. When he visited the Muso office in Osaka, Japan, in Sept. 1982, he noticed very large shipments of soymilk in aseptic foil retort pouches, made by Marusan, being shipped to Spiral Foods (run by James Wilson) a macrobiotic distributor in Melbourne, Australia.

Talk with Yuko Okada. 1992. July 16. Muso first exported soymilk (Bonsoy) from Japan in about 1979 to Spiral Foods in Australia, owned by Jim Wilson. This soymilk was packaged in a foil retort pouch.

3254. **Product Name:** Soymilque.
Manufacturer's Name: Sunbow Farm Products.
Manufacturer's Address: Route 2, Box 46, Corvallis, OR 97330.
Date of Introduction: 1979.
Ingredients: Well water, organically grown soybeans.
How Stored: Refrigerated.

New Product–Documentation: Shurtleff & Aoyagi. 1979. July. New Tofu Shops & Soy Dairies in the West; Mia Posner & Harry McCormick. Label sent by Sunbow. 1980? 3.5 inches square. Black on white. "Sweeten to taste. Best when fresh. If contents thicken and separate, use in baking for light muffins, pancakes, bread, etc. Container recyclable as solar mass wall, scoop, or flower pot."

3255. **Product Name:** Firm Tofu, Soft Tofu, Fried Tofu, Flavored Tofu (Wu-Hsiang Kan), and Soymilk.
Manufacturer's Name: Superfoods.
Manufacturer's Address: 1257 4th St. N.E., Washington, DC 20002. Phone: 202-546-5205.
Date of Introduction: 1979.
New Product–Documentation: Call from Paul Wilson, PhD of Chapel Hill, North Carolina. 1996. July 2. When he was in Washington, DC, recently, he bought soymilk, fried tofu, marinated tofu, and silken tofu made by a local company named Superfoods. The soymilk was very sweet.

Talk with Tom Lee, founder and owner of Superfoods. 1996. July 2. Tom, who is Chinese-American, started this company in 1979 in Maryland. The name was slightly different at that time. In 1981 or 1982 he moved the company to its present address in Washington, DC. His main competition in the local tofu market comes from two Korean-run companies.

3256. **Product Name:** Nursoy (Iron Fortified Soy Protein Infant Formula).
Manufacturer's Name: Wyeth Laboratories Inc.
Manufacturer's Address: King of Prussia Rd., Wayne, PA 19087. Phone: 215-688-4400.
Date of Introduction: 1979.
Wt/Vol., Packaging, Price: Canned.
How Stored: Shelf stable.
Nutrition: 87% water, 6.7% sucrose, 3.4% vegetable oils, 2.3% isolated soy protein on a ready to feed basis.
New Product–Documentation: Thomson. 1979. *Journal of the American Oil Chemists' Society.* March. p. 386-88. Label. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

Koo. 1988. Journal of Parenteral and Enteral Nutrition. 12(2):171. Gives manufacturer as Wyeth Laboratories, Philadelphia, Pennsylvania.

Talk with company employee. 1990. Oct. 31. The company's name changed on about July 1988 to Wyeth Ayerst Laboratories Inc., now located at 555 E. Lancaster Ave., St. Davids, PA 19087. Phone: 215-971-5734.

3257. **Product Name:** Yeo's Soya Bean Drink. Boisson au Soja (Soymilk).
Manufacturer's Name: Yeo Hiap Seng Ltd. in Singapore.
Manufacturer's Address: 950 Dunearn Rd., Singapore.
Date of Introduction: 1979.
Ingredients: Water, extract of soya bean, cane sugar (10/91).
Wt/Vol., Packaging, Price: 250 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Color photo sent by Anders

Lindner of STS. 1987. Nov. 14. 250 ml Tetra Brik carton, Orange, green, and yellow on white. Shows large yellow soybeans.

Label sent by Anthony Marrese. 1991. Oct. 7. 1-liter Tetra Brik carton. Red, green, and brown on white. Shows large brown soybeans. Retails for DM 3.49. Purchased at a new Japanese food store that just opened in Bremen, Germany. The 1-liter product is now made by Yeo Hiap Seng (Malaysia) Berhad, 7 Jalan Tandang, 46050 Petaling Jaya, Selangor, Malaysia. It is imported to Europe by Tang Freres, 48 Avenue d'Lvry, 75013 Paris, France. Use before 18 March 1992.

3258. **Product Name:** [Yeo's Soya Bean Drink (Soymilk)].
Foreign Name: Boisson au soja; Sojamilch-Getraenk; Tounai.
Manufacturer's Name: YHS (USA) Inc. (Importer). Made in Singapore by Yeo Hiap Seng Ltd.
Manufacturer's Address: 1744 Junction Ave., San Jose, CA 95112.
Date of Introduction: 1979.
Ingredients: Water, extract of soya bean with sugar added.
Wt/Vol., Packaging, Price: 10 fluid oz (300 ml). Can with pull tab top.
How Stored: Shelf stable.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 33, 44-45. Label (can). Light green red, and tan on dark green. Name in English, French, and Chinese characters. Packed at 950 Dunearn Rd., Singapore 2158. Label. 1988. July. The German name has now been added to the can.

3259. Ament, Marvin Earl. 1979. Intestinal malabsorption: Soy milk protein sensitivity. In: Victor C. Vaughan, III, R.J. McKay, Jr., and R.E. Behrman, eds. 1979. Nelson Textbook of Pediatrics, 11th ed. Philadelphia, Pennsylvania: W.B. Saunders Co. xxiii + 2170 p. See p. 1035, 1075-91. Illust. Index. 27 cm. [1 soy ref]
• ***Summary:*** This is a massive and authoritative textbook on the subject, with each section written by one or more experts on that subject. Each of the three main editors is an M.D., as is the Senior Editor, Waldo E. Nelson.

In Chapter 11, "The digestive system" (p. 1019+) is a long section on "The intestinal tract" (p. 1035-1109).

A subsection titled "Intestinal malabsorption" (p. 1075-91) is by Marvin Ament. Within this, section 11.44, "Malabsorption syndromes" (p. 1080+) contains subsections on "Cow's milk protein sensitivity" and "Soy milk protein sensitivity" (p. 1082). In the references section at the end, there is 1 reference (p. 1090) to soy protein (Ament and Rubin 1972).

The section on "Soy milk protein sensitivity" states that soy protein isolate is the primary protein in all soy milk formulas. It "can cause a violent gastrointestinal reaction in susceptible infants." The mechanism of this reaction and injury are unknown. "The upper intestinal mucosa loses villous structure and becomes flat within 24 hours of challenge with soy protein isolate; recovery occurs within a few days. Clinical symptoms are described.

Note: Unfortunately, we are not told what percentage of infants have a negative reaction to soy milk protein. Address: M.D., Prof. of Pediatrics, Chief, Div. of Pediatric Gastroenterology and Nutrition, UCLA Center for the Health Sciences, Los Angeles, California.

3262. Barer-Stein, Thelma. 1979. You eat what you are: A study of ethnic food traditions. Canada: McClelland & Stewart, Ltd. xii + 13-624 p. Index. 23 cm. [550+* ref]
• ***Summary:*** This is largely a compilation of information from many other books and articles. On the cover is a color painting of The Gardener (or Vertumnus), from his series, The Four Seasons, c. 1590, by Giuseppe Arcimboldo (or Arcimboldi) of Milano.

In Chapter 12, on China, the section titled "Meats and alternates" (p. 110-13) notes that the soybean is called the "Chinese Cow" [sic, "Cow of China"] because of its versatility. Soybeans are used as whole dry beans and as sprouts, or they can be made into a firm white curd called "Chinese cheese" [sic], which can be used in many different ways. Soybean milk may be used in much the same way that westerners use cow's milk. They are fermented to make the favourite condiment, soy sauce. "Bean curd sauce is fermented bean curd that is packed in jars and sold as red bean curd sauce or white bean curd sauce,..." Cantonese names for soy products are (p. 111-12): Mien chiang: A syrup-like sweet bean paste. Dow-foo (tofu). Foo yu (fermented tofu). Tiem jook (dried yuba, broken into pieces

[sweet dried yuba sticks]). Wow doo [Wu dou]. Black soybeans. Dow see [doushi, fermented black soybeans]: Salted, fermented black bean paste [sic, fermented black soybeans] often garlic flavoured and used in small amounts as a condiment or seasoning.

In Chapter 30, on Japan, the section titled "Meats and alternates" (p. 336-37) notes that products made from soybeans include: (1) "Shoyu, a sweetish soy sauce made from wheat and barley [sic], soybeans, salt, and water." (2) Miso, or "fermented soybean paste," used mostly for flavouring soups [miso soup]. (3) Tofu, or soybean curd, is a staple in Japanese cookery. "Its smooth, custard-like texture and bland flavour make it an ideal ingredient. It is extremely versatile and readily absorbs other flavours. Many "restaurants in Japan take great pride in their tofu dishes."

In Chapter 31, on Korea, the section titled "Fruits and vegetables" (p. 350-51) discusses soybeans and their products at length. Soy sauce is used to season *kim* (nori) and other edible seaweeds. Soy sauce is an ingredient in "hot pepper mash" [*kochu jang*]**.** Soybeans are used to make "soybean mash" [*doen jang*]**.** Dry soybeans are roasted in an iron pot, then ground, and the roasted soy flour is used as a garnish over rice cakes [mochi] or plain cooked rice; children enjoy eating the coarser roasted bits that are sifted out of roasted flour or meal. Soybeans sprouts are eaten lightly cooked as a vegetable. Soybeans are also made into tofu (*tu bu*)*;* a brief description of the process is given, in which the drained curds are left in their hemp bag to form a firm cake, which may be cut, dipped into soy sauce, or fried in sesame oil. "Oil can also be made from the soybeans, but it is not commonly used or prepared."

Although commercial soy sauce, made in factories, is now widely available, many Korean households still prepare their own soy sauce each fall. Boiled soybeans are pounded, molded into a cone shape, and set to dry until hard. They are then wrapped with rice straw, hung from eves, rafters or ceilings, and allowed to ferment for several weeks [until they become *meju*]**.** During the winter, these fermented cones may be stored in huge rice-straw bags kept in a cool place.

In the spring, break the cone into small pieces and place in a large earthenware jar, nearly filled with water. Add salt, spices, red peppers, and a few charcoal lumps. Leave this in the sun for a few days [sic, 30-60 days] until the molded soybean chunks float to the top and the resulting liquid turns black. Ladle out and filter the black liquid, then boil it to make soy sauce. The solids remaining in the jar are used as soybean mash [after the charcoal is removed].

A portrait photo of the author, with a brief biography, appear on the rear cover and in the Introduction. Address: Ph.D. student, Ontario Inst. for Studies in Education, Toronto, Ontario, Canada.

3263. Bauer, Cathy; Andersen, Juel. 1979. The tofu cookbook. Emmaus, Pennsylvania: Rodale Press. xix + 188 p. Illust. Woodcuts by David Frampton. Index. 23 cm.
• ***Summary:*** Text atop the title page reads: "The no-cholesterol, high-protein food from the Orient as it can be used in your kitchen." Contents: Recipes in this book. 1. What is tofu? 2. Getting better acquainted: Saving money with tofu, waste of land, tofu and better nutrition, growing your own. 3. Making tofu: equipment, solidifier, process, making tofu in quantity. 4. Using tofu: fresh tofu, aging tofu, making firmer tofu, freezing it, serving it plain and simple, tofu for vegetarians, tofu for dieters, becoming an innovator. 5. Okara and whey: Okara, whey. 6. Soymilk: Soymilk recipes in this book, how to make it, koumiss, milkshakes. 7. Processed soy protein (PSP): What is processed soy protein?, PSP recipes in this book.

The Recipes: 8. Main dishes. 9. Side dishes and preparations. 10. Soup, sandwich, and salad. 11. Baking with Okara; bread crackers, and pastries. 12. Sauces, dips, and spreads. 13. Breakfasts. 14. Desserts: Pies, cakes, cookies, and assorted fancies. 15. Kids' specials and baby food. Appendices: A. Substituting flours. B. Composition of spices. C. Miscellaneous substitutions. D. Table of equivalents. E. Fahrenheit and Celsius equivalents. F. Recommended daily dietary allowances.

Note: As of Sept. 1989, 105,528 copies of this book have been sold by Rodale Press. 2,000 copies are still in stock. Address: California.

Londrina (Parana), Brazil: EMBRAPA–Centro Nacional de Pesquisa de Soja (CNPS). 389 p. See p. 235-43. Held 24-30 Sept. 1978 at Londrina, Brazil. [12 ref. Por; eng]
• ***Summary:*** Contents: Summary. Introduction. Soymilk (*leite de soja*)**.** Soy flakes (*flocos de soja*)**.** Micropulverized soy flour. A flowchart (*fluxograma*) shows how each of these soy products are made. The summary begins: "Soybean is the best source for low cost and high nutritional value protein for human and animal consumption." Address: Instituto de Tecnologia de Alimentos (ITAL), 13.100–Campinas, SP [Brazil]. Phone: 23-9850.

3266. Doyle, Rodger Pirnie. 1979. The vegetarian handbook: A guide to vegetarian nutrition and foods. New York, NY: Crown Publishers. x + 182 p. Illust. Index. 24 cm. [20+ ref]

• ***Summary:*** Table 3, "Daily food guide for vegan adults" (p. 30) recommends soy milk, tofu, and fermented soybean curd [fermented tofu].

The section titled "Weaning infants on vegan diets" (p. 40-44) also discusses soy milk and The Farm in Tennessee. Soy milk is also recommended for pregnant and lactating women (p. 54-55).

Chapter 9, titled "A pair of unusual diets," discusses macrobiotic diets and fruitarian diets. The author is quite critical of a number of macrobiotic practices and teachings: Studies have shown nutritional deficiencies. Restricted intake of liquids may lead to kidney stones and kidney failure. "The greatest danger of a macrobiotic diet is not to adults but to newly weaned infants... Don't wean infants on Kokoh... Wean them instead on either milk or fortified soy milk."

Page 93 states: "Soybeans are among the most valuable of vegetarian foods, not only because of their high-quality protein but because they can be made into soy milk and tofu (soybean curd)... Two other soy products that are widely used in the United States are soy sauce and miso." Pages 96-97 discuss soy milk and textured vegetable protein (TVP).

3268. Fomon, Samuel J.; Ziegler, Ekhard E. 1979. Soy protein isolates in infant feeding. In: H.L. Wilcke, D.T. Hopkins, and D.H. Waggle, eds. 1979. Soy Protein and Human Nutrition. New York: Academic Press. xiv + 406 p. See p. 79-99. [19 ref]
• ***Summary:*** Summarizes the results of 37 studies on nitrogen balance and concludes that, in an infant formula, soy protein isolate (Edi-Pro A) fortified with methionine, is at least as satisfactory as protein from cow's milk. Infants fed fortified soy milk, cow's milk, or human milk as 6% of their energy intake, retained similar amounts of nitrogen. In experiments where the protein level was 8-11% or 12-16% of energy intake, the nitrogen balance from soy formula was similar to that from cow's milk. Older infants receiving methionine fortified soy milk retained more nitrogen than did their counterparts receiving cow's milk.

Contents: Adequacy of soy protein isolates fortified with methionine: Nitrogen balance studies, growth studies. Methionine supplementation. Summary. Discussion.
Address: 1. Univ. Hospital, Univ. of Iowa, Iowa City, IA 52242; 2. Univ. of Iowa.

3269. Gabr, Mamdouh; Maraghi, S.; Morsi, S. 1979. Management of lactose intolerance secondary to acute diarrhea with a soy-based, lactose-free formula. *Clinical Therapeutics* 2(4):271-76. [7 ref]
• ***Summary:*** An isolated soy protein formula containing a mixture of sucrose and corn syrup was found more effective in infants recovering from non-bacterial diarrhea than a standard lactose-containing formula. In a study with 58 patients of the management of lactose intolerance secondary to acute diarrhea, the authors determined that (1) High recurrence rates of diarrhea after reintroduction of a milk-based formula are caused by secondary lactose intolerance, and (2) Infants with secondary lactose intolerance can establish disaccharide activity while on a soy-based, lactose-free formula.

Note: This is the second earliest document seen in which a soy formula or beverage is specifically recommended as a solution to the problem of lactose intolerance. Address: Cairo Univ. Faculty of Medicine, Dep. of Pediatrics and Clinical Pathology, Cairo, Egypt.

3270. Hong Kong Soya Bean Products Co., Ltd. 1979. Vita profits: A healthy way to grow (Brochure). Hong Kong. 6 panels. 18 x 18 cm.
• ***Summary:*** This full color, glossy brochure shows the company's many colorful packages. Vita Juice (6 flavors). Vitasoy (3). Vita teas (3). "Vita beverages keep better, sell better in Tetra Brik packs." Address: Export Dep., 41 Heung Yip Rd., Aberdeen, Hong Kong. Phone: 5-528211. Cable address: "Vitasoy".

3271. Ko Swan Djien; Kelholt, A.J.; Kampelmacher, E.H. 1979. Inhibition of toxin production in tempe bongkrek. In: P. Matangkasombu, ed. 1979. Proceedings of the Fifth International Conference on Global Impacts of Applied Microbiology. Bangkok: GIAM V Secretariat. xxxviii + 535 p. See p. 375-88. Held 21-26 Nov. 1977 in Bangkok, Thailand. [14 ref. Eng]
• ***Summary:*** Salt (NaCl) was added to tempe bongkrek to effectively inhibit toxin production. Tempe bongkrek is made of partly defatted coconut residue which remains after coconut meat is pressed to obtain oil, or when shredded coconut meat is extracted with water to obtain coconut milk. Outbreaks of food poisoning by tempe bongkrek still occur periodically. During the latest large outbreak, shortly after the new year in 1977, more than 400 persons were involved and more than 70 victims died. Address: Dep. of Food Science, Agricultural Univ., Wageningen, Netherlands.

3272. L'Aurore. 1979. La cuisine au tofu: Un art Japonais [Tofu cuisine: A Japanese art]. Quebec, Canada: L'Aurore. 192 p. Illust. No index. 14 x 22 cm. [Fre]
• ***Summary:*** Contents: I. Introduction: Table of derivatives of soybeans. Some numbers [statistics]. II. Tofu: Utensils, coagulants, method of preparation of tofu, method of preparation of kinugoshi tofu. Other preparations: Soymilk. Soymilk yoghurt [yogurt]. III. Getting started: Fundamental

ingredients, tools of the art, techniques for preparing foods. Fundamental recipes: Bouillons, sauces to accompany basic soy sauce, preparations to accompany basic miso, basic sauces, rice, noodles, sesame salt, grilled soybeans, kofu [wheat gluten]. Recipes using gô, okara, tofu, soymilk, kinugoshi tofu, yuba. Glossary. Useful addresses. Bibliography.

Note 1. This book is largely based on and pirated from *The Book of Tofu* by Shurtleff and Aoyagi (1975).

Note 2. This is the earliest French-language document seen (April 2013) that mentions silken tofu, which it refers to as *kinogoshi*. Address: Quebec, Canada.

3273. Miya Mori, E.E.; Shirose, I.; Costa, S.I. 1979. Teste de campo sobre aceitabilidade do VITAL por escolares [Field test on the acceptability of VITAL soymilk by school children]. Londrina (Parana), Brazil: EMBRAPA–Centro Nacional de Pesquisa de Soja (CNPS). 389 p. See p. 255-63. Held 24-30 Sept. 1978 at Londrina, Brazil. [8 ref. Por; eng]

• ***Summary:*** The acceptability of Vital soymilk on 1,497 school children ages 7-14 in school meal programs was tested at five locations in Sao Paulo using seven different flavors. Vanilla and chocolate, being preferred by the children in Monte Mar, the first location, was selected for tests in the other locations.

The arithmetic mean of acceptance approached 77%, but was 87.7% and 85.2% in the two schools where it was liked most. Address: Instituto de Tecnologia de Alimentos (ITAL), Cx. Postal 139, 13.100 Campinas, SP, Brazil. Phone: 23-9850.

3274. New England Soy Dairy Inc. 1979. Product and merchandising guide. Greenfield, Massachusetts. 18 p. Illust. No index. 28 cm.

• ***Summary:*** Contents: About NESD. What is tofu? Why buy tofu?: Consumer benefits, retailer benefits, institution benefits (shows package label). Why buy Soy Dairy tofu?: High quality ingredients (soybeans, natural nigari, water), good taste, freshness, long shelf life (18 days from day of production), sales service, product liability insurance. How tofu is made (with 7 large photos showing each step). The many uses of tofu. Nutritional highlights. Nutritional information: Tofu, firm tofu. Point-of-purchase materials and program (incl. 3 recipe brochures, color poster). Letters of recommendation. Kosher letter (1 Sept. 1978 from Rabbinical Council of New England; Tofu and Soymayo have been granted the KVH symbol of Kashruth endorsement). Care and handling: Packaged tofu, bulk tofu. New products and guarantees. Price list (enclosure).

"New products scheduled for release in 1979 are plain and flavored soymilk, deep-fried ready-to-eat tofu cutlets, eggless no-cholesterol mayonnaise, and soymilk ice cream. In the testing stages are soymilk yogurt and soymilk kefir, and other traditional foods made from soybeans... Guarantee: New England Soy Dairy guarantees the quality and integrity of all its products." Address: 305 Wells St., Greenfield, Massachusetts 01301. Phone: (413) 772-0746.

3275. New England Soy Dairy Inc. 1979. Soy Dairy tofu (Poster). 305 Wells St., Greenfield, MA 01301. 1 p. 44 x 28 cm. Color. Reprinted in Soyfoods Marketing. Lafayette, CA: Soyfoods Center.

• ***Summary:*** This large and colorful poster (see next page) has a yellow title and color photos of prepared tofu dishes on a black background. The photos on the top two-thirds are: 1. Tofu tomato cheese sauce on broccoli. 2. Tofu garlic dressing on a green salad and alfalfa sprouts. 3. Tofu strawberry whip in a stem glass. 4. Soy milk. 5. Deep fried sweet & sour tofu. 6. Organic Soy Dairy Tofu. 7. Organic Soy Dairy Firm Tofu. The bottom one-third is text and explanation. Address: Greenfield, Massachusetts.

3276. Ng Sock Nye. 1979. Soya bean–Nutritious food for the people. Malaysia: Institut Masyarakat Berhad, 9 Lorong Kucing, Pulau Tikus, Penang. 19 p. Illust. 21 cm. [3 ref]

• ***Summary:*** A very original and informative booklet, containing a photo or illustration (line drawing) of most of the soyfood products discussed.

Contents: Nutritional value of soya bean, soya bean milk (tau chui [soymilk]), soya bean curd (tau fu fah [soymilk curds]), soya bean jelly (tau fu [tofu]), fried bean cake cubes (tau fu pok [deep-fried tofu cubes]), bean cakes (tau kuah [pressed tofu]), dried soya strands (tau ki / fu chok [dried yuba sticks]), soya skin sheets (tau pui; dried yuba), sweet bamboo (t'im chok [sweet dried] yuba), vegetarian duck (chai ak [Buddha's duck made from seasoned and steamed yuba]), vegetarian salted fish (chai kiam hu [Buddha's fish made from tofu spread on yuba]), vegetarian meat (chai tu kar [Buddha's ham made from seasoned yuba; may be steamed]), soya bean sprouts (tau geh [soy sprouts]), soya sauce (tau eu [soy sauce]), salted soya beans (tau chio [Malaysian fermented black soybeans]). Bibliography.

On page 18 is a photo of all the soyfood products discussed on one table, each neatly labeled with its Malaysian name.

3277. NV Vandemoortele. 1979. Soyamel: A new source of proteins. NV Vandemoortele, Protein Division, Prins Albertlaan 12, B-8700 Izegem, Belgium; NV Befico, Marsveldplein 5–bus 28, B-1050 Brussels–Belgium. 9 p. 30 cm. [Eng]

• ***Summary:*** Contents: Soya: A source of proteins. Agronomy of soya (a hectare of land planted to soya will yield 500 kg of protein; this is more than any other plant or animal. Beef makes least efficient use of the land). Nutrition (soy proteins

are high in quality). Soyamel: A new protein source ("The industrial process developed by the Vandemoortele Group yields as high-quality soya bean-based drink" containing 3.3% protein and 44 calories per 100 gm. An illustration (line drawing) shows imaginary (never commercially produced) 1-liter and 500 ml Tetra Brik Aseptic cartons of Famalac energy drink in chocolate and vanilla flavors. A child is shown drinking the product from a glass with a straw). Soyamel: A reliable production process (shows the equipment and a flowchart of the process).

Vandemoortele, your partner: "The industrial concept of the Soyamel processing plant has been developed by the Protein Division of the Vandemoortele Group. Established in 1879, the Belgian Food Group Vandemoortele ranks among the most important food processing industrial companies of Europe in the field of edible oils and fats, and protein foods. The Group operates wholly-owned manufacturing and marketing subsidiaries in Belgium, the Netherlands, France, Great Britain, and the Federal Republic of Germany... The group employs over 1,700 persons and achieved a total turnover of $600 million (US) in 1978." Photos show three large Vandemoortele plants.

A foldout on the last page shows a cutaway view of a large soymilk plant. "Standard production capacities: 4,000 liters/hour or 20 million liters/year; 6,000 liters/hour or 30 million liters/year; 8,000 liters/hour or 40 million liters/year. The Vandemoortele Group has developed a compact installation.

"Yield: 1 kg soya beans produces an average of 5 to 8 liters [= 6½ quarts] soya bean milk and some residues for animal feeding. Vandemoortele is also willing to assume the technical management of the plant for a limited period of time. In this way Vandemoortele will be able to guarantee the best plant start-up in relation to local circumstances."

Note 1. Talk with Philippe Vandemoortele. 1990. June 4. This booklet, published before Alpro was established, was designed to sell turnkey soymilk plants. The protein division of N.V. Vandemoortele started the company's soymilk research. As long as it was only doing research and losing money there was no need to start a new company. Alpro started when it was clear that there would be income from the sale of the first turnkey plant. At that time, the protein division of N.V. Vandemoortele turned into Alpro, and the former then ceased to exist. Soyamel was a term that was coined for future soymilk products. Alpro first began to actually sell Soyamel in March 1981. In about 1983 it looked as if a company named Soyamel Nigeria Ltd. would buy a turnkey plant, but the deal never went through.

Note 2. This is the earliest document seen (July 2013) concerning Alpro or its predecessors in Belgium.

Note 3. The term Soyamel, a registered trademark of Worthington Foods Inc., was first used in about 1954 to refer to a powdered soymilk made by Worthington. Address: Izegem, Belgium. Phone: (051) 30 22 22.

3278. Okita Enterprises, Inc. 1979. Masuko Sangyo Miniplant: Tofu & soy milk machine. 960 E. 12th St., Los Angeles, CA 90021. 12 p. Undated. 28 cm.
• ***Summary:*** A photo on the cover shows the Masuko Sangyo Miniplant on a blue background. Okita Enterprises is the sole agent in the USA for the equipment shown in this catalog. Okita has a training center at 723 S. Stanford Ave., Los Angeles, California 90021. The body of the catalog shows photos and gives details on the following equipment: The Miniplant and related parts (p. 2-5). The Super Masukoroider, a soybean grinder with special non-permeable grinding stones made by Masuko Sangyo K.K. in Japan (p. 6-7). Various sizes of manual and automatic tray packagers, the smallest of which is the Monkey Packer 1 (p. 8-9). The new Asahi Container (tofu pressing and forming box), made of stainless steel and Tofu-Tex "cloth" by Toyo Plant in Japan. Address: Los Angeles, California. Phone: (213) 629-2206.

3279. Okita Enterprises, Inc. 1979. Sany Ace "Unit": Unit type sanitary plant [Automatic tofu & soy milk machine]. 960 E. 12th St., Los Angeles, CA 90021. 6 p. 30 cm.
• ***Summary:*** On the cover is a photo of the Sany Ace plant on a blue and white background. The manufacturer is Sato Shoji Co. Ltd. in Japan. Okita Enterprises is an importer of this equipment. Contents: DEvelopment of the "Sany Ace (Unit)." Characteristics of Sany Ace. Flow sheet, with the names and a mechanical drawing of each piece of equipment in the system. Features of the grinding unit, boiling unit, and squeezing unit (with a photo of each). Option: Advanced separator for labor saving: Vibrating screen, Brown squeezing unit (with photos of both). Address: Los Angeles, California. Phone: (213) 629-2206.

3280. Okita Enterprises, Inc. 1979. Rietz Manufacturing Co. 960 E. 12th St., Los Angeles, CA 90021. 4 p. Undated. 28 cm.
• ***Summary:*** A black-and-white photo on the front cover shows a Rietz disintegrator on a green background. A black-and-white photo on the rear cover shows a Rietz tofu and soymilk cooker on a white background. The inside two pages show mechanical drawings of these two pieces of equipment integrated into the OK-FRSB 1000 tofu plant, which has a capacity of 10-15 gallons/minute. The text states that this "could very well become the Tofu plant of the future." Note: Rietz (c/o Bepex Corp.) is located in Santa Rosa, California. Address: Los Angeles, California. Phone: (213) 629-2206.

Come prepare il go, il latte di soia e il tofu [Soybeans. Seeds and sprouts: how to grow, prepare, and cook them. Combining with meat and vegetables. How to prepare fresh soy puree (gô), soymilk, and tofu]. Milano, Italy: Sonzogno. 127 p. [73 ref. Ita]
• ***Summary:*** Contains many recipes. Address: Italy.

3284. Riker, Tom; Roberts, Richard. 1979. Directory of natural and health foods: A sourcebook for dietary revolution. New York, NY: Putnam (A Paragon Book). 320 p. Index. 37 cm.
• ***Summary:*** The first part of this book (p. 7-49) consists of essays on natural foods and nutrition (some reprinted). Part two is a commercial catalog/directory of natural foods available in 1979; it lists and describes (with may photos and labels) products from most of the major U.S. natural foods manufacturers. An Index (p. 293-308) lists participating companies alphabetically.

Soy-related products include: Hain Super-E Soy Oil and Crude [unrefined] Soy Oil (Los Angeles, California, p. 55). Health Valley Soy Moo (Montebello, California, p. 56). Edward & Sons Miso-Cup (Union, New Jersey, p. 57). Family Orchards Fruit & Nut mixes, incl. Back Packer+*, Hi-Fiber Mix+, Hi-Iron Mix+, Hi-Protein Mix+*, Hiker's Helper, Mixed Nuts*, Mountain Munchies*, Tamari Mixed Nuts* (+ = contains Soy Nuts; * = contains Tamari Peanuts) (Berkeley, California, p. 60-61). Niblack Tamari Pumpkin Seeds (Pepitas), Tamari Roasted Sunflower Seeds, Liquid Lecithin, Granular Lecithin (Rochester, New York, p. 72-73). Arrowhead Mills Unrefined Soybean Oil (Hereford, Texas, p. 75). Good Morning New England Granola incl. Cashew-Raisin Bran-ola (with okara soy fiber), Happy Trails Mix (with roasted soynuts) (Amherst, Massachusetts, p. 79). Elam's Soy Flour (Broadview, Illinois, p. 81).

A long section on Erewhon and its products (p. 84-108) is probably the reproduction of an Erewhon catalog. Erewhon is now located at 3 East Street, Cambridge, MA 02141. Following several pages about the company and its philosophy and standards, each of its major products is discussed in detail, often with nutritional analyses. A label for Soy Flour (organically-grown stone-ground, 24 oz.) is shown; the main recommended use is for making soy milk! A major part of the presentation is titled "Japanese food guide." Products described include: Umeboshi (2 pages): Plums pickled in brine (umeboshi). Umeboshi paste. Plum concentrate (*bainiku ekisu*). Miso (2 pages): Hatcho, waka-Hatcho, soybean, barley, brown rice, rice, and natto miso varieties. Tekka (made with Hatcho miso). Sweets made from mizu ame [rice syrup]. Nigari. Gomashio. Koji starters for various types of miso or shoyu. Goma-muso (60% barley miso and 40% whole sesame seed butter). *Gomamiso furikake* (with barley miso, whole roasted sesame seeds, and shredded nori seaweed). Kombu candy. Kokkoh. Dried tofu (*Kohya-dofu*). Brown rice sake. Mirin. Gluten cakes (*Kuruma-fu*). Seitan (Gluten cooked in shoyu). Rice crackers seasoned with tamari soy sauce. Kuzu (3 pages). Tamari and shoyu (4 pages; Johsen Shoyu is made in Sendai and tamari is made by San-jirushi Co.). Seaweeds (4 pages): Kanten, arame, hijiki, kombu, ne-kombu, nori, seasoned nori, kanten, kanten flakes, wakame, and mekabu.

Good Food brand Soy-Millet Bread (Austin, Texas, p. 120). Arrowhead Mills Bulgur-Soy Grits (p. 121). Erewhon Morning Cereal, and Infant Cereal (each containing soy beans). Chico-San Black Soybeans (imported), and Azuki Beans (Dainagon imported small red), and Lima Soy Sauce (Chico, California, p. 126-27). Arrowhead Mills 7 Grain Cereal, and Deaf Smith Crunch (granola-type cold cereal) (each contains soybeans, p. 130).

The section on pages 188-197 is titled "Soy." It lists Farm Foods Tempeh Kit, Tempeh Starter, Natural Nigari for Curding Tofu, Soyflour, Whole Cleaned Soybeans, Good for Ya Textured Vegetable Protein (Summertown, Tennessee, p. 189). New England Soy Dairy Tofu (with many tofu recipes, Greenfield, Massachusetts, p. 192-96).

The Redwood Sprouter Co. sprouter containing Soy Sprouts (1976, Austin, Texas, p. 202-04). Worthington Foods (a photo shows their line of 38 products). Millstone Burger-Like (with soy flour and TVP), Wheat Fries (with wheat gluten), Tender Cuts (with wheat protein and soy flour) (Penryn, California, p. 222-23). Sunrise Health Products Lecithin Granules (p. 274-75).

3285. **Product Name:** [Tofu kit].
Foreign Name: Tofu kit.
Manufacturer's Name: Roland A. di Centa.
Manufacturer's Address: Via Maffei, Milan, Italy.
Date of Introduction: 1979. January.
New Product–Documentation: Ad (in French, 2 inches square, black and white) in Le Compas (France). 1981. No. 17. Spring. p. 52. "Tofu kit. Contains everything to prepare tofu in your own home, including a 16-page booklet and enough nigari for two batches of tofu. Price: 120 francs, postpaid. Send a check to De Centa, 12, rue des Patriarches, 750-05, Paris."

An undated booklet accompanied this tofu kit made in Italy by Roland A. di Centa, Italy's first Caucasian tofu maker. On the yellow cover of the French-language booklet the word "tofu" is also written using Chinese characters. Contents of the booklet: Tofu: What is tofu?, vitality and energy, proteins, easy to digest, saturated fats and cholesterol, easy to prepare in recipes, make tofu at home using the tofu kit. The tofu kit and its contents. Details on the tofu kit and how to use it. How to store and press tofu. How to make tofu at home: Detailed instructions with illustrations. Ingredients used in preparing tofu recipes: Tamari, miso, kuzu, unrefined sea salt, sesame oil, sesame seeds and gomashio, tahini (most sold at macrobiotic food stores). Recipes for using tofu. Recipes for using okara. Soymilk.

Note: This booklet was sent with a letter by Roland A. di Centa. 1993. Aug. 9. For details, see that letter.

3286. **Product Name:** [Tofu kit].
Foreign Name: Tau-fu kit.
Manufacturer's Name: Roland A. di Centa.
Manufacturer's Address: Via Maffei, Milan, Italy.
Date of Introduction: 1979. January.
New Product–Documentation: An undated booklet accompanied this tofu kit made in Italy by Roland A. di Centa, Italy's first Caucasian tofu maker. On the white cover of the Italian-language booklet the word "Tau-Fu Kit" is written in brown outline letters. Contents of the booklet: Tofu: What is tofu?, vitality and energy, proteins, easy to digest, saturated fats and cholesterol, easy to prepare in recipes, make tofu at home using the tofu kit. The tofu kit and its contents. Details on the tofu kit and how to use it. How to store and press tofu. How to make tofu at home: Detailed instructions with illustrations. Ingredients used in preparing tofu recipes: Tamari, miso, kuzu, unrefined sea salt, sesame oil, sesame seeds and gomashio, tahini (most sold at macrobiotic food stores). Recipes for using tofu. Recipes for using okara. Soymilk.

Note: This booklet was sent with a letter by Roland A. di Centa. 1993. Aug. 9. For details, see that letter.

Londrina (Parana), Brazil: EMBRAPA–Centro Nacional de Pesquisa de Soja (CNPS). 389 p. See p. 245-53. Held 24-30 Sept. 1978 at Londrina, Brazil. [14 ref. Por; eng]
• ***Summary:*** Contents: Summary. Introduction. Material and methods. Results and discussion. Flowcharts for formulas A, B, and C. Contains 4 tables. The goal of this work was to develop a food formula, based on soy protein and whole milk, fortified with man vitamins and minerals, for infants above 6 months of age, in order to improve the nutritional status of nursing infants and pre-school children. Three formulas were developed and compared. The soy protein component was an extract (soymilk) of whole soy flour. The formulas contained 1.8 to 4.5 gm of protein per 100 kilocalories. The biological value was above 85% when compared to casein. The PER raged from 2.18 to 2.48 and the *in vivo* digestibility from 79.9 to 81.6. Address: Instituto de Tecnologia de Alimentos (ITAL), Cx. Postal, 139–13.100–Campinas, SP [Brazil]. Phone: 23-9850.

Address: Cornell Univ., Ithaca, New York.

3289. Smith, Elizabeth Bernice. 1979. Vegetarian meal-planing guide: A lacto-ovo-vegetarian diet. Winnipeg, Manitoba, Canada: Hyperion Press Ltd. 104 p. Illust. (some color). 21 x 22 cm. [57+ ref]
• ***Summary:*** At head of title: "Dr. Elizabeth Smith's New World of Eating." Table 5e (p. 25) lists calories for meat alternates group. Soybean sprouts, miso, soybean curd (tofu), soybean milk, and TVP are moderate calorie, while soybeans and soy grits are high calorie.

Page 47 notes: "Generally speaking, legumes are moderately deficient in methionine. Soybeans are an exception, as are their by-products, tempeh (fermented), tofu (the curd formed for soya), and soybean milk. All these are roughly equivalent in quality to cow's milk.

Page 49 notes that when breast feeding is not possible, soyamilk may be formulated as a very satisfactory substitute; vitamin B-12 must supplement it in pill form. "An infant who cannot tolerate cow's milk because of allergy and cannot be breast fed may accept a soybean formula until 3 to 4 months of age. At weaning, according to Fomon, the child should continue to receive by cup either soybean formula or soybean milk fortified with vitamin B-12.

Pages 54-56 describe in detail how to sprout soybeans at home, and how to prepare homemade soymilk and tofu (soybean curd). It is advised that fermented soybean products such as miso and tempeh not be produced at home "as the control of the fermentation process by specific micro-organisms is too difficult to achieve without specialized training and equipment."

Soy-related recipes include: American soybean loaf (with soaked, ground soybeans, p. 76). Soybeans printanier (with cooked soybeans). Soya sesame loaf. Soya cheese balls (with cooked, seasoned soybeans). Soybean casserole (p. 77). Sprouted soybean Creole. Sprouted soybeans au gratin. Bean sprout chop suey (with tofu, p. 77). Skillet soya sprouts

and beans (p. 78). Soybean stroganov (p. 78). Address: Winnipeg, Manitoba, Canada.

3291. Voldeng, Harvey D. 1979. Soybeans in Canada–Past, present and future. Based on an article [sic, manuscript] by Dr. H. Voldeng. In: 1979. Fats and Oils in Canada: Annual Review. Ottawa, Ontario, Canada: Grain Marketing Office, Dept. of Industry, Trade and Commerce, Agriculture Canada. [vi] + 95 p. See p. 1-10. Chap. 1. [7 ref]
• ***Summary:*** Contents: Introduction. Introduction of soybeans to Canada. Importance of the soybean [worldwide]. Utilization. Food uses of soybeans: Oriental foods–Soy milk, tofu, sufu, miso, soy sauce, tempeh, Hamanatto, natto. Western ingredients–Full fat flour, defatted flour, soy protein concentrates (70% protein), soy protein isolate (more than 90% protein), textured soybean protein. Soybeans in Ontario. Development of short season varieties. Soybeans in Quebec and the Maritimes. Soybeans in the Prairies (southern Manitoba and Alberta).

A table shows soybean acreage in Ontario's leading counties in 1978. Kent 205,000. Essex 192,000. Lambton 170,000. Elgin 63,000. Middlesex 40,000. Other 7,000. Total (Ontario) 705,000 acres.

Soybeans grown in Ontario can be crushed at three plants: (1) Victory Soya Mills (owned by Procter and Gamble) in Toronto. (2) Canadian Vegetable Oil Processing Limited (owned by Canada Packers) in Hamilton. (3) The recently completed Maple Leaf Monarch plant (affiliated with Unilever Corporation) in Windsor. Total crushing capacity in Ontario is about 35 million bushels per year.

The CSP Foods Plant in Altona, Manitoba, has in some years crushed limited amounts of soybeans imported from the U.S.

"Development of short season varieties: The justification for the effort to develop a large acreage outside of southwestern Ontario has been the magnitude of imports of soybeans, meal and oil. This has been and continues to be sizeable. The situation (in metric tons = tonnes) is outlined below for the 1977/78 crop year: (1) Whole soybeans: Production 527,361. Imports 262,835. exports 64,173. Domestic crushing 728,400.

(2) Soybean oil: Imports 28,100. Exports 1,400. Domestic production 125,600.

(3) Soybean meal: Imports 376,300. Exports 45,600. Domestic production 575,400. Source: *Fats and Oils in Canada, Annual Review,* 1978.

Letter (e-mail) from Dr. H. Voldeng of Agriculture and Agri-Foods Canada. 2010. Feb. 16. The original "article" was not an article but a manuscript that was sent to the publishers of this volume; they reduced the length slightly. It was never published separately, no longer exists, and cannot be cited separately. Address: Agriculture Canada, Ottawa, Ontario.

• ***Summary:*** Contents: Introduction. Soybean supply: Seed structure and composition, composition of source material, storage and handling, soybean oil, food products from defatted soybeans, soy flours and grits, soy protein concentrates, isolated soy protein, amino acid and mineral composition. Food uses of soy proteins: Meat products, baked products, infant formulas and food, food analogs, dairy type foods (yogurt, sour cream, frozen desserts, cheese, and dip-type products), protein supplements, other uses. Address: Ralston Purina, Checkerboard Square, St. Louis, Missouri 63188.

3293. Loma Linda Foods. 1979? To your health, naturally! Recipes and catalog. Riverside, California. 10 panels. Undated. Front and back. Each panel: 16 x 10 cm.
• ***Summary:*** The cover of this very informative catalog is dark brown and orange-brown on beige, with a rustic illustration of a man and a woman with two horses and a plow in front of a small barn. Loma Linda Foods–Since 1906." Contents of the front panels: The Loma Linda story (history). Names of vegetarian products made by Loma Linda with a recipe for each: 1. Stew-Pac, Dinner Cuts, Tender Bits (canned). 2. Meatless Fried Chicken (frozen in carton). 3. Sandwich spread (canned). 4. Soybeans–Boston Style, Chili Beans, Green Soybeans (canned). 5. Savorex (plastic tub). 6. Tender Rounds (meatless meatballs) with Gravy. Fried Chicken with Gravy (canned). 7. Soyalac. i-soyalac (canned). 8. Meatless Breakfast Sausage (chub). 9. Redi-Burger. Vege-Burger (canned). Vita-Burger (Chunks or Regular; dry in box). 10. Nuteena (with peanuts and soy flour). Proteena (nut loaf). Vegelona (canned). 11. Gravy Quik (Meatless Gravy–Chicken Style, Brown, Mushroom, Onion, Smoky Bits, Country Style). Spaghetti Sauce Mix (foil pouches). 12. Long Links. Linketts. Big Franks. Little Links (canned). 13. Meatless Slices (Roast Beef, Bologna,

Chicken, Turkey, Salami; frozen in carton). 14. Soyagen (soy beverage; Carob, All Purpose {liquid}, Carob, All Purpose, No Sucrose {dry in canister}).

The back is divided into 14 rectangles of various sizes, one for each family of products described on the front. A color photo and description accompanies each of the 46 products. Address: Riverside, California.

3294. White, Jim. 1980. Close encounter of the tofu kind: A white custardy thing zooms out of the Orient onto your lunch counter. *Toronto Star* (*Ontario, Canada*). Jan. 18. Family section.

• ***Summary:*** This full-page feature states: "Brace yourself, Toronto, for the experience, because there's every indication tofu's going to do more than hover on the horizon like a fleet of sci-fi spacecraft." Victor Food Products in Scarborough [a suburb of Ontario] says that sales of tofu have nearly tripled in one year, from 720 lb/day to more than 1,900 lb/day. Shoppers can now buy tofu in selected Dominion, Lowlaws, Miracle Mart, and A&P outlets. "When the big boys take a bite of the action, you know something is cooking."

The article includes a listing of tofu makers and retailers in the Toronto area. Makers: (1) Pyung Hwa Co., 2139 Dundas St. W. Jhasun Koo. Phone: 534-0237. Korean-style tofu. Firm, 10-oz. cakes cost $0.55. (2) Wah Chong Co., 88 Ossington. Phone: 532-0841. Chinese style. $1.20/dozen. (3) Yet Sing Co., 11 Baldwin St. Phone: 863-0818. Custardy tofu. $0.70/dozen. (4) Victor Food Products. A photo shows Stephen Yu, standing with has packaged tofu and soymilk products.

Paul Smith, owner of Baldwin St. Natural Foods, runs a small night class once a month on making tofu. Branson Hospital (Seventh-day Adventist) has been serving vegetarian meals to patients for 22 years. Much of the protein comes from soyamilk, soya curd, and other soya products. Interest in tofu has been spread by the publication of *The Book of Tofu,* by William Shurtleff and Akiko Aoyagi. Address: Star Food Writer.

3295. *British Medical Journal.* 1980. How necessary are elimination diets in childhood? 280(6208):138. Jan. 19. [8 ref]

• ***Summary:*** Discusses part of the controversy on the value of soy in elimination diets.

3296. Praskin, Laurie. 1980. Re: Plenty's work with soyfoods in Solola, Guatemala. Letter to William Shurtleff at Soyfoods Center, Jan. 28. 2 p. Typed, with signature.

• ***Summary:*** Plenty, run by The Farm in Tennessee, is introducing soymilk, tofu, and soy ice cream to the Guatemalan highlands and building a soy dairy in Solola. Address: Plenty, San Bartolo, Solola, Solola, Guatemala.

3297. ASEAN Sub-Committee on Protein. 1980. ASEAN Protein Project. Bangkok, Thailand. 24 p. Jan. Illust. 29 cm. [Eng]

• ***Summary:*** Contents: Introduction (incl. history, programs, and budget). Administration (incl. list of workshops held by the ASEAN Sub-Committee on Protein). Research and development. High-protein low-cost foods. Full-fat soy flour (a plant at Chiang Rai, northern Thailand, produces 100 tons/month). Fermented foods (incl. soy sauce). Soy products (incl. tofu). ASEAN network (directory).

"The ASEAN Protein Project was conceived at a joint research project on soybeans and protein-rich foods at the first meeting of the ASEAN Permanent Committee on Science and Technology held in August 1971 in Indonesia. Meetings of food specialists soon followed, one in September 1972 in Malaysia and another in November 1972 in Indonesia. At a further meeting in August 1974, involving Australian technical experts, four areas for research co-operation were identified, namely: (1) Identification, development, and utilisation of low-cost, protein-rich foods for children and other vulnerable groups. (2) Processing and utilisation of full fat soy flour (3) Improvement of fermentation technology; and (4) Microbiological culture collection.

Workshops held by the ASEAN Sub-Committee that concern soya include: 1st Workshop on soy products (1976, Kuala Lumpur, Malaysia). 3rd Workshop on culture collection (1977, Bangkok, Thailand). 4th Workshop on soy sauce manufacturing techniques (1978, Singapore). 5th Workshop on solid substrate fermentation (1978, Bandung, Indonesia). 8th Workshop on extruder technology (1980, Bangkok, Thailand).

Photos show: (1-4) Participants, meetings, and tours. (5-6) Full fat soy plant at Chiang Rai, Thailand. (7) Commercial soy sauce factory. Address: Bangkok, Thailand.

3298. **Product Name:** [GranoVita Soja Drink, and Carob Drink].
Foreign Name: GranoVita Soya Drink, Caroba Drink.
Manufacturer's Name: DE-VAU-GE Gesundkostwerk GmbH (Marketer). Made in Belgium by Alpro.
Manufacturer's Address: Luener Rennbahn 18, Postfach 1660, D-2120 Lueneburg (near Hamburg), West Germany.
Date of Introduction: 1980. January.
Wt/Vol., Packaging, Price: 500 ml Tetra Brik Aseptic carton.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 123; STS. 1985. Containers for Soymilk. Shows color photo of 500 ml Tetra Brik carton. Orange and green on white. "Made purely from plants. Free of cholesterol. Rich in protein (Rein pflanzlich. Cholesterinfrei. Eiweissreich)." Manufacturer's catalog. 1983. GranoVita. Health-food & natural food from Germany. 6 p. plus 3-page price list. With color photos and ingredients

for all products. Retail price is DM1 for 0.5 liter. R. Leviton. 1983. Report on trip to Europe with American Soybean Assoc. Oct-Nov. p. 17. Product seen in Reformhaus health food store in Zurich, Switzerland. Sold for F1.75/500 ml.

Form filled out by Alpro. 1990. May 30. Alpro began making this product (2 flavors) in Jan. 1980 in 500 ml cartons.

3299. *Soyanews* (*Sri Lanka*). 1980. Deadlines set for soya milk: Substitute for ten million coconuts a year. 2(7):1, 7. Jan.

• ***Summary:*** "The best soya news of 1979 may well be the government's decision to produce drum-dried soya milk at Anuradhapura, in the heart of the country's best soya land.

"At a conference held by the Acting Minister of Agricultural Research and Development, Mr. Chandra Bandara, the following time table was set:

"Dec. 1979–Finalise floating a public company. March 1980–Finalise specifications for tenders. April 1980–Call for tenders for machinery and equipment. May 1980–Finalise awards. And best of all: Jan. 1981–Commissioning of the plant.

"Forbes and Walker will float a public company in consultation with Industrial and Commercial Consultants Ltd., who may handle the incorporation of the company, call for tenders, appoint suppliers of machinery and equipment, appoint contractors to build the plant, in short everything up to the point of commissioning, when the key is turned.

"The factory is expected to produce 4,000 lbs. of dried milk a day. Working 250 days a year it would produce one million pounds of dried milk which can substitute for ten million coconuts in the nation's kitchens."

The price of coconuts has been rising rapidly, and using soymilk made from domestic soyabeans has some foreign exchange benefits. A flow chart shows the basic steps and equipment used in making drum dried soya milk at the plant.

3300. Soothill, J.F. 1980. Elimination diets in childhood. *British Medical Journal* 280(6211):401-02. Feb. 9. [2 ref]

• ***Summary:*** Part of the controversy on the value of soy in elimination diets. Address: Dep. of Immunology, Inst. of Child Health, London WC1N 1EH, England.

3301. Mashburn, Rick. 1980. From beans to 'cheese.' *Sentinel* (*The*) (*Winston-Salem, North Carolina*). Feb. 15. p. 7. [1 ref]

• ***Summary:*** About Jerry MacKinnon and Bean Mountain Soy Dairy of Boone, North Carolina. The shop makes 1,000 lb/week of tofu plus some tempeh and soymilk. MacKinnon left a tofu business he started in Ann Arbor with four other people 2 years ago when it grew too big. "MacKinnon seems reluctant to start sermonizing on the virtues of tofu. He'd much rather hand out a copy of a chapter from *The Book of Tofu,* by William Shurtleff. Crowell, however, is a more zealous missionary." Concerning the future of tofu, he notes: "As soon as General Foods realize Americans are gonna eat tofu, we'll be out of business." Four photos show Jerry MacKinnon, with beard and hat, cooking 50 lb of ground soybeans in steam-jacketed cooker. A portrait shows Marc Crowell. A label for the company's tofu product.

3302. Leviton, Richard. 1980. Sanitary practices and soyfoods production. *Soycraft* (*Colrain, Massachusetts*) 1(2):24-31. Winter. [8 ref]

• ***Summary:*** Discusses: Bacteria, on overview. Six bacterial families. The view from the health department: "In Massachusetts the following serve as guidelines for evaluating tofu: 1. Total plate count: no more than 100,000 colonies/gm product. 2. Total coliform: no more than 100 colonies/gm product. 3. *Staphylococcus:* no "coagulase positive" Staph. Coagulase negative Staph. do not cause food poisoning. 4. Minimal enteric (human intestinal) bacteria, e.g. *Escherichia coli.* 5. Zero or very low product tolerance for pathogenic organisms, depending on the type, e.g. *Salmonella, Klebsiella, Shigella.* 6. Holding temperature of product less than 40ºF or greater than 150ºF." These are compared with milk standards. Recommended building, floor, and drain specifications are discussed. For unpasteurized tofu, the Massachusetts Dept. of Public Health recommends a 7-8 day shelf life, and would like to see (1) a maximum allowable bacterial count established for soyfoods, and (2) what are the ideal lowest counts achievable under good manufacturing practices.

Setting up an in-house sanitation laboratory. Last summer New England Soy Dairy employed Amy Braveman, an undergraduate in microbiology and chemistry at the Univ. of Mass. to set up such a lab. Details and photos are given. Typical pH values on the soymilk production line are: bean soak water 6.5, slurry 6.7, soymilk 6.6, tofu curds 5.9. Actual plate count and coliform count for various pieces of equipment and stages in the tofu manufacturing process are given. Phase II of the companies total sanitation program is discussed. Address: Colrain, Massachusetts.

3303. Plamil Foods Ltd. 1980. Plamil (Ad). *Alive* (*England*). Jan/Feb. p. 16.

• ***Summary:*** An 1/8 page ad. "For health's sake, make sure you have the right fats. Plamil soya plantmilk & derivative products are rich in polyunsaturates. Send for literature (s.a.e. please)." Address: Bowles Well Gardens, Folkestone, Kent [UK].

3304. *Plenty News* (*Summertown, Tennessee*). 1980. Soybeans in the Third World. 1(4):4-5. Winter.

• ***Summary:*** "Soy dairy [in Guatemala]: The village soy dairy in San Bartolo is now complete. The building was constructed during the summer and fall of 1979 in conjunction with the men of the community. The

inauguration for the 22 by 44 foot soy dairy occurred on February 15, 1980."

"Several hundred local people and officials attended and enjoyed the festivities and free ice bean. Augustin Xocuic, (pictured above) President of the San Bartolo Community Association, spoke warmly of the cooperation and help given by Plenty."

"The dairy has a split-level design for gravity feed production and also contains a sawdust stove for water heating."

"The dairy is capable of producing 200 pounds of tofu and 35 gallons of ice bean daily. Some will go out free to schools. We will be test marketing the soy products to determine the viability of the soy dairy as a self-sustaining cottage industry.

"The construction of the dairy was a community effort on the part of the people of San Bartolo. Training in soy dairy management will also involve interested members of this community."

"This pilot project has drawn a great deal of interest from other international organizations."

"Tofu is a complete protein and when it is served with a grain food like tortillas or bread it has even more protein value. Ice bean is naturally the popular way to eat the 'Noble Bean'."

Lesotho: "During 1979 Plenty introduced soybean in Lesotho. A demonstration of soy technology for home use was held at the National Agricultural Show in Maseru last June. The booth sparked much interest. Soy demonstrations have been held in the Sebapala villages and were met with acceptance and enthusiasm.

Photos show: (1) The soy dairy equipment being loaded for shipment to Guatemala. (2) Augustin Xocuic of San Bartolo talking with two people from Plenty. (3) A Plenty volunteer and a Guatemalan stirring soymilk with a wooden paddle. (4) A view of the new soy dairy in San Bartolo from the outside. (5) Two little Guatemalan girls enjoying soy ice cream on a cone. (6) A Plenty volunteer (Suzy Jenkins) and a Guatemalan woman each demonstrating tofu on a tortilla. "At the annual fair in the square in Solola, we were invited to set up a booth featuring tofu on tortillas. On the first day we 'sold out' in half an hour... on the second day it all sold out in ten minutes." (7) A Plenty volunteer (man) standing behind a long wooden table on which are soyfoods and simple equipment for making them at home. Looking on are 6-8 people from Lesotho. (8) A Plenty volunteer and a kid from Lesotho serving soymilk in cups to many other African kids. "In Lesotho, Plenty's volunteers have begun soy demonstration classes for native villagers in the Sebapala area. In Africa, as in Guatemala, the 'Noble Bean' has been welcomed with great interest and enthusiasm."

3305. Schuette, Sally A.; Zemel, M.B.; Linkswiler, H.M. 1980. Studies on the mechanism of protein-induced hypercalciuria in older men and women. *J. of Nutrition* 110(2):305-15. Feb. [40 ref]

• ***Summary:*** When urea and amino acids enter the kidneys on the way to elimination in urine, they cause not only the loss of excess water but also the excretion of large amounts of minerals. Address: Dep. of Nutritional Sciences, Univ. of Wisconsin, Madison, WI 53706.

3306. *Soyanews* (*Sri Lanka*). 1980. Soyabeans make the front page. 2(8):1, 7. Feb.

• ***Summary:*** "A news item in the national press and broadcast on the radio said that the Anuradhapura plant (*Soyanews,* Nov-Dec. 1980, this page) will produce full-fat soya flour (FFSF) in addition to drum dried soya milk (DDSM) as well. It is to be mixed with wheat four to produce a more nutritious loaf of bread. The goals of better bread and less coconut milk are so much closer."

"The Thriposha processing complex at Ja-Ela will also help. The Marketing Department bakery in Colombo recently made bread fortified with 2% soya."

Redd Barna, the Norwegian Save the Children organisation, would like to help develop weaning using soya.

A Sinhalese illustration shows a Sri Lankan farmer squeezed in a vice between the jaws of Price and Marketing. If farmers are to grow soyabeans, they must get a reasonable price from their sale and make a reasonable profit.

3307. *Soycraft* (*Colrain, Massachusetts*). 1980. Soyfoods deli update. 1(2):10. Winter.

• ***Summary:*** Discusses Yellow Bean Trading Co. (Detroit, Michigan), The Tofu Shop (Rochester, New York), and The Cow of China (Boulder, Colorado), and The Soy Plant Deli (Ann Arbor, Michigan).

"The Yellow Bean Trading Company of Detroit, Michigan, began business in September 1978, with a truck, garage, and cooler, as Timothy and Carol Huang delivered tofu, tempeh, soysage, and soymilk, made by the Ann Arbor Soy Plant, around the metropolitan area. But in March 1979, they opened a retail delicatessen because they 'wanted to teach people about soyfoods by letting them taste them, which is better than reading about them in books.' The deli retails groceries, juices, herbs, teas, dry grains, bulk tofu, bottled soymilk, nori rolls, tofu carob creme pies, and tofu salad. The Yellow Bean has seating for fourteen and they are planning to introduce hot food items, such as tofu spinach pies, tofu lasagna, rice with tempeh, and bean and vegetable dishes." Though currently losing money, the deli grosses about $600 each six-day week.

Greg Weaver of The Tofu Shop in Rochester reports that August 1979 was their biggest month all year; they grossed $2,000/week. Autumn sales averaged about $1,700/week. During the World Series in October they invented the Not Dog–a hot dog based on baked tofu.

Steve Fiering of the Soy Plant deli in Ann Arbor reports

steady sales of about $1,000 a week. Steve Demos at the Cow of China deli in Boulder reports that retail sales peaked in August at $450/day. Now they range from $1,700 to $2,000/week.

3308. Takai. 1980. Takai Tofu & Soymilk Equipment Co. (Ad). *Soycraft* (*Colrain, Massachusetts*) 1(2):54-55. Winter.
• ***Summary:*** This 2-page ad gives basic information about the company. Photos show: (1) "Our modern tofu and soymilk equipment factory." (2) Takai continuous roller extractor. (3) Takai automatic duplex pressure cooker system (S180). (4) Takai pressure cooker system (S40A). (5) Pressure cooker. (6) Hydraulic press. (7) Takai automatic pressure cooker system (W30C). Address: 307 Inari, Nonoichi-machi, Ishikawa-ken 921, Japan.

3309. Bronson, Gail. 1980. Breast-feeding advocates increasingly question safety, nutritional value of infants' formulas. *Wall Street Journal.* March 21. p. 40.
• ***Summary:*** At least 130 infants became ill after receiving Neo-Mull Soy, a processed soybean formula, made by Syntex Laboratories (a subsidiary of Syntex Corp.), a pharmaceutical company located in Palo Alto, California. The formula was found to contain too little sodium chloride–common table salt. Fortunately, none of the infants died.

Cow's milk is the basis for about 80% of all U.S. infant formulas, and soy protein for about 20%–according to Syntex. America's best-selling infant formula is Similac, made by Ross Laboratories of Columbus, Ohio; it has over 50% of the market, and is followed by products made by Mead Johnson (a subsidiary of Bristol-Myers Co., Evansville, Indiana), and Wyeth Laboratories (a division of American Home Products Corp., Philadelphia, Pennsylvania).

3310. Island Spring Inc. 1980. Can you make a living making tempeh? (Ad). In: William Shurtleff and Akiko Akiko. 1980. Tempeh Production: The Book of Tempeh, Volume II. Lafayette, California: New-Age Foods Study Center. 176 p. See p. 171.
• ***Summary:*** This quarter-page black-and-white ad is for the Soycrafters Apprenticeship Program, a professional 21-day intensive "hands-on" course in the commercial production and marketing of tempeh, tofu, soymilk, and related soyfoods. Address: P.O. Box 747, Vashon Island, Washington 98070. Phone: (206) 622-6448.

3311. *Vegetarian Times.* 1980. Japanese remove "soybean taste." No. 36. March. p. 14-15.
• ***Summary:*** "Scientists at the Dep. of Food Science and Technology at Kyoto Univ. have found a way to treat defatted soybean extract with an enzyme which removes the 'beany' flavor that many people find disagreeable."

3312. Dunn, Carole. 1980. Soya beans are good for human 'beans.' *Chronicle, Tuesday Magazine* (*Eumundi, Australia*). April 15. p. 11.
• ***Summary:*** Cyril and Elly Cain, originally from the USA but now living in Imbil, are selling soyfoods at the Saturday morning Eumundi market, including soymilk drinks, smoothies, plain tofu, flavored tofu dips and spreads, tofu sandwiches and burgers, Soysage rolls, ice bean (soy ice cream), and a variety of cakes and pies such as tofu cheesecake. A photo shows Elly smiling as she makes a sale at a tofu & soymilk stall; Cyril appears in the background.

3313. Belt, Becky; Jelepis, Kathy. 1980. Tofu takes many forms. *Dispatch* (*Columbus, Ohio*). April 23.
• ***Summary:*** Bill Lutz and Mick Vissman, two entrepreneurs in their 20s, recently started Rainstar Foods, which distributes tofu and other natural foods. They also started the Hip Pocket Tofu Deli [on 1 March 1980]; its popular items include: Chili with tofu, Eggless "egg salad," Saltimbocca (marinated tofu cuts), Tofu burger, Guacamole, and Tofu onion-garlic dips. Soy foods like soymilk, soysage, and seitan roast are also on the menu. For dessert there is tofu cheesecake and banana cream pie. All recipes used at the deli were developed by chef Dennis Prutsman, who cooked with tofu for 15 years in San Francisco, California. No recipes are given.

3314. Ling, C.A. 1980. Time catches up with Plamil. *Alive* (*England*). March/April. p. 15.
• ***Summary:*** This year is the 15th anniversary of Plamil Foods Ltd. (formerly named Plantmilk Ltd.), "as it celebrates 15 years of marketing the well-known Plamil soya plant milk," which is sold in virtually every health food store in the country.

Plamil Delice is a replacement for dairy cream. Plamil Rice Pudding was made to replace its dairy counterpart. Address: Managing director, Plamil Foods Ltd., Bowles Well Garden, Folkestone, England.

3315. Plamil Foods Ltd. 1980. Plamil (Ad). *Alive* (*England*). March/April. p. 7.
• ***Summary:*** An 1/8 page ad. A cartoon (by Artie; see next page) shows a cow and her calf standing in front of a huge billboard on which is written "Plamil" (in black letters on white). The mother cow says: "That is for humans, dear."

Below the cartoon: "Send for literature on all our non-dairy products (s.a.e. please)." Address: Bowles Well Gardens, Folkestone, Kent [UK].

• ***Summary:*** A step-by-step guide to making each product using simple equipment. Address: Cornell Univ., Geneva, New York.

3318. Hope, Jane; Bright-See, E. 1980. Milk digestion aid now in liquid form: Nutrition matters. *Toronto Star* (*Ontario, Canada*). May 14. p. D3.
• ***Summary:*** Those who don't drink milk because they can't digest its lactose [a sugar], might want to try LactAid; just add 4-5 drops to a glass of milk.

Other people are forced to avoid milk and milk products because they are allergic to milk protein. Babies with milk allergies are often given formulas based on soy protein. "Since soy protein is a high quality protein, the babies grow just as well as if they were getting regular milk."

Adults who are allergic to daily milk might "consider using the soy products which are available in many Chinese grocery stores. These include soybean milk and bean curd (also known as tofu or dow fu). The protein in these products is very good." And they contain no lactose.

Small photos show Jane Bright and Dr. E. Bright-See.

3319. **Product Name:** Promax 70 (Soy Protein Concentrate).
Manufacturer's Name: Griffith Laboratories.
Manufacturer's Address: 12200 S. Central Ave., Alsip, IL 60658.
Date of Introduction: 1980. May.
New Product–Documentation: Moore, Karen. 1980. "Upgraded soy protein concentrate exhibits improved functional properties: Emulsification, fat and moisture binding ability approaches or equals that of soy isolate, casein and NFDM. Processed meat, snacks and milk replacers are end use applications." *Food Product Development* 14(5):62, 64. May. About Promax 70.

Two 1-page leaflets sent by Griffith Laboratories. 1980. One, titled "Promax-70 Soy Protein Concentrate," gives a detailed nutritional analysis. The other, titled "See the Promax Difference," shows six model oil/water emulsion systems in glass jars. "Note Promax-70's superior performance in maintaining stability against proteins costing considerably more." Soya Bluebook. 1982. p. 64.

3320. Okada, M.; Miyura, Y.; Komeyasu, M. 1980. [Effect of heat treatment on flavor of soy milk]. *Nippon Shokuhin Kogyo Gakkaishi* (*J. of the Japanese Society for Food Science and Technology*) 27(5):245-51. May. [Jap; eng]*

3321. **Product Name:** [Soyalac {Soymilk} (New Plain Type)].
Foreign Name: Soiyarakku Neo Sutoreeto Taipu.
Manufacturer's Name: San-iku Foods.
Manufacturer's Address: 1-1 Nagaurataku, Sodegaura-machi, Kimizu-gun, Chiba-ken 299-02, Japan.
Date of Introduction: 1980. May.
Wt/Vol., Packaging, Price: 250 gm can.
How Stored: Shelf stable; refrigerate after opening.
New Product–Documentation: K. Tsuchiya. 1982. Dec. *Tonyu* [*Soymilk.* 2nd ed.]. p. 74. States that Neo Sutoreeto Taipu was introduced in May 1980 by Saniku Fuuzu in a 250 gm can and distributed nationwide.

3322. Sayavun, Daranee; Tontsirin, Kraisid. 1980. Effectiveness of "Kaset Soy Milk" in treatment of infants with diarrhea. *ASEAN Protein Project Newsletter* No. 6. p. 5-6. May. [Eng]
• ***Summary:*** Soymilk, an inexpensive product, was found to be effective in the treatment of acute diarrhea in infants. Address: Mahidol Univ., Bangkok, Thailand.

3323. *Consumer Reports.* 1980. Soybeans–the "meat" that grows on vines. 45(6):360. June.
• ***Summary:*** This sidebar to the article "Vegetarianism: Can you get by without meat?" gives a brief description of the soybean and its food uses. "Roasted soybeans [soynuts] can be a delicious snack food." A small amount of soy flour added to bread or pasta dough appreciably increases those foods' protein content. Sprouted soybeans can be eaten cooked or as a salad vegetable and are a good source of vitamin C.

"Soybeans can be made into a milk that, when fortified, can supply nutrients usually obtained from cow's milk. That's important for total vegetarians or those allergic to milk protein. Soy milk can be made into a cheese: soybean curd, or tofu, familiar to many as the little white cubes floating in the soup at a Chinese restaurant." Also mentions soy sauce, miso, tempeh, and meat extenders or meat analogs.

3324. Jayawardene, Ellen. 1980. Sri Lanka soya recipes. Unpublished manuscript. 15 p. Undated. Unpublished typescript. [Eng]
• ***Summary:*** "In soyabean cookery, time is saved by using broken soyabeans." Contains the following 29 recipes: Soya curry (with broken soyabeans). Soya sambol (with blanched roasted soybeans). Soya string hoppers (with soya flour). Soya waddai (with broken soyabeans). Soya milk (1, made from finely ground raw soya flour). Soya milk curry. Soya milk residue and wheat roti (with okara). Soya murukku (with "full fat soyaflour"). Soyabean milk (2, made from soyabeans). Soya pakoda [pakora] (with soya residue or soya flour). Soya tofu (made from 5 cups soya milk). Tofu curry. Soya milk watalappam (with jaggery or *kitul*). Soya rice thosai [Indian = dosa, dosai] (with broken soyabeans). Soya wheat thosai. Soya rice hoppers (with soya flour). Soya rice kanjee (kande, congee [from Tamil; rice porridge or gruel]; with soya flour or soya milk). Soya–rice keum (with blanched roasted soyabeans). Soya kurakkan roti (*karukkan* = millet; with processed soya flour). Soya groundnut sweet (with blanched and roasted soyabeans). Soyamilk with broken beans. Soya pittu (with soya milk residue). Soya kiri bhat (with soya milk). Soya vegetable mixed curry (with broken soyabeans). 25. Soya coconut chutney (Indian type; with blanched and roasted soyabeans). Fried soyabeans. Soya mixture (with fried soyabeans and flattened rice–*Habala Peti*). Soya rice aluwa [halva, halwa] (with dehulled soyabeans). Soya potato cutlets (with broken soyabeans).

3325. **Product Name:** Tofu Spinach Quiche (Eggless).
Manufacturer's Name: Legume.
Manufacturer's Address: 112 West 75th St., New York, NY 10023. Phone: 212-362-6616.
Date of Introduction: 1980. June.
Ingredients: Tofu, soymilk, soy oil, spinach onions, mozzarella cheese, garlic, soy margarine, spices. Crust: Whole wheat flour, soy margarine, sea salt.
Wt/Vol., Packaging, Price: 10 oz.
How Stored: Refrigerated or frozen.
New Product–Documentation: Letter from Chandri Speer to Bill Shurtleff. 1980. June 23. "We are doing business as Legume and have created a kosher product line including tofu-spinach quiche (eggless), whipped tofu mousse pie, and soon to include contemporary chile..." Label. 1980, undated. 3.25 by 4 inches. "Complete protein meals by Legume. 100% natural. No preservatives. No sugar. No artificial additives... If frozen, bake for 35-40 minutes." This is an early American frozen tofu entree. It is eggless and kosher, but not dairyless. Shurtleff & Aoyagi. 1980. List of soyfoods products.

3326. **Product Name:** Legume Tofu Muffin [Tofu-Carrot-Bran, or Tofu-Banana-Bran].
Manufacturer's Name: Legume.
Manufacturer's Address: 112 West 75th St., New York, NY 10023. Phone: 212-362-6616.
Date of Introduction: 1980. June.
Ingredients: Carrot-Bran: Whole wheat flour, bran, carrots, honey, tofu, soymilk, raisins, soy margarine, safflower oil, baking powder, arrowroot, sea salt, natural flavorings.
Wt/Vol., Packaging, Price: 4 oz, cellophane wrapped.
How Stored: Shelf stable.
New Product–Documentation: Label. 1980, undated. 1.5 by 2 inches. "The complete protein snack by Legume. All natural."

3327. Leviton, Richard. 1980. Kicking the dairy habit: Healthy soyfoods are putting old cows out to pasture. *East West Journal.* June. p. 60-65.
• ***Summary:*** Discusses: The infant soyfoods industry. Luke Lukoskie. Soyfoods industry and market statistics. The soy deli. Five established soy delis in the USA. Third Annual Soycrafters Association Conference next month at the University of Illinois. Media coverage of tofu.

Tofu and soymilk recipes (from *The Book of Tofu,* by William Shurtleff and Akiko Aoyagi). Gives six tofu recipes and 3 soymilk recipes. Address: 1. Publisher and editor of *Soycraft,* 100 Heath Rd., Colrain, Massachusetts 01340.

3328. **Product Name:** Soysage (Meatless Okara-based Sausage).
Manufacturer's Name: Light Foods Inc.
Manufacturer's Address: 6144 Bartmer, St. Louis, MO 63133.
Date of Introduction: 1980. June.
Ingredients: Okara (Soypulp), whole wheat, flour, soymilk, nutritional yeast, wheat germ, safflower oil, bulghur wheat, soy grits, shoyu, honey, barley malt, sesame seeds, herbs & spices.
Wt/Vol., Packaging, Price: 20 oz (1 lb 4 oz), 567 gm.
How Stored: Refrigerated.
Nutrition: Per 2 oz.: Calories 147, protein 6.3 gm, carbohydrate 16.5 gm, fat 6.1 gm, sodium 292 mg.
New Product–Documentation: Label. 1980. June. 3 inches square. Self adhesive. Purple on white. Illustration of a winged unicorn jumping across a stream in front of a rising or setting sun. "No preservatives."

Barbara G. Ostmann. 1980. Post-Dispatch (St. Louis, Missouri). Oct. 29. p. 1E, 4E. "Time for tofu." Bob Davis' company Light Foods Inc. makes Soysage (soy "sausage").

Label. 1981, undated. 3 inches square. Self adhesive. Purple on white. Illustration of a winged unicorn rearing on its hind legs jumping across a stream in front of the rising or setting sun. "No preservatives. Please refrigerate." The size is now 22 oz (567 gm) plastic wrapped.

Leviton. 1981. Soyfoods. Summer. p. 42. "They produce up to 300 pounds weekly." 1983. Winter. p. 48. Gives name now as Light Soysage and ingredients as: Okara, bulghur

wheat, whole wheat flour, wheat germ, nutritional yeast, sesame seeds, shoyu, oil, mustard, soymilk, and 10 different seasonings.

3329. Long, Alan; Ling, Arthur. 1980. Plant milks and infant feeding. Infant feeding practices: A cause for concern. Clarification and facts: A reply by Arthur Ling of Plamil Foods. *Alive* (*England*). May/June. p. 18. [1 ref]
• ***Summary:*** Within the last year 15 severely ill babies have been treated at 2 London hospitals because the parents have fed them alternative milks "in good faith on the basis of publications or on the recommendations of those providing advice" (see *British Medical Journal*). The report mentions Plamil, which is said to be low in calcium, vitamin D, and potassium. Plamil should not be used as the sole food for babies. Ling replies that Plamil contains at least 80 mg of calcium per 100 gm, compared with 33 mg in human milk and 125 mg in cow's milk, as well as 70 mg of potassium per 100 gm. Vitamin D levels have always been adequate. Address: 1. MD, England.

3330. May, C.D.; Remigio, L.; Bock, S.A. 1980. Usefulness of measurement of antibodies in serum in diagnosis of sensitivity to cow milk and soy proteins in early childhood. *Allergy* 35(4):301-10. June. [24 ref]
• ***Summary:*** Over 50 children, 4-30 months of age, with suspicious histories of adverse reactions to cow milk or soy products were investigated. Soy protein is only weakly antigenic in man. Address: Dep. of Pediatrics, Univ. of Colorado Medical School and National Jewish Hospital and Research Center, Denver, Colorado.

3331. Shurtleff, William. 1980. Notes from INTSOY Short Course in soybean processing, SANA Conference (Urbana, Illinois), and subsequent research trip. Lafayette, California: New-Age Foods Study Center. 143 p. Unpublished manuscript. 28 cm. Spiral bound.
• ***Summary:*** This five-week INTSOY short course at the University of Illinois at Urbana began on 16 June 1980. Contents: Introduction (John Santas, Tom McGowen, Dr. Siedler, D. L.S. Wei). Tour of Food Science Lab. History of INTSOY, by Dr. Thompson. Soybean nutrition, by John Erdman. Soybean grading methods, by D. Wei. A.E. Staley Mfg. Co., by Hank Parker. Soybean oil and margarine, by E.G. Perkins. Soybean crushing, by Ross Brian. Soybean agronomy, by Bill Judy. Antinutritional factors in soybeans, by Dr. Wei. Harvesting, drying, and handling raw soybeans, by Gene Shove. Field trip to University of Illinois agricultural machinery dept. Soybean nutrition, by Barbara Klein. Livestock feeding, by Don Bray. Processing whole soybeans for food, by Dr. A.I. Nelson. Ralston Purina Co. and soy protein isolates, by Dr. Kolar. Film titled "Protein for People" from Ralston Purina.

Third week: Margarine, by Dr. Wei. Quality control of soy protein products, by Dr. Wei. Field trip to Kraft Foods Humco plant in Champaign, Illinois (Margarine, Vegemite). Wenger, extrusion cooking, and textured protein foods, by Randy McDonald. Low-cost extrusion cookers and cooking, by A.I. Nelson. Field trip to Lauhoff Grain Co. (good manufacturing practices). Drying foods, by Dr. Wei. Soya in Third World countries, by Dr. Thompson.

Fourth week: Soybean dal, by Dr. Nelson. Visit to Ted Hymowitz who is writing a book on the history of soybeans (p. 56). Sensory evaluation, by Dr. Tobias. Oriental soyfoods, by Dr. Wei.

Fifth week. Soymilk, soy yogurt, and soynuts, by Dr. Nelson (Kibun). Griffith Laboratories, by Ann Daniels (incl. history, HVP, soy protein concentrate, TVP). Home and village level production of soybean foods, by Dr. Nelson. Soy flour and soy fortified baked goods, by Dr. Cho-Chen Tsen of Kansas State Univ. Soybean crushing, soy flour, and plant sizes, by Sheldon Williams.

Shurtleff research trip. Visits to ADM and A.E. Staley Mfg. Co. in Decatur, Illinois, American Soybean Assoc. in St. Louis, Missouri (Read William Morse's 1929-31 journal of trip to East Asia). Talks with David Hildebrand, Mike Tarano. Address: P.O. Box 234, Lafayette, California 94549.

3332. Shurtleff, William. 1980. Notes on visit to Kraft in Glenview, Illinois and meeting with Dean Wilding and his research team. Lafayette, California. 1 p. June. Unpublished typescript.
• ***Summary:*** In 1975 Kraft bought Carnation's soy protein isolate plant at Coshocton, Ohio, and started soy research at that time. They now have 14 people in the protein products working primarily on soy. They are not looking mainly at soy protein isolates, but rather at full-fat soy flour (ffsf), made from defatted soybean meal produced by ADM and Central Soya.

They hot grind at 13% solids in an Urschel Comitrol, then spray dry the ffsf, which contains 40% protein and 25% fat. They remove the insolubles to make soymilk, then remove the sugars to make a full-fat isolate. The key area of use of soy is in imitation cheeses–which have better flavor but less functionality. Isolates cost $0.90/lb vs. $1.50 for casein. They are also interested in imitation fermented cream cheese.

Dean Wilding, the head of the team, is a fine man, vegetarian, Mormon, interested in natural foods.

They ferment their soy protein isolate with one pure culture, which gives it a new flavor; they then use this in experimental process cheeses in place of some sodium caseinate–which comes from cow's milk. We tasted this product. Kraft is apparently doing very little work on new products and not much with soy. Address: Lafayette, California.

3333. **Product Name:** Soy Melk [Plain, or Honey-

Flavored].
Manufacturer's Name: Sunshine Soy Co. Inc.
Manufacturer's Address: 4015 Laguna St., Suite "H," Coral Gables, FL 33146. Phone: 305-447-1277.
Date of Introduction: 1980. June.
Wt/Vol., Packaging, Price: Quart retails for $1.05.
New Product–Documentation: Sunshine Soy Company. 1980. Retail price list–Effective May 1980. "Soy Melk–Plain." One quart retails for $1.05. One case of 12 quarts weighs 23 lb 4 oz and retails for $12.60.

Needleman. 1981. Soyfoods. Summer. p. 29-30. "Tofu plant profiles: Swan Gardens and Sunshine Soy (Miami)." Danny Paolucci started Sunshine Soy in June 1980.

3334. Thompson, William N. 1980. History of work with soy and views on the potential of soyfoods around the world (Interview). Conducted by William Shurtleff of Soyfoods Center, July 3. 3 p. transcript.
• ***Summary:*** 1. What is your background and how did you become interested in soy and INTSOY? Ans: He grew up on a farm in Illinois when soy was still a very small crop. In college, he was an ag economist, specializing in farm management, with work on the economics of various types of cropping systems. In 1965 he helped to develop an agricultural university in Sierra Leone, This experience was very valuable in orienting him toward the problems of the developing world. Since then, most of his work has been on these problems. He has had short-term assignments in India, Nepal, and Thailand, where he developed research and education organizations. He is the first director of Intsoy. He had no special interest in soy before joining Intsoy except that soy and maize are major crops in Illinois. He is mainly an administrator, not a technical man. His major role has been to develop an institutional structure to make knowledge on soy available worldwide.

2. What do you feel are the two or three main advancements that INTSOY has made worldwide? (a) Facilitate worldwide network to improve communications among people interested in soy. Regional conferences, newsletter, publication series, training courses at the Univ. of Illinois. (b) Focus on the key problems of soy in tropical countries. Intsoy has more impact in India than in any other country. The India program started in 1965 (funded by US AID) with the cooperation of Indian food scientists and agronomists, specially at Pantnagar and Bareilly. The two university development projects in India were in Madhya Pradesh and Uttar Pradesh. Then the Coordinated Research Project on Soybeans was developed–both utilization and production. The results were exciting. Intsoy grew out of that program as the potential became clear. Now India has 1 million acres in soybeans. Develop soybean varieties that will grow in areas where it was formerly not thought possible. Develop new Maturity Groups 0 and 00 to the north and 9 and 10 to the south as soybeans are grown ever closer to the equator. Work on soybean diseases (mosaic virus), pest control. Intsoy has done more work in soybean production than in utilization. It is hard to get financing for utilization.

New soybean countries working with Intsoy: Ecuador now has 30,000 acres of soybeans, Egypt 50,000 acres, Ivory Coast, Pakistan (good yields), Colombia, Guatemala (work with Plenty from Tennessee), Indonesia, Thailand, Zambia, Kenya, Ghana, and Nigeria. (c) The method for boiling and processing whole soybeans using sodium bicarbonate has been a breakthrough. Soy + cereals make low-cost infant foods.

3. Do you feel that in 20 to 30 years most countries in the world will be growing and processing soybeans. Yes, he thinks that, in the next 15-30 years, most developing countries will have soybeans growing somewhere in their country. This will take adaptive research domestically. Some areas and climate in most countries are suited to soybeans, which can now be grown under a wide range of conditions. The soybean is a high producer of both energy (calories) and protein per hectare.

4. What are your views on low-technology soyfoods in Third World Countries? Which particular foods do you feel will become widely used in South Asia, South America, and Africa. Intsoy's primary orientation is low-tech–using less capital and more labor. The Sri Lanka program is medium- to low-tech. Intsoy is proud of that program and its training activities. There is great potential to expand soybean utilization in this way.

5. How do you feel about the use of soy in livestock feeds in poor countries? Is there a danger that the upper classes will use most of the soy protein to make their meat leaving little for direct food use? This is not much of a problem since prices for soy will always be low for use as livestock feed. We should use soy to help as many people as possible. The more affluent, with economic and political power, will consume more animal proteins and soy. Soy will easily find its way into feed. We need strategies to get soy to the poor–those who need it most. It can also be used in feeds for animals of the poor. Intsoy's bias is to help soy find its way into the diets of low-income people. We must be very careful with the crop that is displaced, so that a net gain results. In India, the soybean fit in as a monsoon crop where no other crop was grown. Beware of the Brazil problem. Intsoy did some variety testing in the Amazon in Brazil. They now have varieties that yield very well in northern Brazil. Brazil has lifted some technologies from the U.S., such as highly mechanized farms, but this will not work in northeastern Brazil. There has been aggressive government support and subsidies for soy in Brazil. Dr. Thompson has lots of respect for Brazil and the government's support for agricultural development. Now they need to work on nutrition and food uses. The main problem for Intsoy is to figure out how soy can met the needs of a particular country or region; not to get soy growing everywhere.

6. Are you aware of a deemphasizing of the role of protein in the diet in Third World countries? How might this affect soy? If we grow enough grains, will the protein take care of itself? Soy fits in nicely with the Green Revolution, although this revolution has led to a decrease in legume production in India. This leads to more funding for IRRI and less for soy. But there is still a problem of protein in some countries that have done a lot to meet calorie needs. It is an oversimplification to say that a diet with adequate calories will contain enough protein. Indians now realize this. They now want more dairy milk–the white revolution.

7. Recent findings at MIT and INCAP have shown that for humans soy protein is approximately equal in quality to that of milk and meats. How long do you think it will be before this finding has an impact in America and the Third World? Dairy milk is no longer considered to contain higher quality protein than soymilk. Dr. Thompson thinks this research data is solid. Perhaps more important, we can produce 4 times as much protein from a unit area of land in the form of soymilk than of dairy milk. So the key problems are acceptability and cost.

In the U.S., as with margarine replacing butter, there is a gradual move toward vegetable proteins. That move is faster in the Third World where people have less choice with their food dollars. Dr. Thompson thinks that when people are introduced to soyfoods in the Third World, they will generally like them, and buy or make them. They are not as resistant to change as we might think–as shown clearly in the Sri Lanka program. Moreover, ingredients like ground whole soybeans or soy flour can be added to baked goods or tortillas where people are not aware that they are eating a more nutritional food.

8. How might the Soycrafters Association and our New-Age Foods Study Center cooperate with INTSOY? Specific projects? He thinks our two organizations are more oriented toward the USA, whereas Intsoy is oriented toward the Third World. Yet he sees good opportunities for cooperation–as in Intsoy learning more about traditional Asian soyfoods such as tofu, tempeh, miso, etc. He hopes our two organizations can have more of an impact on the Third World. Les Ferrier has done lots of overseas utilization work. Maybe we could be on a technical advisory committee (TAC).

9. Would you favor legislation requiring 5-10% fortification of items such as baked goods and chapaties in poor countries growing soybeans if this did not decrease the acceptability of the foods. How might it affect cost? Is there any such legislation?

10. Any other comments? Intsoy's annual budget is less than $2 million, including $850,000 from AID for Urbana and Puerto Rico. IRRI's budget is about $15 million. Part of the reason for the difference is due to the reevaluation of the importance of protein in human diets. Address: Director, INTSOY, Univ. of Illinois at Urbana-Champaign, Urbana, Illinois.

3335. American Dietetic Association. 1980. Position paper on the vegetarian approach to eating. *J. of the American Dietetic Association* 77(1):61-70. July. [54 ref]

• ***Summary:*** This position paper is surprisingly supportive of a lacto-ovo vegetarian diet, although the ADA continues to feel that combining proteins is important. It states that "a growing body of scientific evidence supports a positive relationship between the consumption of a plant-based diet and the prevention of certain diseases," including coronary heart disease, osteoporosis, and gastrointestinal and reproductive cancers.

Contents: Introduction. Definition of terms: Vegetarian, vegetarianism, traditional vegetarians, total vegetarians or vegans, lacto-vegetarians, semi-vegetarians or partial vegetarians, new vegetarians (since 1960, incl. yogic vegetarians, Hare Krishnas or Krishnas, Sufis, Sikhs, Macrobiotics), fruitarians, raw food eaters, individualistic vegetarians, alternative life style diet. Other terms which relate to vegetarianism: Natural foods, organic foods, unrefined foods, unprocessed foods, health foods, meat analogs (look and taste like meat), nutritional or food yeast, milk substitute (alternate) (usually based on soy. "Calcium, zinc, vitamins A, B-12, D, and K, and thiamin are all substantially lower (or missing) in these home-made products than in breast milk or other proprietary formulas"), fermented foods (incl. soy sauce, miso, tempeh–may contain some vitamin B-12), seaweeds and algae.

Vegetarianism past and present: Historical perspectives (omnivorous diets), vegetarianism in the U.S. today (it is more popular than at any time in the nation's history). Nutrition issues: Proteins, energy, carbohydrates and fats, vitamins and minerals (vitamins B-12 and D, calcium and riboflavin, iron and phytic acid, zinc and phytates). Groups with special physiologic risks: Pregnant and lactating women, infants and children (lacto-ovo- and lacto-vegetarian diets, vegan diets–the use of properly fortified soy milk is strongly recommended, vitamins and minerals), adults with special health problems (lactose intolerance, diabetes mellitus). Implications of vegetarian diets for health promotion and prevention and treatment of disease: Coronary heart disease, cancer, obesity, dental caries, osteoporosis. Menu planning guidelines for vegetarians. Meat analogs. Summary. The President's page: Esther A. Winterfeldt, PhD, RD, on "Position papers."

"Macrobiotics–persons who consume vegan or vegetarian diets which involve extensive non-animal food avoidances, use of unprocessed, unrefined, 'natural', and 'organic' foods; and also, in some forms, fluid restriction. Tamari, miso, and various seaweeds are used extensively and are believed to be endowed with special properties.

"Vegetarianism–past and present: The American Dietetic Association recognizes that most of mankind for much of human history has subsisted on near-vegetarian diets. The

vast majority of the population of the world today continues to eat vegetarian or semi-vegetarian diets for economic, philosophical, religious, cultural, or other reasons. The matter of motivation is crucial, because it affects the diet adopted, adherence to it, and other characteristics of life style."

"Nutrition issues: The American Dietetic Association affirms that a well planned diet, consisting of a variety of largely unrefined plant foods supplemented with some milk and eggs (lacto-ovo vegetarian diet) meets all known nutrient needs. Furthermore, a total plant dietary can be made adequate by careful planning, giving proper attention to specific nutrients which may be in a less available form or in lower concentration or absent in plant foods."

Note: This is the earliest English-language document seen (June 2002) that uses the term "plant-based diet" to refer to one that contains no animal products.

3336. Blix, Glen. 1980. The story of Dr. Harry Miller, soyfoods evangelist. Paper presented at the Third Annual Soyfoods Conference. 4 p. Held in 13-19 July at Univ. of Illinois, Urbana, Illinois.
• ***Summary:*** No notes of this speech survive. For an expanded version of the talk see: Shurtleff, William. 1981. "Dr. Harry Miller: Taking soymilk around the world." *Soyfoods* 1(4):28-36. Winter. Address: Loma Linda Foods, Mt. Vernon, Ohio.

3337. Everybody's Vegetarian Restaurant. 1980. July. New soyfoods restaurant or deli. 120 21st Ave. North, Nashville, Tennessee.
• ***Summary:*** Menu sent by Richard Leviton, obtained while visiting the restaurant. 1982. April.

Leviton, Richard. 1982. "Everybody's Restaurant. The Farm brings soyfoods to Nashville." *Soyfoods*. Summer. p. 38-39.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started July 1980 by members of The Farm, in Summertown, Tennessee. Address: Nashville, Tennessee. Phone: 329-2000.

3338. Fox, Madeline. 1980. Tofu and special diets: Soyfoods and human nutrition. *Soyfoods* 1(3):9. Summer.
• ***Summary:*** Contents: Introduction. Heart disease and atherosclerosis. Diabetes. Hypoglycemia. Lactose intolerance.

In diabetic diets, tofu is low in carbohydrates (2.25 gm per 3 oz) and saturated fat (0.9 gm), contains no cholesterol, is low in calories (112.5) and is a good source of protein (12 gm). Address: Marketing Director, New England Soy Dairy, Greenfield, Massachusetts.

3339. Island Spring Inc. 1980. Can you make a living making tofu? (Ad). *Soyfoods* 1(3):8. Summer.
• ***Summary:*** This quarter-page black-and-white ad is for the Soycrafters Apprenticeship Program, a professional 21-day intensive "hands-on" course in the commercial production and marketing of tempeh, tofu, soymilk, and related soyfoods. Address: P.O. Box 747, Vashon Island, Washington 98070. Phone: (206) 622-6448.

3340. **Product Name:** Tofu, and Soymilk.
Manufacturer's Name: Jack and the Beanstalk.
Manufacturer's Address: Buckeye Building, 65 W. Carmel Valley Rd. (P.O. Box 525), Carmel Valley, CA 93924. Phone: 408-659-4366.
Date of Introduction: 1980. July.
How Stored: Refrigerated.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. The owners are Paula and Nobukatsu Terui. Bill and Akiko Shurtleff visited them and stayed overnight at their home in the Carmel Valley at about the time they started production.

Michael Shedlin. 1985. Monterey Life. Feb. p. 12 "Tofu: That chameleon of the food world." Buck and Leslie Patton, owners of Jack and the Beanstalk, make tofu in Carmel Valley Village. They make 1,700 lb/week of nigari tofu.

Letter announcing sale of business. 1985. "Jack and the Beanstalk began manufacturing tofu in July 1980. Leslie and Buck Patton bought the business in May 1983. It is the only tofu manufacturer in Monterey County. Current tofu production is 1,800 to 2,000 lb/week. Soymilk production is about 15 gallons a week [it is not clear when soymilk production started]. Sale price is $50,000. The gross income grew from $43,705 in 1981 to $81,000 in 1985, when profit was $13,100."

Talk with Russel Hicks of Sweet Earth. 1991. Jan. 31. His company now buys its tofu from Jack and the Beanstalk, which is located in Salinas.

Talk with Albert Park, owner. 1991. Feb. 1. The company, whose name has not changed, is now located at 401 Victor Way, Suite 16, Salinas, California 93907. The previous owner, Mr. Hun Kim, moved it to that location from Carmel Valley about 5 years ago. Both Mr. Kim and Mr. Park are Korean-Americans. The company now makes only 3 products: tofu, soymilk, and soybean sprouts. It is a very small business that makes 1,500 to 1,700 lb/week of tofu.

3341. Leviton, Richard. 1980. Soyfoods in Toronto. *Soyfoods* 1(3):14-19. Summer.
• ***Summary:*** Discusses Vital Eat, Pyung Hwa, Soy City Foods, and Victor Food Products. Victor Food products (102 Hymus Rd., Scarborough, Ontario, Canada M1L 2C9) was founded and is owned and managed by Mr. Stephen Yu. In the 3,600 square foot tofu factory, 13 workers (mostly Vietnamese refugees) produce 1,900 lb/day of tofu, 750

gallons/week of Nutrisoya soymilk, and about 200 quarts/day of kinugoshi soybean pudding. Mr. Yu, who was born in China and educated in California, came to Toronto in 1977 to make an initial market survey. He opened his plant in Feb. 1978, with an initial production of 900 lb/day. Mr. Yu now has accounts in all major Toronto supermarket chains. He reaches about 40% of the Oriental market and about 40% of the overall soyfoods market. He speaks fluent English and is "far more forward looking and market conscious than his Oriental competitors in the Toronto area." His production process and equipment are described in detail. Last summer he appeared on a 10-minute television feature that depicted the story of soybeans from field to shop to table. This was followed, in Jan. 1980, by a major article which profiled his company in the *Toronto Star.* This publicity ushered his tofu into the three big supermarket chains not yet carrying it and sales in the four chains that were rose 100%. Note: This is the earliest document seen (April 2001) that mentions Victor Food Products in Canada.

Soy City Foods, at 2847 Dundas St., is a new soy production site due to open in the spring. Pat Guardino is general manager and Leonard Bugyra is sales manager. The company is a subsidiary of Golden Age, Inc., a spiritual group which operates a successful vegetarian restaurant downtown and is currently installing a second one next door. The company will start by producing about 600 lb/day of tofu, as well as soymilk and soysage. They will supply their contiguous restaurant and sell bulk soyfoods from their own retail counter in the storefront. They will also produce tofu cheesecakes and okara cookies in the restaurant.

Photos show: (1) Soy City Foods and its owners (incl. Pat Guardino) under the storefront sign. (2) Pyung Hwa Tofu Shop, with cakes of tofu cooling in a bathtub. (3) Stephen Yu of Victor Food Products with Nutrisoya soymilk. Address: Colrain, Massachusetts.

3342. Leviton, Richard. 1980. Effective soyfoods marketing: "We want to do for tofu what flavors did for yogurt." *Soyfoods* 1(3):46-51. Summer.
• ***Summary:*** Discusses the tofu marketing strategies of: (1) Steve Demos at White Wave (Boulder, Colorado); he makes 7,500 lb/week of tofu and tofu products; (2) John Paino of Nasoya Foods (Leominster, Massachusetts). Nasoya makes four tofu spreads and a tofu mayonnaise; (3) Luke Lukoskie of Island Spring, Inc. (Vashon, Washington). Each week the company produces 10,000 lb of tofu, five flavors of Soyfreeze (soymilk ice cream), soyloaf, tempeh, soymilk, and spicy Korean tofu; (4) Madeline Fox, director of Marketing at the New England Soy Dairy (Greenfield, Massachusetts).

Photos show: (1) Tom Timmins (rear view) addressing a soyfoods press conference audience in Boston. (2) A waiter in a black bow tie setting up the tofu buffet at the Seventh Inn.

Note: This is an earliest document seen comparing the marketing of tofu to yogurt (the dairy product) in the title. Address: Colrain, Massachusetts.

3343. **Product Name:** Soydairy Numu (Soymilk).
Manufacturer's Name: New England Soy Dairy Inc.
Manufacturer's Address: 305 Wells St., Greenfield, MA 01301.
Date of Introduction: 1980. July.
Ingredients: Water, soybeans (grown without artificial chemical materials), barley malt, honey.
Wt/Vol., Packaging, Price: Quart.
New Product–Documentation: Ad in Soyfoods. 1980. Summer. p. 11. "Numu. New England Soy Dairy brings you a unique nutritional beverage. Blast off with Numu." Soya Bluebook. 1980. p. 51. "Pure-Pak Soymilk." Article in Soyfoods. 1981. Winter. p. 18-19.

3344. New-Age Foods. 1980. Calling all soycrafters... Start your own soyfoods business. Tofu, soymilk, tempeh, miso. Here are the books that show you how! (Ad). *Soyfoods* 1(3):45. Summer.
• ***Summary:*** This 2/3 page ad is for three books by Shurtleff and Aoyagi: *Tofu & Soymilk Production. Tempeh Production. Miso Production.*

"Since publication in 1976 of *The Book of Tofu* by William Shurtleff & Akiko Aoyagi (there are now a quarter million copies in print), more than 120 new tofu shops and soy dairies have been started in North America. Based on the authors' *Book of Tempeh* and *Book of Miso,* many new tempeh and miso shops have also come into being. The founders of these shops have joined to form the Soycrafters Association of North America. Indeed a growing number of people are joining the Soyfoods Revolution and finding that the soycrafting arts offer just the type of creative, satisfying, and financially rewarding work and way of life they have long been seeking–plus an opportunity to make a vital contribution to the future.

"Three beautiful technical manuals: Based on over seven years of research with master craftsmen and modern producers in the U.S. and around the world, Shurtleff and Aoyagi have prepared three beautiful craft and technical manuals, containing all the information you'll need to start and run your own soyfoods business on any of various scales and budgets from low-cost community shops up to large modern plants. These books, used to start virtually all the shops mentioned above, each come in a handsome large (8½ by 11-inch) format, filled with informative illustrations."

A brief description is given of each, along with the price, and a photo of the cover. "Free with each book: A list of all tofu, tempeh, or miso shops in the West, and applications for the Soycrafters Apprenticeship program, Soycrafters Assoc. of North America, and *Soyfoods Magazine."*

Note: Each time William Shurtleff contributed a full-

length article to a magazine, always free of charge, the magazine agreed to run this ad in exchange. Address: New-Age Foods, P.O. Box 234, Lafayette, California.

3345. Shurtleff, William. 1980. Microwave cooked dairylike soymilk. *Soyfoods* 1(3):4-5. Summer. [1 ref]
Address: New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

3346. *Soyfoods.* 1980. Soyfoods to the American taste: An interview with Drs. Clifford Hesseltine and Hwa L. Wang. 1(3):58-62. Summer. [1 ref]
• ***Summary:*** Dr. Hesseltine has just returned from a six-week trip to East Asia. In Taiwan he studied soy sauce fermentation and gave advice on setting up a national collection of microorganisms used in soybean fermentations. In Indonesia he attended an international symposium on various aspects of fermentation as a method a processing foods, with an emphasis on soybeans in Southeast Asia. "These people look to us in the West as far as science is concerned. Suddenly we see scientific institutions in the U.S. and now in Europe being interested in high protein foods made from soybeans. The East Asians follow and say, 'Well, if its very interesting for the West, then we should be interested in it.'" There is increasing interest in traditional, lightly-processed soyfoods.

Way back in 1963 the NRRL did research on making tempeh perforated plastic bags. Today, "on the island of Java, 90 percent of tempeh is now produced using plastic bags, including the tempeh I saw being sold on the street,..."

Dr. Wang, who was born and raised in China, recently returned there to visit family. She noted: "To me, it is a very sad story... Even tofu is rationed now. You can't buy tofu every day, probably once a week." "Soy sauce is not hard to get. Miso never had as much importance as in Japan... Tofu and soymilk are the two foods that were very common before. We stayed at a hotel and we only had soymilk once a week, in the morning for breakfast. And tofu, I don't even remember having eaten any."

"Dr. Hesseltine: Natto is one of the most rapidly growing fermented soyfoods in Japan, which surprised me, over something like miso. Natto has become more popular because it's supposed to be the great aid for digestion. In the new form, natto is much more acceptable as a food because the old, traditional type is sticky (it's a real mess) and this isn't. This is coated, so what you get is like small peanuts coated with powder; they don't stick to your hands."

Dr. Hesseltine: "What I saw in Taiwan really fascinated me–pressed tofu sheets [*pai-yeh*]. We would like to see the soycrafters making some recommendations [for us] as to practical areas of research for soybeans."

Portrait photos show (1) Dr. Clifford Hesseltine. (2) Dr. H.L. Wang. Two photos of each, seated. Address: NRRC, Peoria, Illinois.

3347. **Product Name:** Soynaise: Imitation Mayonnaise.
Manufacturer's Name: Soyplant Co-op Inc. (The).
Manufacturer's Address: 711 Airport Blvd., Suite 1, Ann Arbor, MI 48104. Phone: 313-663-8638.
Date of Introduction: 1980. July.
Ingredients: Tofu (soymilk, nigari), sesame oil, soymilk (organic soybeans, water), cider vinegar, honey, salt, garlic, dulse, love.
Wt/Vol., Packaging, Price: 12 oz.
How Stored: Refrigerated.
New Product–Documentation: Label in Soy Plant scrapbook from about 1980. 3 by 3 inches. Black on white. 12 oz. "Please reuse or recycle this container." This product was sold in plastic tubs, unpasteurized, like a fresh dressing.

3348. **Product Name:** VFP Nutrisoya (Soymilk).
Manufacturer's Name: Victor Food Products, Ltd.
Manufacturer's Address: 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
Date of Introduction: 1980. July.
Wt/Vol., Packaging, Price: Plastic bottle, about 1 liter.
How Stored: Refrigerated.
New Product–Documentation: Leviton. 1980. Soyfoods. Summer. p. 17. The company makes 750 gallons a week, flavored with sugar. In plastic quarts. Leviton. 1981. Soyfoods. Winter. p. 55. A black-and-white photo shows 6 of the plastic bottles. The size looks like about 1 liter. Soya Bluebook. 1986. p. 102.

3349. Thalman, Margaret Morse. 1980. Re: William J. Morse, her father. Letter to William Shurtleff at Soyfoods Center, Aug. 26. 2 p. Handwritten.
• ***Summary:*** "It has taken me a few days to locate some articles and photos that I think you could use. [While in East Asia] We made copies of articles from several publications of various dates. Most of the photographs were glued into scrapbooks and I was hesitant about taking pages from them to send to you. However, I found a few loose photos that I hope will do."

"I am very impressed at how much the soy foods industry has progressed these past few years.

"It might interest you to know that one of my grandsons, Michael Morse Garrison, was allergic to cow's milk as an infant and had to have soy milk. My father would have been very pleased to know how all his exploration and research helped his great-grandson." Address: 22 Interlaken Rd., Eastchester, New York 10709.

3350. Dinshah, Freya. 1980. More vegan recipes. Malaga, New Jersey: American Vegan Society. 27 p. Aug. No index. 22 cm. Spiral bound.
• ***Summary:*** Soy-related recipes include: Soy bean cheese spread (with cooked, ground soybeans, p. 5). Slicing soya

cheese (with vegetable margarine and soya powder/flour, p. 5). Simple soy cheese (with soya powder and nutritional yeast, p. 5). South Jersey soy patties (with soy granules, p. 7). Corn bread (with soya powder/flour, p. 9). Sesame soy milk (with soya powder/flour, p. 11). Sunflower soy milk (with soya powder/flour, p. 11). Scrambled tofu, Tofu salad dressing, Yeasted tofu, Tofu Cantonese, Tofu, mushrooms and greens, Tofu in savory crumbs, Tofu turino, Tasty tofu strips (baked with soy sauce) (all p. 15). A photo on the title page shows the author. Address: 501 Old Harding Highway, Malaga, New Jersey 08328.

3351. Ener-G Foods, Inc. 1980. Good tasting allergy foods (Ad). *Health Foods Retailing* 44(8):207. Aug.
• ***Summary:*** A full page black and white ad, featuring the Ener-G logo. "For wheat, egg, and milk-free diets. Formerly Jolly Joan." A full-page photo shows the company's products, including Pure Soyquick (a dry soymilk), and a list of these products. Many are made from rice, and some from barley or oats. Address: P.O. Box 24723, Seattle, Washington.

3352. *Health Foods Retailing.* 1980. Part I. 44(8):1-98. Aug.
• ***Summary:*** Selected full-page ads and articles: (1) Norganic–Wheat pilaf (Anaheim, CA, p. 7). (2) "Health Valley's great pasta dinners," from Health Valley Natural Foods. Whole wheat pasta, tomato sauce and raw milk (Montebello, CA 90640, p. 11). (3) "Richlife natural protein drink a meal." Each can (11.5 oz) "contains a balanced formula of vitamins and minerals with over 20 grams of protein from nonfat dry milk, peanuts, soy and whole milk (Anaheim, CA, p. 15). (4) Hain specials for September include 15% off Natural Teriyaki Marinade and Tenderizer Mix (p. 17). (5) Solgar Co.–Lecithin granules, Formula VM-75 (Lynbrook, New York, p. 29, 33). (6) Tiger's Milk Nutrition Boosters, come in colorful new packaging and four flavors: Unsweetened Plain, Carob, Vanilla, or Cocoa. In 12, 24, or 36 oz. cans. From Plus Products (Irvine, California 92714, p. 43).

(7) "Federal court issues injunction against FDA protein regulations." "The regulations, which were to go into effect Aug. 4, would require that warning labels be put on certain food products deriving 50% or more of their caloric value from protein; the warning required varies according to the use for which the product in question is promoted, but in the case of protein products promoted for use in weight reduction, the warning includes the statement that "Very low calorie protein diets... may cause serious illness or death" (p. 50).

(8) "Lectures boost business," by Mary Conte. Photos show: (a) A hugely muscled man in a tiny swim suit, with the caption: "Dr. Franco Columbu, a former Mr. Universe, lectures on body building." (b) Jack LaLanne, "a famous TV personality," dressed in a striped suit and lecturing. (c) Dr. Robert C. Atkins on the cover of his book "Dr. Atkins Diet Revolution." (d) Dr. Allan D. Cott (p. 51).

(9) "Europe's Helfex attracts U.S. trade." Helfex is "Europe's International Health Food Exhibition, held from May 18 to 21 in Brighton, England," the historic seaside town (p. 67, 228). (10) Naturade–Elastin (p. 82). (11) Alta-Dena Dairy, which was established in 1945, sells kefirs, youghurts, frozen youghurts, and Golden Honey ice creams, ice milks, and cheeses (City of Industry, CA, p. 83). (12) The Pavo Co., Inc.–Distributor since 1931 (Minneapolis, Minnesota, p. 96). (13) American Dietaids–Papaya enzyme with chlorophyll (p. 97).

3353. Ling, C.A. 1980. Plamil steps ahead. *Alive* (*England*). July/Aug. p. 12.
• ***Summary:*** Dairy milk is subsidised by a price support system in England; this enriches the dairy industry. Factory farms are exempted from a tax rate. Soybeans are subject to an import tax. Address: Managing director, Plamil Foods, England.

3354. **Product Name:** Soymilk or Soy Juice [Maple-Maple, Honey-Nilla, Carob, or Plain].
Manufacturer's Name: Redwood Valley Soyfoods Unlimited.
Manufacturer's Address: P.O. Box 371, Redwood Valley, CA 94570.
Date of Introduction: 1980. August.
Ingredients: Soy Juice: Well water, organic soybeans.
Wt/Vol., Packaging, Price: Plastic pints, quarts, half-gallons.
How Stored: Refrigerated.
New Product–Documentation: See next page. Label for Soy Juice. 1980. 2 by 3 inches. Self adhesive. Black on white. "100% Vegan Organic Pure." Leviton. 1981. Soyfoods. Winter. p. 17; Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 32. Letter from Richard Rose. 1987. Aug. 29. This product was not introduced until 1980. Initially it was called soymilk. Then, when that term was found to be illegal, it was voluntarily (with tongue in cheek) changed to "soy juice." "Name changes depended on whether the state Department of Food and Agriculture, or the Department of Health were hassling us." Finally the plain was changed to Fresh & Lite and each flavored soymilk was given a fanciful name: Maple Maple, Honey-Nilla, ChocoLite.

Label. 1983. 1.5 by 3 inches. Self adhesive. Honey-Nilla: Black on yellow. Maple-Maple: Blue on white. Plain: Red on white. 2 different label designs. One with double square on edge; the other without. The labels without square have bird logo.

3355. Pinnick, Sinclair. 1980. Re: Dr. Harry Miller and his work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Sept. 10. 1 p. Typed.

• ***Summary:*** "Dr. Miller was always the first one to start the day's work at his Mount Vernon plant. One morning he climbed into the starch tank and was overcome by the fumes. Another worker came in and found him and pulled him out thus saving his life. Another time he was experimenting with a new formula and cut the end of his finger off in the food grinder. He calmly picked up the severed part, walked into his office and sewed it back on.

"In 1948 he sent me to the Philippines to set up the plant there. He and his second wife came over during my stay there. In Manila he was treated as a very important person. In Mt. Vernon he was just Dr. Miller, a friend of all.

"In 1972 the Southern Asia division asked me to go to Poona [Pune, southeast of Bombay, in Maharashtra state], India and set up a plant at Spicer Memorial College. In March of 1973 Dr. Miller flew over from Hong Kong to get us started in production. He would work all day with us at the food factory and then spend nearly every evening speaking to some group on healthful living. There seemed to be no limit to his endurance."

Note: Dr. Harry W. Miller was a vegetarian throughout his life. Address: 16042 Bivelbliss, Mt. Vernon, Ohio. Phone: 614-397-8213.

3356. Thalman, Margaret Morse. 1980. Memories of her father, William J. Morse (Interview). Conducted by William Shurtleff of Soyfoods Center, Sept. 18 and Oct. 3. 1 p. transcript.

• ***Summary:*** William Morse, her father, as born on 10 May 1884 in Lowville, New York (upstate). His father was a butcher. W.J. Morse's wife, Edna, went on the trip to East Asia, as did Margaret, who was an only child. Edna kept diaries for her daughter and wrote down what happened every day–in child's language such as "Played in the park."

William Morse wrote much of the book about soybean foods that he hoped to publish. He wrote it by hand on yellow lined paper; it was never published and she has sent the manuscript to the American Soybean Association.

During World War II W.J. Morse was under a great deal of pressure. A great many people called on him for information. He first became aware that he had an ulcer in about 1943, and this affected his diet. He lost a lot of weight (you can see it in the photos of him from that period) and he had to go on a "baby food diet." He ate soft, bland foods including soymilk, tofu and acidophilus soymilk and yogurt. He bought soyfoods at the Seventh-day Adventist health food store in Takoma Park, Maryland–including the soy ice cream he loved. She does not recall that he ever made tofu or soymilk at home.

After returning from their two years in East Asia, he

and his wife used soyfoods regularly in their diet. He liked very much to make sukiyaki for dinner, especially for guests or special occasions. He had a low sukiyaki table made by having the legs cut of a regular table. Everyone would sit on cushions on the floor, with an electric hot plate on the table. His sukiyaki recipe always included tofu.

He and his wife liked to put soy flour in homemade breads and waffles. He did not eat a lot of meat but neither was he a vegetarian. He ate Boston baked soybeans when his wife fixed them.

William Morse bought the house in Tacoma Park, DC, in 1917 and lived there until he retired, shortly after which he and his wife moved to Eastchester New York, where he lived the rest of his life.

He spent the last ten years of his life writing his book (from time to time she typed up his notes), doing lots of gardening and reading, and writing many letters. He kept in touch with the world of soy.

His office, where he had shelved with packaged soyfoods, was in Washington, DC. He did not move his office to Beltsville until about 1939–when all of USDA moved there.

Note: P.H. Dorsett was born on 21 April 1862. So at the time the expedition first arrived in Japan he was age 67. Dorsett had a grown daughter.

"William Morse was a gentle, soft-spoken person, who liked others and they liked him. He liked to tease, and the secretaries at his office all loved it. He was a very easy person to get along with; he was slow to anger and never cursed. He wasn't aggressive; where some might push, he would give in. He was intelligent. His work came first. He was not financially ambitious." He was a rather heavy cigarette smoker. His daughter remarked that "If anything upset him, he didn't let it out on his fellow workers."

"His friends and co-workers called him "Bill." His family called him "Will."

She still has her diaries and some of her father's small notebooks of the trip plus many photographs glued into scrapbooks. She has no files of his left; she sent them all to the American Soybean Association.

Verna Donavan was W.J. Morse's secretary at USDA starting not long before he went to the Orient to study soybeans. After Morse returned, when the Bureau of Home Economics became interested in soybeans, the two of them were often asked to come over and to taste the soybean dishes they had prepared.

Update. 2004. April 14. She has a book that was given to her father when he retired from USDA. In it are letters from many companies (cereal companies, oil companies, etc.) praising his work. It also has letters of praise from his co-workers and his superiors. Address: 22 Interlaken Rd., Eastchester, New York 10709. Phone: 914-632-2508.

3357. Harrison, Connie S. 1980. Group seeks to export soybeans to China along with U.S. hog-feeding practice. *Wall Street Journal.* Sept. 24. p. 36.
• ***Summary:*** The American Soybean Association (ASA) sees a huge untapped market for American soybeans to feed China's 300 million hogs. The group recently sent 15 of its members to China to tout their product. The problem is, the Chinese see soybeans as a food for people, not as feed for hogs. Dairy farmers in Shanghai routinely kill baby male calves within 2 days of their birth. To Chinese dairy farmers, milk is too valuable to waste on raising unproductive males. But the ASA is providing the Chinese with samples of a soy-based milk replacer that can be fed to baby calves; when they grow up, they can be killed and sold for their meat.

In 1979 China bought 850,000 tonnes of U.S. soybeans, which was 10 times its earlier purchase. Before normalization of diplomatic relations between China and the USA, China preferred to buy its soybeans from Brazil or Argentina. Address: Staff reporter.

3358. Hope, Jane; Bright-See, E. 1980. Vegetarian diets need good planning: Nutrition. *Toronto Star* (*Ontario, Canada*). Sept. 24. p. C-3.
• ***Summary:*** Describes the different types of vegetarians and their different needs. The section titled "Soy protein" begins: "But the amount and quality of protein in plant foods is usually lower than that found in animal foods. The exception, of course, is soy protein. Soy products, such as cakes [tofu?] and soy milk, are excellent sources of protein."

Discusses protein complementarity and good books on vegetarian nutrition and recipes.

3359. Sass, Lorna J. 1980. A couple on a tofu mission in the West. *New York Times.* Sept. 24. p. C3. Reprinted in the San Francisco Chronicle. Nov. 12. p. 22.
• ***Summary:*** About William Shurtleff and Akiko Aoyagi, authors of *The Book of Tofu.* A large photo shows each person. "The two people most responsible for catapulting tofu from the wok into the frying pan are William Shurtleff and Akiko Aoyagi." In the early 1970s they began to work on introducing this inexpensive foodstuff, high in protein and free of cholesterol, to the United States. Concerned that there is a world food crisis, they are committed to the philosophy expressed in the book *Diet for a Small Planet,* that if people in Western cultures relied on beans and grains rather than meat, the problem would start to improve. Shurtleff says that they wanted to find a way to make soy foods appealing to Big Mac [hamburger] fans. "'We decided to try to do for tofu and other soy foods what Johnny Appleseed did for apples.'"

A graduate of Stanford University in physics and industrial engineering, Shurtleff first became interested in natural foods and a healthy diet starting in 1968, while living at the Tassajara Zen Mountain Center near Carmel Valley, California. In 1971 he went to live in Japan where, as a student with little money, he found he could eat for as

little as 30 cents a day by relying on tofu as his major source of protein. There he met Miss Akiko Aoyagi, a Tokyo-born fashion designer who was also fine cook. Using the seven different types of Japanese tofu, she prepared her favorite tofu recipes for him. A turning point came when they shared a meal at Japan's oldest haute cuisine tofu restaurant [Sasa-no-yuki, in Tokyo].

At the time they had no publishing experience and only about $100 between them. Yet within several weeks they had found a publisher and were hired on a part-time basis by an American company to do interpreting, that paid enough to free them to research the subject thoroughly for the next four years.

In December 1975 their first book, *The Book of Tofu,* as published by Autumn Press, a small publisher originally headquartered in Japan and now in Massachusetts, interested in both tofu and vegetarianism. The book was received so enthusiastically–over 100,000 copies are now in print, that Ballantine Books decided last year to publish a revised mass market pocket-book edition.

In 1975 they founded the New-Age Foods Study Center, with offices in Tokyo and Lafayette. Their center has published three volumes: *Tofu and Soymilk Production* ($17.95), *Tempeh Production* ($15.95), and *Miso Production* ($17.95). These books are directed at people interested in manufacturing "soy foods." In 1978 they helped to found the Soycrafters Association of North America. Last July the association held its third annual conference.

Lorna Sass is also the "general editor of the forthcoming reprint series of significant historical cook books." Address: Culinary historian, New York.

3360. Blix, Glen. 1980. Soymilk and soy-based infant formula in America (Interview). *SoyaScan Notes.* Sept. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1979 Loma Linda made 2.24 million gallons of ready-to-use Soyalac infant formula, and 1.0 million gallons of Soyagen (soymilk for adults, plus small amounts [400-500 per year] of Granolac and Granogen which are sold in the United Kingdom), for a total of 3.24 million gallons. Some of the Soyalac (named i-Soyalac) is made with isolated soy protein. In 1979 Loma Linda used 1.5 million lb of soybeans to make soymilk, working 190 days a year.

Only two companies in America make soymilk for adults. Loma Linda has 60% of the market and Worthington Foods has 40%.

Market shares in the soy-based infant formula market are approximately: Ross Laboratories 50% (Isomel; 14,720,000 gallons ready to serve), Mead Johnson 40% (Prosobee; 14,080,000 gallons), Loma Linda 7% (Soyalac; 2,240,000 gallons), and Wyeth Laboratories (in Pennsylvania) 3% (Nursoy; 960,000 gallons). Syntex is now out of business. Note that Worthington Foods does not make any infant formula. Ross and Mead Johnson originally entered the infant formula market with dairy-based products, then later added soy-based products. Glen thinks that ProSobee, which is made in the USA, is a powdered product sold only outside the USA. Loma Linda sells infant formula in a 32-ounce can. It is given a UHT short time sterilization at Pet Milk in Coldwater, Ohio, then packed. Address: Loma Linda Foods, Mt. Vernon, Ohio.

3361. **Product Name:** [Soymilk].
Manufacturer's Name: Alimentos Colpac.
Manufacturer's Address: Apartado 134 Navojoa, Nuevo Leon, Mexico.
Date of Introduction: 1980. September.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). "COLPAC, Apartado 134, Navojoa, Nuevo Leon, Mexico. Owner: Jose Farrara. A Seventh-day Adventist soy dairy."

3362. **Product Name:** Tofu (Hard & Soft), Tofu/Okara By-Products, Soymilk.
Manufacturer's Name: Cleveland Tofu Co.
Manufacturer's Address: 1797 Radnor St., Cleveland Heights, OH 44118. Phone: 216-371-3222.
Date of Introduction: 1980. September.
Ingredients: Tofu: Water, organic soybeans, nigari.
Wt/Vol., Packaging, Price: Tofu: 1 lb.
How Stored: Refrigerated.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owners: Paul Sheldon & Bob Karr.

Label. 1982, dated. 4 inch diameter. Green on clear plastic lid. "Keep refrigerated. Store in fresh water." Founded by Bob Carr. Form filled out by Brooks Jones and Bob Carr. They started on 22 March 1982. They presently make hard & soft pressed tofu, tofu/okara by-products, and soymilk.

Levin. 1984. Crain's Cleveland Business Weekly. Feb. 19. "Cleveland Tofu Co. must educate the market."

Dun & Bradstreet database search. 1984. May. Company has two names: Ohio Tofu Company Inc. and Cleveland Tofu. Address: 6210 White Ave., Cleveland, Ohio 44103. Phone: 216-361-8638. Year started: 1983. Sales this year: $250,000. Employees: 11. Principals: Brooks Jones, President; Robert N. Carr, Vice President.

Talk with someone from Ohio. 1988. Feb. 22. Brooks Jones had to close his business in December 1987. His plant was in a bad part of town and he had to spend all his profits on security guards.

Talk with Charles Meeker of VitaLite Foods. 1992. Feb. 27. Charles does not know why Brooks went out of business but he has heard that his father was extremely wealthy and he was just doing the tofu business as a sort of hobby. He didn't really need the money. A year or so ago

he was painting strips on parking lots, and now he is in the consulting business. Moreover, he ran the business poorly. When Vitalite Foods bought the Cleveland Tofu name and trademarks from Brooks, he did not even know the names of his accounts. His records were poor. The man who did the deliveries knew where the accounts were but Brooks didn't. Cleveland Tofu was selling a lot of tofu at the time VitaLite took it over.

3363. Dubois, Donald K. 1980. Soy products in bakery foods. *AIB Research Department, Technical Bulletin* 2(9):1-10. Sept. [12 ref]

• ***Summary:*** Contents: Introduction. Processing of soy products. Quality factors. Defatted soy flour. Enzyme active soy flour. Full fat, high fat and lecithinated soy flours. Soy grits. Soy protein concentrates. Soy protein isolates. Milk replacer blends. Soy bran. Nutrition. Products. Summary.

AIB stands for the American Institute of Baking. "Soy products, because of their unique functional and nutritional properties, have become major ingredients in many food systems. The use of soy protein as an ingredient, extender, or analog has spread to every category of food, and consumption of edible soy protein in the United States has grown from less than one hundred million pounds per year in the early 1960's to over one billion pounds per year in 1978."

Ten tables give the nutritional composition plus NSI (Nitrogen Solubility Index) and PDI (Protein Dispersibility Index) of different soy products, and the manufacturer of each, as follows: Table IV–15 defatted soy flours: A.E. Staley: Bland 50, I-200, and F-200. ADM Company: Baker's Nutrisoy, Nutrisoy, and Toasted Nutrisoy. Central Soya Co.: Soyafluff 200W. Cargill, Inc.: 70 PDI Soy Flour and 20 PDI Soy Flour. Dawson Food Ingredients: Dawsoy Flour 100/70, Dawsoy Flour 200/20, Dawsoy Flour 200/70, and Dawsoy Flour 200/88. Farmland Industries: 200L and 200E.

Table V–2 enzyme active soy flours: ADM Company: Nutrisoy 7-B. Cargill, Inc.: 90 PDI Soy Flour.

Table VI–1 full fat soy flour made by Ingredients Systems, Inc.

Table VII–1 low fat soy flour made by Food Ingredients.

Table VIII–4 refatted soy flours made by ADM: 15% High Fat, Bakers Nutrisoy, Toasted Nutrisoy T-6, and Nutrisoy 220T.

Table IX–8 lecithinated soy flours: ADM Company: Soylec C6, Soylec C15, and Soylec T15. Central Soya: Soyalose 105W and Soyarich 115W. Cargill, Inc.: 3% Relecithinated soy flour, 6% Relicithinated soy flour, and 15% Relecithinated soy flour.

Table X–13 brands of soy grits: ADM Company: Defatted Soy Grits 8-20, Defatted Soy Grits 20-40, Defatted Soy Grits 40-80, and Defatted Soy Grits 80-0. A.E. Staley: Bland 50-Medium Grits and Bland 50-Coarse Grits. Lauhoff: Soy Grits 5/16, Soy Grits 8/30, and Soy Grits 20/0. Dawson Food Ind. [sic, Ingredients]: Dawson Grits 10, Dawson Grits 20, Dawson Grits 40, and Dawson Grits 60.

Table XI–3 "soy protein concentrates": Griffith Labs: Promax 70. ADM Company: Ardex 700F and Ardex 700G. A.R. Staley: Sta-Pro.

Table XII–16 "soy isolates" (incl. pH, particle size, and special properties of each): Ralston Purina: Edipro A, Supro HD 90, Protein 220, Supro 350, Supro 610, Supro 620, Supro 630, Supro 660, and Supro 710. Dawson Food Ind.: Isoprime 900, Isoprime 900GL, Isoprime 900G, and Isoprime 900L. Grain Processing Corp.: Pro-Fam S-955 and Pro-Fam S-970.

Table XIII–1 type of soy bran: Nutrisoy Fiber, made by ADM. Address: American Inst. of Baking, Manhattan, Kansas.

3364. Grossman, Harvey; Duggan, E.; McCamman, S.; Welchert, E.; Hellerstein, S. 1980. The dietary chloride deficiency syndrome. *Pediatrics* 66(3):366-74. Sept. [24 ref]

• ***Summary:*** "Chronic depletion of body chloride developed in a group of infants ingesting a diet consisting almost exclusively of chloride deficient Neo-Mull-Soy. Ten of the 12 infants were on this diet three to five months before loss of appetite, failure to thrive, muscle weakness, and lethargy led to a diagnostic evaluation. The outstanding laboratory features were severe hypokalemic metabolic alkalosis, low urinary chloride concentrations (<10 mEq/liter), and erythrocyturia. There was marked decrease in weight for age in all 12 infants...

"In our review of the literature we have found no documentation of other instances of chloride deficiency in the human as a consequence of dietary chloride lack alone." Address: The Children's Mercy Hospital, 24th at Gillham Rd., Kansas City, Missouri 64108.

3365. *League for International Food Education* (*LIFE*) *Newsletter.* 1980. Soybeans in Guatemala. Sept. p. 3.

• ***Summary:*** "With 1500 lbs of soybeans donated by UNICEF, Plenty has been teaching the people of Guatemala, concentrating on the wives of farmers who have shown an interest in growing soybeans, how to make soymilk and tofu (bean curd) using a metate and utensils traditionally found in their homes.

"Classes are held once a week for four students at a time. All students have learned the process in one lesson. They return to their homes provided with cheesecloth and small bags of beans. After they use those, they can return for more. Most students have successfully made tofu in their homes and say their families like it.

"Plenty plans to set up a village-scale soy processing plant which will produce 100 lbs of tofu and forty gallons of icebean (ice cream made from soymilk) three times a week. Funded by Plenty and CIDA/Canada, the plant will supply free icebean for school lunch programs. After an initial period of training, the soy plant will evolve into a

local cottage industry and a means of financial support for members of the community.

"For further information, please write to: Suzy Jenkins; Soy Technician; Plenty; 156 Drakes Lane; Summertown, Tennessee 38483 USA."

3366. Myers, Steve. 1980. [Farm Foods' original soy Ice Bean is on the market again (News release)]. Summertown, Tennessee: Farm Foods. 1 p. Undated.
• ***Summary:*** "Dear People, Our plant moves are complete and Farm Foods' original soy 'Ice Bean' is back. It is now available in these flavors: carob, vanilla, and strawberry, and comes in pints, 5 oz. cups, and 3 gallon tubs.

The original soy 'Ice Bean' is similar in flavor and texture to ice cream, but contains no milk products and no cholesterol. "Ice Bean" is completely vegetarian and contains all natural ingredients: soy powder, pure honey, soy oil, natural fruit and flavors, lecithin, guar gum, and salt. But best of all it tastes great and it's good for you."

To help understand this news release, we will quote from *Tofutti and Other Soy Ice Creams,* by Shurtleff and Aoyagi (1985, p. 46-47). "In 1980 Ice Bean was America's best known non-dairy soy-based frozen dessert, though its following was still relatively small, and concentrated in California. In February or March of that year, Farm Foods moved its operations from San Francisco to headquarters in Tennessee, signaling a commitment to expand Ice Bean's market from regional to national. Farm Foods realized that they had a virtual monopoly on soymilk ice cream, for which national demand was growing faster than they could supply. The company was also aware of the huge potential market on the East Coast from kosher Jews and natural foods devotees. Moreover, the landlord had tripled the rent on their building in San Francisco. So they sold their big ice cream freezer to a frozen dairy yogurt maker and pulled up roots.

"Back on the land in rural Tennessee, Farm Foods' directors reformulated Ice Bean and had it manufactured at a dairy ice cream plant in Nashville, later in Memphis. The Farm Foods' crew made the soy ice cream there with the help of a plant technician. They applied to register the name Ice Bean as a trademark in 1980 and were granted this in October 1982. When they applied for kosher certification in New York with the oldest and largest certifier (O-U), the rabbi told them that this was the first non-dairy frozen dessert that he had ever certified as kosher and pareve. 1980 was the year that Ice Bean really began to go national, and in December Farm Foods started its first national advertising campaign, with full-page color ads in at least four national health food, counter culture, and vegetarian magazines."

"Initially the reformulated Ice Bean was made using powdered soymilk produced by Loma Linda Foods (at the plant in Mt. Vernon, Ohio, built by Dr. Harry Miller); the vacuum-pan deodorization process reduced volatile beany flavors found in typical soymilk. But in about 1983 Farm Foods switched to fresh soymilk made by Dr. Miller's son, Willis Miller, at nearby Miller's Soy in Tennessee, using a special patented process. Starting in mid-1984 (after Miller's Soy went out of business) all of the soymilk was produced in Summertown, Tennessee, at The Farm's own soy dairy." Address: President, Farm Foods, 156 Drakes Lane, Summertown, Tennessee 38483.

3367. Redwood Valley Soyfoods Unlimited. 1980. [Real Food Tofu Shop and Café] (News release). 8473 East Rd., Redwood Valley, CA 95470. 1 p. Sept.
• ***Summary:*** "Redwood Valley Soyfoods Unlimited is proud to announce their opening of the Real Food Tofu Shop and Cafe. It is a 14-seat restaurant serving lunch and dinner with deli products featuring our Brightsong Tofu." The tofu shop is behind the cafe. The wholesale food processing kitchen manufactures Tofu Cheesecake, Soy Juice, Tofu Treat, Tofu Dips and Dressings, Marinated Salad, Soyannaise, Soy Loaf, frozen dinners and various sandwiches. "The cafe is the only one of its type west of Colorado."

Note 1. A leaflet (printed with black ink on pink paper, undated, 8½ by 11 inches, single sided) titled "Brightsong. The Real Food Tofu Café," gives details: Air conditioned. Smoke free. 8473 East Road, Redwood Valley. Sandwiches $2.00: Tofunafish, Baked-spice tofu, Missing egg salad, Happy Chicken Salad, Hummous, Tofummus, Stuffed mochi. Not dogs. Burgers $2.50: Tempeh, Tofu, Soysage. Desserts: Creamies, Cheesecake, Cookies, Ice Bean, Banana Split, Frozen Joy. Salads: Missing Egg... Drinks: Soy shake, soymilk, Spirulina smoothies.

Note 2. This is the earliest document seen (Sept. 2011) that mentions "Redwood Valley Soyfoods Unlimited."

Note 3. On 31 Oct. 1979 Brightsong Tofu ordered *The Book of Tempeh* (professional edition) and *Tempeh Production* (Vol. II, manuscript). Address: Redwood Valley, California.

3368. Shurtleff, William. 1980. Tofu shops and soy dairies in the West. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 2 p. Sept. Unpublished typescript.
• ***Summary:*** Lists the name, address, phone number and owner of all known tofu shops and soy dairies in the USA (alphabetically by state), Canada, Latin America, Europe, Australia & New Zealand, Africa, and the Middle East. Address: Lafayette, California. Phone: 415-283-2991.

3369. **Product Name:** Soymilk, and Soymilk Ice Cream.
Manufacturer's Name: Vita-Green Enterprises.
Manufacturer's Address: 5411 Lake Washington Blvd. South, Seattle, WA 98118. Phone: 206-237-0900.
Date of Introduction: 1980. September.
How Stored: Frozen.
New Product–Documentation: Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages,

typeset). Gives the company's name, address, and two phone numbers (also 722-7772). Owner: Harry Dea.

3370. Boyer, Robert A. 1980. Work with Henry Ford and soybeans. I (Interview). Conducted by William Shurtleff of Soyfoods Center, Oct. 18. 2 p. transcript.
• ***Summary:*** The Henry Ford Trade School was not the same as the Edison Institute of Technology. Boyer attended the Trade School.

In the mid- to late-1930s Henry Ford held several luncheons where the press and other famous or influential people were invited. He served a complete meal from soup to nuts. Out of these events came a 19-page booklet published in about 1936 by the Edison Institute and titled "Recipes for Soy Bean Foods." The purpose of these meals was to popularize soybeans and thereby to help farmers. But Ford was most interested in finding industrial uses for farm crops. He was deeply interested in the fact that soy had been used in the Orient for so long by millions of people as a key source of protein in the diet. But he had been interested in health before he got interested in soybeans. Still, he was very involved personally with soybeans as foods; he used them a lot in his own diet.

Ford grew his own soybeans on over 10,000 acres he bought in southern Michigan. The idea was not to help farmers by buying their beans but to encourage farmers to grow soybeans then process them in small-scale solvent extractors on their own farms. Eventually this village industry concept proved to be uneconomical so it was abandoned.

In about 1932 Ford set up his first solvent extractor near the River Rouge plant. About a year later he set up a plant to make soy protein isolates from the meal produced by the solvent extractor. In about the mid-1930s Ford built a soymilk plant in Greenfield Village. It was just a demonstration plant that made several hundred gallons of soymilk a day. The plant was part of the larger research effort; none of the milk was sold commercially. With the arrival of World War II, the process was taken by Bob Smith, one of the fellows who developed it, and used as the basis for a private plant [Delsoy Products] in Dearborn where he sold a lot of soymilk for use in whipped toppings, baked goods and frostings. It was quite successful. A big bakery in Detroit used a lot of the topping. As a result of that, the Rich Products Co. in Buffalo, New York, started making the same type of product and became very big. One of Bob Smith's workers [Holton "Rex" Diamond] went to Rich Products and made a big success of it. Rich is very well known; they also make coffee creamers.

Henry Ford was not a vegetarian. He ate like most Americans at the time, and he ate many steaks–even though he knew meat was not the best thing for you. Mrs. Ford suffered from arthritis and he sought diets to help her.

World War II killed the idea of the plastic car. The company would have needed to spend lots on dies to make it commercial. Also each plastic body took too long to produce; it had to cure for 3 minutes in the die. Young Henry Ford II threw out everything [not directly related to automobiles] that his grandfather was interested in. General Motors was actually the first company to make a commercial car with a plastic body–the Corvette, whose body was made of fiberglass.

Edsel Ruddiman was the man who got Ford interested in the food side of soybeans. Ruddiman was quite old. He had his own lab (which he got in about 1930-31) and was a very good scientist. He and Boyer worked closely together since their labs were nearby.

Ford grew 10,000 acres of soybeans in southern Michigan. Ford set up his first solvent extraction plant in about 1932 and his soy protein isolate plant a year later. Ford was personally very involved with soyfoods. He used them a lot in his own diet. He built a soymilk plant in Greenfield Village in the mid-1930s as part of his research efforts. He made several hundred gallons a day. The milk was not sold commercially. After the start of World War II the process was taken over by Bob Smith, one of the fellows working on it. Smith built a private plant in Dearborn where he made the milk into frostings for use in baked goods. It was quite successful. A big bakery in Detroit used a lot of it. As a result of that, Rich Product Corp. in Buffalo, New York, got interested and eventually became very successful. One of Bob Smith's workers, Rex Diamond, went to work for Rich. They also made non-dairy coffee creamers and milk.

Boyer was director of research for The Drackett Co. from 1943-1949.

Ralston Purina's edible soy isolate plant was in Louisville, Kentucky. It was hard at the beginning to get people to use isolates. Mead Johnson started using an isolate in their infant formula. Address: 632 Edgewater Dr., Apt. 731, Dunedin, Florida 33528. Phone: 813-734-2415.

3371. Ostmann, Barbara Gibbs. 1980. Using soybeans: From milk to nuts. *Post-Dispatch* (*St. Louis, Missouri*). Oct. 22. p. 3B. Food section. [1 ref]
• ***Summary:*** Contains recipes–adapted from various books–for: Soynuts. Speedy soy flour. Quick and easy soy milk. Egg-sprout patties (with soybean sprouts). Spicy soybean salad (with whole dry soybeans). Soy vegetable soup (with cooked soybeans and soybean cooking liquid). Soy burgers (with cooked soybeans). Soft sandwich buns (with soy milk). Soy bread (with soy milk). An illustration (line drawing from *The Soybean Book*) shows a soybean leaf and four pods. Address: Post-Dispatch Food Editor.

3372. Siedler, -. 1980. Re: Research on soyfoods in the Department of Food Science, Univ. of Illinois. Letter to William Shurtleff at Soyfoods Center, Oct. 28. 1 p. Handwritten responses on Soyfoods Center letterhead.

• ***Summary:*** The earliest research in this department appeared in a 1955 MSc thesis titled "Treatment and utilization of extracted soybean flakes for human consumption."

The main soyfoods studied to date by this department have been: (1) Dairy analogs: Soymilk, chocolate soymilk, yogurt, ice cream, and diet margarine. (2) Weaning foods: Soy-cereal and soy-fruit.

Dr. Siedler estimates that 10 theses and 15 articles have resulted from the department's research on soyfoods. The main researchers have been Wei, Nelson, and Steinberg.

3373. Arshad, M.; Aslam, M.; Sheikh, Iftikhar Ali. 1980. Preparation of soymilk from soybean. *Pakistan J. of Scientific and Industrial Research* 23(5):218-20. Oct. [11 ref. Eng]
• ***Summary:*** A soymilk free of bitter and beany flavor his been developed and standardized. The net protein utilization (NPU) of this soymilk was only slightly lower than that of skim milk (84.6% vs. 84.7%). The protein efficiency ratio (PER) was 2.4 (compared with 2.6 for casein). Net dietary protein (NDP) was 7.05 calories (compared with 7.55 for skim milk). Address: PCSIR Lab., Lahore 16, Pakistan.

3374. Erdman, J.W., Jr.; Weingartner, K.E.; Mustakas, G.C.; Schmutz, R.D.; Parker, H.M.; Forbes, R.M. 1980. Zinc and magnesium bioavailability from acid-precipitated and neutralized soybean protein products. *J. of Food Science* 45(5):1193-99. Sept/Oct. [28 ref]
• ***Summary:*** Zinc bioavailability may differ for general categories of soy protein products, including flours, beverage, concentrate, and isolate. Address: 1-2. Dep. of Food Science, 567 Bevier Hall, Univ. of Illinois, Urbana, IL 68101; 3-4. NRRC, Peoria, Illinois; 5-6. Dep. of Animal Science, Univ. of Illinois.

3375. Filisetti, T.M.C.C.; Lajolo, F.M. 1980. Thyroid active factor in heated soybean products. *J. of Food Science* 45(5):1179-82, 1186. Sept/Oct. [16 ref]
• ***Summary:*** A crude extract was obtained from hexane-defatted soybean flour by water extraction and acetone fractionation. It was active in depressing the uptake of iodine-131 by the thyroid glands of live rats 24 hours after administration by stomach tubing. "The inhibitory effect was evident at 24 hours only when either the extract or the flour had been previously autoclaved. Similar results were recorded when extracts from commercial products such as [dried] soybean milk, soy protein concentrate, and toasted soy flour were used. However, using extracts from unheated raw soy flour, the inhibitory effect was only present 6 hours after ingestion and it subsequently disappeared. The active factor is not precipitated by 90% ethanol. Isolated soybean isoflavones, either autoclaved or nonautoclaved, did not show any inhibitory activity."

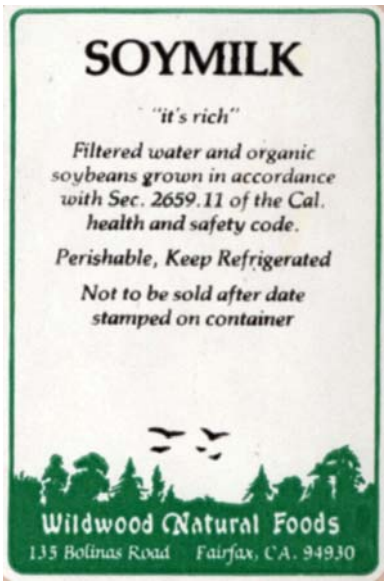
The factor appears to be heat stable since all the products tested had been previously heated during normal processing. The factor is not related to phenolics and it may be activated during heating. Address: Depto. de Alimentos e Nutricao Experimental, Faculdade de Ciencias Farmaceuticas-USP, Caixa Postal 30.786, Sao Paulo, SP, Brazil.

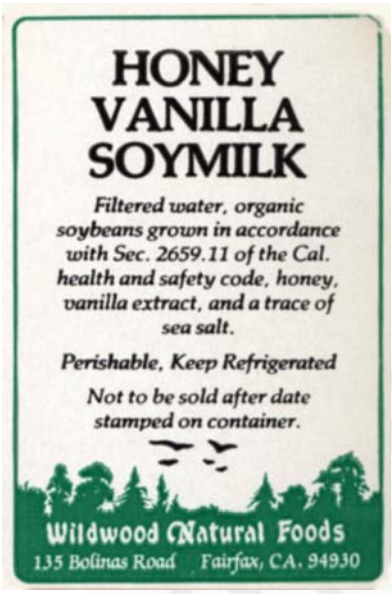
3376. Lah, Carol L.; Cheryan, Munir. 1980. Protein solubility characteristics of an ultrafiltered full-fat soybean product. *J. of Agricultural and Food Chemistry* 28(5):911-16. Sept/Oct. [34 ref]
• ***Summary:*** The product is a close relative of soymilk made from ground whole soybeans. The study focused on protein dispersibility index (PDI) as a function of pH and the concentration of various salts. For acidic and neutral pH values, the PDI was higher than that of the raw material and of a commercial soy protein isolate. Address: Dep. of Food Science, Univ. of Illinois, Urbana, IL 61801.

3377. **Product Name:** Soyloaf.
Manufacturer's Name: Light Foods Inc.
Manufacturer's Address: 6144 Bartmer, St. Louis, MO 63133. Phone: 314-721-3960.
Date of Introduction: 1980. October.
Ingredients: Okara, whole wheat flour, nutritional yeast, wheat germ, safflower oil, soymilk, coconut, bulgur, soy grits, mustard, tomato table sauce, barley malt, sesame seeds, herbs & spices.
Wt/Vol., Packaging, Price: 20 oz (567 gm) container.
How Stored: Refrigerated.
New Product–Documentation: Barbara G. Ostmann. 1980. Post-Dispatch (St. Louis, Missouri). Oct. 29. p. 1E, 4E. "Time for tofu." Bob Davis' company Light Foods Inc. makes Soyloaf (soy "meatloaf").

Label. 3 inches square. Self adhesive. Orange on white. Winged unicorn rearing on its hind feet before an orange moon. "No preservatives. Please refrigerate." Leviton. 1981. Soyfoods. Summer. p. 42. "They produce up to 100 20-ounce containers of Soyloaf."

3378. TNO and IIT. 1980. Précis of the final report on the Colombian-Netherlands project for "Utilization of soybean proteins for human consumption," Colombia, 1977–1979. Wageningen, Netherlands: The Netherlands Organization for Applied Scientific Research (TNO) and Instituto de Investigaciones Technologicas (IIT). 12 p.
• ***Summary:*** The following products and related processes were developed or improved for use in Colombia: Soy beverage, soy cheese (tofu), soy yogurt, roasted soybeans, quick-cooking soybeans, full-fat soy flour, soy-enriched arepas or maize cakes. IIT is the Instituto de Investigaciones Tecnologicas, Bogota, Colombia.





3379. **Product Name:** Soymilk, or Honey Vanilla Soymilk. Renamed Yo Soy! by about Sept. 1981.
Manufacturer's Name: Wildwood Natural Foods.
Manufacturer's Address: 135 Bolinas Rd., Fairfax, CA 94930. Phone: 415-459-3919.
Date of Introduction: 1980. October.
Ingredients: Honey-Vanilla: Filtered water, organic soybean grown in accordance with Sec. 2659.11 of the Cal. health and safety code, honey, vanilla extract, and a trace of sea salt.
Wt/Vol., Packaging, Price: Pint or quart plastic bottle.
How Stored: Refrigerated.
New Product–Documentation: Soyfoods. 1983. Summer. p. 42-43. Labels sent by Wildwood on their letterhead. 1983, undated. 2 by 3 inches. Self adhesive. Black and green on ivory. Silhouette of woods with birds. "It's rich. Not to be sold after date stamped on container." The product names are "Soymilk" and "Honey Vanilla Soymilk."

Talk with Billy Bramblett, an owner of Wildwood. 1998. Aug. 8. Soymilk was not a product made from day one. Billy would estimate that Wildwood started bottling soymilk (plain and honey-vanilla) in the spring of 1981. Because Wildwood was distributed outside the country they were in (Marin), their products suddenly became regulated by the state–rather than the county. Shortly after this product, labeled "Soymilk" was launched, the California Department of Health sent two women (dressed in lab coats) to the plant; they went through every product Wildwood had, took samples, examined labels, etc. They found various problems with Wildwood's labels. So they went back to Wildwood and told them how to change their labels to bring them into compliance with state labeling law. Paul Orbuch was in charge of Wildwood's labels at the time; he was a photographer, so he had a lot to do with the text and graphic design of the labels. A guy who came along (sort of a Nazi type) told Billy "You can't use the word "Soymilk." Billy asked "Why not? I've got a book right here, written by Shurtleff and Aoyagi, that says its soymilk." He said, "If it's milk, the label must say "dairy," otherwise it must say "imitation." Billy shot back, "How about milk of magnesia." The guy got really mad–like a bureaucrat without an answer, and said "Look–Change the label or we're gonna pull the product." Billy had a huge debate with this guy for about 2 months. Wildwood toyed with the idea of calling it *Tonyu,* which is the Japanese word for soymilk, but they realized nobody would know what that meant. They wanted to keep the word "Soy" in the name, so Billy came up with "Yo Soy," which is a palindrome.

Talk with Paul Duchesne, founder of Wildwood. 1998. Aug. 28. Paul still has detailed typewritten records showing sales of individual Wildwood products in 1980 and 1981. According to these records, Wildwood first made and sold soymilk in October 1980; $32,00 worth of plain soymilk was sold that month. The company consistently made soymilk from that time on. Sales increased to $34 in November. In November Wildwood added Honey Soymilk and sold a total of $40.00 worth of the two flavors that month. By July 1981 Wildwood was selling $200/month of Honey Soymilk and $172/month of plain.

3380. Shurtleff, William; Aoyagi, Akiko. 1980. Henry Ford and Robert Boyer: History of work with soya. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 25 p. Nov. 3. Unpublished typescript. Available online at www.soyinfocenter.com.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction: Ford. Early research with soybean oil and meal: 1928 chemurgic movement (joining of farm and industry), setting up Edison Lab, Dec. 1931 soybean chosen as most promising crop for use in industry and as a food, 1931 encouragement of farmers to grow soy, biographical sketches of Boyer and Ruddiman, soy oil (used in car paints and pioneer work in solvent extraction),

meal, isolates, molded parts, plastic pilot plant, cottage industries, barn solvent mills, 1934 World's Fair. Ford, Ruddiman, and soyfoods: Soyfoods press luncheons (not all were impressed), 50 recipe cookbook, soymilk (commercial and personal), personal interest in soyfoods, Greenfield Village (soy flour and green vegetable soybeans), Ford's views on health. Development of the plastic car: Glidden first commercial plant for industrial soy protein isolates (1935), Ralston's food use plant in 1960, Ford built 3 small oil plants 1937-39, grew own soybeans, connection with American Soybean Association, soybean plastic car (trunk lid unharmed when hit by ax), jokes, soy a minor element in later structural plastics, idea lost in files, General Motors' plastic Corvette introduced 1953, lots of plastic by 1980 (but not from renewable resources like soy). Boyer's soybean wool and edible protein fibers: Soybean wool and history of fibers, wool pilot plant, how to make edible soy fibers, discovery of food protein idea. Henry Ford's passing: Death in 1947, his contribution (quotes), actually not much soy used in Ford's auto and tractor factories. Boyer's development of meat analogs: Drackett purchase of Ford protein spinning operation, first visit to Worthington (Sept. 1949), Corn Products Company purchase of first license on edible protein fiber patent, Swift purchase of exclusive rights from 1950-54, 1951-52 Unilever license for production outside U.S., Worthington purchase of license 1956, advantages and limitations, licenses after Worthington, royalties and consulting, Boyer's quality evaluation, the future. Address: Lafayette, California. Phone: 415-283-2991.

3381. Watanabe, Hidekazu. 1980. Re: Early work by San-iku Foods in Japan with tofu and soymilk. Letter to William Shurtleff at Soyfoods Center, Nov. 20. 5 p. Handwritten, with signature on letterhead. [Jap; eng]

• ***Summary:*** Starting in about 1955 Dr. Harry Miller began to recommend that the Saniku school in Japan serve soymilk instead of dairy milk to its students. But the school decided not to do this because they thought the taste of the soymilk was not very good and it was considered less nutritious than cow's milk; moreover, it would cost a lot of money to buy soymilk equipment.

In 1957 Mr. Hanzo Ueda (who had previously worked at the post office in Hachioji and was a Seventh-day Adventist) was running a tofu shop. He and Mr. Hidekazu Watanabe were making soymilk at the tofu shop, packing it in 180 ml bottles, and selling it around Hachioji–under Dr. Miller's guidance.

In 1959 people from the Saniku school visited the tofu shop and gained confidence. They bought similar (but not identical) equipment, and started to produce soymilk at the school. They bottled it in 180 ml containers and started to serve it to 500 students at every meal.

Ten years later, in 1969, they started to produce Soyalac infant formula soymilk with help from Loma Linda Foods in America. They produced it at College Health Foods–a separate organization from the Saniku school.

Dr. Miller gave us helpful advice on technical and nutritional matters, and furthermore he always supported our spirit and spirituality as we developed the soymilk plant (1959) and the infant formula (1969). In 1969 Luppy Kôsan began to make Luppy soymilk. This was the first really serious commercial soymilk product in Japan.

Note: See also Mr. Watanabe's follow-up letter of July 1981. Address: San-iku Foods, Sodegaura-machi, Chiba-ken 299-02, Japan.

3382. Goodbrad, John. 1980. History of Sovex Natural Foods, Inc. and other small Adventist food companies (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 26. 1 p. transcript.

• ***Summary:*** Sovex is a private company. John and his wife are Seventh-day Adventists, as are many of the company's employees. John worked at the Boulder Sanitarium (also called the "San," in Boulder, Colorado) from 1947 to 1953; the Sanitarium owned 8 health food stores and he was in charge of them. During the time he was in Boulder, the Sanitarium did not manufacture any foods; they had already gotten out of that business.

Then he went to work for Collegedale Distributors (in Collegedale, Tennessee), which was owned by Southern Missionary College. They made, and still make, granola.

Sovex was founded in 1953 by the Hurlingers in Holly, Michigan. The company's original product was Sovex, a flavor concentrate paste, made from a mixture of brewer's yeast and soy sauce. In 1964 John bought the business and moved it to Collegedale, Tennessee, where he worked.

In 1981 Sovex products containing soy include Prothin Snack Chips, Vege-Pat (textured soy flour, in sausage, burger, and chili flavors), and Granola (their main product line, in nine flavors, many of which contain soy grits).

Sovex had no relationship with Madison Foods (of Madison, Tennessee). Madison was one of the pioneers in the meat substitute field. They were purchased by Worthington Foods, which phased out the Madison products. John has eaten Madison products on and off for over 50 years, but has had no direct contact with them for a number of years. John has a copy of *Back to Eden,* autographed by Jethro Kloss.

A Mr. White, who was a grandson of Ellen G. White, had a super soymilk recipe about 20 years ago. He started with soy flour, ran it through an homogenizer, then sweetened it with honey. People loved the flavor; it was fresh, not canned. He called it Nu-Milk and made it on the sly at the Southern Missionary College dairy in Collegedale, Tennessee. It was illegal because there are laws against putting anything but milk in a milk processing plant.

John just talked with Frank Miller (phone: 817-641-8343), who used to work for Madison Foods and who now owns Texas Protein Products, a company that sells TVP in

Texas. Another key man was Bruce Stepanske, who made soymilk at Madison until it was discontinued. Address: President, Sovex Natural Foods, Inc., Box 310, Collegedale, Tennessee 37315. Phone: 615-396-3145 (or 2111).

• ***Summary:*** This protein product, made from a relative of soymilk made from ground whole soybeans, is similar to Promine D. Address: Dep. of Food Science, Dairy Manufactures Building, Univ. of Illinois, Urbana.

3384. Tally, Gene. 1980. The Coca-Cola Company's work with soymilk in Brazil (Saci) and Mexico (Samson) (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 1. 2 p. transcript.
• ***Summary:*** Coca-Cola Co. (CCC) taste panels have found that soymilk made with soy protein isolate is more acceptable than soymilk made from soybeans; it has less beany taste and less bitterness–a more neutral taste. Most promising is an isolate-based soymilk. Gene says: In terms of acceptance, we've got the best soymilk so far, and we've tasted all the others." The only soft drink fortified with soy protein that CCC now sells is Saci (pronounced sa-SEE) in Brazil. Until recently, Saci has only been sold institutionally to the Brazilian School Feeding Program. Recently CCC has cut through red tape in the Brazilian government and gotten additional flavors approved. Formerly chocolate was the only flavor; now they have approval for coconut, vanilla, and café au lait (with coffee and sugar). Acceptance among Brazilian adults has not been too encouraging, except when the drink is made like a milk shake with a colloidal thickener.

60% of the people in Brazil do not drink milk, due to its shortage and high price–so soymilk is an economical alternative. CCC can make soymilk for 25% less than cow's milk including the packaging. The product has not yet hit the market, but CCC hopes to retail it in Brazil for about 25% less than milk.

A new tack is to export this soymilk, made in Brazil, to Japan, since Brazil is the world's #2 producer of soybeans and #1 producer of sugar. CCC presently plans to export it in powdered form and reconstitute it in Japan.

Samson, which CCC now makes Mexico is a whey product; it contains no soy. In Southeast Asia CCC is test marketing a soymilk product with a range of flavors in a joint venture with K.S. Lo and Vitasoy.

In the early 1960s. K.S. Lo was selling *almost* as much soymilk as Coke–of which he was the bottler and distributor. But now sales of Vitasoy are flat; they have hit a mature market situation, and with larger packages Coke is way ahead of Vitasoy. But at that time, when Mr. Lo proved what he could do, CCC got interested. "We've had a dialog and a joint venture with Mr. Lo and his family for over ten years. That now includes our joint venture with a soy-based product in Thailand."

Gene thinks CCC is almost ready to enter the soymilk market in the USA; they are waiting for the Tetra Brik package and process to be approved by the USDA, and he thinks that approval is immanent. Hydrogen peroxide is used to purge the carton before it is filled, but there is not trace of it after it is flushed through. The same process is used in a number of other food processing systems. Its turned into a real witch hunt and the Tetra Pak people are about to lose their patience.

Gene has lived and worked in Japan for 5 years, Singapore for 3, and Hong Kong for 2. So he knows the East Asian soft drink and beverage market from direct experience. Address: Coca-Cola Co., Atlanta, Georgia.

3385. Wakana, Teruo; Okubo, Kunio; Hanaoka, Yutaka. Assignors to Kibun Company, Ltd. (Tokyo, Japan). 1980. Process for producing soybean milk. *U.S. Patent* 4,241,100. Dec. 23. 4 p. Application filed 11 Sept. 1978. [10 ref]
• ***Summary:*** Unsteeped soybeans are boiled in an alkaline aqueous medium for a few minutes to inactivate the lipoxygenase enzyme before grinding the beans. "A process for producing soybean milk without undesirable beany flavor or bitterness and giving soft and pleasant feel to the tongue, which comprises cooking unsoaked soybeans in an aqueous medium for as short a period as practicable, grinding the boiled soybeans while bringing them into contact with a sodium bicarbonate aqueous solution at a relatively high temperature, extracting the soyprotein and other water soluble components from the ground soybeans and removing a substantial amount of the solids from the slurry." Address: 1. Hidaka, Japan; 2. Ogose, Japan; 3. Akishima, Japan.

3386. Lowe, Janet. 1980. City's first tofu plant due soon in Hillcrest: San Diego Soy Dairy hopes a demand for exotic food will follow. *San Diego Daily Transcript.* Dec. 24. p. 1A, 12A.
• ***Summary:*** "Gary Stein is building the San Diego Soy Dairy in a building next to the Kung Food restaurant on Fifth Avenue. Kung Food will use part of the former gasoline station for a bakery, and Stein will use the remaining space for his steam injected cauldron system. Stein says his plant should be operating by Jan. 15."

Note: In late 1980 Gary C. Stein of San Diego Soy Dairy (P.O. Box 33778, San Diego, CA 92103. Phone: 714-692-0132) wrote an undated letter on his company's letterhead which stated: "Dear friends, Our new company, the San Diego Soy Dairy, is happy to announce that we will soon be producing tofu and soy milk on a daily basis. By early January we will be able to serve your store or restaurant with fresh tofu and soy milk. We are using only organically grown soy beans and filtered water in our process."

"It would be great service to us if you would indicate on the enclosed card your interest in fresh tofu and soy milk and return the card to us. If you would like to met with a representative of our please indicate that on the card or call 692-0132. We will be happy to answer any further questions. Thank you for your help." Address: San Diego, California.

3387. Root, Waverley. 1980. Soybean: An underdog sneaks up on the world's diet. *Los Angeles Times.* Dec. 29. p. I15.
• ***Summary:*** "Mahatma Gandhi, after much experimentation with various diets, expressed the opinion that the world's best staple food was the soybean."

This article focuses on uses of whole soybeans and unfermented soybean products such as: Fried soybeans [soynuts] in China and Japan. Cooked whole soybeans, which may be added to soups. The young unripe beans [green vegetable soybeans] may be eaten raw in salads.
